

# **THE WRITINGS OF WILLIAM WASHINGTON BOLTON**

**Fourth Edition**

**Updated May 2022**

## FOREWORD

In September 2009, a colleague at the Secretariat of the Pacific Community in Nouméa, New Caledonia, forwarded me an email he had received from Moira Enetama, Director of Taoga Niue, the government department supporting and promoting the use and preservation of Niuean culture, language and tradition. She asked, “*Do you know anyone by the name of Bolton or a relative of William Washington Bolton, he was school teacher in Niue in the early 1920’s. Someone told me he has a relative working at SPC, if not current, maybe in the past few years?*” At the time, I had already compiled some information regarding my great-grandfather and I thought it would be appropriate to respond to Moira’s email by sending her a chronology of WWB’s life.

Months later, after filling in a few gaps, the chronology was finally completed. In the meantime, I had visited the Mitchell Library in Sydney to examine the *Bolton Papers*, a collection of WWB’s writings about his travels in the South Pacific and elsewhere, and there found his book about Niue, *The Chronicles of Savage Island*. It seemed a potentially important work and so with the help of the Mitchell Library, scans of the handwritten pages of the book were copied from microfilm to a PDF file and sent to me on a DVD, whereupon I transcribed *The Chronicles* into the digital age. There appeared to be a controversy regarding the anthropologist E.M. Loeb’s use of information obtained from WWB in Loeb’s 1926 book, *History and Traditions of Niue*, and so I did a study comparing the texts of the two books that treat the same subjects.

With the first three parts completed, the next project was to transcribe the *Tales of a Roaming Grandfather*, stories that WWB wrote about his travels and sent to his grandchildren while he lived in Tahiti later in life. And having completed that, it made sense to transcribe WWB’s letters, most of which are related to the *Tales*. The first edition of *The Writings of WWB*, consisting of Parts I to V, were published online in May 2011. The second edition, with Parts VI to IX, was published in October 2012, while the third edition, with Parts X to XII, was published in October 2013. The fourth edition, with Parts XIII to XV, was first published in April 2015. The fourth edition is the last substantive edition, although updates, with minor changes and additions, may be published from time to time.

If this document is being read on a device, click on a link below to go directly to the Part. Clicking on an item in any of the Tables of Contents in this document will take you directly to the text.

[Part I](#)      ***Notes on the Life of William Washington Bolton, 1858–1946*** : with a chronology and biographical information and inferences, by T.A. Lawson.

[Part II](#)      ***The Chronicles of Savage Island*** : the history, traditions and observations regarding Niue, where WWB taught from 1921 to 1924.

[Part III](#)      ***Did E.M. Loeb Use Information Obtained From W.W. Bolton in History and Traditions of Niue?*** by T.A. Lawson.

[Part IV](#)      ***Tales of a Roaming Grandfather*** : including 93 stories about his travels that WWB sent to his grandchildren from Tahiti, 1939–1941.

[Part V](#)      ***Letters*** : while Rector of the Episcopal Church of Saint Mary the Virgin, San Francisco, dated 1893–1894, and while living on Tahiti, dated 1939–1946.

[Part VI](#)      ***References to WWB in the Victoria Daily Colonist*** : concerning WWB’s exploration of Vancouver Island, the founding of the University School, and other matters.

- [Part VII](#)    ***Articles By and References To WWB in the Pacific Islands Monthly*** : dated 1935–1947, including WWB’s studies of the history and traditions of the South Pacific.
- [Part VIII](#)    ***Articles By WWB in Bulletins de la Société des Études Océaniques*** : dated 1935–1940, including three studies concerning French Polynesia.
- [Part IX](#)    ***Old Time Tahiti*** : a sketch of the history of Tahiti, with numerous appendices and addenda containing a broad range of information concerning French Polynesia.
- [Part X](#)    ***Tales of Roaming*** : an account of WWB’s trip to England in 1913, via Japan, China, Korea, Mongolia and Russia, and including two months spent in London, and his trip down the Yukon River in 1914.
- [Part XI](#)    ***Roaming the Pacific Waters*** : an account of WWB’s travels in Hawaii, Fiji, New Zealand, Tonga and Samoa in 1920–1921, prior to his stay on Niue, and his travels to the Kermadecs, Australia, Lord Howe Island, Norfolk Island, the New Hebrides, New Caledonia and Singapore in 1924–1925, following his stay on Niue.
- [Part XII](#)    ***Memoirs of St Paul’s Anglican Church, Esquimalt, and the Episcopal Church of St Mary the Virgin, San Francisco, 1887–1897*** : including an account of WWB’s introduction to teaching.
- [Part XIII](#)    ***Roamings In the Great South Sea*** : an account of WWB’s travels in French Polynesia, with a sketch of the history of Pitcairn, and many other South Sea *curios*.
- [Part XIV](#)    ***Tahitian Vignettes*** : stories of incidents in the lives of the islanders and expatriates on Tahiti during WWB’s residence there from 1928 to 1946.
- [Part XV](#)    ***Exploring Vancouver Island*** : an account of WWB’s expeditions of 1894 and 1896.

For convenience, several of the stories recorded in *The Chronicles* are reproduced in Part III for direct comparison with work on the same topics in Loeb’s *History and Traditions of Niue*, resulting in some overlap between Parts II and III.

In each edition, typos and other minor errors were corrected. Other changes made to the first edition and published in the second are listed below:

- Further information concerning the red banana, *hulahula*, was added to the last footnote in the section *Opahi* in Chapter III of *The Chronicles of Savage Island*.
- Articles from the Victoria Daily Colonist in Part I, Appendix VIII were moved to Part VI and Part I, Appendix VIII was deleted. New articles were included in Part VI; the articles were published on 28 June 1896, 3 July 1896, 12 February 1889, 17 January 1897 and 8 October 1908. The date of WWB’s marriage to Lily Bushby — 11 February 1889 — was found in the article of 12 February 1889.
- Part VII, *Articles By and References To WWB in the Pacific Islands Monthly*, was added, and Part I, Appendix IV, *Articles by W.W. Bolton and Biographical References in the Pacific Islands Monthly*, which contained a list of the articles, was deleted.
- Part I, Appendix IX, *Mr. W. W. Bolton, Now 85 Years Old*, which contained an article published in the July 1943 edition of the *Pacific Islands Monthly*, was moved to the new Part VII.

- Part I, Appendix X, *the Good Work of the Late W. W. Bolton*, which contained an article published in the November 1946 edition of the *Pacific Islands Monthly*, was moved to Part VII.
- Part I, Appendix XI, *The Cession of Matavai*, which contained an image of an engraving and its caption, was moved to the article from which it was taken in Part VII, *Pacific Islands Monthly* of July 1942, page 14, *Light on a Half-Forgotten Incident of Early Tahiti*.
- A footnote in *The Chronicles of Savage Island*, Chapter IV, under *Things Practical*, gives references to Faséné, WWB's assistant teacher on Niue, in Margaret Pointer's book, *My Heart is Crying a Little — Niue Island Involvement in the Great War, 1914–1918*.
- Part VIII, *Articles By WWB in Bulletins de la Société des Études Océaniques*, was added, and Part I, Appendix III, *Articles by W.W. Bolton in Bulletins de la Société des Études Océaniques*, which contained a list of articles, was deleted.
- Part I, *Notes on the Life of WWB*, was updated with additional information, and the sources that had been listed in an appendix were moved to footnotes.
- Part IX, *Old Time Tahiti*, was added, with *Pioneer Missionaries of Tahiti* appended; the sources are Volumes 17–20 of the Bolton Papers in the Mitchell Library.

Changes made to the second edition and published in the third are listed below:

- In the *Chronology* and under *Genealogy* in Part I, *Notes on the Life of WWB*, the year of birth of Vyvyan Muriel Bolton was changed from 1890 to 1889; the former was taken from the Victoria Census of 1901 and may have been mis-reported by Lily Bolton — she is also thought to have mis-reported her own year of birth — while the latter is based on more reliable sources.<sup>1</sup> The year she died, 1976, was added.
- Also in the *Chronology* and under *Genealogy* in Part I, the name of WWB's son was also changed from *Eric Seymour Bolton* to *Eric Ion Bolton* and the reference to one of Vyvyan Muriel Bolton's married names as *Gallagher* was removed; Vyvyan Gallagher was the daughter of Eric Ion Bolton (1892–1950). These changes are based on information provided by Harry Bolton (pers. comm., November, 2012).
- Under *Genealogy* in Part I, the years of birth and death of WWB's mother, Lydia Louisa Pym, were added, as were the years of death of WWB's two brothers who died in infancy.
- In the *Chronology*, the reference to Staffordshire in regard to WWB's place of birth was deleted and a discussion regarding his place of birth was included under *Date and Place of Birth*. Items were included in the *Chronology* referring to the death of WWB's father in 1863, WWB's family's move from Kilburn to Wimbledon in about 1864, and the death of WWB's mother in 1914.
- A section on *Kilburn and Wimbledon*, where WWB lived in his youth, was included in Part I, based on the England Censuses of 1871, 1881, 1891 and 1911, and information provided by the Heritage and Local Studies Centre of the London Borough of Merton.
- Under *Moosomin* in Part I, the possibility that WWB's sister, Mary Louisa Bolton, was living in Saskatchewan when WWB was in Moosomin was noted.

---

<sup>1</sup> The sources are listed on RootsWeb [here](#).

- A section on *St Paul's Anglican Church, Esquimalt*, where WWB was Rector during 1887–1889 and where he received his introduction to teaching while Headmaster of St Paul's School, 1889–1890, was included in Part I, based on his account in *Beginnings* in Part XII, *Memoirs of St Paul's Anglican Church, Esquimalt, and the Episcopal Church of St Mary the Virgin, San Francisco, 1887–1897*.
- In the *Chronology*, the reference to WWB's trip to Salt Lake City was modified, and a section on *Trip to Salt Lake City, Denver, Chicago and New York*, which WWB took while Rector of St Mary's in San Francisco, 1890–1898, was included in Part I, based on his account in *Playing the Sleuth* in Part XII, *Memoirs of St Paul's Anglican Church, Esquimalt, and the Episcopal Church of St Mary the Virgin, San Francisco, 1887–1897*.
- Further information regarding WWB's itinerary was added to *From Niue to Victoria* in Part I.
- Four letters written when WWB was Rector of the Church of St Mary the Virgin, San Francisco, were included in Part V, *Letters*.

Changes made to the third edition and published in the fourth are listed below:

- In Part VI, *References to WWB in the Victoria Daily Colonist*, the poem, *Crown Mountain*, which is found in the October 23, 1910 edition, was added. This is the only known poem by WWB.
- Photos of the Urzhumka train station and the Monument of Tears separating Europe and Asia, near Chelyabinsk, Russia, were added in a footnote to Part X, *Tales of Roaming, Across Siberia*, Chapter IV.
- Information regarding WWB's residences in Papeete, French Polynesia, 1928–1946, were added to Part I, under *Tahiti and Historical Research*.
- Information regarding the annuity of WWB's mother, Lydia Louise Bolton née Pym, part of which WWB almost certainly inherited upon her death in January 1914, was added to Part I, under *Kilburn and Wimbledon*.
- Part II, *The Chronicles of Savage Island*, was edited for punctuation, and photos of the trader, Robert Head, and the LMS missionaries, George Lawes and James Chalmers, were included in footnotes.

The fourth edition was updated in March 2016 with the following changes:

- In Part II, *The Chronicles of Savage Island*, photographs of various sites on Niue, which were taken from 16 to 18 June 2015, were added in footnotes.
- A letter from WWB to his granddaughter, dated 15 September 1941, in which he refers to the Military Cross awarded to his son after being wounded in France during the Bourlon Wood operations of September 1918, was added to Part V, *Letters*.

The fourth edition was further updated in December 2019 with the following changes:

- In Part I, a quote was added from *Victoria Landmarks* (1985) regarding the house, Trafalgar, at 649 Admirals Road, Victoria, British Columbia, which was built for WWB in 1900 and later received heritage designation.

- In Part XV, the names of the members of the Exploring Expedition of 1894 in the illustration by T. Burroughes Norgate were assigned according to a reproduction of the illustration found in the papers of Jane Elizabeth Van Roggen.
- In Part XV, a footnote on Jephther Skinner, cook and packer during the Exploring Expedition of 1894, was added, based on information provided by Jane Hutton, Curator, Port Hardy Museum, in an email to Lindsay Elms, and the entry for *Jepther Point* in *The Encyclopedia of Raincoast Place Names*.
- In Part IV, the identity of *The Squire* of Tale #71 was added in a footnote, with a link to *The Settlement of Cannington Manor*, which refers to WWB. The same information was added to *Moosomin* in Part I, together with a reference to WWB being the priest at St. Alban's Church in Moosomin during 1884–1885.
- In Part IX, Chapter X, a footnote was added to identify the Acting British Consul at Tahiti in 1842, C.B. Wilson, as the protagonist of Chapter XXI, *Proceedings of the Consul*, in *Omoo* by Herman Melville. And in Part IV, Tale #21, *Of Perseverance*, a footnote was expanded to refer to mention of 'Jim the Pilot' in Chapter XXVI of *Omoo*. Also in Part IX, Chapter IX, a footnote was expanded to refer to mention of Columba Murphy in Chapter XXXVII of *Omoo*. In *L.M.S. Pioneers* in Part VII, a footnote was expanded to note that the octagonal church of Papetoai, Moorea, is the subject of Chapter LXXIX of *Omoo*.
- The author of the story that appears in Tale #64, *Of the Portent and the Thunder*, in Part IV, and *The Portent of Thunder* in the 17 April 1939 edition of the Pacific Islands Monthly in Part VII, is identified as George Archibald McTavish (1856–1922) in footnotes.
- In Part I, a paragraph and a map was added describing bungalows in the same waterfront area of Papeete where WWB had resided in a bungalow, after he stayed at the Hôtel du Diadème in Papeete and before he moved to his residence in Pirae.
- In its Preface, the date of completion of Part XIII was estimated to be no earlier than 1943.
- In Part IX, a footnote was added to *Papeete's Fête Day* stating that a Fête Napoléon was held in Papeete on 15 August 1870.
- In Part IV and Part XI, footnotes were added to *The Swallows' Cave* referring to Fonualei as the location of the cave, rather than Vava'u, according to William James Diaper (1820–1891).
- In Part IX, a footnote in *The Missionary Orsmond* was expanded to include a section of a letter by Orsmond on the sexual immorality of the Tahitians.
- In Part IX, a footnote was added to *Extracts from the "Journal" or daily diary of the first permanent white residents on Tahiti*, noting that Edward Robarts — author of *The Marquesan Journal of Edward Robarts, 1797–1824* — and his family were onboard the *Lucy* when it landed at Tahiti in 1806.

The fourth edition was further updated in May 2022 with the following changes:

- Further information regarding the idols of Pomare II (1782–1821) that are conserved in the British Museum was included in a footnote to *Pomare II's Correspondence* in Part IX, *Old Time Tahiti*.

- Information concerning his return address of Taaroa, Pirae, Tahiti, in a letter he wrote on March 7, 1939, and the meaning of *Taaroa* in this address, was added to *Tahiti and historical research* in Part I, *Notes on the Life of WWB*.

The numbering of each of the Parts referred to above reflects the order in which they were included in this document. A chronological ordering, reflecting the sequence of events in WWB's life, would be as follows:

- From 1884 to 1886, WWB was a missionary at Moosomin, Northwest Territories (now southeast Saskatchewan). His only writings concerning this period of his life are found in Part X, under *A Brush With Wolves*, and in Part IV, Tale #67, *On Wolves*, and Tale #71, *The Squire*.
- From 1887 to 1890, he was Rector of St Paul's Anglican Church in Esquimalt, British Columbia, and Headmaster of St Paul's School. Then from 1890 to 1898, he was Rector of Episcopal Church of St Mary The Virgin in Cow Hollow, San Francisco. This period is covered in Part XII.
- In 1894 and 1896, WWB led expeditions to explore Vancouver Island, which are the subject of Part XV.
- From 1906 to 1920 and from 1925 to 1928, he held positions at the University School in Victoria, British Columbia, which he co-founded. References to University School are found in Part IV, Tale #48, *On Leaving School*, and in several articles in Part VI.
- In 1913, WWB travelled from Victoria to England, via Japan, China, Korea and Russia. This trip is described in Part X, under *Letters from Japan*, *Across Siberia* and *After 30 Years Two Months at Home*.
- In 1914, he travelled the length of the Yukon River, which is the subject of *Alaska and the Yukon* in Part X.
- In 1920 and 1921, WWB travelled from Victoria to Hawaii, Fiji, New Zealand, Tonga and Samoa, prior to his arrival on Niue. This trip is covered in Part XI, in the chapters up to and including *Beneath Tropic Skies (III)*.
- From 1921 to 1924, WWB taught at the school in Hakupu, Niue. His extensive writings on Niue are found in Part II.
- Departing Niue in 1924, he returned to Victoria via the Kermadecs, New Zealand, Australia, Lord Howe Island, Norfolk Island, the New Hebrides, New Caledonia and Singapore. This trip is covered in Part XI, from the chapter entitled *The Lonely Isles : the Kermadecs*, onwards.
- WWB lived on Tahiti from 1928 until his death in 1946. His extensive writings on the history of Tahiti make up Part IX; his travels in French Polynesia are described in Part XIII; and stories concerning Tahiti and its inhabitants are found in Part XIV.

This listing above is only partial; many other stories and articles regarding his travels and historical work can be found in Part IV, Part VII and Part VIII.

## ACKNOWLEDGEMENTS

The following kindly assisted with the compilation of the source material: WWB's grand-daughter, Jane Van Roggen, Vancouver, Canada; Niue Public Library; Max Shekleton, Nouméa, New Caledonia; Pacific Manuscripts Bureau, Canberra, Australia; Mitchell Library, Sydney, Australia, especially Robynne Hayward; Library of the Secretariat of the Pacific Community, Nouméa, New Caledonia; Diocese of Lichfield, England; Société des Études Océaniques, Papeete, French Polynesia; Margaret Pointer, Khandallah, New Zealand; Voyager New Zealand Maritime Museum, Auckland, New Zealand; Merton Heritage and Local Studies Centre, London Borough of Merton, England; Brent Cemeteries, London Borough of Brent, England; Episcopal Church of St Mary the Virgin, San Francisco, United States; British Columbia Archives, Royal British Columbia Museum, Victoria, Canada; L. Tom Perry Special Collections, Brigham Young University, Provo, Utah, United States; Bureau du Cimetière Uranie in Papeete, French Polynesia; Protestant Maohi parish of Papetoai, Moorea, French Polynesia; and the Digital Library Production Service of the University of Michigan, United States.

References to the article in the *Victoria Daily Colonist* on August 16, 1896 concerning WWB's exploration of Vancouver Island and the book *The Official Centenary History Of The Amateur Athletic Association* were found on the *Beyond Nootka* website, which is maintained by Lindsay Elms. Lindsay provided references to the articles in the *Victoria Daily Colonist* that were included in the second edition and WWB's poem in the *Victoria Daily Colonist* that was included in the fourth edition. He also collaborated on Part XV, *Exploring Vancouver Island*.

The photograph of WWB on the first page of this document, and scans of the *Province Exploring Expedition of 1894* and the *Province Exploring Expedition of 1896* in Part XV, are published with permission of the Royal British Columbia Museum.

The photographs of WWB and his family in Part I were provided by Christopher Pullen, via Elizabeth Bolton.

The photograph of Kilburn Lodge, where WWB was born, in Part I, was provided by Hilary LeClanche of Gestel, France, whose great-grandparents, Edward and Eliza Clifford, are recorded in the Census of 1871 as having lived there.

Margaret Pointer provided references to passenger lists for steamers departing from Auckland in 1921 and 1924, on which WWB's name is found, and to the articles and letters concerning WWB's visit to Auckland from Niue in August 1923, which were published in the *Auckland Star* and the *New Zealand Herald*.

And thank-you, Robynne Hayward, Margaret Pointer, Sean Lawson and Brian McArdle, for spotting the typos.

## CHRONOLOGY

- 1858 Born on July 3 in Kilburn, London, England, fourth child of Rev. James Bolton (1824–1863) and Lydia Louisa Bolton née Pym (c. 1827–1914), and brother of Robert Gambier (1854–1929), Francis James (1855–1858), Reginald Pelham (1856–1942), Mary Louisa (1860–1939) and James Beauchamp (1861–1863).
- 1863 WWB's father died on April 8, aged 39.
- 1864 Circa. WWB and family moved from Kilburn to Wimbledon, a district of southwest London, where WWB attended his first school, as a boarder.
- 1865 Agnes Jane (Lily) Bushby, wife of WWB, born on May 6.
- 1877 Admitted to Caius College, Cambridge, after schooling at Spencer House, Wimbledon and private tuition.
- 1879 British amateur champion in the half-mile footrace.
- 1880 Bachelor of Arts from Cambridge.
- 1881 Ordained deacon by the Bishop of Lichfield. Curate of Stoke-on-Trent until 1884.
- 1882 Ordained priest by the Bishop of Lichfield.
- 1884 Master of Arts from Cambridge.
- 1884 Missionary at Moosomin, Northwest Territories (now southeast Saskatchewan) and chaplain to the Rt. Rev. Adelbert John Robert Anson, Bishop of Qu'Appelle until 1886.
- 1886 Curate of Stoke-on-Trent until 1887.
- 1887 Rector of St Paul's Anglican Church in Esquimalt, British Columbia until 1889.
- 1889 Headmaster of St Paul's School, Esquimalt until 1890.
- 1889 Married Agnes Jane (Lily) Bushby on February 11.
- 1889 Daughter Vyvyan Muriel Bolton born on December 2 in Victoria.
- 1890 Minister at St Luke's Episcopal Church, San Francisco.
- 1890 Rector of Episcopal Church of St Mary The Virgin in Cow Hollow, San Francisco from February 1890 to February 1898.
- 1890 Circa. Visited Salt Lake City, Denver, Chicago and New York.
- 1892 Son Eric Ion Bolton born on February 1 in San Francisco.
- 1893 Son Arthur Gerard Bolton born on August 12 in San Francisco.
- 1894 First expedition to explore Vancouver Island in July and August.
- 1896 Second expedition to explore Vancouver Island in July and August.
- 1898 Returned to Victoria and taught at Mr Bolton's School.
- 1906 Co-founded University School in Victoria.
- 1910 Part of the Exploratory Survey Trip, which led to the establishment of Strathcona Provincial Park on Vancouver Island, with son Gerard Bolton.
- 1913 Travelled from Victoria to England via Seattle, Japan, China, Korea, Mongolia, Russia, Poland, Germany and Belgium, spending two months in England, and returned by steamer.

- 1914 WWB's mother died on January 26, aged 87.
- 1914 Journeyed down the Yukon River.
- 1920 Departed Victoria for Oahu and then New Zealand, roaming extensively in both.
- 1921 Arrived on Niue in June from New Zealand, via Tonga and Samoa, originally employed as temporary head teacher of Tufukia school, but instead was assigned to the school in Hakupu.
- 1924 Departed Niue and travelled to Australia, Lord Howe Island, Norfolk Island, the New Hebrides (now Vanuatu), New Caledonia and Singapore.
- 1925 Returned from Singapore to Victoria via steamer to become Headmaster of University School, after being contacted by the school while "roaming in the New Hebrides".
- 1927 Wrote *The Chronicles of Savage Island*.
- 1928 Departed Victoria for Tahiti.
- 1928 Began work on *Old Time Tahiti*.
- 1935 Published *The Beginnings of Papeete and its Founding as the Capital of Tahiti* in the Bulletin de la Société des Études Océaniques.
- 1936 Located the graves of early missionaries on Tahiti.
- 1937 First of his articles on the history of Tahiti and the South Sea published in the January edition of the Pacific Islands Monthly.
- 1938 Completed work on *Old Time Tahiti*.
- 1939 First story in *Tales of a Roaming Grandfather* sent to his grandchildren.
- 1941 Ninety-third and last story in *Tales of a Roaming Grandfather* sent to his grandchildren.
- 1944 Commemorated centenary of Henry Nott, pioneer missionary and scholar on Tahiti from 1797 to 1844, on May 22 at Ahu-Toru, Tahiti.
- 1945 Twenty-fourth and last article by WWB published in the September edition of the Pacific Islands Monthly.
- 1946 Died on Tahiti on July 28 and buried in the Uranie cemetery in Papeete.

In the notes that follow, the sources are given in footnotes. Text in square brackets within quotes have been added for clarification.

## DATE AND PLACE OF BIRTH

The year of WWB's birth is given as 1858 in four sources <sup>1, 2, 3, 4</sup> and on the headstone of his grave in Papeete, French Polynesia. Articles published annually in the Pacific Islands Monthly (PIM) from 1942 to 1946 referring to his 84th to 88th birthdays, which WWB, a frequent contributor to PIM,

---

<sup>1</sup> [\*Genealogical and Biographical Account of the Family of Bolton in England and America\* by Robert Bolton \(John A. Gray, New York, 1862\)](#)

<sup>2</sup> [\*Biographical History of Gonville and Caius College, 1349-1897, Volume II, page 429\*](#)

<sup>3</sup> [\*The Victoria, British Columbia Census of 1901\*](#)

<sup>4</sup> Spring 2002 edition of the St. Michaels University School bulletin, *School Ties*

would have read, imply that he was born in 1858.<sup>5</sup> The year of his birth in *Répertoire biographique de la Polynésie Française* is wrongly given as 1859.<sup>6</sup>

Three sources<sup>1, 2, 3</sup> and two articles in the *Pacific Islands Monthly* (August 1942, page 15; July 1943, page 9) give his birthday as July 3, while his headstone has July 5; the former is almost certainly correct. One article in PIM (August 1944, page 4) states that his birthday is in June.

Two sources<sup>1, 2</sup> gives WWB's place of birth as Kilburn, which is the borough of London where WWB's father, Rev James Bolton, was pastor at St Paul's Chapel, the first stating that WWB was born at Kilburn Lodge. However, another source<sup>4</sup> incorrectly states that he was born in the county of Staffordshire, which is in the West Midlands region of England. We know that WWB's father was ordained priest in 1849, became curate of St Michaels, Pimlico, an area of central London, in 1851, and from there went to St Paul's Chapel in Kilburn in 1852, where he was pastor until his death in 1863.<sup>1</sup> It is therefore certain that WWB was born in Kilburn, London.

WWB was baptised by his father at St Mark's Church, Hamilton Terrace, near Kilburn.<sup>1</sup>

## GENEALOGY

According to the *Genealogical and Biographical Account of the Family of Bolton in England and America*,

The Bolton Family is of an ancient British stock, the genealogy of which has been traced up to the Conquest [in 1066]. At this time it was in possession of great landed estates both in Yorkshire and Lancashire... Oughtred de Bolton, Lord of Bolton, by Bowland, in 1135 was the lineal representative of the Saxon Earls of Mercia.<sup>1</sup>

WWB represents the 22<sup>nd</sup> generation descended from Oughtred de Bolton. The Bolton family also has roots in the United States going back to 1718, when WWB's great-great-great-grandfather, Robert Bolton, who was born in England in 1688, moved to Philadelphia, Pennsylvania. WWB's great-great-grandfather, Robert Bolton, was born in 1722 and moved to Savannah, Georgia in about 1744. WWB's great-grandfather, Robert Bolton, was born in Vernonburgh, Georgia in 1757.<sup>1</sup>

WWB's grandfather, Rev. Robert Bolton, was born in Savannah on September 10, 1788, and went to England in 1808, then returned to the United States in 1836. He went back to England in 1850 and died in Cheltenham, Gloucestershire, on November 19, 1857.<sup>7</sup> His

fifth and youngest son was Rev. James Bolton [WWB's father], who was born at Weymouth, Dorset, February 11, 1824. He was twelve years of age when his father returned to America with the family, and young Bolton continued his education under the famous Dr. Muhlenberg, at College Point [in Queens, New York]. At the age of sixteen he returned to England, where he graduated from Corpus Christ College, Cambridge, in 1848. Having been ordained deacon, he was appointed curate of Saffron Walden in Essex. In 1849 he was ordained priest and two years later he became curate of St. Michaels, Pimlico. From there he went to St. Paul's, Kilburn

<sup>5</sup> See Part VII for all references to the *Pacific Islands Monthly*.

<sup>6</sup> *Tahitiens. Répertoire biographique de la Polynésie Française* by Patrick O'Reilly (Société des Océanistes N° 36, Paris, 1975, page 51). See Appendix III.

<sup>7</sup> WWB's wife, Agnes Jane (Lily) Bushby (1865–1944), visited England from 1916 to 1919 to be near their two sons, Eric and Gerard, who had enlisted in the Great War. She wrote letters to her daughter-in-law, Elizabeth Seymour Bolton née Booth (1890–1972), Eric's wife, at least one of which, dated September 5, 1916, was sent from Cheltenham (Elizabeth Bolton, pers. comm., January 2013).

[where WWB was born], where his most promising career was cut short by death on April 8, 1863. The “Dictionary of Biography” carries the statement that “as a preacher to children he has perhaps never been surpassed.” He wrote extensively, contributing to the “Family Treasury,” the “Sunday Scholar’s and Teacher’s Magazine,” and other juvenile publications. His published writings comprise some thirty-five volumes.

On June 30, 1853 [at St Michael’s in Pimlico], Rev. James Bolton married Lydia Louisa, daughter of Rev. William Wollaston Pym, rector of Willian, Herts, a member of an ancient Bedford and Hertsfordshire family. On her maternal side Lydia Louisa Pym was descended from a Huguenot family, the Gambiers; her great-uncle, Baron Gambier, was the founder of Gambier College in Ohio.<sup>8</sup> Like her husband, Mrs. Bolton possessed literary ability of no mean order, seven books, all of a religious nature, standing to her credit.<sup>1</sup>

WWB had two somewhat famous older brothers, the zoological photographer Robert Gambier Bolton (1854–1929) and the engineer, entrepreneur and historian Reginald Pelham Bolton (1856–1942).<sup>9</sup> The former travelled to the Hawaiian Islands, Japan, China, Java, the Malay Peninsula, Burma, India, and South Africa, and accompanied the Duke of Newcastle, Francis Pelham-Clinton-Hope (1866–1941), on his world tour of 1893–1894, during which the two of them visited WWB in San Francisco, while he was Rector at St. Mary the Virgin.<sup>10</sup> He also had two brothers who died in infancy, James Francis Bolton (1855–1858) and James Beachamp Bolton (1861–1863), and a sister, Mary Louisa Bolton (1860–1939).<sup>11</sup>

### WWB’s brother, Robert Gambier Bolton

<sup>8</sup> Lydia Louisa Pym’s mother, Sophia Rose Pym, née Gambier, was the sixth daughter of Admiral Samuel Gambier, brother of [Lord James Gambier \(1756–1833\)](#); thus Lord Gambier was WWB’s great-great-uncle.

<sup>9</sup> [Gambier Bolton on Wikipedia](#), [Reginald Pelham Bolton on Wikipedia](#).

<sup>10</sup> [The Cow Hollow Church / The first seventy-five years of the Church of Saint Mary the Virgin / San Francisco by Rev. Keppel W. Hill and Robert England \(no publisher, 1965\)](#)

<sup>11</sup> [James Bolton \(1824–1863\) on Ancestry.com](#). Headstone of Mary Louisa Bolton in Ross Bay Cemetery, Victoria, B.C. Mary Louisa Bolton was a pioneer in Saskatchewan with her husband, Henry Colin Cummins; see, for example, CBC’s [Tales on the Trail](#).

### WWB's brother, Reginald Pelham Bolton

In the April 1947 edition of the *Pacific Islands Monthly* (page 76), we read that

The history of the ‘Duff’ missionaries has been so ably told in the ‘PIM’ by the late Mr. W.W. Bolton, that there is nothing this writer may add, except this: The ‘Duff’, on her return voyage, discovered the group of islands to which the Captain gave the name ‘Gambier’, in honour of the great patron of the LMS,<sup>12</sup> Lord Gambier. Mr. Bolton — the historian of LMS missionary enterprise in the South Pacific — was a member of the family of that Lord Gambier.

WWB married Agnes Jane (Lily) Bushby (1865–1944) on February 11, 1889.<sup>13</sup> Lily Bushby was the daughter of Arthur Thomas Bushby (1835–1875)<sup>14</sup> and Agnes Douglas (1841–1928), the daughter of Sir James Douglas (1803–1877),<sup>15</sup> the second governor of the British colony of Vancouver Island from 1851 to 1864 and the first governor of the colony of British Columbia from 1858 to 1864. WWB and Lily Bushby had three children: Vyvyan Muriel née Bolton<sup>16</sup> (1889–1976),<sup>17</sup> Eric Ion Bolton (1892–1950) and Arthur Gerard Bolton (1893–1940).

The Victoria Census of 1901 has the information below for WWB's family, then living on Belcher Avenue. The information includes the date of the interview, family name, surname, gender, family status, marital status, date of birth, age, country of origin (and year of arrival in Canada) and church (CE = Church of England):

10/26/15 Bolton, William, m, head, m, 3 Jul 1858, 42, ENG, to Can: 1883, CE, Clergyman.  
.....Rems: 1900DIR: Bolton, Rev. W.W., collegiate school, 41 Burdette Ave, h.Belcher Ave.  
10/26/16 Bolton, Lily, f, wife, m, 6 May 1868, 32, BC, CE.  
10/26/17 Bolton, Vyvyan, f, dau, s, 2 Dec 1890, 10, BC, CE.  
10/26/18 Bolton, Eric, m, son, s, 1 Feb 1892, 9, USA, to Can: -, CE.  
10/26/19 Bolton, Gerard, m, son, s, 12 Aug 1893, 7, USA, to Can: -, CE.<sup>3</sup>

<sup>12</sup> London Missionary Society (LMS)

<sup>13</sup> [Victoria Daily Colonist, 12 February 1889, page 4, near top of the first column: Announcement of Bolton—Bushby marriage on 11 February 1889](#)

<sup>14</sup> [Arthur Thomas Bushby in the Dictionary of Canadian Biography Online](#)

<sup>15</sup> [James Douglas on Wikipedia](#), [James Douglas in the Dictionary of Canadian Biography Online](#).

<sup>16</sup> Her married names were Cummins and then Grant.

<sup>17</sup> Sources for the year of birth are given on RootsWeb [here](#).

Lily Bushby's baptismal record shows that she was born on May 6, 1865 and baptised on June 4, 1865, so her year of birth in the Census, 1868, implied that she was three years younger than she actually was. The year of birth of Vyvyan, which was 1889, also appears to have been mis-reported.

## KILBURN AND WIMBLEDON

At the time of WWB's birth, his father, Rev James Jay Bolton (born February 11, 1824 in Southdown Cottage, Weymouth, Dorset), was the pastor of St Paul's Chapel in Kilburn. WWB and all of his siblings were born in Kilburn Lodge.<sup>1</sup>

### Kilburn Lodge, Egdware Road, London

James Jay Bolton died on April 8, 1863, aged 39, when WWB was four years old, and is buried next to WWB's mother, Louisa Lydia Bolton née Pym, and WWB's two brothers who died in infancy, James Francis Bolton and James Beauchamp Bolton, in the Paddington Old Cemetery. In *After Thirty Years, Two Months at Home* in *Tales of Roaming*, WWB writes about his visit to Kilburn in 1913:

... God's Acre was still there, not turned into Breathing Spaces as others elsewhere, and St Paul's. I could have found my way blindfolded from the latter to the former for the way had been burned into my childhood's memory as from the one to the other my Father's body was borne amid sorrowing procession of citizens. Others of my own flesh and blood lie with him. That visit of the Wanderer returned belongs to him alone.

**James Jay Bolton (1824–1863)**

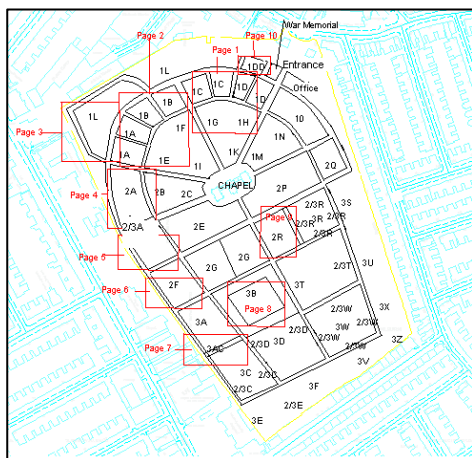

**Grave of WWB's parents, James and Louisa Bolton, and brothers  
James Francis and James Beauchamp.<sup>18</sup>**

According to [AIM25, Archives in London and the M25 area](#), the church of St Paul's on Kilburn Square was constructed in 1826 and enlarged between 1887 and 1894; in 1936 the church was united with Holy Trinity and the church was demolished.

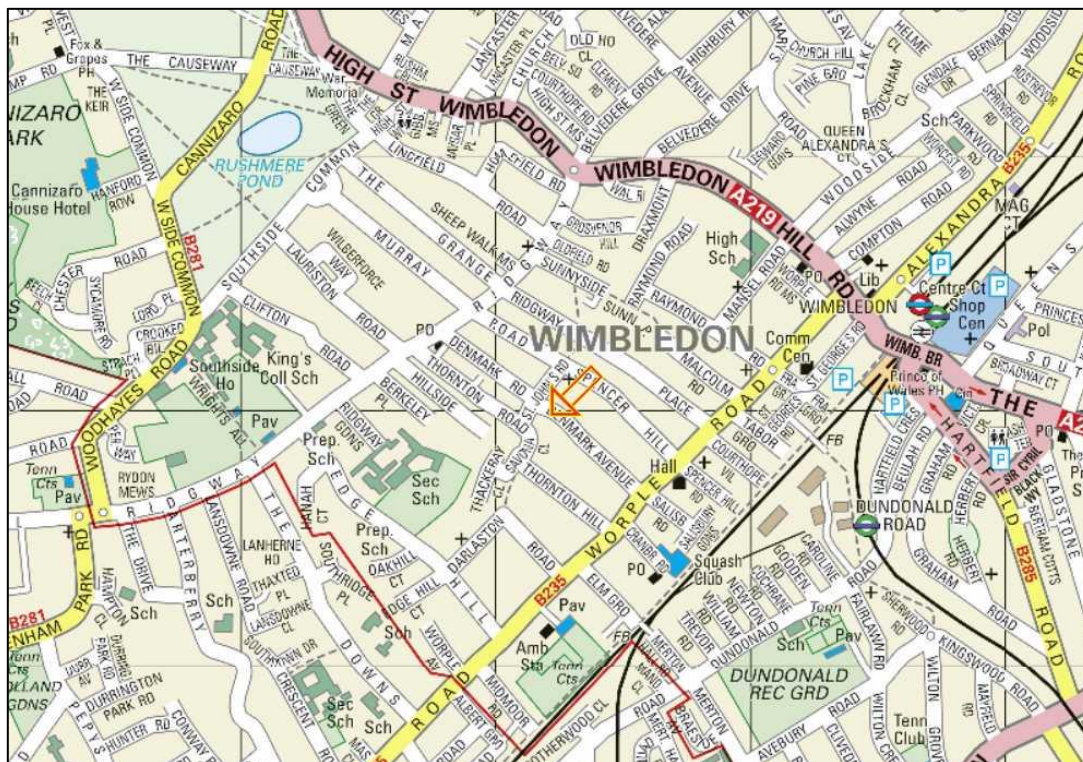

Information recorded during the England Censuses of 1871, 1881, 1891 and 1911 allow us to locate the residences of WWB's mother, Lydia Louisa Bolton, and family. Sometime after the death of

<sup>18</sup> The grave is in Paddington Old Cemetery, Section 1A, Grave N° 359:

WWB's father in 1863, she moved the family to Wimbledon, in the southwest of London, now part of the London Borough of Merton. The Merton Heritage and Local Studies Centre reports that, according to Trade Directories, the family lived at 4 Denmark Hill, between 1871 and 1874, and then from 1876 at 7 Thornton Hill (Gould, pers. comm., January 2013). The locations of the two houses are indicated by the red arrows in the street maps of Wimbledon below. The road that used to be called Denmark Hill is now two roads, Denmark Road and Denmark Avenue. Denmark Hill was named in honour of [Princess Alexandra of Denmark \(1844–1925\)](#).

The Merton Heritage and Local Studies Centre did not provide photos of the houses at the two addresses, but did provide photos of other houses of the area. They are all relatively large houses. The houses shown below are typical of Denmark Hill:

The houses shown below are typical of Thorton Hill:

\* Draw the pen through such of the words as are inappropriate.

husband in 1863. But it is doubtful that the estate of her husband contributed significantly to her annuity, since, although WWB's grandfather, Robert Bolton (1788–1857), was wealthy, he states in his will that:

I give, devise, and bequeath all that shall remain of my estate and property of every kind and description whatsoever, and wheresoever the same may or shall be situated, unto my beloved wife Anne for and during her natural life, and at and after her decease, or immediately upon my decease, if she should die before me, I give, devise, and bequeath the said estate and property to my seven daughters, Anne, Mary Statira, Arabella, Rhoda, Adelle, Adelaide, and Georgiana, or to each of them as shall survive one another, in equal shares, share and share alike, and as tenants in common to any real estate I may leave; to have and to hold the same to them, their heirs and assigns forever. <sup>1</sup>

That is, Robert Bolton's five sons — including WWB's father, James Jay Bolton — received nothing.

The England Census of 1881 shows that, by then, she had moved in with her son-in-law and daughter in Cornwall. There she lived at 13 Vogue Hill, Gwennap, with Henry Colin Cummins and Mary Louisa Cummins, aged 23 and 20, their daughter, Ethel Mary Cummins, seven months, and three servants. Shortly thereafter, the Cummins left their comfortable life in Cornwall to be pioneers in Saskatchewan. (Mary Louisa's son, Thomas Cecil Cummins, married his first cousin, WWB's daughter, Vyvyan Muriel Bolton, in Victoria, British Columbia, in 1910.)

Lydia Louisa Bolton then moved to Brighton, on the coast, south of London. In the Census of 1891, she is listed as a 'Visitor' in the household of the widow, Frances Butler, age 82, in Broadwater, Worthing, about 10 km west of Brighton. And in 1911, she was living at 23 Seafield Road, Hove, adjacent to the west of Brighton, with eight other occupants, one of whom, Elizabeth Child, a widow, age 44, is recorded as 'Letting Apartments'. This may have been her address when WWB visited her in 1913, during his trip to England, which he describes in *After Thirty Years, Two Months at Home*. Immediately upon his arrival in Dover in July 1913, he went to Brighton to see his mother, then age 87 and in declining health. She died on January 26, 1914 and was buried in Paddington Old Cemetery with her husband and two of her children who died in infancy.

The Merton Heritage and Local Studies Centre concludes:

The impression that we get from our material is that Lydia lived in a fair degree of comfort as a widow, having been left some sort of annuity (by her husband, relatives, or possibly the church in recognition of her husband's role). She later moved to live with her daughter, who seems to have married well. For whatever reason, in later life she appears to have resided as a boarder in fairly large properties (living on her own means — i.e., she had sufficient money to care for herself), rather than living with family. The 1911 Census refers to a property of at least 20 rooms — it is not clear whether this was a general boarding house, or a property where older residents were accommodated — however Brighton and Hove were large, thriving and genteel seaside resorts at the time in question — popular with respectable, wealthy travellers. (Gould, pers. comm., January 2013).

WWB almost certainly inherited part of his mother's annuity upon her death in January 1914, after which he began travelling for leisure, starting with his journey down the Yukon River in the summer of 1914.

## CAIUS COLLEGE

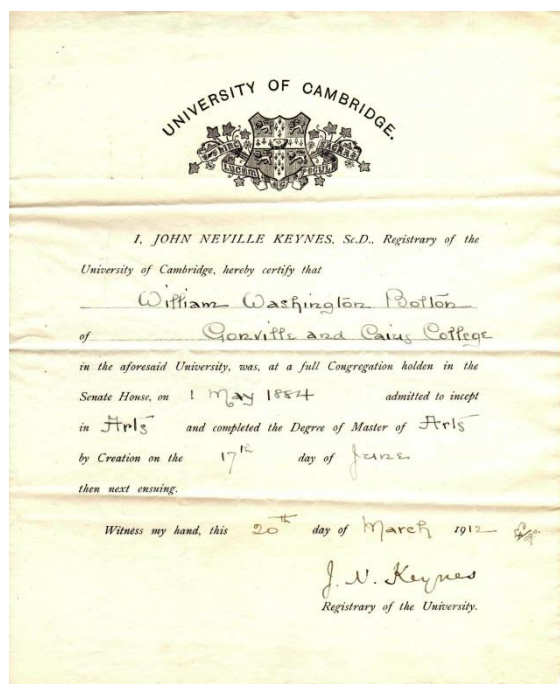

WWB attended Cambridge, as did his father. While at Caius College, Cambridge, WWB was president of the University Athletic Club. In the Spring 2002 edition of St. Michaels University School bulletin, *School Ties*, we read that

At Cambridge, his interests were equally divided between scholarship and sports. In 1879, he won the British amateur championship for the half-mile, and at the same period, set a record for the thousand-yard race. He was also a boxer, a footballer (both rugby and soccer), a long distance swimmer, and an ardent tennis player when that now universal sport was in its infancy. He was proud of being a Cambridge Blue, and a member of the Achilles Club of London, which is made of both Cambridge and Oxford Blues.<sup>4</sup>

The Spring 2003 edition of *School Ties* mentions that he had “an outstanding athletic career there”.<sup>20</sup> WWB’s other athletic achievements while at Cambridge are listed in *The Official Centenary History of the Amateur Athletic Association*.<sup>21</sup>

According to an article in the Victoria Daily Colonist of August 12, 1906, WWB played rugby for Blackheath in southeast London and other well known teams;<sup>22</sup> however, according to *After Thirty Years, Two Months at Home* in Part X, *Tales of Roaming*, WWB played for the Wimbledon Hornets against Blackheath and other teams.

### Master of Arts Degree, University of Cambridge

<sup>20</sup> Spring 2003 edition of the St. Michaels University School bulletin, *School Ties*

<sup>21</sup> [\*The Official Centenary History of the AAA\*](#) (*Amateur Athletic Association*) by Peter Lovesey (Guinness Superlative, United Kingdom. 1979).

<sup>22</sup> See Part VI for articles in the Victoria Daily Colonist.

## ORDINATION

The biographical note on WWB in *Répertoire biographique de la Polynésie Française* states “*N’est jamais ordonné* [Was never ordained].”<sup>6</sup> This conflicts with the *Biographical History of Gonville and Caius College*, which states that he was ordained deacon and priest by the Bishop of Lichfield — then William Dalrymple Maclagan (1826–1910) — in 1881 and 1882 respectively.<sup>2</sup> St. Michaels University School, *School Ties*, Spring 2002, also states that he was ordained in 1881.<sup>4</sup>

The Diocese of Lichfield was contacted by email in this regard and the Lichfield Diocesan Archivist replied that

The Diocesan Calendar (an annual Directory for the Diocese of Lichfield) shows that your great-grandfather [WWB] is recorded as having been ordained Deacon in September 1881 and Priest in September 1882. I attach a [PDF] file of the relevant pages from the 1882 and 1883 Directories (these details were always recorded in the following year’s publication). The ordinations will also have been recorded in the Bishop’s Register for the period. This is deposited at the Lichfield Record Office and they should be able to check it for you and maybe even supply a copy if the Register is not too difficult to copy. The relevant Register is deposit number B/A/1/34 (Episcopal Register Book 1877-1883). [M. Tonking, pers. comm., December 2009]

The sources of the information in *Répertoire biographique de la Polynésie Française* are not given; however, in addition to being wrong about WWB’s ordinations, it also states that WWB was born in 1859, rather than 1858; that Caius College is at Oxford, rather than Cambridge; and it also refers to the article by J.N. Hall in the *Pacific Islands Monthly* and repeats Hall’s error that WWB went to Niue when he was 67, rather than 62 (see *Teaching on Niue* below).

### William Washington Bolton, recently ordained

## MOOSOMIN

The entry in the Victoria Census of 1901 for WWB is “*Bolton, William, m, head, m, 3 Jul 1858, 42, ENG, to Can: 1883, CE, Clergyman*”,<sup>3</sup> which suggests that he went to Canada in 1883. However, *The Biographical History of Gonville and Caius College* states “*B.A. 1881 : M.A. 1884... Curate of Stoke on Trent; 1881–4, and 1886–7. Missionary at Moosomin, Canada, and chaplain to the Bp of Qu’Appelle, 1884–6.*”<sup>2</sup> The latter indicates that WWB remained in England until 1884, travelled to Canada that year, remained in Moosomin, in what is now southeast Saskatchewan, until 1886, then returned to England, where he was Curate of Stoke on Trent before traveling to Esquimalt, British Columbia, where he became Rector of St Paul’s Anglican Church in 1887.

The Directory of the Lichfield Diocesan Calendar for 1887 lists the clergy present at the end of 1886 and the number of years of their service in the Diocese. WWB is listed as Curate of Stoke-on-Trent, with two years of service in the Diocese, which suggests that he may have returned to England in 1885; however, the Directory for 1886 is not available to confirm this. He does not appear in the Directories for 1885 nor 1888, the latter confirming that he left Stoke-on-Trent in 1887. [Tonkin, pers. comm., February 2011]

The Diocese of Lichfield, where WWB was ordained, currently has a missionary partnership with the Diocese of Qu’Appelle, in which Moosomin is located. If the partnership dates back to the 1880s, then this would explain why WWB was sent to Moosomin. In this regard, the Lichfield Diocese Archivist notes that

It is harder to find paper evidence about the diocesan links with Qu’Appelle (which do continue today). It appears that Bishop Adelbert Anson (later a Canon at Lichfield Cathedral) was instrumental in forging a link between the two dioceses, becoming the first Bishop [of Qu’Appelle] in 1884. Bishop Adelbert was from the Anson family (later Earls of Lichfield) and appears to have encouraged the Lichfield Diocese to have a mission to Canada. However, this is not recorded at all as far as I can tell in the Directories, nor in the Diocesan magazine. This information comes from a Wikipedia article on Qu’Appelle, (which also hints that Lichfield eventually gave up putting up the money!) But, as I say, I cannot trace any diocesan records of this. [M. Tonking, pers. comm., February 2011]<sup>23</sup>

Other information we have regarding his period at Moosomin, a prairie farmer settlement, include in *A Brush With Wolves* in Part X, *Tales of Roaming* — a shorter version of which is Tale #67, *Of Wolves* — in which he describes how his toboggan, drawn over the snow by his two horses, was menaced by a wolf pack while out visiting other settlers in the area, and Tale #71, *The Squire*, about an English gentleman farmer whom WWB often visited.<sup>24, 25</sup>

The ‘Squire’ was Captain Edward Michell Pierce (d. 1888), who established Cannington Manor, southwest of Moosomin, in 1882. WWB is referred to in the section *The Settlement of Cannington Manor*, by Capt Pierce’s daughter, Lily (Mrs George Shaw Page), in the chapter *Life in Old Country Settlements* in the book *The Story of Saskatchewan and Its People*, Volume II (1924). We also know that WWB was the priest at St. Alban’s Church in Moosomin during 1884–1885 from *Moosomin Century One: Town and Country* (1981).<sup>26</sup>

<sup>23</sup> See *Churches* in [Qu’Appelle on Wikipedia](#).

<sup>24</sup> See Appendix I for the catalogue of the Bolton Papers in the Mitchell Library, Sydney, Australia.

<sup>25</sup> See Part IV for *Tales of a Roaming Grandfather*, which WWB wrote and sent from Tahiti to his grandchildren in Victoria.

<sup>26</sup> Regarding Moosomin, see [Moosomin on Wikipedia](#), [Anglican Diocese of Qu’Appelle on Wikipedia](#), [Adelbert John Robert Anson on Wikipedia](#), [The Settlement of Cannington Manor](#), and *Moosomin Century One: Town and Country*, page 97. Cannington Manor is now [Cannington Manor Provincial Historic Park](#).

As noted under *Kilburn and Wimbledon*, in 1881, WWB's mother, Lydia Louisa Bolton, lived in Cornwall with her son-in-law, Henry Colin Cummins, and her daughter, Mary Louisa Cummins. Sometime thereafter, the Cummins gave up their comfortable life in Cornwall and moved to Saskatchewan, where they were pioneers.<sup>27</sup> Their son Thomas Cecil Cummins was born on August 6, 1884, in Grenfell, Canada. So WWB's sister was living about 100 km away in Grenfell, in what is now Saskatchewan, during the period that he was in Moosomin, 1884–1886, although he makes no mention of this in his writings.

## ST PAUL'S ANGLICAN CHURCH, ESQUIMALT

WWB briefly describes his period as Rector of St Paul's Anglican Church in Esquimalt, British Columbia, Canada, 1887–1889, and his introduction to teaching, as Headmaster of St Paul's School, 1889–1890, in the third to sixth paragraphs of *Beginnings* in Part XII, *Memoirs of the Church of St Mary the Virgin, San Francisco*. Writing in the third person, WWB notes that "He found Teaching a real Pleasure. He was rusty, very, but it was now up to him to brighten up every cog and wheel of that Teaching Machine within him, a gift wholly unknown to him before. And yet the Pulpit had all along been a training ground, for he had never been a Preacher of mere homilies and exhortations, but from the very first had conceived the pulpit rather to be a platform from which ceaselessly to Teach his various congregations the Faith as handed down the Ages."

## EPISCOPAL CHURCH OF ST MARY THE VIRGIN, SAN FRANCISCO

Chapters 1 to 8 of *The Cow Hollow Church*<sup>10</sup> cover the period during which WWB was Rector of the Episcopal Church of St Mary The Virgin, from 1890 to 1898. WWB had moved to San Francisco early in 1890 and was received into the Diocese of California on March 15, 1890. Cow Hollow was within the Parish of St Luke's Church and in response to an increasing need for attention, the Rector of St Luke's, Rev. William W. Davis, appointed his new assistant, WWB, as Priest in Charge of the area, with the assignment of establishing a Mission of the Episcopal Church in Cow Hollow, building on the work of Miss Florence Gay, who had established a Sunday school in Cow Hollow in 1888. "On March 3, 1891, the organization of the Church of St. Mary the Virgin, was approved by the Standing Committee of the Diocese. It was admitted into union with Convention in April 1891, and was the ninth Parish in San Francisco..."

WWB had strong Anglo-Catholic leanings (although he insisted that he stood for Anglo-Non-Roman Catholicism) and these are described in an article in the San Francisco Chronicle of April 6, 1891:

The new Parish of St. Mary the Virgin has started on lines decidedly ritualistic. Whatever troubles may befall the new organization in the future, the question of "high church" or "low church" will not be one, for the people fully understand what to expect and have decided to stand by the Rector.<sup>10</sup>

---

<sup>27</sup> According to the CBC series, *Tales on the Trails*, [here](#) and [here](#), Mary Louisa Cummins first saw the home her husband had built in Saskatchewan after an exhausting journey from England. "I was about all in when we arrived at the homestead and at the sight of the home I had come to I burst into tears. Am I to live in that, I cried, quite forgetting how hard Colin must have worked to build that little wooden box... So there we were." She recalled the advertising campaign that brought her and her husband from England to the Canadian plains. "At the time, the CPR (Canadian Pacific Railway) was plastering the country with fascinating pictures of glorious wheat fields on the great prairies," she wrote. "There was a fortune for everyone in three years not to mention glittering promises of practically free land. Hopes were high. So we, poor fools, fell into the trap." These quotes may have been taken from her memoir, *How About It?* published by Thomas C. Pullen in 1975.

The relationship between WWB and Frank M. Pixley, editor and publisher of the newspaper Argonaut, is the subject of the Chapter 2 of *The Cow Hollow Church*, much of which is quoted from WWB's memoirs. (The memoirs were provided to the Church by WWB's daughter, Vyvyan Muriel Grant, in 1949; see Part XII.) WWB approached Pixley to request land on which to build a church. According to WWB, "*He [Pixley] had a national reputation because of his caustic pen... His pet and particular aversion was the clergy; the very sight of one set his teeth on edge and he was all for fight...*" Nevertheless, WWB was successful in his endeavours and after sufficient funds had been raised for its construction, the Church was opened with formal services on October 4, 1891.

In Chapter 7 of *The Cow Hollow Church* we read that

Certainly William Bolton was an unusual man. He was a devoted Cleric and a fine Rector, who, despite all the criticism and newspaper publicity concerning his churchmanship and his outspoken views on public matters, managed to establish this Church and see it grow.

And in Chapter 8,

Throughout his eight years at St. Mary the Virgin the Reverend William Washington Bolton was seldom out of the newspapers or the public eye. He was criticized for his stand on cremation, for his part in the cremation service for Frank Pixley and for his views on various issues of the day. When Gambier Bolton [and Francis Pelham-Clinton Hope, the] Duke of Newcastle-under-Lyme [sic, Lyne] was accompanied by Father Bolton on a photography foray into the zoo paddocks of Golden Gate Park, only to be chased by an unfriendly elk, the papers had a field day. When Father Bolton went exploring Vancouver Island with J.W. Laing and M.A. Oxen, this was duly reported as well. But probably the most controversial aspect of publicity and Father Bolton was in the area of his Anglo-Catholicism. This reached its peak in January 1897, when the Reverend Marshall Law of the Church of the Advent in Oakland scored Bolton for his practice of cleansing the chalice with his own lips...

WWB justified his practice with reference to a Rule 29 that "*specifies the almost universal practice which has been handed down from generation to generation.*"

According to *The Cow Hollow Church*,

Still the pressures continued and in January 1898, Father Bolton resigned as Rector of St. Mary the Virgin. He was in Vancouver at the time of making his announcement. He had been ill during the Christmas season of 1897, and was on holiday in Vancouver. While he named ill health for his reason, it was generally believed his often-criticized Anglo-Catholic leanings were the real reason for his leaving San Francisco.

In a quote from the San Francisco Examiner, WWB writes that

It is possible now that I have brought the church to its present standing, that an American priest may be of greater usefulness among the people. I shall always be an Englishman and I fear that this has at times operated against the success of my ministry.

## TRIP TO SALT LAKE CITY, DENVER, CHICAGO AND NEW YORK

While Rector of St Mary's in San Francisco, WWB was approached by a wealthy member of the congregation and asked to locate the man's young wife, who had fled to the eastern United States. For WWB's account of this adventure, see *Playing the Sleuth* in Part XII, *Memoirs of the Church of*

*St Mary the Virgin, San Francisco*. And for his account of his visit to Salt Lake City, see Tale #57, *Of Mormons (1)*, and Tale #58, of *Mormons (2)*, in Part IV, *Tales of a Roaming Grandfather*. For the approximate date of his trip, see Tale #57, *Of Mormons (1)*.

## EXPLORATION OF VANCOUVER ISLAND

The B.C. Archives, Call Number MS-2777, contains

Records relating to the Province Exploring Expeditions of 1894 and 1896 sponsored by the Province newspaper. The first expedition, under the Rev. W.W. Bolton, explored Vancouver Island from Cape Commerell to Woss Lake in the summer of 1894; the second, which was organized by John William Laing but led by Bolton, explored the area between Woss Lake and Alberni in 1896.<sup>28</sup>

Regarding the first expedition, the article of July 2, 1894 in the *Victoria Daily Colonist* states that

the intention is to traverse the island from one end to the other with the idea of exploring the unknown interior and afterwards publishing the results. The utmost reticence has been observed as to the details, and the members of the party are under promises of secrecy, so that of course it is impossible to say who is the promoter of the scheme. It has leaked out, however, that Rev. Mr. Bolton is to be the leader of the expedition, while J. A. McGee, of Snoqualmie, a well known timber cruiser, goes along as guide. A photographer and sketcher, Mr. T. B. Norgate, has been secured, and tidings of the progress made on the arduous journey will be sent to the outside world by means of carrier pigeons to be taken from Victoria. All the necessaries for the trip, including a small tent, will be packed on the backs of the men who, in addition will each carry a rifle. A peculiar and apparently comical feature of the dress is that plug hats are to adorn the heads of the hardy adventurers, as it is asserted that the glossy silk hat slips through the brush much easier than any other form of headgear...

Regarding the second expedition, in the article of August 16, 1896 in the *Victoria Daily Colonist*, we read that

Rev. Mr. Bolton had in 1894 made a trip from the north end of the island to Woss lake, and from Alberni to Victoria, and their present trip was for the purpose of exploring the island's interior from Woss lake to Alberni, so as to complete the tramp through the whole length of the island. Woss lake it may be explained is 100 miles north of Alberni. The party consisted of Mr. Laing, Rev. Mr. Bolton, Mr. Fleming, the photographer; C. W. Jones, a timber cruiser; and J. Garver, cook.

This trip is also described in article in the *Victoria Daily Colonist* of January 17, 1897 concerning a lecture given by Mr. Laing and WWB in San Francisco.

Regarding the establishment of the Strathcona Provincial Park, WWB's explorations of Vancouver Island are mentioned in *Strathcona Provincial Park Wildlife Viewing Development Plan* and we read that

In 1909, it was a common belief that a park was the key to transforming Vancouver Island into a tourist mecca. Public pressures and Rev. Bolton's enthusiasm for the Buttle Lake area caused

---

<sup>28</sup> [Records of the Province Exploring Expeditions of 1894 and 1896 in the British Columbia Archives](#). See Appendix IV and Part XV, *Exploring Vancouver Island*.

the Hon. Price Ellison to take his perilous journey in 1910, to determine whether or not the centre of attractions might not well be located there. Receiving a favourable report from Ellison, the Legislature, on March 1st, 1911, set aside a triangle of land, approximately 160,000 hectares, under the Strathcona Park Act...<sup>29</sup>

WWB met Lord Strathcona in person when the latter visited the University School on September 3, 1909.<sup>22</sup>

WWB participated in the 1910 Exploratory Survey Trip, which preceded Ellison's "*perilous journey*" mentioned above, together with his son Gerard Bolton, who was 19 years old at the time.<sup>30</sup>

The 1894, 1896 and 1910 expeditions are described in detail in Chapter Two, Early Explorations, 1894–1910, of *Beyond Nootka* and in three articles by WWB and J.W. Laing published in *Overland Monthly* and *Out West Magazine*.<sup>29,31</sup>

## MR BOLTON'S SCHOOL, 1898–1906

The Spring 2002 edition of *School Ties* states that in 1898, WWB "*returned to Victoria to start a small school for boys at his home on Belcher Ave.*"<sup>4</sup> That WWB resided on Belcher Avenue is confirmed by the Victoria Census of 1901.<sup>3</sup>

In *The Cow Hollow Church* (page 23), we read that "*After leaving St. Mary the Virgin, Father Bolton went to St. Barnabas Church on Belcher Avenue, Victoria, B.C., where he served for several years as the Headmaster of a Church School for Boys.*"<sup>10</sup> The parish was founded in 1880, but the current St. Barnabas Church at 1525 Begbie Street was constructed in 1951; there is no information on the Church's website regarding previous locations.<sup>32</sup>

The Victoria Census of 1901 also has the remarks "*1900DIR: Bolton, Rev. W.W., collegiate school, 41 Burdette Ave, h.Belcher Ave.*", which suggests that in a 1900 directory, he was listed as being at the Collegiate School on Burdett Avenue, while still residing on Belcher Avenue.<sup>3</sup> WWB mentions "Collegiate School" in Tale #48 (see University School below), but does not say whether he worked there.

In *Victoria Landmarks* by Barry F. King and Geoffrey Castle (G. Castle and B.F. King, 1985), we read (page 39) that "*One of the important criteria used when a home receives heritage designation is consideration of noteworthy former occupants. Trafalgar, at 649 Admirals Road, is no exception. The rambling colonial-type structure with dormers and extensive verandahs stands in half an acre overlooking Esquimalt Harbour. It was built in 1900 for Reverend William Bolton, founding principal of University School (now St. Michaels University School). His wife, Agnes Jane (Bushby) was a granddaughter of Sir James Douglas, who founded Fort Victoria in 1843. Bolton was a life-long athlete and celebrated his 85<sup>th</sup> birthday with a 40-mile hike.*"

<sup>29</sup> [Information in the British Columbia Archives and the "Strathcona Provincial Park Wildlife Viewing Development Plan" by April L. Maurer \(Parks Library, Government of British Columbia, March 1989\), relating to WWB's explorations of Vancouver Island.](#)

<sup>30</sup> ["Beyond Nootka, a Historical Perspective of Vancouver Island Mountains" by Lindsay Elms \(Misthorn Press, Courtenay, British Columbia, 1996\).](#)

<sup>31</sup> See Part XV, *Exploring Vancouver Island*.

<sup>32</sup> [Saint Barnabas Anglican Church](#)

In 1903, the Collegiate School was located at The Laurels, 1249 Rockland Avenue. The name of Rockland Avenue was changed from Belcher Avenue in 1905.<sup>33</sup>

According to the Victoria Census of 1901, Rev. John William Laing, with whom WWB explored Vancouver Island in 1896, was the Principal at the Collegiate School in 1901. The list of the occupants residing at the school includes Rev. Laing, his wife, a teacher, a matron, five students aged 11 to 16, a Chinese cook and a Chinese servant:

06/15/01 Laing, John W., m, head, m, 1 Apr 1853, 46, SCT, to Can: 1896, CE, School master.  
 .....Rems: 1900DIR: Laing, Rev. J.W., principal Collegiate School, 41 Burdett Ave  
 06/15/02 Laing, Ethel M., f, wife, m, 13 Jan 1876, 34, ON, CE.  
 06/15/03 Muskett, Henry S., m, teacher, s, 5 Mar 1866, 35, ENG, to Can: 1892, CE, School master.  
 06/15/04 French, Emma, m, matron, s, 15 Jun 1868, 32, ENG, to Can: 1888, CE, Matron.  
 06/15/05 Ellinge, Charles, m, student, s, 12 May 1884, 16, USA, to Can: 1900, CE.  
 06/15/06 Stebbins, Prescott, m, student, s, 19 Apr 1889, 11, USA, to Can: 1900, Psb.  
 06/15/07 Stebbins, Hory, m, student, s, 8 Apr 1893, 8, USA, to Can: 1900, Psb.

 06/15/09 Armytage, Jeffrey, m, student, s, 17 Jul 1886, 14, BC, CE.  
 06/15/10 Sam, -, m, dom, s, 7 Oct 1870, 30, CHN, to Can: 1884, -, Cook.  
 06/15/11 Tai, -, m, dom, s, 14 Dec 1882, 18, CHN, to Can: 1896, -, Servant.<sup>3</sup>

A classified ad in the January 27, 1907 edition of the Victoria Daily Colonist under “Educational” reads

Collegiate School / For Boys, Victoria, B. C. / Head Master / J. W. Laing, Esq., M. A., Oxford / Assisted by three Graduates of the Recognized Universities of Great Britain and Canada. Moderate terms for boarders and day scholars. Property consists of five acres, with spacious school buildings, extensive recreation grounds, gymnasium. Cadet corps organized. // Easter Term will commence on Monday, January 7th, 1907, at 2:30 p. m. // Apply to Head Master<sup>34</sup>

According to John Adams in *Old Square Toes and His Lady* (Horsdal & Schubart, Victoria, 2001), Sir James Douglas’ son, James Jr., attended the Collegiate School from November 1860 to about March 1862, when he left Victoria to attend school in England.

In a review of private education establishments that appeared in the August 12, 1906 edition of the Victoria Daily Colonist, *Mr. Bolton’s School* is described, without any reference to either the St. Barnabas Church or Collegiate School.

## YUKON RIVER

WWB describes his travel along the length of the Yukon River in Canada, from Whitehorse to the Bering Sea by boat, with a companion whom he met in Whitehorse, in *Alaska and the Yukon* in Volume 1 of the Bolton Papers — a shorter version of which is Tale #72, *The Klondike*. He does not give a date, but it was inspired by the gold rush of 1897. “*That wild gold rush had fascinated me for years.*” In Chapter X, he states that “*We made but 80 miles the first 24 hours, when (after another struggle with a sandbar) we reached “Hot Springs”.* A dozen years back, Alaska yielded up this secret

<sup>33</sup> [Heritage walking tour of the Rockland neighbourhood in Victoria, British Columbia](#)

<sup>34</sup> [Victoria Daily Colonist, 27 January 1907, page 7, seventh column](#)

*and men claim for them medicinal qualities and have made of them a health resort.”* He may be referring to [Manley Hot Springs, Alaska](#), which was discovered in 1902. If so, then WWB’s trip down the Yukon took place in 1914.

He covered 6,000 miles in six weeks, first travelling by steamer from Seattle to Skagway via Prince Rupert, Ketchikan and Juneau. *“We ran along the coast of Vancouver Island, and all day long I was passing over familiar waters, and noted peaks on the island to which I had climbed, pack on back in years gone by.”*

Then overland from Skagway to Whitehorse, where he looked for a vessel. *“The day came when Hopkins and I started down the Yukon. We had a 12 ft flat bottom boat, brand new, made of rough lumber and built in a day.”*

He describes each of the places he passed on the way, including Hootalingua, The Lewes, Big Salmon River, Little Salmon, Carmacks, Yukon Crossing, Minto, Fort Selkirk, Selwyn, Coffee Creek, Stewart City, Dawson (where he left Hopkins with the flat bottom boat and took a steamer), Fort Reliance, Forty Mile, Coal Creek, Eagle City, Fort Yukon, where the Porcupine River joins the Yukon, Fort Hamlin, Rampart City, Mission and Tanana, where the Tanana River joins the Yukon. Then up the Tanana to Fort Gibbon, Hot Springs, Sutherland, Minto, Nenana, Chena and Fairbanks. Then to the Bering Sea passing by Koyukuk, Malakoff, Nulato, Kaltag, Anvik, Holy Cross, Russian Mission and Andreaofsky, and reaching the Bering Sea at Kotlik. From there, they travelled along the coast to Nome, where he took a steamer homewards. *“We passed from the sea to the ocean between Unimak and Unalaska.”*

## UNIVERSITY SCHOOL

In 1906, WWB co-founded the University School (now St. Michaels University School) in Victoria, British Columbia, Canada, with Mr James Clark ‘Barney’ Barnacle. Then in 1908, Queen’s School in Vancouver moved to Victoria and amalgamated with University School. J.C. Barnacle was Headmaster from 1906 to 1923. WWB was Warden from 1906 to 1920 and Headmaster from 1925 to 1928. The Headmaster of Queen’s, Capt. Rupert Valentine Harvey, was Warden from 1908 to 1914. University School and St. Michael’s School amalgamated in 1971.<sup>4, 20</sup>

In Tale #48, *On Leaving School*, we read that

The first school in Victoria, long, long years ago, long before there were such places as Public Schools, was ‘The Collegiate’. It had its Ups and Downs. At one time it was like a candle blown out, it disappeared. Then all of a sudden Up it came again. That was a strange thing for a school to do — like a Jack-in-the-Box. That old School was below the Cathedral near the large tide - swamp now filled up, and for games the boys had to go Beacon Hill. It was alive when we thought it was time that Victoria should have a really large school, with large buildings and large playing grounds, much larger all round than the Collegiate. Now what should be its Name? We thought of many but none seemed quite the thing. Then it came into my head “What is larger than a College? Why of course a University”, and they agreed with me that that would be an excellent name, so it was adopted.

A classified ad in the January 27, 1907 edition of the Victoria Daily Colonist under *Educational* (page 7, immediately below the ad for the Collegiate School quoted above under School for Boys, 1898–1906) reads

University School / For Boys / Oak Bay Avenue, Victoria, B. C. / Day and Boarding School / Excellent accommodation for boarders: Chemical Laboratory, Workshop, Manual Training, Gymnastics, Boxing, Football, Cricket, etc. / School re-opens Monday, January 7th, 1907, at 9:30 a. m. / Apply for Prospectus to / Rev. W. W. Bolton, / J. C. Barnacle, / Principals. / Phone 1320.

According to the *Directory of Vancouver Island, 1909*, WWB and family resided at Ewyger house on Admiralty Road in Victoria (and his phone number was B726).

## TRIP TO ENGLAND IN 1913

WWB describes his trip to England in *Letters from Japan, Across Siberia* and *After 30 Years Two Months at Home* in Part X, *Tales of Roaming* — shorter versions of which are Tales #39, #40, #41, #43, #51, #52 and #54. He had left England for the first time in 1884 and for the second time in 1887, and returned in 1913 to visit his mother, then living in Hove, near Brighton, on the south coast, shortly before she died in January 1914, aged 87.

He first went by steamer from Seattle to Japan, where he stayed for perhaps two or three weeks to explore. Then he left Japan in May 1913 (one of the rare dates that appear in WWB's writings) and continued on by steamer to Shanghai. After visiting Nanjing, which he visited in June as per the date on Plate 7 in *Tales of a Roaming Grandfather*, he continued by steamer from Shanghai to Pusan, South Korea. From Korea he travelled by rail across Korea to Changchun, China, where he changed trains for Harbin, China, where he caught the Trans Siberian Express coming from Vladivostok. The train took him across Mongolia, then Siberia via Lake Baikal, Irkutsk, Tomsk, Omsk, Chelyabinsk and the Monument of Tears, which marks the boundary between Europe and Asia (so-called because that is where the exiles from the USSR entered Siberia on their way to the gulags). Then to Samara, Moscow, where he visited the Kremlin, Brest in Belarus, Warsaw, Berlin, Cologne, Brussels and finally Calais, where he took a ferry to Dover... "*and I stood again on England's soil after Thirty Years A' Roaming.*"

On his arrival in Dover in July, he went straight to Brighton to see his mother. Then WWB, very much the Londoner, spent most of his two months in England in that city, staying at his 'Club'. His detailed account of his visit to London in *After Thirty Years, Two Months at Home*, is an excellent guide to the city in which he points out many places that not even the Londoners of his day knew about. He visited Kilburn and Wimbledon, and also the estates of his maternal family, the Pymys, in the *Three Counties* of Hertfordshire, Bedfordshire and the *Light Blue County* (Buckinghamshire).

Regarding his return to Victoria, he writes simply "*From thence to steamer and the other side of the world.*" He would have returned in about September. Volume 2 is signed "*Vancouver Island 1913*", so he finished writing about his trip by the end of the year.

## DEPARTURE FOR THE GREAT SOUTH SEA

Regarding his departure from Victoria in 1920, the Spring 2003 edition of St. Michaels University School *School Ties* states that "*He was warden of University School until 1920, when he left for the South Pacific to be Inspector of Schools for the New Zealand Government*". WWB certainly inspected the schools on Niue for the New Zealand government, while working there as a teacher from 1921 to 1924. However, in Volumes 6 and 7 of the Bolton Papers, he wrote that the trip to Honolulu was the

only part of his journey that he had planned beforehand and that he was “*roaming*” while in New Zealand; he makes no reference to working as an Inspector of Schools in New Zealand.

WWB may have been influenced by his older brother, the nature photographer Gambier Bolton, who travelled to many places that WWB would eventually visit (see Genealogy above).

In Tale #93, he wrote “*Long years ago, ere I started my far roaming, I read a book entitled ‘White Shadows of the South Seas’ written by an American named O’Brien...*” This book was originally published in 1919, a year before his departure. One reviewer of this book writes that

The book sold like hotcakes in the early 1920s and a movie of it won an Oscar in 1928. I suspect, however, that a lot of the popularity of the book was due to photographs of undraped Polynesian women and hints of sexual delights. One of the female characters is named ‘Vanquished Often’. This is pretty racy for 1921, the stuff that escapist dreams were made of after the horrors of World War I...<sup>35</sup>

Later in Tale #93, WWB wrote that “*Having tested that author [O’Brien] in that [a description of the Darling Trail near Papeete] and many another description I must needs confess — and those who knew him here [Tahiti] cordially agree — that for effect he was given to exaggeration and oftentimes to romance.*”

In Tale #92, he also referred to *Typee* by Herman Melville and *In the South Seas* by Robert Louis Stevenson, but does not mention whether he had read them prior to his departure.

## FROM VICTORIA TO NIUE

WWB’s travels during 1920 and 1921, prior to reaching Niue, are described in Volumes 6 and 7 of the Bolton Papers and several of the Tales. In 1920, he travelled by steamer to Honolulu, which he explored in some detail “*during my many months stay.*” [Tale #55] While on Oahu, he walked from Honolulu to the northwest coast of the island, following the roads along the east and north coasts, and then returned on the road which passes through the centre of the island.

From Oahu, he travelled to New Zealand, passing by Canton Island in the Phoenix group, Futuna and Alofi in the French territory of Wallis and Futuna, and stopping at Suva on the island of Viti Levu in Fiji. Arriving in Auckland, he then travelled extensively in New Zealand, primarily by train.

While in New Zealand, he was offered the post of teacher on Niue (see *Teaching on Niue* below). A memorandum from the Secretary of the Cook Islands Department of the New Zealand government in Wellington to the Resident Commissioner on Niue, informing the latter of WWB’s appointment as teacher (with a salary at the rate of £350 per annum), is dated 24 January 1921 and must have been written immediately after WWB was offered the job.<sup>36</sup>

From Auckland, he travelled to Samoa, visiting Nuku’alofa, Vava’u and Niuafo’ou (Tin Can Island) in Tonga on the way. The ‘Shipping’ section of the Auckland Star dated 26 February 1921 lists “W.W. Bolton” as a passenger on the Union Company’s steamer, *Navua*, which departed from Auckland that afternoon for “Suva and the Western Pacific Islands.”<sup>37</sup> While in Samoa awaiting transport to Niue, he was also employed as a teacher, at the Malifa school in Apia (#25, #30). A memorandum from the Administrator of Western Samoa to the Resident Commissioner on Niue, dated 25 April 1921, states

<sup>35</sup> [Review of “White Shadows of the South Seas” on Amazon.com](#)

<sup>36</sup> Documents provided by the Niue Public Library (Amanda Heka, pers. comm., September 2003).

<sup>37</sup> [Auckland Star, Volume LII, Issue 49, 26 February 1921, page 6.](#)

that “Approval is given to the employment of Mr. W.W. Bolton, M.A., while waiting for transport to Niue. Mr. Bolton will be paid at the rate of £360 per annum, during his employment as assistant master, commencing from 14th March 1921 until the 9th April 1921.”<sup>36</sup>

Also, we know that he was in Samoa on March 17 because he visited Robert Louis Stevenson’s grave on Mount Vaea on Saint Patrick’s Day. [Tales #27, #28]

In Volume 6 of the Bolton Papers, a work about his travels in Hawaii, New Zealand, Tonga and Samoa entitled “*En Voyage*,” he states on page 293 that he travelled on the British sloop *HMS Veronica* from Samoa to Pago Pago, American Samoa and then, on page 295, he went direct to Niue, but he does not give the dates.<sup>38</sup>

We know from a newspaper article and a University of Canterbury Master of Arts (History) thesis that the *HMS Veronica* landed at Niue on 14 May 1921 in response to the murder of a policeman that took place in April 1921.<sup>39, 40</sup> Upon that landing, the memorandum dated 24 January 1921 (see third paragraph above) was delivered. In response, the next day the Resident Commissioner of Niue sent a memorandum to the Secretary, Cook Islands Department, dated 15 May 1921, which states that “*Your memorandum of the 24<sup>th</sup> January last notifying the appointment of Mr. W. W. Bolton as temporary head teacher of Tufukia School came to hand yesterday and the contents noted. Mr. Bolton has not yet arrived in Niue.*”<sup>36</sup> However, the last five words of this text are almost illegible on a photocopy and the text should be verified with the original.

It would have been strange for the *HMS Veronica* to leave Apia for Pago Pago and Niue in April or May 1921 without WWB, given that he had been waiting for transport to Niue for months, but perhaps this is because the ship did not travel to Niue from Apia on that occasion, but from elsewhere. This is suggested by the University of Canterbury thesis, which states regarding the murder that “*News of this incident was intercepted by HMS Veronica which then rushed to Niue. Twenty rifles were landed to aid the guard and two suspects were found and later transported to New Zealand aboard HMS Chatham.*” The word *intercepted* suggests that the ship might already have been at sea when it obtained the news of the murder by the wireless message mentioned by WWB in Chapter V of *The Chronicles of Savage Island*, where he writes that “*from Samoa hastened a man-of-war after a calling vessel had ‘wirelessed’ the news and need to the world outside.*”

In a letter dated 28 June 1921 from the Resident Commissioner to the Minister for the Cook Islands, the former states “*I have the honour to inform you that Mr. W.W. Bolton, the recently appointed headmaster sent by you to this Island arrived in Niue by H.M.S. Veronica on the 12th last and took over his duties the following day.*”<sup>36</sup> The second digit in the text “12th” is somewhat unclear and should be verified; however, it would appear that the *HMS Veronica* returned to Niue, with WWB, on 12 June 1921.

The first correspondence from WWB while on Niue is a two-page handwritten letter in which he proposed to teach at the government school in Hakupu, rather than at the government school at Tufukia; it is addressed to the Resident Commissioner and is dated 16 June 1921.<sup>36</sup> We know that he “*took over his duties the following day*” after his arrival and that he spent one day in Hakupu “*to size up the scholastic situation, to see the Teacher’s proposed Abode, the school building the villagers had erected and specially to meet Hakupu’s Council for a discussion of the future.*” [See Chapter VI,

<sup>38</sup> He also describes his travel from Apia to Pago Pago on the *HMS Veronica* in Volume 7 of the Bolton Papers; see *In Luck* in Part XI, *Roaming the Pacific Waters*. In *Pago Pago* in Part XI, he states that his stay in Pago was four days, during which he stayed aboard the *Veronica*.

<sup>39</sup> [Arrival of HMS Veronica at Niue on 14 May 1921](#)

<sup>40</sup> See page 16 of [Felicity Caird \(1987\), \*The Strategic Significance of the Pacific Islands\*, University of Canterbury](#)

*Hakupu*, in *The Chronicles*.] So it is entirely reasonable that he could have written the letter only four days after his arrival on 12 June 1921.

However, WWB's arrival on Niue on 12 June 1921 is contradicted by two sources. The first source is Tale #8, *On Niue's Call*, in *Tales of a Roaming Grandfather*, in which he writes "News came to Samoa by canoe! that a terrible murder had taken place on Niue and would the Government please send a Man-of-War quickly. There was one — the *Veronica* — there at the time. So off it went — and I on board. That was How I went to Niue, on a Warship of His Majesty's." This would imply that he arrived on Niue when the *HMS Veronica* landed on 14 May 1921, rather than when it landed on 12 June 1921. However, here he contradicts his own account in Chapter V of *The Chronicles*, where he states that "a calling vessel had 'wirelessed' the news" and not that the news "came to Samoa by canoe." Perhaps he embellished this story for the grandchildren.

The second source is the story "The Old Trader" in WWB's book, *The Chronicles of Savage Island*, about Robert Henry Head, in which he states that "I missed him by just one month."<sup>41</sup> According to the website of The Church of Jesus Christ of Latter-Day Saints, Head died on 5 February 1921, which would suggest that WWB arrived on Niue in March 1921, rather than on 14 May or 12 June 1921.<sup>42</sup> The record on the website also states: "Record submitted after 1991 by a member of the LDS Church." Either the date is wrong or WWB was mis-informed, or perhaps WWB was embellishing.

In *Niue*, in Part XI, *Roaming the Pacific Waters*, he states, "It was Sunday noon when I was called to the Bridge to get my first glimpse of my Island Home." This suggests that WWB landed on 12 June 1921, a Sunday, rather than 14 May 1921, a Thursday.

## TEACHING ON NIUE

We have three descriptions of the circumstances of his applying for the teaching position on Niue. First, in an article published in the *Atlantic Monthly*, Volume 173, Number 6, June 1944, entitled "Mr. Bolton's Birthday. A True Story", and reprinted in the February 1945 edition of *The Strand* and again in the *Pacific Islands Monthly* in June 1947,<sup>43</sup> James Norman Hall,<sup>44</sup> Bolton's American friend on Tahiti (and co-author with Charles Nordhoff<sup>45</sup> of the 1932 novel *Mutiny on the Bounty*), writes that

he [WWB] chanced to read an article in an Auckland paper that a teacher was wanted for Niue, a lonely little island dependency of New Zealand, 600 miles west of Rarotonga and 350 miles southeast of Samoa. Mr Bolton was then sixty-seven, and really thinking about retiring, but when he learned that the Niue post was not wanted by others because of its remoteness, he immediately offered his services, gratefully accepted by the Minister of Education.<sup>46</sup>

In fact, WWB was sixty-two, not sixty-seven, when he was appointed teacher on Niue in January 1921. This error by Hall was subsequently quoted in the St. Michaels University School bulletin, *School Ties*, Spring 2002, which appears to have been the source for part of the biography of WWB on the website of the book *Beyond Nootka*, and *Répertoire biographique de la Polynésie Française*.

<sup>41</sup> See Part II.

<sup>42</sup> The link to Robert Henry Head on [FamilySearch.org](https://www.familysearch.org) is dead.

<sup>43</sup> This story was also summarised in the article "Ex-Victorian, W. Bolton, 85, Walks 40 Miles," in *The Daily Colonist*, Victoria, B.C., June 30, 1944.

<sup>44</sup> [James Norman Hall \(1887–1951\)](#)

<sup>45</sup> [Charles Nordhoff \(1887–1947\)](#)

<sup>46</sup> See *The Late Mr. Bolton of Tahiti* in Part VII, *Articles By and References To WWB in the Pacific Islands Monthly*.

Also, WWB was offered the job by Sir Maui Pomare, then Minister in charge of the Cook Islands, rather than the Minister of Education.<sup>47</sup>

Second, in Tale #8, *Of Niue's Call, New-Ay*, WWB writes

The Niueans had appealed to New Zealand — which Protects them from all possible enemies — for education for their children. Hakupu (har-koo-poo) begged hard. They said they had 100 children longing to be taught and they had raised a large building as the schoolroom. Please send a Teacher. The Government told them that they should have what they wanted, but when they asked for a volunteer they could find no one at all willing to go. It was too lonely. I was then roaming amid the lovely scenery of New Zealand and read of the difficulty, so hastened to the Capital and asked the Ministers if they would let me answer Niue's Call. They were very much surprised at my request but very kind. They said that they feared the life there would be too hard and unpleasant for me but I told them that I was strong and hardy and would love to teach native children though I had never done so before. So all was settled and I said that I would give 2 years of my life to them — perhaps more if the children were not by then ready for someone else who would find a house prepared by me for a Teacher with wife and children, so as not to be really lonely. That was Why I went to Niue.

Third, in Volume 6 of the Bolton Papers, pages 135 and 137, WWB writes

There were yet many spots in the North Island [of New Zealand] alone inviting a call, the Bay of Islands, Kaipara one of the Cities of Refuge — alike with the Hawaiians in this custom — the towns of Napier and New Plymouth, whilst in the South Island were The Lakes, The Southern Alps, Milford Sound [in] Fiordland, the Goldfields and the towns of Christchurch and Dunedin : but unexpectedly the Island of Niūē called for a Teacher and having offered to go, I must needs away, for boats are rare to that lonely isle and Samoa is the handiest place to find one.

Further, in the tribute to the work of WWB in the September 1947 edition of the *Pacific Islands Monthly*, the author recounts how

On one occasion, he [WWB] told me [Eric Ramsden], he approached the late Sir Maui Pomare, then Minister in charge of the Cook Islands, for the post of schoolmaster at Niue. "What are your qualifications?" inquired the Maori Minister. The latter's degree, by the way, was American. "MA of Cambridge," replied the applicant. Recalling the incident years later when we met in Tahiti he remarked: "That satisfied him. I obtained the job!"<sup>47</sup>

WWB signed the Return of Attendance for the Hakupu school on 31 March 1924.<sup>36</sup> Plates 1 and 6 in *Tales of a Roaming Grandfather* are dated April 1924 and these are the last documents available regarding his presence on Niue.

WWB's efforts on Niue are referred to in the following letter to the editor of the *New Zealand Herald*, dated 30 June 1922,<sup>48</sup> concern reading materials sent to Niue from New Zealand:

<sup>47</sup> See *The Good Work of Late W. W. Bolton* in Part VII, *Articles By and References To WWB in the Pacific Islands Monthly*.

<sup>48</sup> [New Zealand Herald, Volume LIX, Issue 18130, 30 June 1922, page 5.](#)

## “NEVER SEEN A COW”

Sir, —

In reply to Mr. E. B. Vaile's letter under the above heading, I beg to state that “the erroneous ideas” which he quotes are from the writings of Mr. W. W. Bolton, the schoolmaster at Hakupu, the chief of the 11 villages of Niue, to whom I am referring Mr. Vaile's letter for more particular reply. As to reading matter, we send only a few fiction magazines. We send, by request, the Nineteenth Century, the National Review, and like publications. We furnish the world's news as it may be gleaned from English, Scottish, Canadian, Indian, South African, Australian, and U.S.A. newspapers as our shelves afford. We send instruction books on knitting, crocheting, and needlework for the womenfolk of the officers stationed on the island. For the Islanders we send, also by request, hymn books, for which they have a passion and of which there must by now be a weird collection there; simple hymn and song tunes; occasionally animal picture and ample reading books; and pictorial matter not required for home use.

Miss Juniper, who recently passed through here after a stay at Niue, gave a very graphic description of the arrival of the cases which she witnessed last December, describing the excitement as the contents were revealed. She assured me there was a use for everything the cases contained. These cases are received by the Resident Commissioner and sent to Mr. Bolton to deal with, and they have, by the way, to be dragged a long distance through the bush to the master's house. Niue contains 4000 people, of whom about 20 are whites. Mr. Bolton is a university man, and I judge him to be one of those unappreciated Imperial dreamers on the outskirts of the Empire to whom Britain already owes so much, and of whose type she was never in greater need than today. If our humble parcels contribute one iota to the fulfilling of his visions, he must have them: their cessation would be a tragedy in the little world of Niue.

A friend contributed to the shipment alluded to 50 small scrap books made from Christmas cards; on their receipt Mr. Bolton promptly set to work and manufactured 50 more from whatever material was to hand so that each child in his village received one for a Christmas-box. These booklets they carried round with them everywhere and perused them in church during the sermon; the parents got their chance while the children were in school doing lessons. We have already received an advance order for 100 this time.

H. Basten  
Hon. Sec. Mayoress' War Memorial Library Committee

During his stay on Niue from 1921 to 1924, WWB returned to Auckland at least once. From the Auckland Star dated 3 August 1923: <sup>49</sup>

## LIFE IN NIUE

## THE VALUE OF GIFT BOOKS

At the conclusion of the formal business at the annual meeting of the Mayoress' War Memorial Committee yesterday Mr. W. W. Bolton, of Niue, entertained the members

<sup>49</sup> [Auckland Star, Volume LIV, Issue 184, 3 August 1923, page 8.](#)

with a most interesting chat about life at that lonely place. He gave a graphic word picture of this island, which he said was a solid mass of coral, with a soil covering of from one to two inches deep, notwithstanding which trees, including our own kauri, shrubs and vegetation flourished exceedingly, and the bush was almost impenetrable. There were 4000 natives, including about 800 children, and 24 white people. He expressed the deepest appreciation of the pictorial matter sent, and described how each Friday, when school was dismissed, each child was presented with a sheet of pictures from an illustrated paper, which they carried into the village, and after excited perusal they would come back to ask the meaning of what they saw. At Christmas he had been able to present each of the 800 children with a card, and in his own village with a little scrap book as well. Niue now had in its chief village quite a nice library, the literature for which had come from the Mayoress' War Memorial Library Committee. Some of the pictorial matter sent he passed on to the hospital, and finally went to their solitary leper. He spoke feelingly of the pleasure afforded by the receipt of a parcel of cushions sent to the nurses by the Trained Nurses' Association from Auckland. He followed this with an appeal for a gramophone to take back with him from the citizens of Auckland. Throughout the speaker stressed the value of the influence on the native mind when they realised these were the free gifts of their white friends far away.

The financial statement presented showed receipts for the year £328 17/11, and expenditure £187 6/8. The credit balance at the bank was £205 19/4.

And regarding horses, and those cows, on Niue, a letter to the editor by WWB was published in the New Zealand Herald the next day, 4 August 1923: <sup>50</sup>

#### LIFE ON NIUE

Sir,—

I regret that through a misunderstanding, an error crept into the otherwise excellent report of my address upon Niue given at the meeting of the Mayoress' War Memorial Library Committee. That error related to the live stock of Niue Island, it being stated in the report that there were only two horses there. There are certainly only two horses that are fat and well-favoured, these being fed on imported hay and oats. One is the Government's horse, the other belongs to the missionary, but the natives have many, no village being without them. They are a sad and sorry sight, however, their bones stick almost through their hides, and they look as though they could not draw a baby carriage. The S.P.C.A. would certainly put on deepest mourning at the sight of them!

With reference to the cow mentioned, exception was taken some time ago in the Herald to the statement that some of the children had "never seen a cow," but it must be remembered that the reference was to children of tender years only. Certainly within the limits of the present school age, such a bovine animal has never been landed on the island, and what happened to the last bunch of steers is on record. It was an adventure and a failure, for several of them died promptly, owing to the distribution of poison to kill wandering pigs, but which also reached higher game. Owing to their being no proper feed — the so-called grass is but un-nutritious, weedy staff — the remainder were quickly slaughtered, and the dealer found himself a sadder and a wiser man. There is a record of

---

<sup>50</sup> [New Zealand Herald, Volume LX, Issue 18469, 4 August 1923, page 7.](#)

a cow whose death took place some 20 years ago, and cattle have undoubtedly been seen, as the above statements show, but to the children, they are but a tradition of their elders.

W. W. Bolton

And in regard to the gramophone, the following letter was published in the New Zealand Herald dated 18 December 1923:<sup>51</sup>

#### GRAMOPHONE FOR NIUE ISLAND

Sir,—

A few months ago a visit was paid to Auckland by Mr. W. W. Bolton, M.A., who has charge of a school at Niue Island. Among other things he thanked our Mayoress and the members of her committee for many gifts of books, etc., and he came to me for some pictures and went away happy. He made one other request: "There is one thing above all that we desire for our hospital — a gramophone and some records." So I placed the request before the Rotary Club and eventually, per favour of Rotarian Charlie Nathan, was passed along to Mr. S. Coldicutt of the E. and F. Piano Company, who presented a new machine. Records were provided by several Rotarians; A. B. Wright and Sons carted the goods to the wharf free of charge and the mate of the Kaeo undertook the delivery at Niue, where they were landed before the ship went to pieces on a reef. I have just received a letter of thanks from Mr. Bolton. I should like to ask, through the columns of your paper, if any of your readers have any records that they would like to donate? Any old thing will be appreciated; I am sure that many people have records that they are tired of hearing; that are relegated to the bottom shelf and never see the light of day, some perhaps that are scratched. They will all be joyfully accepted and sent along to our isolated "foster-children" to whom they will give great delight. A ring to 'phone 2316A or a postcard to Box 1374 and I will gladly collect all that are offered.

A. S. Antiss

## HISTORICAL RESEARCH ON NIUE

During his three years on Niue, WWB wrote down the island's history and traditions based on stories he obtained from five of the elders. Until that time, the only systematic study of Niue's history and traditions had been conducted by Stephenson Percy Smith,<sup>52</sup> who founded the Polynesian Society in 1892 and was Government Resident on Niue for five months in 1902. The result of WWB's efforts was a book entitled *The Chronicles of Savage Island* — Savage Island being the name given to Niue by James Cook upon his finding the island in 1774. The book, which WWB completed in 1927 and copied in 1931, is currently available in its original handwritten form in the Mitchell Library in Sydney, part of the State Library of New South Wales, together with the other writings by WWB that are collectively known as the Bolton Papers. *The Chronicles* consist of seven sections: *The Island in General*, *Tales of Today*, *Tales of Yesterday*, *Tales of Romance*, *Folk-Lore*, a bibliography and an appendix (see Volumes 9–15 of the Bolton Papers).

At the beginning of the bibliography, we find the following:

<sup>51</sup> [New Zealand Herald, Volume LX, Issue 18585, 18 December 1923, page 6.](#)

<sup>52</sup> [Stephenson Percy Smith \(1840–1922\)](#)

## Note :

D<sup>r</sup> E. M. Loeb of the Bishop Museum Staff arrived on Niue during my residence, measuring skulls. Naturally at his request I gave him freely of my information. On his return I am told of “The History and Traditions of Niue” from his pen without any acknowledgement of the source thereof. The world is full of strange people.

Edwin Meyer Loeb <sup>53</sup> was a Lecturer at the University of California in Berkeley, under Professor A.L. Kroeber, and was funded by the Bishop Museum in Honolulu while on Niue. He arrived on 25 August 1923 and remained on the island for about seven months, departing on 17 March 1924. He was about 29 years old at the time. *History and Traditions of Niue* was published in 1926 as Bulletin 32 of the Bernice Pauahi Bishop Museum. <sup>54</sup>

Many of the stories documented in *History and Traditions of Niue* are also found in *The Chronicles of Savage Island*. The question therefore arises regarding the extent to which Loeb may have used information that he obtained from WWB, without acknowledging his source. In an attempt to answer this question, the text of those stories that are found in both works were compared; see Part III, *Did E.M. Loeb Use Information Obtained From W.W. Bolton in History and Traditions of Niue?*

The only reference to *The Chronicles of Savage Island* that was found online was on page 195 in Thomas Ryan, 1981, Fishing in transition on Niue, *Journal de la Société des océanistes*, Vol 72–73: 193–203. <sup>55</sup>

## FROM NIUE TO VICTORIA

The chapters of Volume 7 of the Bolton Papers, on his travels prior to arriving on Niue, are in the order of his travels, i.e., Oahu, Fiji, New Zealand, Tonga and Samoa. WWB’s itinerary following his departure from Niue can therefore be surmised from the order of the chapters in Volume 8 of the Bolton Papers, on his travels after his departure from Niue, which is as follows: the Kermadecs, Tasmania, Australia, Lord Howe Island, Norfolk Island, the New Hebrides, New Caledonia and Singapore.

From *The Lonely Isles* in Part XI, *Roaming the Pacific Waters*, we know that he went to Auckland after leaving Niue, visiting the Kermadecs on the way. However, from the ‘Shipping’ section of the Auckland Star dated 30 May 1924, we know that he left Auckland on that date on the *Marama*, bound for Sydney, rather than Hobart. <sup>56</sup> And in *Launceston on the Tamar* in Part XI, he mentions crossing the Bass Straits from Melbourne, and in *New Norfolk* in Part XI, he states that he “*had lately been exploring the Jenolan Caves in the Blue Mountains back of Sydney*”, so, contrary to the order of the chapters, he visited Sydney and Melbourne before visiting Tasmania.

He departed Niue April 1924 <sup>57</sup> and returned to Victoria to become Headmaster of the University School sometime during 1925. In Tale #50, he writes “*I was roaming in the New Hebrides when word reached me that my helping hand was needed amongst you [at the University School].*”

<sup>53</sup> [Edwin Meyer Loeb \(1894–1966\)](#)

<sup>54</sup> [“History and Traditions of Niue” by Edwin M. Loeb, Bishop Museum Bulletin 32 \(Bernice P. Bishop Museum, Honolulu, 1926\). 230 pages, 5 figures, 12 plates, 1 folded map](#)

<sup>55</sup> [Reference to The Chronicles of Savage Island on page 195 in Thomas Ryan, 1981, Fishing in transition on Niue, Journal de la Société des océanistes, Vol 72–73: 193–203.](#)

<sup>57</sup> See *The Kermadecs* in Part XI, *Roaming the Pacific Waters*.

## TAHITI AND HISTORICAL RESEARCH

Regarding his move from Victoria to Tahiti in 1928, the articles in St. Michaels University School *School Ties* states that he “*returned to the South Seas, collecting historical material for the French government*”<sup>4</sup> and “*he returned to the South Pacific to work for the French government*”.<sup>20</sup> His relationship with the French government, if there was one, is not clear. Hall states that after W.W. Bolton’s arrival,

He had rested for perhaps a week when he became interested in Polynesian history as it concerns Tahiti. So he started tramping the island over, exploring the sites of ancient buildings, and the scenes of ancient happenings, reading neglected manuscripts, making researches that no one before had had the energy or the interest to make.<sup>46</sup>

This would suggest that he conducted his historical research in only a personal capacity. In any case, in 1935 he published *The beginnings of Papeete and its founding as the capital of Tahiti*<sup>58</sup> and at some point deposited two handwritten volumes of his research with the British Consulate in Papeete.  
24, 46

In Tale #50, *Of the Lure of the Great South Sea*, he writes

So when I returned [to Victoria in 1925] to be again among my own dear flesh and blood and friends overwhelmed me with their kindness there was ever ringing in my ears a Cry from the Great South Sea. It was those loveable natives of Polynesia calling ‘Oh! Come back! Come back! You belong to us now and we want you.’ Day and night that Cry could not be silenced. I knew that it would have so to be, that somehow, somewhere amongst them, there was work for me to do: but it must not be till my helping hand was no longer needed which would have been to desert my Duty, and Duty comes First in your and my life, even above Love. Having seen far stronger, abler hands than mine take the helm, that longing, lonesome Cry had right of place for the years that might still be mine. To serve others, especially those below your own grade and standing will I hope ever be your Joy too. So I took ship once more, and sailed away down South to those Isles of Perpetual Sunshine whose Lure had gripped me in its arms from which there was no escape. As with me, so it has been with countless others. If it be your lot in years to come, may it be to like perfect happiness. Though it may mean loss of Country and of Home, of lifelong friends and loved ones, all in measure is made up for, not in wasted years of idleness but in useful and unselfish work for others who need you in your Old Age.

In a letter to WWB’s grand-daughter dated 3 February 1970, Robert Langdon,<sup>59</sup> the first Executive Officer of the Pacific Manuscripts Bureau, writes

I have always had a great respect for your grandfather, W.W. Bolton, since discovering his papers in the Mitchell Library in the early 1950’s while doing research for my book on Tahiti [*Tahiti, Island of Love*, 1959].

While on Tahiti, W.W. Bolton wrote numerous articles on Pacific island history for the *Bulletins de la Société des Études Océaniques* and the *Pacific Islands Monthly*.

<sup>58</sup> See Part VIII, *Articles By WWB in Bulletins de la Société des Études Océaniques*.

<sup>59</sup> [Robert Adrian Langdon \(1924–2003\)](#)

In recognition of his historical work, the London Missionary Society gave W.W. Bolton a steel engraving of the oil painting *The Cession of Matavai*.<sup>60</sup> The painting itself was a gift from the LMS to Captain James Wilson, commander of the ship *Duff*, which took the first missionaries to Tahiti in 1797. W.W. Bolton subsequently presented the engraving to the British Consulate in Papeete.

Regarding his residences on Tahiti, according to his story *Across Tahiti Afoot* in Part XIII, *Roaming In the Great South Sea*, his home in 1928, the year he arrived, was the Diadème; that is, the Hôtel du Diadème (left), which was previously the Hôtel de France (right), rue du Rivoli (since 1941, avenue du Général de Gaulle), Papeete.

He then appears to have moved to a bungalow on Papeete's waterfront. In *My Canary Bird* in Part XIV, *Tahitian Vignettes*, he writes, "... I invited him to share my home... from which no finer view of lagoon, of sea, of mountains... is to be had on the waterfront of Papeete." In *La Maison de Santé* in Part XIV, *Tahitian Vignettes*, we read that "Adjoining my onetime residence on the waterfront of Papeete is a charming bungalow..." and "He brought his Scarlet Woman to a bungalow two doors past mine..."

In *Papeete's Waterfront* in Part XIV, WWB describes the waterfront as extending in a half-moon shape from the industrial area on the far right, as one faces the sea, past the quay for the liners, the seawall where the schooners and yachts docked. Further along, "[t]he American Consulate is here and the Post Office, with a charming little park alongside, with abundant shade trees and moveable seats, whilst far along, past many a little bungalow, one comes to the native Church and the British Consulate, where the waterfront proper ends." The bungalows would therefore have been

somewhere between the current Hôtel Tiaré Tahiti — the site of the American consulate for almost a century until the 1960s — and the Paofai Temple, in the vicinity of the Paofai Gardens, which are shown in this Google map.

<sup>60</sup> See *Gift of an engraving of the "Cession of Matavai" from the London Missionary Society to W.W. Bolton and Light On a Half-Forgotten Incident of Early Tahiti* in Part VII, *Articles By and References To WWB in the Pacific Islands Monthly*.

In *Gauguin in the South Seas* (1965), Bengt Danielsson describes bungalows near the Paofai Gardens and diagonally opposite the Paofai Temple. These may well have been the bungalows referred to by WWB. Danielsson describes how they came to be rented out (page 133):

The enterprising and business-like lady who had recently [1893] gone in for renting houses in this new way was a Madame Charbonnier. She had arrived in the island in a rather unusual manner. Some time in the 1860s, when still very young, she had been picked up by the *police de mœurs* of Paris in a street of ill repute. With many of her unfortunate sisters, she had been deported ‘for rehabilitation’ to the penal colony of New Caledonia, where there was chronic shortage of women among convicts. On the voyage out, however, she had shrewdly decided that it would be better to be rehabilitated somewhere else, and she had managed to get ashore in Tahiti. The change of environment, together with her energy and initiative, had produced such remarkable results that in course of time she had acquired a valuable plot of land in Papeete. On this she built five small houses, with two rooms and a verandah, which she rented out, mainly to government officials and army and naval officers — that is, to persons with a steady income.

The approximate location of Madame Charbonnier's five bungalows, according to the map on page 63 of Danielsson (1965), is shown in this Google map.

In *Atolls of the Sun* (1920), Frederick O'Brien writes (page 447) that he spoke with Madame Charbonier when he went to see the glass doors that Gauguin had painted in one of the bungalows. That was in 1913, twenty years since she had built the bungalows and fifteen years before WWB's arrival in Papeete.

From his reference in *Papeete's Waterfront* to Marmaduke Grove — the Chilean colonel who escaped from exile on Easter Island and passed through Papeete in about 1931 — we know that WWB lived on Papeete's waterfront at that time. From the term “onetime” in *La Maison de Santé* in regard to his residence on the waterfront, and the text “It [La Maison de Santé] was burned to the ground... I had moved to the countryside years previously,” we can infer that he subsequently moved to a third residence.

According to Norman Hall's article, *The Late Mr. Bolton of Tahiti*, in the June 1947 edition of the *Pacific Islands Monthly*, in Part VII, which was first published in the *Atlantic Monthly* in June 1944, when WWB was 85, WWB lived in the district of Pirae, which is adjacent to the eastern boundary of Papeete, the Fautaua River. His house was down a lane and had steps leading up to a verandah. His garden was called *The Bower*.

In Tale #1, *His Highness*, in Part IV, *Tales of a Roaming Grandfather*, he states that “To one side below [the pigsty in his garden] a steep bank runs the Hamutu brook...” This is probably the Hamuta River, which runs through the Lycée Polyvaent de Ta'aone in Pirae.

In Tale #15, *Of Troubles*, he states that “The other side of the Hamutu rushing mountain rivulet is a Dairy farm where cows and horses graze and also mules.”

In Tale #77, *Of the Bower*, he states that “the site on which it stands was part of a large Sugar Plantation, the hills and rows were very evident and no small task to level. Later the whole acreage was planted with coconut palms in ordered row...” “The Highway with its auto traffic night and day is half a mile away. Quiet reigns the day long and at night I can only hear the babbling brook (The Hamutu) by the side of my dwelling as it makes headlong for the sea or the roar of the breakers as they thunder against the reef.”

*The Bower* was probably on the waterfront of Pirae, where he heard the “roar of the breakers”, and beside the Hamuta River, in what used to be the sugarcane plantation of Taaone, <sup>61</sup> which was in the vicinity of what is shown as *Aora'i Tini Hau* on the map below. The *Highway*, at the time, was probably the Avenue Ariipaea Pomare, which is about a half mile away. <sup>62</sup>

© Copyright Google 2014

The photograph below, which shows the possible site of WWB's home in Pirae, was taken in October 2014.

<sup>61</sup> See [the sugarcane plantation of Taaone on Tahiti Heritage](#).

<sup>62</sup> According to the [Ville de Pirae](#), the larger, and much closer, Avenue Charles de Gaulle (the road in yellow on the map above, which becomes Avenue du Prince Hinoi further to the west) was constructed in the period between 1960 and 1975.

Not much remained of the Hamuta ‘River’, which is found to the right of the house (behind the sandbar in the photo above).

But there were still pleasant views of the mountains and the ocean.

In his letter of March 7, 1939 to his grandchildren, Jane Elizabeth Bolton and Gerard Patrick Bolton, in Victoria, British Columbia, Canada, <sup>63</sup> WWB states his return address as ‘Taaroa, Pirae, Tahiti’. *Ta‘aroa* is the supreme creator god in the mythology of the Society Islands. <sup>64</sup> *Taaroa* is now found to be a given name of Tahitians, a family name, the name of a lodge on Tahiti, and the name of the Taaroa Race, a *va‘a* competition, which sometimes departs from Taaone Beach (pictured above) by the Hamuta. In his address, it may refer to the name of his residence or may possibly be a synonym for the Ta‘aone area of Pirae.

<sup>63</sup> See Part V, *Letters by William Washington Bolton*.

<sup>64</sup> [Ta‘aroa on Wikipedia](#)

## TALES OF A ROAMING GRANDFATHER

From August 1939 to November 1941, he wrote stories about his travels in the South Pacific and elsewhere, and sent them to his two grandchildren in Victoria. There are 93 stories in *Tales of a Roaming Grandfather*.

He refers to his upbringing in England in several Tales (#3, #5, #6, #83, #90). Regarding his travels in North America, he wrote about Moosomin (#17, #67, #71), Victoria (#48), Utah (#57, #58), Vancouver Island (#81) and the Yukon (#26). Regarding his travels from Victoria to England in 1913, he wrote about Japan (#39, #40, #41, #43), Nanking (#51), Korea (#52), Siberia (#52, #54) and Moscow (#68).

Regarding his travels in the Great South Sea (and not to be referred to as the ‘South Seas’ — see Tale #7 and the note on Volume 8 of the Bolton Papers in Appendix I below) from 1920 to 1925, he wrote about Oahu (#55, #56), New Zealand (#27, #33, #54), Samoa (#8, #23, #25, #27, #28, #30, #34, #38, #53, #66), Tonga (#19, #26, #31), Niue (#8, #12, #29, #44, #45, #46, #47), the Kermadec Islands (#7), Tasmania (#8), Australia (#7, #11, #36, #73), Lord Howe Island (#74), Norfolk Island (#59, #91), New Hebrides (now Vanuatu, #10, #86), New Caledonia (#85, #89) and Singapore (#75).

Regarding the period from 1928 until the last story was written in 1941, during which he lived in French Polynesia, he wrote about French Polynesia in general (#61, #63), the Austral Islands (#80), the Gambier Islands (#60), the Marquesas (#92), Moorea (#5, #18, #21, #64), Tahiti (#1, #2, #3, #4, #5, #6, #9, #11, #12, #13, #15, #16, #17, #18, #20, #21, #22, #24, #32, #37, #54, #62, #65, #70, #77, #78, #81, #87, #88, #93) and the Tuamotos (#11, #76, #79, #82).

He also wrote about Java (#8, #69) and the Trobriand Islands in Papua New Guinea (#26), which he probably visited while traveling in Australia in 1924–1925. He also wrote about Easter Island (#4) and Nauru (#31), but apparently never travelled to either.

## BIRTHDAY HIKE ON TAHITI

There are references to lengthy hikes that W.W. Bolton took on Tahiti on his birthdays when he was in his eighties. In Tale #62, *Of Our Birthday*, he refers to a walk that took place on his 82nd birthday from his residence, through Papeete, to a friend’s “*sumptuous bungalow*”, and which he states as being both 25 miles and 40 kilometres long, round trip.

In the August 1944 edition of PIM (page 9), we read that “*Mr. W.W. Bolton, well-known British resident of Tahiti, celebrated his 86th birthday in June by a coastal hike of about 40 miles. Needless to say, his health is excellent.*” (However, his birthday is in July, rather than June.)

In the November 1945 edition of PIM (page 29), we have “*Mr. W.W. Bolton, a well-known scholar, of Papeete, Tahiti, recently celebrated his 87th birthday by taking a moonlight stroll to Maraa Cave — a place 18 miles distant from his residence.*”

In the May 1946 edition of PIM (page 9), we read that “*Mr. W.W. Bolton, MA, of Papeete, Tahiti, has now reached his 88th birthday; and, in a recent letter, he says that he is ‘still happily going strong.’ He celebrated his 87th birthday — and the end of the war in Europe — with a 40-miles hike, in one day.*” In fact, in May 1946, WWB was still 87. The “40-miles hike” refers to the stroll to Maraa Cave mentioned in the November 1945 edition, which, being 18 miles distant from his residence, would have been a 36 mile round trip.

Hall states in his article that W.W. Bolton took a 40 mile hike on his 85th birthday.

Finally, in the September 1946 edition of PIM (page 12), we read that “[a]fter he passed 80, Mr. Bolton celebrated his birthdays by going off on a long hike, through the delightful countryside.”

Hall also remembers W.W. Bolton telling him that he celebrated his 25th birthday, in 1883, with a 60 mile walk, which he accomplished in 24 hours, 20 hours actually walking.

## HEADSTONE

W.W. Bolton died on Tahiti and is buried in the Uranie Cemetery — also called Pauranie Cemetery, from Pa, meaning *Fort*, and *L’Uranie*, the French corvette active during Tahiti’s War of Independence, 1844–1847 — at the front of the second level, in the only grave that faces the ocean.

### Grave of William Washington Bolton, Papeete, Tahiti, French Polynesia

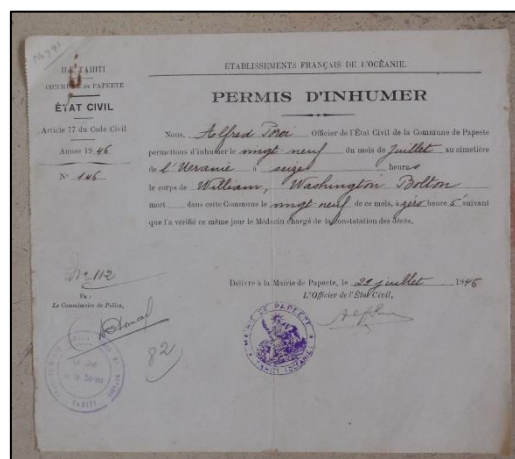

**William Washington Bolton's headstone**

Both the dates of birth and death on the headstone are wrong. His birthday was almost certainly July 3, 1858 (and not July 5) and, according to the obituary in the September 1946 edition of PIM, he died on July 28, 1946 (and not on July 29, 1947). And the apostrophe is missing in *Journey's*.

**William Washington Bolton's *Permis d'Inhumer*, dated 29 July 1946**

## APPENDIX I. BOLTON PAPERS IN THE MITCHELL LIBRARY

The list below is from the 'Catalogue of Manuscripts of Australia and the Pacific in the Mitchell Library, Sydney. Series A: Manuscripts catalogues between 1945 and 1963 (1967).'

### 1-7A

#### **Bolton, W.W.**

A3357–A3377

Papers, being partly his own work and partly copies of other manuscripts and of printed material, sometimes with annotations. MS. and typescript. Ill. Maps. [The Bolton Papers were donated by WWB's daughter, Mrs Vyvyan Muriel Grant of San Leandro, California in October 1952. The writings concerning WWB's memoirs of the church of St. Mary the Virgin in San Francisco were conveyed to the church in 1949 (Church of Cow Hollow, page 23).]

21v.

Typed list of books and MSS. copied is filed in the Mitchell Library Bibliographic Folder. Title pages or lists of chapter headings are provided by W. W. B. together with an index to Old Time Tahiti

#### *Contents*

v. 1	'Tales of roaming' 1913	A3357
v. 2	'After thirty years. Two months at home.' 1913	A3358
v.3–4	'Tahitian vignettes' 1922?–42. Mainly reminiscences of people. Includes copy of a letter from National Maritime Museum 1938 re authenticity of Bounty anchor at Papaoa	A3359–60
v. 5	'Roaming in the Great South Sea' 1926	A3361
v. 6	'En voyage'	A3362
v. 7–8	'Roaming the Pacific waters' 1926 partly rewritten from A3359 and A3360	A3363–4
v. 9–12	'Chronicles of Savage Island' 1927. 4v. With bibl.	A3365–8
v.13–15	<i>The same</i> 1931	A3369–71
v. 16	Young, J. L.—'Atimaono, an account of the rise and fall of the Tahiti Cotton and Coffee Plantation Co Ltd, 1863–73' written by J. L. Young 1928 and copied by W. W. Bolton	A3372
v. 17–19	'Old time Tahiti, 1928–38'. With bibl. 3v. Volumes 2 & 3 are transcriptions	A3373–5
v. 20	'Pioneer missionaries of Tahiti: transcriptions of extracts from printed books 1815–24 and MS. journals kept by L.M.S. missionaries 1796–1820'	A3376
V. 21	'Inter alia' 1940? Notes and transcriptions of extracts	A3377

For most volumes, the contents of the Bolton Papers are given in greater detail below:

**Volume 1.** Tales of Roaming. 1913. All text handwritten on odd-numbered pages. Letters from Japan (page 3). Across Siberia (75). Alaska and the Yukon (101). The Gold of Nome (189). Alaska's Blue Ribbon (199). Where Ignorance was Bliss (207). A Brush with Wolves (217). The island of Moorea (225). Discovery and Discoverers of French Oceania (261).

**Volume 2.** "After 30 Years" Two Months at "Home". 1913. Handwritten.

**Volumes 3 and 4.** Tahitian Vignettes. Handwritten. Volume 1. My canary bird (5). Papeete's name: The Story of (17). A false scare (23). Nouns, Names and Negatives (27). My friend (33). Lake Vaihiria (49). The Mystery Stone of Tahiti (53). History in Streets (57). Pauranie (63). Revenge (77). Sunday in Papeete (97). The Grand Tour (107). Point Venus (117). The Great Marae (123). Taiarapu (129). Volume 2. La Maison de Santé (3). Bootlegging (15). The adventurous native (19). Big Fish (23). The untutored native (28). The Pomare dynasty (31). Papeete's waterfront (36). Rambling around (40). When wild winds blow (43). Mulcting the Stranger (46). A trio of Freaks (48). The Prince of Tahiti (67). The Princesses of Tahiti (70). To-morrow (73). Rebellion (75). An Outsider's Witness (77). The Bounty's anchor. The lone voyager (83). Darling, the Nature man (85). A Tahitian garden (89). A character sketch (93). Tahiti's Heart (97).

**Volume 5.** Roaming in the Great South Sea. Dated 1926 by the Mitchell Library, but several chapters were written about WWB's experiences in French Polynesia, where he lived from 1928 to 1946. Handwritten. The Taupou's Grave (5). The Exile's Return (11). A Samoan Play (19). The Gambier Islands (37). The Tuamotu Islands (61). South Sea Curios (111). Pitcairn's Island (133). Across Tahiti afoot (185). The Sous-le-Vent Islands (203). Regarding the title, he writes,

Note : Geographically there is no such named space on Earth's surface as the "South Seas" (plural). The Pacific Ocean — except on its far western coast line — is One, Undivided Whole, north and south of the Equator. Polynesia, which these Roamings concern, lies in "The Great South Sea" (singular). This term was first used by the early Spanish navigators and later by whalers as a general one for their hunting grounds. The use of the plural is a careless though poetic indifference to Fact.

Also in Volume 5, South Sea Curios Gathered from many quarters. 1. "Tin-Can Island" 2. How a doorstopper lead to a Fortune 3. Filipino Theologians 4. Nomenclature 5. Ci Gît 6. The Duk-Duks 7. An erratic isle 8. Marriage Settlements 9. Deer hunting 10. A one-man Island 11. The last of The South Sea Sovereigns 12. The Curfew Bell 13. True to Type 14. Of birds 15. Stone masonry

**Volume 6.** En Voyage. Handwritten. Oahu. The Crossroads of the Pacific (3). New Zealand. Under the Southern Cross (79). Tonga. A Sovereign State (139). Samoa. 'neath Tropic skies (183).

**Volume 7.** Roaming the Pacific Waters (1). 1926. Typed version of Volume 6. Syllabus. Foreword. Oahu. Fiji. New Zealand. Tonga. Samoa.

**Volume 8.** Roaming the Pacific Waters (2). 1926. Typed. The Kermadecs. Tasmania. Australia. Lord Howe. Norfolk. New Hebrides. New Caledonia. Singapore.

**Volumes 9 to 12.** Chronicles of Savage Island. 1927. Handwritten. Volume 12 is available on microfilm. See Volumes 13 to 15.

**Volumes 13 to 15.** Chronicles of Savage Island. Volumes 9 to 11 rewritten by hand in 1931. All three are available on microfilm. Of the four volumes of the Chronicles, the first volume contains section 1, The Island in general, and the first part of section 2, Tales of to-day, with the following subheadings: The Village of Alofi, The Village of Hakupu. The second volume contains the second part of section 2, with The Village of Hakupu, The Village of Tuapa, The Village of Hikutavake. The

third volume contains the third part of section 2, with The Village of Makefu, The Village of Mutalau, The Village of Liku, The Village of Fatiau, The Village of Avatele. The fourth volume contains section 3, Tales of Yesterday; section 4, Tales of Romance; section 5, Folk-Lore; section 6, Bibliography; and section 7, Appendix.

**Volumes 17 to 19.** Old time Tahiti. Commenced 1928. Completed 1938. Handwritten. Maps. Illustrations. Bibliography. 1. The Period of Violence 2. The Period of the French Index. Addenda, including Digest of Books, Manuscripts and Pamphlets not easily attainable. Some parts have been published in the Pacific Islands Monthly.

**Volume 21.** Inter Alia. Twenty-six stories and extracts.

## APPENDIX II. BIOGRAPHICAL HISTORY OF GONVILLE AND CAIUS COLLEGE, 1349-1897 (Page 429)

Bolton, William Washington : son of late Rev. James Bolton. Born at Kilburn, July 3, 1858. School, Spencer House, Wimbledon ; and private tuition. Admitted Oct. 1, 1877.

B.A. 1881 : M.A. 1884. President of the University Athletic Club. Ordained deacon (Lichf.) 1881 : priest (do.) 1882. Curate of Stoke on Trent; 1881-4, and 1886-7. Missionary at Moosomin, Canada, and chaplain to the Bp of Qu'Appelle, 1884-6. Rector of St Paul, Esquimalt, 1887-9. Headmaster of St Paul's School, Esquimalt, 1889-90. Minister at St Luke's, San Francisco, 1890-1. Rector of St Mary, San Francisco, 1891-98-.

## APPENDIX III. PATRICK O'REILLY. 1975. TAHITIENS. REPERTOIRE BIOGRAPHIQUE DE LA POLYNESIE FRANÇAISE. SOCIETE DES OCEANISTES N° 36, PARIS (PAGE 51)

**BOLTON, W. Washington** (1859-1946). — Un Anglais, né en 1859. Entre à Caius College à Oxford, en 1877, pour des études théologiques. N'est jamais ordonné. Voyage à travers le monde. A soixante-sept ans, occupe une place d'instruction à Niue. En 1928, vient s'installer à Tahiti où il s'intéresse intelligemment à l'histoire locale. Intrépide marcheur, il explore à pied les moindres recoins de l'île, pour y découvrir — et souvent pour y restaurer — les reliques de l'époque missionnaire : tombes, cénotaphes, inscriptions, ruines. En même temps, il fait dans les archives des recherches qu'aucun autre n'avait eu l'idée d'entreprendre ni la persévérance de mener à bonne fin. Comme résultat de ces efforts : de nombreux articles de journaux et de revues, et deux gros volumes manuscrits, calligraphiés de sa propre main, qui furent déposés au Consulat anglais de Papeete à l'intention des chercheurs. — Meurt à Tahiti, le 28 juillet 1946. Voir une note sur lui, signée de J.N. Hall, dans : *Strand Magazine*, févr. 1945 ; article reproduit dans *P.I.M.*, June 1947, p.43, port.

## APPENDIX IV. PROVINCE EXPLORING EXPEDITIONS OF 1894 AND 1896, BC ARCHIVES, MS-2777

MS-2777

BOLTON, William Washington, 1859-1946. Victoria; clergyman. Originals and typescript, 1894-1896, 7 cm; microfilm (neg.), 1894-1896, 35 mm [A01682(2)].

Records relating to the Province Exploring Expeditions of 1894 and 1896 sponsored by the Province newspaper. The first expedition, under the Rev. W.W. Bolton, explored Vancouver Island from Cape Commerell to Woss Lake in the summer of 1894; the second, which was organized by John William Laing but led by Bolton, explored the area between Woss Lake and Alberni in 1896. The collection consists of Bolton's pencil journals covering the 1894 expedition (2 vols.); a scrapbook of clippings from the Province of Bolton's journal entries, 1894 and 1896 with introductions and some additional articles; transcripts of the Province articles; and a notebook listing photographs taken and giving barometer, thermometer, and pedometer readings. Maps transferred to Map accessions CM/D130, CM/D173, and CM/A914; 10 watercolours by T.B. Norgate removed from scrapbook and transferred to Visual Records, PDP09053 - PDP09062; photographs transferred to Visual Records accessions 198208-032 and 198703-003.

Finding aid: volume list.

## THE CHRONICLES OF SAVAGE ISLAND

NIUE

(New-ay)

BY

REV. WILLIAM WASHINGTON BOLTON, M.A.

### Preface

#### *Source of The Chronicles of Savage Island*

The original text of *The Chronicles of Savage Island* is stored in the Mitchell Library, State Library of New South Wales, Sydney, Australia, as part of the Bolton Papers (Collection 1–7A). There are two versions of *The Chronicles* in the Bolton Papers: Volumes 9–12 (Catalogue numbers A3365–8) of the Bolton Papers are dated 1927 and consist of all four notebooks in which WWB wrote, by hand, *The Chronicles*, while Volumes 13–15 (A3369–71) of the Bolton Papers are dated 1931 and consist of copies of the first three notebooks, also handwritten. Volumes 12–15 are also available on microfilm (CY Reel 1145).

The handwritten text was transcribed from scans taken from the microfilms and provided in PDF files; the first two sections of *The Chronicles* — *The Island in General* and *Tales of Today* — that appear herein, which are contained in the first three notebooks, are thus dated 1931, while the remaining five sections — *Tales of Yesterday*, *Tales of Romance*, *Folk-lore*, the *Bibliography* and the *Appendix* — which are contained in the fourth notebook, are dated 1927.

#### WWB and Penmanship

Transcribing WWB's handwritten text into digital form was not without challenges. The problem was not the legibility of his handwriting, which is almost always clear. Rather, the difficulties were the result of what he refers to as the *niceties* of handwritten text.<sup>1</sup> The *niceties* are what gives handwritten text its personal character, but which also give rise to some of the problems listed below:

- WWB often capitalised proper nouns and their adjectives for emphasis; however, in places his majuscules are not distinguishable from his minuscules and his intention is not always clear, particularly for the letters K, S, V and W. The exceptions are for those capital letters that he wrote with loops for flourish, although they sometimes brought into question whether neighbouring letters without the loops were meant to be majuscules.

---

<sup>1</sup> See Tale #14, *Of Penmanship*, in Part IV, *Tales of a Roaming Grandfather*.

- He would sometimes write the same lowercase letter cursively and sometimes print it, non-cursively, making it difficult to determine whether he intended to write one word or two. This is particularly a problem for the following compound words, which we now write as one word or as two hyphenated words, but which he may have intended to write as two: *anyone*, *blackboard*, *businesslike*, *coastline*, *countryside*, *daylight*, *downgrade*, *folklore*, *foresight*, *forever*, *good-looking*, *headway*, *hereabouts*, *hereafter*, *hotfoot*, *ironwood*, *kingfish*, *likewise*, *livestock*, *maybe*, *midday*, *night-time*, *old-time*, *onetime*, *onto*, *outcast*, *overeat*, *overnight*, *parrotfish*, *playground*, *redfish*, *sailcloth*, *saltwater*, *shellfish*, *shipshape*, *sometime*, *somewhere*, *storeroom*, *sugarcane*, *therefore*, *therewith*, *today*, *warpath*, *wheelbarrows*, *whirlwind*, *whitewashing*, *widespread*, *withdrawing* and *withhold*.
- In contrast, he usually wrote *cliff edge* as one word, although without the *f* and the *e* joined cursively, rather than two clearly distinct words.
- He also split words that would not fit onto the end of line by writing the remaining part of the word on the next line, sometimes using a hyphen, but most often not.
- He wrote certain words with letters much larger than normal, for emphasis, i.e., the last few words at the end of Chapter XV, *Hue and Cry*, and Chapter XVII, *Niue's Blue Ribbon*.
- He often inserted an exclamation mark in the middle of a sentence to emphasise a word; thus he often wrote the first letter of words following an exclamation mark in lowercase.
- He sometimes neglected to put the period at the end of a sentence and would often omit the second comma or hyphen at the end of a phrase. He occasionally used a period or an exclamation mark where he should have put a question mark. And he often neglected to use a comma between a quotation and the preceding or succeeding text.
- He usually put double quotes around words for emphasis, but sometimes used single quotes.
- He was inconsistent in his use of British or American spelling; for example, he used both *color* and *colour*, and *labor* and *labour*.
- He usually wrote *a.m.* and *p.m.* without the second period, but also with both periods or with neither, and occasionally with the first period *before* the first letter, the second period after the first letter and nothing after the second letter.
- He sometimes used *other* where *another* would be correct and *exceeding* where *exceedingly* would be correct, while elsewhere using *another* and *exceedingly* correctly.
- He wrote the chapter numbers for Chapters i–ix, xiii, xvii and xxiii in lowercase Roman numerals and all the others in uppercase.
- Sometimes he wrote the section titles within chapters capitalised and sometimes not. Same for story titles, which are listed in indexes as well as in the text; sometimes the capitalisation of the same title in the index differs from the title in the text.
- He wrote the titles of the sections within each chapter under the heading for the chapter and then divided the text of each section with a line of dashes, without rewriting the name of the section at the beginning of the section.

In addition to the characteristics of WWB's writing listed above, we should note that WWB was born in 1858 and learned to write in the 1860s. He was a priest of the Church of England and his style of writing stories can often be characterised as biblical. His English is, therefore, sometimes archaic. The following is a list of the archaic words that he used and their equivalents today. He used *anent* for *about*, *anext* for *next*, *anon* for *occasionally*, *aught* for *anything*, *bethinking* for *thinking*, *betwixt* for *between*, *covereth* for *covers*, *covet* for *desire*, *doeth* for *does*, *e'en* for *even*, *ere* for *when*, *eschew* for *avoid*, *even* for *evening*, *groweth* for *grows*, *ken* for *knowing*, *kenned* for *knew*, *knoweth* for *knows*, *hath* for *has*, *hied* for *went quickly*, *hither* for *to this place*, *knoweth* for *knows*, *meaneth* for *means*, *methinks* for *I think*, *naught* for *nothing*, *nay* for *no*, *nigh* for *near*, *o'* for *of*, *o'er* for *over*, *oft* for *often*, *saith* for *says*, *smote* for *hit*, *spake* for *spoke*, *telleth* for *tells*, *thee* for *you*, *thence* for *from there*, *thenceforward* for *from then on*, *thine* and *thy* for *your*, *thitherwards* for *in that direction*, *tress* for *lock of hair*, *trice* for *instant*, *'twas* for *it was*, *'twere* for *it were*, *whereat* for *where*, *wherewith* for *by which*, *whither* for *to where*, *wont* for *habit*, *wroth* for *angry*, *wrought* for *worked* and *yonder* for *that or those*.

He also used many French and other foreign words, some of which are commonly used in English today, such as *rendezvous*, but others not. The English meanings of foreign words that are less common are given in the footnotes.

### Guidelines for Transcription

The basic principal governing the transcription was to preserve WWB's usage, even though he was inconsistent. However, there were exceptions and these are listed below:

- The first letter of words, other than those at the beginning of a sentence, have been transcribed in lowercase unless it is clear, either by the size of the letter or the context, that WWB intended it to be uppercase; that is, when in doubt, the letter was usually transcribed in lowercase.
- Compound words, where they appear to have been written as two separate words, have been transcribed as a single word.
- Missing periods and question marks have been inserted. WWB tended to use fewer commas than would be considered good punctuation today and some have been inserted, but only to improve the clarity of the text and not necessarily to make the reading of it easier.
- The various spellings of *a.m.* and *p.m.* have been standardised.
- Chapter numbers are all uppercase Roman numerals.
- The titles of sections are given beneath the chapter heading and at the beginning of each section.
- The section titles and story titles have all been capitalised.

WWB often printed Niuean words with single letters not joined cursively, as if to ensure that the spelling was correct. All Niuean words have been italicised, except those of the common place names of today.

Words that WWB wrote with larger than usual letters have been given a larger font size.

Footnotes have been entered regarding definitions of other archaic, uncommon or foreign words and phrases, or to provide additional information. If no link is given, then the source is Wikipedia or one of several online dictionaries.

Footnotes also note where WWB's rare spelling mistakes have been corrected or where there are two spellings of the same Niuean word.

### WWB and S. Percy Smith

Basil Thomson's *Savage Island* was published in 1902 and covers a mixture of contemporary and historical subjects. However, the most systematic study of Niue at the time of WWB's visit from 1921 to 1924 was that of S. Percy Smith,<sup>2</sup> who was on Niue as Government Resident for nearly four months from September to December 1901. Smith was actively interested in Polynesian history and anthropology, having founded the Polynesian Society in 1892. Smith's study of Niue was first published in five editions of the *Journal of the Polynesian Society* in 1902 and 1903 as *Niuē Island and Its People, Parts I–IV and Appendix Continued*, and later published in book form in various editions. WWB lists one of these editions, Smith's *Niue-fekai*, in the bibliography of *The Chronicles* and probably used Smith as a reference for certain subjects; those subjects in *The Chronicles* that are covered by Smith are noted in the footnotes. References to Smith and works mentioned in this preface and the footnotes are given below.

## **THE BIBLIOGRAPHY OF NIUE ..... 165**

<b>APPENDIX: Extract from "Missionary Enterprises in the South Sea Islands" by the Rev. John Williams .....</b>	<b>166</b>
---	------------

### **To the Reader**

Tutoring, for long years my profession; while leisurely roaming New Zealand, my attention was called to a newspaper paragraph in which appeal was made for men willing to go as Teachers to some of the more isolated islands under control of the Government. The life was not portrayed as an easy one, and things would have to be from the very beginning.

Here was an opportunity not only of useful service but of new experiences. My offer was most kindly accepted. What I learned as I taught is here set down for those who would see "South Seas" life from a somewhat unusual angle. In the main it is Extracts from my Journal kept of those pleasant years : '21 – '24.

W.W. Bolton. M.A.

Tahiti.  
1931.

## THE ISLAND IN GENERAL

### Chapter I

Sail Ho! — The Island — Its Past — Its People —  
Things Missionary — The Liquor Question and  
Others

#### Sail Ho!

Niue Island is not one of a Group. It lies absolutely alone, a mere speck on sea and map. Tonga is 250 miles away to the West, Samoa is 350, whilst the Cook Group is nigh 600. It is but 10 miles broad and 17 miles from North to South, yet houses close on 4000 natives.

Niue is on a Trade route of a sort. Barques from 'Frisco to Australia oft head for and are right glad of Niue so as to correct their position after beating this way, that, from distant Continents. Therefore do hearts quite frequently rejoice, and Sail Ho! rings over the Isle, only to be hugely disappointed. It is not the time for the arrival of the boat from New Zealand — of which in my day there were but six in the twelve months, and none from October to March — yet it may be some special one coming without notice. It is clearly heading hither, and with it will come welcome news of the great world outside. Alack! and Alas! slowly it turns and sails away. That turning tests some souls sadly. I have seen tears shed copiously thereat.

Nigh the cliff-edge of Alofi — wither all ships make for port <sup>3</sup> — one cannot help but cast the eyes seaward, at any time of day, over that vast expanse of bluest water touching the horizon everywhere. There have been days when as many as three ships have headed towards us, yet far off have turned their helm and slowly disappeared, their crews doubtless gazing toward us, as we towards them.

Despite the possibility of disappointment every vessel is watched with keenest interest from that same cliff-edge, and if she keeps her nose pointing Alofiwise hour by hour, till Hope becomes a certainty, then folk get going, up runs the Flag, the news spreads fast, men, women and children drop each their task, none can work more that day.

On one of such marked days, I landed from a Man-of-War, to Teach and Learn.

---

<sup>3</sup> Sir Robert's Wharf, Alofi, with the cliff on the left (June 2015):

## The Island

Invert, not a plate but, a platter of oval shape and you have Niue.<sup>4</sup> Raise it above the table — which is the sea. Niue's outer rim rises 90 feet above the water, and all around clinging tight against that cliff is a 'Fringing' reef. There is no 'Barrier' or Outer reef.

On that first level, which is nowhere a half-mile deep, and all around there runs a grassy Highway for 40 miles, and 11 villages will be met upon the way.

The upper part of your platter is the higher grade, rising 200 feet above sea level, and flat as that same dish, covered with dense forest and shrub. Across it there run four roads, a stiff grade up, a stiff grade down at either end. It does not do for any to wander off those roads, save upon the natives' trails.

As to means of locomotion other than on foot, the Island is getting on. Whilst Niue, on my landing, did not, throughout its whole extent, possess one cow, it did possess some horses who live on leaves — for Niuean 'grass' is an entire misnomer — and what is more, possessed a Ford car — the Doctor's.<sup>5</sup> Alas! it had its Ups and Downs, and when I landed it was in its Downs. It was waiting for a certain little pin from Auckland, and when that would arrive, none knew. There were also two motor lorries, the property of Traders.

There is no running water on the island, not even a rivulet. The natives for centuries had to depend upon the rain alone. Till white men came, this was a serious business for health, cleanliness and thirst. The rain soaks into the limestone coral and is gone. But fortunately between the lower and the upper rims — those two upheavals from the deep from which an Atoll became an Island — there is a fissure round the oval, sometimes broad, at other places narrow, and down into this one goes to a fearfully uneven bed, entering caves, and galleries with stalactites from which drip water, which though heavily charged with lime is caught in buckets and helped and still helps out the needs of natives.

The white man's coming made things considerably better. Concrete tanks have been constructed in each village : and wayside tanks of galvanized iron are met with at even distances the Island round, these once drums for biscuits from far-off Germany, sheltered by corrugated iron roofs with leads and waterpipe to catch the water from the skies. There is no waste of water, it is far too precious. The white folks' dwellings have each their Drum, their widespreading roofs umbrellas which shed the rain into the receptacle therefor. For them, there are but two things needful : to see that the mosquito net is ever working at the entrance to the Drum, and any way to have all the drinking water boiled.

## Its Past<sup>6</sup>

Niuean Tradition goes back hazily 500 years. Despite its Lilliputian dimensions there were ever diverse Clans thereon, each continuously at war with one another. At the south-western corner of the Island, as witness, there are the remains of a Fort in which the Avateleans, not so very, very long ago, held off the frequent attacks of the rest.

Their fierce antagonism to strangers seems to have arisen from an attempted invasion by the Tongans in the 16<sup>th</sup> Century. Any outsider after that was an enemy, and hence Captain Cook found them so extremely inhospitable and so keen for a fight that he retired to his ship in disgust, and gave them the name which has clung since his day upon maps, of "Savage Island".

<sup>4</sup> Smith states that "The island may be likened to an inverted soup-plate." Smith, Part I, page 83.

<sup>5</sup> The doctor at the time of WWB's stay on Niue has not been identified. The doctor's predecessor was presumably [Edward Pohau Ellison \(1884–1963\)](#), who was on Niue from 1919 to 1921.

<sup>6</sup> Niue's past is discussed in Tregear (1893) and Cowan (1923), but these works are not listed in WWB's bibliography.

They were never cannibals, but were so keenly alive to the dangers of disease — which they knew to be on other isles — that they killed even their own kindred who, leaving for other parts from Wanderlust, attempted to land again on their home soil.

They were long averse to tattooing, considering it no mark of honor or sign of man or womanhood as in other Polynesian isles — where even women have their special marks stamped on arms and thighs — but of degradation. One meets a few tattooed today, but the practice is never likely to be general.

Gradually they came together under a Monarchy, but as their kings were also their highpriests, and these latter were considered to have power over the crops of fruits and roots, they were so frequently killed in times of scarcity that at last, no one greatly cared to hold the office, save he who became the last.

Now came Christianity to the lonely isle. In 1830 that intrepid missionary John Williams <sup>7</sup> arrived in ‘The Messenger of Peace’ which he had built with native assistance at Raratonga <sup>8</sup> in the Cook Group — and had sacrificed three out of four of his precious goats to make leather for his needed bellows — and like the dauntless fellow that he was, first gained a future footing for his Creed on the Forbidden Isle by bearing off two of the natives for instruction on Tahiti. His Samoan teachers changed the island from witchcraft to Christianity. Yet today Devil Doctors thrive thereon.

Then came other white men, and in 1859 the Niueans thought it the part of wisdom to seek a British Protectorate, but this did not at the time coincide with British Colonial policy.

In 1887 again they asked for it and still we hung back. But two years later, when the Great Powers — Britain, the U.S.A. and Germany — held their Convention on Samoan affairs, and the South Seas in general for the coming years, we gave away all our claims on that Group, much to the astonishment and regret of those natives, getting in lieu thereof a freer hand in the Solomons — little Niue thrown in as an Extra. <sup>9</sup>

The next year <sup>10</sup> therefore saw the Protectorate proclaimed, with Flag-raising, Salute of Guns, High Feast and Dance, all this under one who had assumed the Kingly estate, none else wanting it, King

---

<sup>7</sup> [John Williams \(1796–1839\)](#) was an English missionary, active in the South Pacific, primarily in French Polynesia, the Cook Islands and Samoa. Williams’ account of his visit to Niue is reproduced in the Appendix of *The Chronicles*.

<sup>8</sup> WWB’s spelling of *Rarotonga*.

<sup>9</sup> The [Washington Conference](#) and the [Treaty of Berlin](#) were held in 1887 and 1889 respectively. WWB is referring to the [Tripartite Convention](#), which was held in 1899, rather than 1889.

<sup>10</sup> The British Protectorate was proclaimed in April 1900. Niue was subsequently annexed in October 1900. See [Thomson \(1902\), page 147](#).

Tongia by name, whose royal attire were petticoats, and a helmet surmounted by a resplendent cock's comb.<sup>11</sup>

Six months later, it came, quite unexpectedly to the natives, under the direct control of New Zealand who has proved a faithful, kindly foster mother, has provided Resident Commissioner,<sup>12</sup> and all necessary assistants, a Doctor, Nursing Sister, Teachers, Books, scarce counting the cost of what must surely be a highly expensive baby, so only she may fulfil her trust.

### Its People

Niueans dwell in closed-in homes of stucco, dazzlingly white, with doors tight shut of nights to keep the devils out. Their plumbline is not always straight, but then rarely does the fierce hurricane whirl along this way, and no native aims at lofty home.

The women are adepts at many handicrafts, specially fan and hat making. You see these articles drying in the sun before many a home, fans of many shapes, stained in many colours, with broad-rimmed hats that invite shade. Both sexes seem ever busy, the coming and going on the road and trails unceasing from morn till nightfall.

They are a would-be cleanly folk, but the water question is cruelly against it, and they are clothed, though oft the needle seems loudly called for. They do not affect, as a rule, the more wholesome undress uniform of the Samoans. The little boys and girls are only like unto certain New Hebridean peoples I know, when heavy rain descends and the Highway becomes a bathing pool. Then is the youngsters' hour of joy.

The garbage can seems an ever present need, despite that each native appears to be in measure his own scavenger, fires ever going here and there to burn up refuse. But decomposition is too rapid for busy folk to keep apace with. The Law is on their track and perhaps ere long there will be official

---

<sup>11</sup> King Tongia, with petticoats and helmet, in April 1900 (from Thomson, 1902):

<sup>12</sup> During WWB's stay on Niue, there were two Resident Commissioners: John Crouchley Murray Evison from 1920 to 1922 and Guy Norman Morris, for his second time, from 1922 to 1926.

scavengers with carts, and selected Valleys of Gehenna.<sup>13</sup> There is much room for improvement. The Niuean has no lack of nature's foods. Here grow bananas, pineapples, oranges and melons, sugarcane too and arrowroot, roots aplenty. Fish of course abound, though off Avatele there seems to be one of those strange sea deserts, its floor covered with huge white boulders, and not even a crab to be found.

The plovers fly in droves, so too the doves, whilst swallows skim the air. There are brilliant plumaged paraqueets, and huge colonies of Flying Fox. Many lizards, one specially I soon made acquaintance with. A small gentleman of his kind, peculiar to this island, who is known as the *Moko*. He is ever on the watch for flies, and crawls up your walls with lightning movements, big eyed, with tail lashing to and fro as he beholds his quarry.

The Niueans do not bury their dead together. They are everywhere, surmounted by oft cumbrous pile above. The old method was the better — they laid the dead in their own canoe and let them drift out to sea towards that Far Country the spirit had started for, or bearing them into the bush laid them on platforms of stones, covering the body with cloth of bark, later on gathering the bones and depositing them in the many caves. Yet other custom will be read of later in the 'Caves of Death'.

The present day graves are at times surmounted with strange articles, bespeaking usually the occupation or predilections of the deceased. On one stands a sewing machine,<sup>14</sup> rusty but still complete. On another a washtub. Here is one covered with bottles emptied of the gin contents — was he a bibbler I ever wonder as I pass by? Another has many dishes thereon. I see a pair of shoes on a child's grave — all little tots go barefoot but some mother had doubtless thought of these for her babe's tender feet. Yet other grave itself takes the rough outline of a ship. All along the roads they lie, you cannot possibly escape them.

### Things Missionary<sup>15</sup>

Armchair Christianity is one thing; carrying one's life in one's hands for the Gospel of White Folk's belief is quite another, and is the stuff of which heroes are made. Niue called for courage of the highest degree in its tackling and men were found who had it. Captain Cook stepped ashore in three spots in a single day and was right glad to be safe back upon his quarter-deck, and Cook was a daring fellow. Native Christians stepped ashore, were likewise menaced, but remained. They were heroes.

In 1830 John Williams in his home-made ship brought to, off Tuapa, and despite a none too friendly welcome induced two youths of Niue — as already noted — to sail away with him to see new lands and learn from him. They went, and after seeing other isles and gaining some measure of instruction in the white man's religion were returned as promised.<sup>16</sup>

A sickness struck the island and was promptly put down to these same youths. One was slain, the other with two companions hid, and later got safely away to Samoa on a passing ship. Not he, but one of his co-refugees there learned not only some of the new religion but also to read and write. He took the name of *Peniamina* which is but plain 'Benjamin'.

---

<sup>13</sup> In the Hebrew Bible, [Gehenna](#) was where apostate Israelites sacrificed their children by fire; hence, WWB is referring to a municipal site where the garbage will be burned.

<sup>14</sup> Smith, in 1901, also noticed a sewing machine; see Smith, Part III, page 207.

<sup>15</sup> Much of this material is covered on pages 15–20 of Smith, Part IV, and on page 108 of Smith, Appendix Continued; however, some of the details given by WWB and Smith differ.

<sup>16</sup> For information regarding the two youths, see the footnote in the *Appendix*.

In 1846 he returned to Niue on the first ‘John Williams’ and was put ashore together with his precious books at Avatele; the latter, for safety’s sake drawn ashore in a barrel. He was allowed to remain, but ere long he fell from grace, fleeing the island with another’s helpmate.

In 1849 came Paulo, the real Apostle of Niue, a full-blooded Samoan who before he died in 1863 saw the fruit of his labour, for scarce an outspoken heathen was on the island. And more than that he did, for he brought the warring clans together in a lasting peace, and taught them how to build their now common lath and plaster homes.

To his aid came Samuel and Hezekiah, and Moses too, who were all true not only to their Faith but to their names. These are the Four Saints of Niue in her Church calendar, though white pastors have run them close.

In 1861 George Lawes<sup>17</sup> landed, and with him for awhile to set him on his feet the Pioneer of Samoan Christianity George Pratt<sup>18</sup> whose 40 years’ work in that Group is today a treasured memory. Lawes was a scholar and at once got down to the translation of the Bible, and ere in 1872 he was sent to Papua had mastered more than half of the Old Testament.

In 1868 Lawes’ brother, Frank, had come to join him, who found in Niue his life work, remaining for full 40 years, and as his monument left the Bible translated from cover to cover in a Niuean vernacular that is today the standard of the language, as noble alongside the colloquial as is the English Bible from the language of the crowd.

Frank Lawes did more, for carrying on Paulo’s work and his brother’s he caused the Niueans to make a clean sweep of everything of the Past, so much so that even their Traditions ceased to be handed on, much to the present regret of such as delight in antiquarian research. It was to be ‘the whole thing overboard’, but how deep the new religion has sunk into Niuean hearts, these Chronicles must help to show. I cannot.

John Williams’ own account of his first contact with Niue, as given in his “Missionary Enterprise in the South Sea Islands” will be found in the Appendix.

### The Liquor Question and Others

The Liquor Question is really no question at all with Niueans, for neither can they have it nor do they seem at all desirous for it. Even the *Kava*, so common throughout the South Seas, has no attraction for them. They would appear to be a distinctly temperance crowd today, the whole lot of them, with ‘bootlegging’ and ‘illicit still’ unknown. There are heavy penalties, nevertheless, should white man

<sup>17</sup> [William George Lawes \(1839–1907\)](#), and his monument at Avatele (June 2015):

<sup>18</sup> [George Pratt \(1817–1894\)](#)

hand a spiritous drink to any native, penalties quite sufficient to deter any white from flouting regulations.

In the hands of the Resident Commissioner is the fate of all 'drink' on Niue. Through him every bottle has to pass. His Bond House is a part of his own compound, and aught taken therefrom has to be duly signed for. Should men abuse their right, then are they cut off for good. There is no room for repentance, no giving yet one more chance. Yet the allowance is liberal, quite sufficient for all ordinary thirsts : one bottle of wine or whiskey per week, or a dozen bottles of beer, none with such can properly complain of being stinted, with unlimited Kava to fall back on. Brandy can only be secured through the Doctor, who knows the ailments of every person. None seem to complain, neither native nor white; both feel that on Niue the Liquor Question is solved on thoroughly sensible lines.

There is, however, danger in excess in other than straight spiritous liquors. Who would suppose that the homely coconut could have a 'kick' in it, and carry trouble in its fluid? It affects not only the head, when fermented, but if you want Jaundice you can have it by drinking to excess that pleasuring milk. In moderation, with whites, it is up-building; in excess it will often lay them low.

The Yellow Peril has also long been settled. Neither Chinaman nor Jap is to be seen on Niue. They settled this matter of exclusion once and for all. There landed at Alofi a Chinaman, his wife and bairns.<sup>19</sup> He thought to make here an abiding place. All he secured was a seat on the steep bank above the Landing Stage where he was told to remain till further word. A meeting was hastily called and the matter was discussed at Niuean length. They had learned from white folk the penetrating power of the Race once it sets foot in any country; they decided that Niue was for themselves and not such as he. Therefore they descended upon him and ordered him and his back to the schooner which brought them. He went, and from that day none of his Race nor of the insinuating Jap has been seen on Niue. Yet does the island wait for just such prodigious workers as they. It is but scratched now. The Niuean makes a living out of tiny patches of their fruitful land. There remain thousands of acres that could be made to bear. But with the natives' consent they will never be by hand of Chinaman or Jap.

From another Peril these Niueans — helpless through ignorance — could not be saved. Till white man came their blood was pure, they had heard of disease and, determined to be free of such, slew even their own who went forth and would return. In good faith they granted landing to Christian teachers. That gave the opening for others wholly different. But for Christianity no crew could have landed to this day save by force of arms and wanton murder of those whose land it is. To throw the blame on the women is unjust, for the code of morals of the native was quite different from ours, and largely still is. When first they noted its effects they knew it not. To the Missionary they went to gain enlightenment. He did his best to stay it. Its first ravages were fiercesome as one who saw it at its height has testified to me. It is better now, but not effaced — the Doctor has his hands full.

There is yet one fancied Peril which Niueans are slowly rising superior to — their prejudice against Romanists. They had seemingly good ground for it as can be read of in their Tale of 'Rogues in Cassocks'.<sup>20</sup> The antipathy has from that day been deep. It reached even to trade and barter. When the Captain who gave Trader Head<sup>21</sup> his first real start would land his goods, it was noised around

<sup>21</sup> Robert Henry Head; born in Portsmouth, Hampshire, England on 3 March 1833; began trading on Niue in 1867 for Bully Hayes; died in Tuapa on 5 February 1921; married to Pelenise Fakatala (1850–1937). The [photo on the left](#) shows

that he and his crew were Romanists. The natives were dead against his landing them. One never knew. A Council was called and the matter carefully considered. The decision to admit was passed, only after an aged Chief had spoken out right boldly; “Never mind what the religion of that ship is, what we want are those goods,” and the goods they got, nor ever a whiff of Romanism with them.

Not long since now, some sprightly Niuean youths, far from a goodly crowd, thought fit to play a joke upon their elders. They wrote a most appealing letter to the good Fathers at Vavau in the Tonga Group, begging for a priest to be sent, and assuring warmest welcome. They could not however keep the matter to themselves. It reached their elders. The leading Chiefs promptly sent off another letter telling the Vavau Fathers that they were utterly opposed, and that it was presumptuous for a few young men to speak for the whole island. Happily for peace’s sake the action of those Fathers was highly discreet and honorable, and has gone far deeper than the natives realise to lessen the antipathy. They returned answer that the young men’s letter had indeed come to hand but they had purposed taking no action till they had heard from the Authorities of Niue. They added that it had at no time been in their minds to open mission on the island for they knew that Niueans were being well looked after by the Society <sup>22</sup> which fathered them from the very first; a work to which they wished abundant success.

The Chiefs breathed freely once again, the youths received good measure at their hands, and should white folk as the years roll on be visited by Fathers of their Faith, Niue I trow <sup>23</sup> will give them kindly welcome.

## Chapter II

Devil Doctors and Others — Things Nautical —  
Niue-fekai — Then and Now — Customs New and  
Old — Map-making

### Devil Doctors and Others

Despite that all Niueans are nominally Christians there is still a clinging to the beliefs of the 'Period of Darkness'. The medical officer has no easy road to travel. He finds himself continuously up against practices which defeat his efforts to lessen sickness and the death rate. He knows, as all do, that Devil doctoring is rife, yet done so furtively that none can lay hand upon the culprits. The present leader of the old-time physicians is well known. No man, but a woman, an adept to avoid the meshes of the Law. She is of the village of *Tamakautoga*, nigh Alofi, by no means an old witch to look at, a hale and hearty woman with a clever head, in command of her many deputies in every village, men as well as women. When the Doctor steps out of a stricken home, the Devil doctor oft steps in. Cases that should mend suddenly collapse and the patient dies : therein the Doctor sees the hidden hand. All the old-time methods of these quacks are resorted to, incantations, pounding of the body, weird seeking of signs in the heavens, the earth and the sea, their medicines beyond the ken of white men.

The natives are high in spoken praise of the White Doctor but fail in fullest faith in him. Like certain in the Holy Book, "They fear the Lord but serve their own gods" to make quite sure not to offend either. The Missionary whose word is ordinarily so supreme has tried from the very first to suppress the evil but it will not 'down'. Heavy fines have had but little effect.

Great efforts are being made to stay the dying out of these islanders. Every village has been lectured to on hygiene, good water and sanitation but still the death rate is high. Infant mortality is great, and the Doctor reads clearest sign therein of devilment. Mothers fall easy victims to the witch.

Before white Doctor came, and apart from the Missionary's Dispensary, there was oft strange treatment given at the hands of whites. I have it from one of those same improvised physicians that Turpentine was a sovereign remedy, a strenuous one but very effective. When cases became hopeless, then men decided upon a merciful death, rather than a lingering one. The 'Snuffing Out' took as a rule the form of morphia. Where the heart was weak, an overdose of whiskey was the means — a copious draught, a gasp and the thing was over. Niue knew nothing in those days of Coroner's Inquests.

Of other ills I may here make mention. As to idiocy in the past I know not, today there is but little. I have heard of never a maniac but the natives are very secretive in such matters; they are sedulous<sup>24</sup> to keep their afflicted from the public gaze. Casually I discovered one, confined in a pen in the bush. His troubles are now over.

### Things Nautical

One hears and reads of the unapproachableness of Niue. To see is to believe. Along the entire East coast landing is practically impossible even for natives who are such expert canoe-men that they can land upon a reef without ripping their frail canoes on the jagged surface. The Trades blow on that coast eight months out of every twelve. The Northern coast is just as wild, the Southern coast but

---

<sup>24</sup> Diligent in application or attention; persevering; assiduous.

little better. On the West, however, there is some hope as the old-time whalers found at Avatele; at Tuapa too; with Alofi the one real hope, helped thereto by man, for H.M.S. Mildura,<sup>25</sup> long years ago, blasted a narrow boat passage through the reef.

Hence on Niue one sees no *Fautasis*<sup>26</sup> as at Samoa, those fine rowing boats running to great size. I could wish, when there, to have seen that of Satupuala, surely the largest open rowing boat the world over — 156 feet long, 15 feet in width, 46 oarsmen on each side, steps for 6 masts and carried 300 souls aboard. It was built of kauri wood and cost £2000. But vandals burned it in 1899.

Nor are here seen those large double canoes where two lashed together carry a platform between. They would not last long on such a coastline as this. Niueans use a narrow canoe with an outrigger at one side, and a paddle which for weight and strength leaves even the Hawaiians far behind.

Alofi has a so-called Bay, but when a Nor'wester blows then look out for trouble. There is nothing for it but 'up anchor and away', or the ship will be upon the reef, anchor or no anchor.

The schooner from New Zealand bringing much needed food, and passengers, lay peacefully at anchor at the little Capital, the Captain ashore visiting Tuapa miles away. The mate aboard had for visitors over a cup of tea, two of the few white ladies of the land, the Commissioner's wife and a Trader's bride. Without warning, a Nor'wester sprang up, blew hard and furiously. That Tea Party went by the board, nor was there any hope of setting the visitors ashore. It was up anchor and out to sea. For three days and nights the little craft kept far away, the unfortunates wholly unprepared. The Captain waited, so did the anxious husbands. Since then, naught can entice those fair ones to pay a call on any schooner as she lies in the offing at Alofi, though the sea is as a millpond, nor a leaf ashore is stirred.

Just such another breeze caught the 'Awanui' at Tuapa, and this time there was a wreck.<sup>27</sup> She lay off shore, anchored fore and aft. Her crew were ashore, the captain and the mate alone aboard. The wind rocked the ship, she had not length enough for play, nose up, nose down, she knocked a hole in her keel, then the cables parted. The two aboard had close call as in the jolly boat<sup>28</sup> they were flung upon the reef. They had no need to, for now the great combers came along, and one lifted the schooner clear up, broadside, on the reef, the next hit her squarely and pushed her further shorewards, the third lifted her to where she could move no more for she lay sheer up against the bank whence men walked aboard on a plank to find her on as even a keel as if upon the deep. She was Treasure Trove to the islanders, for whilst White men disputed in the Capital as to the wreck's disposal, there was coming and going all night in the nearby villages. Internally she was a wreck indeed when morning broke.

A similar blow caught another schooner which had started out from England filled with trade goods. But though the Directors willed one thing, the Captain and crew willed quite another. At Tahiti they had bartered the goods for little copra but much Liquor and when the boat reached Niue she was a floating distillery. Here, confident as others have been to their undoing, that he knew how to take care of himself, the Captain took no heed of warnings, and too late tried in vain to escape when a Nor'wester struck him. His staunch ship fouled the reef, yet it was not a death wound. The blow passed, but for his own private reasons the Captain decided to abandon ship. But not before its fiery contents had been salvaged. They were, but only by the help of natives at an extortionate wage. Opining that abandonment would mean a gift of all that remained to those who had 'held him up' he swore

<sup>25</sup> [HMS Mildura](#) was an Pearl-class cruiser of the Royal Navy, launched on 25 November 1889.

<sup>26</sup> Samoan longboat.

<sup>27</sup> On [11 January 1919](#).

<sup>28</sup> Traditionally the term *jolly boat* refers to a boat carried by a ship, powered by four or six oars and occasionally yawl rigged sails.

that they should not have even a piece of old rope. Emptying all his tar upon hold, deck and sides, he set fire to the ship. Slowly, tide and a breeze offshore carried her out to sea ablaze from stem to stern, till afar off she sank beneath the waves.

Yet lost he his precious cargo too. No vessel appeared. Both cargo and crew, camped back of Tuapa, were voted by King, Chiefs and the lone Missionary, a Public Nuisance and a Disturbance of the Peace. Therefore was a great Fono <sup>29</sup> held, and order given for total destruction of the liquor. Captain and crew were powerless before the islanders. Great was the outpouring. Where that act of righteous indignation was perpetrated, every coconut tree was destroyed by the fiery contents of those casks — the land has yet scarce recovered from the shock.

After long months, at last a schooner called, and Niue was right glad at the departure of both crew and Captain.

### Niue-fekai

Doctors of Learning dispute over *Niue-fekai* the full name of the Coral Isle. There is no agreement as yet. As they argue to and fro I turn to what seems to me a fairly authoritative source, even to one who is part flesh and blood with Niue's best, a well read man to boot, from whom I gather that here are not two but three separate words : *Niu* — a coconut : *E* — Yes of a truth : *Fekai* — good food : that the first comers welcoming a second contingent of their fellows, greeted them with the welcome news that here was a land bearing good pottage, and that same welcome became the name of the land.

If however, *Fekai* is to be interpreted as 'Fierce' — and it has yet other meanings besides these two — which some would have, there is some ground for it, according to the native view. All savage folk seem to love to think themselves pre-eminent in this, to pat themselves on the back and proclaim aloud that they are the Real Thing — theirs needs priming up, however, by antics, biting of beards and grimaces, as the Maoris show you in their War Dances of today. Niueans therefore may have in this same boastful spirit dubbed their new found home the Island of the Fierce.

But if Niue failed and fails in men of real fierce type they have amongst them those true to type who can justly claim the title for their home. There is a small bush fly who can make it as warm for you as any prizefighter. He attacks the eyelids and you come home from the bush where he hides with a pair of eyes that appeal for raw steak and constant bathing.

It is well to avoid the Land crab. He can nip, and can hold fast as any bulldog. The only way to induce him to let go is to stroke his ribs, but his ribs not everyone can find in such emergency. He is excellent pottage.

There is the wild cat, who once tame, has had an attack of Atavism and is ten times worse and fiercer than his forefathers.

There is a spider too who is out for business. Not that he troubles man but he can make it hot for far bigger things than himself. He weaves a web so tough that it is used as a fishing net : and birds if unhappily they would fly through it, find themselves quite helpless. It winds about them like a shroud, tying their wings to their sides as in a vise. Then comes the cat along, and there is one less bird on *Niue-fekai* which Cook the Navigator called — not Fierce but 'Savage'.

---

<sup>29</sup> Meeting.

## Then and Now

Upon another contested question Whence came these Polynesians as a whole, I am not bold enough to offer an opinion. All I know is that these Niueans do not claim to have been always on the isle. They cannot say whence they came, but they have a name for their ancestral home where e'er it was — not *Hawaiki* like the rest but — *Tulia*. Besides the present names of 'Niue' they have other names, <sup>30</sup> two of which have some hanging-on appearance to their first home which 'Niue-fekai' has not, the one *Nuku-tuluea*, and other *Nuku-tutaha*. The third, *Motutefua* is a word quite beyond me to explain, but you can have a guess at it by knowing that 'Motu' is 'a Land — a Sore — an island — a clump of Forest — a People — anything isolated — and a Country', and 'Fue' means 'a Measuring Rule — an Egg — To carry on the shoulder — To weigh — To swell and a Tumour!' 'Tis no easy language to acquire. The words are few, but the meanings many. One lives in daily terror of saying one thing whilst meaning quite another.

There was at first, long war between the Avateleans and the rest. The time came when they became at least nominal friends and Niue was divided into two other factions — the *Motuans* and the *Tafitians*, the Northerners and the Southerners. These quarrelled and up and down swept the avenging hosts, they slew, they burned, they captured the women, and by the latter act it comes to pass today that many a Northerner has property rights in the South through his ancestral mother and vice-versa. Thus out of evil, there came good for all are one big intertwined Family now.

In those far off days, those women must have found Time hang heavy on their hands, save in walking warily to escape the rod of their lord and master, for those crafts which today they are so adept at were unknown. It is to the credit of a runaway Tahitian sailor who found shelter upon Niue that he introduced those arts. He was a godsend, yet history tells us not his name nor what honors were accorded him. All the materials were to hand, and still they are in such abundance that it is not possible to find a use for all varieties. There is the tribe of canes for instance, the sugarcane of course for eating, the cane for flares of nights, but there is the mighty *Va*, a climber strong and lusty which runs up 80 feet in height. Methinks it is a portion of that which Niuean Church beadles <sup>31</sup> use for unruly ones.

That Bush is a constant wonder to me, in the way money comes out of it. We read in the Holy Book of ready cash in a fish's mouth; it seems about as easy to do the trick in Niue's forest. Taxes are light enough in all conscience; ten shillings a year per man covers the lot, including the Doctor and his medicines, with one shilling per term for each child attending Government School. Do they want the wherewithal to meet the Tax Collector? They move not till he is upon them, then disappear in the Bush, return with any one of a dozen gifts of nature in their hands, pay a visit to the trader and hand over the necessary shillings with a smile.

They have, so far, but touched the fringe of this fruitful isle. There are thousands of acres that could be made to bear. Fortunes in copra and other produce such as sugar await the planter. The natives seem insensible to the treasure to their hand. Wisely or unwisely — Governments know best — no incentives are held out to draw others. No white folk can buy land on Niue, they can but lease, nor do regular steamers ply upon this route so as to carry goods to market were white men busy on the land.

Despite the amazingness of coral everywhere, there appears not to be a barren acre the whole 60,000 over. It astonishes to see where and how the coconuts grow, whilst the treatment they receive is enough to kill any other tree. You see them hacked and hewn, blackened with fire, steps cut, the very

<sup>30</sup> These names are discussed on pages 81–82 of Smith, Part I; Smith also mentions another name, *Fakahoa-motu*.

<sup>31</sup> A parish officer having various subordinate duties, as keeping order during services, waiting on the rector, etc.

pith exposed, and yet they live and bear abundantly. The banana is better treated; it too thrives in wondrous situations. The root sends upward a stout shoot oft 12 feet high. It bears but one bunch, that done it has run its course and is cut down. At times that shoot is cut back hard to some 4 feet from the ground before bearing. From the centre of that stump springs a fresh shoot which can be measured daily by reason of its rapid growth, and will bear its bunch, then suffer slaughter. But it is not wasted. It is fed to horses which tear it to pieces in long strips, devouring it for its juiciness. There is but little water for those attenuated animals. One root throws out many a sucker, and thus banana groves are easily formed.

The Breadfruit and the huge mango trees; the lofty, spreading kapoc — that excellent substitute for wool — find root among the coral, here, there and everywhere. Niue awaits its full development. As yet the island is but scratched.

### Customs New and Old

It was an outrage to tell me at Samoa that Niueans had no manners. It is far otherwise. They are most courteous, carrying it to an extreme. Their custom is in coming towards white folk upon the Highway to step clear off the road, and hug the bush as you pass by, thus to show respect : nor will they pass you if coming from behind. A woman will do more : she will haste to the nearest tree and turn her back upon you : she still has sense of her great inferiority. Boys of today delight to stop and, standing like sentinels, give you a military salute : the girls will bow most graciously as they too bring themselves to a halt. Nor lack they words for Asking and Response : '*Fakamolemole*' stands for 'Please' and '*Oue tulou*' is 'I thank you'.

Nowadays it is the custom with some to possess a garden patch. White folk started it. When one sees what it means, the wonder is that there is anyone brave enough to attempt it. The way to make it is not with the spade, but with the crowbar. A pocket in the coral has to be prized out and soil inserted. It is a slow job, and to make several beds bespeaks grim determination. The nearer the sea, the worse the business.

To white men is due yet other change from ancient custom. All villages were away from the sea, on the higher plateau. *Paluki*, the Capital, now utterly deserted and hard to place, was practically in the very centre of the island. Today only five villages remain on the higher land, the rest — six in number at my stay — have gone down to the cliff-edge. This means that they are separated far from their plantations which lie behind and above them. Thither they make their way at break of day, men, and women too, so that few adults are to be seen in the villages on those days of the week set apart for tillage. When not at their plantations there is home work to be done of many kinds, for the women.

Succeeding missionaries have tried hard to lay the ghosts of Niue. The natives remain however true to their old-time custom in keeping indoors after nightfall. To them, the Bush is a 'Spooky' place : even a 'Clearing' little better. A policeman was detailed to watch a lime kiln for the night, close to my dwelling, and for company was allowed a prisoner. They looked very nervous when night fell; they grew worse as the hours sped by. They stood it till flesh and blood could stand the strain no longer. By 2 A.M. the Spooks were after them, and they fled incontinently <sup>32</sup> to Alofi and the Guard House a mile away.

It is the custom to eat the flesh of the shark, but there are occasions when he is 'taboo'. Avatele was all agog; their fishermen had secured a monster. Proceeding to disembowel him, they discovered within that capacious stomach, a turtle, a sheep's skin, and a cat! That last settled it. Whose cat it was,

---

<sup>32</sup> Not restrained; uncontrolled.

long agitated my friends, and whose sheep's skin, for sheep are few upon the island, and of the few none were missing. Here was another mystery of the Sea. The cat was a cruel blow, for Avatele had to go without shark steak, and fall back on coconut and taro. But Niue's nuts are not to be despised. They are monsters. There is a light brown one with a smooth surface which is the Champion of the Pacific. It holds more than one quart of milk, and makes a handsome bowl as drinking cup when polished. I cannot give its Latin name, we run not to such fine thing here, but the natives have him ticketed as the Nut Supreme. Niueans affirm that there was a time — long years before their arrival — when no coconut was here. Therein their stories do not agree. Nor are they in agreement as to how it came. But for the seeming fact that saltwater ruins the ripened nut despite its husky shell — but not the tree itself which delights to hug the land washed by the sea — one might hold that they floated hither from other isles and so took root at first. No matter! They are here, and as one sees, none finer.

33

The custom was of old-time to wear long hair, even as their women have today. That has changed. Such hair, black as the wing of the raven, was used for making wonderful girdles, and still the women give of their long tresses to work into their fans, and bind the handles to the main piece. Long before the Holy Book was known, Niue had its Samson and Delilah, but here the Hair Trick was entirely successful and no beams carried off.

*Tuhega* was the man : he was a bad man, going about killing people. Alofi was his home, and Alofi was ashamed of him. Therefore did his near relations try many ways to rid themselves of their blood thirsty member. But he was too much for them, escaping all the traps set out to make an end of him. Then they bethought them of a really handsome plan. He always slept with his head near a post of his house, and on the fatal night his faithless Better half managed — without awakening him — to untwine his long braided tress and tie it round the post. Then they had him, and *Tuhega* was buried with his fathers.<sup>34</sup>

Here then I have mentioned Customs New and Customs Old. There is one old custom however which I have sought in vain, none knowing : the names they gave their Week Days in the Long Ago. 'Aho' stands for 'Day' but how distinguished they one from another? With the 'Period of Prayer' they had, like us, their week and their days. We took the names of ours in chief from ungodly things; they seem to have far bettered us for they have more practical names for all but one — and that one ours.

Their week commences on the Monday, and Sunday is their 7<sup>th</sup> Day; here clearly do we see the hand of Missionary. Possibly he helped largely in the names applied. Those names and meanings are as follows, 'Aho' preceding each :

Monday – *Gofua* – Free Day (Do as you please)

Tuesday – *Ua* – 2<sup>nd</sup> Free Day (No work in the Bush)

Wednesday – *Lotu* – Church Day (Service 6.A.M.)

Thursday – *Tuloto* – Middle Day (of the Week)

---

<sup>33</sup> Smith states that "Dana, in his work on the Coral Islands, makes the statement that the coco-nut will not germinate if it is very long in salt water, though it seems probable nevertheless that some of the smaller atolls have received their coco-nuts in this manner — that is a very popular belief, especially of those who are quite ignorant of, or ignore, the extent of the Pacific covered by the explorations of the old Polynesian voyagers. It is known that they invariably carried coco-nuts in their canoes, and naturally planted them wherever they landed. In this manner I believe many an island now uninhabited has obtained its coco-nuts, rather than by accidental drifting. I hold that there are extremely few islands in the Pacific within the temperate zone that have not been visited by the Polynesians during the high-day of their nautical enterprise, which practically ceased some 500 years ago, through causes which I have detailed in *Hawaiki*." Smith, Part I, page 97.

<sup>34</sup> The story of *Tuhega* is told on page 165 of Smith, Part II, and by WWB in *Tales of Long Ago, A Ruffianly Chief*.

Friday – *Falaile* – Fri Day as spoken by Samoans

Saturday – *Fai Umu* – Cooking Day

Sunday – *Tapu* – Holy (Go to Church all day).

### Map-making

Finding that no topographical map of Niue had yet been attempted, only the coastline with its eleven villages, mine was the pleasure to attempt the task. And task it was, for every one of the 60,000 acres is owned and has a name, and the coastline around has a mass of them. But a beginning I felt had to be made; others in later years may add thereto. It was not done secretly. It was hung in the Post Office at Alofi for all and sundry to inspect and to suggest, as also a copy in my own *falé* <sup>35</sup> at Hakupu whither I invited the Intelligenza to give me aid. To the kindly New Zealand Government I bequeathed it at my going, and for all and sundry on the spot. Men said it was impossible for an Amateur, far too great a task, so none had dared essay.

As one walks along the Highway or the trails, my native companion remarks “Here is *Kalaone*” — nothing but bush — and you have not gone 200 yards before you are told “Here is *Anatoga*.” The same distance on you reach *Vaikona* and next lies *Lalotuali*. The list on any stroll seems quite interminable. When it comes to portions of the continuous reef the noting is still more difficult upon any map of ordinary size. There is no possible demarcating line, as sometimes in the Bush, between patches of the same reef, between *Vaipiki*, *Vaikulehepa*, *Anaheke* and *Oo*, and round a headland the endless names continue. But these are as nothing to what awaits one in the Interior of the Isle, that great stretch of Forest and Fissures — it is all owned, all named. The memorizing power of these natives is astonishing. These names are not confined to a few experts; they seem common property of all adults. Of one thing I am sure, that Niueans will have more than ever cause for pride when, eventually, they see their island laid out piecemeal upon paper.

As one seeks, one learns. These individual portions of land or reef are, in a sense, Family possessions, and each Family would appear to have its Head Gardener and Head Fisherman. No Family today could possibly tend all its possessions, it makes no attempt to do so, but its present day needs fall to the above named as Supervisors, others are their assistants. Many a good fisherman is useless in the Plantation; many a fine husbandman can scarce keep his balance in a canoe. Each to his task and the wheels go smoothly.

But a Chief is a Chief, he of necessity ranks first in his own Family, even in his village. He is above acting as head gardener or head fisherman, though he may work, and hard too from a love of the Outdoor Life as ever has done the Chief of Hakupu, the Niuean best known to me. His is the part of chief landed proprietor. As childless relatives of his high rank die, their portions lapse to him. He can dispose or hold as he sees fit.

Alas! there have been, and to my knowledge still are those who abuse that pre-eminence, who suffer from Earth Hunger and need careful watching. They take no heed of that solemn imprecation in the Holy Book they know so well, “Cursed be he that removeth his neighbour’s Landmark.” True it is that there are no posts, nor cairns of stones, nor fence on Niue, yet there are the coconut trees, to cut down which is to make it exceeding difficult to follow exact measure. They — even the Heads of Clans — have been known to steal forth with axe and carefully obliterate the Landmarks of portions which they coveted, by felling the trees. This is no mere scandal-mongering, or abuse by a Stranger of the Aristocracy, but plain truth and must be Chronicled.

## TALES OF TODAY

### The Village of Alofi

(Ār-lōw-fēe)

### Chapter III

*Tufukia* — By the Grave of *Fataaiki* — Alofi's War  
Memorial — *Opahi*

#### *Tufukia*

As it were 'to get one's feet' and the measure of this people, I had the good fortune upon arrival to be offered by the kindly Resident Commissioner, a temporary home in the empty bungalow of Alofi's late White Teacher at *Tufukia* which lies along the Highway a mile from the centre of the little Capital.<sup>36</sup> The School, numbering 250 pupils, and now some years in existence, was awaiting the coming of a new Head. All connected therewith, as to buildings, is very compact. There is the home of the Headmaster, a most commodious school building not a stone's throw off, beyond even closer is the Assistant White Teacher's house — soon to become part of the Hospital which was in the raising — and a Manual Training quarters upon the playground.

The Bungalow consists of four large rooms, with a broad veranda all around, up the posts of which wind creepers new to me, and also roses greatly daring, familiar ones of Home. These latter are usually a failure in Polynesia for they are fooled by the perpetual summer, and bearing blooms incontinently, expend their strength, their full beauty and their very scent.

The kitchen is apart, so also the bath and shower rooms. A low coral wall cuts off all from the highway to Alofi and Avatele, and just inside the gate are trees of the fragrant frangipani, and croton bushes of many hues, shrubs with waxen flowers of pink and white, great spreading fan-like palms, coconut

---

<sup>36</sup> Tufukia School was moved to another location in the mid-1950s. The school was then used by Lord Liverpool Hospital and later was converted to government offices, which were destroyed by Cyclone Heta on 4 January 2004. Tufukia in June 2015:

trees laden with their fruit, and banana bunches asking to be plucked, papaya too, the *Tane-tane*<sup>37</sup> bush in rows like sentinels beside the walks, and a lovely glimpse of the sea at the bottom of the garden where it shelves to the reef far below.

There is a miniature headland to one side of that decent where the land runs sharply out, known as ‘The Point’, a straight drop of full 90 feet to the water below. It is railed in lest accident befall, and close by is a thatched summer house, with cots of sacking for tired folk and for nights spent out of doors. Standing on that Headland there is an entrancing view. Ahead naught but the sea, to right and left the curves and inlets off the island’s shores, below you a sea lapping lazily over the reef and in those waters fish of the most wondrous colors moving lazily too. Here is a gorgeous deep blue fellow, there an orange, there a bright red beauty, and a woman is wading on that jagged surface looking for what she may obtain in the crevices of the reef where strange things nautical abide. Outside the reef are men, fishing in their narrow outriggered canoes, each by himself, rising and falling as the swell impels.

By the day ever so hot, yet at ‘The Point’ it is ever cool, for overhead, as a huge umbrella, are trees — not palms — with abundant branches to give shade. It supplies the perfect finish to *Tufukia*, Alofi’s Government School, and proved an ideal welcome.

### By the Grave of *Fataaiki*

*Fataaiki*’s grave lies hard by Alofi’s native Church<sup>38</sup> which rises close to the Cliff-edge and commands an unknown seascape. A building to wonder at is that Church inside, lofty and commodious, without a nail used, all sinnet (coconut fibre) bound, with window doors in profusion all around its oval form.

Across the road, with the village green in front lies the Native Teacher’s School where Pastors — who though oft young in years must needs be married men — are trained for full six years, then sent out not alone to Niue’s villages but as far afield as Papua. They are trained to Teach as well as Preach, both in the native tongue. The London Missionary Society has not, so far, considered it as its policy to teach English, though today in some small measure a commencement has been made.

Hard by is the Missionary’s residence, a very large affair, a bungalow lofty, with thatched roof of sugarcane, covering much ground and many roomed, all within a compound walled, not high, but very solid. The Mission has the pick of all Alofi’s sites, as indeed it has in every village — was it not the first comers and therefore had every right to — and here in Alofi, the Missionaries’ Headquarters, *Fataaiki* a good king, and *Tuitonga* his predecessor lie, though the last king — the last of Niuean Royalty, *Tongia* — rests not here but at Tuapa five miles to the North.

<sup>37</sup> WWB uses both *Tane-tane* and *Tanetane*.

<sup>38</sup> The church at Tomb Point, and *Fataaiki*’s grave, in June 2015:

*Fataaiki's* Grave is cumbersome as is that of *Tuitonga's* tomb close by, a jumble of coral heavily coated with lime, a heavy flat tomb with three huge headstones, one at each end and a semi-circular one on top.<sup>39</sup>

The two upright 'Anointing Stones' rise close handy, across the road, beneath coconut trees on the Village Green, for though Niuean Kings knew nothing of Crowns, there had ever been a formal ceremony known as the 'Bathing' and the 'Leaning Back'. Seated upon the ground, leaning back upon the coral slab, the would-be monarch had oil of coconut poured freely over him — his Bathing — and he arose a King. *Tongia's* Stone is on Tuapa's Village Green, with other stones half a mile back in the Bush where he held his Council, a raised platform of coral for himself, his headmen sitting at respectful distance, each with his back to a slab still standing.<sup>40</sup>

Niuean history is divided into two distinct parts: the 'Period of Darkness' and the 'Period of Prayer'. *Tuitonga* lead the latter, *Fataaiki* next. Rough drawings of these two show them bearded, not now the custom, but in earlier days considered all important. With care they were fostered, plaited till they looked like rats tails and oft had small shells attached to their ends.

When *Fataaiki* died, his son did not of necessity succeed him. Indeed there was a long interregnum till *Tongia* by Persistency attained the rank he coveted. But with *Tongia* came the end of Niue's Kings. There could not be two kings on Niue at the same time, so thought they all in their simplicity. They had accepted the King of Beretania,<sup>41</sup> and King *Tongia* of Niue must therefore disappear. The latter groaned but none else even sighed, for he had long lost the respect of his people. He was consoled with the regal pension of £50 a year and dwelt in his Palace at Tuapa till his death. His son, a Prince of sorts, is a Road Boss, content and corpulent.

But *Fataaiki* dreamed not of such an end to the Kings of Niue, and he was laid to rest hard by the Church he loved, full of years and honor.

Beyond the grave and beyond the Missionary's house is a group of Niuean homes. Therein are housed the budding Preachers, their wives and children. Each village has its candidates, there are always nigh 50 in training, their ages greatly varying, and each village has erected homes for them at the Capital, and helps in measure to support them, bringing in tithe week by week. Yet each would-be Pastor has his own Plantation — a free gift from Alofi's people — up on the level land aback and above, to help

<sup>39</sup> *Fataaiki's* grave, left, and *Tuitonga's* tomb, right, (June 2015):

<sup>40</sup> The Anointing Stones, and the 'Period of Darkness' and the 'Period of Prayer', are described in Smith, Part II on pages 174 and 173 respectively.

<sup>41</sup> Britannia.

him out, and there he toils two days in every week, save holiday times when he is back in his village — the rest are spent in study.

### Alofi's War Memorial <sup>42</sup>

Six weeks had passed since that fateful August day when the Motherland threw down the gage of battle with the Hun, ere the news of that momentous event reached isolated Niue.

Next day a Fono was held, and there and then £140 in cash was turned in to help the Cause, and, largely through the eloquence of one Chief, two hundred men offered themselves shortly after, for Service at the Front. Here was gallant response indeed. They longed to do their 'Bit'.

Upon the summit of Alofi's cliff, close to the Missionary's house, there stands today a German Field Gun, presented to the island by the New Zealand Government 'In grateful remembrance', and beside a Monument of Stone, on its face engraved 'Pro Patria', beneath which is Niue's Roll of Honor — seventeen names — the Dead who gave their lives that we might be free. <sup>43</sup>

More died of sickness, not of wounds. They were not fitted for the task they longed to do, albeit the few who reached the actual firing line showed gallantry. One in chief was marked at Gallipoli by his white soldier friends as magnificent and met a soldier's death. Another, shot through the chest, lay lingering for two years in a New Zealand hospital, not again to see his island home, but always uncomplaining. Those who survived had to be returned or else none had seen his home again. Two errors — not their own — would seem to have been made in the rush of things. The one, the climate they were sent to so different from their own; the other, the keeping them together as a Company. The two just mentioned had enlisted in New Zealand and stationed otherwise than their fellow Niueans.

They <sup>44</sup> were let gently down. No hearts were sore, they had done their best, they were ready for the sacrifice, and though they failed to carry through, they failed with honor. They realized that the task was beyond their powers. When told that they could do better service for the Empire in that far-off Coral Isle, keeping guard 'gainst sudden seizure, gathering in the all needful copra, they bowed the

<sup>42</sup> For an account of Niue's involvement in the Great War, see [Tagi Tote E Loto Haaku — My Heart Is Crying a Little, by Margaret Pointer](#).

<sup>43</sup> The Niue National Memorial, including the German field gun and the Pro Patria monument (June 2015):

<sup>44</sup> They would appear to refer to Niueans who were not sent to the front, rather than *the two just mentioned*, who were.

head and returned whence they had come. Those who survive today are glad that they offered themselves, their folk are proud of them, and they know that Beretania never forgets.

And the Dead! they will never be forgotten, for are not their names inscribed on that Monument which is the first thing to meet the eye as the new-comer mounts the cliff from the Landing Stage? and right handy to that Church where most of them learned ‘the love of Brethren’?

Here then are those names : let them go forth to other lands : names not of Generals and Captains, only of Non-Coms and the rank and file, but heroes all — Niueans none nobler :

## Opahi

I have stood where Captain Cook touched land in 1774, he with his companions the first of white men to land on Niue. It lies between Alofi and my first abiding place at *Tufukia*, and to reach it one descends the cliff by fairly easy grade, a chasm there reaching to the reef. It was not the first spot on that day, but it was the worst spot for himself, where he came very nigh to death.

The natives, now that they know his worth, are proud of their first white visitor, and vying with one another as the locality, confuse the issue. But all are agreed that it was at *Opahi* where he stepped ashore for the last time. His account is clear and unmistakeable. He came from the North and sighting land, stood off a mile. Then taking boat he made for shore. It was the North West coast he touched, and first at *Matapa* Chasm, then at Alofi, then at *Opahi* — all within a distance of 10 miles — he landed, turned away in disgust, and sailed towards Tonga, dubbing the island ‘Savage’ because he was not wanted.

It was the on the 21<sup>st</sup> of June that he stood on *Opahi*'s reef; by an unpurposed co-incidence that same date was my first visit there. Let me give his own words; they are more vivid than mine can be.

Of Matapa Chasm,<sup>45</sup> nigh Hikutavake he wrote

“Perceiving some people on the shore... I put off to the land, accompanied by some of the officers and gentlemen. As we drew near the shore, the inhabitants retired to the woods... we landed and took post on a high rock to prevent surprise... the coast was so overrun with woods, bushes, plants, stones etc that we could not see 40 yards round us. I took 2 men and with them entered a kind of chasm which opened a way into the woods. We had not gone far before we heard the natives approaching, upon which I called all to retire<sup>46</sup> ... as I did likewise. We had no sooner joined them than the islanders appeared... we began to speak and to make all the friendly signs we could think of to them, which they answered by menaces, and one of two men who were advanced before the rest threw a stone which struck Mr Spearman on the arm. Upon this, two muskets were fired, without order, which made them all retire under cover of the woods, and we saw them no more. After waiting for some little time... we embarked and proceeded down along shore, in hopes of meeting with better success in another place.”

Of landing at what is now Alofi village he proceeds :

“Having put ashore a little before we came to the last place, three or four of us went upon the cliff, where we found the country as before, nothing but coral rocks, all overrun with bushes, so that it was hardly possible to penetrate into it, and we embarked again.”

Of *Opahi* he writes

“After ranging thus the coast for some miles without seeing a living soul or any convenient landing place, we at length came before a small beach on which lay 4 canoes. Here we landed... with a view of just looking at the canoes, and to leave some medals, nails etc in them, for not a soul was to be seen. The situation of this place was to us worse than the former. A flat rock lay next the sea. Behind it a narrow stone beach, this was bounded by a perpendicular rocky cliff...

---

<sup>45</sup> Matapa Chasm (June 2015):

<sup>46</sup> Cook's text is to be found on pages 12–15 of Smith, Part IV. Where WWB has “*upon which I called all to retire*”, Smith has “*upon which I called to Mr. Forster to retire to the party.*”

two deep and narrow chasms in the cliff seemed to open a communication into the country... I saw that we should be exposed to an attack from the natives, if there were any, without being in a situation proper for defence. To prevent this... I ordered men to be drawn up upon the rock from whence they had a view of the heights, and only myself and four of the gentlemen went up to the canoes. We had been there but a few minutes before the natives, I cannot say how many, rushed down the chasm... upon us... they came with the ferocity of wild beasts and threw their darts. Two or three muskets discharged in the air did not hinder one of them advancing still further and throwing another dart or rather spear which passed close over my shoulder. His courage would have cost him his life had not my musket missed fire, for I was not five paces from him when he threw his spear, and had resolved to shoot him to save myself. I was glad afterwards that it happened as it did. At this instant, our men on the rock began to fire... and the last discharge sent all the islanders to the woods.<sup>47</sup> Seeing no good was to be got with these people... we returned on board... and made sail.”<sup>48</sup>

## Chapter IV

Drunken Fish — Things Practical — A Sunday in  
Alofi — Flying Fish and Others — The Flying Fox

### Drunken Fish<sup>49, 50</sup>

The *Aukava* is a serious business, not to be lightly undertaken. It is the catching of fish in the cracks, the chasms and pools of the reef by means of a special soporific.<sup>51</sup> It must be done during two months only of the twelve, and all according to strict custom and tradition.

What special preparations they make in their homes I do not know, but one thing in special is insisted on. All must be on the spot — to look down from above with peering eyes either native or white is to cast a spell on the *Aukava* and to ruin all chance of success. Therefore was I on the reef and in the very thick of the crowd. I would be no spoil sport, yet would I learn.

<sup>47</sup> At this point in Cook's text, Smith, Part IV, has “*from when they did not return so long as we remained. We did not know that any were hurt. It was remarkable, that when I joined our party, I tried my musquet in the air, and it went off as well as a piece could do.*” Cook is embarrassed. WWB is missing an ellipsis.

<sup>48</sup> See also the story of *Vai-Matagi and Vai-Fualolo*, in Smith, Appendix Continued, pages 88 and 90: “Captain Cook landed near Alofi, at the reef-opening of Opāhi, the village near the point Halagigie. The chiefs of Niue painted their lips, teeth, and cheeks with the red juice of the banana called *hulahula*, and spread out their arms, and showed their teeth to frighten Captain Cook to depart, and not come to their island. Their teeth were dyed red (to make believe) it was man-eating — it was deceit; and so he named the island thus (Savage Island).” For a humorous account of author Tony Horwitz's search for a *hulahula* on Niue, see Chapter 8, *Savage Island: The Hunt for the Red Banana*, in Horwitz (2002). They are apparently rare, but he found one beside the water tank at the home of Carol, the wife of an equipment driver who had been a client of legal consultant Herman Tagaloailuga. The latter described the plant as, “Very straight, thick stalk, broad leaves. The fruit doesn't droop, it goes straight up.” In an article (previously) on the website of The Queensland Times entitled “Niue: Land of plenty” and dated 5 July 2011 — the link is now dead — concerning the plantation of Tony Aholima, it is reported that “Beside his house in Mutalau village, he's even got a banana variety whose sap produces the red colour worn by the warriors who famously scared off Captain James Cook when he tried to land in 1774.”

<sup>49</sup> A shorter version of this text appears in Tale #45, *Of Drunken Fish and Flying*, in Part IV, *Tales of a Roaming Grandfather*.

<sup>50</sup> This text is referred to by Ryan (1981), page 195. This was the only reference to *The Chronicles of Savage Island* found online when they were transcribed in early 2011.

<sup>51</sup> Smith noted that “*they often stupefy fish by casting the berries of the kieto and kauhuhu into the waters.*” See page 216 of Smith, Part III.

As the tide ebbed over the site selected, some acres in extent, the natives beat the sea with sticks, driving the fish back towards the land, then certain of them stood guard where the reef edge is, that none should pass out again. Meanwhile men were busy with long poles pounding in coconut baskets the seed of the local Ebony Tree, seed the size and shape of a small crabapple, a hard exterior green in colour — these can only be collected during June and July — and a soft pulp inside. The mash was at length ready.

Here, all alert, were well over 100 men, women and children, provided, some with hand nets, most with 20-feet long sticks with three and sometimes four spear points bound together at the head. Standing in the shallow water around the cracks and pools, which often run far under the coral, the word is given and the soporific is drawn through every crack and pool, not spread by hand. At once the result is seen; the whole space, even where one stands in the wet, is turned into a bright magenta, from any distance it looks like blood. This has the effect, not of poisoning the finny one below, but of blinding them and confusing their poor wits so that they swim aimlessly about, and fall to spear and net and hand in their confusion.

What each catches, that they keep; there is no division of the spoils. To expedite matters, the natives sink beneath those ‘bloody’ waters, some with boxes glass-bottomed the better to see into the depths, making things still more lively for the fish. I saw one old dame disappear in a great pool close to me and counted four and twenty slowly ere she returned to the surface. She had been rewarded.

The men strip, save for a loin cloth; the women go in Mother Hubbard <sup>52</sup> and all, and look like drowned rats; the naked boys and girls are in Paradise for the nonce. <sup>53</sup> Here a man had speared a splendid Blue fish with the beak of a parrot; another brought one up with all the colours of the rainbow on it; strange things appeared and the native tongue left me as much as ever in the dark. There were many eels and many an octopus. Of the latter, I saw a young woman dive down, then reappear to make at once for a clear space close beside me, an octopus not only on her arms but held tightly to her breasts. The evil thing had discharged its fluid of inky hue all over her. She was not a pleasant sight. Clearing herself of the tentacles, and using knife to slay as well, she spent long time in bathing, yet still remained a sooty object as she resumed her quest.

Everyone was busy, and stabbing, drawing up and releasing from the spear points would bite to death their capture, big or small, ere throwing them into baskets slung to their sides.

The Doctor who stood beside me, sighed, for well he knew that much trouble lay ahead of him, for though the fish if eaten forthwith are harmless, yet those escaping if captured later are poisonous, and then has he work cut out for him in many a *falé*, for many days.

### Things Practical

There is neither Boot-mender nor Hairdresser on Niue, not even at the Capital. The natives wear no boots, therefore the trade of mender does not appeal to them. Two noble-souled white men stand ready to do their best, but oft the nails run short, when tintacks <sup>54</sup> take their place. Sometimes these hold, sometimes they do not.

There came a Great Man to Alofi, even the Governor General of New Zealand, and the Resident Commissioner was in a sorry plight for his only decent pair of shoes were on strike between their

---

<sup>52</sup> A Mother Hubbard dress is a long, wide, loose-fitting gown with long sleeves and a high neck, introduced by missionaries and intended to cover as much skin as possible.

<sup>53</sup> The present, or immediate, occasion or purpose.

<sup>54</sup> Tack or small nail of tinned iron.

Uppers and their Lowers. But the noble souled hastened to his assistance. He was proud. He felt that now from his helmet to his boots he could make a respectful show. Down to the Landing Stage he went, and up with the Great Man he came, but not with his boot. There was a sudden parting of his soles from what supported them, and in his stockinged feet he carried out the honors of that day. There is great opportunity on Niue for a Boot-mender with a Mission.

For Hairdressing we look to one another; one's neighbour comes gallantly to the rescue; one's cook is none too bad. At the beginning of things I called mine from the washtub for I knew that she had had long experience and had got past the stage of 'Steps' upon her husband's pate. Later I called steadily upon *Faséné*, my Assistant Teacher, a past master in the art, had learned it in the Army<sup>55</sup> and could hold his own, I swear, in any Barber Shop the wide world over. My verandah, the open-air location; a full sized sheet, my robe. Yet for fear — shame be it said with such a master with my scissors — I held my ears lest evil should befall their tips. One can never tell.

We have one tailor, that is when he has a mind to be. He can make duck suits; his talent stops there. But being the only one, he keeps raising his price. Yours it is to supply the material; he carries no stock. Once he charged but six shillings for the making, now that native wants well nigh double. We are up in arms. It is robbery.

We have shops, but not for white folk. The Traders condemn<sup>56</sup> us. We have brought it upon ourselves. We order in bulk from Outside. The native does not. He finds in the Trader's Store all that his soul desires, and pays the price. Yet are we Friends. Ere we turn to him, however, we go a-begging. We are but one big Family the score<sup>57</sup> of us. We borrow freely and without shame. He who did not repay when the schooner had come, replenishing his storeroom, would be met with cold looks. Ostracized on a Coral Isle! Heaven forefend<sup>58</sup> such a tragedy for me. The loss of Friendship for a bag of salt or a tin of butter! Far rather will I pay the Trader's extortionate price. I early did so, for I forgot the Pepper!

For years they have run a native Co-operative store at Alofi, a gold mine were it properly conducted, and if a real combination of all the natives were effected. But their organising ability does not reach so far. Therefore the enterprise drags along with its Ups and Downs, and the White Traders still hold the situation well in hand and make good money.

When first the business started, the native Board of Directors imported a white man from New Zealand to conduct it. He made a good thing out of it — for himself — and was on the eve of a final grand coup when his Past rose up against him. The Authorities had at last found his lair, their hands were almost on him, but he was just too quick for them and left with his spoils for parts unknown.

Still those simple folk wanted a white man in control. The second one likewise made good money for himself and was not, when they wanted an accounting. Then they turned to their own. The first had

---

<sup>55</sup> *Faséné* is mentioned in *My Heart is Crying a Little* by Margaret Pointer. He was a corporal, with army number 16/1034. He sailed to Egypt from Auckland on the SS Navua on 5 February 1916 and was invalided home from Suez on HT Tahiti on 5 May 1916. On page 19, we read that

One man, 16/1034 Fasene of Avatele, gave as his occupation on enlistment "pupil teacher" and he was recognized as interpreter for the group. Upon arrival at the [Narrow Neck training] camp [in New Zealand], the men were organized into groups according to the village they came from, villages were paired and then an attempt was made to identify someone within each group to take charge. This was largely dependent on who had at least some knowledge of English and it seems that Holmes [the chief constable on Niue], assisted by Fasene, spent some time identifying these men.

<sup>56</sup> To treat or regard with disdain, scorn, or contempt.

<sup>57</sup> Twenty.

<sup>58</sup> To fend off, avert, or prevent.

not been in office long ere he blossomed out with the desire of every Niuean heart — a horse and trap.<sup>59</sup> He was retired.

A second came upon the scene with precisely the same result. Then they found an honest man who accumulated funds for the Company and not himself. But this success was too much for them; they quarrelled amongst themselves over the spoils; and disgusted, he threw up the appointment. It now drags along under yet other native manager, and what might easily be the greatest business in all Niue is a tiny storeroom as you pass down the cliff to the Landing Stage at the Capital, with its copra shed half empty.

But though they do not shine as Company Promoters, yet as individuals they have great ability in merchandize of special kind. The gifts of Handiwork are both varied and wide spread, and through these they make much money. Alofi boasts of Table Mats. Do you seek baskets, then go to the old-time Capital, Tuapa. If you need fans, Liku is the place par excellence. Do you seek bead work, Makefu can supply you. If you are after Dancing Waists, you must go to Avatele. Hakupu is noted for its hats. The workmanship of each of these articles is oft exceedingly fine, and the prices astonishingly low. One shilling will buy most things. In trade they go for considerably less. They are still a simple folk where true value is concerned. They may wake some day and become a business people.

That diversity of gifts is likely to die out unless good watch is kept by us who have introduced so much to draw those nimble fingers to other things. For myself, I set apart regular hours for each girl to be instructed, not only in Hakupu's specialty but all the rest, and secured Experts — at a price — from other villages as Teachers.

### A Sunday in Alofi

Things Churchly hum of Sundays at the Capital. They commence early and the Missionary works till late. The first native service is at 6 a.m., followed by another at 9 a.m. (the High Service of the day), then again at 3 p.m., with Sunday School for all to follow, and to the credit of the Missionary, after thus serving the natives he adds a service for the White folk in the evening.

To the natives, every Sunday is a Gala Day, an event in their all too Monotonous lives. They turn out to enjoy it to a man. Some seem to camp by the Church for the day. You see groups sitting on the sward<sup>60</sup> hard by, waiting for the next performance. There are many Bibles in hands, big books well known literally. Hymn books are always within the building, though most seem to know the whole book by heart. Of organ there is none; a Leader takes its place. A big fellow, in Alofi, who seems to possess a range of voice from deepest bass to a screeching falsetto. And once started, they sing hard, harsh and tumultuously.

Big Ben, under special cover, strikes outside — three times at great length it tolls, the first to get ready, the second to prepare, the last is to start. And then you see Alofi at its best; they come pouring in from every side save one — the sea. The ladies, I am confident, have three dresses laid specially by for Sundays: the Early Morn, the Full Dress, and the Second Best. The 6 a.m. is clean but plain, then at 9 a.m. they burst forth in all their grandeur of frills, flounces<sup>61</sup> and furbelows,<sup>62</sup> whatever the latter in English means. It cannot mean Fur in such a clime as this, and their Belows are free of

<sup>59</sup> A light, often sporty, two-wheeled or sometimes four-wheeled horse-drawn carriage, accommodating usually two to four persons in various seating arrangements, such as face-to-face or back-to-back.

<sup>60</sup> An expanse of short grass.

<sup>61</sup> A strip of decorative, usually gathered or pleated material attached by one edge, as on a garment or curtain.

<sup>62</sup> A ruffle or flounce, as on a woman's skirt or petticoat. A piece of showy ornamentation.

stockings and of shoes. But the smocks are very smart, whilst the hats are an Easter Sunday Parade every week. They make a brave sight in that large building with its centre and side aisles full, the men in more sober attire with loose shirt wide open at the breast. There are Beadles too, to keep good order, who have long fishing rods with which they tickle the pates of unruly ones, and doubtless would throw them out neck and crop<sup>63</sup> if the occasion demanded.

The Native Pastor who reads the Lessons is a marvel for rapidity. At all times Niueans speak rapidly and run their words together; they raise the voice at the end of every sentence and clip the last syllable so that it is hard to catch the sound, but this Pastor must be a Champion. He went so fast that he oft lost his breath, and to follow him as he read a Chapter from ‘Corinthians’ kept my eyes going like a millrace<sup>64</sup> as I strove to follow in a Niue Bible.

The white folk who attend, do not sit in the Nave, but in a railed off chancel<sup>65</sup> of semi-circular form, round and behind the Rostrum whence the Pastor and the Missionary — when at home — lead in Hymns, Prayers, Reading and Address.

The Blessings given, the way that great congregation clears out is a marvel; they seem to rise up from the pews — for Alofi has long passed the stage of mats on floor — en masse and disappear in a trice. But they are seemingly quite ready for another session, and the ladies, once outside, linger on the Green as if loath to lay aside their spotless finery. I saw my *Fou*, but did not at first recognize her, she was grand; I felt quite proud of my cook of the Fuzzy Hair. I did not see my *Tuli*; I fear the rascal had gone off fishing on the sly.

But the third service over, there was no more for them, and they went slowly home to their little white stucco houses in the groves of coconut and bush, whilst the white folk took a stroll along the Highway or the Cliff, others to gather on some verandah and have a cup of tea, and chat. Then supper came, and later the Summoning bell went, and lamps were lit — for dark nights it is wise to see one’s way and the Mission School House is off the road. Here the Missionary held service, a simple one, the Cleric in his white duck suit, an harmonium that was in bad health, either from dampness or much heat, a little company for the white folk are but a handful, but a drawing together for a little space to deal with the Things Unseen.

Thence to *Tufukia* — in the pitchy dark — and so to rest.

### Flying Fish and Others<sup>66</sup>

A pretty sight it is to see these natives engaged in netting the Flying Fish.<sup>67</sup> Out beyond the reef they assemble, and forming a line abreast, paddle slowly forward. As it is always at night and a moonless one at that, each canoe has a huge torch light up on the prow. Standing on the Cliff-edge one can see nothing of boats or men, only the steadily moving forward of the flares. Behind these stands a man in each canoe with a sort of immense butterfly net, who scoops in the fish as they rise from the sea and fly directly at or past the light. The paddlers sit behind. It is extremely bad manners to forge ahead of the line. It is unfair too, but sometimes a greedy two attempt it. Then the other perforce paddle to keep up; faster goes the greedy crew; faster go their companions till it degenerates into a canoe race,

<sup>63</sup> Altogether; roughly and at once.

<sup>64</sup> The current or channel of a stream, especially one for conducting water to or from a water wheel or other device for utilizing its energy.

<sup>65</sup> The space around the altar of a church for the clergy and sometimes the choir, often enclosed by a lattice or railing.

<sup>66</sup> A shorter version of this text appears in Tale #45, *Of Drunken Fish and Flying*, in Part IV, *Tales of a Roaming Grandfather*.

<sup>67</sup> Smith comments that it is “a very pretty sight”. Page 215 of Smith, Part III.

with Flying Fish quite in the background. But those two are 'Taboo' for future hunts. The proper pace is that of the weakest paddler; those paddles are exceeding heavy.

That strictly kept line is a wonderful sight in the dark. Perhaps 10 canoes will push off from a village; others join in as they proceed along the coast; there are 20 now in line; others add themselves till twice that number may be seen moving upon the still water, and all abreast. As many as 180 have been seen working together, a moving fleet known only by its flame.

It is not all easy work, for often those winged fish will miss the net in their flight and strike hard the men in face or naked body. Those scaly ones leave their mark ere they fall into the canoe. Three men in a boat not two feet wide, and one standing up, does not draw me to become one of the company. I prefer to look on from above.

There is good sport however in trolling for the Tiger. He is a big fellow and takes some handling. He gets his name from his wondrous stripes, which bear close resemblance to the biggest of the Cat Tribe. Their lustre vanishes once he is out of the water. His flesh is brown and coarse, but fair to taste, the body not deep but compact, running to four feet and over. The native way to get him, when once hooked, is to let him take you out to sea till he is exhausted and gives in. Then in such dinky things as these canoes one hauls in very carefully.

I would sample Niuean shellfish. A kindly native went a-hunting in the deep. His companion dived for them and soon filled the canoe with the big conches, whose tenants are eaten raw. Crossing a deep spot, the two capsized before my eyes and every shell went back to its proper element, too hopelessly deep down for recovery. I had to await initiation, but then not raw. Besides they are more than a mouthful except to Experts.

*Tou*, my outside man, and *Tuli*, my boy orderly, asked me one late afternoon soon after my arrival, if I would like to see our supper caught, so we clambered down the Cliff nigh my dwelling, and leaving me on a point of vantage well above them, they descended to the reef. They parted. The man went to where a pool connected directly with the sea; the lad hugged the shore. They crouched and moved forward as cats for mice. Suddenly both rushed, the man dashed his framed net across the mouth of the pool, and in the net was our supper. Meals cost little here, if need be. What name those fish bore I know not, nor care, but they were very tasty.

### The Flying Fox

To see a colony of those strange bat-like birds, the Flying Fox, is no easy task on Niue. Deep in the forest they abide, only issuing from thence at nightfall to find their food in the fruits which they share with the natives. They are pests, but steadily increase; their haunts so inaccessible and ammunition costly. As a table delicacy they are an acquired taste, but today there is arising a demand for their skins, or at least a part thereof, the rich red brown of their breasts, the U.S.A. chief seekers.

With a Trader and a native guide, I tramped out from Alofi, soon leaving the Highway to take a tortuous trail into the bush, which lead to a grass hut, a good four miles from home. Refreshed with coconut milk secured from Alofi, we dived into the trackless forest and over roughest coral, stumbling and fighting our way along for another mile, the native slashing with his long knife to notch and so make sure of safe return. Here it was that not long since, a larger party of white folk than we had lost themselves, missing connection with their guide who had left them temporarily to find other colony and wandered for long hours till they escaped with many tears and bruises.

With fine accuracy that same guide brought us to our quest. There was no doubt about it, for the squealing and the quarreling and the constant swish of wings could have assured a blind man of what

was above. High up in the huge banyan trees they were gathered together, hanging in clusters from the branches. There were many hundreds, and all seemed restless, evidently hungry, preparing for their nightly piracy, each to go off on his own, winging its way slowly along with much the appearance of an owl.

Looking upwards, the black and brown with a touch of red of those on the wing, flashing in the late afternoon sun was well worth the tramp. When the dog of our party let them know what was beneath them, they swung off en masse, the place a whirling mass of wings, the squealing deafening.

It was worth a ten mile tramp moreover to have located those fruit thieves in their home — those poachers — whom Niueans call the *Pek-a*.

## Chapter V

### The John Williams IV — Of Caves — Fiat Justicia — The Falé *Monuina*

#### The John Williams IV

There were 3 'John Williams' before the one I know, and one other preceding all of the four. And each and all, their object, Missionary work. There dangerous waters, as has been noted, were first navigated with such intent by the veteran John Williams himself, without a chart and in a ship built with his own hands. The wonder is that it ever held together with the primitive implements of those hands. The masts were coconut trees and so by no means straight, every other part was as rough, yet was it a gallant craft and braved dangerous seas as dauntlessly for many a year, as if turned out from the banks of the Clyde. Its builder christened it 'The Messenger of Peace'. It lasted long after he had fallen a victim to New Hebridean savages; at length it dared once too often as had done its builder, and piled up upon a reef — those reefs it had so long defied.

The 1<sup>st</sup> John Williams came to grief on Danger Island; the 2<sup>nd</sup> made an end on Niue's reef; the 3<sup>rd</sup> escaped similar fate, being sold after 30 years' good service to secure steam in place of sail; the 4<sup>th</sup> John Williams is to the natives a floating palace, fortunate those who travel thereon. It is no cargo carrying boat, save for the supplies needed by the various Mission Stations. It carries, however, on its rounds full complement of passengers. Were there no restrictions the steamer would not hold the number.

Two years had passed since the Mission Ship had cast anchor off Alofi; great therefore was the joy when one Saturday night, just as darkness had settled over the land, word was passed from mouth to mouth that in the W.S.W. a light was to be seen at sea. It was no star low down, said those who ought to know, but a lamp at the masthead. Steadily it drew nearer till the most hardened doubter was convinced. Then when she was so close that her outline proved that the trim little craft was no other than the Mission Ship, she turned and made as if she was going, after all, to leave Niue in the lurch. Some hearts on that cliff-edge sank, but others cheered them with the assurance that no wise Captain would venture to make an anchorage at night; he would head out to sea and drift till morn, which proved the truth.

That glimpse in the darkness was enough to send 'Sail Ho!' ringing that same night throughout the isle, and before the Sabbath was half over, every village had heard the news, and into Alofi began to pour the natives from every quarter. They came from various motives, many only to see once more

‘their Ship’, others to go off on her to visit other islands, each traveller with a group of friends to speed them on their way. The natives had already long stored many tons of yams at the Capital, to be put aboard, part for the crew, the larger portion to be left on islands and atolls, as gifts, where naught but coconuts grow, and this huge potato of the Pacific they knew would be warmly welcomed.

With early morning, the John Williams came to anchor and soon officers and crew were ashore. A fortnight from Australia, the ship had run into a cyclone off Norfolk Island, and in it had lost the horse going out to Alofi’s Missionary, some sheep and many chickens. Whilst this was unfortunate for the Missionary, it was just right for the Resident Commissioner, whose horse had thus promise of a glorious feast for a full year to come. That deal was quickly arranged for; Australian hay is not secured every day on Niue.

Of course, we had lunch onboard, where things were served such as we oftentimes dreamed of tasting once again, but rarely do attain to. We learned much welcome news of the great world outside. The visit was all too short, for Monday night saw the prim little steamer lift anchor and steam away. It bore off, besides fifty Niueans, three of our small white community, reducing us to still smaller dimensions. These by Duty’s call; the natives, for pure love of roaming.

Not every native — on any isle — who likes can go aboard, thus getting a Free Passage, less food, which each one must supply. Both Residents and Missionaries have to pass on the would-be passengers. They must be Members of the Church; they must be in good standing; and they must owe no one any cash. The names — in Alofi — are posted weeks, nay months, ahead, on a board in the Post Office, and any and all objectors can have a say. They used to ship off owing much to the Traders; this is now impossible. To head them off still further, the Permit issued by the Government has been raised from 4/- to One Pound, but the larger sum seems not to hinder. It is no round trip that the Mission Ship makes. Some have returned to Niue after a thirty years absence; few get back by the time they expect to. But it does not worry or deter them. Theirs, like some white folk, is the Wanderlust and go they must.

Up anchor then, and away, and Niue turned once more to its isolation.

### Of Caves

There are numerous Caves the whole coastline over where the sea has entered in, and besides these there are many land caves, each and all studded with stalactites, which in warring days came in handy. With an eye to serious business, in addition to their clubs and spears, pieces of these were broken off and rounded as a small cannonball, or shaped as a lemon; they held a terrible missile in their hands.

It was in a land cave hard by Alofi that that the Tongans in the 16<sup>th</sup> Century met their Nemesis. Drawn after the Niueans, who were seemingly retreating to the bush, they were well nigh exterminated by the collapse of a false bridge which hurled them into the great cavern below, where hidden foes awaited them, with coral bombs a-plenty from above.

Inveterate sightseer that he was, it was fortunate that Cook did not enter any Coast Cave on the isle or the chances are that he and his would ne’er have come out again. Yet there were several very handy to his landings at and nigh Alofi.

Further on one comes to *Tahikave*. It is a cave now left severely alone. It was long so noted a spot between Alofi and *Tamakatoa* that its very entrance was dignified with special name, even *Kaufagalahi*. Once inside that portal, a swim of a hundred feet brings you to where the gloomy hollow opens out into a roomy space, deep and still water hugging the coral walls. Yet there is room enough, in spots, to climb out upon and fish, nor did fishers ever fail of goodly catch. Things went well for a

long time, then for some unaccountable reasons the Tigers of the Sea took it into their savage brain that they might as well join in the sport, and possibly get more toothsome food than fish. A native fell a victim, and from that day *Talikave*<sup>68</sup> has been shunned by man; sharks can have it if they will.

Not far off is *Halaika*. Here on the summit of the cliff there is a fissure, looking down which one can see the ocean waters shimmering in the Cave below, which has a sub-reef outlet to the sea. Long men sought to find that outlet's mouth, and finding, set their nets across it to make rich harvest; then proposed diving down that 90 feet to stir the waters and drive the finny ones to sea and capture. As to getting back, there was but one way, that which the fishes took. So 'twas arranged, but none of those who took that dive into the Unknown ere came back to tell of that same passage. The net was a great success, but after the fish there came no men. Long and anxiously they waited, then as the tide ebbed there issued water tinged with blood. They had dived to their death, that Cave of *Halaika* their burial ground. None from that date have ventured.

Anext is *Amanau*, with its story. There was deep trouble between *Talamahina* and *Fugamata*. The former, the elder, sought his brother's life. The latter fled from home and sought refuge in the Cave of *Amanau*. He selected this one because it, like *Halaika*, can only be reached by diving beneath the reef and coming up into the hollow space, cut off from all other approach. And *Amanau*'s way in and out is very clear to see.

Long did *Talamahina* seek his brother, yet feared to take that dive for he was no expert swimmer, as was *Fugamata*. But the hider, as the days went by, found it far from comfortable always getting wet as he swam out for food, even for coconuts and taro, of a night, so shifted his retreat to *Makatutala*, a high pinnacle of rock standing by itself upon the reef, not far off. Because the height was great and the climbing wearisome, he made a ladder, which he drew up after him, making himself a shelter in a split of the rock. Thence would he issue forth of nights for food, yet dared not he hammer his coconuts upon the rock lest his bloodthirsty brother should hear and thus locate him. He used instead the claws of the crab *Kalavi* to saw the dry shells in two. Thus dwelled he for many moons.

But now *Talamahina*'s wrath had passed and he would have peace between them. Therefore went he forth and stood upon the cliff above *Ananau* and nigh opposite *Makatutala* and called aloud for him "*Fugamata*, my brother, come forth, there is peace forever between us from this day," and as a sign thereof he broke his spears and hurled them from him into the sea below.

All this *Fugamata* heard and saw and was right glad, for he was weary of his rock home and his loneliness. And when he heard his brother further declare aloud that far, even at the back of the island, was to be his future home, then knew he for sure that all was well with him. That night returned he to his people, the feud was o'er, nor *Amanau* nor *Makatutala* saw him more.

Lately — during my stay — workmen cutting a new road along the cliff-edge from Alofi to Avatele came across a cave unknown to any. It was full of skulls and bones of all ages. The explanation offered by the natives is that to this cave refugees from some raid fled for refuge, and either died of hunger fearing to go out for provender<sup>69</sup> or — more likely — were tracked by the avenging host and massacred. Anyway, to those White folk who were interested in skull formation and measurement<sup>70</sup> it proved a most interesting discovery.

---

<sup>68</sup> WWB wrote place names carefully and the inconsistency with *Tahikave*, at the beginning of the paragraph, is not an error of transcription.

<sup>69</sup> Food or provisions.

<sup>70</sup> WWB is probably referring the American anthropologist, Edwin Meyer Loeb (1894–1966), who visited Niue during WWB's stay; see WWB's note regarding Loeb at the beginning of the *Bibliography*.

## Fiat Justicia

To see British Justice at work, slow but sure, following up relentlessly the criminal till its long arm grips him, brings him to trial and metes out sentence due, is not only something to be proud of, but to instil great confidence when off the beaten track.

I saw it at work on the lonely isle, and all Niue was moved at the sight. Crime of most serious kind is not frequent amongst this people. The High Court does not often sit; it is in lesser sins that Niueans fall by the way, especially that of Theft. It seems hard for them to distinguish between Meum and Tuem.<sup>71</sup> They specialize in petty thieving. One stole my shaving brush — it must have been a man — I got it back without ever discovering the thief. The threat I gave of leaving them was enough. I found it laid on my doorstep. Of course, its use to me was forever gone. But the Magistrate dispenses Punishment. It is road work both for man and woman. There is no jail. One Governor built a real prison in Alofi, but the next one pulled it down. It was an offense to the eye. Prisoners are by no means harshly treated. They live at home, their hours of labour 7 a.m. to 4 p.m. Then they retire to their homes — oft miles away. They provide, in the main, their own food though so many ship's biscuits appear to be allowed daily to each. They may have a sentence of even 18 months; for that period they are the slaves of the State. Two years and over, means Transportation to New Zealand. Then they have a taste of the Real Thing.

But now a capital crime had been committed. A policeman had fallen to the knife of one of his own race. Suspicion fell upon one of great power and influence on the island. He had a strong party behind him. Yet that did not avail him. Though there was grave danger of an uprising if hands were laid upon him, and not one rifle amongst the tiny handful of white folk — 20 amid nigh 4,000 — yet was he arrested and confined in a temporary jail, a watch set over him. Three others also. Despite the danger, the whites stood firm. Justice must prevail.

Then from Samoa hastened a man-of-war after a calling vessel had 'wirelessed' the news and need to the world outside. A Police Inspector stepped ashore. Niue saw and wondered, and the white folk thanked God for such a Mother.<sup>72</sup> Slow and sure worked that Inspector, picking up threads here, there, till he had woven a net complete.

The scene of Niue's last murder trial was in the Post Office, where one stands to buy the pretty stamps to send news far afield. A dais was made for the occasion, and at the table thereon sat the Resident as Judge. Two white men and four natives were the jury. No gaping curious crowd. Niue was full content to leave it to the white men. The Capital Charge against the Chief, an accessory before the fact against the younger man. All the evidence was in; the prisoners had had full liberty to call any they desired to testify on their behalf. The Jury retired and returned to find both Guilty.

It was hard on that gentle-souled Resident to doom a man to die. The other got 10 years. The doomed one and sentenced were held till they were carried off to New Zealand for their punishment. Niue knew them no more, but has had yet one more lesson what British Justice means, and whilst awed, admires nor will forget. Had that Chief escaped through slackness, no native's or white man's life would be really safe on the little Coral Isle, cut off for months together from all communication.

## The Falé Monuina

After years of patient waiting, there broke a day to be forever remembered upon Niue, that day when the Lord Liverpool Hospital was dedicated at *Tufukia*, nigh Alofi. It was to that Governor General of

<sup>71</sup> Latin: What is mine and what is thine.

<sup>72</sup> WWB uses *Mother* here and elsewhere to refer to the mother country, England.

New Zealand that the initiative was due, who, coming to the isle, saw the crying need, and headed the fund where with to build and equip, with a truly noble subscription. But such a building could not rise like natives' grass huts. It was to be built to endure and plans were drawn at Wellington to be time and again altered to suit local conditions unrealized so far away. The cost was prohibitive to import skilled workmen; all was done by local talent, lead by a single white man, a Tasmanian, a real genius in times of difficulty, to whom all turn in perfect confidence, be the material trouble what it may.

It lies beyond the Government School Building, adjoining the playground, the Assistant Teacher's house absorbed as the Sister's and native nurses' Home. It is a compact building and complete, with operating room and Dispensary. No longer now is the latter hard by the Doctor's home in Alofi. He has some hours of peace assured him with medicines a full mile away. Instead of sick and sorry gathering before those doors, and bottles lining the shelves, that one-time Out Patients' hospital is now the White Folks' Clubroom, the shelves carrying a Library, a useful meeting place, where magazines and papers abound, and one loses in good measure the sense of loneliness. That Library has its counterpart at the Hospital, a provision made ready against the day of White patients, and both of them the gift of one of the Judges of New Zealand's Supreme Court who was troubled greatly in spirit at this Roamer's wilful exile. All unheralded, a schooner unloaded two huge packing cases; within was a royal gift of choicest literature from the giver's own Library — 500 volumes — a personal gift from one true friend to another. The latter found his own pleasure in dividing his treasures between the Healthy and the Invalid.

The natives were not overlooked in gift for Hospital. From Auckland there came the gramophone, which was to play so prominent a part in Hakupu's reception of King George and Queen Mary's message to the Children of the Empire — which will be read of later. It and 50 Records were sent to cheer the weary hours of sickness for the natives, and specially for him who, struck with the dread disease of Leprosy,<sup>73</sup> was housed, alone, a stone's throw from the main building, on a promontory, twin brother of the 'Point'.

Though Niue was proud of its Hospital, yet Niue feared. Their name for 'Hospital' is *Koe Falé Gagao* — the Sick House — and the outspoken opinion of the majority was, that enter its portals was to doom oneself to death. Doctor and Sister were much exercised as to the response that would be made to the Government's splendid effort to save the Race. That Dedication Day went far to prove that Niueans will rise above their dread. There was a mighty crowd, every village fully represented. Of course a Feast went with it — but not Dancing, such was felt to be out of place. There were also, of course, many speeches, for the white folk, the Resident, the Doctor, the Missionary and this Roamer, for natives the very choicest of the choice. To me fell the duty of stressing the value of the Hospital, that it should not be called the Falé Gagao, but that a special term should be coined for it, even the Falé *Monuina* 'The House of Blessing'. I must needs here quote a portion of the reply made in succeeding speech by a leading Chief, as a sample of the native eloquence and courtesy. I translate:

"The Voice that we have just heard this day, could only come from Beretania. It is his Mother's Voice we have rejoiced to hear, that great Mother whose voice wins Races to her Heart the whole world over, even as this son of Hers wins ours today."

Doctors, Sister, Nurses have been very busy since that Day of Days, and but for skillful Doctor, tireless efficient Sister, and the white folks' cosy ward, I for one, should not be alive today.

---

<sup>73</sup> Smith, referring to his visit in 1901, states that "*Leprosy is unknown in the island, though supposed to have been introduced there once.*" Smith, Part III, page 218.

## The Village of Hakupu

(Har-kōo-pōo)

### Chapter VI

The Road to Hakupu — Hakupu — As Mine Host  
— The Move to Hakupu — A Formal Welcoming

#### The Road to Hakupu

There were three of us in the tarvallé drawn by the Resident's all too well-fed nag, for he has not leaves alone to munch as his island fellows — real grass as we know being quite unknown, but oats from Auckland, and that hay from Australia. He takes his time, and one at least was glad of it so as to take in all that was to be seen.

Once we had gained the upper coral ridge we were on the top of the island, and far as the eye could see was a great park land, save occasionally ranges of bush. Here and there big trees where coral so abounds as to make tillage impossible, plantations ever and anon with coconuts and bananas, pandanus too with the latter's useful fruit — save for a scent extracted — fruit similar to a pineapple high up in the air, guava bushes and lemon trees with their golden fruit. Paraqueets we saw with their jerky flight, but Flying Foxes were absent as they are, in the main, nocturnal birds. Lightning here plays havoc with the graceful coconut, beheading as neatly as if with an axe. The tall headless trunk looks very mournful amid its palm crowned brethren.

The miles of Niuean roads are marked by cairns of stones. Wayside tanks, to act as Temperance 'Pubs' are placed on every road some mile and a half apart. There was formerly great waste of coconut by thirsty ones, who climbing the trees and drinking the milk of the nuts obtained, threw the nut itself away. For commerce the nut must fall from the palm of itself, properly matured.

The road of grass, so-called, finding root in brown, red earth formed of decomposed rock, winds prettily; no sea can be glimpsed through that level of bush and trees. Unwise he would venture amid that tangled growth save on native trails, yet none of it is really wasteland save tiny patches, and all, as has been noted, is owned and named, though not a land mark is to be seen.

Every acre hugging the Highway, if at all possible, is cleared and taro planted, then let lie fallow once the crop is gathered, when quickly it is bush again. In due season the spot is burned and once again put into use. Such is Niuean farming.

And graves are met with all along the way. Sometimes a lonely one, at other times in groups. And what a wondrous assortment placed beside or on them. Some have little sheds raised over them. These among other articles I noted: a bed and chair, a fine mosquito net, mugs and tea pots, a lantern, many buckets, an iron and a wash tub, a decanter, and bed linen which sorely needed washing.

These the living thought for their Dead. Here is a sample of the other side and kind — the Ungrateful Dead.

A native had lost his wife and there was much lamenting. Her last wish that she should have all her personal belongings, bed, chair, cup, clothing, sewing machine and wash tub upon and around her

grave was faithfully carried out, and the broken hearted husband went oft daily to his plantation for all manner of fruits, which were lain upon the broad lime and coral tomb.

Six months later he took to himself a second partner, and all went happily till the new wife had an unwelcome dream. She declared that the first wife had appeared and upraided <sup>74</sup> her for taking her place in the home circle. Infuriated at this un-called for interference, the irate native husband seized an axe and hurried to the tomb. “What more do you want?” cried he. “Have I not given you all you asked for and food in abundance. Now will I fix you once and for all,” and forthwith proceeded to demolish things till tomb and all was a hopeless wreck.

It certainly looked so to me.

## Hakupu

We drove bravely into Hakupu, one of Niue’s eleven villages, not by the sea but in the Bush, with a population of 500 natives. There is a large open Green, round which the houses cluster, a large Church dominating all, and a Sunday School not much smaller. At once we were the cynosure <sup>75</sup> of all eyes, and made but small progress as the folk stepped up to shake hands with each of us. We had come to size up the scholastic situation, to see the Teacher’s proposed Abode, the school building the villagers had erected, and specially to meet Hakupu’s Council for a discussion of the future. <sup>76</sup>

The Head Man — the Chief — a grave fellow was on the spot at once. He it was who had donated the school property, a large acreage all now cleared; the community had met his gift with free labour, the result a commodious, airy school. A site on the grounds had been prepared for the Teacher’s house, but nothing done so far; the proposed residence was none other than the Chief’s own *falé*, a native dwelling, roughly built of coral with galvanized iron roofing, roomy, if not fashionable, the owner already having generously moved with his family and belongings into a far less pretentious shack close adjoining. The school had been opened some time back, but after only six months’ work had had to be closed for lack of a Teacher called elsewhere.

The Hakupians had certainly done their share; it was up to the Government to do theirs. They had offered me the post, but this village surmized that I was scheduled for *Tufukia*.

So we had a Fono. It was held in the school house for shade. Desks there were none, the scholar’s work was to be done upon the floor. Alas for my poor back, for I am not short of stature. The Councillors sat upon a mat, the Chief *Kuluséa* by name and seven others, all grave men, with heads bowed, seemingly ever deep in thought, and even whilst speaking looking anywhere but at the one addressed, not through awkwardness, but native courtesy. I sat me on a handy form with my two companions of the drive, teachers themselves, natives, the elder — *Malama* ‘Rainbow Light’ — a

---

<sup>74</sup> To reproach.

<sup>75</sup> Something that strongly attracts attention by its brilliance, interest, etc.

<sup>76</sup> Hakupu (June 2015):

host in herself for all round capability. It was for me to open the proceedings, Malama interpreting. Three in turn made reply.

They begged for a Teacher, stressing above all that they wanted a man with much kindness of heart, for their bairns were timid. They urged that I should not be drawn to other village, but come and live amongst them, teacher of both young and old, for many adults were eager for knowledge. Promising them that their need would be carefully considered, they rose, each to shake us gravely by the hand and so depart.

In that school room lofty and so bare, with but one table, four short benches, and easel with blackboard, and one small piece of chalk as its furnishings, we had a basket lunch, helped out by gifts brought in forthwith by eager hands and young, coconuts and oranges, with bananas sufficient for a dozen. The people could not do enough for us; we found our rig filled up with fruit, but got in somehow and made off, all wishing us a quick return amongst them. On the way back we gathered more fruit from lemon trees, and drove into Alofi a veritable fruiterer's store at the end of a memorable day.

### As Mine Host

It was of course settled. Alofi, though at the moment without a Head teacher, could carry on very well till someone should arrive from New Zealand. The ground had long been tilled and sown, all was in perfect running order, comfort and companionship was assured the new arrival, whilst in the Bush lay practically virgin soil, and the life which had been offered me. I had not a moment's doubt. I came to help the needy; the suggested discomforts were but a spur to acceptance. Was I not out for fresh experiences? (I got them.)

Ere leaving Alofi, I gave a Lunch Party, eight souls in all, men, four of them natives. And here I learned much that was new to me. The Niuean fashion seems to be for you to give the invitation, and for those invited to supply the food. Maybe it is that way for the solitary man. Malama insisted upon taking over all the arrangements, so of course success was assured. My crockery and cutlery not running to such a spread, there was much borrowing and I found I suddenly had half a dozen servants instead of three; some prisoners, male and female were sent along, also to lend a hand. As I owned but two chairs, others were purloined and made one table by borrowing others to add to mine. My metal cups were 'taboo'; nothing but fine glasses would suit such an occasion.

My boy was missing the previous afternoon, but came back with my main joint — three chickens very much alive, tied to one long string, and as they were not to suffer death till the following morning — because of the climate — they had some wonderful adventures since at no time night or day did they seem to be able to agree upon a common course of action. This triple gift was followed by a huge plum pudding. Then poured in the fruits of the land, so that when at last the table was spread, there was enough for double the number. And yet there appeared from somewhere a great Meat pie and a Niuean custard pudding — with a quite impossible name to a new comer — a fine cake too. That is how things are done on Niue. 'Mine Host' is a fraud as I surely felt.

And all did full justice to that Feast, save one. I had a Farewell supper to attend that night for I was off to the Back Blocks <sup>77</sup> the next morning.

---

<sup>77</sup> Australian pastoral country which is remote from the seacoast or from a river.

## The Move to Hakupu

The largest of the two motor lorries upon Niue was brought into requisition, and piled high with goods, trunks, valises, beds, packing cases and other household necessities, I drove into Hakupu in State. My boy orderly I could not part with, but could only carry him off on the top of the load on condition that he should return to his loving family each Sunday, tramping the sixteen miles for his health. I lost my *Fou* of the Fuzzy Hair, but I gained *Moka* in her place, assisted by her husband *Peni*, who somewhere and sometime — clearly I soon found — in the Long Past, cooked for white men elementary fashion.

Hakupu was excited, to say the least. There were many willing hands to get things into shape. My two Assistant Teachers were on hand to help out in the language difficulty, *Faséné*, the Avatelean, whose home — with wife and children — is in that village five miles away, and *Réné*, a Hakupuan girl, trained at Alofi's school, who was to act as Pupil Teacher.

The new home faces west and has a square of the so-called grass between it and that road which circles the island. *Tanetane* bushes form a sort of hedge on three sides; a banana grove lies at the back. Internally it is divided up — without any ceilings — into five rooms, a storeroom, too, and a bath room. The kitchen is outside. The school grounds are but a stone's throw from the house, reached through an avenue of guava and coconut palms. A ground floor verandah runs round three sides of the house and there are doors leading out thereto in plenty, too plentiful for anyone who desires privacy, yet knows the insatiable curiosity of natives. Water is provided by a cistern erected at one corner with which the rain water is directed from the roof. Alas! that roof is not of thatch but zinc, and I early found that when the tropical rain descends, the noise inside was like to the beating of many kettle drums.

The lorry discharged and all things stored within, the gaping crowd wended their way to their respective quarters and I was left with my three willing servants to put things into shape and start upon my new adventure.

## A Formal Welcoming

The Hakupuans did themselves proud. It was a right hearty welcome. The same week I arrived, at high noon, four of us — three being visiting Half castes — were ushered to the school house where a bountiful repast had been laid on the one and only table. Those forms for seats there at. The added company of countless flies were attended to by my *Moka* and *Loui*, the village policeman.

That table! Land crab — which is of a truth a lobster<sup>78</sup> — and chicken, fruit of every kind served this way and that, and at the further end, an immense pile, our share of the Feast prepared outside for the general public. The folk here did not, as I saw on Samoa, proceed to eat their share on the spot. It was all in coconut baskets. I counted sixty-four in one continuous line, and in the middle a roasted pig, suspended lengthwise on four upright stakes. They have Clans or Families in the village and to each so much is carefully shared out. Thus it is difficult for the white folk to give presents to the crowd as a box of matches or a plug of tobacco would have somehow or other to be divided up or offence given.

Lunch finished, we took our seats outside upon the school verandah, the natives scattered about in the large playground, but the orators gathered in front of us, some little distance off, in a semi-circle. In the open they stand to speak as in other isles. The chosen three had so much to say both as to the

---

<sup>78</sup> In their scientific classification, crabs and lobsters are members of the same order, Decapoda, but are of different sub-orders and families.

pleasure of having a permanent Teacher amongst them, and of the full liberty accorded me to beat the Parents if aught went wrong with the children. Their needs were many, some real, some fancied, and I was kept busy keeping mental tab of the various points for I was expected to reply to each when my turn came. At long last my turn, the efficient Malama interpreting, and that part was over.

Then came Sivas,<sup>79</sup> four of them, three of the children, one of adults. They sang topical chants, all composed for the occasion. The children evidently had no great opinion of themselves. “We are dunces all. Please do not be greatly disappointed. You have come to us from a far country. Please do not go away because we are stupid.” — “The ‘Man of War’ was a good ship because it brought you to us.” — “We have forgotten all the English we once knew. You will have to teach us all over again.” I noticed some very strenuous action, and this the chant, “Now that you are here, we are going to tie you with sinnet rope, so that you do not run away.” Tiny tots were among the different bands, yet sang and moved their hands and arms in perfect time, then rose up to dance with uttermost abandon. A few were really graceful dancers, promising great things in time. The adults, especially the men, were well worth seeing. I would not care to be the son or daughter of the Mistress of Ceremonies of that day whilst she had a broom stick handy. She looked very masterful, yet danced about like a youngster till her head garland fell off through excitement — yet she halted not.

As each band finished, they came forward with their gifts; the pile before me soon grew to enormous proportions. Sugarcane and taro, land crabs (Alive O!) tied to the end of branches, baskets, the contents of which I never saw for my cook ran promptly off with them, water melons and huge coconuts. In addition, many came up the steps and laid gifts in my hands, eggs till I lost count, spring onions and live chickens. I was kept busy handing these to my household servants for safe keeping, and each given required at the same time as offering, a hearty handshake.

And the necklaces! They flung beads around my neck, and garlands of flowers till my shoulders could support no more. We all had a splendid time and even those welcomes I have had on other isles were no whit better nor enthusiastic.

Thus welcomed they their Teacher whom they would fain<sup>80</sup> make ‘feel at Home’.

## Chapter VII

Future Studds and Graces — All in a Day — Things  
Sacred — Hakupu’s Seafront

### Future Studds and Graces<sup>81</sup>

*Kilikiki*<sup>82</sup> at Hakupu is primitive. Cricket here needs some radical changes. Some of the bats as high as tall as the smaller batsmen, and their width and their weight enormous. The ball is made from the rubber of the banyan tree and is but an attempt at roundness. The crease is on the high road for youngsters, and as the houses fringe on either side it is well that there is no such thing in Hakupu as window glass — save in the Church and my Falé, once the Chief’s. Niueans are more up to date at

---

<sup>79</sup> Samoan term for *dance*.

<sup>80</sup> Happily; gladly.

<sup>81</sup> The three [Studd brothers](#) — Charles, Kynaston and George — were Victorian gentleman cricketers. [William Gilbert Grace](#) was an English amateur cricketer who is widely acknowledged as one of the most significant players of all time.

<sup>82</sup> Niuean for *cricket*.

the game as we know it than the Samoans, as they have the correct three wickets properly spaced, and keep within due limits, occasionally, for a side. I failed to find the scoring card in Apia, but here — used for less important matches — I found it. They use a banana leaf, which possesses many ribs on either side; these are slit down for each run; leaves look ragged things when a game is over.

The players, while no batters though consummate sloggers, are very excellent catchers, and the fielding with bare feet amid coral rock, coconut trees, under brush and houses is remarkably keen. They throw with great speed and accuracy and possess South paws (left-handers) amongst them. The antics of the rubber ball are wonderful. Once let it touch the ground and none can tell what it will do, yet do they gather it in.

The first game I saw was North versus South. The local clubs of Hakupu take their titles from the compass, and for all I know there may be such niceties as the S.S.E. and the N.N.E. clubs. The score which I helped to keep was 29 to 70 in favour of the North, and as my residence may be said to be the true centre of the village, I was quite impartial as to which side won.

There is an absence of cricket flannels; a vest, and a lavalava tucked up like to old-time bathing tights is the very thing, and leaves great freedom of movement.

The overhand bowling was of good length, but rubber has its own ‘googly’ ways, and the keen eyesight of those players for that dark-colored elusive ball made me fear that I was going blind. A Boundary hit seems in my village to have to go over two homes at least, and to disappear in the Bush beyond. Then I ripped the leaf up six times. I aired my wide knowledge of the language by announcing the result of the match to be “*U a fula ma hiva*” to “*Fitu go fulu ma* nothing” and warmly thanked the perspiring sides with a grand “*Oue tulou*” for the Exhibition.<sup>83</sup>

### All in a Day

School had not started yet. It was the busiest time of year in the plantations, yet were there many slackers. Here are a few of one early day’s experiences awaiting me.

The first, a constant struggling with the language, a hit here and a bad miss there, many trying to help me at the same time, confusion worse confounded.

Now visitors. A man with a bunch of cabbage leaves squats down on the door step. It is not etiquette — at least among the Elders of Niue — to give gifts standing. He makes offer with a perfect torrent of words; I accept with a well versed word (correct this time) and my boy bears the gift off to the storeroom. Another comes with a whole basket of lemons; more thanks. Then a boy appears with three eggs, but I discover that this is barter. Mother is out of matches. Can it be that the White Chief will exchange three boxes for three eggs? I feel that she is getting the best of the bargain, with eggs one penny each the whole year round and no freight charge to pay, but as a smoker I have sympathy for anyone out of lucifers, so off he goes happy.

Now, as I strive hard to settle down to work, comes one with Mummy apples,<sup>84</sup> and another with oranges and yet other with a Land crab all ready for the table. I am getting overwhelmed, and right glad to escape outside, invited to see a game of Rounders<sup>85</sup> by a company of girls. What would their white sisters think of playing bare-footed upon coral, with a ball made up of twisted coconut leaf, the size of a large marble, and the sun hot enough to sizzle one. Yet they had a fine game and I heartily

<sup>83</sup> *Ua fulu ma hiva* means “29”. *Fitugofulu* is “70”. *Oue tulou* means “Thank-you very much.” Translated by Efi Rex.

<sup>84</sup> Colloquial colonial name for papaya.

<sup>85</sup> A game played between two teams each alternating between batting and fielding.

congratulated them. I rectified that ball by the next schooner from New Zealand, and marbles too — by the hundred — to take the place of oval nuts too large for tiny fingers.

Then came along the boys who for the same game, but really a modified Baseball — which they had never seen till I taught it them with further imported ball, and they became experts thereat — produced their banyan rubber ball, so precious, and their clubs. All went well and there was much spirited running of bases till a big boy took his turn with his War Club and lifted that priceless ball to the sky, over houses, trees, everything in sight, and we saw it land in the bush for its first hop. Being rubber, we calculated that it would go on hopping. Anyway, we all went a-hunting. We lost that ball, but found a nest, eight eggs in all. They were mine. I was over-rich, yet have I mine always poached — in case! Besides eggs, I got a mass of burrs; my company had no need of danger on that score, and recovering at last some open land, had a small army clearing my nether garments of trouble.

Next I saw an exhibition of Stilt walking — then of marbles! It is wonderful how happy native children are with such poor tools.

The Sports were over and I returned to my home. There a monkey played upon my stoop. A real monkey, a live monkey, the only one Niue has ever seen, brought to see the White Chief who, like himself, had come hither from a far country. Now Evening and the lights are lit, and my floor, by special licence, is occupied by many, even adults, all eagerly scanning pictures from my store. Not a sound above a whisper; my boy is the host; René, the hostess. A lad rises and politely excuses himself as he is going out ‘pit-lamping’ — not after deer, for Niue has none, but after the elusive crab. Good luck to him, I say. Crab is excellent eating, especially with chopped onions, as I have learned.

At last, time to close down. The day is done. I bid them all good night in my best Niuean, which sounds sweetly to the ear “*O a mutolu*,” but is really very rude when literally translated, for thus it runs “Be gone ye.” They are begone, and soon — once Family Prayers are over — Hakupu is quiet as the grave, till the roosters start their midnight clamour.

### Things Sacred

Hakupu’s Church is large, could hold the entire population of some 500, and half as much again. It is white both inside and out, with three feet through walls of coral, twenty windows — really doors — around, ever cool. At one end, inside, in black lettering, high up, one reads the date of Dedication — 24<sup>th</sup> of June 1889 — and beneath the one word ‘*Kanana*’, which, I take it, is its Patron Saint, the ‘Land of Canaan’, other wise the ‘Promised Land’, for Saints proper have no place in the ecclesiastical polity of Niue.

The interior arrangement is peculiar. The Choir and Rostrum — the latter with no less than three Reading Desks within it — face each other occupying the entire middle of the building; the people sit in pews on either side, likewise facing each other. Between the Choir and the Rostrum is the ‘Table of the Lord’, large and marble-topped with heavy iron work legs.

Prior to the worship was the Offering, my first Sunday, and that table became the Receipt of Custom, the natives sauntering up and depositing — oft times throwing from a distance — their mite <sup>86</sup> in a wash basin! placed thereon, and four deacons were kept busy counting the coin.

In this arrangement of the East and West for the congregation, with the Choir and the Preacher betwixt them, there is a clean cut division made between the sexes in the pews, a heavy rail down the centre

---

<sup>86</sup> Biblical coin.

shuts off the sheep from the goats — I am prepared to call the women the former for the sake of peace — the children at the West End being similarly divided.

The singing, wholly of the Part Song order, is very fearful. The Pastor, a homo robusto with a big voice, got through the main service in an hour. This was followed by the 'Breaking of the Bread', which the Chief asked me specially to attend. It was their High Mass, simple as themselves, all done very reverently, if shorn of all that Splendour one expects in consonance with the Holy Sacrifice. The marble-topped table; the Altar, a dinner cloth its covering; four goblets and a tankard, the Chalice; the same number of plain dishes, the Paten,<sup>87</sup> all silver-plated, save the dishes; a large dinner napkin, the only Veil; and ship's biscuit and coconut milk the 'outward and visible sign'. None knelt at any time; there were hymns of a kind; prayer by two of the dark skinned Deacons; Bible reading from 'Corinthians' by the Pastor; then the Partaking handed round by the four. Very primitive, but none the less interesting to one privileged to be an onlooker and quite a new experience in things of the Soul.

### Hakupu's Seafont

A good mile and a half through the Bush, along a trail with coral every where, a sharp drop from the flat upper ridge of the island to the lower ledge, and then a further half mile for yet further drop to the reef (when the tide will let) brought me to the sea from inland Hakupu. I was to learn later by bitter experience another but unauthorized way — never again.

A Sou'Easter was blowing hard and it was high tide. The effect was magnificent. It was one long thundering roar as the huge waves curled up to dash themselves against the face of the reef from which, for a brief moment, they sank back, exposing its great depth to view. They came, as usual, in threes, mighty walls of water, the last a towering giant, curling up, and surmounting that coral wall, to smash down and swirl across the hundred feet of coral reef, one vast mass of seething, snowy foam.

I sat alone, high up above the swirl, yet was wet through soon with spray. At a distance on either hand, looking along the coastline, one could see what looked like flocks of seagulls swooping every way as is their wont. It was naught but flakes of that same foam.

Behind me lay the little Isle; before me lay the Ocean. Not a sail, not a movement of any kind, save those restless waves, in sight. Even the birds seemed to have sought shelter from that blazing sun, which was still high in the heavens.

Both going and return had each their interest. Here, amid the trees, was a tomb like structure. It was the common baking house of this Community till they quarrelled over its use and for the sake of peace now go without local bread. Chiefs' graves, as usual ungraceful and cumbersome; plantations which would break the heart of any white man for the seeming impossibility of producing anything in such a tangle of rock and undergrowth, which cut, seems to spring up again over-night; and the haunts of land crabs clear enough, holes in the rocks before which dangled coconuts sufficiently opened to let the creatures get a taste and long for more, whilst near by, of nights, lurks the capturer; kitchen gardens, too, where 'mid the tangle there bravely grew arrowroot and the sweet potato.

Near the cliff-edge were the canoes of Hakupuans, covered over with leaves, only to be used when that raging sea chooses to be smooth, then carried down the rocky side. Then the village has fish again, ever a welcome change of diet.

---

<sup>87</sup> A small plate, usually made of silver or gold, used to hold Eucharistic bread which is to be consecrated.

And on the way back, a great fissure to be visited, and looking down, the precious water to be seen 100 feet below, fresh and pure and ever cold, drawn up by bark bucket and a strong rope of coconut fibre — known as sinnet — both lying there; a well that never fails. Down to its depths reach the roots of trees unknown to me, clinging as they descend to the sides of the chasm with grip of steel, but the banyans float in space as they descend; they want bottom and nothing less.

There are many charming tramps from Hakupu as a centre, but to my mind none the equal of that portion of Niue's rugged coastline which forms the Sea Front of that inland village.

## Chapter VIII

### The Roll Call — Family Prayers — Chanticleer — First-Aid — The Line Up

#### The Roll Call <sup>88</sup>

The school of one hundred boys and girls has marched in — the eagerly awaited classes have been now going a few weeks — they have taken their places on the mats, the boys on one side, the girls on the other, their ages ranging from seven to seventeen. They have knelt to recite the Lord's Prayer, have sung a hymn unaccompanied by any instrument, and have had their daily Story on some useful topic at my lips. In all this *Faséné* has been very useful.

Next comes that Roll. To read out 100 names in a new lingo is no easy task. They do not smile at the stumbles. They are learning the Teacher's language so that his world of books may become open to them; he is learning theirs so as to help them in every way. But surely all will sympathize with one faced with such a task as to fluently pronounce such names as *Ligitagoloa* and *Tiahifineone-Motutanati*, *Tapuakihau* and *Faranitama*. No cutting short of vowels please, every one has to be distinctly sounded, and 't' is 's' and 'g' in 'ng' and surely you are lost as I was.

Here, too, one finds some English names fiercely mutilated: *Alaita* (Alice) — *Letuki* (Lucy) — *Lele* — *Fane* — *Elika* — *Makaline* — *Tiosefa* (Joseph) — *Viviani* and *Lopeti*. <sup>89</sup> The key to the last is that they have neither R nor B in their alphabet. But Time works wonders and one's tongue gets used at last to new forms of twisting. It needed courage that Roll Call did at first, with 100 pair of eyes fixed steadily upon one, but it had to be done; it was the White Chief's duty as Head Teacher.

The Adults were as keen to learn. They, too, had their Class of an afternoon — two days a week, for the rest must be spent in the bush seeking their daily bread. They consisted of the picked young married folk of the village, though some few unmarried were allowed the privilege, and there were more men than women. There is no 'Mr' or 'Mrs' on Niue. One tries to be polite, but in class one at times was forced in despair to point the finger and say "You"! Try these and see if they can be readily retained for use — *Manogiveti* — *Hakeagala* — *Tumitimea* — *Vikofa* — *Akaneti* and *Liuevaie*. The grown folk alike sat upon the mats, with slates in hand and worked hard. The 3 R's always ended with a geography lesson before a large map of the World and many were the questions asked, oft weird at times.

<sup>88</sup> The names of the students in this text are also found in Tale #46, *Of Inspection and Roll Call*, in Part IV, *Tales of a Roaming Grandfather*.

<sup>89</sup> *Lele* is possibly for *Lily*, *Fane* for *Fanny*, *Elika* for *Erika* and *Makaline* for *Mageline*.

They were very grateful. A delegation soon waited upon me to say that they wished to show their appreciation by a monthly present of food. Customs are customs, and these native folk are easily hurt, so I had to use considerable tact, but *Faséné* my Standby helped me out, and when the Chief pronounced his fiat against it, the matter dropped, but happily not so did the classes.

### Family Prayers

The principle of Family Prayers is altogether admirable, and the Missionaries both past and present have been faithful advocates thereof. Hakupu holds them of an evening — but not every household every night. I ought to know because the entire village is aware when the Family Devotions are being said. If there was a recognised hour when all families gathered each in their own *falé*, the din would be appalling, but it would be over in one fell swoop, not prolonged hour by hour as now.

A hymn is always sung or, truer to say, is shrieked; the whole village resounds with the noise, the children letting out for all they are worth, the seniors scarcely less so, and those hymns are long. Then one hears a man's voice maybe reading, maybe praying, always in a monotone. Then comes gladsome silence.

But not for long, for here is another *falé* starting off and the same performance is gone through. Another silence settles on the village and one has hopes that the evening orisons of Hakupu are over, with two doing duty for the rest. Alas! the stilly night is rent again and so continues on and off for hours. If only these Niuean folk knew the value of 'He that prayeth in secret'!

Where did those hymn tunes come from? They have a hymn book in their language, printed at a London Press, and the words are admirable. But not yet have I heard an air to any one of them nor seen nor heard of music book. Those tunes are a continuous anthem. There is never unison singing; it is Part Singing gone mad. I am told that natives of other islands came visiting long years ago and taught the Niueans these strange sounds. I cannot believe that the Missionaries have had the smallest part in them, for they are past finding out by any White man's ear. I have clearly caught at times a touch of 'Moody and Sankey',<sup>90</sup> also of negro melodies, but I give the matter up as unsolveable. They are certainly are not Music.

For myself, without instrument of any kind, even a tuning fork for pitch, I am diligently teaching the children the sweet harmonies which ring in the fanes<sup>91</sup> of Home. Niue perhaps in time will learn a better way.

### Chanticleer

The ways, also, of Niuean roosters are not as those of other lands, so far as life and far Roaming has shown me. I was brought up in the belief that Chanticleer was the Time Keeper of the world, the Herald of Dawn, that with the unerring instinct of the breed he gave forth the moment of the breaking of the new day, and never meddled with the clock of nights. But these roosters have no idea of time or of their special duty.

A half hour past every midnight they begin — I have clocked them time without number — one flaps his wings somewhere in the village and leads off. In Hakupu, he, the father of all the others by the look of him, roosts in a grove quite close to me. He is the culprit in chief; he starts the chorus, which

---

<sup>90</sup> [Sankey and Moody](#) was the evangelical duo of Ira David Sankey and Dwight Lyman Moody. Starting after their meeting in June 1871, the team wrote Christian songs and traveled throughout the United States and the United Kingdom calling people to God through their use of song, with Moody preaching and Sankey singing.

<sup>91</sup> Temple, church.

steadily grows in number and volume. Every rooster has his say, and every falé seems to own one, till far away in the Bush one hears the last. Then silence reigns. Again at half past one they break forth, and thence at hourly intervals till it is time for them to get to the business of the day — their food. What their lady birds think of it all, one knows not, but till one gets thoroughly accustomed to it as have the natives, it rouses murderous intentions in the gentlest heart.

I have designs upon that aged monarch whose perch is nigh me. I have located his perch upon a low and spreading tree. I am waiting till the next full moon — for stumbling over coral in the pitchy dark has no delights for me. I shall use against him my heaviest ‘K’ boot <sup>92</sup> and purpose knocking him clean off his perch and humbling his pride before his harem. If it prove his last crow, I cannot help it.

And all day long they keep that crowing up. There is no cessation. It may have become a disease of the brain. I could well wish that there were fewer roosters in Hakupu Village, but not less hens, for eggs are my staple diet. The flocks seemingly belong to no one in particular; there are no pens nor yards; and the eggs belong to those who find them. I have one compensation — there is that Law, which none dare break, that eggs shall and must be but one penny each the whole year round.

### First-Aid

I know that I ought to be ashamed of it, and am, but I am as ignorant of medicine as a babe. Yet I am called upon as if I had passed through a College course and had ‘M.D.’ after my name.

Happily I have none but ‘Out Patients’ and I absolutely draw the line at broken limbs. I have no wish to have crooked legs and arms upon my conscience. The real Doctor upon Niue — at Alofi — has given me an outfit of a sort, his blessing, too, and I have plunged. It is the quantities that non-plus me. Wanting to be sure of effecting cures, I give enormous doses. What damage they do, I am not informed of, but I must surely be successful for they do not turn their backs upon me as a fraud. So far I have killed nobody.

I have lint and cotton wool, oilskin and bandages, salves of many kinds, quinine, aspirin, colic killers and many mysterious powders. That Doctor has much upon his soul on my account.

I was reading. There came a man to my door. I heard “Kind Teacher, I have broken my hand.” I was prepared to say at once, “*Fano akoe fakaave kia Ekekafo*,” which, interpreted, means “Go you quickly to the Doctor,” eight miles off, but asked him to show me the injured limb. A cricket ball had struck him between two fingers and split the hand down to the knuckles. Did I rise to the occasion? I ordered my servants to bathe the wound in warm water and boracic, <sup>93</sup> then laid on vaseline thick, bound the two fingers together, placed the bandage ends round the wrist, his arm in a sling, and off he went. He is all right today.

A young woman came limping to my door. What’s the matter now? She showed me a wicked scar above the knee. I asked her how she got it and, between us, I made out, I thought, that she had fallen along coral rock. So warm water was again in use and salve well plastered on. A fine bandage completed the job, touched off with a safety pin just for the look of the thing. My servants were out for an airing. Drat it! The next day I discovered that she had let a hot iron fall upon her limb, and there I had Carron Oil <sup>94</sup> in plenty, whilst I had put on ‘Good for Ulcers’ instead. It was not my fault, but the language’s. I ordered her to my Home Clinic again, and she is as frisky as a young colt today.

<sup>92</sup> Possibly a mid-calf, lace-up army boot.

<sup>93</sup> Boric acid can be used as an antiseptic for minor burns or cuts and is sometimes used in dressings or salves.

<sup>94</sup> An ointment of limewater and linseed oil, formerly used to treat burns; named after Carron, Scotland, where it was used among the ironworkers.

Again as I was reading, I looked up to see a man squatting in the door way. He presented the sole of his right foot to me without a word. As it was nearly black, I had some difficulty in discovering what the trouble was. I perceived a yet blacker spot where was a great split. He had been walking with this, I suppose, till he could walk no more. It was not a nice sight, especially as the soles of the natives have a good half-inch of callous, well ribbed each and every way, upon them which nature provides in place of leathern <sup>95</sup> soles. Once more, my good servants, and this time Condyl's Fluid <sup>96</sup> for the bathing, then ointment and bandage, and off he limped content.

Axe gashes are not infrequent, and sore backs from heavy loads, with many skin affections thrown in to give variety. "Well done," says the Doctor when he comes round after long weeks. "You are getting on famously, and if you do unluckily kill anybody, I am the Coroner and will return a verdict of Accidental Death." This is more than kind of him and gives me great confidence.

But my conviction is, today, that every White man, no matter what his objective, who comes to these Pacific Isles should be required to show upon his passport that he has taken a full course in First Aid. The natives certainly expect it and take it for granted. We are cunning people to meet troubles of the body, in their eyes.

### The Line Up <sup>97</sup>

Daily the one hundred scholars are lined up ere school begins, and as Head Teacher, I pass between the ordered ranks — Inspecting. Clean faces and clean hands there have to be; the teeth are ever rows of pearls — sugarcane sees to that — and tidiness of apparel however humble or attenuated is my peremptory command. They do not, of course, wear their Sunday best, and neatness of patching is not a strong point with most of the busy mothers, but they do their best to look neat, especially the girls, and I never was a tyrant.

I could wish their skins looked healthier; it is sad to see such scars on limbs, not their own fault. The Doctor is fighting hard to remedy such matters and another generation may be cleaner skinned.

So down I pass, all standing at attention, 'eyes to the front', but little girls cannot refrain from breaking rules and giving me a beaming look as much to say "I love you, Teacher," and how can I be severe? But the boys, they need watching. Here is one with a big feather in his thick mop. Out it has to come and promptly disappears inside his shirt. Here is another with a necklace of leaves to set off his bare chest. The chest may remain bare, but the leaves have to go. I have to sigh at another's vanity who, though the hour is sweltering, wears a great coat far too big for him. Half a bracer <sup>98</sup> is thought better than none, by some, or perhaps they have split up one between them. Those fellows have a distinct pull over the altogether braceless. It is considered also quite *au fait* <sup>99</sup> to wear one's shirt outside one's pants; it seems a shame and waste to hide away any part of one's attire. And the boots! Most eschew them, many wear lint bandages for the coral is very cruel, but some boys think that Boots are the Real Thing, so they borrow their father's and waddle about in things many sizes too big for them, with never a lace to hold them. My judgements issue, and they stand. I know they think thus by special items of attire (even though it be ridiculous rig to us) to do honor to their school, so let them gently down. Things will right themselves wholly in due season. I give the word "Form Fours" and off they go for their daily drill ere the formal work, within, begins.

<sup>95</sup> Archaic: leather.

<sup>96</sup> [Henry Bollmann Condyl](#) patented "Condyl's fluid" in 1857; it was a disinfectant solution that could be taken internally or used externally.

<sup>97</sup> Parts of this text also appear in Tale #46, *Of Inspection and Roll Call*, in Part IV, *Tales of a Roaming Grandfather*.

<sup>98</sup> Possibly an arm or wrist protector, especially for use by an archer.

<sup>99</sup> French: being up to particular standard or level, especially in being up to date in knowledge.

## Chapter IX

### A Tamé — The Gifts of a Tamé — The Exiles’ Welcome — The Exiles’ Turn — Hakupu v The Exiles

#### A Tamé

There was to be High Festival in Hakupu; a Tamé was to be held, a ‘Welcome’ to the Niue boys who had been so long in Samoa. Now at last they were back, therefore Hakupu alike with the rest of the villages would show them right royally how glad they were.

So 4 and 40 were coming in response to the invitation, nigh every village on Niue having representative among them, and the Welcome was to take the form of Gifts, Dances and a Feast, with the grand climax of an All-Day Cricket Match. Friday was set apart for the latter and, of course, all business was to be closed down, mine amongst them. There could be no School that day. The boys would arrive on Thursday morning and the first part of the programme would be that afternoon.

Hakupu’s man and womanhood were terribly busy from Monday on. There was taro and bananas, sugarcane and coconuts galore to be fetched from the distant plantations. There were land crabs to be caught and cooked, yams, too, arrowroot and livestock to be on hand — and roast pig. The Dances and topical Songs had to be rehearsed, and the local cricketers had to get their eye in, for they meant to ‘wipe the floor’ with the Exiles, after having loaded them with gifts and fed them to repletion. My Adult Class begged off that week, and how could I, as a sportsman, say them nay.

#### The Gifts of a Tamé

Wednesday afternoon came and I was asked by the Chief to step to the Village Green and see the arrangement of the Gifts. It certainly took a surprising form. Young saplings, some one inch through, full lofty, with their top foliage and lowest branches untouched, were driven into the ground six inches apart in a long line of over sixty feet. Across these were tied others, all cleared of branch and foliage, thus forming a sort of freize or fence reaching ten feet from the ground. Above this height the branches had been left upon the uprights. Upon the rails thus formed were hung a portion of the Gifts. There were over 2,000 taro roots in bunches of five, giving the fence a most strange appearance from the front; above these brown roots were slung lengthwise along the fence bundles of sugarcane, mighty lengths as sugarcane has the habit of reaching when mature, then, above the fence thirty huge bunches of bananas were tied to the saplings, and higher yet hung coconuts just sprouting. The tying was done with Sinnet. The *Pièce de Resistance*,<sup>100</sup> however, was three roasted pigs, suspended on stakes, full length, in front of all. It was when completed — and I watched till that was done — a Wall of fruit and vegetable 60 feet by 20! Stakes to hold it from collapsing were driven in slantingly both at back and front. At the foot of it were 4 and 40 baskets of coconut leaves, laden with other good things. Within each, the cooked foods, the chickens, the crabs, the yams were each done up in leaves. There were tinned goods, too, in those bulging baskets, some of mine amongst them, for my servants had begged gifts off me to make their own complete. Piles of husked coconuts were there, too, for thirsty throats. Food for 4 and 40! It looked more like food for 400.

---

<sup>100</sup> French: the outstanding item in a collection.

### The Exiles' Welcome

Now came Thursday and with it, the 'Exiles'. There was no mistaking them. They had been to the outside world and they meant to let it be known. They were dudes indeed. Each was rigged out in yellow boots, a flowing blouse, duck trousers of either yellow or blue, a neckerchief and a hat. No mere straw for them; a real felt hat set at a rakish angle. They must have looked glorious in the eyes of the village maidens. And the money they possessed! Their pockets bulged with it; from the very start of things they threw it around, which doubtless made them still more wonderful. Behind the scenes I happened to know that each landed with twenty Sovereigns <sup>101</sup> in his pocket, but at the rate they went from their landing, and at Hakupu, they were making efforts to be beggars in a month. So opposite the lofty fence of gifts they sat, whilst the donors hugged the freize, and Eloquence broke forth, hours of it. First a Hakupuan, then an Exile. Knowing what I was in for, I took a chair along with me and sat among my villagers under the shade of a banana tree. At last came more interesting matter than likening to harangues which served out 'Welcome' and 'Thank you' in a hundred ways. These folk do not give gifts by stealth; they are not ashamed to let their left hand know what their right hand doeth. They are also not at all above blazoning forth the number and the value of their gifts. The Hakupuan Orator therefore announced in detail the Offerings to the Exiles at their Welcome.

There was a total of 3,372 separate articles — this for 4 and 40 men. I know not what the total would have been if they had counted each banana for those bunches were enormous — nor each item in those baskets. He dwelt earnestly on the chickens — this at least Hakupu could easily spare for it seems to be one large poultry yard — and the crabs, which I did not so much wonder at, for they must have taken some hard night hunting. He drew close attention to the porkers, nicely roasted and ready to be quartered. In a grand burst of eloquence, he metaphorically cast the whole lot at the feet of the 4 and 40 Exiles as they sat opposite on the green sward, and with a final and loud "Welcome" found likewise a seat upon the ground.

### The Exiles' Turn

But the 'Exiles' were not to be outdone. A big fellow arose and stepped forward with a bundle in one hand, an oatmeal bag in the other. He thanked Hakupu for its generosity and said that they, too, came with gifts in their hands, for the bundle was a brand new 'Union Jack' of great dimension, and the oatmeal bag held £30 of right good English money. Hakupu's Chief made tracks for that bag; lesser lights unrolled the bundle and seizing a handy sapling tied fast the Jack with coconut fibre and proceeded to parade the village with the Emblem of Empire. Then there came a sudden turn in the events, for the Big Fellow started loudly praying even as he stood, and all the Rakes uncovered, and so did I, though he prayed so fast that I could not catch a word of it, yet got in an "Amen."

Now came the Sivas. There were three and the main actors were the children of the school. They sang very prettily in their own strange way, and moved their hands and arms in their usual perfect rhythm, whilst some in each bunch rose and danced. Again and again, as their performances were carried through, one or more of the Exiles would step out and throw money into the rings thus formed. One was so rude as to force a handful of coins into a Duenna's <sup>102</sup> mouth as she led her troop of girls in singing, but by them all this was thought to be a most delightful by-play. Another marched into the troop then performing and cast the contents of a bottle of scent right and left. Then, as each group

<sup>101</sup> The [sovereign](#) is a gold coin of the United Kingdom, with a nominal value of one pound sterling.

<sup>102</sup> Traditionally, a [chaperone](#) was an older married or widowed woman accompanying a young woman when men would be present. The English derivate "duenna" seems to come from dueña, the Spanish old form for doña.

retired, they laid their gifts at the feet of the Welcomed, but none went empty away; the florins <sup>103</sup> I saw pass from the Exiles to the villagers made one sigh for vision of the rainy days ahead for those gallant spendthrifts.

Next came the dismantling of the Fence. Hakupu retired, it was the graceful and the delicate thing to do. The Exiles remained and so did I, and watched them tear down that thing piecemeal, which I had seen the previous day built up with such ingenuity and care. The 4 and 40 found the 4 and 40 baskets crammed full, but they crammed them still fuller, and were busy dividing up the 2,000 taro roots when, at last, darkness fell and I had to take myself home — my chair also or I had ne'er seen it again.

What those 4 and 40 bachelors did with those 3,372 separate articles of food, before they went rotten, will always be a puzzle to me.

### Hakupu v The Exiles

And now came Friday and the great game, 44 a side — an All Day Match, played on the Village Green. They took the long French windows out of the Church before they started, as a wise precaution, for during that wonderful day I saw the ball boldly and unblushingly enter the House of Prayer, and a mad bunch of fielders dash in after it and hunt among the pews for the heathen creature. It had taken refuge in the Pulpit! But I forestall. I was given the printed Program from the Missionary Press at Alofi, which I translate :

Championship Cricket Match  
Hakupu versus Exiles from Samoa.  
44 Players a side.  
A Church Service will be precede the Game at 6 a.m.  
A substantial Breakfast will please be taken at 7 a.m.  
Songs, Addresses and Drill on the Green at 8 a.m.  
Game to commence at 9 a.m.  
Stumps drawn without fail at 5 p.m.  
Note. No Midday Meal or Rest to be taken by the Players.  
No Reserved Seats.  
Onlookers will kindly bring each their own Chair.  
God save the King.

The light was just breaking when I heard the first Church bell ring. I sat out the 6 a.m. and the 8 a.m. arrangements, but kept faithfully to the 7 a.m. and just before 9 a.m. grasped my most comfortable chair and made for the Green. The sun was blazing, so I took my first position upon the Church verandah, moving steadily as the sun beat me to it, till in the afternoon I was clear across that Green upon the verandah of the Pastor, where sat the Scorers and Hakupu's Elite, for like all other Great Matches, be they where they may, the afternoon's attendance was the larger, though Hakupu was well represented from the first.

The 4 and 40 Invaders had put a heavy tax upon Hakupu to find like number of players, and the village had had to call upon some who had passed their prime, as well as upon school boys. The Exiles were stalwart fellows, hard as nails, but be it here said that my school boys were a match for them. Indeed the finest bowler of the day was one of my scholars *Ikitaimata* by name, and the youngest stood up to the Invaders' bowling like a veteran.

---

<sup>103</sup> [Florin](#) derives from the city of Florence in Italy and frequently refers to the gold coin struck in 1252; this money format was borrowed in other countries and the word florin was used.

At 9 a.m. sharp — by the sun — the 88 marched upon the field and formed 2 double lines — a good space between. Final instructions were given them, and the toss was made which put Hakupu to bat, and the Exiles fielding. Those 4 and 40 Fielders covered the land to the very horizon. They were every where, but I was soon to learn rarely were they in the right place at the right moment, for that rubber ball played abominable tricks. It was not a rough banyan ball, but for so great and occasion one of superior make, full sized and of perfect shape — for a while — yet was it rubber and the way in which it acted was enough to break a fielder's heart. It would come straight from the bat toward a fielder, touch the ground alas! ere reaching him, and there and then decide that it did not want his attention at all, but that fellow to the right. Like a kangaroo it hopped in that direction, then with all the rights of a woman, again changed its mind, leaped clear over his head quite out of reach, and took a turn to the left. The best way was for half a dozen to rush it, grab at it, bring it to earth some how or other, fall *en masse* <sup>104</sup> upon it, and then out of the *melee*, <sup>105</sup> the underdog would have it and hurl it home to the nearest wicket keeper. But all this took time and, meanwhile, runs were being steadily made. Surely it must be also most disheartening when you have got the ball safely in your hand and hurl it home, for the blamed thing to hit a coconut tree and spring back far behind you, and in the outfield the coconut trees were thick as thieves in council.

The Captains of each side were very much in evidence. They have great powers. They are provided with a switch, <sup>106</sup> a real switch that can hurt. If a man failed at a catch his Captain made a rush at him and the luckless one felt the weight of the rod, nor attempted to escape. If, too, any man was spotted by his Captain hiding from the blazing sun behind a tree, that fellow got the stick remorselessly. When a wicket fell, another Boss, possibly the Vice Captain, blew a whistle and the whole 44 gathered round that prostrate wicket, sang a song and danced a horn pipe. <sup>107</sup> It was a wicked waste of Time. Here again if a fielder did not rush up to take his part in the 'Can-can' <sup>108</sup> off went that Captain and whipped him into line. Cricketers upon Niue are wondrously long suffering — yet ordinarily their tempers are extremely short.

Hakupu had no boots and coral is cruel stuff; one of the village bowlers, doing splendidly, stubbed his big toe and could bowl no more. He wrapped a piece of cotton round the injured member and went a-fielding. I often saw that Big Toe in action that day; it was so very evident, no nurse's trained hand had put that bandage on. To keep the ball from melting, there was a coconut shell of water handy for the bowlers, who oft times dipped the thing in it, or it might have stuck to their hands.

When the batters really got in their whack there was something doing; a dozen would dash into the Bush for it and frantic effort made to discover its whereabouts. Not once that day was it lost for keeps. As soon as it was discovered, a whistle was blown by the Vice Captain of the Fielders, which I thought was giving the furious runners altogether too great a chance of reaching their wickets and safety, for they then knew that the rubber was coming home. But it had other goals, at times, than the House of God and the Bush. It would boldly enter the front door of a house — it was too hot to close them — and the rushing fielders would leap clean over the heads and forms of those sitting in the doorway; tables, chairs, mats, pots and pans all went helter skelter to get the elusive thing.

---

<sup>104</sup> French: in one group or body, all together.

<sup>105</sup> WWB also uses *melée*. French: a confused hand-to-hand fight or struggle among several people.

<sup>106</sup> A flexible rod, typically used for corporal punishment.

<sup>107</sup> The [hornpipe](#) as a dance began around the 16th century on English sailing vessels. Movements were those familiar to sailors of that time: "looking out to sea" with the right hand to the forehead, then the left, lurching as in heavy weather, and giving the occasional rhythmic tug to their breeches both fore and aft.

<sup>108</sup> The [can-can](#) is a music hall dance, traditionally performed by a chorus line of female dancers.

As to the Game itself, of course, it was not Cricket, though there were three stumps properly set, a crease and umpires. Besides the latter, there was a most important party at each end, who acted as Coach to the Batters, giving them loud tips and wild encouragement. It was slugging and that alone. Yet it was great sport. There were 4 and 20 War Clubs to choose from, set close to where I first sat, some of wonderful make and shape. And lo! there was one real cricket bat. Only one of the players throughout the day selected the genuine article, and he actually stood at the wicket with a straight bat, and I had high hopes of him as a Defender of his bailless wickets, but not a bit of it. He swiped from the start, and though he had a long inning, yet failed he to connect with a single ball till he was run out. I was right glad, for I was sore at his using a real cricket bat for such a purpose.

The Umpires called aloud each run, and this was taken up by an Ancient Party who sat alone on the Green, nigh the Scorers, and to whom they evidently looked for correct information. And yet all Hakupu could hear those Umpires. The scorers chalked up the runs on a blackboard, borrowed for so august an occasion from the Sunday School. I was uncertain as to M.C.C. Rules,<sup>109</sup> but it struck me as hardly fair calling it a catch, when the ball struck a roof, and a fielder or two waited for its coming down, and collared it ere it reached the ground.

For four and a half hours did Hakupu bat — from 9 a.m. till half past one — when the 43<sup>rd</sup> man went down and the inning closed. The score was one that heartened Hakupu, 366. I was willing from the very first to lay odds on my village, as against my Pupil Teacher René's lack of faith in the prowess of her people, but she was averse to betting — probably had not tuppence to her name — and my position as a White Chief would not allow me to go round the field as a Bookmaker. So I nursed my hopes, encouraged my side in broken Niuean, and watched with bated breath<sup>110</sup> the opening of the Exiles' innings. Hurrah! we surely had them. They could not connect with that ball, and my *Ikitaimata* was knocking down their wickets like nine pins, keeping a perfect length, and Hakupu was fielding smartly and seemed to know the habits of the kangaroo, getting hold of him when he had every hope of eluding them.

It took many hours, did the Exiles' Innings, and ere the end came one could see that both sides were getting weary. They had had nigh eight hours of it without a rest or a bite to eat. They were indeed full of coconut milk, but in great matches such as this, real cricketers carefully avoid excess of drink. Now were the Exiles not rakish; one trouser leg of yellow or blue would be down, the other rolled up to the knee; laces were loose or boots grew too tight for comfort; hats were jammed over the eyes; neckerchiefs hung loose and limp, nor was Hakupu much better. Their white garments of the morn showed signs of the fierce conflict, patches of brown skin appeared where coral and bush had made sad rents. The score of the Exiles rose very slowly. When 22 men were down and out, they had but 105 and it looked a certainty for Hakupu. But Time was flying and there was an appalling waste of time for clapping and dancing as each wicket fell. I feared a draw. Could we yet finish off the 14 left and thus fulfil to the letter our boast 'to wipe the floor' with those Exiles. Five more fell before the villagers, and now but nine were left. It was 166 and Time was almost up when lo! the Exiles threw in the sponge.<sup>111</sup> The Big Man of the money bag arose and called off the game. They could not win, he said, and added that from the start — if only I had known it! — Victory was to go to the side which had the highest score by 5 p.m. They had fought their hardest, 166 against 366 in the few minutes left! No nine men could do it. They had thought Hakupu would be easy game, but instead they had been soundly beaten. They quit.

<sup>109</sup> Marylebone Cricket Club, custodian of the [Laws of Cricket](#).

<sup>110</sup> Breathing that is subdued because of some emotion or difficulty. *Bated* is a shortened form of *abated*, meaning to bring down, lower or depress.

<sup>111</sup> To give up a contest; to acknowledge defeat; from a custom of the prize ring, the person employed to sponge a pugilist between rounds throwing his sponge in the air in token of defeat.

Thus ended the Great Match, with Hakupu gloriously on top. The teams now gathered separately, and squatting on the field of play, faced each other for a final word. That done, they rose, the villagers to saunter home and receive congratulations, the defeated to gather up their belongings and return whence they came, even to Alofi, in the big Alofi lorry and other varied vehicles — rich indeed in food, but poorer both in Money and in Pride. The Tamé to the 4 and 40 illustrious Niueans from Samoa was over. Hakupu was dead tired that night. Prayers were over early. By 8 p.m. not a thing was stirring.

## Chapter X

### Shearing the Lock — Word Building — For Ladies Only — The Mé

#### Shearing the Lock

A serious Ceremony, this Shearing of the Lock — sure sign to all of a child's reaching the mature age of 7, when baby locks must be discarded and real boyhood is attained.

I was invited to take part, as an Outsider, on such an august occasion, and one of my smaller scholars was the chief actor in the scene. But only as an Onlooker, the high honor of putting scissors to the poll <sup>112</sup> was reserved for a greater than I; one who — half of the people themselves — had raised himself to both position and affluence amongst them, none more worthy.

A feast is, of course, part of the proceedings, and like the Greeks of old, all went 'with gifts in their hands'. <sup>113</sup> Those gifts were for a brown-skinned pickaninny <sup>114</sup> with a head of lovely nut-brown curls. It seemed a shame to rob him of them. Yet in this case at least, they will be preserved, for they are to be sent to Auckland, there to be worked up in some artistic Chain, which the fond parents will add to their heirlooms. Mine were but humble gifts amid such abundance; three roast pigs adorned a table, which groaned beneath a weight of taro and fish, chicken and yam. Sweetness was my cue, therefore a pot of honey and a goodly cake were my family's offering, and the Hero of the day thus knew of a certainty that his Teacher had actually once been a boy himself.

The father addressed the assemblage, telling of the birth seven years back, and how the ancient customs should be observed by all faithful Niueans. In this particular case, the hair had not been cut from birth, though in others it is kept full short save for just one lock kept for this same occasion. Then forth came the boy upon the verandah, lead by his mother, and without fear, yet most demurely, took seat upon a chair. The Officiant stepped forward, scissors in hand, and sought carefully for which of the nutty curls should fall to him — for this, the first, was his own perquisite, though it cost him £5 as a foundation for the lad's future fortune. The rest of the curls would be taken off by his mother, within the Falé. There was an entrancing little lock by the right ear; the scissors snipped; the curl fell; the Babe was now a Boy.

---

<sup>112</sup> Livestock; the name of the part of an animal's head, alternatively referencing a point immediately behind or right between the ears.

<sup>113</sup> See, for example, *Medea* by Euripides, *Clio* by Herodotus.

<sup>114</sup> Slang: a black child.

Then came tea and cake for some, and a Feast that would last far into the night for the natives, a real Birthday Party with crackers bursting, and games. Everyone was happy, *Felesi* (Freddy), who was the main attraction, the liveliest and the happiest of all.

### Word Building <sup>115</sup>

I am getting on, but at the present writing, make no pretence at being an expert at this Niue tongue, which in itself is special and peculiar from all other Polynesian dialects. It stands alone, even as does the Isle itself, and to know it is not to feel at Home when roaming among other groups or lonely specks in the South Pacific.

But in the long hours of study and of acquiring some little fluency in Niue as a language, one comes across much that is both curious and interesting. The Niueans have been hard put to it to express things unknown ere white men came, and their Word building is certainly ingenious and to the point.

They had ‘cups’ from time immemorial — half a coconut shell did the business to perfection and what did they want with a handle! But a ‘Jug’ got them. They looked at it with a scrutinizing eye and evolved the name ‘*Kapiniu loa ne fai gutu*’ — ‘a long cup with a mouth’. They knew no covering for the feet, ‘boots’ therefore were bad enough, but ‘shoes’ as well! They evolved for the former ‘Soles’ wrapping with a long mouth’ and changed the ‘long’ to ‘short’ for the latter. A ‘shirt’, which many men prefer today to exhibit to the tail end, they dubbed ‘the garment to be in side of’, a thing to do quite new to them, who wore but a wrapper round their loins, or still earlier none at all. A ‘plate’ is a ‘flat cup’. As to a Frying pan, they gave it up and made a dash at it in Niuean sounds — this they got ‘*Pani falai*’, which is none too bad. All their Adjectives follow, not precede, their nouns, and their Pronouns are never vain, dutifully following, not preceding, the verb. You must walk warily with some of their words, for a single vowel makes a vast difference. Do you want to say ‘Thick’, then you say ‘*Matolu*’, but do you want to say ‘You’, then out with ‘*Mutolu*’, but if you would say ‘Our’, then must you say ‘*Mautolu*’.

When the Missionary started in to turn the Holy Book into Niuean, he had no small job on his hands for lack of words. What Niuean had ever heard of gold or corn, the Sabbath or a Cross. Satan, too, and Hell, a horse or Synagogue, silk or mustard were unknown. Thus today we have many Greek and Latin, even Hebrew words in use, for those Missionaries were not to be beaten. They largely increased the vocabulary, and what they said went. They started in to Teach and the poor Niuean was tied up in mental knots to get names for things, but they arrived. ‘Letters’ are the ‘Eyes of Writing’; ‘Ink’ was fairly easy, just ‘Writing Water’, even as ‘Medicine’ became ‘Plant Water’. In those early days M<sup>r</sup> Missionary used a quill pen only, so a ‘Pen’ is a ‘*Pene fulu*’ or ‘Feather Pen’. A ‘Pencil’ was evidently something greater in their eyes, for it is the ‘Talking Pen’, whilst a ‘Slate Pencil’ is a ‘Stone Pen’. When ‘nibs’ came first to Niue, they disturbed the mind of the poor folk, yet they would not give up the Quill idea altogether so dubbed them ‘*Mata fulu*’ or the ‘Eye of a feather’. Sometimes they are daring and sail right in on an English word, disdaining subterfuge.

There was a leak from my roof and I sought the homely Washing Tub. Avoiding the plain word ‘Tub’, I sought for Niuean term. How eagerly my cook sought to do my will! I got a Cup, then a Bowl, next a Sauce pan, then a Basin, then old tins were rushed. Then I myself went forth and laid my hand upon the Thing within my wash house. Forthwith came ‘Tub’ in purest English and “Why did you not say ‘Tub’ at the very first?” From that hour, I throw my native tongue at their heads when I get stuck.

---

<sup>115</sup> Niuean words are also the subject of Tale #29, *Of Coined Words* (2), in Part IV, *Tales of a Roaming Grandfather*, and *Quaint Speech of Niue*, published in the Pacific Islands Monthly, July 1942, pages 45–46.

A ‘Button’ is the same as the ‘Moon’, being I suppose round and white. A ‘Blanket’ is the same as ‘Sheep’ and with good reason, though Niue had not seen a sheep when blankets were first imported. ‘Pepper’ is just ‘*Pepa*’. ‘To Jump’ is ‘*Hop-o*’, correctly enough, but why should ‘To Kick’ be ‘*Holi*’? ‘Time’ is not evidently easily settled; ‘Noon’ is ‘the Sun perpendicular’, but they have no half past, quarter past or quarter to, but say the number of minutes either past, which is ‘*Mole*’ or before the particular hour, which is ‘*Ke ta*’.

Note throughout, that Every Vowel must be separately and distinctly sounded.

‘Deaf’ is to have ‘a Frozen Ear’; ‘Blind’ is to have ‘Eye Darkness’. The parts of the Body are neatly covered; the ‘Toes’ are ‘the Eyes of the Feet’, just as ‘Fingers’ are ‘the Eyes of the Hands’; the ‘Nails’ are styled ‘the Moons’ of one’s extremities, whilst ‘Tears’ are ‘Drops of Water from the Eyes’.

They have no such word for ‘Dad’ or ‘Mum’, yet have they ‘*Papa*’ and ‘*Mama*’, but alas! ‘*Papa*’ means ‘a Wooden Club’ and ‘*Mama*’ means ‘a Mouthful’ and these are surely disrespectful words to use to one’s dear Parents. Their terms of endearment are few, they seem to altogether lack the enthusiasm of Love. ‘Father’ is but ‘Male Parent’ and ‘Mother’ but ‘Female’ ditto. ‘Boy’ has to be content with ‘Male child’ and ‘Girl’ has but the difference of Sex. Of naughty words I cannot speak; they may use them in my hearing, but they are lost on me — as yet.

Whilst they are long-winded as a rule, at times they beat us handsomely. In ‘I cannot say’ we beat them hollow for theirs is ‘*Kua nakai maeke au ke pihe atu*’, but in ‘What do you want it for’, they have us, for they cover it in just one word ‘*Moha*’.

And maybe you, who read, by now have just one word, one only, upon your lips ‘Enough’, and though it takes several words to say it in the Niuean language, I will out with it and close this Memo — ‘*Toka e mena ia*’.

### For Ladies Only

Niuean femininity in matters of Dress is content with nothing short of their white sisters. They go plumb crazy over Fashion Plates.<sup>116</sup> Mine were worn to the bone. This is well if they can afford it, but there is this great difference: they must needs exhibit every fresh garment to the public be it what it may.

A Trader, my good friend, with an eye to business, secured not long since a consignment of Corsets, and bestowing one upon his native wife, awaited developments. The dark-skinned one assumed it — showed it round — she at least was modest — and my village, yes Hakupu, went wild over the article. The Trader had his shelves cleared in a trice and made a handsome profit, but nor he and certainly not the Pastor were prepared for the denouement, when on the following Sabbath fifty Niuean ladies issued forth to the House of Prayer with those Corsets outside their Mother Hubbards.

A rival Trader in the village nighest mine was not to be outdone; he therefore ordered Combinations,<sup>117</sup> and followed the same plan. He was horrified, however, when he beheld his Niuean better Half — not so well in hand — parading the village clad only in this new gift, with a new parasol to complete her toilette.

<sup>116</sup> A [fashion plate](#) is an illustration (a plate) demonstrating the highlights of fashionable styles of clothing. This method of disseminating fashionable styles was popular during the 19th and early 20th centuries.

<sup>117</sup> A type of underwear that combines a vest or camisole with trousers or drawers.

The last King of Niue's wife was a Breezy thing. He was an Ancient, she but 20 years of age. She was very fond of dress and made continuous raid upon the Traders on the arrival of every schooner, thinking nothing of paying 10/—<sup>118</sup> a yard for what she coveted. There was wrath both in her eye and speech when the other women appeared in like material, and things went so far in her fistic attacks upon the humbler of her sex that she was eventually haled<sup>119</sup> to the Resident's Court and fined £5 for her unqueenly conduct. Yet carried she the thing through in regal style for she hired the one and only 'Ford' at an enormous price to act as 'Black Maria'<sup>120</sup> there and back. Her Palace was at Tuapa.

To this day the Traders have to use guile to part with a full roll of dress material. To the first comer they show the new goods, who falls to the temptation, but lays down the law, "Mind you sell this to no one else." Along comes another, and to her the wily salesman says, "I have the very thing for you. Don't tell a soul. Just step in and see." That woman is also won; she is followed by the Trader's wife, who whispers cunningly to her neighbours separately that the last ship has brought a lovely consignment of goods. That settles it for the lot, till all is sold. Ere long, a score or more of women issue forth to Church in their new glory — the 'one and only' worked furtively of nights — to find it the property of the village. That Trader is in for a hot time, but he knows his customers and is well aware that he can carry on the same old game with every ship's arrival.

This is Vanity; would that it ran to other and really needed garments! Where there is a little snap in the air of an early morning, there are no Paisley Shawls<sup>121</sup> to fall back upon, but instead my village ladies appear wrapped in bathing Towels. It looks as if there was going to be a grand ablution somewhere, but not so. A full length bath towel may look odd on a dark-skinned form, but it is just the thing and that's the end of it. Cold impresses them; would that Damp did, too. Here is further, useful use of Towel, but they discount it. To make plaiting and weaving easier, the women regularly retire to some damp Cave, where they will sit for hours, less than half clad, unmindful of the danger, only anxious to make their 'Straw' more pliant for their fingers.

Thus is Consumption started and many a Plaiter the less.

### The Mé

Sound the E as an A and you have the 'Me'.<sup>122</sup> But what is the Me, for 'the May' (its interpretation) is held in July, the one High Day and Grand Festival of Niue, looked forward to through all the year, the Feast of Feasts. Then to Alofi all the island journeys, and there are Services and Meetings, Offerings of money and of kind, together with much singing, followed by Athletic Sports and 'Eats'.

Yet, methinks, the genesis of the name is not hard to get at. The Missionaries, in the early days, wished to keep the natives in touch with the source from which their new privileges as Xtians<sup>123</sup> came. In London there were, possibly still are, the great May meetings of the different Xtian bodies, Missionary Societies among them, when accounts were rendered of the work done amongst the heathen, and offering given in support. On Niue therefore, at the same time, there was held a gathering of Thankfulness, and to it the title of 'the May' was given.

<sup>118</sup> Ten shillings. In the pre-decimal currencies used in the United Kingdom, there were 12 pence in a shilling and 20 shillings, or 240 pence, in a pound; a penny was, until 1960, further subdivided into four farthings.

<sup>119</sup> Drag or draw forcibly.

<sup>120</sup> A [police van](#).

<sup>121</sup> Shawls of Paisley, Scotland; highly fashionable for women's daywear until around 1870.

<sup>122</sup> WWB uses both *Mé* and *Me*.

<sup>123</sup> Christians.

Its change to July was for various reasons; it is not such a busy time in the plantations for one, and the Mission Ship the ‘John Williams IV’ comes ordinarily that month — now but once a year — another great event, for Niueans look upon that Ship as theirs, and do not they provide each year good money to support it?

The rivalry amongst the villagers is great as to which shall head the list in monetary offering. Two years ago Hakupu came off flying, with £260 to its credit. This is a large sum seeing that the income of no native reaches to more, in cash, than £20 a year. This year, money is tight, the price of copra has fallen, and but £100 has covered both adults’ and children’s gifts. To one fell the lot of receiving the latter’s at School time, and I had a busy time for days, receiving shillings, and writing down nigh 100 names as the contributors laid down their monies, some as much as 5/–, till the sum of £10 was in my hands.

These offerings are of some moment to the Pastor, as his Cash for the year depends thereon. All is sent to the Missionary, who apportions it out on a regular scale; so much percentage for the London Society, which runs the Mission Ship, so much for outside missionary work, and the balance to the Village Pastor. But he is better off than such apportionment supposes. Besides a house provided for him by the village, he has a certain number of coconut trees allotted him, out of which he makes copra and sells it to the Traders. His people, every Friday, bring to his door their tithe of food for him and his, so the Cash is his for clothing, baccy <sup>124</sup> and matches. My pastor smokes a two-inch cutty <sup>125</sup> and Black Jack, <sup>126</sup> which latter may it never be my misfortune to be forced to, for it takes six weeks to get used to it and a full six months to forget it. He was a Sailor once and bears traces of the fore-castle still upon him.

Another part of the Me, is, as I have mentioned, the Singing. Each village prepares a Song, and I can vouch for the number of practices the Hakupuans put in, in preparation. They had in hand a sort of Hallelujah Chorus, <sup>127</sup> and the Village rang with it all evening for many weeks. I knew it myself by heart before the end. The Scholars at Alofi and Hakupu also are now privileged ‘to give a piece’. A Hymn it was to be this time, and I selected one quite unknown to natives, and of which I had not the tune save in my head. This one I chose, ‘Loving Shepherd of Thy Sheep’. It would give me the opportunity of breaking up that raucous shouting of theirs. Not being a musician — nor is there piano in the village, even were I — and never having aspired as a Choir Master, it was presumptuous and daring, I allow. Of course, the words had to be learned by heart as none could then read — wonderful memories they have; it comes easy to them this. Every word also had to be explained to them, for they then knew the meaning of but few. I was up against the whole thing at the start, for they knew nothing of Shepherds, at least so they all affirmed, though in such case their Pastor is sadly lacking in his duty. But happily I found a large picture of ‘the Good Shepherd’ in a roll sent me from Auckland, and my path was easy.

But the Tune! Ah, that was the rub. Sharps and Flats are not their strong point. Line by line I took it, and little by little got the one hundred on to it, till after weeks of labour I had it going as smoothly and softly as I could wish. My baton was a ruler this time.

And then, as luck would have it, I was laid low; and another year had to pass ere I saw a ‘Me’. The whole village tramped off the eight miles to Alofi without me. Yet not all, for just think of it! The Village Chief refused to leave me. It was his place, said he, to be within call of the sick White Chief; the ‘Me’ would have no pleasure for him, nor would my servants leave my side. The details of that

<sup>124</sup> Tobacco.

<sup>125</sup> A short clay pipe.

<sup>126</sup> A pipe tobacco brand of the British company, W.D. & H.O. Wills, is referenced [here](#).

<sup>127</sup> From [Messiah](#), an oratorio in English composed by George Frederic Handel in 1741.

wondrous Day came to me second hand; of the Great Gathering, the largest for many years; of the monies poured in; of the long Meetings interspersed with Song; of the native feasts; of the Missionary's hospitality to the handful of white folk on the island; of the keenly contested races for the Flag of Honor; of the gay dresses and the candy consumed. And I heard of my scholars' singing — and, later on, from Alofi's White residents, with high praise — of how charmingly they sang and how clearly the English words came from their lips without a single fault. So I was Content.

I have promised them a Song next. It is to be 'Sweet and Low'.<sup>128</sup> That is a direct and daring challenge to all native precedent. I will have them singing 'Hush a Bye Baby'<sup>129</sup> ere long — if I can but recall the tune — so as to send themselves to sleep. I have one boy with a canary voice. I am watching him. "Bah! He sings like a girl," say the rest and utterly condemn him. He shall be my Soloist when I reach Anthems; about 11 years old he is the keenest of scholars, and sings just as he works, with all his soul in it.

My village came back from that 'Me' with but one Hero; he had won the High Jump. I can see clearly where my outside work lies. Wait till the next 'Me'!!

## Chapter XI

Hospitality Gone Mad — Home Comforts —  
Hunting the *Kalahimu* — A Matter of Taste

### Hospitality Gone Mad

Feasts, as one sees, play a tremendous part in the lives of Niueans. They are ever ready to find and make occasion for them. The Marriage, the Welcome, the Dedication, the Burial, even Cricket itself are secondary to the Eating which accompanies them. For this they will plant and labour prodigiously, so that when the Call comes, they may place upon the sward abundantly. Vainglory also plays a part. To present the largest taro, the biggest bunch of bananas, on such occasions, is an object for which he and his will eat for weeks previously but the tail end of all things grown. To hear "What talent for growing!", "What a wizard he is!" is as incense to the nostrils. Yet it is neither the village nor the individual aught the gainer by this brave display. The guests devour all they can at a sitting, bear off the remainder — and quickly forget the Donors.

Cricket is without doubt the chief offender. For it, supplies are drained to the utmost, then if not thought enough the village puts its hand in pocket and producing its few shillings, purchases tinned meats and biscuits, thoughtless of all other needs. Hospitality demands it. The good name and credit of the village have to be preserved.

Liku, for instance, came to play Hakupu and brought 40 wielders of the bat along. Great were the preparations, enormous the supplies brought in. Those 80 cricketers took three days to fight it out, and the last day a great run had to be made on the Traders. Hakupu won, but Hakupu was eaten out when the finish came.

<sup>128</sup> Possibly a poem by Alfred, Lord Tennyson, set as a part-song in 1863 by Sir Joseph Barnby.

<sup>129</sup> Nursery rhyme: *Hush-a-bye, baby / in the tree top. / When the wind blows, / the cradle will rock. / When the bough breaks, / the cradle will fall, / And down will come baby, / cradle and all.* Said to have originated from America. It was the practice of some Native Americans to place a baby in the branches of a tree allowing the wind to gently rock the child to sleep.

Happily on Niue, things have not as yet reached the stage which other islands have, where the coming crops of every kind have been mortgaged to the Traders for food where with to entertain the opposing team. There, Government authority has been forced to act and to regulate the thing, or soon they would have had to feed the people.

But Niue, without doubt, suffers from Cricket on the Brain.

### Home Comforts

True, my parlour has no ceiling, and high up above you are the rafters and joists for the galvanized iron roof, all to be plainly seen. It is not sumptuous; it is even bare, but it is tidy and ever clean. One does not expect carpets. We have but grass mats in Hakupu, but they lie close, and can be easily moved for the daily washing of the coral lime floor, with Condyl's Fluid. The layers of that floor were not Experts; it has the tendency to be like the waves of a summer sea. I boast of an easy chair — even two — for visitors none too frequent, of my colour, and a lounge for an oft-tired man; the rest of the seats are stern things — I will say no more. There are many doors, far, far too many for one room. I learned one phrase of sheer necessity immediately upon entering into possession: "*Faka molimoli pa e hala*," which means "Please Oh! Please do shut that door." There are cross currents of air ever on the move, and so are my papers, but happily one's temper is even, and one must take 'the Ups with the Downs'.

The walls of rock and lime are also of an uneven surface, but carry paddles, spears and war clubs, dancing waists with heavy fringe, necklaces of beads, bags and baskets of weird and oft beautiful workmanship, fans plain, and gandy-coloured <sup>130</sup> dancing ones. Above one door are two *Tikas* (c-kars), <sup>131</sup> long slender sticks to the head of which are attached pieces of dark brown wood, very hard, smooth and highly polished, shaped as lemons, tapering off at both ends, fat in the middle. These are thrown like a spear, and once touching the ground, it is astonishing to see the distance they cover, gliding along like a snake. This is the game called *Tika*, the winner being the one whose weapon goes the farthest.

It is not right that I should hide from you that I have night companions, but let me re-assure you at once that they are four-legged. I refer not to the ubiquitous mosquito from whom protection can alone be secured by sleeping under a net — a mighty net is mine, hung from the high roof in my bed chamber, with ample space within its folds for air, but well tucked in beneath the mattress — nor to the midget flies first cousins to those outside, but to Rats!

Yes! There are rats on Niue, countless rats. But there are rats and rats. Time was, ere ships came, when the real Niue rat reigned supreme, a little fellow, happy, with the island to roam over at will, all the food he wanted, danger only from the noiseless owl o' nights and natives' clumsy efforts to nab him, which for very sport's sake he enjoyed. Then came those ships, that one in special which was wrecked sheer upon Tuapa's reef, when lo! from the hold there issued forth an army of his fellows and made their way to shore and safety. The Niue rat beheld and straight away fled. Could those be his fellows, those rats three times his size, with fiercesome whiskers and rich furred coat? Some adventured to make friends, and instead were rushed upon, slain in a trice and eaten! They were cannibals! even as they are to this day when opportunity offers. Those were sad days for Niuean rats. They fled from the reefs where oft they had found a dainty morsel of fish; they took to the Caves, to the holes, to the high land, anywhere, everywhere so that they might escape that awful invasion. As a race they are sadly diminished, but still survive in the Bush, and those villages back from the sea.

<sup>130</sup> Possibly a short form of *burgundy*.

<sup>131</sup> Pronunciation of *tikas*.

The Big Fellow reigns in the titbits <sup>132</sup> of the Isle where the white man dwells and has his ample stores; the dethroned have to content themselves on the fruit of the earth and on the thought of What Might Have Been.

Yes! There are rats in Hakupu, the native rat, and the coming of this white man has brought Paradise with it. A white man's Store Room, whoever dreamed in Hakupu's rat land slumbers of such a thing as possible. What Hakupuan rat ever heard of, much less saw such prodigy of food. Now does his vegetarian soul loath all past provisions; he contemns himself for breaking in on natives' haunts. The white man and his delicacies for him forever. At least this appears so to me.

Alas! Hakupu's rat on Niue's purest-breeding knows nothing of that white man's tricks of poison and of spring trap, and is paying dearly for his ignorance; his kind is falling fast. Arise! some Grey Beard and warn thy fellows ere it be too late. Yet will that same white man get thee, even thee old Grey Beard for he Knoweth that some day thine Insides will master thy Brains. And I did, but not for many months, as will be seen.

Such are the Comforts of my Home. Roamers such as I, have to do without framed Pictures for their transient quarters. One Picture only, a 6 by 2 inch glimpse of 'Home' adorns the walls, a rustic house, gabled, thatched, a garden of roses in front, an old yokel <sup>133</sup> driving past with a horse and cart nigh as old as himself. It is Enough; it is Eloquent as a whole gallery. It is England. I am content.

Not only have I comforts in my home within, but have added a special one outside. The sun blazing down on a tin roof makes residence therein during the hottest hours of the day well-nigh impossible. Therefore did I ask for and obtain a Grass House at my backdoor — a Niuean Summer House — an Arbour <sup>134</sup> ever cool. Its building was a thing to watch — a lesson in quick house raising. It was built in a single day, such an one as the builders' forefathers would have thought a Palace. The posts of *kafika* wood, the cross beams, too, the roof and sides of coconut leaves most deftly wove, and not a nail in use. The *Va*, that cane which climbs and clings to trees 100 feet in height, cut in long lengths, then split in four — run down not with knife, but fingers — made the cord which bound all joints together. The leaves put on in one way only, lap upon lap, so as to shed the rain. In the morning there was naught; that evening I sat within, my Summer House complete. There hold I court of those who wait upon me daily with all manner of enquiries. I am the teacher of all, and they know that at any hour of Day they may come to learn. Sometimes they come to Teach and I am ever gratified.

Ere matches came to Niue, along with white folk, I had often wondered just how Niueans made fire. I know now, for I was given an exhibition as I rested in my arbour. Boys came upon the scene, bearing a stout, round limb of the *Fou* tree, barked and dry. Placing it on the ground, one held it fast, whilst a second took a twig of the same tree, shaped like a drumstick without its knob, and drove a groove along the surface. It takes real strength to make that mark; I could see the force put to it, and the perspiration soon poured forth from the driver. The groove some 18 inches long grew still deeper; quicker moved the drumstick; at the far end a fine dust collected, reached the dimensions of a heap; into that heap the driver ever forced more and more, the pace now furious. There came a smouldering, then a glimmering, then a light. They had made fire.

---

<sup>132</sup> A small dish of pleasant-tasting food, meaning here the best parts of the Isle.

<sup>133</sup> A person who lives in the country, especially one who appears to be simple and old-fashioned.

<sup>134</sup> A shaded garden area.

**Hunting the *Kalahimu*** <sup>135</sup>

Three of the Crustacean order are delicacies on Niuean floor-tables: the Crayfish, the *U(n)ga* and the *Kalahimu*. The first is of the sea; the second hides in the caves and rocks of the isle — oft miles from the saltwater, with which he has naught to do; the last is the smaller land crab whose habitat is the Bush. The first you must trap; the second you must entice from his hole by various means; the *Kalahimu* you must hunt for at night only — without anything but a torch, and a basket to hold him.

He is an obstreperous <sup>136</sup> little fellow, like all his kind, with heaps of fight in him, and he has an immense bump of Inquisitiveness, which, of course, leads him into trouble, but also causes him — despite that fact — to love to explore the habitations of Man. He enters your house without invitation; he crawls up your walls in the most astonishing way; he oft gets into places least expected. It is always wise to ‘sound’ your boots and slippers or you may get a really exciting surprise. But better this than snakes, which Niue knoweth not.

I heard him one night in my bedroom as he made his way across the coral floor. Strange to say it was bright moonlight. I saw him in the direct path of the door which always stands open, leading to the sward. Adjusting a boot, I let him have it, he the football, landing him full twenty yards away, his dignity doubtless insulted, but I hoped himself unhurt. Another night — my mosquito net unused — I saw him perched directly over my bed, high up in the rafters. I did not propose to have him nip me by the ear as I slept, so with infinite trouble I got him down from his perch and gave him the end of a broom stick. He went out even as his brother had.

The *Kalahimu* is particularly fond of an evening stroll after dark, and elects for his chief promenade the broad grass-covered way that encircles the island. I was invited to take part in a hunt for the crusty little fellow with the nippers, and as I miss nothing that is going, I joined the party. But we were far from being alone; half the village was out. There was no moon, and to see him, bundles of cane tied loosely together are used, which make a fairly decent flare. Some use a kerosene lamp, i.e., those who can afford kerosene at 1/— a small medicine bottle; others, a bicycle lamp, i.e., those wealthy enough to own a bike. I provided a candle lantern, but the flare beat it hollow.

Out of the village we tramped and into the broad way with dense forest on either side, a darksome place indeed without a light, as I know by taking long walks alone of nights, the trees and the coconut palms shutting us in, though peering through I could see a beautiful starry canopy above us. Ahead were scores of lights, ever moving as the different bearers swished their flares about, sweeping the ground to find their prey. Their eyesight is past my understanding. I saw not one single crab the whole hunt through, till my party had nabbed him or it had nabbed them. Especially along the sides of the road is the place to look, where the coral touches the grass. One of the party carried and worked the flare, another a coconut basket like a carpenter’s tool bag, but sewn up, save for a tiny space, into which to pass the captured. Yet even at that, they get out and the carrier would oft complain of a crab grabbing his or her arm, or neck or hair and we had to haste to the rescue. Men, women and children were all busy that night, strolling along and every now and then swooping down upon something they clearly saw, but which I utterly failed to.

It was a pretty sight, those flares in the dark amid the forest, and a cheery one too, for all were laughing and chatting as Niueans full well can, and the sight of the White Chief out to hunt the *Kalahimu* seemed to amuse them hugely. We walked many miles, and half way were refreshed by the milk of

<sup>135</sup> See also Tale #44, *Of the Kalahimu*, in Part IV, *Tales of a Roaming Grandfather*.

<sup>136</sup> Noisy and difficult to control.

the coconut — bless him who climbed those giant trees in the dark to get them — for the nights are warm here, even as the days.

They are a generous folk, they give to one another — especially to the smaller children — quite freely of any store. We needed no helping out; there was no Jonah <sup>137</sup> in our party. We nailed them on the roadside; we nailed them climbing the trees; we nailed them right upon the road, at the cost sometimes of a nip to naked feet, who were thus made aware of their prey. If everyone had our bag there must have been, with that crowd, well over 1,000 caught, for we returned at last, well tired out, but well content with a bag of fifty, and my lantern, the only glimmer. We had no more fuel.

### A Matter of Taste <sup>138</sup>

She, a buxom lass, had often borrowed my lantern lit by candle. She always preferred it to my kerosene light distributor. Never once had she brought it back to me with any candle left therein. Every atom of grease had likewise disappeared. I was not mean. I started it out every time on its way with amplitude of burning power. If that novel kind of lantern gave the natives any pleasure in the using, they were very welcome to it.

One day I chanced to be spreading bread and butter for some Alofi visitors, and my candle lass was standing by. Knowing the readiness of the native to have a ‘bite’ at any hour, I offered her a slice. “Thank-you very much,” said she, “but I do not like your butter. I do like your candles; they taste so good.” So that is where they went. She still uses my lantern.

We may think such taste debased, but the natives have answer to hand. The *Loku* is a favourite of mine; it has much Pepsin in it and when eaten fully ripe is very tasty to most white folk. They are very plentiful, yet I have much urging to do to get my servants to bring them to my table. They would not dream of offering them to you as a present. You must ask or you will not get. “Bah!” say they, “*Lokus* are only pig’s food” and to the pigs they are served. Therefore may that Candle Eater and I call Quits. After all, it is but a Matter of Taste.

## Chapter XII

### My First Xmas Party — Xmas Morn — Outdoors and In — That Union Jack

#### My First Xmas Party

It is not altogether easy for a new comer to the Southern hemisphere to associate Xmas with broiling summer weather. It seems incongruous to those of us who are used to look for snow at that time, or at least biting weather. Here, too, are no shops with a Xmas look about them, no holly bearing trees, nor mistletoe nor robins. Yet these folk have caught the spirit of that Season, and look forward to it with as much zest as any, whilst elaborate preparations are made for its cheerful observance far ahead.

And so it came about quite naturally that we should have a Children’s Party, to fall on Xmas Eve. For lack of proper lighting arrangements, there is no thing, as a rule, held publicly of an evening, so it

<sup>137</sup> [Jonah](#) is the name given in the Old Testament to a prophet of the northern kingdom of Israel in about the 8th century BC, the eponymous central character in the Book of Jonah, famous for being swallowed by a whale.

<sup>138</sup> See also Tale #44, *Of the Kalahimu*, in Part IV, *Tales of a Roaming Grandfather*.

was to be from 1 p.m. to 5 p.m., and besides Eating, there were to be Games — the chief, the introduction by this lone hand of two games so far wholly unknown to Niue — Basket Ball and Soccer Football. Rugby and Boxing I unwillingly refrained from; Niuean tempers are far too short. I knew there would be some sport for me as well in these, and there surely was.

But first of the preliminaries. The Eating was a great event in itself; the trouble was that I could not persuade the children not to bring baskets of food along with them. I had assured them of plenty, but it seems to be the Custom to add always of their own, and I had to let it go at that. My Assistant, *Faséné*, is, as a sideline, a baker, besides being, as you know, a tonsorial artist,<sup>139</sup> and using one of the large discarded open air ovens of the village, his part of the feast consisted of a gift of fifty loaves of bread — and they were fine. Then a couple of outside Traders — friends of mine — each sent a large biscuit tin of Candies, whilst my own share had to dwindle down to cakes and tins of various biscuits, treacle<sup>140</sup> for the fifty loaves, and Lime Juice Cordial by the bucket. What were in those coconut baskets, I never knew, save the contents of two which the Village Chief, during the proceedings, formally escorted me to and announced that they were mine, one full of cooked Taro, which meant for my Household, for it is a vegetable quite beyond me, being to my taste a mixture of glue and turnip, the other, five chickens roasted in leaves in the native way. Five chickens and in 24 hours they would go bad; they gauge my appetite by their own. I gave away three — on the quiet, ate one, but before I could reach the last, it well nigh walked again. Those baskets were arranged outside the school house not in one long line this time, but in groups. It was a sort of general hotch potch; the supplies were divided up amongst the children of North, South and Central Hakupu, but such nice division of my village was news to me.

We assembled the scholars — the 100 — inside the school, they sat upon the mats, each with a half coconut shell as a mug before them and we moved up and down the ranks, handing the various foods provided by us. Nothing was touched till the last biscuit was distributed. The pile before each grew, to my mind, to alarming proportions — especially with games in sight — far beyond the capacity of any human stomach to envelope. Certainly the Candy got one or two — I saw them crunching on the sly. Then they set to, at least most of them did, and stuck gallantly to their task. Others, wiser as to what was to follow, produced from somewhere on them, paper or old rag in which they wrapped the greater part, proposing to eat later on, as indeed they did, for picnics *alfresco*<sup>141</sup> were to be seen that afternoon every where about the roomy grassy playground. Meanwhile, the Mothers of the village crowded the doors, besides peering through the many glassless windows, so as to miss nothing of the novel proceedings.

Before the children passed outside, each received a Xmas present of a Picture Scrap Book, 50 of which had been sent by the ladies of Auckland, lead by the gracious Lady Mayoress, whom I had enlisted on behalf of my scholars, and whose constant contributions of pictures proved of inestimable benefit to Hakupu, and assistance to myself. The other 50, at great cost of Time and Labour, I and my kind assistants had made up of magazines, illustrated papers and Fashion Plates! The children were delighted, for the pictures would give them a fund of useful information, with questions to ask me for weeks to come.

Then came the Games. Some weeks ahead, I had illustrated upon the Blackboard the various positions of the players and the limits of each field of play. The boys had cut saplings from the forest for goal posts, with a fork atop across which we laid another sapling; there were corner posts and limed lines. For Basket Ball, we had no nets, but tied a coconut leaf-basket to each upright.

---

<sup>139</sup> A barber.

<sup>140</sup> A syrup made during the refining of sugar.

<sup>141</sup> Italian: outdoor.

All was ready for the whistle. Basket Ball first, because I would show honour to the Fair Sex, though their skin be nut brown here, and point the moral to those among whom they hold but a secondary place. The rest of the crowd — adults most numerous — ranged themselves about on the sward. There was no crowding of the side lines; all sat upon the ground, the ensemble highly picturesque. It was not easy getting the sides into their respective places, seeing that the entire vocabulary of needful words was a new Branch of the language to pick,<sup>142</sup> but René, my young Pupil Teacher, was invaluable and I am sure would have most willingly thrown off the field anyone, or indeed the whole mob, if I had but raised my finger. She has great Strength. But the whistle was 'It'. When that blew, once that game had started, they stopped dead short even with a leg poised in air. I had got that much into their heads. The other point — not to grab one another — was quite a different matter. There were some fierce 'scrums' amongst those girls. To a white man on the side lines, each game — and there were many for every girl had to take a part — would have been a screaming farce, but I was kept far too busy. Those girls went at it with a right furious will. The ball — imported, as was the Soccer one, from Auckland — flew up and down the field, the girls tearing about in wild endeavour to connect. The Passing to each other, which I had so carefully instructed them in, went wholly 'by the board'.

It was well that I had ordered old garments to be worn for my Xmas Party, for those clothes — though scant — had a very bad time. So did hair, which would not keep in place, but the great black coil would come untied and cover up all vision of both ball and field, just when eyes were most needed. René and I were kept busy disentangling 'scrums', dragging out by any limbs most handy those who lay buried beneath the avalanche. Those girls, even to the smallest, had a lovely time, and goals were scored despite the fact that the ball would not remain in the 'net', mostly coming out as soon as it went in, but they were goals all the same, so said this Referee.

The Soccer, too, was full of thrills. Some boys took an unfair advantage; they had secured boots, never mind whose, or what size or about laces. Those who had only nature to help them, found it very advisable to do as I had bid — get their toes well under the ball, not propel it with the ends thereof. Penalties came fast at first, owing to their desire to play Basket Ball at the same time, and the Backs became Forwards, and the Forwards became Backs, but each of the many games — ten minutes each — went with a rush, and here, too, goals were scored to the huge delight of all.

Being Coach, Referee and Linesman all in one, and all over both fields for a score of games beneath a tropic sun, I was glad at last to call a halt, and we had Races, with tobacco tins of mine filled with candy, as the Prizes. There was some great Sprinting done. Some sprang the lines and were disqualified, much to their surprise. There being no tapes, there were many collisions and some Blood. The girls threw all appearances to the winds for those candies, whilst the boys 'saw red' in their wild rushes over grass and coral rock. The Strangers' Race<sup>143</sup> attracted several of the men onlookers — and I would have given the many mothers a like chance — but the candy ran out. But every body enjoyed that day, the Games, the Eating, the Scrap Books, the Lime Juice and the Candy, and trooped off home a happy crowd from my first Xmas Party.

But I had not done with my scholars yet, so far as that Xmas was concerned.

---

<sup>142</sup> Almost illegible: last word on the page numbered 41 in Volume 2.

<sup>143</sup> Possibly a race that is open to contestants outside the group for which the main races of the day were organised; in this case, the main races were for the children, while the Strangers' Race was open to the men onlookers.

## Xmas Morn

Foregathering at the school, thence to march *en bloc* <sup>144</sup> to Church, we purposed there to sing a hymn — a Xmas Hymn in English — both for the edification of the elders of Hakupu and, I hope, in all hearts to give Honor to Him whose Day it is. Now did they blossom forth in all their glory. The ‘Me’ and ‘Xmas’ are set apart on Niue for new attire; the rest of the year may look after itself. This year, the color for the girls of Hakupu was Pink; the boys were to appear in khaki pants and white singlets. <sup>145</sup> My! but they did look grand when they assembled. My attention was so riveted on their smart appearance that I had hard work giving them a Xmas Greeting and a little talk. I had a surprise for them and sprang it. Those generous-hearted Auckland Ladies had sent — months previously, for schooners are erratic — 100 Xmas Cards for distribution, nay 200 indeed, but I had sent the other half to give joy in Avatele. Each scholar got a picture and thanked me courteously, as is their wont. Then we sang one of our Songs, and got ready in line — to march.

First came 20 boys stepping bravely out, then half a hundred girls in Pink, then 30 more boys with the famous boy bowler, *Ikitaimata*, bringing up the rear. The boys, of course, bare headed; the girls, on the contrary, each one with a new Niuean straw hat of various shapes. These also, in several cases, essayed <sup>146</sup> white stockings and shoes, but none of these thus encased moved freely. Far prettier it is to see the bare sturdy legs and feet peeping out beneath the skirt, and I now well know how admirably pink and brown combine. The dash of colour in the long line had a picturesque effect as the column wound its way through the village along the green Highway, with the quaint native homes on either side. The Caretaker, a huge fellow, in khaki uniform and white helmet — he must have borrowed them, for I have not heard of him as having been at The Front — marched by the side of the leaders and put fear into the line.

To the Church we went, and filed in to our appointed place, nor were we called upon at once. Later in the service, I heard the Sailor Pastor announcing in his great voice something to the people, and René whispered to me, “It is our turn now.” Up she rose, faced the scholars sitting in the pews, let out a stentorous <sup>147</sup> 1–2–3–4 and off they went. It was, of course, without books, and they made not a single slip. There is no ‘Amen’ to their hymns — but there was to mine. Finished, I wondered if Reverence would forbid applause, and it did, save for one woman who in her exuberance over pleasure given loudly clapped her hands, but happily that was the only one, and the service proceeded on its usual lines to the end.

A half hour later, not a girl but in her everyday attire. I saw the boys, however, playing ‘rough house’ in their suits. I had hoped that they would become their school uniform, the girls to be dressed in blue; I no longer counted on it.

## Outdoors and In

Niue flies are lazy things; they happily in their millions are great lovers of the outdoor life. On your walks abroad they are countless — indoors one cannot complain. Outside, they prefer your back to their own wings to cover distance, also your arms and shoulders. Hence the Fly Whisk, which is constant a companion with everyone. The Elite make theirs of hair attached to a short stick; mine is that of the tail of a defunct horse; the common folk use any old thing, preferably a small branch with leaves. It is a continual battle with the lazy things.

---

<sup>144</sup> French: all together.

<sup>145</sup> A man’s sleeveless undergarment covering the body from the shoulders to the hips.

<sup>146</sup> Tried.

<sup>147</sup> A voice which is loud, powerful, or booming.

When you pay calls and approach a door, you are ever careful to whisk well your back before entering. If you don't, you are likely to be reminded of the courtesy, for whilst you are very welcome, those upon your back are not. It becomes second habit, and my white friends tell me that when once again they reach the outside world, their friends find much amusement in the actions of their visitors in the attempt to remove something from their backs which is not there.

On my walks abroad of a day, I much prefer to have an Attendant as Fly Whisker in Ordinary to doing the perpetual motion act myself. Then I feel like an Eastern Potentate out for his airing. I have a perfect jewel of a boy for the job. Not my regular *Tuli*, but another, smaller; he is Death on Flies and keeps my back whacked hard and well, mile after mile. The walk itself is no object with him; his Head Teacher's back is the thing. The rest of the group accompanying me do their own fly swatting.

Specially do I like my Sunday afternoon walks along the lovely 'grass' covered roads which lead out from Hakupu. There is shade all the way. Sometimes there comes a long avenue with the branches meeting far overhead, and here we lie down for a rest by the way to feed on oranges, which the nimble younger folk have climbed for as we pass along.

Though I battle not with flies, yet battle I perpetually with the language, and by the time we have reached the village again I am quite unsteady on my own. But I forget my troubles in the scene before me. Afternoon Church has been held in our absence, and the large, open, Village Green is a Rotten Row;<sup>148</sup> all Hakupu is out. Here are mothers with their little tots, and young maidens in their Sunday shoes, full proud thereof though they step right gingerly. The Church steps hold the old and the infirm. There is evidently a meeting of the Wise Men in the centre of the Green, a square with all the figures squatting tailor fashion,<sup>149</sup> smoking and talking as only Niueans can for astounding rapidity. There is singing going on in the Sunday School, many passing the hours in their own peculiar melodies, despite all the services that they have attended. Games? No! Such things on Niue are utterly taboo. The young men have on their Sunday best, their hats at an angle that even beats a Guardsman.<sup>150</sup>

Everybody is happy. I bid Goodbye to my kindly company, thank cordially my Fly Whisker and retire — despite loud protest — within the lone white man's Falé.

Would you be Lonely thus, as week follows week? Doubtless you would unless you hold the key to the opposite. It is wholly a matter of Temperament. If you are not by nature Self Contained; if you have not the natural gift of being At Home with Oneself, then keep with the crowd. It is the want of the key to the secret, which has created the Wasters, the Drunkards and the Beachcombers, those curses of the South Seas and other cast away Islands.

I will leave it at that.

### That Union Jack

I saw it again — that piece of bunting presented by the 4 and 40 Exiles from Samoa, who were so gloriously vanquished by Hakupuan cricketers — and wildly happy hearts were following it. It spoke of yet another Victory and lead the way into the village from Fatiau, whither that same day at break of dawn 5 and 20 had walked forth with their women folk to pit themselves against that village. Being

<sup>148</sup> [Rotten Row](#) is a broad track running along the south side of Hyde Park in London. During the 18th and 19th centuries, Rotten Row was a fashionable place for upper-class Londoners to be seen.

<sup>149</sup> With crossed legs.

<sup>150</sup> Certain regiments of Guards in the British Army, such as the Buckingham Palace Guardsmen, wear tall fur hats, known as a bearskin, at an angle that almost covers the eyes.

Wednesday, the Church bell had rung but at 5 a.m. in place of 6 a.m. so as to get the Devotions over and an early start made for the walk.

All Hakupu was uneasy till news began to filter in that Victory was ours. Then was there great joy, and an eager looking forward to the Victor's return. They came at last, just ere sunset of a roastingly hot day, a long line in single file, the 5 and 20 each carrying their slogging instrument upon their shoulder, and the 'rooters' behind, with the village children, largely unclad, bringing up the rear.

The Flag, beautiful still in its newness, was attached to a perfect mast of a pole; it seemed so high as to be waving among the lofty tops of the coconut trees. And before it marched the Band!

Ah! but that Band was the joy of every heart, and gave the final touch to the brilliant performance of a great day. There was a Trombone that had long outlived its usefulness, and gave forth detached blasts and grunts of fearsome sounds. There was a Drum, the size of a small soup plate, beaten in splendid time and fashion, but at best far from resonant. There was a Horn made of twisted coconut leaf — a most ingenious contrivance — capable, according to the power of the blower's lungs, of truly awful sounds; a kerosene can wildly struck; and a Penny Whistle, which gave forth but one long piercing shriek which sent every pig, dog and chicken furiously to cover. But it was glorious! The Victors were returning home! They were entitled to a noise.

And more, they were richly entitled to Presents. Said a maiden to me as I stood at my door as the Procession passed and the cricketers courteously raised their hands at the Salute to the White Chief, "Please give me three boxes of matches so that I may give our men a present." How could I refuse? So my matches went as her present and I added for myself three tins of good Roast Beef. I could do no less, and if I run short before the schooner comes, I shall go without for a noble Cause, for with me it is "Hakupu for Ever!"

As a devotee of the game, I have had a formal presentation made to me of a genuine Niue cricket bat. It adorns my walls. It is a murderous looking instrument, but it is the Real Thing and I set much store by it. My Adult Class gets knocked endways with games. The men plead off, but I have no doubt that they play with an uneasy conscience. Here is a sample: a letter handed me by the sister of a player, in English and my name correct! for the unlettered folk could get no better than '*Misi Po-lo-to-nee*' to the last.

"Dear M<sup>r</sup> Bolton,

Please you don't be angry for me. But I'm sorry, because I did not come to school last Friday. I hope to see you again by and by. Last week before, I got a medicine from you to cure my cough and my breast. I thank you very much M<sup>r</sup> Bolton because I was better.

That's all my loving master

I'm *Folihaké*, lazy man." <sup>151</sup>

How can I possibly find fault with such kindly grown-up children?

---

<sup>151</sup> This letter is also reproduced in Tale #46, *Of Inspection and Roll Call*, in Part IV, *Tales of a Roaming Grandfather*.

## Chapter XIII

Gifts – With a Sting — The Free Clinic Again —  
The *Togo* Cave — The Caves of Death

### Gifts – With a Sting

And still they come, those gifts. Upon arriving at the school, a scholar offers me an orange, another a banana, yet other Passion Fruit — a hard looking marble of large size, but much glutinous matter inside with pips most sweet — now an egg is offered, and next a stalk of sugarcane. School over and a siesta sought upon my couch, no ceasing yet, for two girls appear bearing a basket between them on a pole — holding four dozen oranges — and those for one lone man! “*Alofa*,” (love) say they and disappear. Now comes *Vini* — a melon, with a casing tough as leather, but sweet matter inside encasing a multitude of seeds.

Despite all this fruit, there is cooking to be done. Three of us are on the job; none of us are Experts. Some of our results are a cheering surprise, others a hideous failure. But my Chef-in-chief and my house maid are so willing and so cheerful in times of distress in the cook house that I take all that is served with a smile. Their wages would break no one. One pound per month, with food. I should hesitate to pay so small a sum were it not that they have such splendid appetites and make such heavy inroads on my stores. *Tuli*, my boy, had to leave me; it was not just to keep him for my service at a school so far below his standard. We did not want to part, but both saw it was inevitable. I have another Jewel in his place.

Yes! my servants are willing, far too willing oft times, for they pay no heed to clocks. They lay the table always far ahead of time, and upon the spot you will oft find a stone-cold meal, which you had ordered to be hot. When they themselves are ready, they take it you will be also. I know of white homes in Alofi where the mistress has to order her servants back to their sleeping mats of a morn, or they would have the Breakfast ready at peep of dawn.

Gifts offered in such kindly spirit as here are ever welcome, yet have they danger lurking, for some white folk, within. Among the many gifts brought to my door have been Limes. I had been warned at Tonga that limes in the Tropics are one man’s meat, and another man’s poison, and had acted very cautiously ever. Yet was I ignorant of their cumulative effect. That is where they got me, even as some human poisoners get in their deadly work. The storm broke. How I hate limes! They are an abhorrence in my sight. They got me from the soles of my feet to my crown. They made their outward mark, and for full six weeks they worked their bitter, biting acid upon me. I fought the battle alone, in my *falé*, for some three weeks, but at length, at ominous symptoms, was borne off by the Doctor to his own home, where he, his good wife, and the Island Nurse spared no pains to put me on my feet again.

Be this a warning to any contemplating Touring upon Niue. The Limes of Niue may be good for you, but they may play the very devil with you. Take it from me, and leave Niue limes alone. I know; you don’t.

### The Free Clinic Again

I am rapidly qualifying for an M.D. I have to report no one killed for the present. My Dispensary is the verandah, and my patients very numerous. They come singly, in pairs, at times in droves, and at all hours of the day. The night I bar; my *falé* is sternly forbidden ground from sunset on. I have not,

however, the heart to set fixed times in the day time. They may be in pain, why then should they needlessly wait? But at night they must. Visiting I refuse to do; I know not where it might end, did I once begin.

I have now so many pills, lotions, salves and bottles that I am terribly mixed at times, but hand out the *Vai Lakau* (Plant water medicine) and the *Tepu Vai* (Knob water-pills) indiscriminately, with fullest confidence of a kill or cure. Headaches are common things, so is 'a bad stomach' (from eating unripe fruit I ever ween <sup>152</sup>), chills and fever very frequent, cuts and bruises everyday affairs. This coral works havoc with the extremities. So steadily at these am I employed that I might well have the sign on my door "Feet here both heeled and soled while you wait" like any lightning boot mender. Sore eyes are not at all to my liking nor to the owner's when I get busy with my eye dropper. Infants are brought to me with sores and gaping Yaws (ulcers) pitiful to look upon, and yell like blue murder now at the very sight of me, which is a gross injustice. I still swear by Condyl's Fluid. Everybody has to wash their wounds in an old coconut shell for a basin. I can't spare mine. The needle I refuse to use; such cases are the Doctor's.

A young girl came to my door with a gashed neck, showed me a clean cut almost clear through the stout muscle on one side, said that she had fallen backwards on the huge knife they all carry for Bush work. Of a truth her mother, in anger, had given her 'a love tap' and was afraid that the Law might get her for Attempted Murder; hence the poor girl's fib. That was the crowning glory of my amateur hands so far. The real Doctor saw it weeks later and gave me praise. I deserved it. It was some job getting head and shoulder together again. But 'Sticky Tape' did it, together with a bandage which tied her head back, with threats of Death in the offing for anyone who undid it.

The work goes on merrily — at least for me — no enemies to date nor — at least known — deaths.

### *The Togo Cave*

The *Togo Cave* lies some few miles from Hakupu, between that village and Liku, on the East Coast; the last mile of the way, first through the forest along a trail, one mass of roots of banyan, kauri and other big trees, and then a sharp descent to the sea, which even a goat might think awkward. Besides the Cave there is a Chasm close by, with a large Bathing Pool of fresh water, by the side of which, women — toiling down the difficult path loaded with heavy baskets — prepare arrowroot for their homes.

It was the Chief's Picnic, and I was one of the party. We were 5 and 20 strong. There were no carriages ordered, we had to foot it all the way, a good seven miles in a broiling sun, and the Invitations read "From 9 a.m. to 3 p.m." just the hottest hours of the day. The Chief carried nothing; the rest brought hampers of coconut leaf or handkerchiefs, in which were ship's biscuits, taro and bananas. Big knives were much in evidence. One of the party was the owner of a boiled land crab; I saw it divided among many on the way, but I got none. For drink we relied on coconut milk, and ere we got back we had raided many trees, nor thought of asking leave.

We tramped out of Hakupu along the Highway, a merry party, talk interspersed all the way with song. I fear that they were, of a truth, Church Hymns, for I could distinguish sacred names and places, Jerusalem in special, but they were out for a good time and had to let off their high spirits some how. My servants dropped all their duties and came, too. As in due course we reached and took that goat path, it was a pretty scene. The long drawn out line of natives in varied attire and coloring descending zigzag in single file; the background, giant needles of coral; the foreground, the sea. The last sixty

---

<sup>152</sup> Archaic: to think, suppose.

feet impossible, save by ladder, not one to inspire confidence, rungs some close, others far apart, tied to the side beams with sinnet rope looking very old; four feet broad was that ladder and a slip did not look inviting. Twice did our party tackle the thing and all came safely through.

Now we were at the Chasm, a split in the rocks, which towered high on either side, a fairly decent level where a few coconuts thrive, and at the far end a Pool, deep and cool. It did not take long for most of the party to get in. There was little undressing; the men were already practically in bathing costume — a lavalava is not much covering — the women threw off one upper garment and took the rest in with them. They had a glorious time. Lunch was always on. All ate when they felt like it. I could not enthuse over the table manners, but they had had a good walk, and now a prolonged immersion, and were very hungry.

I saw those huge knives taken into the Pool, and soon there was much diving. Solid chunks of a redwood tree, and of solid weight, were brought to land, and seemed much thought of. Some were then cut into smaller pieces, and all were borne home, for they are a Fetish. It is good luck, it seems, to pay a visit to *Togo* and secure a portion of this submerged tree. Of course, I wanted to know why, and with some great effort of interpretation on my part — for there were many eager tellers — I finally secured it.

Two trees, a fragrant one and an ironwood, grew at far off Hikutavake. They decided to have a race round the Island. Off they started and the going was so fast that when Hakupu — full twenty miles away — was reached, the Fragrant One was quite played out. It gave up the contest, but did not die, for that same Frangi-pani tree grows today alongside my side door! The other pushed on, but alas! in the dark fell head long into *Togo* Chasm and was drowned in the big Pool.

From thence we climbed into the Cave. We had to get in from the back, for the sea was thundering in from the front. It was not easy work; the boulders were huge, sharp-sided and smooth atop. Once in, we found a lovely dome-shaped vault, but no floor, for the sea covered it and came ever swirling in right furiously, though there was but gentlest breeze outside. Across the mouth there rose a huge bridge of rock; occasionally the waves were not content with entering under the arch thus formed, but would rise clear over the bridge itself, and yet some of our party — and those not the youngest — took their chance upon it, as they sought certain shellfish there.

Having now seen all, we turned homeward, scaled the ladder, crawled up the coral path between the towering needles, gained the height, rested and drank still more coconut, pushed on through the forest, gained the Highway and tramped on till the Chief suddenly called a halt in a shady spot. Here we sat on either side of that Highway, when that same Chief sprang a surprise upon one of his Party, at least. He announced that he desired to Pray, and with eyes tight closed, a long, long prayer without a break for a single word. I heard “Beretania” and “white folk” mentioned — evidently me — and thanks for our safety given, and when at last it ended, everyone to my further surprise gave a loud “Amen” and made a raid on a coconut basket of bananas.

Then on we trudged, half baked, to Home, reached sharp at 3 p.m. where a cup of tea, soon brewed, tasted exceeding good, and rest seemed fairly won, but not for all, for I saw several of the oldest go off forthwith to the Bush to work, whilst younger ones joined riotously in games on the Village Green.

There are other Caves hard by Hakupu. One is closely linked with further Folklore, which relates a fierce quarrel between a Frangipani and a Mango tree. They grew up, far from Hakupu, side by side, but somehow could never agree. So, in the dead of night, the Mango moved off to quieter quarters. But this, the Frangipani, like a scolding wife, could not possibly allow. Her vocation and her joy were gone. So she followed and grew again beside the peace-loving Mango. Again he departed, and yet

again the Scolder sought him out and found him. Then the Mango thought long and deeply, at length deciding that the only safe place for him was a Cave. He knew of one, where in the centre was a pool, promising water enough, and only room for one. Therefore he departed and hid himself therein, and though the Frangipani sought him out — and found him — yet was there no chance of its abiding nigh. Outside upon the cliff she planted herself and died — from lack of quarrel, which alas! was also the fate of the Mango who though he greatly loved water, yet needed at least some measure of soil to thrive upon, of which in that cavern Pool there was none.

Another has gained its notoriety by a Man-hunt. There was a Scandal in the village, and men were hotfoot after the interloper. The injured husband was ripe for Vengeance. The pursuers tracked the delinquent to this Cave, searching every nook and cranny. A deep hole in the centre, where the water lay, was the only spot where the Hunted could possibly be, and as it was nigh full, it was settled that the man was drowned. Therefore was the party sent to his falé for all his possessions, shirts, trousers, coats and hats, and one by one they were cast in to accompany him to the Land of Shadows. But as the hats went in, they came out again, the coats the same, the shirts and trousers, too. It was a Blow hole. “He does not want them, that is sure,” said they. “Let us divide the spoil.” But the Injured One demanded all, and his claim was recognized as just. Therefore got he all, and the crowd returned to the village of Hakupu happy in the thought of one wicked Niuean the less.

But the women gave them a shock, for they told of seeing the Drowned — or his ghost — sitting within his falé. He knew that Cave better than they, and even as they had entered, had stepped out by other exit. They hastened to verify. It was true. But had he not paid for his indiscretion? Did not the Injured One own his shirts, his coats, his hats, his pants? Was he not utterly despoiled, that Wicked One? Therefore did anger depart from the Injured; he called it Quits, his honor fully satisfied, and the village dwelt once again in peace.

### The Caves of Death

*Kulusea*, my Chief, would not be denied. We were to take trail to the seafront at *Kopola*, and on the way have a look at dead men’s bones. We went, but not alone; there accompanied some husky maids and lads, who, true to the tradition of their fathers, eat all along the way. It mattered not whether such food was ripe or unripe; it was a thing to eat, and eat they did, guavas and melon, sugarcane and even the despised Mummy Apple (*Lokus*), all washed down with copious draughts of coconut milk. Little wonder that I am oft called on to dispense ‘Good for Colic’, but despite their pains, both old and young keep on doing the unwise thing.

And so we journeyed on, past many a plantation where men and women were busily at work, the land hereabouts wonderfully open for Niue, till cutting across country at great and most regrettable expense to clean white garments, such as mine, we came to the grim spots. They are certainly well adapted to their old-time purpose: great round pits of coral into which you look from well above, roomy enough, with level floor, not inviting for descent, though the offer was made, for dead men’s bones formed scattered piles about. The question was naturally asked, How could the Dead without enormous labour have been carried from the village to their last Resting Place through a countryside such as we the last hour had passed through? The Chief made answer gravely, “They were not carried; they walked hither themselves.” When the time of their dissolution drew nigh, the old and decrepit made their last journey to their own burial, accompanied by the stalwart and the strong. Arriving, they were given food and water, and left in these pits to die. It was the Custom, and thought nothing of. Had not these in their day done the same to their parents and their friends? Besides, it saved a lot of trouble; there was no tending of the dying as they lingered on, and there was no digging of the grave at the close. The old folk passed away with piles of bones their only company. I was offered a memento, but refused the gift.

Then we passed on to the edge of the upper cliff above *Kopala* reef, where a splendid view is obtainable of the wild coastline from *Halafualagi* to *Limafulafua*. Down we went by well nigh a precipice to see the rough camping ground of the arrowroot makers, and their fresh water supply at the bottom of a narrow fissure into which a boulder thrown seemed very long a-reaching; thence to many leaf huts, which stand at the very edge of the lower cliff, beneath which the breakers roar over the fringing reef eternally, brilliant Blue fish and Golden fellows of large size, disporting themselves therein. It was time now to make for home and this we did by another way, a clear trail even for a novice which led eventually to the village. I had had enough, but again the husky ones were fresh and frisky still, and their appetites being still unappeased, ships' biscuits from my storeroom came in handy.

## Chapter XIV

The Secret Ballot — Of Burials — Progress — The  
Welcome to the New Year — *Motu-tu-taha*

### The Secret Ballot

It was the first time that Hakupu had tried its hand at other than an open Election. The village was agog with excitement. Just what was going to happen, none seemed to know; only this, that the Government was going to come, Policemen, too, and a mysterious Box, and *Galiki*, *Tinohaga* and *Tione* were to have a tussle as to who was to be Hakupu's Representative upon the Island Council. Eleven men, true and capable, sit in solemn Parliament at the Capital, Alofi, from time to time, to consult with the Resident on the welfare of Niue, one from each village. As women have the suffrage, the gentler sex have a right to sit, but so far none have aspired to the task. It was the voting of the latter which drew me to the booth, the spacious native-built Sunday School, for I felt sure there would be something worth seeing as the Ladies of Hakupu made their first attempt. I was not disappointed.

Everything, save the Voters themselves, was very businesslike. One door was Entrance, another door was Exit, with a burly policeman set over each. One was armed with a stick, and the way he laid it on each lady as she departed was most rude, but all took it as a part of the wonderful Secret Ballot. At a big table sat the Officials striking off names as the voters entered, ushered from the door with a loud announcement of the name. Given their voting paper, they far from gracefully retired to where should have been those hidden spots where one marks his cross, but in place thereof, two men had their seats at separate tables, where they assisted those who could neither read nor write to signify their will. These men were not of the village of Hakupu.

The main difficulty seemed to be how to get that folded paper into that Box. It may have been nervousness or short sightedness or pure cursedness, but the little slot seemed impossible to negotiate. In sheer despair, they would offer the paper back to those solemn officials, or start off for the Exit carrying away with them the all important missive. Then those police got busy and brought the Muddled One smartly up to tune.

Next in interest to this difficulty was the apparel of the Ladies. They had on their 'glad rags' <sup>153</sup> and the assortment was both varied and wonderful. Many Bath Towels were in evidence as Shawls, and indeed they helped greatly to cover much. There were Whole dresses and Shreds of dresses; there were Mother Hubbards, stiff with starch; apparel, too, that made me wonder how it held together.

---

<sup>153</sup> Slang: fine or dressy clothes.

Most were hatless, but oft a woman would march up to the table with a straw sailor's hat perched rakishly on the summit of a great mass of unruly hair. A few did their hair up before the official's table. It did not need a looking glass for its arrangement, a great coil on the summit with a piece of kindling for a hairpin.

And everyone was happy — the crowd outside peeping through the wooden window slats; the children very keen to see; the Voter within giggling through sheer excitement, moving about the big room as if under fire and seeking shelter. Nine out of ten sought to go out the way they came in, the police asserting their authority with stick without stint. One only refused to obey and he our Pastor! Fie <sup>154</sup> upon him! After the Ladies' turn, in rolled the big ex-Sailor man, rolled up to the table, rolled to the writing spot, rolled back to the Mystery Box, and rolled his huge Self out the way he entered, proclaiming aloud as he went that it was the shortest way Home, and none gain said him. The Pastor is no 'small beans' in his village.

At last the Voting ceased, the scrutineers got busy and when all was counted *Galiki* came out on top; once again he was Hakupu's Spokesman on the Council.

### Of Burials

A firm believer in Cremation, or as seemed best Burial Earth to Earth, it was good to hear of one of my villagers, an aged woman who lately passed away, possessed likewise of a desire to escape a coffin. She had carefully woven a basket large enough to hold her body, and her instructions were that the rock hewn tomb was to be avoided so far as humanly possible. The usual method is to crowbar by the side of a mass of coral, then when fairly well down, to cut a narrow space like a shelf into the mass, level it off and laying fine sand upon the flat, lay the body thereon wrapped in its grave clothes. The open front of the shelf is then covered with wood or tin, and the trench filled up. The actual grave is, therefore, not the spot disturbed, but under the rock to one side. If then it is sepulchre <sup>155</sup> one seeks, it is easy to secure it on Niue. You can be sure of very slow disintegration, with also no possibility of Curio hunters walking shamelessly off to some Home Museum with your skull or bones. In Niue's Caves you are at their mercy.

To hold high feast around the dead is not confined to Ireland. Niueans hold their 'wakes' and are very loath to give them up. Then is the time for gifts of food to the close relatives, and around the body many gather, and eat unto repletion, then sleep till morn — unless the case demands more rapid action — when the Dead is carried forth to the coral grave. Happily, Drink plays no part thereat, and the wailing is ever genuine.

### Progress

Hakupu moves ahead. We are a live village. All are workers. No longer have we a sugarcane thatch for a school roof. We boast today of a red painted galvanized iron roof, put on by the natives with astonishing expedition. Secretly I was against the change, despite the many leaks and pools below, for I had learned from my own *falé* what would happen in a Tropic downpour. Of course, it happened, and constantly I and my Assistants were forced to change the lessons, for it was beyond the power of any human voice to beat the clatter of the rain.

With but one concrete Tank for the whole village, and that one far off on the Village Green — fed from the Church — we were not content either as a village or a school. Therefore, right in the school grounds — to be fed from the new roof, and the coming Bungalow for the future Head Teacher with

<sup>154</sup> Archaic; used to express distaste or disapproval.

<sup>155</sup> A burial vault, tomb, or grave.

a family, the Hakupuans with infinite labour worked for weeks, blasting out from solid coral, a reservoir to hold 8,000 gallons, 7 feet deep by 12 feet square, with concrete sides, and level top of same, the sand brought in sacks from full two miles away upon the backs and shoulders of men — and women, too — a heavy task beneath a sweltering sun and over coral trails barefooted. Especially did I feel pity for those women; they looked so piteously tired and bedraggled of attire at each journey's end. And for the weeks before the mixing of the concrete, these Hakupuans refused to use the water of their only Tank so that there might be enough for that mixing, preferring to drink coconut milk alone, and carry the needful cooking and washing water from caves and fissures far scattered. Not even the wails of babes and the appeals of frantic mothers availed to cause the rest to unlock the pump of that Treasure House, where the precious liquid was stored. Our School Pump today is very fine. The Key is in my pocket. Apart from school hours, I am the Public Dispenser. I feel greatly my importance.

A new road has been cut through the Bush from the Village Green, giving a quicker route to school for most, rocks blasted, trees felled, scores of banana trees meeting their end to make way for the new Approach. It is so extremely picturesque a way that I often and quite needlessly take stroll thereon.

And ere long now, the Teacher's house will be going up within the school estate, in a portion laid off already by low coral wall all round, broad atop and solid. Here the boys of the school got busy, and with me as Foreman of Public Works, we laid out that space to be conserved, and felled the coconut trees that occupied the space, cutting up and burning busily, accompanied by immense consumption of the milk from their nuts. Girls came to our aid in raising that wall; we gathered the rock from everywhere, staggering along with heavy load, all in arms, till Alofi came gallantly to our aid and loaned us wheelbarrows.

We are planting in the garden, where soil permits, the daintiest of the shrubs of Niue, the fruit trees, too, other trees also so far as space allows, but Flowers, No! We want no importations. Niue's indigenous growths are more than enough and satisfying. Of Shrubs there is the glorious Hibiscus, the Single and the Double, both flaming crimson, and the yellow beauty with rich claret stain in the depth of its Golden Chalice. There is the Cape Gooseberry, and the Paper Mulberry, the *Kapili* and the *Kamapiu* both of these used for garlands, the sweet smelling *Momoli* and many a berried bush. Of the graceful Palms, there is the *Fau* and the Cabbage, the Umbrella, the Date and the Traveller's.

Of fruits, there are the Guava and the Pear, the Paw paw and the Fig, the Orange and the Lemon — even that accursed Lime, its half brother — the *Talapa* and Mango. Of trees, the place will hold the fragrant Frangipani, the Almond, the Coral, Chestnut, Ebony, Kapoc, the Mahogany and Pine. The Banyan I have barred out, lest in time it monopolize the whole limited space — he wants a forest to expand in; ours is but a Garden.

We are all 'on edge' for that concrete Bungalow to rise — though to me it spells Departure, for my work will have been finished, my promise kept, that of Pioneer in the Rough — that comfortable Home with its twelve foot verandah all around, netted in against mosquitos; its airy rooms; its hallway; well furnished kitchen, with room for stores a-plenty; its fore ground, the playground; its back ground, waving coconut trees, bananas thick below them; clear shut off from the Village, the only ways thereto, two Avenues graced on either side by most entrancing foliage.

No more will the Teacher hear babes yelling with colic half the night; no more will pigs roam all too closely, and chickens walk in upon him to have a look around. No more the singing, save at such healthy distance as it may make it seemingly melodious; no more rats that love old dwellings and spiders dropping from the rafters with a thud upon him. He and his will be indeed 'in clover', yet

does not such appeal to me. Niue, Hakupu, as it is, is good enough. That changed, I roam to other of these sun-kissed isles — to Learn.

### The Welcome to the New Year

My first New Year's Day on Niue was spent, by urgent request, among the handful of white folk at Alofi; my second, in my village, and right glad I was to be there to be enlightened of the doings. In a measure, it was unfortunate that the Passing of the Old Year should fall on a Saturday at midnight, for the full welcome to the new one had but short shrift at the hands of our Pastor. Everything had to be done ere the sonorous bell rang forth from its turret on the Green, for then Sunday would have come, and the Sabbath forbade all hilarity. Yet I may as well confess and get it off my soul that there were not a few, and I among them, who were far enough away from that burly Pastor to have a little merriment in forbidden hours.

But leading up to midnight, there was enough going all day long to satisfy anyone. There was a feeling of suppressed excitement from early morn; there was a ceaseless coming and going between the homes, whilst the children could not withhold from letting off a fire-cracker before the appointed hour, beating on the kerosene cans or making the day hideous with tin whistles. To ease the situation, I was glad to call them into the school grounds and arrange to let off some of their enthusiasm in games.

The Xmas Feast lasts but one day; the New Year's Feast is an octave. It is their 'Holy Week', not of the remembrance of a great Tragedy, but of dedicating themselves to the toil of another round of Time. High Service everyday at 8 a.m., with a sort of Championship Singing Contest connected therewith. Then Eating and Rest and more practice of Song, till the night comes, this for eight days, a holiday indeed. This contest stressed the three divisions of Hakupu: the North, the Central and the South. The keen rivalry between them evidently reaches even into the House of God. Three Hymns are set as the Test; each Division sings one daily out of the three at Public Worship. It appears to be Public opinion which awards the crown. So far as I heard them, I would have given the championship to the Central folk; they had more vim, were specially strong in basses, and their contraltos were not be despised.

For this Week's Eating, there, of course, has to be much previous digging and bearing home the produce, and all day Saturday, men, women and children passed my door well loaded down. They actually impressed carts drawn by hand to bear the produce. It was largely gifts for others. A tithe from every house for the Pastor, till a monster pile lay before his door that day, and much for the neighbours. Yet I fear that Pride plays a large part in the latter — spoiling the gift and leads to a fearful waste. Saturday was one long competition to see who could give most. When the Octave is over, then comes the Aftermath. "I beat you in my gift to you of taro." "Yes, but I beat you hollow in my gift of sugarcane." "I gave you more chickens than you gave me." "Ah! but who gave you the pig? Tell me that! Isn't a pig worth twenty chickens even at one and sixpence apiece? Keep silent you, I'm the Champion giver of us two." Thus are New Year's presents given on Niue.

I could not enter into such a competition. I should have had to empty my storeroom with no ship in sight for a good three months. But, happily, I had one thing in bulk, small to look at, but of delightful expansive power. I gave the village at one fell swoop enough Tea to drown the lot. Of course, I had to have a present in return, and about midday, along marched a troop of men bearing taro and live chickens. Withdrawing a little space after depositing the gifts upon my doorstep, the first spokesman declared that they regretted bringing so little, but that they knew that personally I did not eat Taro, and that more than three chickens would be but an encumbrance. The second spokesman spoke of how greatly they all appreciated my dwelling among them and made other kindly remarks. In reply,

I assured them that with white folk, it was not the quantity that counted, but the spirit of Friendship which prompted any at all, that I was grateful not to be swamped and my life among them was a daily joy. Retiring gracefully, my servants pounced upon the Taro, which I gladly saw the last of, and whilst their backs were turned I spirited away the livestock, making it a gift to a family, the proud possessors of a chicken yard, who could keep the trio for the lean days to come. There is such a thing as too much chicken and I had lately had a surfeit.<sup>156</sup>

The hours wore on till the evening meal hour; at 4 p.m. the village was quiet for quite a while, as one and all fell to, and commenced the prolonged feast. Then, with nightfall, began the Welcoming proper. It may be an isolated isle whereon we dwell, but the natives can ‘whoop her up’ as well and as uproariously as any white land. They did indeed ‘whoop her up’ and I lay snug within my falé till that bewitching moment when Big Ben rang out, and a New Year came in.

Then, in the pitchy dark, I rallied forth to where I knew High Jinks<sup>157</sup> would be, despite Sir Oracle,<sup>158</sup> our Pastor. I found; I saw them; I was offered steadily of the kava bowl, but I declined, even as my pen declines to place on record those same Jinks. ’Tis enough to say that there was a merry party, and that Hakupu was not lacking in the warmth of welcome to the New Year, despite the fact that it fell upon a Sunday.

### Motu-tu-taha

Motu-tu-taha is an ancient name for what is now called Niue, and is most appropriate the ‘Land which stands alone’, and being alone for unknown period, its people have evolved special customs, habits and peculiarities. Some I have already noted.

The habits of Early Morn I have nowhere else met with in such clearness. They are extremely early risers; there is no such thing known seemingly as lying abed of a morning. After 4.30 a.m. you cannot count on quiet. They commence talking, as well outside as inside their falés, strictly, it would seem, at that hour, and keep it up till they retire at night. The sick will be outside your door by 5 a.m.; your servants will clatter plates and spoons a half hour later; at 6 a.m. you may have a visitor just arrived from Alofi, then comes Morning Song in the Church, which resounds throughout the village. You must get in your sleep early or you will have to go without.

If only they made a decent breakfast, and had to cook it, the village could not so instantaneously rise up, but dressing does not take a moment, with only a lavalava to adjust and water far too scarce an article to be wasted on a wash, and Breakfast causes no worry to the cook. A cold taro, half a cold chicken if handy and not gone bad, a banana and a drink of coconut milk, all taken ‘any old how’ — and the thing is done. That meal carries Adults till evening. Today tinned meats are often opened for that meal, and they are somewhat epicures as to the kind they like. They have a great objection to sausage for they fear a trap of the white butcher, and especially for mutton which they affirm is naught else but canned cat! Beef, Beef is the thing, and they buy it not by the tin, but by the barrel, fully salted.

How babies exist, after weaning, upon such hardy fare is explained through the help rendered by the elder children. All food for little brother or sister is first masticated by those but a few years older, then given to the babe. Toothbrushes may be unknown, but sugarcane is the best of dentifrices and they are ever munching it. So far, so good, but danger lurks still for the infant in arms, for nothing gives greater joy to the old grannies — who have no teeth usually, but in their gums grip a well

<sup>156</sup> An excessive amount.

<sup>157</sup> Playful, often noisy and rowdy activity, usually involving mischievous pranks.

<sup>158</sup> Dogmatist.

seasoned clay pipe — than to carry off a babe for the day, and thus in addition give the mother a rest. Always is the warning given, “Don’t feed it,” but all too oft the old lady slyly prepares a meal for the infant in her ‘blackjack’ soaked mouth, and then there is a baby very ill, the mother guessing, but the old dame swearing that it was not so. Many die, thus poisoned.

As to privacy, it does not seem to appeal at all. Every home is largely a Crystal Palace, albeit it lacks glass. Doors and windows, front, back and both sides. My own is similar. I have secured two discarded green blinds — kindly donations of my white friends — which I roll on two discarded broom handles, and suspend from a couple of nails in my sleeping quarters. These help, but I am getting hardened to Publicity, and care no longer who peers into or through my quarters. It does not do to be nervous on such matters here.

Desiring to be honest anent this isle, I will not hide yet other disadvantages. They are but slight compared to other Foreign Parts I have essayed, and some are common to all Tropic lands. Your clothes of a morning seem one and all to have just come out of a wringing machine; you have a fine tussle to get your nice, clean socks on; there is — at least in Hakupu — a constant menace of a shortage of water which forces you to consider carefully your ablutions; there are Borers who have a gimlet <sup>159</sup> head, which works havoc with your furniture and boxes — luckily it draws the line at human flesh — cockroaches abound and stop not even at your bed; ants of minutest size are in their millions and hold not back even from the hair of your head; while insects (hitherto unknown to me) drop from above as you sit within, and call for immediate and drastic attention.

Living alone, there is, for me, one special disadvantage. I recall a sign above a restaurant somewhere in the great world outside. It bore the legend ‘Quick Eats’. Such were for Busy people. Here there are other reasons, the chief being the absolute necessity of consuming one’s food in the shortest time possible. Take my case. Ere I can hope to get through a tin of condensed milk or butter, and many another perishable article, it goes bad. It is always a race and invariably I lose. No man, save a glutton, could possibly consume the whole of even a Hakupuan fowl, but the question is whether next morning what is left over will not be poison.

Nor can one kill aught and hang for mellowness. Thus it comes that the rapidity of action upon, for instance, your poor fowl is remarkable. It is brought to your door, say, at 9 a.m. and, tied by one leg to a banana stump, disports itself till 2 p.m., then slain, prepared, and by 5 p.m. upon your table when — for safety’s sake — the last stage is reached. Personally, I would much prefer not seeing my dinner hopping happily and busily about before my door a few hours before I consume it. It seems so callous. One day, however, a rooster, thus doomed, escaped. The hue and cry was raised. Everybody in the vicinity went after that bird. It got behind bushes; it flew into trees; it fled down the Highway, but all was of no avail. A fat woman, dear kindly soul, at last fell prone upon it, and there and then it nigh gave up the ghost. Anyway, it had had enough and that same early evening was served upon my table.

## Chapter XV

### One of a Jury — Hue and Cry

#### One of a Jury

Niue has so small a party of white men dwelling on it that everyone of them must stand ready to give what help he can to the Resident Commissioner. Justice requires — save seemingly for murder — an equal number of natives and of whites to form a Jury when the High Court meets. Therefore when called upon, to Alofi I went to help adjudicate upon the guilt or innocence of my fellows. To refer to so ordinary a matter would be uninteresting, save that Niue's dispensation of Justice has some strange concomitants, not met with ordinarily. There is not a lawyer on the island; the proceedings, therefore — may lawyers pardon me — run wholly along common sense lines. There are no quibbles, no fine points of the Law of Evidence raised and argued over. Everyone is allowed to tell all they know about a thing; the main issue is always to the front.

There is no curious, gaping crowd in the Court Room. Those who have actual business there are present, squatting on the floor, save the officials, who have chairs; all others go about their ordinary business. The Court Room is the Post Office of Alofi; the dock is the centre of the floor. There the Accused must stand, even by the hour if need be, nor ever seems to weary, and alongside the accused ranges close, but with seat on floor, each witness for or against called in turn. Those witnesses, in waiting to be called, are also to be seen sitting on the sward outside, each accused being also free to roam till his or her case is called.

The Prosecuting Attorney is the native Chief of Police, and yet it seemed to me, as if the Registrar — a white man — held half of that same post. As to the Judge, who is the Resident, one can only say that seeing, in his particular case, he had had to train himself to the post after arrival on Niue, he filled that post with admirable ability. There is an absence of stenographers, yet all the evidence is written down. I was sorry for both Judge and Registrar, for their wrists must have ached badly after a session that ran from 9 a.m. to 8 p.m. Interpretation just doubles the time.

Happily, the Jury had no disagreement. They retired to the Private Office of the Postmaster, and each Jury man had to carry in his own chair. I feared that my lack of knowledge of the language would prove a handicap in that room, but it was not so. As all evidence was given in both tongues, so was discussion in the Jury room, my two white 'assessors' — fluent speakers in the Niuean tongue — gave me the converse of the rest and kept me 'in the know'.

There were three cases sent up from the Lower Court, which simply means the Police Magistrate — who is one and the same person as the Judge of the High Court — who had considered them worthy of a Trial by Jury. There appeared 'a woman' in each case. One had been assaulted; one had beguiled her lover into Trespass; another was said to have been looked upon whilst asleep by the accused who had stolen in through a French window<sup>160</sup> and unwisely bragged about it on the outside to his fellows. In no case was any real damage done, but there is need of constant firmness to keep the young Hotbloods in their proper place.

The first fellow was clearly not 'all there' in his upper storey. It hardly needed the Doctor's evidence to tell us that. The second fellow one could not help feeling sorry for. Has not the heart always gone out to the gallant Lover, who leaps the garden wall and defies all creation in the doing? The third

---

<sup>160</sup> A door with one or more panes of glass such that it is also a window.

fellow, whether guilty or guiltless, got off on a remand, for the prosecution failed to weave a really convincing web around him. Gossip is well enough over the tea table, but does not count much when Liberty is at stake. If he was indeed the Gay Lothario,<sup>161</sup> he had a shock that should last him for a long time. When he was told to go, he went, nor stood upon the order of his going.

And we went, too, though ere Hakupu was reached that night there was an anxious time, with a wheezy, gibbing<sup>162</sup> Ford, a bumpy road and a chance to have to foot many a mile in a Tropic downpour.

### Hue and Cry

Pride cometh before a fall. I used to think in my young days upon the then trackless Canadian Prairies,<sup>163</sup> and exploratory expeditions elsewhere, that I was a Pathfinder. Now I know that I am as ignorant of the unknown and untried as a babe. I have had my lesson; it might easily have ended in tragedy. To get off the beaten track in the Niue Bush I knew to be fraught with danger; such counsel I had had from many, and as I have tramped along the Highway, again and again, I have noted trails leading therefrom into that impenetrable bush, with its hidden crevices of coral, and thought with a shudder of getting off them by mischance. But it was to be.

It happened thus. From the school grounds there runs a perfectly clear cut trail, a mile or more long, direct to the sea. From that trail others branch off East and West, and I was given to understand that they also lead to the sea. Why not, having often walked the main trail, strike off and follow a fresh route to that lovely wild vista at the lower cliff-edge. It was easy, surely, to turn back if the way became uncertain.

I had been honored by a visitor, one of the gentler sex, a new comer to the isle and would fain seize the occasion to show off the beauties of my dwelling place. Early in the afternoon of a gloriously hot day, giving my servants warning whither I went, with orders for Supper to be set at 5 p.m., we set out. With a woman's foresight, we took a Thermos of tea, some biscuits and a brand new box of matches. At the first clear fork we left the main trail and turned slightly to the East — though of a truth I had no compass — but was not I a Pathfinder who could not err?

All went well for a full half mile; that Way was lovely, the plantations full of fruit. At one lemon grove, we gathered of its bearing — that lemon was to come in very handy ere the day was done. On we tramped, still swerving to the East, then came to a Bush Shack, a thing of poles and coconut leaves, where workers sleep over night to be on the spot for work at break of day. The trail lead on to some fallen trees, along which we walked, dropping off therefrom into a most alluring avenue, which looked well trodden. The way ahead was clear and we passed on till we came to a split in the land. Just across that hollow appeared the continuance of our avenue. Coral shows but little sign of wear by naked feet and this broad fissure was edged therewith. Doubtless, however, natives went round, but we would dip down and up. It looked so easy. Right there I was in grossest error. We were down, but to get up that farther side was quite another matter. To escape more fissures in the bottom, we had to twist and turn till when we reached that farther side and up, our clearance was to be no more seen, and looking back we knew not in the slightest whence we had come. The way back was just as impossible as the way ahead. To try to retrace our steps down and up that split in the coral was as

---

<sup>161</sup> A man who seduces women. The character *Lothario* is from *The Fair Penitent*, Nicholas Rowe's stage adaptation in 1702 of *The Fatal Dowry* by Philip Massinger and Nathan Field, first published in 1632; also a character in *Don Quixote* by Cervantes, published in two volumes in 1605 and 1615.

<sup>162</sup> Possibly derived from the word *giblets* and meaning, in this context, *about to explode*.

<sup>163</sup> WWB was a missionary at Moosomin, Northwest Territories (now southeastern Saskatchewan), Canada, from 1884 to 1886.

likely as not to lead us still deeper into the Bush inland, to grope our way amid pits or coral, and scrub impossible to see through. Ahead lay the Sea, for we could hear the waves thundering on the reef in the silence that reigned around, though we were a mile away by now. There — if we could gain it — we should at last be in the clear. Either way meant a great effort, but of one thing I was sure, that if I did not return by nightfall, the village would make search, and first direct its steps to the seafront whither my servants knew I had set out.

Therefore, to the sea directly ahead we set our faces and began the fight. That mile was made, but it took nigh four hours to reach its end. It was also a fight against Time, for once the sudden darkness fell not a move could be taken because of the deep fissures, chasms and pitfalls everywhere, most covered with enticingly stout trellis of vine, inviting for strength, but traps of death. We were also well aware that before we could reach that sea, there was a sheer drop of 100 feet to be made somewhere ahead, a cliff of broken, jagged coral, and beyond a level broken by an infinity of needly-pointed rocks, and of deep fissures, as is common to the Southern coast of Niue, and then a further drop of 90 to the reef. To reach some height of rock so as to see ahead, we tried in vain; we were down among coral, which broke every way, and amid trailing vines an inch thick, which barred the way and wound around one, requiring to be hand broken, as yard by yard we forced the way ahead. To the West lay that known Trail, but try as we might, the broken ground forced us ever further East, but South we steadily kept, where alone Escape lay. At times we could walk the coral needles, at others we could only crawl along the jagged edges, a yawning chasm ready, a drop that seemingly had not bottom.

Now did we see the great Rock Crab in plenty, safe from the hunting native, brilliant in his lovely lobster shell of blue, and wished that we had his ability to climb. We progressed steadily, if slowly, hands, knees and legs now bleeding, with bruises many, till forcing up and on the summit of a lofty block of solid coral, we saw the Sea ahead, but realised at the same moment that we were upon the very edge of the Cliff to the level below, the first of two drops to the sea. Beneath us we could see where the next fight was to be made, far as the eye could see a maze of coral and shrub.

We celebrated our arrival at the first cliff by a sip of tea, despite the necessity of haste. The drop did not look inviting. From crack to crack we lowered ourselves, grasping roots and trailers. Happily they held the strain, save one which nigh caused an end to this same Roamer, but let that pass. We arrived and at once pushed again ahead. Scarce one fissure ran our way. When it did, we climbed down into the bottom — and some were deep indeed — and kept to it till forced out. Then from pinnacle to pinnacle we stepped, balancing as best we could, our sunshades now in ribbons and our clothing nearly so. Yard by yard we won our way, till at length we leaped down from the maze we had been struggling through and stood clear — with the waves smashing at high tide on the reef 90 feet below. Our four hours fight was over.

But by no means were we yet really ‘out of the woods’. Could we, before darkness fell, make now West till we struck the old Trail? We judged the distance to be a couple of miles to the West, so far had we been forced East. That high tide cut off all hope of using the reef below, which would have made the thing fairly easy. Another sip from the Thermos and we started off, clinging as we could to the cliff-edge, but constantly forced back into that coral and matter scrub growth. Now the light was giving; we could no longer clearly see, yet felt on our way, testing every step, oft landing into holes where that growth gave way. Then utter darkness fell and there was nothing for it but to remain just where we were, till help or daylight came. In such a district we might be found at night or we might not. Anyway, did we not have two biscuits left, a sip of tea, one lemon and a box of matches?

We laughed at our dilemma, and sat us down, our backs to a great coral slab, our feet dangling in a fissure whose depth we knew not. Should the moment arrive, we would light a flare with the fragment

of paper those biscuits were wrapped in and so direct any rescuers to our enforced retreat. Alas! that new box of matches was a fraud. Its ability to strike a light was gone. Every article of clothing left us was wringing wet with our efforts beneath such a sun as had been that afternoon. With infinite patience and coaxing, we saw the hour by one, a half hour after 7 p.m., but when most needed, when in the inky darkness we saw a mighty flare high up on the Cliff to the West, those that remained, one and all ignominiously <sup>164</sup> failed. We could make no answer; we could give no aid. The villagers must find us in that maze. Therefore divided we our last resources, one biscuit each, a half sip of tea and half the lemon. Our thirst was great. Then waited we for what might happen.

It was as I surmized. When supper time came, and I not back, the servants waited. When 6 o'clock came, they hastened to the Chief. Like the good fellow that he is, he hastened forthwith down that Trail and shouted loud and long. None answering, back he hurried and made for the village tocsin. <sup>165</sup> That bell, sounding suddenly in the village eve, brought out everyone upon the run. What was the matter? Our White Chief lost in the Bush and night come on. Then things happened. The Hue and Cry was raised, and the village turned out to a man. Aye and women, too, and young folk, and with flares and lanterns hastened by every trail to the sea, both East and West of that main trail they knew we had started out on. Word was given that if by midnight we were not found, a runner was to be ready to hasten to Alofi to bring the Police to aid in search. They meant business, did those Hakupuans, and knew the dangers we had unwittingly faced.

The party which went seawards directly upon the main trail reached the edge of the upper cliff at the very time I calculated. We saw the flares, but had no light to answer with. They shouted, but no human voice could carry such a distance. I knew that they would make down to the lower cliff and we should see the flares again. We did. High up on the pinnacles of that coral and scrub flat there appeared half a dozen flares, then but one, for the others were leading the search in rifts and chasms. Steadily the lights came toward us. It was the party's duty to search Eastward. Others had gone to the Westward, whilst looking behind us as we faced the oncomers, we saw still other flares in the far distance. It was a pretty sight in the darkness, those lights moving hither and thither, now high, now low, now gone altogether as their bearers followed the contour of the land. Then borne in upon us came a shout, faint at first, but growing steadily stronger. When I judged that a Coo-ee would carry, it went. Then like a pack of hounds they gave tongue, <sup>166</sup> and we could see the flares flashing back the news to those behind. All now we had to do was to direct them to our perch, by the voice at first, then we stood up and the remnants of our white clothing stood out in clear relief against the dark background, whilst they were still some distance off. Slowly they worked forward, slashing with their huge knives and testing every step, till at last two semi-naked men — big fellows each — stood before us and with gladsome faces grasped our hands.

Now came the last, but not the easiest nor the safest portion of our tramp that day. We were taken in hand — and literally at that. We had hard work preventing those huge, strong fellows, with their kindly hearts, from carrying us bodily, and were led step by step along the cliff-edge. Perilously near the edge we were all forced at times, but nothing would make those guides go into that maze in which we had walked and fought for hours. Now women awaited, women who had been praying hard upon coral rock, and who seemed overcome with joy. At last we hit the old Trail, and rescuers and rescued started homewards. Parched with thirst after those long hours of struggle, there awaited us, a little way ahead, coconuts fresh gathered from trees in the dark! And coconuts hang high. Did ever drink taste sweeter to us than that long draught? Refreshed, we made the 100 feet ascent, and there found larger company. So made we home at last.

---

<sup>164</sup> Marked by shame or disgrace.

<sup>165</sup> The name of the bell used to sound an alarm.

<sup>166</sup> To articulate, either verbally or with a cry, shout, or noise.

It was just striking 11 p.m. when we entered my falé. Here supper lay still spread for two, but it stretched to hundreds. Wild shouting had long told the village that the Lost were found. Both inside and outside my dwelling place sat men, women and children. They could not sleep whilst the hunt was on, and now to these were added the fast returning groups of hunters. What less could I do than distribute tins of biscuits to folk who ought long hours before to have been asleep upon their mats? The contents of those huge tins disappeared as if by magic. Their Joy was great; they thought not of reward of any kind, yet did I add to the Biscuits a Thank Offering the next morn to the whole village, which to them seemed a fortune, but far from adequate in my private view.

Ere the gathering at that late hour dispersed, I got a lecture from the Chief and took it like a lamb. Said he in broken English, “What for you go into the Bush? You get lost. We love you. You must never do it again. When you want go, I take you. We very unhappy this night. Now we rejoice we find you.” It was past midnight when the last of that company retired. Bed felt very good the next few hours — still more so when ere Dawn, down came the rain in torrents and I thought of what that would have meant to those two torn, bleeding and bedraggled ones sitting in the open — but for days, nay weeks I, for one, nursed my sores, my bruises and my wounds.

For my companion, I cannot speak, save that I would bear witness to her pluck, her calm, her confidence to the very end in a Broken Reed.<sup>167</sup>

Never again will I leave the Beaten Track. I am no Pathfinder. Never was.

## Chapter XVI

### Let Dogs Delight — Sunday School Extraordinary

#### Let Dogs Delight

Alas! that in so fair an Isle, where perpetual Summer reigns, and everything should tend to make an Isle of Saints, there should be scenes still — in public, too — of hasty temper and of Violence, as in the old and wicked ‘Period of Darkness’, when all were Heathen. But the Truth must be recorded in a true Chronicle, however painful to one who loves both Isle and People as this Roamer doeth.

The good Bishop made doubtless some strange errors in his noble hymn for lack of geographical knowledge, but he might well have had Niue in Mind — if he had only known the spot — when he penned, “Where every prospect pleases, and only Man is vile.”<sup>168</sup> Wisely did he generalize the species, and not lay all the sins on men, for I fear that here, women are oft as culpable, as I must now faithfully unfold. Of course, a woman is supposed to be at the bottom of most trouble in this wicked world, and it was an wholly innocent dark-skinned maid who brought about my first Tumult.

Who is this who disturbeth the quiet of the village, as it rests beneath a blazing sun, making his entry therein with loud, wild and most naughty words, brandishing a big stick, and sending every child to cover on the dead run? It is an irate father, whose plans have been sent sky high. He would fain have stopped the marriage of his daughter to a young man of whom he disapproved, and as she had passed

<sup>167</sup> A weak or unreliable support. From Isaiah 36:6: “Lo, thou trustest in the staff of this broken reed, on Egypt; whereon if a man lean, it will go into his hand, and pierce it: so is Pharaoh king of Egypt to all that trust in him.”

<sup>168</sup> From “*From Greenland's Icy Mountains*” by Reginald Heber (1783–1826), Bishop of Calcutta from January 1823.

her troth <sup>169</sup> and stuck right gallantly by it, he had hied himself to Alofi to get the white Chief of Chiefs to bring the Law to bear. But that high Authority had pointed out that as the maiden was of legal age, none could prevent her choosing her life-mate. Thus foiled, he returned, a savage at heart, vowing direct threats. If only the village native policeman had been about, things would soon have been normal, but that worthy had an off day, so the field was clear.

The girl, having found the air of the paternal home too warm, had removed with her belongings to an Aunt's nearby. It was thither that this Peace Disturber hastened. Everybody there was wisely out, and peeping at the infuriated one from behind the coconut trees in the rear. But why should White Man fear? My scouts were ever on the watch for me for stirring incidents, and I was never slow in the response. I came, I saw, but of course could not control.

Out he dragged the precious boxes and proceeded to smash them up, trampling and scattering far and wide their contents; out came her mats and pillows, her one and only pair of shoes, and, pettiest vengeance, her Scent Bottle, which was sent flying into the nearby bush and fell with a crash upon bare coral. Oh 'twas a sorry sight, yet such a delightful savage to behold at work. He left a wreck, then evidently bethinking that there would be a Reckoning, hied him to the Bush, a beaten man for all his brave show. They were married despite him. I helped to replace her *trousseau*. <sup>170</sup>

Again, it was just high noon when female voices, high pitched and furious, rent the air upon the Village Green. My scouts were on their job, and I was there, useless as usual in such an emergency. It was not words alone, but deeds that got everybody on the run. There, in the central spot of all the place, four of the gentler sex were madly at it. Their long black tresses had fallen down and each was grabbing fiercely at her rival's; there was enough already on the ground to make me covet it as an extra Fly Whisk, when quiet reigned once more so as to gather it. Scratching and biting, rending clothes, the two sides were marking each other handsomely, and the village heard such words as must have shocked the Pastor before whose *falé* was the battle ground, but for me they hurled them far too fast to be translateable; yet was it fine to hear in high pitched Niuean those female Battle Cries.

Then — not content with fighting at a distance, they closed in, and there was a genuine football 'scrum', a pile of femininity, bare legs, and feet not on terra firma; a dog fight was a funeral beside it. Ah! but it was a brave scrap and going beautifully, the score quite even so far as one could judge, when suddenly the crowd scattered, for the Village Policeman — this time upon the spot — was hastening from his *falé* in the Bush to the scene of combat, and he might require Witnesses. But I stood firm.

Those Four Furies rose at his dire command, a sad and sorry quartette, but still there was a flash of savage fury in their eyes calling for Blood! more Blood! You could see their forefathers standing out in them. But the loinclothed Arm of the Law held them. They parted, to meet again that week before the Bar of Justice in the Port Office of the Capital, where hard labour on the roads was meted out to them. I was most kindly asked to select the spot and promptly chose my back way to the school. There, as good friends, they worked their Sentence out, giving me a delightful smile as I passed daily by. Those rascals somehow seemed to know how dearly I have ever loved a scrap. Their names were — — — — No! never will I betray those Amazons of Niue. They are Heroines All!

Their drama ended there, not so the Irate Father's. Act 2 succeeded upon Act 1; let us hope that there will be no Act 3, for that will surely be the Capital Crime and Niue has had enough of such.

<sup>169</sup> Faith or loyalty when pledged in a solemn agreement or undertaking.

<sup>170</sup> French: a dowry; the outfit of a bride, including the wedding dress or similar clothing.

The bridegroom was one of two brothers who had been brought up by a stepfather to whom they were greatly attached. Those two young men are in the full 'pride of life'; the elder, the father of a young family.

It was Friday morning in Avatele, and at 6 a.m., Church Service held and over. The natives had begun to separate to their homes, when one — none other than the father of the late made bride making purposed visit thither — began to orate. Niueans love a Speaker, so the crowd stayed. The village very still, no breeze, the human voice could carry far, half the little village could easily hear such an angry voice as now poured forth its tale. He claimed that he had been grossly insulted, for no Feast had been given him when he had lost his daughter. He seemed to have quite forgotten his wild antics awhile ago. From this point, he went on to heap abuse upon the groom's stepfather and it was real 'hot stuff'. Away those wild words floated and smote upon the ears of the elder brother, as he came forth from his house and put foot upon his bike to make journey to Hakupu. He heard — stopped — listened — worse words followed. It was enough. Vengeance was in that young man's heart as he leaped upon the seat and swept furiously towards the Speaker and the crowd. Past them he swept, then swerved and rode behind the House of God, where he deposited his bike and made all haste for the orator. He came indeed from behind, but gallantly stepped round and ere any had divined his purpose, drove his good 'left' at the jaw of the Speaker. That speech stopped short. Spinning round by the force of the blow, his 'right' drove hard upon the other's breast, then essayed he to make mincemeat of the man. So far, none had stirred, for they felt that the Irate One was only getting what he well deserved, but now they rushed in and grabbed the younger man.

The elder waited not on the order of his going, but, disappearing, he reappeared in a trice with an axe in his hand, walking swiftly along that Highway, which the younger would surely take, as was his daily wont. The crowd saw and insisted upon that journey not being taken, yet would it have been, had not some wise brain suggested a trip in the other direction, even to the Capital, there to get in first by laying information against the Defamer of Character. Thither, therefore, he went and the axe missed its prey, and I straggled bravely alone that day with only René to assist me, the while greatly wondering, for that young man is *Faséné*, my Assistant Teacher, a tireless worker, whole souled and true.

The end, I fear, is not yet, for that irate one has ever been a fomentor of trouble, a quarrelsome fellow, his savage instincts with but thin veneer, and my young man is fearless, whilst the road between his home and his duties runs in utter loneliness for miles, with ideal lurking spots for assault and murder all the way. We shall see.

### Sunday School Extraordinary

As I was not called upon to give Religious Instruction to my scholars, I was curious to see how my burly ex-sailor Pastor carried out that important duty. So I went to Sunday School — but only once.

Whilst one does not expect to see the strict discipline of the Classroom at such a gathering to teachers and taught, yet there are surely limits to its freedom. In the large, long building, there was gathered a motley crowd of men and women, boys, girls and infants too. They sat where they liked, some in groups, some in pairs, some inside the railed off portion for the one and only Teacher — our Pastor. Two men were evidently supposed to keep order, one being provided with a stick, a long sinnet lash attached, the other with a switch, but they might as well have been absent.

After the monotonous tolling of a bell for a full quarter of an hour, the Pastor rolled in, dropped into a chair in front of a table and yawned. Everybody kept on talking. After a good while, out of the Babel, the Pastor could just be heard above the din, announcing a hymn. The man with the whip led

off, and the noise was deafening in that low-roofed building. Still sitting, the Pastor made prayer. My idea that he would now address the school and give them sound yet simple teaching on high matters was a delusion. He proceeded to sit dumb as an oyster for a full twenty minutes, whilst the din of those 100 and more talkers was awful. I enquired of my neighbour — a native — what was the object of this strange hiatus and was informed that it was to give time for the scholars old and young to find answers to certain Biblical questions previously announced for this particular lesson. I saw a very few busy with pencil and paper, but the majority were having a ‘bully’ time, the boys loudly declaiming<sup>171</sup> the Weights and Measured I had taught them, others shouting aloud the English Alphabet — both possibly to show off before their Teacher — the women chatting, girls furiously hunting after babies who had escaped them, others singing.

But nothing moved the Pastor. He sat on, looking bored to death, occasionally glancing out of doorway, evidently to get the time of day from the sun. At last he rang a mournful little bell and it took sharper ears than mine to hear it ten feet off, but the movement of the thing seemed to have gradual effect, the din slowly lessened, yet that Pastor urged not haste by word of mouth or rose. I was by now quite keen to hear those Questions, set by him stationed at Hakupu to teach the deep things of God. The first was “How many villages did the Jews take under Joshua?” The next, “What is the meaning of the name, Solomon?” The third, “Give the number of David’s Army?” I fairly gasped. It may be that Hakupu’s religious instruction is unique as compared with the rest of Niue’s villages and behind the times. I will but say that I sincerely hope so.

As the Pastor gave out the correct answers amid a babel of voices, I noticed that the only ones who give him any close attention were a few young men. Then another hymn led by the now very husky man with the whip — he had possibly been leading in the Church from early morn — a prayer from the Pastor still lolling on his table, and he slowly rose to go. Sunday School was over. I leave it to you who read to comment. This only, I would say, that “The letter killeth, the letter killeth,”<sup>172</sup> rang in my brain for days. The Bible, as a Book, I believe to be a Fetish with this people. With many, I have no doubt there is a conviction that the mere knowledge of the text is a sure printed passport to Heaven.<sup>173</sup>

My Pastor is a fine, big fellow, a bit slow to be sure in his movements. I like him much, and I like his big voice when he lets it off full blast in Church, but I cannot be blind to his limitations. Exegesis is evidently beyond his powers, and he is clearly ignorant of the great value of Order. Bible Societies may be doing a fine work, but I must doubt it, unless the giving out freely of the Book is followed up with the most careful instruction by those really capable of giving it. I have it on the direct testimony of a native woman, who is today as sincere a Christian as any on the island, that though she had been a Christian from her earliest years, not till the Great War<sup>174</sup> had she realized that Egypt (whither Niueans went), the Holy Land, Persia and the whole gamut of lands mentioned in her Holy Book were on earth. She had always thought of the whole lot of them as in Heaven. The Missionaries needed and still need to teach Geography and the Bible hand in hand. You can take nothing for granted in the untutored mind.

<sup>171</sup> To deliver a formal recitation, especially as an exercise in rhetoric or elocution.

<sup>172</sup> From 2 *Corinthians* 3:6: “Who also hath made us able ministers of the new testament; not of the letter, but of the spirit: for the letter killeth, but the spirit giveth life.”

<sup>173</sup> At this point in the text, about a third of the way down the page numbered 127 in Volume 2, a piece of blank paper has been pasted over eight and a half lines of text.

<sup>174</sup> World War I (1914–1918) was generally referred to as the *Great War* up until World War II (1939–1945).

## Chapter XVII

### Niue's Blue Ribbon — My 2<sup>nd</sup> Mé

#### Niue's Blue Ribbon

Hakupu did it. There is no disputing the fact. Its cricketers are the Champions of this coral isle. For long years, they have hoped for it, have striven hard for it. It has taken many weeks, nay months, this present year to settle it. They have attained their goal.

The last and the greatest conflict was with Alofi; one by one, Hakupu had challenged each of the other villages, and entertaining them right royally, or been entertained in turn, had won game after game. With an unbeaten record, there remained but the 10<sup>th</sup> between them and the Championship.

It is rare for Alofi with its 1,000 inhabitants to step outside to meet opponents. They consider it the part of others to go thither. But Hakupu stood out for its rights as Challenger and declared that the Title would be theirs by default, if Alofi stood upon its dignity. Therefore did Alofi journey to Hakupu, full of confidence, too. What could a minor village expect, but a sound drubbing from the stalwart sons of the Capital. Now would they put a stop to the all conquering march of the Hakupians. Yet I fear that they were not above trying to take a mean advantage.

Alofi has men by the hundreds. Hakupu, beyond 40 playable men, has to call on boys. Alofi brought 100 for their side and insisted upon putting at least 60 in the field. This meant Hakupu's playing 20 children against 20 men. Long was the debate; strenuous was the argument; hours sped by, which should have seen the earlier stages of the game, but Hakupu was not to be fooled. At length, my village did a sporting thing, it compromised at 50, and at that was forced to put some of my scholars in, hardly in their teens. But back of these was a real team, a team that had played together for months and were as one. It was team work against individual strength and skill, and as it ever is, Team Work won. Yet Alofi never dreamed of defeat and their very over confidence helped much to bring about their downfall.

Hakupu knowing that a big crowd of men was to be expected for a match that would run for at least three days, got busy for a week previously, bringing huge quantities of food from the Bush, and well it was, for though eight miles divide the two places, half a hundred women and children besides the 100 would-be players tramped over to see Alofi bear away Hakupu's scalp.

Lest the Evil One should settle upon Alofi's manhood, the 100 marooned themselves for days and nights in Alofi's school house ere they came. It was not for training that thus they acted, but to ward off bewitchment. And during their stay in Hakupu, they occupied houses to which none, even of their own village, were permitted to approach, least of all the gentler sex by those 'gallants', who like all Niuean males condemn their women folk, going so far as to consider a canoe forever defiled by a woman stepping therein.

They came, did those Warriors Bold, in three detachments, with a huge Flag each, and a New Zealand Ensign in addition, and to drive every possible devil seawards — there to be drowned like the pigs of their Holy Book <sup>175</sup> — entered Hakupu by three different trails, covering the North, the Central and the South portions of the village. And yet — according to them — the devils got them after all.

---

<sup>175</sup> *Luke 8:33*: "Then went the devils out of the man, and entered into the swine: and the herd ran violently down a steep place into the lake, and were choked." See also *Mark 5:13* and *Matthew 8:28-34*.

But at first, all was Gladness; the usual preliminary performances were gone through. Church Worship, Addresses, Drillings, Songs. Then came the toss, which Hakupu lost and was promptly put to bat. All day we slogged and far into the second day. Our first 20 went down for all but 100 runs and Alofi saw Victory already in sight. The antics of that Alofi ‘Eleven’, as each man went out, were amazing; they served out a fresh series for every fallen wicket. And all the time the ‘followers’ beneath the coconut trees kept up, as they sat, a continuous song and drumming of the hands, then rose to dance. Alofi was out for a good time, for the easy annihilation of presumptuous Hakupu. Why not ‘whoop her up’?

But my village team had cunningly a stronger tail than head, and the two bowlers never changed — in their case an egregious blunder — grew weak just as and when Hakupu’s bats were strong, and ere the 49<sup>th</sup> wicket went down, 357 runs were chalked up on the blackboard. But what were nigh 400 runs to 50 Alofi men, each a mighty slogger? So in they went, the crowd accompanying their first two, leaving each of them with a loudly expressed Blessing.

But what was this! Who were those two bowlers, *Fanovaha* and *Ikitaimata*, my school boy? Surely had the devils got into them. They bowled in deadliest fashion, wicket after wicket fell for a mere pittance; the Hat Trick <sup>176</sup> went by the board; and what balls they did connect with went into the hands of those 8 and 40 fielders, and Hakupu put on no Antics. Did a wicket fall, they certainly gathered round it, but *Latoa*, the Captain, a huge, ruddy native with a pompadour of raven black hair, gave the call for the rhythmic clapping, and let it go at that. He would have no Dancing. A wise Captain, he.

Then Alofi began to grow anxious; things were not so rosy after all; the singing and the dancing ceased; and men stepped forth to stand before those bewitched wickets and bedeviled bowlers with less jaunty air. So tense grew their feelings that when one man — who had reached a total of 17, two of which were ‘sixes’ over the roof of the Church — was ‘run out’, his father, one of the Alofi Chiefs, rushed forward as his hero son came back, and kissed him oft! Yes! they were sore perplexed, and well might be for the 49<sup>th</sup> man was out and Alofi had but 218 runs. Play for the Second Day ended thus, with despised Hakupu 139 runs in the lead.

That night there was great ‘searching of hearts’, and rumour was brought me that Alofi was so wrought upon that there was a serious talk of their decamping there and then, for who could play Cricket with Devils? Hakupu’s Captain, with his most tremendous roar, had to talk stoutly to them, inviting them to search the whole village, all the surrounding Bush and even mine, the White Chief’s dwelling, for those same devils, and told them plainly that those were but ‘poor Sports’, who could not take defeat.

Of this one thing Alofi was dead certain of, that a Hoodoo was upon them, and if that night it was not removed, they were doomed. Yet was every one of them a Christian, and attended Church the year round! So out they went — and I went too — in the dark night in search; light glimmered here, there and everywhere. There was ‘Bad Medicine’ round each wicket; they stirred the poor dust up thoroughly; the Lacrosse ball of rubber I had given them was brim full of Devils; they doused it in a bucket sufficiently often to drown 10,000 devils; they examined each player under oath if he had spoken to any woman for three days past — and all denied, husbands foreswore their wives, lovers utterly repudiated their Amoras, <sup>177</sup> then, which was exceedingly rude, they declared that the food and drink which Hakupu had so lavishly supplied had been bewitched, and thus had they lost their eye and their strength.

<sup>176</sup> A [hat trick](#) in sport is the achievement of a positive feat three times or more during a game. The term was first used in 1858 in cricket to describe [Stephenson](#)’s feat of taking three wickets with three consecutive deliveries; a collection was held for Stephenson, and he was presented with a hat bought with the proceeds.

<sup>177</sup> From the Italian *inamorata*: a woman with whom one is in love or has an intimate relationship.

There was but one thing to do. They sent off that night post haste to Alofi for a Devil Doctor — a thief to catch a thief — who, coming at dawn, set his traps to catch the wily demons of Hakupu. He settled right away the location of the Chief Evil Eye. Anyone could have sensed it, he declared. A poor, lonesome, upright coral slab, a headstone of a grave in the Long Ago, lying in the Village Green, close to ‘the pitch’, between the Pastor’s House and the Church, was without doubt the main object to be watched, and a guard was to be set on a rickety house hidden from that stone — since the House of God lay between the two — a house once owned by a deceased rival Devil Doctor, who had watched and waited long to get his own again from Alofi — and both sides swallowed the thing, Hakupu rejoicing in its helpful demons!

The 3<sup>rd</sup> Day opened with Hakupu’s second innings. Alofi felt better after the Doctor’s visit, and better still when no less than three of the highest Chiefs in Alofi had been rushed to the scene of battle. These could not believe the news brought home. Hakupu getting the scalp of the Capital! Impossible! It must not, it shall not, be! And if Talking and Wild Encouragement could do it, Alofi’s Chiefs had done it. One white-haired, old Chief stood forward — for hours — right on the field of play, talked, yelled, sang weirdest songs as Solos; he would have doubtless danced, but for his high position. Hakupuans, on the other hand, kept grimly silent, and the same full measure of success did not attend the villagers’ ‘Eleven’ — for Alofi had ‘laid the devils’ by a change of bowlers, though to their dying day Alofi will never grasp the simplicity of the thing — yet when the Innings closed, they had added 220 to their score.

And so Alofi had 359 runs to make, which was 140 more than they had made at their first poor effort. Hakupu knew that they could never do it, but Alofi, having ‘jerked the jinks’, decided to have a try. It was the afternoon of the 3<sup>rd</sup> day that Alofi went to bat, with *Fanovaha* and *Ikitaimata*, Hakupu’s trundlers once more. They tried to connect, with all their might, but the score rose very slowly. Yet did they not lack encouragement and, in one direction, highly specialized. At each wicket, there stood an Advisor to the batter at the other end. He is considered a most important party. I place him as the Clown of the Play. He is generally an old gentleman, and his Directions more antiquated than himself. I made a note on paper of a few I gathered those wondrous days; it was easy to do so because, though for safety’s sake I sat far off, their voices were loud enough to be heard over the whole village. Here are a few. “Watch your left, that’s where the ball is coming.” So, of course, *Iki* put it to the right, and the wickets flew apart. “Hit this one for six or you’re a Muff,” and he misses it altogether, spinning completely round in his endeavour. “Send this one over the Church roof,” and stepping out to it, is ‘stumped’. And they never tired of Coaching.

But all that Alofi’s aides could do, could not stave off the miserable score. More than half were out for 140 when Time was called for the 3<sup>rd</sup> day. That left over 200 to be made next day by their tail end, a real tail end as all had seen. Some of them had stuck their huge War Clubs in front of the wicket and received ball after ball without a movement, yet they were not playing against Time. Others mowed the ground. That tail was long and weak.

The 4<sup>th</sup> day opened, and after Church at 6 a.m. one could hear Hakupu tuning up for the finish. There was much drumming, and the ancient Trombone of Hakupu — only used for State Occasions and for Triumph — was once more doing duty. But Achilles sulked in his tent.<sup>178</sup> Alofi had had enough. They sighed for Home and their dark-skinned damsels. The Championship was nothing now to them. And, anyhow, how could 4 and 20 Lane Ducks put on 200 and more runs with those deadly, devil-endowed, bowlers, *Fanovaha* and *Ikitaimata* — in special that mere school boy *Iki*, who lives for Cricket, whose young arm never tired those long broiling days, whose wicket-keeping, too, was

---

<sup>178</sup> In Homer’s *The Iliad*, Achilles sulked in his tent, rather than fight the Trojans, after the Greek king, Agamemnon, took Achilles’ love, the beautiful captive girl Breseis, from him.

quicker than eye could follow, who stumped man after man, snapped up everything within reach and oftentimes seemingly quite beyond it, who was cool as a Veteran all through, and Coy as a shy maiden at any praise from the crowd. No! they had had Enough. Therefore did they beg the burly *Latoa* and his team to let them off; Hakupu was their master. And though we one and all were wild to play the match out, Hakupu is not vindictive, and let it go at that.

Then did Pandemonium break forth in this Village in the Bush. There was huge and lusty Shouting, drums beat and tin cans appeared in shoals; they danced; they sang; they ran hither and thither aimlessly; one would have thought the village had gone Mad.

But games in these parts do not end — on great occasions — by the closing of the innings. There has to be a final seance, even as there has to be a Preliminary. That Final Seance took just six hours to carry through. I can but touch upon its outlines to keep these Chronicles complete in all their Niuean details. First came the Procession. Both sides and their ‘Followers’ marshalled their forces on the village green. Forming four deep, the army moved in soldierly style to the school grounds, amid the clash of every kind of drum. Past my *falé* they marched, the Defeated gallantly allowed to lead, 200 strong, one hundred carrying their War Clubs as muskets. Then came that Flag, that Union Jack, once more, that Flag whereon defeat had not yet sat, the big *Latoa* right behind it leading his victorious Legion, who with beaming faces gave me a Salute as they passed, even as I stood at the Salute to the One and Only Flag for me. Behind these was the entire village seemingly, men, women and children, the little boys a most disreputable crowd, who in their wild excitement had forgotten most of their attire. Once upon the playground, there was much counter marching, and courtesies extended to each other, which I could not fathom for my usual interpreters were wholly out of hand. Then back to the village green, for Giving and Receiving, Dances and long Orations. The native Traders’ stores were soon sold out. I could get no Black Jack, so fell back upon the very last packet of my matches.

Carrying my chair, I prepared to see the matter through. It was hugely interesting, though it took hours. At one time, the old Chief, who had worked so gallantly as Inspirer of the defeated, stepped forward into the space between the squatting ranks of Alofi and Hakupu with a huge ships’ biscuit tin. Placing it in the centre, he surmounted it with a wide mouthed coconut basket. Into this, men, women and children from Alofi cast much money, and many another kind of gift. After an oration from both sides, a Hakupuan stepped forward, grabbed the lot and disappeared. I know nothing of any subsequent division. It may have been for the winning Team. At another, two aged women who ought to have known better, put on a Dempsey<sup>179</sup> – Carpentier<sup>180</sup> prizefight; at another, evidently the Rape of Niue, men rushed in among assembled maidens and with fierce struggles bore them off. Alofi’s male dancing was both well done and a scene to be remembered, the while an old woman assiduously poured coconut oil upon their naked backs, lest these should be blistered in the broiling sun. Nice compliments were given on both sides — all bitterness had passed.

The afternoon was well on when, at last, the gathering broke, the visitors gathered their baskets up and departed, some singly, some in groups, the Chiefs, the last, arose and turned their faces towards Alofi. That invading, would-be all-conquering army was gone. Doubtless, arriving at the Capital they would — in true Niuean fashion — try to cover up their defeat; they would march in with gallant bearing, all flags flying and every instrument of noise full blast; excuses would be made by every inhabitant — save the white folk. It would be held to be no real defeat.

But what cared Hakupuans! Hakupu was content with all the World, the Blue Ribbon of Niuean Cricket at last was Hers.

<sup>179</sup> [William Harrison “Jack” Dempsey \(1895–1983\)](#)

<sup>180</sup> [Georges Carpentier \(1894–1975\)](#)

My 2<sup>nd</sup> Mé

I was there that time for sure — my Second Mé — not with bells on, it is true, but sporting a linen suit, the envy of all. It happened this way. White soils quickly in contact with the bush, and being of a frugal mind, I had purchased from Auckland a dye, a rick khaki brown — so said the packet — capable of defying the look of dust and stain. Being also of an innocent mind, I had carefully followed directions, and though I was surprised at the colour in the tub, I had no doubt but that all would come out right at the end. Boiling long and stirring well with a long pole, I brought forth my treasures to hang upon the line to dry, when lo! I had before me suits of a most entrancing lavender hue, delicate enough for a lily of a lady. Here indeed was a surprise and an unexpected joy. The village maidens fell in love — with the colour; the villages' braves begged the garments themselves, but there was nothing doing in that way. To the Mé I tramped, seven good miles, in all my delicate Glory and was a marked man the whole Festival long, the envy of one and all. I am not giving away where I bought that 'dark brown' dye.

That Mé was memorable in that, though it is a Religious Festival, there was held on the previous evening the first Nigger Minstrel Show <sup>181</sup> ever held on Niue. Needless to say, the excitement was great. Thus did the printed notice run, which was sent out from the Missionary Press at Alofi to all the villages. Sound each vowel separately, please, as in the French tongue:

*“O mai oti ke kitia e tau Tagata Uli Aferika he vaha ne faka tupa ai he tau Meleke i Amerika, mo e logona ai e tau Lologo ne fa uhu e lautolu, Kua hagao ke he mate matekelea ha lautolu, Katoa mo e Tau Lologo atu motu mo e falu a mena fulufuluola Kehekehe”*

which being interpreted reads “Be sure and come to see the Black Men of Africa, who became Slaves in America, and hear their Songs of Sorrow, and Songs of Joy.”

And well was it carried through on a stage raised in the open, with palms as a background, the white-robed audience squatting on the sward in their hundreds, and over all, a gloriously Clear Full Moon. Naturally, the leading spirit was a white man, but the natives rose magnificently to their new role, and the fun was fast and furious. The program was long — as all programs are on Niue — and contained much more than mere Songs and Speaking; there was Acting and Dancing to audience's hearts' content. They had their money's worth: 6d for the sward, 1/- for a chair, 2/- for the Front Row or rather Sides, otherwise those upon the grass would have seen naught. The Chiefs of Niue, to keep up their Estate, had to shell out the higher price and sit with us, of whom every white was present, the ladies in elegant toilettes befitting a hot night, the men totally eclipsed alongside my own Lavendar Glory.

The Great Day itself was long; the whole morning taken up with Singing, Speaking and Praying, the large crowd seated on the ground beneath a huge awning, yet ringed round with scores who found no room within its shade. Each village had its separate place, and the colours were those of the rainbow, the women straw-hatted with bands thereon of delicate reds and blues. There was not a loud colour in the lot, such are reserved for the loin-cloth, which was happily hidden from view.

Each village had to have its own innings, and each went at it with a Vim. My Pastor had been honored with the post of Time Keeper, his instrument of warning, a cowbell of uncertain timbre. No man might speak for more than five minutes, no Hymn take more than ten — yet did some strive hard to

---

<sup>181</sup> The [minstrel show](#) was an American entertainment consisting of comic skits, variety acts, dancing, and music, performed by white people in blackface or, especially after the Civil War, black people in blackface.

step beyond, and sore hearts were clearly theirs when the bell cut short their harangues and their songs. At my special request — so that the children might haste away to play, rather than sit the long hours through, a deadly defiance of Tradition — the Government School children led off in the program, and Hakupu was the first. Bravely my scholars opened the proceedings and sang with all their hearts that martial hymn and air, ‘Who is on the Lord’s side’,<sup>182</sup> which was wholly new to Niue, and the tune of which I had fortunately carried in my head. It went with a swing and a dash that put life into all. My baton, this time, was my Fly Whisk — the defunct horse’s tail attached to a piece of stout, twisted wire off a packing case, for a handle. Thus did I perform two acts in one, Kept Marching time and Warned Flies of their doom awaiting.

Now the Island’s missionary contribution was announced. This year a total of £1,080, no small sum from under 4,000 souls all told, with copra down to bedrock price. Hakupu’s share was £106 — of which £50 went to the native Pastor, £25 towards the upkeep of the Mission Steamer — to which my scholars had contributed £8. The announcement as to which of the villages had contributed the most was awaited with breathless interest. The rivalry each year is keen. Mutalau came out on top; Hakupu’s hopes were blasted. Yet have we been top dog often. The meeting at long last over, the Missionary and his wife had lunch ready for both Whites and Half Castes in their commodious home, a bounteous spread to which all did justice, and I, as the Patriarch, gave thanks for all.

There followed, by special request of Mutalau, the Champion Givers, a Dance in the Missionary’s Compound, with presents for their Host and Hostess at the close: 114 eggs being one of the gifts, with live land crabs tied ‘hand and foot’ to sticks. Forthwith all went to a Baby Show: 3/— and a pink rosette for the winners of each age. There were some real beauties shown, clean, clear-skinned, fat to bursting point. Alas! that the healthy stage is kept so very short; once weaned, deterioration sets in.

Then followed Sports of many kinds, with a Flag for the village winning most points, and lo! the high honor this year — did I not forewarn you — fell to my Hakupu. Last year but one prize; this year, the Banner. Hakupu went wild with Joy; the burly ex-sailor Pastor so far enthused that, forgetful of his dignity, he seized the Flag and wrapped it round and round his copious frame, and swore that he would carry it thus to Hakupu that same night. And he did. A seven mile walk at the end of a long day is nothing to a Hakupuan — but night walks are never taken singly, for fear of Devils. My own long night tramps are past their understanding.

Truly that Mé was a stressful time, and to add to the excitement, the Mission Ship had arrived on its yearly call, and there was coming and going of boats, and partings to be made. The white folk sighed a sigh of relief when all was over and we could settle down once more to the simple life.

I found my way back to my village late that night — with the Hakupuan long gone ahead — for I enjoy its real restfulness and its primitive life. Yet have I now a little two-roomed den of my own at the Capital, a Town house, in fact, as well as a Country one, the key of which I carry ever in my pocket, and to which when I have a mind to — at weekends — I walk on Friday midnights, to escape the sun of the next morn, a charming tramp through the dense and stilly forest, to find everything in my hand, save servants; a duplicate, in fact, of my Hakupu home, though still every house in Alofi is wide open to me, and my place is set at every table.

---

<sup>182</sup> Words by Frances R. Havergal, 1877. The title is from [Exodus 32:26](#): “Then Moses stood in the gate of the camp, and said, Who is on the LORD’s side? let him come unto me. And all the sons of Levi gathered themselves unto him.”

## Chapter XVIII

### The *Maota* and Other Things — *Kuenaia*

#### The *Maota* and Other Things

The long winter of some of these folks' Discontent was over, the many months of completest isolation passed; a boat was riding at anchor off Alofi. Not a boat of a truth to enthuse over, a mere tub, 40 tons, built by Japanese at Suva, Fiji, and bearing name of tree '*Maota*'.<sup>183</sup> But it was a boat and brought news of the outside world, also some small amount of mail it had picked up some how — for it came not from New Zealand, but from Samoa — and one white passenger, a Nursing Sister, to relieve the one who had so long and ably fulfilled her task. Its orders were to carry off some of our little company, thus further depleting our ranks. Our kindly Resident was going, none, however, sent to take his place; therefore, our genial Doctor had this further duty lain upon him as Ruler and Magistrate, in addition to administering pills and lotions till our new Head should arrive.

None going out anticipated easy voyage; the deck, the only cabin; a rising wind and an angry sea, with Apia 350 miles away. There was coming and going all that day — I had walked in, of course, on the news arriving — letters to be answered, and help given for hasty packing. The freight man, however, had an easy time for no heavy matter came or went. Alas! for larders, which remained impoverished, and for good housewives' peace of mind. Now was the hour of sailing, and the bank leading down to the Landing Stage was crowded with curious natives. The departing ones waited each their chance to leap into the dingy, which rose and fell, twisted and twirled, in the narrow break in the reef wherein it lay. They made it, and strong arms battled out to where the *Maota* lay. The anchor raised, she dipped her nose; there was long waiving from boat and shore; they were gone. We turned and entered once more upon our isolation. And they? We learned later they had safe, but tempestuous and horribly inconvenient voyage.

I found fresh honors awaiting me. I was always for Peace; now am I working for it as Chairman of the *Kilikiki* Disputes Committee. They forced the job upon me, and we got to work at once. There were several misunderstandings to be straightened out. We backed up the native Umpires to the limit, and threatened direst pains and penalties if teams withdrew in anger ere a match was lost. It would appear that I have great fame on Niue as a cricketer — a one time Grace or Armstrong<sup>184</sup> — Heaven alone knows why. My continual protests are of no avail. In my village, I am Sir Oracle and what I say is Cricket Law!

I learned fresh lesson at the Capital. Entering the combined Post Office and High Court of Justice, I perceived a large bundle of dog collars. That was enough to set me going. I learned that of canines, there are 131 till the next litter is born; that every dog must wear a Government collar or be food for sharks; and that the roads are helped in their making and repair by this tax upon their owners. This was the new lot just arrived. Dogs are not indigenous on Niue.

High honor came to the first of the species that stepped ashore from a passing ship in the Long Ago. He had a name but it was not worthy of so great a wonder. The natives called him — not his species, which is merely *Kuli* — *Taafu*, and no dog since has borne that title; it was Niue's Knighthood. It

<sup>183</sup> See the [New Zealand Maritime Index](#), where it is described as 'Early 1920s the Pago Pago mail boat'. The source is Eric L. Cordery, "Shipping in Samoa in the '20's: Some recollections of a happy youth," *New Zealand Marine News*, 1966, p.55.

<sup>184</sup> [Warwick Windridge Armstrong \(1879–1947\)](#)

seemed, however, to have turned his head, or else the ordinary food failed to appease his hunger. He sighed for meat and bones — and got them. Alas! he scented out the Caves of Death and ate human flesh and bones, and was discovered in this wickedness, and not even his great name could save him. There were the gods to think about, whom he had outraged, therefore *Taafu* came to an untimely end, and Niue waited long ere the species came again. I cannot enthuse over them; they are mostly of terrier size, all mongrels, mostly thin as rails. Their only use, to drive pigs from the *falé* doors, and — when they feel like it — to take a stroll with their masters to the Bush. I have yet to hear one called a name; *Taafu* took the lot.

But this lack of individual names is fully made up by the human species. There seems no end of name giving. One at birth, a fresh one at Lock Shearing, another upon going to school, yet another at Marriage and a final one at Burial.<sup>185</sup> Surely it is wisdom on the part of Traders to work on a strict Cash basis with such a people. The police also have to keep their eyes wide open to follow tabs on dog collars with the owners playing ‘ducks and drakes’<sup>186</sup> with the name thereon. They use no surnames, nor even Family name. One name at a time suffices. It certainly sounds strange to hear children thus familiarly address their parents, but as they have no ‘Dad’ or ‘Mum’, it has to be.

I noted that day also, that the School of the Prophets was off on a holiday, so also was the Chief Prophet, the Missionary. I have frequently wondered why there is such a keen desire to get into that select group. I fear that worldly things enter largely into the matter. It is, compared with the rest, an easy life. Food is brought to one’s door; the tithe is sure, so is the salary, which ranges according to the popularity of the Pastor from £30 to £80 a year, more money than most could make, save in the Government service, and posts in that are few. In a few years, one has enough to retire on; meanwhile, he has been busy building his future residence in the village he originally came from. The Parsonage of the L.M.S. is always well built and substantial, so, not far off, is sure to be another, a retired Pastor’s dwelling. They do not favour life long service; when the time comes in his own opinion that he has worked long enough, he quits. Of expulsions, I will not speak; what Ministry is wholly free of such? The wonder is that in so short a time, so earnest a Ministry has been evolved.

I returned to my own native house to find Death had entered it during my short absence. It was a case of Suicide. My 60<sup>th</sup> rat awaited burial. I am justly proud of my record. I caught old Grey Beard after all. He was Number 54. He was, without doubt, the great-great-grandfather of all Niuean rats, a monster, bigger than a ship’s rat, the pride of his Race, and the honour fell to me. He filled up the spring trap so that all were amazed. Once too often he relied on his ancient cunning, and the White Man got him. Now am I reaching out to my One Hundredth, unless I have exterminated the Colony in the Bush. Highly do I prize my one spring trap, with fiercesome jaws; if it breaks, then sure I am my luck is gone. But so far, so good.

### *Kuenaia*

Relief has come at last. No longer do I suffer backache bending over scholars seated on the floor, nor am I forced down on my knees to hold and guide the hand, as it struggles to learn the art of writing — upon slates. Wellington heard my appeal and we have Desks! Real school desks, holding two apiece. They came, of course, not put together. We had that joy. I was Head Carpenter, *Faséné* Chief Assistant, everyone else, from the Chief down, eager to lend a hand. Now have we attained to Ink and Pens and real Copy books; slates are in the discard. That ink has given me much anxiety, not because it is spilled on Copy or wasted on my scholars’ fingers — my scholars are too amazingly

<sup>185</sup> Multiple names on Niue are also mentioned in Tale #12, *Of Nomenclature* (2), in Part IV, *Tales of a Roaming Grandfather*.

<sup>186</sup> [Stone skipping](#).

adept for that — but because many of them have taken to it as a new and delightful drink.<sup>187</sup> I find ink wells empty daily; at first I put it down to the exhausting heat, now I demand where the fluid has gone. “Please, Teacher, I drank it,” says the culprit. I fear to run short if this does not stop; New Zealand’s stores are far across the ocean; my powder supply, though generous, is insufficient for 100 thirsty throats. If only their Insides would reject it! But there is little hope for that. I am reduced to planning low down schemes. If only I had some Ipecacuanha<sup>188</sup> handy, surely that would cure them, as it did my Cambridge<sup>189</sup> servant in the ’70s, who loved too well my sherry.

But I can forgive them such delinquency, and much besides, when I look upon those Copy books. I thought that a mighty task awaited me to break my scholars in to use of pen and copy. There I was wholly wrong. They took to such unknown things as ducks to water. Whole copy books are filled with scarce an error, a blot considered a disgrace. The writing of those neophytes amazes me just as had their drawing, and the girls designing. I would pit Hakupu’s scholars, grade by grade, with any white lot. They acquired at a stroke what others take a year — nay more — to gain. I take no credit — it is latent power waiting simply to be tapped. They have the capacity for taking infinite pains. It is a Copy and they take the word literally. Were the words written upside down, it would be the same. The daily writing period is a joy to all, sitting correctly at those wonderful desks, and not a pen is put to paper till word or sentence has been thoroughly explained, thus killing two birds with one stone; they write that which they clearly understand, new English words at that. They surprised me — I would surprise them.

There came a message across the ocean that King George<sup>190</sup> and Queen Mary would speak to all the children of the Empire, and the Government of New Zealand had a gramophone record made which could be procured by any and all teachers. Were we to be left out? Certainly not. To secure the record was easy enough, but how about a gramophone, which in Hakupu had never been seen, and the addresses themselves, which would be unintelligible to the hearers at their present stage. Those generous, ever ready ladies of Auckland had seen to the first, for through them a kindly dealer in such wares had made gift to the hospital at Alofi, as has been noted, and I annexed it for the great occasion. The second was overcome by our translating the two speeches into the native tongue, and having every scholar write them out, learning them in both languages by heart, before the Great Day arrived when they should hear the human voices of their King and Queen from far off Beretania. That was a tense hour when a crowded school room, filled to capacity, and outside, too, with scholars and their parents, awaited, to them, the amazing and incomprehensible thing of the human voice on a disc. Some were clearly nervous — the elders fearful of magic and witchcraft, the younger that someone might suddenly spring out of the box, yet did the White Chief’s presence and handling give them confidence to see the wonder through. The King’s voice — so resonant, every word so richly sounded, clear and slow, the Queen’s truly feminine — rang out in that lofty sugar-thatched school, every word understood and received with deepest reverence. The speaking stayed, but once was not enough, the appeal was made for again — and yet again till every sentence had been indelibly impressed. Then broke they one and all into that which they sing at the close of each week’s schooling, ‘God Save the King’, to disperse, discussing this new wonder, and the high honour done them in the hearing.

I would not have you think my scholars Paragons of Wisdom. They are certainly above the average white boy and girl on some lines; two of the three Rs come easily to them; the third, Arithmetic, is

<sup>187</sup> The drinking of ink is also one of the subjects of Tale #46, *Of Inspection and Roll Call*, in Part IV, *Tales of a Roaming Grandfather*.

<sup>188</sup> [Carapichea ipecacuanha](#) is a species of flowering plant in the Rubiaceae family. The roots were used to make syrup of ipecac, a powerful emetic. WWB has *Ipepecuanha*.

<sup>189</sup> WWB was admitted to Caius College, Cambridge in 1877. He received his Bachelor of Arts degree in 1880 and his Master of Arts degree in 1884.

<sup>190</sup> [George V \(1865–1936\)](#) was King of the United Kingdom from 1910 until his death.

Anathema. In the first two, they fall back upon their native gift of wholehearted, tireless Application; the third is the handling — juggling it appears to them — with Figures, with which till white men came for barter, their forebears had no serious concern. It will take more than one generation of scholars to clear up the confusion wrought in their heads by ‘Sums’. The straight work of Tables, Weights, Measures are nothing to them as an exercise of memory, but Thinking in such terms is prodigiously hard work.

Zealously have I guarded against supplanting their own native life. Whilst learning to read English — in order as they know full well, in chief, to have the whole world of Books open to them in place of being limited to only three in the native tongue: Bible, Hymn Book and Catechism — they have been taught to become readers in their own. Niuean Reading has had to be done regularly till each boy and girl is ‘Passed’ by *Faséné* as a fluent reader. Whilst the history of the world has been taught them in orderly sequence, the history of their own Isle has been as carefully instilled. Whilst Nature at large has been laid before them, their own Fauna and Flora have been collected together and been learned by heart. Their Fish, their island’s specialties, have been stressed as against the common varieties of the outside world. Their handicrafts have been taught. They are Niueans first, and have been instilled with a just pride of their Island home.

We have now the beginnings of a Village Library. The freewill offering, made when the school first opened, of £10 and more has bought — now that we are ready — a whole gamut of books, suitable, and carefully graded. They have found ready readers, and the thing should steadily grow.

We can sing now, not shout. We have looked inside ourselves with wonderful Charts, and know why we cry out with Indigestion and Colic pains. We can roam about the World before a Mercator’s Map, take trips all round, and know Polynesia by heart, no group or single isle can faze us. We can write a Business letter to surprise both parents and Traders, and letters home — should we wander off — that will give joy to those who would hear of us. We are wonderfully adept at our Drill and Physical Training under that stern instructor, *Faséné*, who is a born Sergeant-Major, berating us, deriding us, but proud of us — at heart.

Yes! we are now two full years and more on the high road of Education, and the foundations laid, there is every promise of further, useful building. Happy he who has the privilege of putting on the coping stones.<sup>191</sup> He himself will be living in clover. His choice Bungalow is ready at long last. Hakupu rejoices at its handiwork.

The day that I put the key into the front door of the completed building was, from the first, to me, to be *Kuenaia* — the ‘End’ of Hakupu for me.

That day came. My pleasant task was done.

---

<sup>191</sup> A stone that forms the top of wall or building.

## The Village of Tuapa

(Too-ar-par)

### Chapter XIX

#### Going A-trading — A Wreck Ashore

##### Going A-trading

Tuapa, the last seat of Royalty, lies some five miles from Alofi. An opportunity offered to go thither with a Trader friend, who has a branch store there, which he opens for business once a week, and himself, his wife and I set out right early from Alofi for a busy day. The drive, in his fine lorry, all along the way runs close to the cliff-edge, with the waves a lovely sight below you as they dash against the Fringing reef. On the other hand was one long avenue of tropic growth.

Makefu, celebrated for its bead work and its turtles had first to be passed through, a long straggling village with a very poor class of homes.

Graves the entire way, both sides, for as we have seen, cemeteries on Niue are unknown.<sup>192</sup> The run was quickly made and we reached Tuapa, a goodly village with a noble green; the usual Church, Sunday School and native Pastor's house, the main features of the broad open space.

What took my fancy most was, however, the White Missionary's onetime abode. Though the house is now torn down, its outline remains in concrete foundations, and the compound in which it stood still surrounded by a low stone wall. Without doubt it is the finest site in Tuapa, if not the whole island. The view of the sea from that site is magnificent. It was used in the days of the brothers Lawes, when one lived at Alofi, the other here. When the elder went to New Guinea, the younger moved to Alofi, and there was no need for a second residence. The site has been offered by Tuapa for the Teacher's house, when the school is built and the three R's started. Lucky the teacher who dwells in Tuapa, unhemmed in by bush and the sea breezes ever blowing in upon him.

---

<sup>192</sup> WWB does not mention that one of the graves is that of Peniamina, shown below in June 2015. See *Things Missionary* above.

In the centre of the village green are two graves. One that of the last Niue king — *Tongia* — and close to him, his lifelong friend and advisor, the Grand Old Man of Niue, the Trader Robert Head.<sup>193</sup> It was upon Tuapa's reef he was wrecked in the long ago; it was at Tuapa that he lived for fifty years. In Tuapa he rests. Here is still his home, his wife still living in it, a lively old lady keeping that hearth still warm. Here is the store which sent all Niue mad with its wondrous goods. Here he brought up his large family, a stern father who combined parenthood with Business, holding school even as he served the counter, marshalling his own flesh and blood in and out at the Quick March, and allowing no fooling as they sat upon the mats grinding away at their daily lessons.

At one end of the village green, hard by the mission compound, is *Tongia's* Crowning Stone, his 'Bathing', a coral slab painted today a glaring white with lime, nearly directly opposite his one-time Palace, a poor place for a king, perhaps used whilst he was so diligently seeking the office; for his last Palace is further on, a well found house, now occupied by his grandson, who was my friendly guide during the day. A keen young fellow, full of push, who is not content to idle in Tuapa, but ever off to other lands to make good money and see the world. He has a wife and children, so the royal line is not likely as yet to become extinct.

He took me to the old Palace to see his heir looms: signed portraits, of large size, of England's Royalties, Queen Victoria,<sup>194</sup> King Edward,<sup>195</sup> King George and their Queens. They were sent to Niue's kings, and he is justly proud of them. I wanted much to see the Stocks of Ancient Times, which I had heard of, and the Prince was nothing loath. Down we clambered into a cave on the cliff-edge, no easy going, stumbling over roots and coral, and found ourselves in a noisesome place, damp and gloomy. No wonder the punished oft died of fright when left there overnight. To one side my Cicerone<sup>196</sup> stepped, and drew forth bones and pieces of skulls of human beings. The stalactites were dripping as I stood there; the coral, green in places; not a comfortable place at all. The Stocks — shame be it said, such relics of the Past as they — lie thrown carelessly upon the coral floor. There is no doubt as to what they were. The lower piece has grooves for four pairs of legs; the further end is rotted badly. The upper piece is but a remnant, grooves only for three left today. The end stakes, which were driven down, are lying loose. The top and bottom pieces must have been bound together with sinnet rope. I longed to buy them on the spot, but wanted first to learn who were the present legal owners. And no one seems to know, though I doubt if any Tuapan cares a tuppence for them.

But if all this was interesting, the hours spent behind the counter in the Store were just as good. My Trader was born at Tuapa, brought up there, knows everyone by name, has a pleasant word for each

<sup>193</sup> The graves of Tongia, left, and Robert head, middle and right (June 2015):

<sup>194</sup> [Queen Victoria \(1819–1901\)](#) was the monarch of the United Kingdom from 1837 until her death.

<sup>195</sup> [Edward VII \(1841–1910\)](#) was monarch of the United Kingdom from 1901 until his death.

<sup>196</sup> [Cicerone](#) is an old term for a guide, one who conducts visitors and sightseers to museums, galleries, etc., and explains matters of archaeological, antiquarian, historic or artistic interest; the word is presumably taken from [Marcus Tullius Cicero](#).

and is a whirlwind. Before we opened, we arranged the shelves for trade. The Strong Box was opened, and we drew forth all manner of calicos and enticing articles of barter. Then we flung open the front door, and in they trooped.

There are two other Traders in Tuapa, one the widow of him who went down in the ‘Jubilee’ <sup>197</sup> — that schooner which mysteriously disappeared — the other an Irishman with a charming wife. Niue’s Traders are unlike others I have met. They refuse to run to seed <sup>198</sup> and careless ways. It is a pleasure to enter their cosy homes. Their welcome is genuine, and their surroundings those of real white folk.

My Trader seems, however, to be the favorite, and very naturally his clientele a large one. Many were waiting his weekly visit. Two tons of copra were brought into his shed that day, borne in baskets, some carried by long poles on shoulders, others in *panniers* <sup>199</sup> upon horse flesh, others in the most ramshackle of carts. All was weighed and credit given. Then across the counter passed the goods in return; some wanted soap, others dress goods, here was one for fish hooks, here one for kerosene. The ladies were specially keen on scents, yet some were dead on tinned meats and biscuits.

My eyes were ravished by the baskets and the hats that were handed in for barter. I counted one hundred baskets of lovely shapes and workmanship. I lost count of the hats, and fans came, too. I had to buy — directly off the ladies — and the Trader helped me to pick the choicest and the best. There is a great demand for the hats and the baskets in New Zealand, and here was I upon the spot. The Trader was making up a consignment of one thousand of the former, and handled the precious things in a way which I thought scandalous. But he had no time to be careful. I did that for him as best I could.

We closed up for lunch, when the good wife spread before us, on the back verandah, a toothsome feast. There was baked flying fish — a fine thing — upon that menu. Then back to work we went, and oft refreshed ourselves with the milk of the young coconut.

It was a glorious time, on a gloriously broiling day, but at last the long list of customers was served, the store emptied of lookers, and we set to work to put back all the remnants in the Strong Box, then loaded up the lorry with copra, hats and baskets, and made for home. My seat was high up on the load and none too secure; the road was not of asphalt, but we got back safe and sound.

## A Wreck Ashore

Another call which took me to Tuapa was a Wreck. Our longed for schooner with supplies had arrived and purposed discharging certain of its cargo for the Village Traders at the village itself. The Captain was new to the island, but the mate, though a young man, an old hand on the treacherous coast. The boat was seen from the cliff to be coming dangerously near to the reef at the wrong spot. Frantic efforts were made by flag waving and horn blowing from the shore to warn of the danger brewing, but still the schooner drew nearer. It was a calm day, and this boat taking the place of the usual one had auxiliary power in it, so wind was no essential. Had the mate been on deck there would surely have been no catastrophe, but he was engaged with the engine, and the Captain was full of confidence

---

<sup>197</sup> In an [article](#) dated 9 December 1920, we read that “The Government steamer Tutenekai returned to-night after an unsuccessful cruise in search of the missing schooner Jubilee, which left Auckland on the 15<sup>th</sup> August for Niue Island. Careful watch was kept for floating wreckage, but none was seen. A merchant at Niue, Mr. Head, who returned by the Tutanekai, states about 4<sup>th</sup> September a severe hurricane was experienced at Niue, and later he found a ship’s locker on the beach, which he has brought to Auckland for identification.”

Mr Head lost one of his children on the Jubilee; see *The Old Trader* in *Tales of Yesterday*.

<sup>198</sup> To decline in looks, status, or utility due to lack of care.

<sup>199</sup> French: a basket, bag, box, or similar container, carried in pairs either slung over the back of a beast of burden or attached to a bicycle or motorcycle.

at his ability to bring his boat alongside the reef, and there tie up till the wind rose. Closer still he drew and the onlookers now could only await the inevitable. He did bring up against the reef, but he did not know that at the very spot he chose, there was an underlying reef jutting out, a veritable trap, which, sailing into, he ran upon hard aground, so hard indeed that he tore the bottom out of his boat and the engine disappeared through the hole. And now up sprang a breeze, seemingly from nowhere, and then breakers rose and rocked that schooner back and forth, cracking its sides between those cruel jaws till 'twas but a wreck indeed.

But the Tuapans had not waited. They had dashed in troops down the cliff and across the reef to save what could be saved from the wreckage. I fear, nay I am sure, that it was first for themselves and but little thought for the Captain. When I arrived upon the scene (news travels fast upon the island in some uncanny way), I met for miles upon the Highway as I walked, men, women and children staggering under loads of what was pure 'plunder'. Not the stores alone, but mattresses and tables, pots and pans, chairs and the very clothing of the crew. For them it was Treasure Trove, their Pastors' teaching was cast to the winds. I found but little of the boat left.

It was hard on them, but the Resident Commissioner who had lately arrived was a man of parts.<sup>200</sup> He gave orders that all was to be returned, and sent out his police to enforce his command. The Bush saved some for the plunderers. however, and what had been consumed that night of orgy was no small fraction of the whole.

Niue's coastline is not to be trifled with. That Captain is but one of many who has learned by bitter experience to approach the island with special care.

## The Village of Hikutavake

(Hee-koo-tar-var-kay)

## Chapter XX

A Village *en Fête*<sup>201</sup> — Headman *Hipa*

### A Village *en Fête* — Headman *Hipa*

There was High festival in Hikutavake, the village at the North West corner of the Island, and I was one of the company. For the second time they had won the Challenge Cup as the Cleanest Village, and the presentation of that Cup was to be made. A third time and it will be theirs for 'keeps'.

*Hipa* had really done the thing each time, *Hipa* the Masterful, *Hipa* their Headman, not alone by right of birth but by his forceful character, and *Hipa* was naturally much in evidence that day. He had arranged a lengthy program, and every item went through with a swing.

It was also the Doctor's Day, a sort of Triumph for his assiduous labours for this people. It was he who had offered the handsome trophy and had worked up the islanders to make an effort towards real

---

<sup>200</sup> A person who is talented in a number of different areas or ways.

<sup>201</sup> French: engaged in a festivity.

cleanliness. With him it is not so much ‘Cleanliness next to Godliness’ as ‘Cleanliness the Handmaid to Health’.

There are Laws and Penalties, but compulsion has heretofore utterly failed. It was Rivalry that did the business, with hard work by the Doctor and his native helpers, week in, week out. The Resident, the Registrar and the Doctor decided the winning village, and certainly to an outsider such as I, who had roamed in each of the eleven villages, Hikutavake had clearest right thereto. True, it is but a small village and compact — not more than 300 souls — and being so, has a distinct advantage over the larger ones where untidy and indifferent folk are more numerous, but the secret lay in Unanimity. Everybody was out to win, and *Hipa* the Masterful would not stand for any slackers.

Most of the white handfull on the island were there that day, the men, their wives, their children, babes in arms. The two lorries, the one and only Ford, traps varied, all bore happy loads, and the White Man from far off Hakupu could not be left out, therefore did his scholars have a holiday, and that white man went.

Hikutavake lies off the main road, reached by a by-lane between Tuapa and Mutalau. The approach is highly picturesque, the land bordered on each side by a tropical forest, till at length straight ahead one sees the open space of the Village Green.

Arriving, we found six and thirty men, arrayed in white trousers and blouses of blue edged with white, drawn up on one side, whilst the same number of women, all in white, stood at strict attention on the other, a dozen boys also on the men’s side, the like number of girls on the women’s. Here was *Hipa*’s work at the very outset, for *Hipa* had been a Sergeant in the Great War and is not Drill a Sergeant’s strong point?

A long and commodious marquee <sup>202</sup> had been erected at the far end of the Green, no mere sailcloth, but of posts and coconut leaves, with flags fluttering from the front, and tables spread therein for the white folk’s lunch to come. That for the natives was to be seen at one side, extending almost half the length of that Green — seventy baskets in a row — loaded with all manner of local foods, yet in one I saw two tins of B.C. <sup>203</sup> Salmon! Of course, there must be roasted pig, and three of these hung suspended at full length in the centre of the line.

Before the formal proceedings began, I took a stroll around. The village nestled on the summit of the cliff, the Church not a stone’s throw from the edge. Below, the waves were smashing down upon the Fringing reef; for all that, it was a glorious day of sun. Far below me, to the left, one could see the cleft in the reef, where alone boats can safely approach. Nature had made it. It is but narrow, and a clumsy oarsman could easily make a hash of it, but taken properly it would land you safe and squarely upon the even reef top close to shore. There is no beach.

Twenty years ago Hikutavake lay up on the ridge — the flat top of the land — behind the present site, and great was the dispute as to coming lower. But the Church settled the matter. It also was the first Church on Niue to discard a thatch and put on corrugated iron for a roof. They are clearly a progressive people. The rest of the island has followed them in this, as they will now have to follow them in cleanliness.

I gathered herewhiles *Hipa*’s history, for he had welcomed us in excellent English and I wanted to fathom this masterful native. A big chap he, straight and strong of limb, he has not lead an idle life.

<sup>202</sup> A large tent, open-sided and installed outdoors for temporary functions.

<sup>203</sup> British Columbia, Canada. WWB lived in Victoria, B.C., from 1887 to 1890, 1898 to 1920 and, after he left Niue, from 1925 to 1928. Salmon canning has been an important industry in B.C. since 1870.

His father, though a Chief, hired himself as Boss of a gang of Niue ‘boys’ engaged to work phosphate on Malden Island, 900 miles away to the North East, and took his little lad along with him. His term of engagement up, the father returned, but the white manager and his wife had taken a great fancy to the little pickaninny. He became their cook boy, thus learned he English. Returning to Niue, he took the fashionable step in Niuean Society, went to the Mission School and passed out as Pastor and Teacher. To New Guinea he went and stayed there till his wife’s health compelled him to return. He now became a member of the native Legislature, the Niue Council, and Headman of his native village, adding to his duties that of Official Government Interpreter. When the Great War broke out, he promptly volunteered and saw not only Egypt, but France, lost a brother in the Fight and himself was wounded. Rose to be a Sergeant. The War over, he once again saw Niue, his added duties now being Chief of Police and Health Inspector. When he walks into a village with his *Aides-de-camp* <sup>204</sup> on Inspection bent, there is something doing in that village. Like a wise man, he first set his own house in order, and rightly Hikutavake thinks that there is none on Niue quite so good as he.

A bell rang out, and all got to their places, chairs actually provided for the white guests beneath the welcome awning. Drill was the first Order of the Day, much marching and counter-marching, much Swedish Drill <sup>205</sup> too, *Hipa* in his element, the typical Drill Sergeant, terribly masterful, and, I fear, despite his clerical training, giving vent — so I was told — at times to many naughty words in the vernacular when things did not go quite to his liking. He certainly was not afraid to use his bare toes when it seemed needful. The women did their share splendidly, though they had oft to mop their perspiring faces. That Drill took a long time — Time counts not upon Niue — then came the Speaking, which took even longer.

The Resident led off with words of congratulation, the Doctor followed with words of counsel, the Missionary got his turn, and they sought me, but I declined to overload the program. Then came forth the Challenge Cup and into *Hipa*’s hands it went, with £10 of good silver money besides, a present to the Village from the Government, and £2–2–0 given by that generous Doctor to an ungetatable <sup>206</sup> name, for having the cleanest, tidiest, sweetest smelling house in Hikutavake. Oh! they were a happy crowd and showed it in their oratory. Great was the flow of native eloquence, the general burden this: In keeping our homes clean, ere the Cup was heard of, we were but trying to obey the regulations, but now that it has come to a tussle with the other villages, we challenge the whole lot to a fight to a finish. One outsider spoke — a great man of Tuapa — the other villages had sent none, I fear through jealousy. He of Tuapa spoke truly enough, that a small village stood always a better chance to win that Cup than a large one. But Hikutavake was the daughter of Tuapa — *Oho motu*, the King’s abode — and the mother rejoiced wholeheartedly in the success attained by the daughter.

At last the Speaking was over and we fell to upon the tables piled high with food. Opposite me was a huge banana leaf spread across to my *vis-a-vis*, <sup>207</sup> and upon that broad leaf, minus any plate, six roasted chicken and two boiled land crabs. Thus was it for each. We had knives and forks. The crabs were not so easy; there were neither crackers nor hammers handy, but a native waiter promptly made and presented to me a most efficient Penetrator and all went well. *Hipa*, of course, was very much upon the spot, and recalling his training as a cook boy, forgetting all the rest, served up a delicious cup of tea, followed by the ‘King’s Dish’, arrowroot in a half coconut shell, boiling hot and no spoon! But what of that! We consumed it.

<sup>204</sup> French: a personal assistant, secretary, or adjutant to a person of high rank, usually a senior military officer or a head of state.

<sup>205</sup> Exercises for students based on *The Swedish Drill Teacher* by M.H. Spalding, 1910.

<sup>206</sup> Un-get-at-able.

<sup>207</sup> French: *face to face* or *in regard to*; in this context, the person across from WWB.

And now the tables were removed and we had a rest, ere the Dancing and the Songs commenced. Some of us took that resting time to walk a half mile through the deep shade to see the *Ma-ta-pa* Chasm, a great rift in the rocky cliff into which the sea pours, forming a long and lovely Bathing Pool. Right across its sea face, there rises a huge rock, which breaks the force of all ordinary waves, and all is still within. That great Pool is deep, and only healthy swimmers take their sport therein, for it is cold there, abnormally so for Niue. *Matapa* is the northern end of a rift, which runs unevenly down the island and ends at Fatiau's Cave at the southern end nigh fourteen miles away. Here Captain Cook, undoubtedly to my mind, knowing well his Journal, first made land, sighting the great rift in the coast cliff as he came from the north. He got nothing for his pains by landing, as that Journal shows.

Now back, and Time was called for full three hours of Song and Dance. It can be overdone. It was, but everyone wanted to have a turn in doing honour to so great an occasion. They came in groups, four of them, North, South, East and West Hikutavake, and in each the women outnumbered the men two to one. I counted just three dozen in each, and they, both sexes, wore all the colors of the rainbow, not only on their garments, but on their ankles, wrists and heads. Yet even at that they found room on the latter for the sprinkling of much grated sandalwood, giving a touch of dull gold to their raven-black heads of hair. The ladies made up for the inequality of the men by adding charcoal mustachios of most elaborate design. No man ever had such, but they looked exceeding fierce and clearly spelled the Male.

Their Songs were so many 'Speeches in Song', much to the point, and the Music, a Chant, repeated endlessly, the hands beating in truest time, the body movements ever changing. If it was not for the fact that Hand movement is an integral part of all Polynesian Song, I should say that it was pure Vanity on these Hikutavakean women's part, for the hands were undoubtedly pretty, the fingers tapering gracefully, the proportions perfect, no large hands seen and no trace of hard work done, their rich brown colour giving a softness quite beyond me to depict. They sang of the Cup, of their Hopes and their Fears, of the Hard Work it meant, of the New Mats made till fingers ached, of Whitewashing and the Broom. They sang a Welcome to the Cup, a Welcome to the £10, a Welcome to the White Folk, and a Proclamation to all Niue of their firm intention to win that precious Cup outright.

Then some would rise and dance whilst the rest sang Jazz or Rag or Foxtrot Waltz time, and those bodies twisted, twirled and writhed like snakes, and the kerosene can went rattling at a dazzling pace, and the Funny Men got busy and played the Fool around the group.

And each set, ere leaving, gave gifts to us: sugarcane and baskets, necklaces and live crabs, chickens, too. I tied my white Leghorn to a leg of my chair and yet lost it in some mysterious way; I did not Mourn for it. One of those seventy baskets I found was mine also. I was very Chieflike and generous, giving it grandly to *Hipa* (and the Devil), for it contained Abominations — fat pork half roasted, and weirdsome-looking fish, with taro in abundance. For all that, it was very kind of them, and I a Stranger.

Then for a closing scene, they gave us an old-time game — 'the Owl and the Rat' — Niue's 'Pussy in the Ring'. A large circle was formed of men, hands joined, and within the ring, a human being on all fours with a long improvised tail acting as the Rat. Forth from a *falé* issued the Owl, whose face was certainly well made up, and who flapped his arms as wings and looked o'er wise. The antics of that Owl were clever, and the squeals of that rat as he saw his winged enemy making for him, were very real. Again and again did that human Owl try to get within the ring, but was blocked by arms, high, low and every way. Meanwhile, the ring chanted high Derision at that Owl, till goaded on to desperation, he rushed at the spot where the rodent cowered, scared him out of the ring, and rat and owl made frantic rush, the one for safety, the other for capture, and both headed straight for unlucky

me. Being still a little nimble, I escaped the onslaught by a hand's breadth, but chair went flying and the Rat met death at my feet.

Now all rose and sang 'God Save the King', and thanks were given and received by visitors and village, and once more tea and cakes were served, with handshaking all round. Then carriages were ordered, and the lorries, and the one and only Ford, and with hearty cheers from both sides, Hikutavake was left to itself, its Triumph and its Cup.

## **The Village of Makefu**

(Mar-kēf-ōo)

## **Chapter XXI**

### **Turtles — Grades of Grief**

#### **Turtles**

The Village of Makefu, a small and, as usual, a straggling one, lies between Alofi and Tuapa going North. It has but little history, but is noted for its bead work and its turtles. These latter are to be seen all round the island, but they are not easy of entrapping. Makefu boasts the Champion trapper, known as the 'Turtle King'. In his falé he hoards that portion of his catch which is incorruptible; in a shed close by, three immense backs were hanging as I passed one day, slowly smoking till ready for sale or barter.

This fortunate one owns a pool in the reef below, which is a special rendezvous of turtles. To see if any are lying deep below the still surface, he uses a glass box; should there be, he knows that they must needs rise for a breath of air, and accordingly prepares a stout line with hook attached. As the head appears, he deftly casts the snare. The turtle may draw back as it senses danger. Mostly it is just too late; it only needs a hauling in.

#### **Grades of Grief**

The village has come lately into unpleasant prominence, for here dwelt murder and victim in Niue's latest capital crime. A great man and a leader was the former, well to do as his pretty, well built bungalow close to the road, so that all can see, bears testimony. Not far along that road, one comes to the scene of the tragedy, marked by a cairn of stones 'for remembrance and for warning'; the grave just across the way, in front of the victim's home. The widow made strong entreaty to have the body buried actually within that home, it to become a sort of mausoleum, but the Authorities refused. Such action was well taken; they know the native mind. It may be that within six months she will have another lord and master and be glad of her home.

It was but the other day that one in the adjoining village lost his wife and would fain bury the body at his doorstep, so that from his verandah he might sit and gaze and mourn. His friends managed to persuade him to lay it at the back but a step from his porch on that side. There, when his plantation did not require him, he sat and grieved. Yet but half a year had passed when he brought a new wife home and that grave became an offence as he and she stepped from porch to cooking shed, but there it has had to stay. Whilst passing of husband or wife seems but a temporary grief, it is not of children.

Till they have left the home circle, they are held exceeding dear and later are very far from being forgotten should they die. You may see a parent adorned with a dead son's trousers tied round the waist, or his shirt around the neck, some article of girl or babe likewise, mothers alike with fathers thus adorned. That grief is lifelong.

## The Village of Mutalau

(Moo-tar-lar-oo)

## Chapter XXII

### On the Top of the Land — Fearless Hearts

#### On the Top of the Land

There was an opportunity offered to see this village at the extreme North-Eastern point of the island, eleven miles by road from Alofi, for there was work out there for the Doctor, ever a very busy man, and we hastened thither in his 'Ford'. The run was through Makefu and Tuapa, then taking the grade to the top of the island, we crossed to the east by a road which seemed never to leave plantations. There were scattered houses all along the way, and greetings many as we passed, for all know the *Ekekafo*.<sup>208</sup>

The water question must be acute with these folks, their only source the Wayside Tanks to some homes a mile away and all to be carried in buckets. One cannot wonder at the scanty ablutions and that skin diseases are rife.

Then out from the bush to the village, where there is the usual open space, but no Church, for it collapsed under the last hurricane and with iron at its present price, it awaits to be rebuilt. They use the Sunday School in place of it, which managed to escape the blow. The village on the flat top of the island is, like Hakupu, some distance from the sea below, where one has to use a ladder of sorts to reach the reef.

Here dwells a white man, a New Zealander, who has a home bespeaking care, a cosy dwelling with countless nick-nacks, and a garden where roses grow. He, too, heard the Call of the Motherland, went through the Fight, and happily came through unmarked. In his hall are hung mementoes of the struggle. He proved a most admirable host at each visit of mine to his village.

They are keen to have a Government School, having one of the largest populations of the island, and I saw Blackboards in the Sunday School, which showed that the native Pastor was anticipating things, as also English on those boards, whilst Mission Schools teach all in the native tongue. Logs and lumber lay ready for the school to be on a site cleared in the forest on the confines of the village. The main difficulty is to secure the White Teacher. Tuapa waits alike as here. Hakupu was the fortunate one; their turn will surely come in time.

---

<sup>208</sup> Niuean for *doctor*. Translated by Efi Rex. WWB has *Ekekafo* here and elsewhere.

Once there was much trading carried on, no less than three concerns serving the place; merchants overdid the thing; one store now fills the bill. The village is a stronghold of the Seventh Day Adventists; they have their Church in the bush and are served from Alofi.

### **Fearless Hearts**

It was at this village that Paulo, the Samoan Teacher — he of the fearless heart — first set foot on Niue. He came from the North and stepped ashore with but a Bible in one hand and a staff in the other. The savage natives gathered round him, with intention quickly to slay him who had thus dared to land. Despite their murderous looks, Paulo stood calm amid the clamorous crowd and thrusting his staff into the ground, exclaimed in their own tongue he had learned through Niueans borne off by others to Apia, “Here plant I the Word of God.” His fearlessness appealed to one High Chief. “Men! shall we slay this newcomer till we have heard him? He has no spear; he holds but a walking staff. If he brings bad words, we will slay him, but if he brings good words we may glad.” They were.

Here, too, another fearless heart, this time a white man proved his courage and won out also. It was in the 70s. There was a murder in the village and the victim was widely connected. The news spread fast and his friends came hurrying to the spot with every prospect of fierce fighting. The murder had been a lively time in itself. No stealthy blow in the dark, nor sudden assault in the bush. That Chief was found where he had no right to be and essay was made to lay hands on him by the injured one and his friends. Seizing an axe, he flayed it right and left, took off one man’s ear, cut off another man’s arm, slit another’s shoulder and laid out still other three in direful shape. But the numbers were against him and hacked and hewn well nigh to pieces, still had strength to cry, “I pray you leave me just a stump,” then died. News reached Tuapa, where Head the Trader dwelt. At once he hastened to the scene. He was but just in time. The natives’ fighting blood was up; it would have seemed and been to most a hopeless task to avert catastrophe. He, known to one and all, stepped in between the gathered crowds, spoke and won out. Staying their hands, he saw them separate for their diverse homes, then bore off the wounded to his own home, bound up their wounds, nursed them back to health and strength, nor lost he one of them.

Both these fearless ones — Polynesian and British — were long a Power in the land of their adoption.

## **The Village of Liku**

(Lee-koo)

## **Chapter XXIII**

### **Manners Easy — The Rugby Tackle**

### **Manners Easy**

Another of the eleven villages I was first enabled to see by the kindness of our Island Doctor. Later I knew it well. Liku is the most unsophisticated village of them all, being on the East coast and having had but little contact with white folk in comparison with the rest, from the very first. It is far strung out, its houses of the most rough and ready appearance, save two in the village proper, which belong to the past and the present native Pastors respectively. The run was very pleasant from Hakupu, six miles of grass road, acknowledged by all as the most delightful of the whole forty mile circuit. Ferns

abundant on either side, richest foliage of every kind mixed up with these, heavy timber here and there with leafy, widespread branches, fine plantations of coconut palms and sugarcane, bananas too aplenty. We ran through a continuous bower.<sup>209</sup>

The Doctor was not allowed to see his particular patients till he had held an Open Air Dispensary. What that auto carried in the way of medicines was a marvel. Those villagers were avid for pills; watery medicines came a very poor second. As to manners, there was a great lack of ‘Please’ and ‘Thank you’; they grabbed at everything handed out and the Doctor was far too busy to teach them courtesy. The three hundred villagers were well represented round the car; men, women, children, infants, too, poured in upon the scene. The Pride of the Village was there, of course, a boy, a pure Albino, in his early ‘teens, from his flaxen hair to his bare toes, a ‘Paleface’ indeed. Liku is in luck possessing two fully grown women, all three entirely unrelated. Other villages are full of envy, for Albinos bring good luck with them, so gossip says on Niue, and this backed up by the island’s Devil Doctors still far from extinction. They have long held strong grip on Liku and the Doctor has been much encouraged by the appeals made for him to visit and dispense for the village. So the welcome was very hearty, even if it was somewhat rough and manners easy.

I wandered off to see the sights, not numerous. The Church, a long one, some 100 feet by 20, seats right across the nave, no central aisle, these at the sides, a stout rail all down the centre dividing the sexes, the pews soft of seat through coconut fibre and matting. Its name the ‘New Jerusalem’ painted in huge lettering high up on the eastern wall. Thence outside to the Village Bell, presented lately by Likuans resident in American Samoa — a bell with rich mellow tone, one that many a City Church might envy. Church and Bell Tower are embraced in the Church yard, these together with four enormous ungainly graves of the Great of Liku’s Past enclosed by a stout wall of coral made to represent a ship’s upper deck, a rudder in stone at one end, a bowsprit of like material at the other. A weird conception, which must have some history behind it, did one know. The village green, a poor one, especially for any games, far too many coconut palms, free space little.

Of course, the Pastor and his wife gave us welcome, a grave welcome befitting their responsibilities, the wife — as all Pastors’ wives on Niue appear to be — very plump and robed in a Mother Hubbard gown that reached the ground. They took the lead up the gentle slope to their roomy home, all within as well as without whitewashed, and regaled us with fruit and coconut milk.

Usually the Doctor leaves a village loaded down with gifts of fruit pressed eagerly upon him, but Liku’s manners do not at present run to that. Once the Doctor had made his rounds after the despoiling of his Drug Shop on wheels, they let us depart with but noisy shouting.

### The Rugby Tackle

A later visit with the *Ekekafo* was a memorable one, amusing to me, but anything but to the little Doctor. At once upon arrival, he was informed that a man with a badly ulcerated tooth needed his attention. Drawing the Ford up on the Highway, the patient came forth from his *falé*, hidden up a rise in the bush hard by, accompanied by two stalwart male friends and a wife of like calibre. A box good and strong was produced for a dentist’s chair and each man gripped an arm, the woman standing close behind with her arms on shoulders ready for emergency. The patient with but a loin cloth on him, clean shaven and very bald, was an ugly customer to look at, not alone from the exuberance on his cheek, but from his bullish build. My Doctor was not built on such massive lines, not only being short, but lean. He looked within, inserted the forceps, one pull and the thing was done, but not so thought the patient. With a yell that half the village must have heard, he sprang from his box, cast off

---

<sup>209</sup> A shady leafy shelter or recess, as in a wood or garden; an arbour.

his friends as if they were feather weights, wrenched off his wife's encircling arms and went for that poor Doctor. Seated in the car, I flung open all doors as a hoped for City of Refuge,<sup>210</sup> but there was no chance for the poor man, the Avenger was too close upon his heels. Round and round the Ford the Chased and the Chaser sped, the latter yelling the while, full blast. Thrice the men and woman rushed him and each time failed to hold. Jumping to the rescue, I shouted "Collar him low" — I played Rugby in the 70s<sup>211</sup> — and whether they understood English or not, they followed the advice and brought him squarely to earth. Then all three sat on him. Others now rushing up, he was borne off, still bellowing like a maddened bull, to his home, some holding legs, others arms, the wife his head and the exhausted little Doctor sank on to a seat beside me. A gallant little fellow for once recovering, he calmly went his rounds, and then, ere leaving the village, paid a visit to the man, whom, however, he found not only quiet, but profoundly penitent for his attempted assault.

On later visits to Liku, no Doctor with me, I met that man and we had a laugh together at the nimble little Dentist and the Rugby Tackle.

## The Village of Fatiau

(Far-see-aroo)

## Chapter XXIV

On the Downgrade — The Black Rock

### On the Downgrade

Fatiau lies in the forest, well off the Highway, on the upper flat about a mile from the sea. Once it was well populated and its warriors went forth from it to contend with those of other villages, especially of the northern side, and when hard pressed, they could find shelter and safety in a huge cave by the sea, which today is so overgrown of approach or entry by trailing vine that it is no easy matter to reach. But now they are a handful, the smallest community on Niue, some seventy all told, and they are far from up to date, whilst their village is uncomely. Their Church, dedicated as 'Zion', has a rickety appearance, its walls propped up by stays, and relics of heathen times seem to linger even in so sacred a place, for hideous figures in relief, demons surely, meet the eye at the four corners of the Church verandah.

Orange trees abound, however, and guava bushes, and they will not starve for lack of coconuts. They still have the will for sport and lately sacrificed many a fine fruit tree to win a very limited space as the Village Green, to be like their fellows elsewhere.

Those who greeted me on visits paid looked very far from healthy and the children are so few that Fatiau may yet be wiped off the map. It has been so with other spots; one hears of place names that exist no longer, some not even the oldest of today can at all locate.

---

<sup>210</sup> The [Cities of Refuge](#) were towns in the Kingdom of Israel and Kingdom of Judah in which the perpetrators of manslaughter could claim the right of asylum.

<sup>211</sup> WWB played rugby for Blackheath in southeast London, and other well known teams. See the article *Mr. Bolton's School* in the August 12, 1906, edition of the Victoria Daily Colonist, in Part VI.

Those villages, like this one, were in the Bush, for it was there — not on the coast — that the earlier Niueans lived. Not till the white man came and raised his stores by the sea did they leave the forest and cluster round the strangers. But Fatiau did not move; the bush was good enough for them. Its coast line, however, holds Romance.

### **The Black Rock**

At the northern end of Niue and off Mutalau, there is a huge Black Rock, but half of it has split away and gone. That other half is to be seen at the southern end, off Fatiau. The great boulder quarreled with itself, split in two, one half remained, the other went a-wandering, slowly working its way till now it has reached and rests awhile off Fatiau. It will not remain, but as slowly journey on till it has completed the circle, once more to meet its other half, join on and heal the breach forever. When those two become one again, then will Niue sink into the deep from whence it rose.

What the natives really feel about that rock, I cannot say, but we can surely await that day with great complacency, though we should dwell thereon, as now I do, and others will as the years mount up for Niue.

## **The Village of Avatele**

(Ar-var-say-lay)

## **Chapter XXV**

The Home of the Aborigines — The End of the Round

### **The Home of the Aborigines**

Avatele lies five miles from Alofi, at the South West corner of the island. There is an upgrade from the little Capital to the flat top of Niue, then miles of guava bushes cover the ground, with pandanus trees here and there, whose fruit, so like a pineapple, produces a most pungent scent for the ladies of the land and whose leaves are used for plaiting; then downgrade to the village by the sea. Here is the only real beach on the island.<sup>212</sup> Not large, only some eighty yards by twenty, a beach of white sand reaching to the Fringing reef and so to the so-called Bay, where in the whaling days of old, many a ship lay to for shelter and supplies. With such rough sailormen ashore, Avatele has seen some lively

---

<sup>212</sup> Oneonepata Beach at Avatele, with boat ramp on the right (June 2015):

times, but today is very demure, a tidy looking village with several pretty homes, a fine Church and Sunday School. <sup>213</sup>

Here an Englishman, married to a native, has long made his home, acting as a Trader. The Call of his Motherland found him eager to go where he was gassed and finds life now at times a burden, but pluckily works on. Here, too, *Faséné*, my assistant dwells; no slouch is he, zealous at his school work and very capable, a clean man in every way. His home, a charming one and neatness itself, even as he. He, too, went to the Front and happily returned unimpaired. <sup>214</sup>

I hoped to see the ancient coral Fort, where the villagers were wont to fly for refuge in days gone by, but the trail is blocked by vegetation, so that it is not possible to see or follow it. The Avateleans seem never to have hit it off with the rest of the villages; they claimed to be the Aborigines and the rest were Interlopers. They were forever beset by the rest, but with the Fort to flee to, were never wiped out. They certainly carry themselves proudly and are courtesy itself.

### The End of the Round

Here, then, we have visited all the villages on the island, save two: Tamakautoga and Lakepa. Not but that I oft passed through the former on my tramp afoot from Hakupu to Alofi, when I chose the

---

<sup>213</sup> Church at Avatele (June 2015):

<sup>214</sup> Role of Honour commemorating the men from Avatele who served with the New Zealand Maori Pioneer Battalion in the First New Zealand Expeditionary Forces, 1914–1918, including WWB's assistant teacher, Fasene (June 2015):

coast route rather than cut across the top of the island, but it is a sleepy village without interest to any others besides themselves, except that there — as has been already mentioned — dwells that very formidable woman, not only in character, but in size, who is the Pontiff of Witchcraft on Niue and exacts obedience from every wizard and witch thereon, and they seem not to be few in number.<sup>215</sup> It is a small village, lying on the West coast, whilst Lakepa, similar to it in every way, lies on the wild East coast. Besides these two there is a 12<sup>th</sup> village in the making, close to Hikutavake, a thing today of a few grass huts, yet to win both a place and a name.

---

<sup>215</sup> Tamakautoga (June 2015):

## TALES OF YESTERDAY

### 1. The Cost of a Sextant

Ere white men dwelt on Niue, there came a British schooner to the offing of Tuapa. The natives crowded off in their canoes, and some were allowed on deck and shown around. Friendliest relations being established, Captain and crew went ashore. The next day the sextant was discovered to be missing and great was the fuss aboard. Enquiries on shore failed to lead to the culprit, and as still the natives hung about the ship, the Captain determined to seize and hold a hostage till the culprit should appear. A young lad was laid hold of, taken from a canoe and brought aboard. Then ugly temper showed, and the wild natives tied their little skiffs with ropes of sinnet to the big ship's sides and refused to leave till the captive was restored. A wind just then sprang up, which meant destruction of the schooner upon the fringing reef if she still held her ground. So out to sea she put, the limpets still hanging to her sides. Many of the occupants had clambered aboard, and the Captain having no desire to return to land them, gave order when well out to sea to clear the decks of those dark skinned fellows, willy nilly. Out upon that fast rising sea they were forced, and of all the number but one returned to Tuapa. His story was that after incredible effort, they had managed to make shore at Avatele, the south western point of the island, and there had been set upon by their enemies — for war was then ever amongst the villages — and all but he had fallen in the unequal fight.

Here then was clear cause for revenge, and the Tuapans started forthwith upon the warpath. The Avateleans were not unprepared; they had a coral Fort for just such times as these; to it they retreated before the furious onslaught and long held out, but not without a heavy loss of life on either side.

Avenged according to their code, the Tuapans returned to their northern village, and sick and sorry for all the trouble some thief had caused, made search and found both culprit and the sextant. His doom was sealed. No casting over cliff, no spear thrust nor club, but putting him in his canoe he was sent adrift to sea, doomed to perish just as certainly, but far more miserably.

With cooler tempers, came word from Avatele. What really was the late war about? They had learned that it was for slaughtering fellow Niueans who had landed out of a raging sea. The storm was certainly a fact, but the canoes and their occupants a myth. The sole survivor had clearly lied to make himself out a hero. Tuapa offered no apology, however. The fallen warriors were dead. Both sides had put up a brave fight. The sea might hold its secret and its dead. The ship had gone, and Tuapa possessed a Sextant of which it was inordinately proud.

### 2. Village Justice

In the days before a Resident came to the Isle, they had a rough and ready way of settling with the law breakers. Upon the village green the culprits were marshalled by the guardians of Niue laws. The native judge sat upon the sward, and on his right and left stood the apprehended, men and women on respective sides. One by one they stood before him, and like a true Niuean he aired his eloquence to his heart's content. The Disgrace was what these solemn Judges chiefly dwelt on, and when they felt that the delinquent had been sufficiently squelched before his and her fellows, the fine was named, if fine it was to be.

Before tin money came into use, the fine was necessarily in goods; afterwards it was Peruvian dollars<sup>216</sup> or their equivalent. The sum might sound large, but the method of paying usually adopted cut down the amount prodigiously. The Treasury was in front of the Judge and grew in size as the judgements were announced. A shirt was thrown onto the pile at ten dollars, a lavalava went on at five, a battered straw hat at about the same, whilst the proud possessor of an ancient ‘plug’ hat,<sup>217</sup> secured from a ship in the long ago, went in at least for twenty.

After the garments of the sinful came their produce, and when Court at last was cleared, Judge and Police proceeded to divide up the spoils of the day. That ‘plug’ hat was well known all over Niue; it travelled much; its owners — for the police found ever ready purchaser — could not somehow escape the meshes of the Law. It was a hoodoo, yet none hesitated for possession. One week it would be on the head of some brave at Avatele in the South; the next week would see it at Mutalau in the North.

But not always was it Fine. For moral offences, it was usually the Lash, and there and then it was administered, to women as well as to men. There was no play about that. Judge and police could get no benefit out of it, so it was the real thing. The blood came, but the savage heart refused to cry out. When over, the usual happening was the taunt to the administrator<sup>218</sup> of the law that he did not know how to hurt, and to the Judge that he must give a heavier sentence the next time. Then Court adjourned.

### 3. Rogues in Cassocks

They love not Roman Catholicism upon Niue. It is hardly to be wondered at, as this tale will disclose. The Protestant missionaries had at last got a permanent footing upon the island and things were running smoothly, when one day a ship appeared; off from it put a boat, and making the perilous landing, two figures stepped ashore, the rest returning to the ship.

Who were these men robed in black to their feet, and round their necks hung chains of beads, a cross at the end resting on their breasts, and as they stepped ashore were heard mumbling words, and with folded hands cast their eyes to heaven? Slowly, amid the crowd of natives, they made their way direct to the Missionary’s large stucco house with roof of thatch. They seemed to have no doubt as to whither they would go. The Missionary, in his largeness of heart, received them warmly. All his was theirs. They could not speak his language, but they were strangers and teachers of the same Saviour. They made it clear to him, however, that though the ship in the offing was a mission ship, they had much aboard for barter. Would the natives come off and see? They would be very welcome.

Thus was the trap laid, and into it the Niueans fell. What entrancing things they had aboard! those beads and things called ‘amulets’ and pictures, too, of the natives’ lately accepted Christ, useful things as well. There was much going and coming, besides which they were free, were those native men, to stop aboard whilst the mission ship moved around the coast. Then something happened.

Everything was lovely; everybody was so very kind. The hundred men and more who had joined the picnic, ere the round of the isle was made, were asked below to have yet one more sumptuous meal. Of course, those ever hungry natives would. Hark! what was that, as the last stepped down the hatchway? The covering boards came thundering down above their heads. All was darkness. They were trapped.

<sup>216</sup> Possibly the Soles de Oro, which was introduced in Peru in 1863, [replacing the Bolivian Peso at a rate of 1 Soles de Oro to 1.25 Bolivian Pesos](#).

<sup>217</sup> A hat that is round and black and hard with a narrow brim; synonyms are *bowler hat*, *bowler*, *derby*.

<sup>218</sup> WWB has *administrater*.

Some of the finest manhood of Niue were carried off, but one only ever to return, he by the kindness of an Englishman, who found him working in the mines of Peru and took pity on him and his story, conniving at his escape from slavery. For this ship was a Peruvian barque; those cassocked rogues were ‘black birders’. They sailed to Easter Island far to the East, the Slavers’ rendezvous.

From that day, the name of Roman Catholic has a fearsome sound to Niuean ears. Who can wonder at it? Yet good came out of that gross, evil deed, for the echo of it reached round the world, and the Motherland, whose protection Niue long had sought, protested loudly at such an outrage. Strong pressure was brought to bear on that South American home of plunderers of peaceful isles, and Peruvian ‘black birding’ barques no more sailed these seas.<sup>219</sup>

#### 4. An Affair of Honour

Things matrimonial have not always run smoothly upon Niue. There was Patterson,<sup>220</sup> the trader. He had lost his first wife and had laid her to rest on the cliff-edge at Alofi. In Samoa he had found a second mate, a governess to white children in Apia. Now came to Avatele yet another trader to represent an Australian firm. He had wife and budding daughters. One of the latter, Patterson of Alofi coveted. He had the effrontery to tell his rival trader that he asked for the maiden in rightful form as the then M<sup>rs</sup> Patterson was no legal wife of his. He thought to prosper in his suit, but he counted not on an injured woman’s grit. That same true wife got wind of the scheme and put her spoke in it. Therefore word came to Alofi from Avatele that the courter was not acceptable — indeed far otherwise.

Now the courter was a big man, claimed to be an American, had a Prussian bearing, altogether a masterful man, and the Avatele trader was a little man, with the heart of a mouse, brave only at a

---

<sup>219</sup> This story is recounted on pages 87–88 of Smith, Part IV: “In my account of the Kermadec Islands, at page 15, I mentioned the fact, copied from Sterndale, of a large number of Tokelau natives (since known to be Niuē natives) having been taken to Sunday Island [now Raoul Island in the Kermadec Islands] by a Callao slaver in 1861, where nearly all of them died. I got the Niuē account of this affair through the Rev. F. E. Lawes. It was not very long after the arrival of Rev. W. G. Lawes that a Peruvian slaver appeared off the coast at Alofi, under the command of an American. They succeeded in getting a large number of the people on board and induced them to go below, when they clapped the hatches on and secured them. There were about 200 of them. The people on shore, seeing the others did not return, began to understand that something was the matter. So Fata-a-iki, who was an enterprising and determined chief (but not then king), got a large number of people together and went off in their canoes, with the intention of over-powering the ship and releasing their fellow-islanders. But the crew prevented their getting on board, and fired on them to keep them off — one man being killed and others wounded. The crew manned and lowered an armed boat, and gave chase to the canoes, which made for the shore. A big fat man in Fata-a-iki’s canoe wanted to cease paddling and offer up prayers for their safety; but Fata-a-iki said, “Leave your prayers till we get ashore,” and insisted on urging their canoe at full speed. Some time after this an Irish sailor came ashore to the mission house to fetch some medicine, and Fata-a-iki wanted to make him prisoner as a hostage for their own people, but Mr. Lawes dissuaded them, thinking the captain would not wait for his sailor. Soon after the vessel sailed, and before very long dysentery broke out amongst the unfortunate prisoners, when many died, and were cast overboard. Things got worse, so the captain, being then near Sunday Island, landed most of the others in Denham Bay, and there left them to die, as all the unfortunates did. Some few were taken on to Peru, where they were made to work as slaves in the mines and other works. Some years after this an American whaler manned by Aitutaki natives arrived at Callao. Two of the younger Niuē people determined to escape by her if they could, and communicated their desire to the Aitutaki crew, who arranged with the captain to take the young men, if they came off dressed in their best, and hid somewhere near the shore. When the whaler’s boat came ashore, the heart of one of the young men failed him, thinking they would be recaptured by the Peruvians, but the other went off in the boat. The coastguard suspecting something gave chase, but the boat reached the ship, and the captain being all ready put out to sea at once. This young lad was landed at Oahu, from whence he managed to communicate with his relatives at Niuē; but he was afraid to come back on account of his father, who he knew would hold him responsible for his brother left in Peru. He married at Oahu, but in the end made his way back to Niuē.”

<sup>220</sup> The first trader to settle on Niue was Mr. H. W. Patterson, who came from Samoa in 1866 as agent for [Johann Cesar Godeffroy & Sohn](#) of Hamburg, Germany. See [Johann Cesar VI. Godeffroy \(1813–1835\)](#).

distance. The Big Man wrote a letter, not mincing words, but challenging the Little Man to a duel to the death; he had been grossly insulted; he would have revenge. He would come over the trail and have it. He named the day and the hour. The letter went. Then was there great consternation in Avatele. An unheard-of thing! a duel with pistols upon Niue! The natives were wild with excitement, yet feared. The Little Man with the mouse's heart barricaded his home and his store, got his and himself safely behind the walls and waited with palpitating heart.

Yes! it was true! The road slopes down from the ridge above as one nears Avatele from Alofi; the village itself is on the flat. Along that wooded flat came furiously the Challenger. How big he looked upon his horse, that horse which he had borrowed from the missionary for a little outing, and in his anger was spurring that steed which ever before had but ambled on errands of peace, and on each side of the man there were holsters with those implements of death all ready for use.

He came tearing along, and nearing the Little Man's abode shouted aloud brave words, demanding Blood! Blood! The natives hied to their thatched homes; he might take theirs instead. The Mouse Heart behind the walls peered out and trembled. Round and round the castle the coatless knight steered his mount, uttering fearsome cries and many most extravagant words, brandishing his weapons, expending them anon in air. But nothing else stirred in Avatele.

Foiled of his prey, his amorata hid behind the door, Patterson could do naught but turn his horse's head Alofiwise and depart to whence he came, hurling back to the very last cries of "coward", "cur" and "I'll return." But he did not return and Avatele dwelt again in peace.

## 5. Jews' Harps or Death

Patterson was full of guile, Head was honest-minded. Their stores at Alofi were one behind the other, Head's at the back. They were rivals of necessity for native trade. Patterson was Agent for Godeffroy & Sohn — a German firm, Head acting at that time as Agent for 'Bully' Hayes, whom he had not seen for a long time, and little wonder for the man was jailed in Apia. The natives went on strike for higher value to be allowed in trade on their cotton and fungus.<sup>221</sup> Patterson feared Head's 'cutting' and strongly counselled firmness. Standing together, they would win. And Head agreed.

Here was a pretty pass for things to come to! The natives sighed for the tinned goods and the biscuits of the white men, the women for the dressing goods, the children for those Jews' harps, which were their constant joy, whilst the white men sighed for that cotton and that fungus. It was a deadlock. Then Patterson approached Head with the news that real trouble was coming, that he had learned that there would be a raid in two nights' time. Had he gun or pistol? Head had none. He would lend Head his second holster and they must not sleep, and when the marauders came must shoot straight and fight bravely to the last.

The marked night came and Head lay with pistol ready, dozing off and on, and up at once at the slightest sound. Light came and naught had happened. Patterson made excuse that he had confused the dates; the coming night would see the tragedy. Things were ominously quiet all that day in the village of Alofi; few moved save the ever restless children who hung about the two stores and cried mournfully for the harps they loved. The traders were adamant, though Head with his sailor's heart felt sorely for the kiddies.

---

<sup>221</sup> Possibly the wood ear fungus, [Auricularia auricula-judae](#).

That night he lay again prepared. About 2 a.m., in the pitchy dark, he heard steps outside. Rising, he primed his weapon and peered out through the slats of his Venetian blinds, if haply he might see his enemies. They were there of a truth, for he saw a hand slowly inserted beneath a blind, and the slats raised. Creeping noiselessly towards the would-be marauder, he raised his pistol to take steady aim, when a great bundle of cotton was pushed through by two tiny hands, and a mournful little voice appealed, “Please, oh, please, Misi Head, give me a Jews’ harp. Don’t tell Mother. We’ll bring you cotton every night but not Misi Pattersoni. *Samesesi* and *Moses* want harps too. Give me quick. I must get back to my mat.”

Many harps fell to that youthful smuggler of contraband. Next day there came a compromise; peace reigned and trading had a boom.

## 6. Flouting the Flag

During the absence of Niue’s British Representative, Head, ex man-of-war’s man, became his Deputy. His modest soul saw nothing in the office but its duty. Not so Patterson, the rival trader. His soul was filled with envy. Therefore he hied himself to Samoa by the first schooner that made Apia, and claiming American citizenship, secured the appointment from the Consul there as Deputy for the isle of Niue.

Back he came, and a huge name plate upon his garden gate blazoned forth the fact, besides which he had a pole erected and flung to the breeze the Stars and Stripes.

Niueans are simple and loyal, and cannot grasp the niceties of politics and nations. It was beyond them to conceive how the Union Jack and the Stars and Stripes should be flying along the cliff-edge at one and the same time. They had lost their king — not that they much wanted him — because there could not be England’s Sovereign and King Tongia on the same island. How then could there be two flags?

Therefore there was a Fono, and a crowd, and a wild gathering before that Consul’s home, and down came the Stars and Stripes, despite the ravings and the threats of Patterson. The emblem of American Liberty was torn to shreds, and the little imps of Alofi cast aside their lavalava fragment, and wound around their loins rent pieces of the flag.

What would be done to Niue for that outrage, Patterson made quite clear. He would sail by the next schooner that touched the isle to bring a warship, and their villages would be blown to fragments, and off indeed he shortly went, but not to Pago Pago or to Western Samoa direct, for the schooner was headed for Sydney; yet did Niue fear. They had had their way and their riotous fun, now they had to pay for it. Those were anxious months; unexpectedly ships came in — all too often for once, for the quiet of their minds — and the folk at the very first sight thereof upon the horizon made for the bush and the far interior, till they were reassured by no cannon’s roar.

Then, one day, Paterson walked ashore from a schooner and landed many goods. So after all, he had gone not for revenge, but for business only. Niue smiled, and what little respect Patterson still held was gone for aye. And the end was not far off. None but a few would trade with him. His debts accumulated. The Firm which supplied him changed hands; the new one — the D.H. and P.G.<sup>222</sup> —

---

<sup>222</sup> The headquarters of the *Deutschen Handels-und Plantagensellschaft der Südsee-Inseln zu Hamburg* (D.H. and P.G.) were in Apia, Samoa. In 1879, D.H. and P.G. took over the assets in the Pacific of Godeffroy & Sohn, which had been forced into bankruptcy over investments in Russian Paper and Westphalian iron. For information on German firms in Apia, see Chapter 2, “The Elements of Discord: Foreign,” in Robert Louis Stevenson, [A Footnote to History](#) (1892).

took his store and home and told him to go to the other side of the island and work off his debt to them. He was old now, and a new start was beyond him.

Early in the morning of the day he was to leave Alofi, they found him — dead, sitting on his own door step, a great gash in his arm whence the life blood had run, and to make sure, a phial of poison by his side. He had hauled Life's Flag down with his own hands.

## **7. Donkeys on Niue**

Once there were four-legged asses upon the island. There are none now. This is their story, as told to me by one who saw them in the Long Ago.

At Liku, a village at the back of the island, a trader had opened a small branch store. In those days, there was little or no cash in circulation, and business was done by means of barter. Goods were given in exchange for produce, such as the fungus and the cotton of the land. These had to be carried some ten miles through the bush, on a narrow trail, to where the main store was situated. As an inducement to the trader to open the branch store, the natives offered to carry the produce free of charge. This arrangement, so excellent for the trader, did not last long. The natives found the task far heavier than they bargained for and, after a few weeks, demanded payment. The sum of sixpence per bag of 100 pounds was offered and accepted. This again lasted but a short time, when a general strike took place, a shilling a bag the price. The trader, not relishing being thus held up, imported three donkeys from Samoa. When the animals arrived, the produce had greatly accumulated.

A native, tempted by the wage, became the driver of the team. Pack saddles were used and each beast was loaded with three bags. An early start was made, but after only a short mile on that bush track had been covered, the donkeys refused duty. They had had enough. A messenger was sent back to the village and the entire inhabitants hurried to the scene. After due consultation, the crowd decided that it was a golden opportunity to pay back the trader for his meanness. Each donkey was, therefore, tied by the legs, and by means of stout poles was carried, together with the produce, the whole remaining distance to the coast on the other side. The owner, who was expecting splendid results from his quadrupeds, was dumbfounded when the crowd put in so weird an appearance, shouting and yelling with delight, becoming wild with rage when a sum of four golden sovereigns was demanded for carrying the donkeys. For the sake of peace and future trade, there was nothing to do but pay up.

On the following day, the animals were offered for sale, but their usefulness having been shown to be a minus quantity, no buyers were forthcoming. Eventually they were re-shipped to Samoa; the branch store at Liku was closed; and no trader from that day has looked to donkeys as means of transportation upon the isle of Niue.

## **8. The Rape of Niue**

Natives now look upon Cook's landing as one of the supreme events in Niuean history, for it told the outside world of the island's existence. They recall another landing as one of the most tragic, and well they may.

To the coral isle came ‘Bully’ Hayes <sup>223</sup> of evil fame, not long after the Peruvian slaver had made a haul of the best of its young manhood. Whites and natives stood aghast at his nerve to show his handsome face amongst them, for to him they had laid the charge of kidnapping, which still rent their hearts. But Hayes was ready; it was all news to him; he was guiltless; and as he had a wonderfully persuasive tongue, and a manner — when he chose — that few, if any, seemed able to resist, his word was accepted and he was given the freedom of the isle.

He said he was anxious to give his crews a few days’ run ashore after long sea travel. So they landed, and spread to all the western villages which skirt the shore and, as the manner was of such rough folk, sought their amoratas, telling them wondrous tales, beguiling them with travel and scenes enough to make the brains of simple Niue maidens whirl.

All had been arranged. Aboard went Hayes and weighing anchor at dusk, set sail up and down the coast. Out upon the reef flares twinkled and from the ship a boat put out, shot toward land, and here a couple, there two or more were picked up. The silly dark skinned maids were caught, and though at the last moment protesting, were helpless on the reef, their men upon the cliff, all unconscious of their peril. All night the direful business went on, the flare, the capture and the shriek, and then the ship, having regained all her crew, set sail and carried that despairing hold of womanhood to far off eastern isles. There was human traffic there, and the ‘Bully’ got his price.

Some few — after many years — returned, and one, now an aged woman, still lives, yet speaks not of the Past as she sits upon her mat awaiting the end, which those days in the sixties so nigh brought about.

To Niue, Hayes, with his consummate impudence, returned when so he felt inclined, and assailed afresh with reproaches and threats laughed them aside. ’Twas no fault of his; the women had indeed come aboard, but when he would have them return, how could he make a landing with the wind now dead against him? He was forced against his will to carry them to his next port of call, where they chose to abide, entranced by the wonders of new lands. Thus fooled he the simple Niueans and again was received into their good graces.

But now that the truth is known, and Hayes and his wild crew have gone to their last account, the natives hold the hope that those poor deluded ones in the Rape of Niue may be allowed to rise in judgement against so base a villain.

## 9. The Biter Bit

Between Captains Peese <sup>224</sup> and Hayes there was not much to choose. Each was dyed deep with treachery and murder on the High Seas.

To Apia, on Samoa, came Peese and found his boon companion nabbed, and under duress of the Law. To get him free was his task and his jailers proved an easy mark. Peese’s chronometer was out of shape; no mariner could go to sea in safety with such an instrument. None was there in Apia like Hayes to set such instrument aright. Might the prisoner be allowed on board to make repairs? It was

---

<sup>223</sup> [William Henry “Bully” Hayes \(1827 or 1829 – 1877\)](#) was born in Cleveland, Ohio, to a father of Irish descent and was murdered by Peter Radeck in 1877 onboard the *Lotus* near Jaluit, Marshall Islands. See [Concerning Bully Hayes](#) by Louis Becke. See also the Biography.

<sup>224</sup> Captain Benjamin Peese or Pease, who claimed to be American, was born in 1834 and was murdered at Port Lloyd in the Bonin Islands in 1874.

a worthy cause, and to get rid of Peese at an early date was yet a better one. Therefore Hayes stepped upon the deck duly accompanied; the anchor was forthwith raised and to the ocean sped both villains.

They headed for Niue, Peese's schooner well found in articles of trade. To Alofi first, for Hayes' sake, who would close his store and take aboard for China the fungus gathered by his agent, Head. Inviting the latter to run down with them to Avatele, they sailed for that bay and the trader who dwelt there. Presenting to him a forged order, from the Australian firm he represented, to deliver to Peese all his fungus on hand, the trader handed over the contents of his bulging sheds, and so to sea the plunderers went.

Head, seeing their direction, asked for his wages of long standing and to be returned to his home, but was coarsely told that there was no return for him, and Hayes half drunk, blurted out that "dead men tell no tales." Here was danger indeed, two rogues to deal with and not a friend aboard. The schooner was fast losing sight of land when, as Hayes sat upon the hatches, his agent made one last appeal. It touched the one chord in that base nature which still rang true. Both had daughters.<sup>225</sup> Hayes' death would bring his lasting grief; his death would cause yonder girls to suffer likewise. Calling for Peese, down to the cabin they went, whence issued loud talk and many an oath, the trader left upon the deck to await his fate. Peese alone returned and calling to his crew to shorten sail, himself taking the wheel, deliberately turned the vessel round and headed back to Niue. Approaching the reef, he had the boat lowered and ordering the unpaid agent in, told him to get ashore, and that if he breathed a word of what he doubtless knew, his would be short shrift when next they called.

The two now set their course for China, and arriving, Hayes calmly reported Peese as a long-sought fugitive from Justice, whom it would be wise to clap in jail till the Authorities could be notified, and returning himself aboard, weighed anchor and sailed off gaily with his prize.<sup>226</sup>

## 10. A Rogue's Career

There was always mystery about 'Bully' Hayes. Not about his deeds, for they rang to heaven, but whence he came. It is said that he was born in Ireland, and Irish he was in many ways, his suavity, his moods, his droll schemes and his 'chip upon the shoulder'. This Pacific pirate of the 19<sup>th</sup> century was first heard of at Honolulu in '58. He may have been an honest man in early life, but once he beheld the waters of the Pacific, he was out for perpetual evil. He stole ships and men and women, as boys do cherries. He was of attractive appearance, always well groomed, to meet him none would think him capable of the depths he delighted to step down to. Seized many times by the supposedly strong arm of the Law, he always managed to escape. He changed his religion according to his circumstances. He was London Missionary Society, with prayers aboard night and morning, when such missionaries were aboard; he was Wesleyan and Roman Catholic when need required. He deserted wife after wife, yet found other devoted to him. Of his children, he was much attached to two daughters by a wife who dwelt for long in Apia, and who was esteemed by all who knew her. He amassed wealth, but failed to keep it. In his cabin, one of his wives and he quarreled over a bag of gold pieces, £500 the sum. Seizing the sack, he strode up on deck and hurled the whole thing into the sea. It was not wise to cross him.

---

<sup>225</sup> Hayes' daughter with Rosa Buckingham, Adelaide Eudora Hayes, was born on 11 July 1863 in New Zealand. Both mother and daughter died on 19 August 1864, after their boat capsized about a mile and half from shore; Hayes alone survived. Hayes' twin daughters with Emily Mary Butler, Leonora Harriet Mary Hayes and Laurina Helen Jessie Hayes, were born 2 May 1866 at Lyttelton, Canterbury, New Zealand. Mother and daughters were living in Apia, Samoa, at the time of the incident described in this story.

<sup>226</sup> Peese then became a representative of a Shanghai firm (Jane Resture's *Oceania*).

In one of his ports of call, he took umbrage at a ‘darkie’, who ran a well equipped saloon. Entering with a belaying pin,<sup>227</sup> he proceeded to demolish the establishment; grand mirrors, bottles, glasses all fell before his mighty arm, nor desisted till an unlucky blow smashed the central light and left him in total darkness.

He was a fine seaman, ever ready to take chances, too, through reefs and over bars where others would hang back. He knew the islands as few did, from Easter to the Carolines, and had he been content to wait, could have built up a great chain of Trading Stations with his accurate knowledge of the natives and the best locations.

It is hard to get the truth about him, even from those who sailed with him, for they ever seemed unwilling to say aught against him from a sense of weird loyalty, which he inspired despite his villainy.

He came to a just end, a violent one, too sudden, one would think, for he who had done in so many, in lingering agony. To an island he had gone ashore, his mate charged to keep the schooner gently moving well off the encircling reef. Hayes did his work ashore, then stepped in his boat to make the ship. But the wind and tide were against the schooner and she had drifted far. He had far to row, and at last reaching the side, clambered up cursing the mate and swearing he would shoot him. Descending to his cabin to get his weapon, the mate stood over the companion way, and as the would-be murderer came up, one blow from a belaying pin ended his all too long career.

So runs, at least, the Niuean story of his end.

## 11. Midnight Justice

Men do things, sometimes, out of routine order in the far outposts of the British Empire. Authority has a motley crowd at times to deal with, not only with the natives, but with white folk, too. Even officials are not, at times, all that they should be. One would think that the Police Force would be free of misfits, yet of one who fell from grace is here made record.

The members of the Niuean Force are natives, but the Chief is a white man. A previous Chief had well nigh died of *ennui*,<sup>228</sup> and just in time had fled from a post for which nature had not fitted him. Yet another had served in the Coldstream Guards,<sup>229</sup> a fine specimen of manhood and keen for duty, yet he was going the same way had he not been recalled to the Colors and saved his intellect, even if did not save his life, which on Niue is not known.

Then came one who proved a waster, a man of parts maybe, but as Chief of the Niuean Force, he was no good. Having much time on his hands, he got into mischief. Whether married or not, he gave himself out as a bachelor, and set hot siege to the heart of a dark-skinned Niue maiden. He spent his days a-courting and his nights laying plans for victory. He won; there was a marriage feast, and the lone mission bell of Alofi rang out right royally.

Six months had passed since then, and all was not going well, either in his home or his post as Chief. The Authority was on to him and greatly desired a change, but what could be done with no actual charge to nail him with, nor any ship in sight on which to give him ticket.

---

<sup>227</sup> WWB has *bellaying pin* here and elsewhere. A device used on traditional sailing vessels to secure lines of rigging.

<sup>228</sup> French: boredom.

<sup>229</sup> The [Coldstream Guards](#) is a part of the Guards Division, Foot Guards regiments of the British Army. It is the oldest regiment in the Regular Army in continuous active service, originating in Coldstream, Scotland in 1650.

Then “Sail ho!” rang o’er the isle, and a ship lay in the offing. Apart from the Power, the Chief had his own keen desire to be aboard, heading for the land he came from. Unexpectedly, things came his way. There were several parties ‘going out’ and things were humming in preparation. The hour of sailing was already past. Night fell and still there was delay.

It was then that one of the departees discovered that his treasured bicycle was lying in the Doctor’s residence, just then untenanted. He could not sail without it. He hastened thither only to find the house locked and barred. As luck would have it, he met the Chief walking moodily along the cliff, the ship’s lights twinkling, beckoning him to come. Would the Chief kindly help? There are no strangers in such tiny isles and everyone stands ready to help a neighbour. Of course he would, and forthwith walked to the residence, smashed in the door and secured the prize. One man was happy, but another who would fain get even with the Chief for past unfortunate attention witnessed the destruction, hastened off to the Authority and reported the outrageous deed.

The Resident hastened out upon the warpath, met the Chief, hot words passed and the incident seemed closed. Hardly had they parted than the Chief met the talebearer. Then there was real trouble. The Chief worked upon him his pent up feelings. Escaping, he fled to the Residency. It was enough. Late though it was, nigh the hour of midnight there was a summons, a trial and a judgement. Deportation on the spot was ordered.

News flies fast in a village. There was no packing up. A weeping woman clung to the arm of the departing official, as he made his way down the cliff to the Landing Stage. They parted. He had his way, so had the Authority, but from that day no word has come to a woman who loved not wisely, but too well.

## 12. The Biblical Boomerang

A certain King of Niue was undoubtedly an able man, head and shoulders above the rest of his race. He had been trained to be a Teacher and a Pastor, and his probation finished, he was sent to one of the far off islands to the West as his Mission Station. He was a good-looking fellow even to his end. As a good Pastor, he had his wife along with him, but strange stories began to come back, and at last a lovely dusky maiden in that far off isle committed suicide. Dame Rumour locally got busy and laid the charge against the Niuean Pastor. He denied, but the Authorities were adamant, and sent him back whence he had come, where he retired to his village and dug his plantation for a living.

Even in his retirement, his abilities could not be hidden. His King oft sought him out, nor ever failed to take counsel with him on all affairs of State. When his Monarch passed, the thoughts of all turned to the Nameless One, and they would not be denied. He was the only possible successor to the Kingly dignity, and he ruled with Justice, Firmness and Great Wisdom.

His one weakness, once upon the throne of Niue, was like to another great Potentate of whom he had read much in the Holy Book, and on whom he had grounded many a powerful sermon — a plurality of wives, yet because of his weaker brethren, he would not keep open harem at Alofi. His was in the Bush, and his servitor, of purpose, both deaf and dumb.

That servitor intended no harm to his lord and master, but though dumb, the Sign business brought much trouble. Through him the secret leaked out to the white folk and duly reached the ears of the Missionary. That party saw his duty very clearly. Though a king, he must be brought to book. Therefore did the white Pastor mount his steed and guided by the faithless dumb one, make his way into the Bush, taking his Majesty wholly by surprise. But the surprise was shortly his, for coming

forth from his snug retreat, Royalty demanded the reason for such intrusion. Told that he was a Scandal and the thing must stop, the Royal Blood rose to boiling point.

“Get you gone,” said His Majesty. “You shall not thus insult me. Does not our Holy Book tell of Solomon the King, renowned for his Wisdom, who took to himself many wives? Am not I a king? Am not I renowned for Wisdom? As the Holy Book declared, so shall I act like Solomon to the end, I too shall have my harem.” And the Missionary turned his horse toward home.

Yet did he cut off the Nameless One from Church fellowship. There was no more ‘Breaking of the Bread’ for him, nor might he longer sit upon the High Chair next the pulpit in Alofi’s Church. But this did not at all disturb His Majesty, who went to service as regularly as ever, finding his place as pleasant sitting on the mats. Nor lost he caste <sup>230</sup> among his people to his end. His grave lies close outside.

It does not do, one sees, to teach the Letter of the Holy Book too strongly — as a Guide to Conduct.

### 13. Death on Pigs

There is a law, today, confining pigs to pens when once they pass the age of babyhood, yet seemingly it is more observed in the breach than in the observance. But in earlier days there was no such law and they roamed whithersoever they listed; <sup>231</sup> hence, today there are many wild pigs in the Bush, which men go hunting with the rifle.

In Alofi was a trader whose premises were constantly invaded by the village pigs. He stood it till he could stand it no more. He proposed putting an end to the nuisance. He did — but far more thoroughly than he intended. He distributed plenty of rat poison about his plot. The bait was taken that same night. He was awakened early by a boy who informed him that a dead pig lay outside. Hastening to the spot, as he gazed upon his crafty handiwork, a lad came running with the news that another porker lay dead not far off, and yet others bore a similar tale. There were dead pigs everywhere. He was filled with dread at the situation. Would the natives eat this wondrous and unexpected feast lying ready to their hands and might he thus become the murderer of the whole village? Yet dared he not tell or his trading days were over. Happily, it was felt that some mysterious and virulent disease had struck Alofi’s pigs and none partook.

But even larger game fell to his sinister and mean design, for one of a herd of cattle, which another enterprising trader had brought to the island — the one and only herd ever seen on Niue — and which browsed as best it could on Alofi’s village green, fell before that fatal sowing. This was too much for the natives. They passed the pigs, but Beef was altogether too alluring. The beast was carved up amid huge rejoicing. The owner cared naught as to the distribution. He had lost one of his herd, the price of the rest would have to make up for it. But the guilty one greatly feared. None died, however. They may have preferred to keep their inner pains to themselves as the price of gluttony.

Yet pigs no longer wandered aimlessly about the village, the owners thinking it best to feed them within pens on coconut and mummy apple, keeping them safe and sure for future table use.

---

<sup>230</sup> Social position.

<sup>231</sup> Inclined.

## 14. The Old Trader

At fourteen years of age he was on the famous training ship the ‘Victory’, thence into the Royal Navy, where he served long, winning the medals of the Crimean, Kaffir and Chinese wars. Free now to go where he listed, he would go a-wandering. In the prime of life he was drawn to the Australian gold diggings, where for ten years he experienced the ups and downs of that eventful life. Then once more, the Call of the Sea, and he set his face toward Sydney. Just then the Missionary ship, ‘John Williams II’, made port on her way to the many stations of the South Pacific. He sought a berth thereon, but found no vacancy. Yet he had not long to wait. She had not long left port ere she came limping back, a sorely wounded thing; she had grounded in the New Hebrides and was badly holed; half her crew refused to work her back; the rest stuck to her, the missionaries aboard filling up the vacancies, the redoubtable Chalmers<sup>232</sup> amongst them, and at Sydney she arrived.

Again he applied, and this time found a job as bo’sun. Now they set sail once more and dropping the Men of God along the way, at length hove to off Niue. The captain, fearful of that Coral Isle and its inhospitable coast, sailed to and fro in the offing, as wise seamen to this day do. But the wind set in against him and slowly, but surely, drove the ship upon the reef. Crew, passengers and goods were safely landed despite the difficulty and the Trader-to-be — who was to see 50 years residence on Niue — set foot upon his future home.

There was then, in 1867, a trader with his store upon the island, not on his own account, but in the employ of that great German firm, which like an octopus spread its tentacles over those scattered isles, Godeffroy & Sohn, and Patterson, their man. The schooner of the firm came in sight not long after, and some of the stranded took passage in her to Samoa. For the balance, there was sent from Apia yet other boat, the ‘Rano’ and in charge, the notorious ‘Bully’ Hayes. Ever with an eye to business, Hayes bought the wreck as it lay upon the reef, and off he went, first to land his passengers, thence to other isle to get help to salvage his late purchase. He returned to find not one plank against another. Hayes rubbed off the account and disappeared from Niue. One of the wrecked crew still refused all offer of passage — our man-of-war’s man. He would stay.

Ever a God-fearing man, honest as the day, one of England’s handy men, nor feared he man or devil. In the Mission House he found congenial company and put his hand to many things. He fell in love in two ways at the same time. The little isle attracted him and so did a Christian girl of Niue, one of

---

<sup>232</sup> [James Chalmers \(1841–1901\)](#) was a Scottish-born missionary, active in the Cook Islands and New Guinea:

the Mission household. In her he found a real helpmate and who survived him, though he saw nigh four score years and ten. I missed him by just one month.<sup>233</sup>

Now out into the Bush he went and set out his plantation that he and she might live. He planted his taro and his banana trees, but fast as he set them, he found on his return, the lot uprooted. Then saw he leaves stuck in his plot of land pointing towards him as he came to his clearing. Seeking, he found answer to these puzzles. “We do not want you White man. Go away.” But they spoke foolishly and those who thus had acted learned to regret their blindness. They needed that strong hand and justice-loving brain; they learned ere long to look upon him as the Friend who never Fails. There was great and genuine sorrow when the Grand Old Man of Niue passed out to sea forever.

Just when things looked blackest at his start, Hayes once more appeared and the sailorman became his Agent as a trader at Alofi, till a second visit of that bully, after long absence, lost him his job and nigh his life — which is another story already told — and once again he was stranded. But Patterson, Godeffroy’s agent, his wife dying at that time, was leaving for Samoa for another and offered the post during his absence to the sailor. A second term of trading now began, again Alofi the location. No well appointed store was Patterson’s, goods in boxes on the floor, a pandemonium. It troubled much the tidy handyman, yet it was not for him to dictate to his employer. A relic of those days is still to be seen, Patterson’s old safe, which even to this writing is at its appointed task, cumbrous but sure, the great grandfather of all present safes on Niue. The sailor’s eldest son possesses it and I use it as my Bank.

Copra was then in its infancy as a trade on Niue, fungus the main staple — a great delicacy for Chinese palates — till the days of the American Civil War<sup>234</sup> when cotton<sup>235</sup> went a-soaring. A leading Sydney merchant sent counsel to his sailor friend that if the island climate suited, good money might be made by planting the much needed thing. So to this, also, he put his hand and induced the natives to do likewise. Months many passed, he the only trader at Alofi.

Then came a gallant looking ship, a gallant owner in command, seeking fresh openings for trade, a ship crammed full of tempting goods. Long he tried to win the sailor from his allegiance, to close one store and open up another, but till Patterson returned his agent was not free. A compromise was reached, that Captain was to land and store his goods at Tuapa — not Alofi — and when the absent trader should return and his agent be once more free, then would he return to Tuapa, his real Home, and open in opposition. So was it done, yet Patterson upon return was sore at opposition once again, and kept back wages due for a whole year and a day, but the sailor smiled and went.

There were great doings in Tuapa when that store opened out. With his own hands he built it, and within no boxes suited him; that day for Niue had gone by. There were shelves all round and a counter, too, and all goods were laid out shipshape. Such a store! Such goods! First they sent Tuapa wild, then all Alofi came, and as the news spread round the isle, all Niue went plumb crazy. The wealth of the whole countryside was laid at the sailor’s feet.

---

<sup>233</sup> This sentence would appear to be in error. According to The Church of Jesus Christ of Latter Day Saints, The Old Trader died on 5 February 1921, whereas WWB probably arrived on Niue on 12 June 1921; see *From Victoria to Niue* in Part I, *Notes on the Life of WWB*.

<sup>234</sup> 1861–1865.

<sup>235</sup> Cotton was cultivated on other islands in the South Pacific at that time. For a history of cotton growing on Tahiti, see *Tragedy of Atimaono, Story of the Rise and Fall of a Tahitian Cotton Enterprise*, Section 1, Pacific Islands Monthly, 1938, May 25, p. 33–39, and Section 2, Pacific Islands Monthly, 1938, June 22, p. 34–38, written by J.L. Young and edited by W.W. Bolton, both of which are in Part VII.

It was not long before there was but one Chief Trader and all the rest, as they filtered in, were lesser lights. To him all looked, White as well as Brown-skinned, and knew his counsel good. The Missionaries, too, knew his worth. Were they absent, there was no stoppage of their work; the Handyman took their place and carried on. Was there troubling of peace on the isle, before the days of the Great Mother's Protectorate, he was there in the midst of it and promptly brought order out of chaos.

Children were born to him, many, and he solved the difficulty that so many white fathers on the isles have failed in. He showed that sons and daughters, despite their native blood and early environment, can become men and women of sterling worth. He spent his money freely on them; to Australia and New Zealand they went for education, after he himself had grounded them in the essentials. He had a second home in Auckland; it is still theirs today. Some did not return to Niue, some have passed, one engulfed when the little 'Jubilee' went down — one of the Secrets of the Sea — others in Niue still, one and all living as sons and daughters of such a father. He died, but Robert H. Head of Tuapa, Niue, can never be forgotten.

## 15. Fire and Brimstone

The white race has brought both blessings and curses to these South Seas native races. Skin affections are one of the latter. Before a resident Doctor came upon the scene at Alofi, many and strange were the attempts at cure made by local medicos.

One ingenious fellow hit upon a plan whereby he would not only heal his brethren, but make a tidy sum thereby. He constructed a large box without a bottom, carefully plugged all the cracks and announced that he was prepared to cure all cases of Yaws at 5/- a head. Sulphur had been long in use for this purpose, and the traders did quite a large business in this article. But the treatment was not drastic enough, at least so thought this expert. He would accept no patient unless, with his entrance fee, he brought 5/- worth of sulphur. Plugging the ears and nostrils of his victims and leaving one tiny hole through which passed the hollow tube of a fruit tree branch, which, placed in the mouth of the patient, allowed him a modicum of air, the strenuous one placed the pile of sulphur on the ground in a coconut shell or two, lit it, sat the patient close thereto, covered him over with the box and sat on top to make sure of no escape.

With eyes tight closed and tube in mouth, it was the unanimous opinion of the Niueans that whilst the treatment was wonderfully effective, yet they knew now for a certainty what wicked people will suffer beyond the grave.

Thus did this medico effect two purposes at one and the same time. Besides enriching himself with handsome fees, he cured his patients and caused them to walk hereafter more warily in the straight and narrow way. Hellfire with brimstone added was too heavy a penalty to pay for passing pleasures.

## TALES OF ROMANCE

### Niuean Romance

But eighty odd years back, Niue was — if not what Captain Cook claimed for it “Savage” — at least Heathen. There are those yet living, who in their childhood spoke with their elders who themselves had lived their whole lives in the ‘Period of Darkness’. They are fast dying now; they have told their tales; and mine has been the pleasure to cast them into English — faithful to the spirit and setting of the original, I trust — that far from the little Coral Isle, those who will may know them.

The Tales of

1. *Toafofia*
2. *Motufalo*
3. *Lagiholo*
4. *Kilimanapule*
5. *Toapuho*

#### 1. There Were Giants in Those days

*Toafofia*

This is a saying of the old men, such as I, who in childhood spoke to and learned of those of the Long Ago. Niue had first a race of *Lukiloans*, then came a race of *Lomeaans*; their place was taken by a race of *Tegameaans*, who were followed by a race of *Ikateaans*. This is the day of yet another race, even the *Tolotoloans*. And what, what will the next be? Will they be children always, without a trace of manhood?

For here is the meaning of this seeming riddle. The Niueans, according to us old men, whose standard reaches to the far, far past, have deteriorated; they are not as their forefathers. The earliest Niueans were as big as the big Black Ants, whose place was taken by the smaller Ant of Brown; these were followed by the Hermit Crabs, to be succeeded in turn by the small White Sprat. This day sees Niueans as Crawling Things! And what will be the end thereof?

#### 2. The White Amulet

*Toafofia*

*Palalagi* the Mighty made a spear like unto himself, and the village wondered why he wrought so mighty a weapon. Was he a-preparing for yet another foray into the territory of his foes? Perhaps he had sent challenge for a duel to the death with the champion of the north. But it was not so, yet had he one in view for other.

Calling his braves together, he led them to the fighting ground, then striking the huge weapon into the earth, he called upon them that one by one they should take the spear and play the fighting man

before the rest. Thus would he test his warrior band and know the weak from the strong, and the strongest of them all.

Man after man stepped forth, the young men in the pride of muscle, the veterans in their assurance by past deeds. They grasped the spear; they made brave effort to parry, thrust and twirl, but all in vain, their strength was not equal to the task. Then was *Palalagi* the Mighty full of wrath and harangued them as weaklings one and all, unfit to follow him to victory.

It happened that amongst the assemblage on the sward there sat one, a stranger named *Helagi*, yet ought they to have known his strength, for he was of great renown. Was it not *Helagi* who slew *Mohelagi*, the craftiest warrior of the isle, at *Mougakelekele*? Was it not he who when the Tongan canoes came hither to make conquest of the land, ordered out his own, and giving each man a pearl shell in place of weapon played the sun upon the enemy till blinded and bewildered they withdrew?

Now did this same *Helagi* rise and ask *Palalagi* the Mighty if he might take the test. Permission given, and lo! he played with that huge weapon as 'twere long stalk of sugarcane. In every attitude of fighting did he pose, his beard in his mouth, his eyes most furious; he was terrible to look upon.

Then was *Palalagi* the Mighty pleased and gave great praise to him, even to the stranger *Helagi*, and before them all gave *Helagi* the spear inviting him to join them in the next fight, soon to be, even with Chief *Giaafu* of the North, and thus he spake, "Behold! O *Helagi* the Strong. To you I give this spear, the like of which there is none for size and weight and length on Niue. I charge you with it to slay him upon whose upper arm you shall note the white shell bound," and *Helagi* noted this and wondered much who bore into battle so carelessly, so valuable a treasure, for it was a thing to be buried with as an offering to the gods, not a thing to adorn the body with in the hour of conflict.

He had not long to wait. With yells and cries, the Northerners swept out of the forest upon *Palalagi* and his band. The struggle was on. *Helagi* worked havoc with his mighty weapon, yet saw none with the white shell upon his arm. Then suddenly he beheld a fresh band of attackers springing into the clear, and leading them was none other than the Chief *Giaafu*, and lo! upon his arm was a shell of dazzling whiteness.

This then was the man, thought *Helagi*. The honor was great that had been given him even by *Palalagi*, who had stood aside that he and not the Mighty One should settle the matter with the opposing Chief. Little chance had *Giaafu*. Indeed, it seemed as if he rushed purposely upon that spear, as leaping forward, the monster barb hurtled through the air, flying towards him with all *Helagi*'s strength behind it. The man and the weapon met; the spear struck home; *Giaafu* crumpled up, lay dead; the White Shell had not saved him.

Great now became *Helagi*'s fame. Men feared him even as they had dread of *Palalagi* the Mighty, and sought his end, nor could for long accomplish. But there came a day when *Helagi* was working in the bush — all heedless of danger — even at *Tamahatakula*. He must needs dig and plant as other men to find food for his own.

A sudden breaking of the undergrowth, a sudden shout, and a band from *Tamahalakika* — even Liku of today — was around him. They closed in and *Helagi* was no more.

### 3. A Warning Contemned

Toafofia

*Likalika* and *Kalomahina* assembled their warriors together ere they went forth to fight *Palalagi*'s band. The plan of attack was settled and many details. Then a word of caution. No single brave was to tackle the opposing Chief. So great was his strength that he could beat off with ease each single spear and lay out the attacker to a certainty. They must mass in the rush on him, and great was the reward to be if that day *Palalagi* fell.

Now *Hautupu* heard and smiled. What were the Chiefs thinking about? Afraid of *Palalagi*? Certainly not he. Long had he itched to have a tussle with the great man, and if the chance came his way, he would ask the aid of none. Forth went the warriors and ere noon the fight was on. Men fell on both sides. *Palalagi* was mobbed, but to no avail; he cut a swathe about him like as with a knife. But *Hautupu* stood aside; he was waiting for his chance.

Now from the mob of yelling, spearing, clubbing savages, there came out the Chief and — as if for a moment's rest and breathing space — stepped to one side and leaned upon his bludgeon. Winded he was, for sure, and *Hautupu* spying, saw that it was his chance. With a yell he rushed him, and whirling his weapon thought to bring it down upon the leaning chief, but *Palalagi* was quicker to action than he, for ere that stroke fell, the chief's mighty bludgeon swept upward and swept down, splitting *Hautupu*'s club to fragments, and landing full upon the attacker's skull, split that and the whole man down well nigh to the very waistline. He learned too late the part of wisdom. *Palalagi*'s hour had not yet come; to him it was but an episode in a day's good fighting, and rushing in again he so flailed about him that *Likalika* and *Kalomahina* were right glad to escape homeward with their skins.

But *Hautupu*'s death was sung for long in many a village, a warning to the over-confident, and a lament over the unwise but brave.

### 4. The Biter Bit

Toafofia

The warriors of *Titi* went forth to fight the warriors of *Aoliko*. But they had given no intention of their coming. It was to be a surprise party and everything was to be easy for the braves of *Titi*. *Ikihega* led the Titians; he was ever full of stratagem and wiles to get the best of his enemies. *Palalagi* was Chief of the Aolikoans, famous the whole isle over for his bravery, his dash, his strength.

Through the forest by narrow trail the Titians made their way, creeping upon the unsuspecting village at last with stealthy tread. Those villagers were resting in the falés, some chatting as Niueans have ever loved to do at their entrance, others lazing on the green. Like a bolt from the blue, there was a wild savage yell and *Ikihega* burst from the infringing forest, followed by his crowd. They had thought to take *Aoliko* at a disadvantage, but it needed night-time to do that.

Forth from his hut rushed *Palalagi* and saw but one man in the assaulting band. A handy bludgeon he had hastily grasped and whirling it over his head, he went straight for his chief enemy. Avoiding the spear hurled at him, he closed in on *Ikihega*. That was the latter's end. He had better have stopped at home, for now he went to another, even to his Long Home.

Then with his enemy dead, *Palalagi* took the path of wisdom, which led precipitately into the Bush. According to Niuean code, it was always well to live to fight another day and he saw that the odds were hopelessly against him. It was his blood, not his people's, that the Titians sought, and they should not get it that day at least, if he could help it. *Ikihega*'s men beat the forest far and wide, but failed to hunt him out. Sadly, therefore, they returned to *Titi*, their little surprise a failure, their Chief dead. *Aoliko* could well claim a victory, and this, with song and dance, they did.

## 5. A Drink Under Difficulties

### *Toafofia*

*Palalagi*, ever eager for a fight, found at Mamalava all he wanted, and something more, for both he and his band had to make haste for Makapa, where he had built a fort of coral rocks for just such an emergency as this, and reaching it defied his enemies. But water was a necessity and of this there was none, yet had they coconuts in plenty nearby. Therefore, in the darkness of night, they crept out and climbing, secured the needed things, but to break them open in the usual way by smashing them on the rocky surface of their fort was out of the question, for their enemies skulking nigh would surely know why they thus held bravely out, and would see that all night marauding promptly ceased.

Coconut is both food and drink, and now they were in need of both. But *Palalagi* was a man of resource. "Why not cut the nuts open with a sharp stone, and coral is sharp and here in plenty," said the Chief, and no sooner thought of than done, the scheme succeeded to a nicety. So proud was the Chief of his bright proposal that he burst into poetry and this his Song:

Making mere stones to open coconuts,  
How wearily long it takes to get within,  
Hunger and thirst the meantime ours.

Doubtless this was very true, but refreshed and replenished with strength, they were ready for aught that might turn up. An unexpected visitor indeed turned up, even *Hiligutu*, the bravest brave of Tamahatokula — this day known as Hikutavake — who, scenting fight, had come from the far north to lend a hand to his friend. Entering, he rubbed noses with them, one and all, and found his presence needful, for every nose was cold as winter water. "This is fear," said he — though they denied — and set to work, good fellow that he was, to put some undiluted courage in their hearts.

So bucked up now were they that what with *Hiligutu* and coconut milk they made a *sortie*,<sup>236</sup> broke up the encircling band and reached their homes in safety. And yet alas! Ere many moons at Fugahehake, *Palalagi* the Mighty fell, most of his warriors, too, and Chief *Hiligutu* also, standing bravely by his friend's side to the very end.

## 6. Vavau's Chief

### *Toafofia*

Paluki, the true centre of the island, was the capital when Alofi (now the chief of all) was but a fishing village. There dwelt the King of Niue and to Paluki all trails led.

---

<sup>236</sup> French: deployment or dispatch of a military unit from a strongpoint.

*Talamahina* was a great Chief, a mighty warrior, and dwelt at Vavau close to Paluki. News reached him that the Alofi men were going to make a great fish killing at Tufonua. He was very hungry for fish, for Paluki is far inland and few were brought thither, save for the King, who had his own canoe and men to work it at the little village by the sea.

At Tukaiavi stood *Talamahina* the Chief, the sea far below him, and saw the boats returning. They were full to overflowing. Hastening his steps, he was at Alofi's reef as soon as they. Tufonua had indeed been a great success. There were all kinds, big and small. There was the Parrotfish and the Bream, huge Cod and Barracouta, the Kingfish and the *Utu*, the Redfish and the Tiger. He sought a present of them, and unwillingly — yet because they feared him — they gave him one — one only. His heart hungered for the Tiger, a big sound fish full of meat. But they would not part with even one of the many *Paala* they had caught. Instead they gave him a *Fagamea*, gloriously red of hue.

*Talamahina* was fiercely wroth, yet dared he not, amongst so many, speak out aloud his thoughts. He took the Redfish, for he hungered greatly for sea meat, and strode home along the narrow trail, holding his gift by the tail, and in his anger swinging it about nor thought to see the mischief he was doing. At Vavau, even at his own home, lo! he held now only the tail, the rest he had left along the trail, piece by piece. Now hurled he the remnant away and vowed he vengeance fierce.

Summoning his band he cried, "Clean your spears, both single and two pronged; get out your war clubs and your stones, for we go to attack and destroy the fishers' homes who refused me aught but a *Fagamea*, whose tail alone reached Vavau!" Then stood forth *Agivalu* and *Tumailagi*, two of the band and said, "O Chief, right gladly will we go with you. Are not the Alofi braves, cowards ever? They are fishers; they are no fighters; they have neither stones nor hooked clubs as we. Haste you that we may kill, for victory is surely ours."

Though *Agivalu* thus spoke of stones and clubs, yet did he himself despise them. From his youth he bore no weapons but his own two hands, closed to fight. All Niue feared him. He fought close in and his blows were terrible; the heart stopped forever at his stroke; the eyes refused to see again; the skull lay cracked and open; the face was as an orange crushed beneath the foot. And *Tumailagi*, though he used weapons, was little less than *Agivalu* in renown.

Now the band went forth, *Talamahina* striding in the front, *Agivalu* close behind in the post he loved right well, nigh to his Chief, *Tumailagi*, his friend, next behind. Swiftly they made westward even to where *Mana* dwelt, that they might settle first with him and his, whom they loved not. Reaching the fighting ground, they sent their challenge, nor was *Mana* unwilling for the fray. He was no fisher, yet was he their friend. A mighty man was he and he had a band that knew no fear.

The battle was joined, stones and spears seemed to darken the sky that day. Now did *Tumailagi* come to see his end. *Matahaiki* had marked him out and so hard pressed was he by many another that he took shelter behind a clump of banana trees. But that availed him not. With mighty throw *Matahaiki* hurled spear, so swift, so sure, so straight that it passed clear through a banana trunk and spitted the hiding warrior to another. Here, too, did *Agivalu* fall. Face to face and man to man he fought, and men lay stretched out all around him, but the gods were against him that day and *Mana's* men were not to be denied. They rushed the brave from all sides, their clubs rained blows, broke arms, crushed skull — he lay a corpse.

And it was nigh the last of *Talamahina's* fights. *Takiula* accounted for him, though now his spears were all gone to fight the Chief with, his club broken, and he had only the round stones, big as a man's fist to fight on with. There was a rain of stones, but 'twas his that reached the leader. It struck

low, or *Talamahina* had been slain. His leg bone cracked, he could stand no more. Out of the fight he crawled and with aid was carried home. Alofi was not for him or his that time.

And *Mana* got *Talamahina* after all, for no sooner healed than he was ready to fight again, his heart still sore with those fisher folks. He sought yet again to reach them, but *Mana* blocked the path, and in the fight the Chief of Vavau fell; he passed to where fish are of no account, nor cause for cry of battle.

## 7. The Labors of Laufoli <sup>237</sup>

### *Toafolia*

Though 250 miles of trackless waste lies between the isle of Niue and the Tongan Group, there was oft coming and going between them in the Long Ago. Tonga out to conquer and awhile victorious, yet got at last a lesson which made it the part of truest wisdom to keep away from Niue. 'Twas in those earlier days of friendship that my story lies.

Among the visitors from the distant isles came a man of great renown amongst his race. A Tongan great and strong was he, famous for many a daring deed. Now *Laufoli* held the same high place in the hearts of Niueans, and it was but natural that two such braves should meet. In friendly rivalry, they tested one another in many a feat of strength and hardihood, and Tongans present, as well as Niueans, gave loud applause to their respective champions. Though *Laufoli* afterwards made such good record as well may wipe out from our memories an act unworthy of the man, yet in his keenness to get the best of the visitor it must needs be told that he resorted to a trick.

Unbeknown to any he selected a tall *fa* <sup>238</sup> tree, bent down its top and broke it off, then let the limb fly back. Now did he call the Tongan and the crowd to see his mighty handiwork, how with his cutting stick he had swung and slung it upwards and with unerring aim had severed off the top. He challenged the visitor to do the same, but such a feat was quite beyond his ken; he did but marvel as did all the rest. And *Laufoli* took the praise.

Soon after, the whole party returned to Tonga, inviting *Laufoli* to surely visit them, where he would have warmest welcome, for was he not a strong and mighty man? He went, like many another in those brave days of old, alone across the great deep, with naught but the stars to guide him where his haven lay, but with that unerring instinct of our race, he feared not to overshoot the mark, and after many days drew up his canoe on the shore of *Vavau* Isle.

Meanwhile the Tongans had held council concerning this visit of the Niuean. Friendly indeed they would be, but they would put him to four tests. If these he passed, then surely was no honour too great for so wonderful a man. These, then, they agreed upon and prepared for:

1. The Strengthened Banana Trunk.
2. The Stony Mountain.
3. The Chasm of Leaves.
4. The Cannibal of the Cave.

<sup>237</sup> The story of *Laufoli* is told on page 9 of Smith, Part IV. Smith notes that the party of *Tongans* were not necessarily from Tonga. It is also told on page 110 of Smith, Appendix Continued. The latter contains a translation of the *Death Song of Laufoli* that differs from WWB's.

<sup>238</sup> Possibly the screwpine (*Pandanus odoratissimus*).

*Laufoli*, like all in those wild times, never travelled without his weapons, his spears, his clubs, his cutting sticks. These he had carefully covered with many leaves, laying them in the bottom of his canoe. Arriving, he stepped out upon the beach and went forward to where many were hastening to give him welcome. Soon he was informed of what had been arranged and right gladly did he consent thereto. He was ready for the first that day and hour.

Now did they lead *Laufoli* to a stout-stemmed banana with succulent but sturdy trunk and called upon him to lay it, at one blow, low. The crafty Tongans had previously driven down from the top, through its very heart, the hard young sapling called *Toa*. Thus would *Laufoli* strike something unexpected and be foiled. He smiled, so easy thought he such a test. Forthwith he sent for his belongings, but they could not be seen so well he bestowed them, and he himself had to fetch them to the testing ground. Tonga was there to watch and laugh. Selecting that stick with which he slashed best at home, he shaped himself, but found that the tree had been selected so that the usual swing there was no room for. It had to be a reverse stroke or none. Yet was not *Laufoli* disturbed in mind. All strokes were the same to him. He raised his stick, he struck with mightiest power, there was a sucking sound, a crack, a swish and the trunk fell, clean severed by the blow. Tonga's laugh was turned to wonder; gave they *Laufoli* praise, for their hearts were good towards him, and was not he their guest?

The next day came to second test. Tongatabu is flat, but Vavau is mountainous, and climbing is not what Niueans have to do, for our isle is even as is Tongatabu. *Laufoli*, however, thought little of such a test of strength. Were not his legs, his thighs, as rocks for hardness? But he was not prepared for the strange action of that mountain. For lo! as he made his way upward, mighty stones came rolling down upon him, stones that would crush and kill, and lesser stones as well, a torrent of stones and no refuge therefrom. Then did *Laufoli*'s anger rise in his heart. He saw no test, but treachery therein, and he burned to reach those hurlers at the summit and lay upon them his good club. With nimble steps, he jumped aside as the great rocks came tearing towards him, the smaller ones he utterly disdained, standing with legs apart he smiled as they went hurtling through. None struck him and he gained the top; then struck he and in his fierce wrath, slew those men, all save one who craved for mercy and, *Laufoli*'s anger now appeased, was granted it. Thus again did *Laufoli* triumph. Great praise was his; the Tongans' hearts were good towards him, and was he not their guest?

A rest and the third test came. To what appeared as a deep sloping trench, the Niuean was led. He was told to make his way along it to a point selected far ahead. Its real depth was hidden, for it was filled with leaves laid on trestles. To tread thereon was to fall, to disappear, to drown in the waters far below, and if *Laufoli* escaped this test and trap, then would they have seen a wonder done before their eyes. And they saw it, for looking ere he leaped, he thought the path of wisdom lay along the sides, and with an agility ne'er seen surpassed, he sprang from side to side, back, forth, back, forth, till his goal was reached, nor had one leaf been touched. A great shout went up; gave they again *Laufoli* praise, for their hearts were good towards him, and was he not their guest?

This final test was left; accomplished they could ask no more of him. *Toloo*, the Wild Man of the Cave, was the terror of all. He was a giant Tongan whose wits had left him; his food was man when he could lay his hands of him; all sought to slay him, but all feared. It was for *Laufoli* to end the terror or himself to die. War club in hand, he sought and found the Cave, went boldly in to find the giant absent. The way led down, so down he went and saw bones everywhere, bones of his fellow men. Not wishing to avoid the meeting, *Laufoli* waited long, then towards sunset heard the Terror coming as he crunched the trail above. At the top of the Cave, the wild cannibal stood, and thus he spake aloud, "Whence comes this smell of Man?" Then looking down, he spied the Niuean. The giant smiled at the thought of getting food so easy and so nigh, then started to descend. As he put his great foot down, one blow from *Laufoli*'s club smashed it to pulp; he thrust the other down and again that club descended. Then the maddened wild man put forth his hand to grasp that which assailed him and

again that club struck true; then came the other reaching out and it too fell helpless. Now came the great body full upon *Laufoli*, but he stepped aside, and soon the cannibal was a lifeless corpse. The terror was no more a thing to fear on Vavau. Taking the teeth out from the massive jaws, *Laufoli* thrust them in his loincloth, then ascended and went back to those who had sent him on his mission. Cried he, "Your terror has departed. I have slain *Toloo* in his cave." With one voice they cried, "You surely lie, O *Laufoli*, it could not be." Then showed he them the teeth which he drew from his loincloth, and they believed.

Thus had *Laufoli* passed every test; they could ask no more of him. Then did the Tongans pour gifts upon the noble Niuean. None were too good for him — many a *Tooga*, those most beautiful of all mats made, hair oil in plenty; *Hiapos*, too, to wrap himself therein when cold; coconuts and all manner of foods. Loaded down, and full of honour and renown, *Laufoli* left the friendly isle, and once more stood on Niue.

The years passed, and for *Laufoli* life held nothing more of interest. He wished to die. He feared that if he grew old and his strength departed, then in some island quarrel, he might fall a victim unable to defend himself, and that to *Laufoli*'s mind was no worthy end to a man of high renown. Therefore he determined that he would make an end of himself, and it should be done openly, bravely and in the sight of all. He was a great man, therefore dared none to gainsay him. He dwelt at Veli on the East Coast, nigh to Liku, and calling his relations to him, he gave orders, "Make you a great oven for a human baking." And they made it. Now did they make huge fires therein, and when all was ready they break it open. Great was the furnace and the heat.

Thus did *Laufoli* draw nigh and spake his last words — "Behold! I die. Cast much earth and covering upon this oven when I do leap therein. Make large the grave of *Laufoli* this day, I charge you." Then he leapt and the great heat wrapped him close. Yet went he not alone to his death, for the people obeying him, piled up the mound all too quickly, and with a mighty roar the huge oven exploded and slew many of those standing by, the workers also. Therefore is it to this day when a big oven of native make shall explode, men say "This is *Laufoli*'s work," and lay the fault on him, nor try to find the cause within themselves.

*Laufoli* has gone — his great Labors are o'er — but even after so many years, there may still be seen the outlines of his oven tomb at Veli, nigh the sea. And this is the Death Song of *Laufoli* ere he leapt into the oven:

How many strands to make a rope?  
 Say it be four to make it strong;  
 Needs make it six to be as I.  
 A Life full of wonders, labors unsurpassed,  
 Great store men set upon their lives,  
 Yet when done where goes it? To the grave.

Now let the Tongans assemble  
 To gaze upon a hero.  
 Was not the banana foully grouped and chosen?  
 How great the cunning to detect the snare;  
 Soft appeared its core, yet wisdom triumphed.  
 But now is the rope getting frayed by age;  
 Where shall it be placed when at last it breaks?

Now let the Tongans assemble  
To gaze upon a hero.  
Heavy and hard was the climb of the mountain;  
Stones rained in rain to hinder, and the summit gained,  
Death met all but one, who pleading hard for mercy, found a friend.  
But now is the rope getting frayed with age;  
Where shall it be placed when at last it breaks?

Now let the Tongans assemble  
To gaze upon a hero.  
Deep was the chasm and very great the danger,  
Water below, all ready to engulf,  
Leaves for deceit with fragile base to hold them.  
But now is the rope getting frayed with age;  
Where shall it be placed when at last it breaks.

Now let the Tongans assemble  
To gaze upon a hero.  
The shadow of the giant shut out the blazing sun,  
As entering his Cave for human blood and meat  
That Flesh struck out and smote him down — a corpse.  
But now is the rope getting frayed with age;  
Where shall it be placed when at last it breaks?

Now let the Tongans assemble  
To gaze upon a hero.  
As the cry of an owl when pierced by an arrow,  
So cried *Toloa* as the blows struck home.  
My life or his! There we settled it.  
But now is the rope getting frayed with age;  
Where shall it be placed when at last it breaks?

The Oven!

And into it Laufoli leapt.  
Thus came he to his end.<sup>239</sup>

<sup>239</sup> The site of Laufoli's death (June 2015):

## 8. All For a Candlenut <sup>240</sup>

### *Toafofia*

Two of the most highly prized trees on Niue have ever been the *Fetau* and the *Tuitui*. Both bear nuts which have much oil therein, which, as now, was used both on the body and the hair, but in ancient times this also was an added use, namely, making every part of the body ready for battle.

Time was when two men great of fame, both of Uhomotu (now Tuapa), by name of *Ligatoa* and *Fakapuna* quarrelled over the right to a *Tuitui* tree. Each claimed possession and the quarrel grew to blows. In the fracas *Ligatoa*'s head was cracked by *Fakapuna* and he was wounded sore. Some of his sons and daughters had left the father's village and married amongst those of Mutalau. When the news of the father's plight reached the latter village, then did those sons rise up and swear by all their gods that they would have vengeance, for their father was dear to them. Therefore did they gather together many braves and, well armed, set out across the island, a large band. The news of their coming went ahead of them and *Uhomotu* feared not, but hastily calling together the warriors of the village, *Fakapuna* took the warpath, too. 'Twas at *Gutukiu* that they met, a famous fighting ground of yore, and there *Ligatoa*'s sons paid *Fakapuna* back in plenty and he was glad to escape with many a wound, but yet a whole scalp of his own. When the fight was over and the sons of *Ligatoa* looked upon the dead of *Uhomotu*, then were their hearts sad, for they had been fighting with their boyhood's friends. Men call such today Civil War, and when hearts are not angry, it appears a fearful wrong. Therefore did these same sons repent and think it an evil thing to slay men of their own village, all for one broken skull. *Ligatoa* rejoiced at the love of his far-off children, yet did he, too, grieve that they had been o'er hasty. It was long, however, ere *Uhomotu* forgave Mutalau its breaking of the peace, yet were they once more friends in time, and *Gutukiu* is but a memory of the ancients, the fight that there took place over a *Tuitui* tree, a ne'er forgotten episode on that cleared field for battle within the forest deep.

## 9. The Dummy

### *Toafofia*

One *Tongia*, an old-time King and his good henchman, *Titi*, puts their heads together how they might entice certain of those who liked them not to their doom. They evolved a plan, which worked with great success. At Paliaati, but a mile back in the bush from Alofi, where the trail branched, one towards Liku, the other towards Hakupu, there was a disused house of poles and leaves. This the two had put in decent order, and then within they made a dummy. Taking a chunk of wood, they covered it with tapa cloth, even to the head, which was the root of a tree, and laid it out, so that it gave the likeness of one asleep. They arranged a fire within the *falé*, and all was ready.

Now did they send forth *Tuhola* and *Tepoua* with orders to make full haste to the Taitians, even to Hakupu and Fatiau and bring hither any Chief they might think fit. Timing the return of their messengers, the crafty King and *Titi* had the fire smouldering, as if the sleeping man would fain warm himself. *Tuhola* and *Tepoua* were successful in their mission and leading the Taitian stealthily to the dwelling, pointed to the man asleep. "Behold," they cried, "did we not say that we could lead you to look upon your great enemy, even upon *Hunuki*. There lies he sleeping. Haste back and call your men together, and return as the sun goes down tomorrow, and he will be yours, for each night he resteth

---

<sup>240</sup> [Aleurites moluccana](#).

here.” Right glad was he to see his enemy so surely in his power, and back he hasted to gather his friends to the slaughter.

Now was it that the King and *Titi* put in their final stroke. At Huluitoga, which lieth nigh to Paliaati on the Hakupu trail, they prepared an ambush. It was easy done, with the thick bush and lofty trees and giant coral boulders to enshroud. That same night, *Tongia* settled with those who disliked his rule. But few escaped. None reached the Dummy, which was borne in triumph to Alofi, where feast and dance and revelry signalized the savage victory, and *Tuhola* and *Tepoua* were given rich reward.

## 10. The Removing of the Mace

### *Toafolia*

Well back from Uhomotu — the royal village now known as Tuapa — in the forest, many of the great Chiefs, with the King of the island at their head, builded a great Council Home at Fautuaua. With care, they selected the wood for the posts and rafters, and had it thatched close, so that even the fiercest rain might find no way therein. Here they should meet and settle the laws of the land, and as a sign of their authority, they decided that a mighty club should be made, and suspended from a rafter in the centre of the building. For this mace, the choicest wood of all Niuean trees was brought into use, and with their rough tools they shaped and polished it. Great was the pleasure of the King and his chief men when all was finished, and the fame thereof spread throughout the land, making good men rejoice at the authority that ruled over them, but the wicked to tremble lest it should reach them with its might.

On the eastern side of the island, where the breakers never cease to roar and life was hard, there dwelt at Veve the Chief *Hafonua*, who had had no part in this work of his King and was envious of the powers of his brethren. Many and wild sons had he, *Tafaia* and *Fualeva* amongst them, and his village feared him for he spared neither young nor old in his wrath. Now did he summon his headmen before him and disclosed his plan. They, too, should have a great Council House and if laws were to be made, they should be made in his village alike with Uhomotu. Therefore was it necessary to secure that mace and he would do it even if it meant a fight. The Council House was raised. Taking only his two sons with him, he now crossed the island along the beaten trail, then hid close to the great Council House till nightfall. Suspecting no danger, all the royal village were within their falés, a full mile away. Nor locks, nor bolts were known then, therefore those wild men walked in, and one climbing the rafters, let down the mace into his father’s hands, and home they went forthwith.

Great was the consternation in Uhomotu when it was found that the sign of the King’s authority had vanished. The wizards were called in and long and deeply did they consider, yet found no solution of the matter. But of this they were sure, that it was the devil’s work and all that they could do was to pronounce their curses on the thief, invoking torment and pains upon him, and let it go at that.

Home the fierce Chief had borne it, and amid feast and rejoicing that mace hung suspended from the main rafter of Veve’s Council House. Then something happened. Sickness befell that village and many died. The groans of the stricken ones touched even that hard heart and the old chieftain sought counsel from his wizards. To them, the mace was the rock of offence, and it must leave the village. To return it whence it came was out of the question, therefore did that Chief commit it for the nonce to the care of the neighbouring village. In their simplicity, they received it with joy, but here, too, even in Kavatonu sickness quickly followed its arrival. Seared at deaths so inexplicable, they, too, suspected that polished mace, and forwarded it promptly on to the next village with word that if they

refused to receive it, there would be war and they be forced to welcome it. Yet again death kept close to it. It was a hopeless case.

Therefore did the Chief of Veve order it to be returned to him and sent back whence it came, and back it was borne through the bush by his stalwart sons, nor was his order fulfilled till once more they had caused it to hang whence they had removed it. Then did the plague cease in the East; Uhomotu rejoiced, and peace reigned in the land.

## 11. A Close Shave

### *Toafolia*

Long was *Utamotu* sick, and his sickness was of a kind none before had known in the land. Time and again he would lie as dead, then return to life again but ever feeble. The devil doctors did their best, but their incantations, their herbs, their every artifice availed naught. But now at last he was really dead. Who could doubt it? All breathing had ceased; the heart was still; the eyes looked blank. *Utamotu* was but a corpse.

Three courses were now gravely considered by his folk. Which should it be? Should they carry the mute form out to sea and there consign it to the deep, which already so many had chosen as their grave? Should they drop the corpse into that Chasm so deep, which already so many had made their grave? Or should they bear it to the Great Cave of *Tukuofe* and add it to the bones, which littered deep the gloomy spot? They decided on the latter. With care they bound the dead man with the four stranded cord, then made a bier of poles and carried him to his last resting place. That night there was much wailing and a feast, and men's hearts were sore for their great loss, for *Utamotu* was a wise man, his counsel ever good. It would be hard to fill his place. Thus mourned they him for days and nights, even for seven sun-risings and sun-settings.

Then a wonder happened, which in those ancient times none could fathom, but we of today have been taught of and do understand. 'Twas night and all had lain upon the mats to sleep, when a voice was heard calling, "Am I alive or really dead? Is it a dream or do I live?" None doubted but that it was the voice of *Utamotu*, yet trembled they on their mats, nor dared to rise, for they feared exceedingly the spirits, which in their ignorance they held to roam the land of nights. But this ghost was a reality, for into his own grass hut did *Utamotu* totter with the rope which had bound him in his hand, yet was he too weak to lay about him and could but berate them with his tongue. Though he scolded sore, yet were they right glad to have him back.

Nor made they like mistake again. When next he seemed to die, with sore hearts, but fullest confidence, they dropped *Utamotu* in the Chasm, and laid the ghost for aye.

## 12. Put Not Trust in Man

### *Toafolia*

*Hopohelagi* was a warrior and was supposed to be both a brave and a trustworthy man. When the women of the village gathered at the sea to prepare the much prized food called *Tuhoi*, crushed berries at picking poisonous, but washed oft in saltwater cleared of every danger, then *Hopohelagi* was for a long time at his best. Great was his pleasure to attend them, giving them little assistances when

needed, watching lest hostile village should swoop down and bear the females off, seeing, too, that their baskets were ever safe from youthful ravagers. But he fell, and this the cause, Rank Jealousy.

There was no love between him and *Tuhega*. The latter was a dashing fellow, winning both in person and in speech, strong too in limb, and active in every kind of game. Much, too, he delighted in playing tricks on the seriously minded *Hopohelagi*, and making him ridiculous in the eyes of the village maidens, but there is a limit to even playful tricks and this game of *Tuhega* went too far. It cost *Hopohelagi* his good character.

The women busy on the reef, the faithful warrior handy, down the cliffside sauntered the gay-hearted *Tuhega* and passed from group to group with jest and cheery word. His eyes, meanwhile, were on those baskets and what could those women do but each one give the handsome brave some portion of their making. Ere long he had all that he could handle — *Hopohelagi* the while glaring at him sullenly — and left those guileless womenfolk with a laughing side glance at the watchman. Now did *Hopohelagi* think long and deeply. If those women were so ready to give away what he gave up his time to watch and ward, why should he be left out? Therefore did he gather up the lot, despite tears and lamentations, and walked off calmly homewards, his credit and good name gone, his occupation as guardian in chief lost for aye. He had failed them it was true, but had he not good reason? The women blamed *Tuhega*. *Tuhega* blamed the women. It was ever thus on Niue and is, even to this day.

### 13. The Fiery Furnace

#### *Toafofia*

*Nukai* and *Lagi* were great men in the land, but were wicked of heart, and sought to increase their power by means however base. Of the two, *Lagi* was not so far steeped in crime as his companion, else had the fulfilment of their most inhuman act been the extinction of all that was noble in the land. For their plan was the slaughter at one stroke of all the other Chieftains.

To Matagu these two wicked ones most cordially invited all the rest, and assured of a sumptuous feast most — unmindful of the treachery — came with glad accord. The feast was to be held in a great open space carved out of the bush, and back of it well hidden from all eyes, *Nukai* and *Lagi* had built a mighty oven. If prying eyes had seen it in the making, there was answer ready: was it not being prepared for the Great Feast? Yet never had Niue seen one of so great a size, nor was any feast to be.

As the Chiefs, singly or in groups, from all parts of the island, came upon the scene, the two ruffians with their cowed assistants seized and bound them. Soon all were in their power. Now did *Nukai* refuse to listen to all appeals, and into the oven of heated stones, he cast man after man. But *Lagi* weakened at the entreaties of the doomed and cast his into the bush on the farther side. His companion doubted not but that *Lagi* and his assistants had done his share and that fire had consumed all traces of the crime of both, and none dared tell him otherwise for fear of *Lagi*'s wrath.

When darkness fell and *Nukai* slept, then did *Lagi* creep to where the bound men lay and cutting their bonds, let them go free. Thus were these saved from the fiery furnace that had engulfed their friends and lived to have a reckoning, which repaid the debt in full.

*Nukai* and *Lagi* have both long passed away, but Matagu remains, and the site of that mighty human holocaust is visible today.

## 14. Long-Distance Divers

### *Toafofia*

At Fautuaua, representatives from every village on the island had gathered to make laws. It was but a mile back in the forest from Uhomotu, where dwelt the King and before which the sea beats upon the coral reef.

It was hot and, their duties over, it was agreed to visit Mataloko, a well known bathing pool to this our day, there to relax in swimming and diving. Rivalry soon showed itself and soon chosen men from each village were at it in earnest. Now came diving and after leaping from great height, there was competition as to who could remain under the waters for the longest time and distance.

All joined in, save two young men from Tafiti, which is where Hakupu and Fatiau lie today. These men were *Tulitoga* and *Tagaloa-hekula*, the stalwart sons of the great Chief *Foufou*. They seemed to be indifferent to the contest, the shouting and the clamour. Yet were they not really so. When all but they had tried, the rest cried out, "Shame be upon you, ye sons of *Foufou*. Take now your turn and dive or Tafiti will be disgraced before us all." Now both *Tulitoga* and *Tagaloa-hekula* had long practiced the art of remaining under water for great distance, and had watched the rest, none of whom could compare to them.

Therefore, now that they were challenged they took the dive, both at the same moment and making the full length of the passageway through the reef, reached the open sea. Still kept they beneath the waters and turning south kept on till a point hid them from sight. Then rising to the surface, they swam steadily on to the cave at Avaiki, which is nigh to Makefu. There they landed and by way of trail returned.

Meanwhile those at Mataloko knew not what to make of it. Was it a dive beyond any known of them, or had the two been drowned? At first, as the distance lengthened alike with the time, men shouted their approval and applause, but when the two did not appear upon the surface, then did men fear many things, the giant *feke* with its tentacles, a shark or the sea-god's wrath. To Uhomotu all returned with hearts saddened for *Foufou's* sons. When the two appeared that evening in the village, great was the astonishment and wonder at their tale. Such diving and such swimming was not known in Motu. Tafiti took the crown.

Motu was defeated and *Tulitoga* and *Tagaloa-hekula* took pains to press it home. Had not Motu jeered at them? Therefore they composed this Song :

Dive cleanly, swim swiftly,  
Else shall you be mocked!  
Tafiti dived, came up for breath,  
But Motu saw us not.

## 15. A Mysterious Visit

### *Toafofia*

*Palafoumiku* sat upon the tiny beach of sand that is to be found at Tavahihi, close to the Tuapa of today. He was thinking of nothing in particular, just taking a rest beneath the winter's sun, when something he saw far out to sea made him think very hard indeed. No ordinary canoe with outrigger,

for such no mortal eye could discern at so great a distance, but a huge warcraft that rose and fell as it clave the waters, making straight for where *Palafoumiku* sat. It came from the west, where Tonga lies. Was it peace it meant, or war? Still on he sat, nor thought of hastening up the cliff to give warning to the village; he would just wait and see.

Bounding along beneath the strokes of a hundred paddles, it soon was but two spears' throw from the land, when it stayed, swung round and rested. Into a smaller canoe, which trailed behind, there leapt a landing party with one, *Teiloa*, at the head. These made straight for the little beach where *Palafoumiku* sat. Now they were out and walking towards him, the while *Teiloa* was unrolling a fine mat. Cheerily the Tongan cried aloud, "Surely are you the Chief of these parts. Your courtesy in coming thus to meet us we warmly welcome. Let this fine tapa cloth be our present to you. E'en now with it will we adorn your shoulders." Then *Palafoumiku* seemed suddenly to awaken to realities. He saw capture and slavery, and thought but of escape. He gave no credence to such soft speech — and yet who knoweth? It might have been, but he went the wrong way about to cause it to be so, for having no weapon with him, he had recourse to his legs alone, and springing to his feet, dashed up the beach, running for dear life. This abrupt proceeding in answer to such kindly words naturally made *Teiloa* angry and forthwith he gave chase. After the beach comes a rocky space, e'er the trail up the face of the cliff is gained. Here *Palafoumiku* cleared at a single bound a wide-spreading rock and crazed with fear rushed on. *Teiloa* followed, but failed to clear and coming down hard, he broke his leg. Here was a 'to-do', the leader helpless and in a strange land, and the crazy one flying up the cliff face with news that would bring the village down like a swarm of wasps. Therefore the man-chase ended then and there, and picking up the helpless *Teiloa*, they made their way back to the canoe and so to the warcraft beyond.

The Leader of the party had watched all these proceedings nor could he understand at all, at such a distance, but great was his anger when he heard that *Palafoumiku*, the cause of all the trouble, had escaped. "Why did not the rest of you chase the man? Were all your legs broken as *Teiloa*'s? A fine landing party are you indeed! And now we must haste back, lest *Teiloa* perish and we incur the wrath of the King, for high is *Teiloa* in his favour."

Uhomotu from cliff and beach saw them pass out to sea. To this day there is mystery about that visit. It came from Tonga, or else we had not heard the story from their lips, which completes *Palafoumiku*'s portion of the tale, but they said not if it was peace or war, and amongst all our ancient tales, it remaineth still the one whose riddle is unsolved.

## 16. Welcoming the Babe <sup>241</sup>

### *Toafofia*

There were strange customs in the days of old when the new-born first appeared. It was a busy time for the father who would have a famous son. Of the girls, the *falé* was their lot in life, not the canoe, the hunting of birds and the warpath. Strength, hardihood and a fine voice were the longings of that father, and his part it was to start his babe on the way thereto.

Down therefore to the receding tide the fond parent would hasten and hunt with diligence for the little *Kamakama*, a crab whose fleetness of pace surpasses his size. When caught, it was borne home forthwith, its claws detached and rubbed for long on the feet of the babe, those claws that sped so

---

<sup>241</sup> Smith refers to the use of the *Heahea* bird, *Kamakama* crab and sugarcane, and also the *Taketake* bird, at birth on page 204 of Smith, Part III. His informant was *Pule-kula*.

swiftly o'er the rocks. Thus would the child, when reaching manhood, be like *Kamakama* swift of foot, swift to pursue, swift to escape to fight another day.

Then off to the bush that parent went to bring down with stone or spear the sweet-throated *Heahea*, the thrush of Niue. The dead bird in his hand, he would haste, and oft rub the lips of the babe with the soft breast of the songster, thus ensuring the future warrior a noble voice that would carry far, either in battle cry or oration to his people.

And yet again he would haste away to his plantation to cut down the *Tomaka*, our sugarcane, but this one with outer skin as stone for hardness, as we have still with us today, and bearing the sweet cane home, would force some of the sweet juice down the throat of the loud wailing babe, that he might be hard as stone to endure all things in the days to come. For in those days, none but the strong could hope to survive; the weakling succumbed quickly in those stressful times.

Therefore with much diligence did each father strive that his son should be a warrior, brave and strong, and take his place and part in life on Niue's stormy isle.

## 17. The Black Devil

### *Toafolia*

It was not the wish of any brave to die upon his mat. Therefore it was grievous unto *Hiligutu* to lie sick in his grass hut, doomed ere long to die as any woman. Yet did he long bravely struggle to conquer and be strong once more, but what could avail, seeing that he had the growth in his stomach, which we this day call cancer? So great was the strength of the disease within him that the brown skin of our race was changed to well nigh black. He sank lower and lower till he lay — seemingly — a corpse. This then they did, though their hearts were sad; it was the hot days of the yearly round of sun and quick must be the burial. Ere the breath had fairly left the body of the mighty warrior, they carried it to a canoe, paddled far out to sea and cast the dead man overboard into the still but gently heaving waters. They had gone far and darkness ever cometh down with startling suddenness. It was as the sunlight fled, they eased them of their burden and paddling swiftly, soon left the spot behind.

The village rang with lamentations both that night and the next for *Hiligutu*, but *Hiligutu* was far from dead, and very busy for a sick man all that time. For the plunge into the waves revived him; his lethargy took flight; coming to the surface, he looked around, but the inky darkness shut out all and every sight. Ever a good swimmer, he struck out and went with the waves. It was long ere he made land, yet made he it in safety, and then was he far from home. Weak was he and faint, and slowly made he his way along reef and cliff. Two nights had sped by, and one of the village made journey to the sea at dawn, when on the reef below the cliff he saw a black form — hunched up, eating bananas, skin and all for none of the fruit seemed to be thrown away. The villager doubted not but that he saw a devil, and fled back to the village with the news. "Come, come quickly, all of you and see a real back devil eating bananas skin and all."

The cliff-edge was well crowded and the black form still sat hunched there. They took it all in, this vision of a devil, its shape so strangely like their own, its ravenous appetite, for still it was busy, its color just as their wizards had taught them. Now would they be able to tell their children and their children's children of the wonder their own eyes had seen, when lo! the devil rose, turned, looked up and waved its arms. With one voice, they exclaimed, "It is no devil. Lo! it is *Hiligutu* whom we had cast into the sea as dead. Let us haste down to hear his story, for it is a wonder greater even than a

devil that *Hiligutu* has returned from death.” The village had high feast that day, with song and dance in place of tears and wailing.

*Hiligutu* had his wish at last, for he died as a warrior should, despite his malady. At Fugaehake he fell, and with him, to the Land of the Shadows, went his friend, the mighty *Palalagi*, to whose aid he had hastened, sick as he was, in that brave’s hour of need.

## 18. A Ruffianly Chief

### *Toafolia*

*Tuhega* was a western man, brave enough, a fighting Chief, but he was a ruffian. His ways were cruel, and of himself he thought alone. When famine struck the land, then roots and ferns, creepers and weeds, were eaten of the people in their dire distress. Some of these are poisonous like as some fish, but from earliest times, Niueans have known the art of clearing out the deadliness and can eat it in perfect safety. Who taught them this is a secret of the past, even as the medicines that are made from many a plant and herb. At such dire times is the food *Tuhoi* used, which, crushed and oft times washed with saltwater, is taken in lieu of better.

Down by the sea upon the reef, the women worked and slaved, whilst Chief *Tuhega* watched above. Then would he take his servants down, and despite tears and entreaties carry off the lot. Yet was he wary. The women who had strong brothers he disturbed not, but only those who were old, and defenceless in their homes.

But the wailing of the women was not to the liking of *Tuhega*’s clan. Their wrath was great against their Chief, who would thus despoil weak women. Therefore did they plot to slay him, but *Tuhega* had his friends, ruffians as he, and many a time did he escape when they nigh had him at their mercy. Yet was life too strenuous for even such a one as he, and he sought at last refuge in the bush. Upon his trail the avengers went, rounding him up at length upon Tapeu hill, which is the summit of the rise behind Tufukia, nigh to Aliutu. There they slew him, yet ere he died, he cried aloud this Death Song which has passed down from mouth to mouth these untold years, sung by him who in his lifetime was oft called ‘Three Hats’ from his delight to wear upon his head a triple covering in his fights:

*Togia* of old was slain by braves;  
I am besieged on *Tapeu* hill.  
Three Hats will be slain this night;  
My bravery avails me naught.

## 19. The Fight at Avaau

### *Toafolia*

Fine were the coconuts — none finer upon Niue — that grew nigh Makefu at Fofoaiki and at Faifai. And envious eyes were cast upon them, even those of the Hakupuans in the south. Therefore did the braves from all the district of Tafiti journey thither on a night agreed upon and stole those nuts, the pride of Makefu, bearing great loads of them away.

Then came there running into Makefu men from both Fofoaiki and Faifai crying, “Our coconuts are gone! Who hath stolen them?” Great was the excitement at the news and men’s hearts grew wild with anger. “There shall be death for this,” said they and they meant it. The wizards and the old men said

that Hakupu was the thief, for long time had bad blood been between the two. Now was there a rush for spears and clubs and those deadly coral stones rounded to hand size, which whom they strike they slay, and when the third sun rose, Makefu was on the warpath.

Tafitians knew full well that there would have to be a reckoning, and had got ready, too. They would forestall the Makefuans, and this time there should be such a fight as would wipe Makefu out; no half measures, their place should know them no more. "Now let us slay them one and all, and possess their homes, and ourselves own those plantations we have raided." So confident were they of their superior force that they took the women, even their wives, along with them to make a settling in forthwith.

At Avaau they met — the angry Makefuans, the bloodthirsty Hakupuans. The former had not expected to meet the enemy so near their village, but the place was good for battle, not cramped, and long the contest lasted. Revenge and right gave strength, and ere the day was over, Tafari was in flight.

One brave of Hakupu, *Lagamohe* by name, saw clearly which way victory was going and thought to save himself for another day by timely flight. He took to the bush and a trail that winds, like all, in and out amid huge coral rocks. Hurrying homewards, he heard what he took to be an enemy close at his heels. Crouching behind a pinnacle of stone, he awaited the approaching one. He sprang; he struck. Alas! it was his own father, *Matagutu*, who had thought it the part of truest wisdom also to get away from the battle, and had taken unknowingly the same route as his son.

But *Lagamohe* soon joined him in the Land of Shadows. The avengers were combing the forest, ere he could drag himself away from his fallen parent. Men, women, fled past, one cry upon their lips "Haste! haste! We perish!" Then rushed they onwards, leaving him still mute and motionless. Makefu hath it that *Lagamohe* made no fight at all at the last, though he was a brave. They came upon him as he slowly made his way. He turned; he raised his head; he had no weapon in his hand; a spear flew, struck home. *Lagamohe* and his parent walked together in Another Land.

## 20. Poachers! Ye Gods!

### *Toafofia*

*Puivao* had a fish preserve. It was his particular fishing ground and he allowed none to encroach thereon. Always, as he went out in his canoe, he called upon his god, *Motufolo*, and was ever careful to first feed his catch with many a dainty fruit and leaf. Lalofou was that fishing ground, and the fish that he sought most to catch was the *Paala*, or as we now call it the Tiger fish, from its long, strong body, striped in red and black.

*Puivao* long had known that others poached upon his ground, but though he tried oft and in many ways, he ever failed to catch them. *Taula* was one of these, whose young son often helped him. The boy had made great friends with *Puivao* and oft went out with him, and thus learned all of the best spots to cast net or hook. Men used for hooks, in those days, the crooked roots of trees. These were the useful trees, the *Piliva*, the *Maile*<sup>242</sup> and *Kapilili*, and nets they made with the vines and tendrils of the forest.

*Puivao* would one day go a-fishing and took the boy along with him. He did his duties thoroughly, called on his god, and gave out food in plenty, yet ne'er a fish came either to hook or net. Then was *Puivao* sad and wondered for the cause. Surely was *Motufolo* angry because he had failed to stop

<sup>242</sup> Possibly the shrub [Alyxia stellata](#).

others coming on the ground. Therefore now would he set double watch, both by night and day, and all would be well once the poachers were slain, for there was killing in the heart of *Puivao*.

*Taula*'s son wandered along the reef off *Puivao*'s ground a short while after and lo! he saw a multitude of fish. Hastening home, he told his father that which he had seen. "What kind of fish were they, my son?" said *Taula*. "They were all the great *Paala*," said the boy. "Go now to your mat, my son, tomorrow we go a-fishing." And they went. It was at break of day and *Puivao*, who had built a leaf hut on the cliff that he might better pounce upon the poachers, was still asleep.

Out they put, and calling upon their god, the two got busy with hook and net. Such catch astonished them. The Tigers were hungry and leapt at the hooks; they were so many that the net soon filled. Now did the father and the son shout aloud with joy, and that was their undoing, for *Puivao* above heard the noisy two below, and rushing forth looked down upon them.

That boy, a poacher, whom he had treated as a son! And *Taula*, the doer of all mischief! Now did *Puivao* call upon his god once more, "O *Motufolo*! Quick! Haste you to the sea and punish *Taula*! He is the poacher! And if you fail to punish him, I will." But *Motufolo* failed not. He was far mightier than *Taula*'s god. For lo! Just then the father and son in their excitement in hauling in the net, upset the boat, fell into the net, their feet and legs all tangled up; they struggled hard, but all in vain. They sank, and the Tigers had a meal they had not looked for.

This was the poachers' end, and so glad was *Puivao* that for one hundred nights, he celebrated it with song and dance, nor forgot he *Motufolo*, who had heard his cry.

## 21. Of Kings <sup>243</sup>

### *Toafolia*

I would fain tell of the Kings of Niue Isle from the earliest, but Tradition is oft at fault, for famine and pestilence and inter tribal wars wrought such havoc in this land that those to whom the sacred traditions were handed on oft perished, their knowledge with them. But out of the dimness of that past, some names have never perished, and it is now well to pass them on in the printed page that our children, so engrossed in learning the ways of the great White Race, may not forget the glories of their own land.

These, the names, and of some of them I would speak a little of matters that may interest. Of the *Togia* of ancient times, I have already spoken. *Leivalu* and *Hetalaga* are both memories. Of what village, why bathed with the sacred oil, thus set apart from their fellow Chiefs, what made them famous or how died, none of Niue knoweth, but came *Tihimau* and *Punimata*, *Patuavalu* and *Galiagaaiki*, *Fokimata* and *Pakieto*. The reigns of these covered many years and Captain Cook, the first of white folks to see our lonely land, was late in time compared with these.

Yet was not Niue wholly without visitors, royal visitors at that, for it is told of *Tihimau*, who had his crowning at Lakepa, on the east coast, that a great and mighty Chief, even *Tepunua*, King of Tonga, 250 miles away, came to see his royal brother, not in war array, but in peace and friendliness. He made his landing at Avatele, which till of late years was the chief and safest spot to gain our shores, and though a stranger was not then repulsed, for Niue had yet to learn the danger of introduced disease. Once learned, the barriers were put up, as the Great Navigator found when it came his turn

---

<sup>243</sup> Niue's kings are discussed on pages 173–175 of Smith, Part II. His source was *Mohe-lagi* of Alofi. Niue's kings are listed on page 106, and a history of the kings is given on pages 116 and 118, of Smith, Appendix Continued.

to seek a passing foothold. Finding that he whom he had come to see was on the other side of the island, Tonga's king took forthwith to the bush along that trail, which to this day runs clear but sinuously across. Many were his followers and his presents, too. Good news ever travels ahead and ere Lakepa was reached, *Tihimau* did the courteous thing, hasting forth to meet his Majesty. In the deep bush, they met and in the friendliest fashion talked and questioned. Each sought to test the other's knowledge, and in rivalry propounded each their queries. All that Niue's king sought of Tonga's was clearly answered and for long Tonga's could find no weak spot in his brother's ken. Then said *Tepunua*, "You have here a king as we?" Said *Tihimau*, "We have here a king as you." "You have an under king as we?" "We have an under king even as you." "You have councillors as we?" "We have councillors as you." "You have the great Meeting House as we?" "We have the great Meeting House as you." "Have you place of worship for the gods as we?" Here was fall for *Tihimau*, for Niue worshipped them under the blue sky of heaven, and knew not of locating whom they worshipped, whether above, below, around them or wholly in the sea itself, whilst Tonga had wondrous stone Temples, which may still be seen, and in them placed images of their gods imperishable, too. Here was weak spot on Niue, to have a King with regal pomp surrounded, but to have the gods unhoused. Niue thus lost out in friendly tilt of words, but no ill feeling followed. Perhaps it was to see that Niue's lack was filled, that the visit was prolonged to so great length that after many moons Tonga's king breathed out his last on his good friend's domain, and *Tepunua's* body was carried back, a lifeless thing, to be buried with his fathers.

*Punimata's* reign was a reign of peace. He had his bathing at Hakupu, even on the spot where the Government School for our children stands, called Makatea, and he was wise and good to all. None fell to fighting, for all looked up to the king, and his words were ever good, yet lacked he not in firmness. It was in his day so long ago that Uhomotu — now called Tuapa — was made the King's Village, and at Fautuaua, back in the bush, there was raised that great Council House of the land of which I have already spoken.

Now I pass on to *Patuavalu*. His reign was also one of perfect peace. It seemed as if Niue had never known, nor could ever know again, so wondrous a time. All life seemed to be happy, as were the people. Never had the trees borne so abundantly; never were the wild birds so numerous or tame. The fat and luscious pigeons came into all the villages, resting not alone in the bananas, but on the roof of every falé, nor feared they man at all. The great land crabs came forth from their rock holes and entered the homes, finding good hiding and abundant food in the huge piles of coconut shells cast aside. The sea, too, was full of fish; none ever went out to return empty handed. The sun was not too great in heat, nor did the rain withhold; the wild winds ne'er blew fiercely. People and land were happy. All rested for the stormy times ahead, yet knew they not that such was to be. *Patuavalu* had his bathing at *Puato*, close to Alofi village, and there at last they buried him, grieving sore at their great loss.

*Galiagaiki* became now king of Niue. He was of Liku, on the east coast, and bathed at Taumahala, in that village now extinct. He was a good man and strong, but fell a victim in another's quarrel. The plantation of a native by the name of *Tinomata* was despoiled and none knew the thief. Now *Tinomata* was of a fierce and ungovernable temper, and in his savage breast, thought only of how he could reach the thief and satisfy his vengeance. He determined to murder the king of the land, for thus would misfortune come to the island; the gods would be angry; they would send too much sun, too little rain, thus would famine come, and coming, slay the thief, though he himself should likewise die. Therefore did *Galiagaiki* fall to *Tinomata's* spear and sorrow great spread over the land. Then did the Chiefs hear *Tinomata's* tale and making search, found *Fakahemanava* to have been the thief.

Then, like Achan <sup>244</sup> of the Holy Book, was *Fakahemanava* destroyed, himself, his wives, his children; the whole family of that wicked one, who had caused the regicide, was wiped out of Niue forever. Now for a long time there was no king, for all the great, the wise and the strong refused to be bathed, lest for some other's wrong, they should come to sudden end.

*Fokimata*, far from willing, was at length prevailed upon, had his bathing at Paluki and dwelt on the King's plantation nigh to Uhomotu. He was the western people's choice, and the eastern side were jealous and long sought his life. For better safety, he at length removed to Hikutavake, which village then lay nigh high up above the lower ridge of Niue's coast. But the warriors of the eastern side were not to be denied. Gathering in mighty force, they crossed the land, rushed the village and yet another king of Niue came to an untimely end.

And now the eastern men set up their king, his name *Pakieto*, who was of lowly birth, yet had come to the front by force of character and strength. The common people had no say, and soon discussion arose throughout the land, and quarreling amongst themselves, they let their plantations go. Then there was too much sun, and far too little rain, so famine came and added to the trouble. Niueans were right glad to eat roots, which in times of plenty they would have despised. And their duty to their king — though they loved him not — they thought not of. Kings were ever provided for after their bathing; it was not for kings to work among their plantations. Now were all men weak with hunger, and each thought only of himself. Therefore was *Pakieto* driven at length to crawl half-dead into the bush and eat aught that came to hand, even the dead birds that had perished from hunger and which were as poison even to the healthy and the strong. There *Pakieto* died, and for long, people sought him when the worst was over, asking "Where is he, our king?" But none could make answer. Some had seen him as he made his weary way from falé to bush, but none after that. Then came the welcome rains, and the famine ceased, and Niue fed once more. And lo! one stumbled upon the body of the king, yet was it hard to recognize for the wild rats had had long their feast. Such was the end of *Pakieto*, an end unworthy of a king.

Now, once again, there came a break in the line of our 'Anointed'. None would consent. Strong braves pushed themselves to the front, some of whom I have spoken of already and others I may mention, among them *Palalagi* and *Foufou*, *Hafonua* and *Futuga*, *Manatoga*, *Tokaagataha* and *Mohelagi*. These took the lead, some here, some there, and rivalry arose and fiercest fighting, and the isle was split in two, some crying out that they were of Tafiti, the others that Motu was their home.

Thus was it, till the Gospel came and changed the land from constant warfare to a land of peace. Then, like God's People in the Holy Book, Niue wished to be as other lands again and have a king, and those known to all of us did reign, *Tuitoga* bathed by Solomon the Deacon in 1876, *Fataaiki* bathed by the Missionary in 1888, and *Tongia* bathed by the same good man in 1890.

Then Britannia's King became our King and Niue cries today "Long live the King — of England and of Niue."

---

<sup>244</sup> [Achan](#) is a figure in the Book of Joshua in connection with the fall of Jericho. According to the narrative, Achan pillaged an ingot of gold, a quantity of silver and a costly garment from Jericho; this act resulted in the Israelites being collectively punished by God. The Israelites used cleromancy to decide who was to blame, and having identified Achan, stoned him, as well as his sheep, other livestock and his children to death.

## 22. Derision and Its Sequel

### *Toafofia*

*Lavakula* was of the west side, and set out to pay a friendly call upon some whom he had long wished to see, who dwelt at Mutalau, which then was known as Eastern Niue. A brave, he ne'er went without his spears, and thus equipped made good headway over the trail. He was near his goal, even at Fakafaleloto, when *Foutapa*, another brave, but of the eastern side, came swinging along. Now *Foutapa* was quick of speech and thoughtless, unmindful of others' feelings and thus sang out, "O *Lavakula*, brave and strong, why carry you those forks? It looks as if you mean business both of killing and eating. Surely you had better brought a cooing dove to play with, and like it make soft love to yonder maidens." Now *Lavakula* did not take such talk at all kindly; his heart grew hot within him and his anger rose. Yet did he not strike there and then, but challenged *Foutapa* and his band to combat, naming time and place, then turning, struck off into the bush and in his fury set his face for home again by another route than that *Foutapa* held. Tufakalele was the battle ground, the scene of many such a fight in days gone by, an open space and level. Here could they fight man to man till victory was assured.

Hither then came the Derided and the Derider, each with a chosen band, and at once the two sides clashed. It was East against West, and all the old-time jealousies and animosities warmed up the combatants to fiercest effort. Man after man went down to rise no more. No quarter was asked; no quarter given. Those 'forks' of *Lavakula* did deadly work that day. He lunged; he thrust; he parried, the greatest warrior of them all. Yet one he kept in reserve; he would first make havoc of the lesser folk, then settle with *Foutapa*. The space was large, the fighters many, but at last they met. "Now will I show thee, O *Foutapa*, how *Lavakula* maketh love," cried the derided one, and parrying thrust after thrust, at last found an opening, and thoughtless-speaking *Foutaoa* fell, paying the account in full.

## 23. A Generous Foe

### *Toafofia*

There is an ancient proverb. This is its ground.

Eastern Niue went forth to fight Tafiti, which in those days of Long Ago was a large populous district, but today is but Hakupu, and Fatiau, too, which is now the smallest of our villages. They thought to kill many, to carry off the younger women, to despoil the villagers of their fruits and roots, and leave their mark upon the place.

But the Tafilians were game; they, too, could put up a lusty fight, and first in steady retreat, then in headlong fight and rout, the Easterners made through the tangled bush for home, the Tafilians ever close upon them. The forest has but trails, and coral rock oft ranges high on either side, as the path glides on between.

This was Tafilian country and *Fofoaiki* ordered his good henchman, *Kiumaka*, to make quick detour and by bypath, head off the fleeing bands. This he did, and blocked the trail ahead. Caught between two batches of Tafilians, it had gone hard with them had not *Fofoaiki* called out to his furious host, "Stop the slaughter; stay your hands." Already many had fallen to rise no more. More, still, were wounded; none had escaped, but for the great heart of *Fofoaiki*.

Therefore is it that *Fofoaiki* is ever named when generosity is spoken of, even as the ancient proverb saith, “Generous as *Fofoaiki* in the day of battle and sure victory.”

## 24. Divided Counsels

### *Toafolia*

Since Captain Cook’s day, in the eighteenth century, ships had steered clear of Niue as a landing place. Yet as Australia and New Zealand opened out to white settlers, merchant ships and carriers of human freight steadily increased in number, and the wild braves on the isolated island saw them, and bristled for a fight, as occasionally they passed by outward or homeward bound. On board, curious eyes would doubtless look at Niue, lying low on the ocean’s bosom, without a hill to break its even line, and would talk together of the savage Polynesians, whose home it was, whilst on the isle itself, there was running to and fro, and hasty messages calling upon its braves to seize their spear and club, if perchance the winged monster of the deep should head their way. That any benefit should come to the island by such means was not within the capacity of the Niueans to conceive. It was an enemy, and as such was to be driven back, attacked if possible, and any way made to have a wholesome and a lasting fear.

Therefore when off the western coast, a full-rigged ship came in view, and under a light breeze was making but slow headway, there was much excitement in the villages that rested on the summit of the lower cliff, whence the wide expanse of ocean could be clearly seen. All the Chiefs, save one, called upon their warriors for defence; *Vihekula*, however, would carry the war to the enemy and fight him ere he landed. Therefore did he call upon his head men three, to leap into his big canoe and with him paddle out to intercept the enemy. Fast and furiously, they cleaved the water and steadily cut down the distance. Perhaps the sailors were lounging lazily, and watching on the taffrail <sup>245</sup> the oncoming canoe with amused interest, but not so was it with *Vihekula*. Though four against an unknown band, that was naught to him. He was out for a fight, and had he not spear to thrust the monster through with, and club to smash it to submission? And it might have been a fine tale for both sides to tell, in spinning a yarn in their old age, but for *Manatoa*. He spoiled it all. His heart was not big enough. Now was it found that he had not even a rat’s courage — that lone wild thing on four legs in Niue — for as the great hulk of the ship grew bigger and higher to his vision, so did *Manatoa*’s heart sink lower and his courage vanished. He was seared and putting energy into his paddle, paddled backward strokes even as his companions paddled forward ones. *Vihekula*’s commands and threats were of no avail; the canoe went wildly; the great lazy hulk moved slowly on; the distance lengthened; the chase was hopeless; it was given up.

*Vihekula* returned to the reef, his wrath had not abated, *Manatoa*’s cowardice had but added fresh fuel to it. What was the coward’s end is a secret of the past, but his paddle was that same day given to another, and none can point of certainty to *Manatoa*’s grave.

## 25. The Fate of the Unruly Son

### *Toafolia*

Stern parents were those of early times; they lacked mercy even to those of their own flesh and blood.

---

<sup>245</sup> The railing around the stern of a ship, often, but not always, ornately carved.

*Puatau* and his wife had many sons. All, but one, had learned obedience and did their share in the bush and the plantation. But one was idle; hard work was not for him. Yet was he an expert fisherman, and he loved to pass the hours with his paddle on the high seas beyond the reef. Repeatedly the father warned him, but he paid no heed either to his father's commands or his mother's entreaties.

"Come my sons," said *Puatau*, "Let us go to the cliff-edge and there build a canoe." Not even the unruly one held back, for it suited his fancy to a nicety. Thither they went, and felling a tree, worked many days upon it. But what struck the brothers as strange was that this was not to have an outrigger to steady it, nor would the father have the ends prolonged and pointed. When they sought the reason, *Puatau* told them to mind their own business; they would know soon enough. Now it was finished and taken down to where the rest of the village canoes lay covered from the sun with many leaves.

Next day, *Puatau* talked first thing in the morning of the need of fish and said that he was going a-fishing, and as the unruly one was good with hook and line, he could come along with him, if he had a mind to. All unsuspecting, the youth jumped at the offer. Indeed, he would go, so father and son set out. Down the cliff-edge they went to where lay the canoes. Taking a stout piece of sinnet rope the father tied the 'dugout' to his best boat, into the latter he stepped and told his son to sit ahead of him. This done, they paddled out, fished, succeeded, went still further out for larger game. All day they fished; all day they had great success. It was time now for action. As the sun began to be low in the heavens and returning was the order, ere darkness fell, with one fierce blow, the father laid his son out senseless with his paddle, then drawing up the 'dugout', lifted the limp form and dropped it in, minus paddle, minus food, nor coconut, nor bite of fish, then turned and paddled slowly home. None asked him where the youth was; none dared; they knew.

Out on the great ocean somewhere had he found himself an outcast, helpless. Perhaps it was not long; perhaps a great roller arose and made an end; perhaps though it was nights and days ere, a raving maniac, he took the plunge, and That which had followed so relentlessly in his wake, got its meal at last.

## 26. The Owl and the Children

### *Toafolia*

There lived a man at the north end of Niue whose wife had died. When necessity required his going to his plantation, he ordered his little ones to keep within the house and on no account to be rude to callers. This they steadily obeyed, yet did not think that such order extended beyond their own kind.

There came a day when playing outside close to the house, there was a sudden whirring sound in the air and upon a tree they saw an immense owl, in size quite beyond any they had ever seen before. Sitting upon a branch looking so solemn and so wise, it was more than lively youngsters could stand not to offer remarks of a jeering nature to the bird. For a long time it took no notice, but seemingly at last it could stand it no more and letting out a terrifying screech swooped down from its perch upon the baby, and grasping it in its talons flew off into the thickness of forest nearby. The father, upon returning, heard the terrible story and roundly berated his children for their rudeness even to a bird.

The following morning, thinking it full likely that the bird might return, the father decided upon his plan. He ordered the children to play again close round the house, whilst he himself hid just within the doorway, and so in case the mighty bird should pay a second visit they were to heap all manner of insults upon him, rousing his fury, then rush for shelter within. Sure enough! It was not long ere loud hooting could be heard, gradually drawing nearer and nearer, till at length upon the same tree

that owl appeared. "Murderer, Cannibal and Savage," were the mildest of the words hurled at him, but the wise bird only looked a little wiser. Then lo! It found voice and hooted out, "Who is hiding behind the doorway? Tell me that, you brats." They chanted, but one answer, "Come down, old goggles, and see for yourself." "I'm coming sure for another meal," at which they all incontinently fled within, the great bird after them, whirring his mighty wings and shooting in like a spear, cast straight and true.

Then was that father's chance, his strong arms encircled the half-closed wings — and there was owl for supper.

## 27. The Feast of Death

### *Toafolia*

Long years there had been warfare between the Chiefs *Tepunua* and *Lipitoa* and victory complete and final rested on neither side. There was great difference of character between the two: *Lipitoa* was brave to rashness; *Tepunua* was brave too, but cunning. To him came the thought that what he could not gain by fair means, he might secure by foul, therefore set he his plans accordingly.

Despatching his finest orator to the enemy's village, he charged him to assure *Lipitoa* and his braves that it was his earnest desire that an end should be put to this perpetual quarrel, and that he had been sent with no fresh challenge for a fight, but with the request that they should bury the spear, and seal the compact with a Feast. To Tumuuli they were invited and they would never regret it, for they would return laden with all manner of foods for their wives and children, and thenceforward the two villages in Southern Niue would be friends.

*Lipitoa* hesitated not a moment; he was right glad of peace, and his braves agreed thereto. The day was set and the envoy returned. The women were set weaving many baskets of coconut leaves, and filling them with stones; the Chief had these covered with baked leaves in which were seemingly tasty cooked fish, but of a truth shaped slabs of wood to deceive the coming guests. When the fatal day arrived, these baskets were arranged in a row upon a chosen spot, surrounded by the homes of the *Tumuulians*. They were a fine sight, bursting their sides with their seeming abundance.

Anon forth from the forest there issued the brave *Lipitoa* and his fighting men — splendid types of Niuean warriors, naked save a loin cloth, no spears in their hands, but garlands round head and shoulders, for they came to celebrate a welcome peace. With mighty shouts and dancing, the visitors were received, then followed much oratory on both sides, and so the day wore on till eating time. No need for *Tepunua* to have drawn attention to the baskets of food; they had been looked upon longingly by *Lipitoa's* men for many a hungry hour.

Now came the grouping of the baskets according to custom, setting so many together for each group of visitors, done by traitors' hands. This done they all withdrew, as is done to our day, to their nearby homes, and *Lipitoa's* hour drew very nigh. Moving to the baskets, his men lifted the top contents, and here one, here another, let forth an exclamation. Instead of toothsome fish, they found cold wood; instead of tarrow, they found a stone.

"Treachery, treachery," they cried, but even as they cried, with a savage yell the *Tumuulians* with *Tepunua* at their head burst forth from the falés and the air was thick with spears. Brave *Lipitoa* fell well nigh the first, his long-time enemy made sure of him at least. The rest, in lieu of spear, strove to do something with the stones, which had deceived them, but there were far too many against them;

soon every warrior had bit the dust. Thus did Tumuuli triumph over its neighbour; many widows were made that day, and a generation had to pass ere the sons of the slain could have revenge for the slaughter of their fathers.

## 28. The Innocents of Niue

### *Toafolia*

There was drought and famine in the land and the people were dying fast. Desperate, they had roamed the forest for *aka* and *luku* and other edible ferns and roots, but even these could not suffice for so many hungry mouths. He who had aught eatable or drinkable on his plantation must needs watch closely and guard well.

At Matahao in the north there lived one, *Tafaki*, who, on his wide plantation, had many of those bananas whose root is both edible and luscious. Jealously he watched his treasures, but desperate folk take desperate chances. News spread of *Tafaki*'s possessions, and to his clearing in the forest there trooped men, women and children, babes in arms, all ravenous and parched with thirst. *Tafaki* saw ruin and death staring him in the face, and in his savage heart determined that it should not be so, if he could help it.

Fast to the village, some little distance from his clearing, he hied and called upon his friends to help drive back the invaders from outside. To a man they rose and followed him back. Aye! Surely, with that crowd, there would be an end of his precious store in quick time, but quicker than that time were he and his. Surrounding the famished ones, they rushed upon them and with spears and stones swept like a hurricane amongst the crowd. None rose again who fell, women and children, as well as men. The babes in arms they left, clinging to their dead mothers' breasts to slowly die. The slaughter over, *Tafaki* awaited the coming of another day, when the little Innocents along with the guilty trespassers should be cast into the deep chasm for their common burial place.

## 29. Simplicity and Witchcraft

### *Toafolia*

Famine and drought were again in the land. It was ever so, yet Niue ever revived. It was the Period of Darkness and to the priests of wizardry they turned at such dire times. *Fakailikula* was the head of the profession at this time and the famished people sought his aid. His was strange counsel in their ears, "Get you back to your plantations and plant as never before. Then will I cause bounteous rain to fall, and drought shall no longer be your lot." Like obedient children, the people of Niue obeyed, and though their strength was well nigh spent, yet did they labour prodigiously.

And now the wizard called their leaders to him and in his blind effrontery gave out his intent to bring rain from heaven. Leading them into the depths of the forest, he selected a narrow chasm in the coral rock, which there abounded, and seizing a boulder, declared that when the rock struck bottom, such a splash should be as would raise a shower of spray that should reach to the sky above and spreading out should cover the whole land on its return. He cast the stone, the Chiefs standing gravely by, not doubting but that what he said should be. They heard it as it crashed against the sides, as falling it bounded back and forth and down, till it found bottom, but not even the feeblest of splashes was heard. They wondered, but not so *Fakailikula*. He charged the failure to them and they meekly received the charge. "Get you gone. You must save yourselves. Haste to yonder reef and dive seven

times into the sea. Slip not in from little height, but plunge from high. Your splash will then rise to the skies and plenteous rain shall be.” Maybe in his heart he hoped that in plunging they would lose their lives and thus save his, for he knew that the temper of the land was well-nigh ready to burst, and his would it be to pay the forfeit, for all that now their Chiefs stood like lambs around him.

They went; they plunged; the rain came not; their gods had played them false; and now in really savage mood, *Fakailikula*’s post was vacant. He had fooled them once too often.

### 30. Unworthy of the Name He Bore

#### *Toafolia*

*Palalagi* was in olden time a name to swear by upon Niue. The mighty *Palalagi*, whose strength was as the strength of ten, had fallen at length at Fugahehake, but others bore the famous name down the long years, and one of that name of renown, the last ere the Period of Darkness passed away forever, I would now tell of.

Alas! He was not full worthy of the name he bore. Great he was and a powerful Chief among his fellows, but today he is not a man whose memory all Niue delights to honour, for he turned his hand against his own, and his end was at the hand of friend turned foe, nor in a worthy quarrel.

*Palalagi* was the son of *Laufuti*, and the mother who bore him was named *Nau*. Born in the south, he was Tafiian and there long he dwelt, growing up among his own kindred, taking part in their councils and fighting in their fights. But his choice for wife fell upon a northern woman, a Motuan, and her he married; nor took her to his home, but went to hers; and by much talking and persuasion, was prevailed upon to side with Motu, not Tafiiti, and to go forth in their fights, and ere long to lead his former foes therein. Tafiiti, therefore, both despised and hated him. They cast his very memory out from amongst them and sought earnestly to put their hands upon the turncoat.

Now was this strange thing. Before *Palalagi* changed sides, he ever had led to victory, but after he joined the northerners, he was continuously beaten. Seven fights he had and in not one victorious; there were Talikifea and Fetiki, Tukuofe and Mamalava, Fetuna and Mougakelekele, Fugahehake, too. He lost all, and many were slain, yet was not he. *Mohelagi* was the closest of all *Palalagi*’s friends; long had they counselled together, worked together, fought together. They were as brothers of the same mother, born at one and the same time.

There came a day when *Mohelagi* sought of his longtime friend a simple thing. “Bring me, good friend, I pray you, a piece of shark’s fin with which to cut my hair, now over long.” And lo! *Palalagi* made rough answer, “I have none; cut it off with land crab shell; ’twill do as well.” *Mohelagi* grew angry and made no effort to smooth the matter over, the rather did he cast cutting words, words true enough, but words best not uttered between friends. “Remember you not, O *Palalagi*, the day your enemies tied you hand and foot, fast to the tree at Fafagu? Would that I had not troubled to set you free, who will not do a simple thing for a friend.” “I have paid you back a hundredfold for that,” said *Palalagi*. But *Mohelagi* denied. Then hot words, then hotter still, then in hot blood, they fought. Fierce was that struggle, hand to hand, friendship changed to fiercest hate and *Palalagi* fell.

Men point out his grave today. Not even dead would Tafiiti have him; his son lies near, that son who slew *Uea*, from whose dying lips Niue first heard of the One and only God in Heaven. Father and son were ruthless men, but they lived in ruthless times ere the Period of Prayer had dawned and knew not better.

### 31. A Niue Stadium

*Motufalo*

On the eastern coast of Niue, there dwelt a mighty Chief, one *Manatoga*, who believed in manly exercises, and believing saw that it was done. He dwelt at the village of Fetuna. He was no one wife man, for he had five to tend to him and bear him children. By two, he had none — they were despised — but the others bore him twelve lusty sons, not to speak of daughters. For these he turned the open space of the village into a great playground, and here not only his sons, but all his warriors and their male offspring took daily exercise. Here was running and spear casting and *tika* throwing, too, and amid all, those twelve sons excelled. Yet amongst them was not one superior to another, so wonderfully trained and expert at exercise were they. The fame of the playground spread far and wide over the island, and men came from every village to see both space and competitions.

Therefore was the name of that village changed from Fetuna to Maleloa, which meaneth “The Long Place”. Yet this day, the forest hath absorbed it; none knoweth its true location, though some ancients do name and hold Lakepa as the spot. But who can tell?

### 32. A Niue Samson

*Motufalo*

*Tafoulu* was a mighty man on Niue. The eastern coast claimed him as their son, and proud those villages were of their doughty <sup>246</sup> champion. His strength and his endurance amazed all; his spears, who could lift, much less throw? His clubs, who could wield, even with two hands, whilst he toyed with them in one? When he went forth to fight, then did his enemies tremble, yet were some truly brave and were found ready to withstand firmly both him and his.

Who has not heard of the Fagahehake fight whereat *Tafoulu* forever sealed his fame? In that fierce struggle within the forest, he fought from early morn till dewy even, his mighty bludgeon laying about him till one hundred men lay slain. Yet did he nigh come to his end that day when he met the opposing Chief — face to face — in mortal combat.

The ground was split by chasms in the coral and slipping, as he lunged forward with his war club, he fell prone into a rift of rock. But for his brother, that had been the last lunge of *Tafoulu*, for the Chief then had him at his mercy, but *Tiuea* saved him, coming on the scene in the nick of time and spearing the exulting enemy to his death.

From that day forward *Tafoulu*’s name was changed to *Tateau* which meaneth the ‘Slayer of One Hundred’.

### 33. Canoeing Under Difficulties

*Motufalo*

From the village of Tamalagau, four braves started out to circumnavigate their island home. It was a dangerous undertaking, not alone from the wild seas that beat all round, nor from the cruel reef which extends from every yard of shore, but from the enemies who lurked in every seaside village on the

---

<sup>246</sup> Marked by fearless resolution, valiant.

way. These were the daring men's names, even *Lagahetau*, *Vetevihi*, *Tuatea* and *Taumatakau*. They were young men, strong, fearless and adepts with the paddle.

Journeying by easy stages, they came to Avatele, that village which kept aloof from all the rest, despising them as interlopers, newcomers, only fit for slaves. Avatele's warriors soon spotted them. Here was daring indeed, even to pass by water in front of their village. *Tafiti*, the Chieftain, hurled defiance at the intrepid four upon the deep, and the four, far from keeping away from such a hotbed of violence, drew in. Steadily nearer they came, taunting the Avateleans to do their worst, till coming within range, *Tafiti* cast his spear at the quartette. His aim was good; it missed *Taumatakau* by inches; nor had it missed him, but for his agility in ducking to the coming messenger of death. This was *Taumatakau*'s chance, the chance not of retaliation, but of becoming one of the early poets of Niue. It was free and spontaneous and strictly to the point. Thus the Song:

Here still I am, O foolish one of Avatele.  
 You have lost your spear and something else besides!  
 Your bravery becomes thus mine.  
 True and great is my skill, though I am but young,  
 Sitting in a canoe, I yet avoided your spear.  
 So, too, on land you could not hit me!

*Tafiti*! You are no good at all!

Your bravery is mine.

The rest took up the song and what *Tafiti* and Avateleans thought and said, tradition telleth not, but those four braves went on, past many another village, where reception just as warm awaited them, and the seas were rough, and landing was oft a dangerous thing, but did not *Lagahetau* and *Vetevihi*, *Fuatea* and *Taumatakau*, the poet, bear charmed lives?

Safely they journeyed, till they saw their homes once more. They had encircled Niue and were sure of lasting fame.

### 34. A Devoted Brother <sup>247</sup>

#### *Lagiholo*

One *Lefutogia* was a youth of *Tafiti*, between whom and his sister *Nukai* there was deep affection. They felt it much when *Lupekovi*, a great man from the same south of the land, even from *Hakupu*, sought her, claimed her in marriage, and bore her off to a new home. Not long after, *Lefutogia* made journey thither and was warmly welcomed by his old-time play mate. But things were not as they should be. This did not take long to see. *Lupekovi* was treating her harshly, berating her with angry words and laying upon her heavy tasks. The soul of *Lefutogia* was moved to protest, yet was he but a youth and had not strength to fight. Therefore he returned to *Tafiti*, full of love for his poor sister and of hate for the man her husband. He should pay for it, even if it took years for the reckoning.

Now did *Lefutogia* of *Fatiau* in *Tafiti* start in to train himself for the coming fight, strengthening his muscles in various ways, learning of his elders how to cast the great spear and to wield the deadly club. All *Fatiau* wondered to see the youth so keen, yet kept he his secret in his heart. One special test

<sup>247</sup> This story is told, with slight changes, in Tale #47, *A Devoted Brother*, in Part IV, *Tales of a Roaming Grandfather*.

of strength he set himself, and when he should succeed in this, then settled he that *Lupekovi* should be taught his lesson, and his dear sister should know peace.

He had his private training quarters at Tanu, in a cave close to the reef, and there he exercised most strenuously none interfering. Hither he brought a huge bowl of oval shape, so large that he could but just stretch his arms across to grasp and lift. Sinking this in a pool in the cave so that it was just covered, he made this bowl the test of his strength. When he should be able to lift it bodily out of the pool and raise it to his head, water and all, then was he *Lupekovi*'s match; the day of days would have struck.

See then this devoted youth. Day after day, he would stand upon the cliff above, whirling his arms this way, that, shaping himself for mightiest effort, then rushing down to his quarters would seize the bowl and heave. Alas! Day after day he could but lift to the surface; beyond that was not in his power to do. For was he not but a youth? But his devotion was great, nor thought he of desisting even as weeks and months passed by and still that bowl remained his master. But meantime, he became an expert in long range fighting and in close. Who in Fatiau could cast the spear now as this youth? Who could evade the blows of clubs as cleverly as he?

And now the years passed on and the youth became a man. Behold! His beard grew and with it, he felt his strength growing ever greater. Now could he lift the bowl clear out of the pool, now could he lift it to his knees, now could he lift it to his shoulders, nor spill one drop. There came a day — the day he had worked for all these years — when he passed the test completely, that wonderful day for him. He stood upon the cliff looking eastward to where his dear sister dwelt; he called upon both her and his gods for triumph. Squaring his now broad shoulders and sparring with those great arms of muscle, he thrust his beard in his mouth — true Niuean sign of fury — then dashed down to his task. 'Tis done! High above his head that oval bowl was raised, then tilted slightly till drained dry where it hung. He was a man. *Lupekovi* should know *Lefutogia*'s might.

To Hakupu he made his way and had long interview with his weary sister. He would not slay his enemy in his sleep; it was to be a fair fight. *Lupekovi* should know nothing till the sister should hear her brother's voice calling out a challenge. "For you, O my sister, deep in grief, I shall come on a day when rain falls not steadily as now, but in passing showers. When I call, come forth and make answer, then tell *Lupekovi* to haste with spear and club, for the avenger of your wrongs is nigh." So was it.

Ere many days the fitful rains began, and the woman sitting on her mat within the grass hut heard a voice she knew and loved crying, "*Nukai*, sister mine, where art thou? Where, O where can *Lupekovi* be found?" She rose, went forth and made answer so that all could hear. "Brother of mine, *Lupekovi* hath wrung from me the secret. He is here and even now hasteth to meet you in the death struggle." They met; that was a terrific fight; Hakupu never saw so wonderful a battle. The old veteran and he who had but just reached manhood. But youth and love were on *Lefutogia*'s side and *Lupekovi* fell at last to rise no more.

Thus was *Nukai* avenged, and the devoted brother led her back through the forest trail to Fatiau her first home, and there in peace and happiness she dwelt for long.

### 35. What Happened to Greed

*Lagiholo*

The whale, that monster of the great deep, has oftentimes been seen off Niue's coasts, but rarely have Niueans had a taste of whale meat. Of one such instance I would tell.

The Period of Darkness was just breaking before the Light of the Gospel of Jesus. Some had heard and had believed, and most of the villages had at least a handful of the Faithful. Being as yet weak in numbers and yet desirous of common worship of the One and only God, some of the villages combined to build one House of Prayer, and thus it was that at Avatele a coral and lime Church was raised, to which the Christians both of Fatiau to the east and Tamakautoga to the north foregathered for public worship, as good Christians should.

The Sabbath had passed, but on Monday morning at break of day, there was to be another service — and folks had tramped the miles westward and south to offer praise and prayer once more. Two Fatiauan, who should have gone, thought otherwise, their names *Paku* and *Futogia*. They preferred a stroll down to the sea and made their way along the well-beaten trail to the lower cliff-edge direct from their home and reached Hikau. Looking down upon the reef, they were astonished to see a monstrous fish lying broadside on it, its huge tail occasionally flapping, showing that life was still within that gigantic form. "Tafua! Tafua!" "A whale! A whale!" they both exclaimed, and hurrying down, soon stood as pigmies beside it. It was past fighting now, soon it breathed out its life, and *Paku* and *Futogia* talked earnestly of what had best be done.

It was decided that *Paku* should make haste to Avatele and spread the news, while *Futogia* should arouse the nearby village. Soon all Fatiau were down at the reef and carving into the gigantic feast. It was the heathen party, one and all; the godly had gone on praying; and these godless ones worked hard to get all they could, ere others came a-seeking. Into the nearby bush they hasted, into caves, anywhere where prying eyes could not readily see, and there they stored the unlooked-for feast.

Meantime, *Paku* had done his part and Avatele and Tamakautoga hastened to the spot. Arriving at the cliff-edge, the newcomers in their host looked down upon a busy scene. All heathen Fatiau was at work, and it might lead to trouble were these newcomers to drop down to lend a hand till formally invited. Now came Fatiauan after Fatiauan up the trail, loaded with solid chunks of flesh; in single file they came, and the outsiders asked in friendly fashion for a share. But No! There was none for Avatele and Tamakautoga, and yet there was no fight. It was sad to see even the Christian *Futogia* thus giving way to greed.

But one, *Taulaga*, made plan quickly. To *Futogia* he appealed, "I pray you, *Futogia*, give me a chunk of whale. If so you do I will give you when next you come to Avatele the shirt you have so long been coveting." It was too much for *Futogia*. "Agreed; for shirt I give you whale meat," and *Taulaga* went home loaded. Yet ought *Futogia* to have given for friendship's sake, not for greed and barter. Meanwhile, others on the reef were still busy — the busiest of them all Chief *Haitaue*. He had worked prodigiously, and in his haste had cast mighty chunks into the bush nearby, careless of aught save getting all he could, ere others grasped it.

And now the carcase alone remained and the hard worked women went slowly home. Avatele and the sister village were sad and grieved, yet had the Christian folk amongst them kept the crowd from blows. Left alone, Chief *Haitaue* went to cast up his goodly haul. Behold! He found none, not even smallest chunk. In his haste he had not noticed that the shrubs to conceal his hoard concealed a fissure broad and deep. Into that chasm all his whale meat had gone, piece by piece, and far out of all possible

reach it lay. Thus was *Haitaue*'s happiness turned to grief, nor could he keep his loss a secret. It was too big for that.

And what of *Futogia*. He had not forgotten the shirt, a very precious garment then, when only lavalavas had so far been known. Hied he therefore to Avatele and held *Taulaga* to his promise, but *Taulaga* absolutely refused. Such greediness on *Futogia*'s part was only fit to be met by like greediness on *Taulaga*'s. In friendship given of the whale, in friendship he had given the shirt. Such the reasoning of *Taulaga*.

When the empty-handed villages heard of Chief *Haitaue*'s loss and *Futogia*'s hapless tramp, then broke forth *Kulukaki*, the poet of the western coast, and this Song:

*Titigigie* prayed for food;  
Appeared forthwith the mightiest of fish;  
All thought to have a share,  
But *Fatiau* was greedy.

Hastily the news went round;  
The lame, the blind found each their way;  
They looked; they saw; they coveted,  
But *Fatiau* was greedy.

With saddened hearts we came away;  
'Twas Christians held us from a fight;  
Yet prayed we sad might be their lot,  
Those *Fatiauans* greedy.

Chief *Haitaue* sought his share;  
A chasm held it safe and sure;  
*Futogia*'s shirt was but a myth,  
Those *Fatiauans* greedy.

When next a whale doth come ashore,  
And good men pray while others find,  
With such stern lessons in their mind,  
Will *Faitau* be greedy?

### 36. A Chastened Brave

#### *Kilimanapule*

*Tukumulia* was Chief of Tamalagau — which is today called Lakepa — in the dark days of Niue, even to the breaking of the light, which the gospel of Jesus brought. He was a fierce-tempered man. So fierce and truculent was he that when thunder pealed and the lightning flashed in the sky, he grew furiously angry with the gods, who were making such a din, leaving him out of their fighting, and grasping his spears and war club, he would rush out from his grass hut, shaping himself ready for a scrap, looking up to the heavens, yelling his defiance and hurling thitherwards his spears if haply he might draw blood.

Now came Paulo the Samoan to Niue, landing at Mutalau, bringing with him the news of the Gospel, and Mutalau received both him and his message, and soon afterwards built themselves a House of

Prayer, and placed a wooden bell beneath its shed wherewith to summon the Faithful to public worship. That drum sounded far, with its sonorous boom, and reached the ears of *Tukumulia*, the heathen. It seemed to be a challenge to both him and his ancient beliefs, and never did he hear it, but he would rush forth to his own village drum and beat it furiously in mad defiance.

The braves — now largely tamed — of Mutalau got wind of this, and being full of desire to pass on the good news to the still benighted villages, determined to pay a visit to Lakepa and have a friendly talk. Arriving, they failed to get an interview with the Furious One, so had to stand outside his *falé*, and thus delivered they their souls. Emulating Paulo on his first arrival, when they had sought his blood, they, like he, stuck a pole in the ground opposite *Tukumulia*'s doorway and prophetically declared, "Here plant we the Word of God, to grow as a mighty tree and spread its branches over Tamalagau." Then they started home. No sooner their back turned, than the fierce heathen issued forth, tore up the pole, hurled it after them, much moist, wormy earth besides, crying out loudly, "Come back! Come back! Pick up your god spirit and take it back to Mutalau. The gods of old are good enough for me."

Soon after, all was changed. Again the thunder crashed and the lightning flashed, and *Tukumulia* rushed forth in fury to go through his performance, but this time his challenge was accepted. As his spear hurtled upwards, a blinding flash came downwards, and *Tukumulia* fell. They picked him up and bore the inert form within; they tended him well with anxious care; he opened his eyes at length, but all was darkness — he was blind.

Then came again those men of Mutalau, and the great Paulo himself among them, and *Tukumulia* asked in his distress to hear this new word of God, and hearing it believed. "Like Paul of old," said he, "I have been struck blind, and another Paul has shown me a great and better light."

### 37. A Wife's Chastening

#### *Toapuho*

Fatiau's Chief had a wife who vexed him sore. She would not keep to her own hut, but was forever gadding about, careless of her home and duties and finding her pleasures apart from her husband. Things reached a climax; they could go on no longer thus.

Deep thought the Chief of Fatiau, and had in mind making an end of her. In his hands were Life and Death. There was the cliff so high, the sea or the chasm. Yet he decided against these, and chose rather to chasten her in the body that she might still live and work for him. Thus spake he to himself, "Now will I give her pain, even as she hath given me," yet saw he not the inequality of the thing, to mete out grievous pains of body to pay for pain of mind.

Said Fatiau's Chief, "I go down to the reef, even to the cave Hikihoe and there will I catch crabs for both you and me to eat." Forthwith he went, but on another hunt. The lizard — no food for man — haunts the Pandanus tree. To tree after tree he went, till at length he spied a hairy lizard in the waving leaves. He set fire to the trunk and soon brought the reptile down to earth. Placing it in a basket, he proceeded to the cave, where he lit a fire and roasted it.

When darkness fell, he journeyed home and found his wife asleep. "Awake! Arise! and eat of this that I have brought thee," cried he, and she was glad for her hunger was great as she had lain awaiting her lord and master. Dark was it, so that she knew not what she took from the man's hand. "But why so tough? Were you not after crabs?" said she. "I found no crabs, but caught this herring instead. Eat

and be glad I have brought you anything.” She ate, but liked it not, and fear came upon her, for the Chief’s voice was fierce. Secretly she kept a portion and already in great pain, she stole later from the mat as he slept and making light saw that it was a lizard! This was her climax, even as her conduct had been his.

Long was she sick; grievous were her pains; anger was in her heart, yet dared not she speak her thoughts. He had cause for anger, that she knew. He had not cast her over the cliff, nor into the sea or the bottomless chasm, therefore had he forgiven. He would warn her. She was wise. She took the warning. She was faithful unto death.

### 38. How Niue Learned of Taro

#### *Toapuho*

For long years, unknown to Niueans, had taro flourished upon the island — that food which became and is unto this day our chief food. To *Lefutogia*, a Tafitian of the village of Hakupu, in the ancient days, do we owe forever grateful thanks, for it was he who found it.

The warriors of the south went forth to fight the north and moved swiftly over the trail that cuts the isle in twain. To gather fruit to eat and slacken both thirst and hunger, *Lefutogia* stopped off the trail and his quick eye perceived a plant with handsome leaf that he had never seen before. Curiously he went to it, examined it, pulled it up by the root and thought well enough of it to make up his mind to try it in his clearing when he returned. Wrapping the thing carefully in a fern, he tied it strong with trailing vine and hung it on his war club, then hastened forward to join once more his band. Hiding it when he neared the battle ground, he came safely through the *melée*, and on his return, picked up his bundle and bore it home.

Saying naught to any, he thrust the plant into a hole he made in his plantation at Manulakafia, and tending it carefully, it thrived. Now did he take a portion and planted this nigh the mouth of the cave at Kakaoka, some distance from his village of Hakupu. Here, also, it thrived amazingly, and soon he had a large space in the bush covered with the unknown plant. He had tasted and knew that it was good, but to others inquisitive, he said it was but a weed whose leaves did take his fancy. Once more he set it, this time at Tehalaga very nigh his village.

The King of Niue dwelt, in *Lefutogia*’s day, at Hakupu, being a Tafitian, and the loyal Niuean bethought that it was time to let him know of this new food. Therefore did he bring that which he had first seen — a handsome leaf, in which he placed arrowroot — and made present to his King. It was night and the company could not tell what this new thing was — this strange leaf — so waited until dawn, when the wise men pondered deep, yet none knew of it, nor had set eyes upon it before. Then said the King, “Go you down to *Lefutogia*’s clearings and see ye this same thing.” They went and behold! it grew abundantly both at Fehalaga, Kakaoka and Manulakafia. They returned and told the King, saying, “We have seen where it groweth and behold it covereth the land.” Then said the King to his sons, “Go ye now and bring some hither that we may plant it even as *Lefutogia* has done.” This was far from the latter’s wish. He was willing to give, but he was not willing that all Niue should have of his find. Yet did the King covet it and *Lefutogia* to his friends thus sounded his complaint:

A second taste, a second taste,  
The first was not enough.  
O foolish I! How true it is  
I’ll die for this new stuff.

And die he did, for how could he, alone, resist in those wild days when might was Right. Not willing to give, they took, and *Lefutogia* was not. None knoweth the grave of him who brought such benefit to his people.

To the King they brought of the roots and he tasted, his warriors, too, and they pronounced it good and gave it the name *Mataga*, the which one species of the many beareth to this day. As the taro spread over the land other names were added — the *maga*, the *pulekau*, to mention some. This is the song that has come down to us, which *Lefutogia* made because of his gladsome discovery:

The Song of the Taro

On Niue Isle I found the thing,  
When fierce on warpath bent.  
Its beauteous leaf attracted me.  
I kened not what it meant.

With my own hands I planted it,  
None knew that it was growing,  
With water daily tended it,  
And ever made fresh sowing.

*Mapualagi* named I it.  
It came 'from Heaven above'.  
Then *Matavalu* sprang therefrom,  
'Eight-eyed' and strong as Love.

It spreads, it spreads, naught stoppeth it.  
*Tehalaga*'s range is wide.  
Alas! the day when all men share  
In *Lefutogia*'s pride.

## NIUEAN FOLK-LORE

By

1. *Toafofia*
2. *Heleliki*
3. *Vihekula*

### 1. How Niue Learned of Fishing Nets <sup>248</sup>

*Toafofia*

Niue was the property of *Hina*. But *Hina* was a god whose dwelling was in the sky. Great *Hina* had four sons, their names *Mele*, *Lata*, *Fakapoloto* and *Hakumana* and these same gods knew much. Long had been their habit to come down to *Hina*'s isle to catch the fish that were so plentiful and bear them aloft for the table of the gods. And Niue longed to know how it was that they caught always so great a quantity and never left empty handed.

Their secret was discovered by one *Puga*, whom all thought a lazy worthless fellow who had no brains, yet was he really deep and scheming as this fable will unfold.

There came again a night when once again the four gods appeared upon the reef, prepared to go a-fishing. To them *Puga* came and asked if he could help in any way. They answered that if he would, he might carry the basket into which the catch would go. Then he saw that they threw something into the sea and drew it towards them. He wondered much and watched more closely, yet were they too quick in handling for him to plainly see the thing. Much fish they kept on hauling in and throwing in the basket, fine fish of wondrous coloring, some red, some yellow and some blue.

*Puga* was thinking more quickly than was his wont. If only the light of the day would come, he would have their secret; therefore he must delay their going in some way. Now did *Puga* do a bad thing, surely unworthy towards the great gods above. He cut a hole in the bottom of the basket and the fish dropped quietly out. *Mele*, the leader sought of *Puga*, "Is the basket full as yet?" But *Puga* answered, "Not yet is it quite full." So on they worked, and as often as they asked, "Is there not yet enough?" he would answer, "No." At last, just as daylight was breaking and the four were hastily pulling in that strange thing that caught so many fish at once, it got entangled in the coral. Now this was very serious for the visitors from the sky, for it was not lawful for them to be away longer than the first streak of dawn.

In eager haste they dived, first altogether, then one by one and sought to set the strange thing free, the whilst *Puga* also dived, and as fast as they loosened it, did twist it amid the coral again. In vain they worked, time was against them and *Puga*'s cunning. The sunlight broke and with a sigh the four swept up what fish they could and disappeared in the sky.

Then did *Puga* dive once more and quickly loosened the caught strands, then rose and drew the thing ashore, and he, first of men, beheld a net. Now did the good news spread, men came and noted how the mesh was made, and copying made fishing nets in plenty. No longer did Niueans hunger for food from the deep. They had the secret of the gods, and lo! *Puga* the Worthless had won it for them.

---

<sup>248</sup> This story is told on pages 94 and 96 of Smith, Appendix Continued.

## 2. How Niue Learned of Flying Fish

*Toafolia*

It all came through a quarrel. *Huanuki* and his son *Tafeahemoana* fell out, none knoweth why, but good came out of it as you will see. *Tafeahemoana* was very sad at his father's anger and made haste to the sea, intending to throw himself therein and end his unhappy life. But what he saw there stopped him in his purpose.

Behold! upon the surface of the great waters, white things rose and fell and disappeared, then rose again and seemed to fly as birds. Never had he seen or heard such a wondrous thing. Great was his fright, yet wanted he to know more of this strange happening. Naught said he to any, but out upon the deep he would go, and lest others should learn ere he did, he waited till the night had fallen, then entered he his canoe and took a flare along with him that he might see the better. A new moon arose that night and its faint light touching the waters made it appear as if those same strange things he had seen were skimming over the surface.

But what was this that rose and struck the torch fixed in the bow, then fell aboard? And now one actually struck him. Now came they thick and fast, a flash of white, a strike, a fall. He bent and grasped one still struggling at his feet, a fish truly, but one beyond his ken. He kept on till his canoe was dangerously full, then made for shore.

To *Lagaiki*, his chief, he bore the catch and *Lagaiki* feared to taste for he knew them not. Then to his father did *Tafeahemoana* bear them as an offering of peace and *Huanuki* was glad, and there was love once more between them. A great feast was made and father and son and many another did overeat and long were sick. Soon the island heard the news, and from every village men went forth at night, and with bright flares lured the strange fish that swam, yet flew besides, and called them the *Hahave* which meaneth 'winged'.

Great praise they gave to their gods who had caused these new fish to come to Niue, stumbled unwittingly upon, even through a quarrel.

## 3. How the Hurricane Came to Niue

*Toafolia*

*Huanuki*, one of the ancient gods, paid a visit to the lonely isle, bringing his two sons, *Lefeke* and *Pupukimata*, with him over the sea. So great and all-powerful was he that breaking off a leaf from the *Talo matagi*, our taro food, he caught the breeze from the sea, which annoyed him upon landing, and wrapping it up in the great leaf hung it up within the cave at Tatapiu, forbidding his sons to touch it. But boys are ever boys, and when their mighty father had gone forth to visit the land, *Lefeke* thought it good fun to pierce the leaf with his spear. Forth rushed the wind and tearing over the land as well as the sea blew a very hurricane.

From that day Niue has known, not regularly, but still far too oft, that destructive wind, which *Huanuki* would fain have sheltered it from tasting, and the taro, too, from which he broke the leaf is to this day known and called the 'Taro of the Wind'.

## 4. How Fire Came to Niue

### *Toafofia*

The gods *Maui* were father and son; *Maui Matua*, the father dwelt under the earth, but *Maui Tama* lived thereon. These were gods of Niue when all men ate food uncooked, for they knew not of fire to roast with or to boil. Nor was the wondrous thing known to all the gods, and *Maui Matua* had kept the secret long even from the son he loved.

There came a day when *Maui Matua* paid a visit to that son and bore with him good and tasty food from his dwelling place below. As the two gods feasted, the son sought of his father why his own food was hard and his father's so soft and succulent. "My son," was the reply, "place yours in the glowing heat of the sun, and it will be even as you wish." Obediently it was done, but yet the food was hard as ever. Thus did the son perceive that *Maui Matua* was holding back the truth. Therefore did *Maui Tama* determine to watch *Maui Matua* closely, if haply he might learn the secret.

The visit being a prolonged one, the father sought his mat in the dwelling place of the son, and — determined that his father should not steal away and the secret be a secret still — the son, waiting till the god was sound asleep, walked warily, and with long trailing creeper, tied one corner of his father's loin cloth to one corner of his own. Then rested he.

It was midnight when the father roused himself, arose to stretch, felt the rope, untied it and crept out. But the son had been awakened and stealthily he followed. He saw his father gather in his arms a mighty bundle of *kaho*, dry stuff, which today we use for torches to light us on our way, then walk into a cave which led down far beneath the earth. Down after his father the son followed, into the great *falé* below, where a bright fire blazed and much rich food was cooking.

Now did the son determine that he, too, should have such food, and stealing some of the blazing pile rushed upwards and hid it within a hollow banyan tree. But the tree caught fire and there was a mighty roar and flame, and *Maui Tama* ran all over the land of Niue calling upon all men to come and see the wonder. All Niue hastened and beheld, and bore off the burning branches, and lit fires for themselves, and learned to have no longer hard, but softened foods and juicy.

## 5. Hide and Seek

### *Toafofia*

The Land Crab and the Plover would fain disport<sup>249</sup> themselves. Said the *Uga* to the Plover, "I go to hide; you'll have some difficulty to find me, that I'm sure." Said the *Kiu* to the Land Crab, "That's easy, with your great claws and brilliant hue. Wait till it is my turn, then you will have to have more eyes than two."

The *Uga* crept off into the Bush and when time was up the Plover went a-seeking. He did not find it quite so easy as he thought he would; he used his long beak to peck, peck, every inch of the trail the Crab had made. Then he saw the telltale claws, which the *Uga* had thought to have hidden, but could not see to properly, so very wide is he. The Plover cried, "Spy I," and now it was the *Kiu*'s turn.

The Insect went off in search and crawled everywhere, even up trees to have a look around. He was nigh despair, and thought he had lost the game, when he heard the gentle whistle of the bird, who

---

<sup>249</sup> Amuse.

could not keep quiet even for a little while, so much he loves his song. Carefully the *Uga* tracked the noise, and creeping up behind the whistler cried, “Nab I,” and nabbed him hard.

Thus learn we two important facts of life: not to be over conspicuous, and the great value of Silence.

## 6. The Swampen and the Woodhen <sup>250</sup>

### *Toafolia*

Why hath the Woodhen black marks along its head, and why the Swampen those long legs. This is the reason according to the Ancients.

They were usually good friends, these free-roving birds, and oft went a-flying together to see what they should find for eating and have a frolic on the way. There came a day when the two birds alighted on the cliff-edge, but the Woodhen thought to keep going, whilst the Swampen said, “I’ll rest.” So down to the reef flew the Woodhen and there he saw a new wonder — a great shell of two sides lying on its back and its mouth partly open. It was the *Gege* shellfish, but he knew it not. Being curious, the Woodhen walked up and looked in. It looked a soft and luscious meal there, but yet he feared. He thought it wisest to try first his foot, and flying up, he deftly let one leg slip in the mouth. Quickly he drew it up again, nor could he wholly escape, for the *Gege*’s two sides snapped together and nipped sorely a toe of the venturesome bird.

This made the Woodhen angry and strangely out of sorts with everything. He called out to the Swampen, still resting on the cliff-edge, “Come down and see a wonder.” Down the Swampen came, and once again the *Gege*’s mouth was open. “Try your legs in there, like I have,” and the silly bird did as he was told. This time the *Gege* made no mistake and caught the Swampen fair and square. Uttering shrill cries, the poor bird pulled and tugged and strained, but all without avail. But what hurt the Swampen even more, was to hear the Woodhen crying, “Come in, come in, O Sea and drown the Swampen.” If ever he was free, there would have to be a reckoning. Yet did the Swampen know its only hope was in the sea. Therefore did he also call upon the sea to come in, and so it did, and the *Gege* glad to be in his own element once more, opened its great sides, and the Swampen flew away.

Then there was a fight, though the Woodhen had whirled off in fear. The chase was hard and long, and the Swampen went hard for that treacherous one and pecked it nigh to death, ripping long marks all down its head, and only spared its life at its entreaties. Then did the Swampen deliver judgement — that henceforth all good things to eat should be the Swampen’s lot, and only refuse the portion of the Woodhen. “For Swampens there shall be ever the stalk of the sugarcane; for Woodhens, but the leaves. For Swampens there shall be the ripe banana; for Woodhens, those fallen rotten to the ground. The taro, too, is ours forever; your lot is to consort with the flies.”

And so it is to this day. The judgement stands. See you now why the Woodhen hath long black marks upon its head? They tell of the sound thrashing the indignant Swampen administered. See you now why the Swampen hath those long legs? They tell of the fierce struggle to get free from the *Gege*’s mouth.

---

<sup>250</sup> This story is told on page 101 of Smith, Part I. It is also told in Morris (1919).

## 7. The Rat and the Octopus

### *Toafolia*

A Niue rat — the only wild beast that has been on the island from the first — was making its way upon the edge of the cliff when even its light weight disturbed a piece of rock and down went rat and rock into the sea below. It was high tide and the reef was fully covered; there were great rents here and there, and into one of these both fell.

Now it happened that an octopus was lounging there, ready with its great arms for any prey that might come its way. When the rat struck the water, the ugly monster of the deep, strangely enough, took compassion on the helpless rodent, and rising to the surface laid hold upon the struggling rat and placed it on its head as the safest place till dry land should be reached. Making its way thitherwards, the rat made one leap and felt the sweet land once more beneath its feet. That leap should have been more gently done, for a fish has but tender skin and rats' toes are sharp. The parrotfaced fish got a nasty gash, and in anger swept out one of its great arms to secure that rat, but missed him by a hair's breadth.

Yet was it ungracious of the rat, and teaches us to return a benefit with kindness, nor think only of ourselves and safety.

## 8. The Rat and the Bat

### *Toafolia*

The Rat, for once not hungry for a meal, sat upon its haunches watching the swift, graceful movements of the Flying Fox or Bat. To the Rat, it seemed as if the Bat was he with wings, and he longed to become a Rat of that kind. "How well it flies," said he. "I must have a talk with it, if only it comes down for a space," and long he watched and waited.

At last there came a night when, as the Rat sat watching and hoping, he saw the Bat come down to the very earth to eat of a banana that had fallen fully ripe. Said Rat to Bat, "O Bat! You are an honor to the sky. Your movements are wonderful. I dearly want to see the sky like you do. Give me, O Bat, wings like you." The Bat ate on, then answered, "No," and flew away.

Again the Rat saw the Bat upon the ground and again he made entreaty, and this time the Bat said, "I will lend you my wings for a fly as you so much wish it." Therefore did the Bat strip off his right wing, and then his left and put them on the Rat, who at once mounted up, and saw the sky and many another wondrous sight.

Soon the Bat grew impatient and called out, "Come down. You have had my wings long enough." But the Rat said, "Just a little longer, please," and off he went again. And now the Bat grew angry and said, "I cannot wait any longer. Come down at once." Then said the Rat, "Mine was the Earth and yours the Sky! Now yours is the Earth and mine the Sky," and off he went for good.

Therefore the Rat and the Bat did change — the Bat of the Sky became the Rat of the Earth; the Rat of the Earth became the Bat of the Sky — which is the reason why Tongans ate rats, but Niueans never did, for a Rat is a Rat and a Bat is a Bat, but not to the Tongans, for they believed this fable and affirmed that to eat Rat was really to eat Bat, whilst to eat Bat was to eat a Rat — which they abhor, but none the less they ate it.

## 9. Why Famine Came

### *Heleiki*

Avatele was not short on gods. Besides its own minor tutelary deities, the Bay itself boasted of many. These, the names of four — *Leloloa*, *Futimotu*, *Fitifonua* and *Fuluhimaka*. Of these *Leloloa* or Long Tongue was the chief and he hung around Tepa Point, which is the southern end of Avatele Bay. His appetite was enormous, and alas! it did not reach to fish; he had long had a surfeit of such dietary. What he loved were the fruits of the land, and being of a generous disposition, he saw to it that his three friends had a share. Well was he named Long Tongue, for never was there plenty of food around the village than he stretched out that unruly member even from the depths of Tepa and swept the land of coconuts, bananas, taro, too, and oranges, melon, *vi*<sup>251</sup> and *ufi*.<sup>252</sup> It was useless to do aught against such a monster; famine had to be till the four were gorged.

Yet did the poor folk who, till *Leloloa*'s time, had plenty, find some little consolation in a song, not of strong words as one might well suppose, but in a plaintive ditty:

*Leloloa! Leloloa! Why act thus?  
All Niueans<sup>253</sup> do grieve most sore.  
Fish are very good to eat.  
Why not content with them?*

But *Leloloa* had no soul for such sweet music.

## 10. A Fisherman's Luck

### *Heleiki*

*Fiti*, Chief of Avatele, was a mighty fisherman and he believed in his gods. He paid them due reverence and they gave him rich return. When he went forth after flying-fish, he put out in his canoe of three, but ever he stood in the bow and himself lit and used the torch, which drew the finny tribe from the depths, to fall into the wide-spread net behind.

Ever was he careful to call upon the proper gods. Did he paddle west, then invoked he the aid of *Tagaloa*, *Fakaalo* and of *Tagaloa Fafao*, those three gods whose domain it was, and always got plenty. Did he paddle east, then called he loudly upon *Lagaiki*, *Fakanoatua*, *Tafahemoana*, *Uliuli*, *Papatoka* and *Lua Tofufu*, one and all of them in careful sequence, and to him they too gave copiously.

Great ever was his good fortune; none could equal him. Line, net or torch, it was all the same. Was he not Chief of Avatele? Had he fear of any be he god or man? Great fame had he on Niue. *Leloloa* of a truth loved him not, and oft despoiled his people's labours with that long tongue of his, which reached from the sea, even off Tepa Point, but left he that god and his chosen three alone; there he never fished. *Tagaloa*'s and *Lagaiki*'s Bands ever filled his baskets; as so he was content.

<sup>251</sup> *Spondias dulcis*; common names Ambarella, Golden Apple, Brazilian Plum.

<sup>252</sup> Species in the family *Dioscoreaceae*, genus *Dioscorea*; common name Yam.

<sup>253</sup> WWB has *Nieuans*.

## 11. The Old Man of the Sea

*Vihekula*

*Limaua*'s home was beneath the waves; his feet were at the bottom of the sea; his head and shoulders could rise far above the placid surface when he chose. His words were few, but when he spoke the sea was in a tumult. Did he shake himself beneath the surface, then canoes rocked hither and thither, for the water was disturbed. Those who are said in the Long Ago to have seen him say that he had a woman's long hair, and that the long weeds seen floating on the surface by men were the combings thrown away. It was always best for those who purposed fishing to give *Limaua* rich presents for food.

There was no point of land on Niue's isle better for troll and net than Halagigie between Alofi and Avatele, and here *Limaua* was sure to be. Happy and successful was he who threw out upon the waters off the Point, baskets of bananas, taro and many a coconut. Calm was the sea and many were the fish, but woe be to him who was niggardly or brought none at all. He would wait, would *Limaua*, to give him his chance and then things happened. The giant would shake with fury, then would he rise and whirl his arms about, upsetting the waves till they knew not which way to go. He would shout aloud, "Shake up, shake up!" and his breath was as a mighty wind, so strong was it. Men had a wholesome fear of this great sea-god, whom all Niueans, since Niue was, had known and fed, and his tribute was great in those long years.

But now he is no more. The God of Heaven holds the sea in the hollow of His Hand and *Limaua* has sunk forever out of sight, even as he has from the memory of all but a few. And yet! Does the sea rage and the great waves thrash upon the reef, then do men say to this day, though they know not why,

That is *Limaua*'s work.

*Limaua* is hungry.

## THE BIBLIOGRAPHY OF NIUE

### Note.

D<sup>r</sup> E. M. Loeb of the Bishop Museum Staff arrived on Niue during my residence, measuring skulls. Naturally, at his request, I gave him freely of my information. On his return, I am told of “The History and Traditions of Niue” <sup>254</sup> from his pen, without any acknowledgement of the source thereof. The world is full of strange people.

### BIBLIOGRAPHY <sup>255</sup>

Books on Niue are not plentiful. Little scraps, however, can be gathered here and there from books of Travel, which help out.

1. Could one but get hold of the literature of 1853, Captain Erskine would tell us how Niue looked then, in his ‘Western Pacific’.
2. In 1861, the Rev George Turner wrote his ‘Nineteen Years in Polynesia’.
3. In 1863, Lieutenant Hood wrote his ‘Notes of a cruise in H.M.S. Fawn’. <sup>256</sup>
4. In 1868, ‘Savage Island’ appeared from a missionary’s pen, the Rev Thomas Powell.
5. The Yearly Missionary Reports of the London Missionary Society, from the date of landing of the Rev George Lawes, should hold good matter.
6. The Rev J. King wrote ‘W.G. Lawes of Savage Island’, a book of real interest.
7. S. Percy Smith’s ‘Niue-fekai’ has much useful information.
8. Sir Basil Thomson’s ‘Savage Island’ has pleasing information of a later date. <sup>257</sup>
9. Louis Becke, in his ‘Wild Life in Southern Sea’, gives an all too short account (from so vivid a writer of Tales) of Niue, where he resided as a Trader for some months.
10. Beatrice Grimshaw put in a short visit, leaving a vivid remembrance and a pleasant one. ‘Strange South Seas’ tells her story.

## APPENDIX: EXTRACT FROM “MISSIONARY ENTERPRISES IN THE SOUTH SEA ISLANDS” BY THE REV. JOHN WILLIAMS <sup>258</sup>

### Chapter XVII

Having to pass an island discovered by Captain Cook, which in consequence of the ferocious character of its inhabitants he called Savage Island, we determined to touch there and leave with them two Aitutakian teachers, to impart that knowledge of the Gospel by which, savage as they are, they will ultimately be civilized and blessed.

After a pleasant sail of five or six days, <sup>259</sup> we reached the island in question, which we found to be of the second class, the altitude of its most elevated land not exceeding a hundred feet. It is neither beautiful nor romantic. The shores were iron-bound, <sup>260</sup> and the rocks in most places perpendicular, with here and there a recess by which the natives had intercourse with the sea. We observed also, as we sailed along the coast, a number of chasms and caverns of various sizes and depths.

Arriving opposite to a sandy beach <sup>261</sup> and perceiving some natives on shore, we waved a white flag, which is the signal used to obtain friendly intercourse. Instead, however, of launching their little canoes, and accepting our invitation, they waved one in return, and on perceiving this we immediately lowered our boat and made for the shore, but on approaching it, we found the natives arranged in hostile array, as if to repel an invasion. Each of them had three or four spears with his sling and a belt full of large stones.

When they had arrived within one or two hundred yards of the reef, our natives lay upon their oars, spent a few moments in prayer, and then proceeded to the shore, making signs to the savages to lay down their weapons. This they did readily when they perceived that there were no Europeans in the boat — (In our first intercourse with a savage people, we seldom went in the boat ourselves, for when the heathen see that people of their own nation and colour only are there, suspicion is at once disarmed, and communication more easily opened.) — and coming down to the extreme point of the reef, they bade our people welcome by presenting the *Utu* or peace offering.

This custom appears to be very general among the inhabitants of the Pacific Isles, and consists in presenting to the visitor a breadfruit, a piece of cloth or some other article, with the sacred coconut leaf which they call *Tapaaau* attached to it, on receiving which the stranger returns some trifle as a token of amity, and a kind of satisfaction that the intercourse shall be peaceable. This ceremony having been performed, the natives launched some of their canoes and advanced towards our vessel, but evinced by their cautious movements and the respectful distance they kept, that they indulged the most fearful apprehensions.

An old Chieftain, however, was at length induced to venture into the boat, and with him they hastened to the ship. His appearance was truly terrific. He was about sixty years of age, his person tall, his cheek bones raised and prominent, and his countenance most forbidding. His whole body was smeared with charcoal; his hair and beard were long and grey; and the latter, plaited and twisted together, hung from his mouth like so many rats' tails. He wore no clothing, except a narrow slip of

<sup>260</sup> Indicating rocky shores difficult for landing boats.

<sup>261</sup> Off Falekula, near Tuapa, in July 1830.

cloth around his loins for the purpose of passing a spear through or any other article he might wish to carry.<sup>262</sup>

On reaching the deck, the old man was most frantic in his gesticulations, leaping about from place to place, and using the most vociferous exclamations at everything he saw. All attempts at conversation with him were entirely useless, as we could not persuade him to stand still even for a single second. Our natives attempted to clothe him by fastening around his person a piece of native cloth, but tearing it off in a rage, he threw it upon the deck and stamping upon it exclaimed, "Am I a woman, that I should be encumbered with that stuff?"

He then proceeded to give us a specimen of a war dance, which he commenced by poising and quivering his spear, running to and fro, leaping and vociferating as though inspired by the spirit of wildness. Then he distorted his features most horribly by extending his mouth, gnashing his teeth, and forcing his eyes almost out of their sockets. At length he concluded this exhibition by thrusting the whole of his long grey beard into his mouth and gnawing it with the most savage vengeance. During the whole of the performance, he kept up a loud and hideous howl.

Retaining the old Chief as a hostage, our boat again approached the shore, and our people were permitted to land. The islanders gave them some food and were friendly in their intercourse, taking care, however, to have their war weapons in readiness for a moment of exigency. A person apparently of some importance now arrived and gave the teacher to understand that we had better take the vessel to another part of the island.

On their return to the ship, we gave our wild guest a present, which consisted of a hatchet, a knife, a looking glass and a pair of scissors, none of which, however, did he appear to prize, not knowing their use, but just as he was leaving the vessel, he caught sight of a large mother-of-pearl shell, which one of our people was handling and springing forward, he seized it from him and appeared from his frantic expressions of joy to have obtained an article of superlative value. Thus laden, he was returned to the shore, where he received the hearty congratulations of his wife and people on his happy escape from a most perilous situation.

Night coming on, we stood to sea, hoping in the morning to hold more beneficial intercourse with the degraded inhabitants of this island, but the next day also was spent in fruitless attempts to obtain it. A landing, however, was effected by the two teachers from Aitutaki whom I had intended for this island, and some of our own people. When, after having been handled, smelt and all but tasted, perceiving a vast multitude of natives approach, thoroughly equipped for war, they thought it advisable to return without delay to the ship, but succeeded in getting one individual on board, who represented himself as a Chief of some importance, although the only badge of distinction we could discover was a few shells and part of an old clasp-knife handle dangling to a narrow girdle around his waist.

All the men were in a state of nature and appeared quite unconscious of any impropriety. Very few of the women were seen for they ran away into the woods on the approach of our people. Not able, however, to restrain their curiosity, some ventured near enough to take a peep at the strangers, as they were probably the first persons wearing European clothing they had ever seen.

The teachers from Aitutaki with their wives were so much discouraged and alarmed at the prospect of settling among these wretchedly degraded islanders that they requested us to allow them to accompany their brethren from the Society Islands, to whom they would act as assistants and with

---

<sup>262</sup> This and the next two paragraphs are reproduced in Smith, Part IV, pages 16–17.

whom they were willing to labour at the Navigators <sup>263</sup> or any other Station. We, of course, acceded to their request, not, however, apprehending that their lives would be in danger, though in all probability they would have been plundered of everything they possessed.

The only way that now remained, by which we might in some degree accomplish the object of our visit, was to endeavour to induce a native or two to accompany us to the Society Islands, keep them there for a short time, load them with presents of useful articles, and then restore them to their home. This we succeeded, after considerable difficulty in effecting.

As soon, however, as the youths <sup>264</sup> perceived that we were losing sight of their island, they became most frantic in their expressions of their grief, tearing their hair and howling in the most affecting manner. We had recourse to every expedient to inspire their confidence and assuage their grief, but for the first three or four days their incessant howlings were of the most heart-rending description; we could neither induce them to eat, drink or sleep. When animal food was offered to them, they turned away in disgust and howled most piteously, for having never seen it before, they concluded that we were cooking and eating human flesh, that we had taken them on board for the same purpose and that when our present stock was exhausted they were to be put to death and devoured. Their fears, however, were in some measure removed on the third day by seeing a pig killed, and from that time they gradually became more tranquil, were reconciled to their new companions and even delighted with the prospect of seeing other countries.

We were induced to be extremely cautious in our intercourse with the inhabitants of Savage Island from having been informed that the islanders had seized a boat belonging to a vessel, which had touched there a few months before, and murdered all the crew. They are certainly the most wretched and degraded of any natives I have ever seen except the aborigines of New Holland. <sup>265</sup>

---

<sup>263</sup> *Navigators' Island* is the English translation of *L'Archipel des Navigateurs*, the name given to the Samoan group by Louis de Bougainville in May 1768.

<sup>264</sup> According to Smith, Part IV, page 17, the two youths were named *Uea* and *Niumanga*. They were eventually taken to Raiatea in the Society Islands. From Smith: "Here the youths were taught many things, and something of Christian doctrines. After several months they were returned to their own island, but they do not appear to have been able to accomplish any good amongst their own people. They introduced to the island the *loku* or papaya. Unfortunately the ship that brought them back introduced some disease into the island, which caused many deaths, and this led to reprisals. *Uea*, one of those who went away with Williams, was killed by *Hopo-he-lagi*, the father of *Iki-lagi*, one of the respected chiefs of Alofi at the present time [1901]. This induced more fighting, in which *Hopo-he-lagi* and some ten others were killed by the Liku people. The other young man, *Niumanga*, belonged to Alofi, and his life was spared. Subsequently this young man together with *Niukai* and *Peniamina* left Niuē in a timber ship for Samoa."

<sup>265</sup> The historic name for the island continent of Australia. The name was first applied to Australia in 1644 by the Dutch seafarer Abel Tasman as *Nova Hollandia*, naming it after the Dutch province of Holland, and remained in use for 180 years.

## PART III

# DID E.M. LOEB USE INFORMATION OBTAINED FROM W.W. BOLTON IN *HISTORY AND TRADITIONS OF NIUE*?

by

Timothy Adair Lawson

May 2011

## INTRODUCTION

Rev. William Washington Bolton, M.A. (1858–1946) lived on Niue from 12 June 1921 to at least April 1924, working as a teacher in Hakupu.<sup>1</sup> During his three years on Niue, WWB obtained stories about the history and traditions of Niue from five of the elders — *Toafolia*, *Motufalo*, *Lagiholo*, *Kilimanapule* and *Toapuho* — and used them as the basis for the *Tales of Romance* in his book, *The Chronicles of Savage Island*. In his introduction to the *Tales of Romance*, written in Victoria, British Columbia, in 1927, he writes:

But 80 odd years back, Niue was — if not what Captain Cook claimed for it “Savage” — at least Heathen. There are those yet living, who in their childhood spoke with their elders who themselves had lived their whole lives in “The Period of Darkness”. They are fast dying now, they have told their tales, and mine has been the pleasure to cast them into English — faithful to the spirit and setting of the original I trust — that far from the little Coral Isle, those who will may know them.

The 38 stories in the *Tales of Romance* are thus WWB’s version of what he obtained from his informants, written in his somewhat biblical style, primarily for the purposes of informing and entertaining his contemporaries, rather than an academic community, while still preserving the main elements of the stories. The original handwritten text of *The Chronicles of Savage Island* is on deposit at the Mitchell Library in Sydney, as part of the Bolton Papers, a collection of 21 volumes of WWB’s writings.<sup>2</sup>

WWB states that the elders “*have told their tales*,” but it is not clear in what form they told them. They could have been spoken, probably in Niuean and written down by WWB with the aid of interpreters; WWB’s usual interpreters while at Hakupu were his two Assistant Teachers, Faséné and René.<sup>3</sup> They could also have been obtained in written form, again probably in Niuean and then translated into English with assistance. Unfortunately, the Bolton Papers contain only his finished works and not his working documents and this makes answering the question that is the title of this study problematic.

---

<sup>1</sup> See *From Victoria to Niue and Teaching on Niue* in Part I, *Notes on the Life of William Washington Bolton*.

<sup>2</sup> See Appendix II of Part I, *Notes on the Life of William Washington Bolton*.

<sup>3</sup> See, for example, Chapter VI, *The Move to Hakupu*, in Part II, *The Chronicles of Savage Island*. According to the official correspondence of the time, René’s true name was Urini.

The anthropologist [Dr Edwin Meyer Loeb \(1894–1966\)](#) had been a Lecturer at the University of California in Berkeley since 1922 when he arrived on Niue on 25 August 1923. He remained on the island for about seven months, departing on 17 March 1924. He was about 29 years old at the time and beginning a long academic career. The purpose of his visit to Niue was to conduct an anthropological survey of the Niueans,<sup>4</sup> and his book, [History and Traditions of Niue](#), was published in 1926 as Bulletin 32 of the Bernice Pauahi Bishop Museum. The book relies primarily on “*written materials furnished by the natives*,” and he notes that “*Most of those who actually wrote note books of information were retired teachers*.” The written materials were translated in collaboration with a Niuean resident, Ella Head.<sup>5</sup>

WWB, who was 65 years old when Loeb arrived, had been on the island for over two years. Both were working on the history and traditions of Niue and they met in that regard. At the beginning of the *Bibliography* in *The Chronicles*, we find the following text written by WWB:

Note.

D<sup>r</sup> E. M. Loeb of the Bishop Museum Staff arrived on Niue during my residence, measuring skulls. Naturally at his request I gave him freely of my information. On his return I am told of “The History and Traditions of Niue” from his pen without any acknowledgement of the source thereof. The world is full of strange people.

We should note that three aspects of WWB’s note are incorrect. First, Loeb’s research on Niue was funded by the Bishop Museum, but he was not a member of their staff. Second, as mentioned above, he was on Niue to conduct an anthropological survey; he makes no mention in *History and Traditions* of measuring skulls. And third, WWB actually *was* acknowledged in *History and Traditions*, but not for his work on the history and traditions of Niue. Instead, we read on page 14 that in regard to the list of place names found on the map that accompanies the book:

The place names in the following list are from the official land map of Niue, to which have been added many by Mr. Bolton, an old resident of the island.

Though WWB was relatively old and a resident of the island, he was not exactly “*an old resident of the island*,” having spent only about three years there by the time Loeb departed.

In any case, the most important aspect of WWB’s note is that he gave Loeb access to his extensive information, yet Loeb makes no mention of that fact in his book. This is especially true given that 17 of the stories found in *History and Traditions* are also found in *The Chronicles* and so would have been part of the information provided to Loeb by WWB.

In an attempt to answer the question regarding the extent to which Loeb may have used information that he obtained from WWB, the text of those stories that are found in both works are compared below.

## 1. THE VISIT TO NIUE BY THE TONGAN CHIEF *TEILOA*

The story about the visit to Niue by the Tongan chief *Teiloa* is recounted by both Loeb and WWB. WWB's informant is *Toafofia*; Loeb lists *Toafofia* of Tuapa in his Introduction (page 3) as among those giving especially valuable information in general, but does not cite a particular informant for this story.

Loeb, page 29:

Another tradition concerns a man by the name of Palafounuku, who lived at Tavahili, at Tuapa. One day a canoe came to his place from Tonga under the leadership of a Tongan chief named Teiloa. Palafounuku observed the gorgeous manner in which Teiloa was attired, and he knew at once that he was a chief. Palafounuku ran as fast as he could when once the Tongan boat had landed. Teiloa, alone, gave chase. Then Palafounuku leapt over a large stone which lay in his path. The Tongan chief, in turn, tried to leap over the stone, but he failed to clear the obstacle, and stumbling, he sprained his leg. His men carried him back to the ship, and gave utterance to their disappointment. "My leg is sprained;" indignantly replied Teiloa, "are all of your legs sprained also that you did not join me in catching and killing the Niuean?"

WWB, Tale of Romance #15, *A Mysterious Visit*:

*Palafoumiku* sat upon the tiny beach of sand that is to be found at *Tavahihi*, close to the Tuapa of today. He was thinking of nothing in particular, just taking a rest beneath the winter's sun, when something he saw far out to sea made him think very hard indeed. No ordinary canoe with outrigger, for such no mortal eye could discern at so great a distance, but a huge warcraft that rose and fell as it clave the waters, making straight for where *Palafoumiku* sat. It came from the west where Tonga lies. Was it peace it meant, or war? Still on he sat, nor thought of hastening up the cliff to give warning to the village : he would just wait and see.

Bounding along beneath the strokes of a hundred paddles, it soon was but two spears' throw from the land, when it stayed, swung round and rested. Into a smaller canoe which trailed behind there leapt a landing party with one, *Teiloa*, at the head. These made straight for the little beach where *Palafoumiku* sat. Now they were out and walking towards him, the while *Teiloa* was unrolling a fine mat. Cheerily the Tongan cried aloud, "Surely are you the Chief of these parts. Your courtesy in coming thus to meet us we warmly welcome. Let this fine tapa cloth be our present to you. E'en now with it will we adorn your shoulders." Then *Palafoumiku* seemed suddenly to awaken to realities. He saw capture and slavery, and thought but of escape. He gave no credence to such soft speech — and yet who knoweth? It might have been, but he went the wrong way about to cause it to be so, for having no weapon with him, he had recourse to his legs alone, and springing to his feet, dashed up the beach, running for dear life. This abrupt proceeding in answer to such kindly words naturally made *Teiloa* angry and forthwith he gave chase. After the beach comes a rocky space, e'er the trail up the face of the cliff is gained. Here *Palafoumiku* cleared at a single bound a wide-spreading rock and crazed with fear rushed on. *Teiloa* followed but failed to clear and coming down hard he broke his leg. Here was a "to-do", the leader helpless and in a strange land, and the crazy one flying up the cliff face with news that would bring the village down like a swarm of wasps. Therefore the man-chase ended then and there, and picking up the helpless *Teiloa* they made their way back to the canoe and so to the warcraft beyond.

The Leader of the party had watched all these proceedings nor could he understand at all, at such a distance, but great was his anger when he heard that *Palafoumiku*, the cause of all the trouble, had escaped. “Why did not the rest of you chase the man? Were all your legs broken as *Teiloa*’s? A fine landing party are you indeed! And now we must haste back lest *Teiloa* perish and we incur the wrath of the King, for high is *Teiloa* in his favour.”

*Uhomotu* from cliff and beach saw them pass out to sea. To this day there is mystery about that visit. It came from Tonga, or else we had not heard the story from their lips which completes *Palafoumiku*’s portion of the tale, but they said not if it was peace or war : and amongst all our ancient tales it remaineth still the one whose riddle is unsolved.

The styles in which the information is presented differ radically. Here, and throughout his book, Loeb, the anthropologist, presents the translations of the written material he obtained in Niuean as data to be considered for the purposes of research. In contrast, WWB embellishes the translation somewhat for his contemporaries, rather than an academic community.

In regard to differences in the content of the story, WWB has *Palafoumiku* for the name of the Niuean and *Tavahihi* for the name of his village, whereas Loeb has *Palafounuku* and *Tavahili*. WWB mentions (i) a leader of the party, (ii) the King and (iii) the village of *Uhomotu*, whereas Loeb does not.

## 2. MULIA’S COVERSION TO CHRISTIANITY

WWB’s informant for this story is *Kilimanapule*; Loeb does not cite an informant.

Loeb, page 36:

The *toa* of Mutalau, who were doing the work of God, heard that there lived in Lakepa a savage chief, who was disobeying God’s word. So two *toa* of Mutalau went down to take the Bible and convert Mulia. When they arrived outside of the house of the *taula-atua* they took a stick and planting it in the ground they called out to their would-be disciple, “This is the Holy Ghost (Agaaga Tapu) that grows here.” Then they turned to go home.

When Mulia heard himself called, he rushed out of the house in a wild fury. He did the war dance and knocked down the image planted by the *toa*. Then seeing a long worm, called a *kelimutu*, he picked it up and threw it on the road down which the *toa* were going. “Come back and take your Holy Ghost,” he called out.

One day Mulia saw that the lightening was flashing, and he started to become angry at the gods who lived in the sky. So he danced the war dance and threw his spears into the sky in order to kill the gods who lived in that region. Presently the lightening became very intense, and the word of God came down in forked flashes. Suddenly Mulia became blinded, and he fell grovelling to the ground. When he arose to his feet he could once more see. After this he accepted the word of God, and he prayed and bowed down to the ground incessantly. He was always talking about the death of Jesus, saying, “Since the kind Jesus was crucified, Mulia will be kind like Jesus.”

WWB in Tale of Romance #36, *A Chastened Brave*:

*Tukumulia* was Chief of *Tamalagau* — which is today called Lakepa — in the dark days of Niue, even to the breaking of the light which the gospel of Jesus brought. He was a fierce-tempered man. So fierce and truculent was he that when thunder pealed and the lightning flashed in the sky, he grew furiously angry with the gods who were making such a din, leaving him out of their fighting, and grasping his spears and war club he would rush out from his grass hut, shaping himself ready for a scrap, looking up to the heavens, yelling his defiance and hurling thitherwards his spears if haply he might draw blood.

Now came Paulo the Samoan to Niue, landing at Mutalau, bringing with him the news of the Gospel, and Mutalau received both him and his message, and soon afterwards built themselves a House of Prayer : and placed a wooden bell beneath its shed wherewith to summon the Faithful to public worship. That drum sounded far with its sonorous boom and reached the ears of *Tukumulia* the heathen. It seemed to be a challenge to both him and his ancient beliefs, and never did he hear it but he would rush forth to his own village drum and beat it furiously in mad defiance.

The braves — now largely tamed — of Mutalau got wind of this, and being full of desire to pass on the good news to the still benighted villages, determined to pay a visit to Lakepa and have a friendly talk. Arriving, they failed to get an interview with the Furious One, so had to stand outside his falé, and thus delivered they their souls. Emulating Paulo on his first arrival when they had sought his blood, they, like he, stuck a pole in the ground opposite *Tukumulia*'s doorway and prophetically declared, "Here plant we the Word of God, to grow as a mighty tree and spread its branches over *Tamalagau*." Then they started home. No sooner their back turned, than the fierce heathen issued forth, tore up the pole, hurled it after them, much moist, wormy earth besides, crying out loudly, "Come back, come back, pick up your god spirit and take it back to Mutalau. The gods of old are good enough for me."

Soon after all was changed. Again the thunder crashed and the lightning flashed, and *Tukumulia* rushed forth in fury to go through his performance, but this time his challenge was accepted. As his spear hurtled upwards a blinding flash came downwards, and *Tukumulia* fell. They picked him up and bore the inert form within : they tended him well with anxious care : he opened his eyes at length, but all was darkness — he was blind.

Then came again those men of Mutalau, and the great Paulo himself among them : and *Tukumulia* asked in his distress to hear this new word of God, and hearing it believed. "Like Paul of old," said he, "I have been struck blind, and another Paul has shown me a great and better light."

WWB gives the name of the shaman as *Tukumulia*, rather than *Mulia*. He uses the old name of Lakepa, *Tamalagau*, and mentions the Samoan missionary, Paulo, whereas Loeb does not. Loeb does, however, mention (page 35) that this story took place "*at the time of Paulo*."

### 3. KINGSHIP

Loeb, page 51:

According to information obtained, the kings following Mutalau were: (1) Leivalu ; (2) Hetalagi ; (3) Fakahinaiki ; (4) Punimata ; (5) Ihuga ; (6) Patuavalu ; (7) Galiaga ; (8) Fokimata ; (9) Pakieto. Only one informant mentions the name Leivalu and another the name of Ihuga. Two informants writing separately agree on the names of Hetalagi and Fakahinaiki. The remaining kings are certainly correctly named and numbered.

In Tale of Romance #21, *Of Kings*, related by *Toafofia*, the list of kings recorded by WWB is as follows:

Of the *Togia* of ancient times I have already spoken. *Leivalu* and *Hetalaga* are both memories. Of what village, why bathed with the sacred oil thus set apart from their fellow Chiefs, what made them famous or how died, none of Niue knoweth : but came *Tihimau* and *Punimata*, *Patuavalu* and *Galiagaaiki*, *Fokimata* and *Pakieto*.

Regarding the kings, it is clear that Loeb had multiple informants, whereas WWB's informant is *Toafofia*. Since WWB mentions *Leivalu*, which only one informant mentioned to Loeb, perhaps *Toafofia* was the informant for both. Information about the kings was also available in [S. Percy Smith, 1902, Niué Island and Its People, Part I, Journal of the Polynesian Society, Volume 11\(2\): 80–106.](#)

Loeb (page 51) states that “The following stories of the other kings are based on accounts given by Toa Folia in the native missionary magazine (19), supplemented by information obtained from other sources”. The reference “(19)” in Loeb's bibliography is simply “*Toa Folia*,” a native missionary magazine. WWB gives *Toafofia* as his source for the same stories, but does not mention the magazine.

Loeb, page 52, regarding *Patuavalu*:

There was great peace on the island during the reign of Patuavalu. According to a native account “all the trees of the island bore fruit, and there were swarms of birds in the bush, the pigeons coming out of the bush and rested on housetops, and on banana trees. The crabs (*uga*) also overran the land and entered into coconut husks in the *kaina* (homes). There was also a superabundance of fish in the sea. The island was blessed from the beginning of this king's reign until the time of his death at an old age.”

Loeb's account is remarkably similar in content, if not in wording, to WWB's account of *Patuavalu* in Tale of Romance #21, *Of Kings*:

Now I pass on to *Patuavalu*. His reign was also one of perfect peace. It seemed as if Niue had never known nor could ever know again so wondrous a time. All life seemed to be happy as were the people. Never had the trees borne so abundantly, never were the wild birds so numerous or tame. The fat and luscious pigeons came into all the villages, resting not alone in the bananas, but on the roof of every *falé*, nor feared they man at all. The great land crabs came forth from their rock holes and entered the homes, finding good hiding and abundant food in the huge piles of coconut shells cast aside. The sea too was full of fish, none ever went out to return empty handed. The sun was not too great in heat, nor did the rain withhold, the wild winds ne'er blew fiercely.

People and land were happy. All rested for the stormy times ahead yet knew they not that such was to be. *Patuvalu* had his bathing at *Puato*, close to Alofi village, and there at last they buried him, grieving sore at their great loss.

The same resemblance is evident in their accounts of *Galiaga*. Loeb, page 52, quoting from a native account:

During the beginning of Galiaga's reign the island was blessed with peace. But later it so happened that a man by the name of Kakahemanava stole talo from the plantation of Tinomata. Tinomata did not know who had stolen talo from his plantation, but planned to obtain revenge by killing the king Galiaga. Then he killed the king. Tinomata killed the king in order to bring misfortune to the island, so that there would be a famine on the island and the people would dwindle to skeletons and die from hunger. Then the man who has stolen from his plantation would also die. After the king had been murdered the island was cursed, but the people did not know who had stolen from the plantation. When the island found out that Kakahemanava was the thief, they exterminated every member of his family. They did this because of the murder of the king. After this everybody was afraid, and nobody wished for the office of *patuiki*, lest he be killed as was Galiaga.

WWB in Tale of Romance #21, *Of Kings*:

*Galiagaaiki* became now king of Niue. He was of Liku on the east coast and bathed at *Taumahala* in that village now extinct. He was a good man and strong, but fell a victim in another's quarrel. The plantation of a native by the name of *Tinomata* was despoiled and none knew the thief. Now *Tinomata* was of a fierce and ungovernable temper and in his savage breast thought only of how he could reach the thief and satisfy his vengeance. He determined to murder the king of the land for thus would misfortune come to the island, the gods would be angry, they would send too much sun, too little rain, thus would famine come, and coming slay the thief, though he himself should likewise die. Therefore did *Galiagaaiki* fall to *Tinomata*'s spear and sorrow great spread over the land. Then did the Chiefs hear *Tinomata*'s tale and making search found *Fakahemanava* to have been the thief. Then, like Achan of the Holy Book, was *Fakahemanava* destroyed, himself, his wives, his children : the whole family of that wicked one who had caused the regicide was wiped out of Niue forever. Now for a long time there was no king, for all the great, the wise and the strong refused to be bathed, lest for some other's wrong they should come to sudden end.

Loeb states that *Galiaga* was anointed at *Paluki*, rather than *Taumahala*, and has the name *Kakahemanava*, rather than *Fakahemanava*, which suggests a mis-reading of the spelling of one for the other.

#### 4. THE VENGEANCE OF LEFUTOGIA

WWB's informant is *Lagiholo*; Loeb does not cite an informant.

Loeb, page 57:

Lefutogia was a Tafari man. His sister went to marry a man of Tumuakifonua, whose name was Lupekovi. The brother followed and went to live at the new home of his sister [as a *fekafekau*]. The new dwelling place of the brother was not good, and he became angry at the way in which his brother-in-law treated his servants. So he turned back to Tafari and remained there to live.

Presently Lefutogia thought that he would revenge himself for the bad treatment that he had received from his brother-in-law. So he commenced at once learning how to fight. He first made a wooden tub [*kumete*]. When this was finished he took it down to a point by the sea named Tanu, and it was there that he learned how to fight. He went down, and taking up the tub, he filled it with water from the sea. He then went up to the cliffs, and performed the war dance (*takalo*) in order to harden his body. Finally he ran down to where his tub full of water lay, and he tried to lift this in the air. He was not able to, and so he threw the water out of the tub, and taking it up, he left it at the cliffs and went to his own *kaina*, where he stayed.

When the next day arrived he went down to the sea again and repeated his training. Thus for many days he went down and performed his exercises as on the first day. He did this until the day arrived that he was able to fight.

Lefutogia was a young boy when he started to plan revenge (*fakafualoto*), but by this time his body had greatly increased in muscle, and the hair on his face was full grown. Then he went down one day, as on the many days that had passed, and filled the tub full of water. Now, for the first time he was able to raise it. He lifted it high in the air and put it on his shoulders. He then poured the water out from the tub and put it back in its regular place. After this he ran up to the cliffs and danced and chewed his beard. His body was indeed very strong.

Now he returned to the *kaina* where he lived, for he was able to do the thing that he had planned. He chose the day on which to fight and then he went to visit his sister in order to have her prepared. "When I arrive in the night," he said, "you will hear a sound as of the rain falling, so be prepared." After Lefutogia had bade farewell to his sister he turned back to Tafari and prepared the war clubs. When these were prepared the troops went up in order to surprise the house by a night attack. There were only two men in the house, and when they perceived that they were attacked they rushed outside and fell at the hands of the invaders. This was in repayment for their wicked deeds. After this Lefutogia took his sister back to Tafari, and lived with her there.

WWB in Tale of Romance #34, *A Devoted Brother*:

One, *Lefutogia* was a youth of Tafari, between whom and his sister *Nukai* there was deep affection. They felt it much when *Lupekovi*, a great man from the same south of the land, even from Hakupu, sought her, claimed her in marriage, and bore her off to a new home. Not long after *Lefutogia* made journey thither and was warmly welcomed by his old-time play mate. But things were not as they should be. This did not take long to see. *Lupekovi* was treating her harshly, berating her with angry words and laying upon her heavy tasks. The soul of *Lefutogia*

was moved to protest, yet was he but a youth and had not strength to fight. Therefore he returned to Tafiti, full of love for his poor sister and of hate for the man her husband. He should pay for it, even if it took years for the reckoning.

Now did *Lefutogia* of Fatiau in Tafiti start in to train himself for the coming fight, strengthening his muscles in various ways, learning of his elders how to cast the great spear and to wield the deadly club. All Fatiau wondered to see the youth so keen, yet kept he his secret in his heart. One special test of strength he set himself, and when he should succeed in this, then settled he that *Lupekovi* should be taught his lesson, and his dear sister should know peace.

He had his private training quarters at *Tanu*, in a cave close to the reef, and there he exercised most strenuously none interfering. Hither he brought a huge bowl of oval shape, so large that he could but just stretch his arms across to grasp and lift. Sinking this in a pool in the cave so that it was just covered, he made this bowl the test of his strength. When he should be able to lift it bodily out of the pool and raise it to his head, water and all, then was he *Lupekovi*'s match : the day of days would have struck.

See then this devoted youth. Day after day he would stand upon the cliff above, whirling his arms this way, that, shaping himself for mightiest effort, then rushing down to his quarters would seize the bowl and heave. Alas! day after day he could but lift to the surface; beyond that was not in his power to do. For was he not but a youth? But his devotion was great, nor thought he of desisting even as weeks and months passed by and still that bowl remained his master. But meantime he became an expert in long range fighting and in close. Who in Fatiau could cast the spear now as this youth? Who could evade the blows of clubs as cleverly as he?

And now the years passed on and the youth became a man. Behold! his beard grew, and with it he felt his strength growing ever greater. Now could he lift the bowl clear out of the pool, now could he lift it to his knees, now could he lift it to his shoulders, nor spill one drop. There came a day — the day he had worked for all these years — when he passed the test completely, that wonderful day for him. He stood upon the cliff looking eastward to where his dear sister dwelt : he called upon both her and his gods for triumph. Squaring his now broad shoulders and sparring with those great arms of muscle, he thrust his beard in his mouth — true Niuean sign of fury — then dashed down to his task. 'Tis done! High above his head that oval bowl was raised then tilted slightly till drained dry where it hung. He was a man. *Lupekovi* should know *Lefutogia*'s might.

To Hapuku he made his way and had long interview with his wary sister. He would not slay his enemy in his sleep : it was to be a fair fight. *Lupekovi* should know nothing till the sister should hear her brother's voice calling out a challenge. "For you O my sister deep in grief, I shall come on a day when rain falls not steadily as now, but in passing showers. When I call, come forth and make answer; then tell *Lupekovi* to haste with spear and club, for the avenger of your wrongs is nigh." So was it.

Ere many days the fitful rains began, and the woman sitting on her mat within the grass hut heard a voice she knew and loved crying, "*Nukai*, sister mine, where art thou? Where, O where can *Lupekovi* be found?" She rose, went forth and made answer so that all could hear. "Brother of mine, *Lupekovi* hath wrung from me the secret. He is here and even now hasteth to meet you in the death struggle." They met : that was a terrific fight : Hapuku never saw so wonderful a battle.

The old veteran and he who had but just reached manhood. But youth and love were on *Lefutogia*'s side and *Lupekovi* fell at last to rise no more.

Thus was *Nukai* avenged, and the devoted brother led her back through the forest trail to Fatiau her first home, and there in peace and happiness she dwelt for long.

In Loeb's version of this story, the brother and sister are from Tafiti, the southern part of the island, with no mention of their village, and the brother-in-law is from *Tumuakifonua*, whereas in WWB's, the brother and sister are from Fatiau and the brother-in-law is from Hakupu.

## 5. CEREMONIES OF CHILDHOOD

Both Loeb and WWB describe a ceremony to bestow beneficial qualities on a male newborn, with each mentioning the same animals and sugarcane. WWB's informant is *Toafofia*; Loeb does not cite an informant.

Loeb, page 70:

After five nights had passed, they brought the fruit of the *tuitui* (candle nut) to light up the place; then they bathed the child and gave it a name. They called this name "that given at the bathing by the *tuitui*."

When the eighth day arrives, if the child is a boy, the parent goes down to the sea to bring it fast animal as a gift. He then brings up the *kamakama* crab. The leg of this crab is broken off and rubbed on the leg of the boy. This is done so that the boy may run well on the battle field, and be quick in chasing people in war, that he may be quick in running for his life, so that the troops will not catch and kill him. Then the crab is allowed to escape.

After this the father goes in search of a flying bird in the bush, this flying bird is the *heahea*. After the father has caught the *heahea*, he takes it and rubs it on the mouth of the boy. This is done so that when the boy grows up, he shall speak well, and be wise in prayer, and shall avoid spears and stones in battle, also that he shall be able to bear hardships, and be kind, and live long as the stones or the sun, for when the sun sets it rises again. Then they allow the *heahea* to fly away. Finally, the father brings a sugar cane, and lets the boy chew it. This is done that he shall be strong and brave in all undertakings.

WWB in Tale of Romance #16, *Welcoming the Babe*:

There were strange customs in the days of old when the new-born first appeared. It was a busy time for the father who would have a famous son. Of the girls the *falé* was their lot in life, not the canoe, the hunting of birds and the warpath. Strength, hardihood and a fine voice were the longings of that father, and his part it was to start his babe on the way thereto.

Down therefore to the receding tide the fond parent would hasten and hunt with diligence for the little *Kamakama* a crab whose fleetness of pace surpasses his size. When caught it was borne home forth with, its claws detached and rubbed for long on the feet of the babe, those claws that

sped so swiftly o'er the rocks. Thus would the child when reaching manhood, be like *Kamakama* swift of foot, swift to pursue, swift to escape to fight another day.

Then off to the bush that parent went to bring down with stone or spear the sweet-throated *Heahea*, the thrush of Niue. The dead bird in his hand he would haste, and oft rub the lips of the babe with the soft breast of the songster, thus ensuring the future warrior a noble voice that would carry far, either in battle cry or oration to his people.

And yet again he would haste away to his plantation to cut down the *Tomaka*, our sugarcane but this one with outer skin as stone for hardness, as we have still with us today : and bearing the sweet cane home would force some of the sweet juice down the throat of the loud wailing babe, that he might be hard as stone to endure all things in the days to come. For in those days, none but the strong could hope to survive : the weakling succumbed quickly in those stressful times.

Therefore with much diligence did each father strive that his son should be a warrior, brave and strong, and take his place and part in life on Niue's stormy isle.

Except for Loeb's first paragraph, the content is identical. In his first paragraph, Loeb mentions the bathing of the child by the light of the *tuitui* and his being given a name; WWB does not mention either.

## 6. THE PREMATURE BURIAL AT SEA OF *HILIGUTU*

WWB's informant is *Toafofia*; Loeb does not cite an informant.

Loeb, page 87:

There was a man named Hiligutu who died from a swelling of his stomach. His relatives then put his body in a boat, and taking the boat down to the ocean they set it adrift. Then the relatives went and performed the *tafeauhi* [the night dance] for the dead. After two nights had passed a certain man went down to the sea. There he saw someone chewing the skin of the hulahula banana, under the banana tree. The man feared that he saw a ghost, so he ran back and called to his relatives, "Come, go down and see the *mena lalauli* [black ghost; ghosts were always black in Niue] eating the hulahula." So the people went down to see. Oh! It was Hiligutu, whom they had sent off in a boat, and whose stomach had been closed by the sea. He had then turned back alive, and had drifted up to the shore. He lived to a ripe old age.

WWB in Tale of Romance #17, *The Black Devil*:

It was not the wish of any brave to die upon his mat. Therefore it was grievous unto *Hiligutu* to lie sick in his grass hut, doomed ere long to die as any woman. Yet did he long bravely struggle to conquer and be strong once more, but what could avail seeing that he had the growth in his stomach which we this day call cancer? So great was the strength of the disease within him that the brown skin of our race was changed to well nigh black. He sank lower and lower till he lay — seemingly — a corpse. This then they did though their hearts were sad : it was the hot days of the yearly round of sun and quick must be the burial. Ere the breath had fairly left the body of the mighty warrior, they carried it to a canoe, paddled far out to sea and cast the dead man overboard

into the still but gently heaving waters. They had gone far and darkness ever cometh down with startling suddenness. It was as the sunlight fled they eased them of their burden and paddling swiftly soon left the spot behind.

The village rang with lamentations both that night and the next for *Hiligutu* : but *Hiligutu* was far from dead, and very busy for a sick man all that time. For the plunge into the waves revived him : his lethargy took flight : coming to the surface he looked around but the inky darkness shut out all and every sight. Ever a good swimmer he struck out and went with the waves. It was long ere he made land, yet made he it in safety, and then was he far from home. Weak was he and faint : and slowly made he his way along reef and cliff. Two nights had sped by, and one of the village made journey to the sea at dawn, when on the reef below the cliff he saw a black form — hunched up, eating bananas, skin and all for none of the fruit seemed to be thrown away. The villager doubted not but that he saw a devil, and fled back to the village with the news. “Come, come quickly, all of you and see a real back devil eating bananas skin and all.”

The cliff edge was well crowded and the black form still sat hunched there. They took it all in, this vision of a devil, its shape so strangely like their own, its ravenous appetite, for still it was busy, its color just as their wizards had taught them. Now would they be able to tell their children and their children’s children of the wonder their own eyes had seen; when lo! the devil rose, turned, looked up and waved its arms. With one voice they exclaimed “It is no devil. Lo! it is *Hiligutu* whom we had cast into the sea as dead. Let us haste down to hear his story, for it is a wonder greater even than a devil that *Hiligutu* has returned from death.” The village had high feast that day, with song and dance in place of tears and wailing.

*Hiligutu* had his wish at last, for he died as a warrior should, despite his malady. At *Fugahehake* he fell, and with him to the Land of the Shadows went his friend, the mighty *Palalagi*, to whose aid he had hastened, sick as he was, in that brave’s hour of need.

WWB does not mention the night dance, *tafeauhi*, nor the black ghost, *mena lalauli*, although the title of his story, *The Black Devil*, suggests there may have been a reference to *mena lalauli* in the translation upon which WWB based his story. In Loeb’s version, *Hiligutu* lives to a ripe old age, whereas in WWB’s, he dies as a warrior.

## 7. THE INTRODUCTION OF TARO

WWB’s informant is *Toapuho*; Loeb does not cite an informant.

Loeb, page 102:

The men of Tafiti came up to fight against Motu. One man, however, stopped half way and went into the bush. When the man turned around he saw a plant growing near him. He went and had a look, then he took it and covered it up with a long green leaf and left it where the torches were kept. He also plaited it with long black hair.

When the troops came back from the fight against the people of Motu, a man by the name of Lefutogia took the plant and planted it at Manulakafia. Then when the talo had grown a bit he replanted it near the mouth of a cave at Kakaoka in Tafiti. He placed it there so it would be near

the water and that he might water it every day. When Lefutogia saw that his taro was growing well he cut down trees and made a kaina at the seaside, calling his kaina Fehalaga. It was here that he planted his talo.

When the talo was full grown the time came along for the making of arrow-root. Lefutogia thought that he would take some arrow-root as a present to his chief. So he brought a talo leaf and covered the arrow-root with it. Then Lefutogia came up and made a feast for the chief. The chief, however, did not eat the arrow-root in the night, for it was very dark and he wished to see what the arrow-root was covered with. The next morning he saw that it was covered with the talo leaf.

Then the chief said to his people, "Go down and find the place where the talo grew." When the people came to the kaina they saw that the talo had grown up and spread all around the seaside at Fehalaga. They reported what they had seen to the chief. The chief sent a child to fetch a little of the talo. The chief planned to kill Lefutogia because he was angry about the talo leaf that had been used to cover up the arrow-root. The child, however, was told to get some of the talo and bring it to the chief for his feast.

Presently, the people said, "Here comes the chief's son to get a little talo." Then Lefutogia saw the son of the chief approaching, and he thought that he came in peace. But the troops came to kill Lefutogia, because they were angry on account of the talo leaf that had been used to cover up the arrow-root.

After Lefutogia had died, killed by the troops, the people dug up his plantation and took the talo to be eaten by the chief. After Lefutogia was dead he sang this song:

My talo that I planted with my hands,  
Who could guess that it would grow  
To be taken as oil for the anointing?  
My talo from beyond the horizon.  
I shall name it eight points.  
My talo from beyond the horizon.

#### WWB in Tale of Romance #38, *How Niue Learned of Taro*:

For long years, unknown to Niueans, had taro flourished upon the island — that food which became and is unto this day our chief food. To *Lefutogia*, a Taitian of the village of Hakupu, in the ancient days, do we owe forever grateful thanks, for it was he who found it.

The warriors of the south went forth to fight the north and moved swiftly over the trail that cuts the isle in twain. To gather fruit to eat and slacken both thirst and hunger, *Lefutogia* stopped off the trail and his quick eye perceived a plant with handsome leaf that he had never seen before. Curiously he went to it, examined it, pulled it up by the root and thought well enough of it to make up his mind to try it in his clearing when he returned. Wrapping the thing carefully in a fern he tied it strong with trailing vine and hung it on his war club : then hastened forward to join once more his band. Hiding it when he neared the battle ground he came safely through the *melée*, and on his return, picked up his bundle and bore it home.

Saying naught to any he thrust the plant into a hole he made in his plantation at *Manulakafia*, and tending it carefully, it throve. Now did he take a portion and planted this nigh the mouth of the cave at *Kakaoka*, some distance from his village of Hakupu. Here also it throve amazingly, and soon he had a large space in the bush covered with the unknown plant. He had tasted and knew that it was good, but to others inquisitive, he said it was but a weed whose leaves did take his fancy. Once more he set it, this time at *Tehalaga* very nigh his village.

The King of Niue dwelt, in *Lefutogia*'s day at Hakupu, being a Tافitian : and the loyal Niuean bethought that it was time to let him know of this new food. Therefore did he bring that which he had first seen — a handsome leaf, in which he placed arrowroot, and made present to his King. It was night and the company could not tell what this new thing was — this strange leaf, so waited until dawn when the wise men pondered deep, yet none knew of it, nor had set eyes upon it before. Then said the King, "Go you down to *Lefutogia*'s clearings and see ye this same thing." They went and behold! it grew abundantly both at *Fehalaga*, *Kakaoka* and *Manulakafia*. They returned and told the King, saying, "We have seen where it groweth and behold it covereth the land." Then said the King to his sons, "Go ye now and bring some hither that we may plant it even as *Lefutogia* has done." This was far from the latter's wish. He was willing to give, but he was not willing that all Niue should have of his find. Yet did the King covet it and *Lefutogia* to his friends thus sounded his complaint:

A second taste, a second taste,  
The first was not enough.  
O foolish I! how true it is  
I'll die for this new stuff.

And die he did, for how could he, alone, resist in those wild days when might was Right. Not willing to give they took, and *Lefutogia* was not. None knoweth the grave of him who brought such benefit to his people.

To the King they brought of the roots and he tasted, his warriors too, and they pronounced it good and gave it the name *Mataga*, the which, one species of the many beareth to this day. As the taro spread over the land other names were added — the *maga*, the *pulekau*, to mention some. This is the song that has come down to us, which *Lefutogia* made because of his gladsome discovery :

#### The Song of the Taro

On Niue Isle I found the thing  
When fierce on warpath bent,  
Its beauteous leaf attracted me,  
I kened not what it meant.

With my own hands I planted it,  
None knew that it was growing,  
With water daily tended it,  
And ever made fresh sowing.

*Mapualagi* named I it,  
It came “from Heaven above”  
Then *Matavalu* sprang therefrom  
“Eight-eyed” and strong as Love.

It spreads, it spreads, naught stoppeth it,  
*Tehalaga*’s range is wide.  
Alas! the day when all men share  
In *Lefutogia*’s pride.

WWB refers to *Lefutogia*’s *kaina* as both *Tehalaga* and *Fehalaga*, whereas Loeb refers to *Fehalaga*. And WWB refers to a king, whereas Loeb refers to a chief.

## 8. TAFAKI AND FAMINE

WWB’s informant is *Toafolia*; Loeb does not cite an informant.

Loeb, page 112:

There was a famine in the island and all the food disappeared. The people on the eastern side of the island knew that the *tefito* [root of banana tree] grew at Mataaho [Tuapa], and that there were banana trees there. The *kaina* belonged to a man called Tafaki. Then all the people of the eastern side came down; the husbands, the wives and the children. They all assembled together and fenced the *kaina* with sticks. The people lived inside of the fence and ate banana roots.

When Tafaki heard that those people had taken his *kaina* he sent word to his *kau* [troops] that they should go and kill all of the people that were inside the fence. The troops went and killed all of the people inside of the fence, but they spared the little babies. After the slaughter the babies crawled about and sucked the milk from the breasts of their dead mothers; then they also perished.

WWB in Tale of Romance #28, *The Innocents of Niue*:

There was drought and famine in the land and the people were dying fast. Desperate they had roamed the forest for *aka* and *luku* and other edible ferns and roots, but even these could not suffice for so many hungry mouths. He who had aught eatable or drinkable on his plantation must needs watch closely and guard well.

At *Matahao* in the north there lived one, *Tafaki*; who on his wide plantation had many of those bananas whose root is both edible and luscious. Jealously he watched his treasures but desperate folk take desperate chances. News spread of *Tafaki*’s possessions, and to his clearing in the forest there trooped men, women and children, babes in arms, all ravenous and parched with thirst. *Tafaki* saw ruin and death staring him in the face, and in his savage heart determined that it should not be so if he could help it.

Fast to the village some little distance from his clearing he hied and called upon his friends to help drive back the invaders from outside. To a man they rose and followed him back. Aye!

surely with that crowd there would be an end of his precious store in quick time, but quicker than that time were he and his. Surrounding the famished ones they rushed upon them and with spears and stones swept like a hurricane amongst the crowd. None rose again who fell, women and children as well as men. The babes in arms they left, clinging to their dead mothers' breasts to slowly die. The slaughter over, *Tafaki* awaited the coming of another day when the little Innocents along with the guilty trespassers should be cast into the deep chasm for their common burial place.

Loeb has *Mataaho*, whereas WWB has *Matahao*; otherwise, the main elements are the same.

## 9. TALAMAHINA AND THE SHARING OF FISH

WWB's informant is *Toafolia*; Loeb does not cite an informant.

Loeb, page 114:

Talamahina was a very strong toa who lived in Vavau, Paluki. Once he heard that the people of Alofi had gone down to catch fish at Tufonua. So he went down to the landing place in order to obtain his share. The people came back with a great haul of fish, and Talamahina rejoiced at the prospects of obtaining a fine present. The leaders of the fishing fleet gave him some fish. One of the fish was a *fagamea*. This was a very large fish but it was not considered very good eating. Talamahina was so furious at the insult that he seized hold of the fish by the tail, and used it as a walking stick (*tokotoko*) as he went up the road to the top of the cliffs to his dwelling place. When he arrived at his kaina the fish was pretty well worn out by hard usage, and Talamahina threw the tail into the bush. Talamahina then called together his troops, and he explained to them that he had been given a poor fish, and not one with "an honorable name." He bade them prepare the fleet that they might break down the houses of the fish eaters.

Loeb continues this story on page 138, under Accounts of Wars and War Heroes:

Each of the *toa* took his share of the weapons, one seized a club, one a spear, and one took some stones. But Agivalu trusted in his strength, and he went empty handed to the war. He had neither club, spear, nor stone. He spoke thus to his troops, "I will chase the men and throw them over my back so that you can kill them."

The troops fought on the battlefield at Mana. There was in that fort (*taue*) a big *toa* named Matahaiki. As they fought Matahaiki threw a spear at Agivalu. But Agivalu dodged by stooping (*kalo fakau*) and the spear struck a banana tree and he escaped uninjured. After this the fight became violent, and some men, seeing that Agivalu was not defending himself with a weapon, made attach upon him. The men hit him with their weapons, and he died on the battlefield. Agivalu met his death because he had trusted merely in his own strength.

WWB in Tale of Romance #6, *Vavau's Chief*:

*Paluki*, the true centre of the island, was the capital when Alofi (now the chief of all) was but a fishing village. There dwelt the King of Niue and to *Paluki* all trails led.

*Talamahina* was a great Chief, a mighty warrior, and dwelt at *Vavau* close to *Paluki*. News reached him that the Alofi men were going to make a great fish killing at *Tufonua*. He was very hungry for fish, for *Paluki* is far inland and few were brought thither save for the King who had his own canoe and men to work it at the little village by the sea.

At *Tukaiavi* stood *Talamahina* the Chief, the sea far below him, and saw the boats returning. They were full to overflowing. Hastening his steps he was at Alofi's reef as soon as they. *Tufonua* had indeed been a great success. There were all kinds, big and small. There was the Parrotfish and the Bream, huge Cod and Barracouta, the Kingfish and the *Utu*, the Redfish and the Tiger. He sought a present of them, and unwillingly — yet because they feared him — they gave him one — one only. His heart hungered for the Tiger, a big sound fish full of meat. But they would not part with even one of the many *Paala* they had caught. Instead they gave him a *Fagamea*, gloriously red of hue.

*Talamahina* was fiercely wroth, yet dared he not, amongst so many, speak out aloud his thoughts. He took the Redfish, for he hungered greatly for sea meat, and strode home along the narrow trail, holding his gift by the tail, and in his anger swinging it about nor thought to see the mischief he was doing. At *Vavau*, even at his own home lo! he held now only the tail, the rest he had left along the trail, piece by piece. Now hurled he the remnant away and vowed he vengeance fierce.

Summoning his band he cried, "Clean your spears, both single and two pronged, get out your war clubs and your stones, for we go to attack and destroy the fishers' homes who refused me aught but a *Fagamea* whose tail alone reached *Vavau*!" Then stood forth *Agivalu* and *Tumailagi*, two of the band and said, "O Chief, right gladly will we go with you. Are not the Alofi braves, cowards ever? They are fishers, they are no fighters, they have neither stones nor hooked clubs as we. Haste you that we may kill, for victory is surely ours."

Though *Agivalu* thus spoke of stones and clubs, yet did he himself despise them. From his youth he bore no weapons but his own two hands, closed to fight. All Niue feared him. He fought close in and his blows were terrible : the heart stopped forever at his stroke : the eyes refused to see again : the skull lay cracked and open : the face was as an orange crushed beneath the foot. And *Tumailagi*, though he used weapons, was little less than *Agivalu* in renown.

Now the band went forth, *Talamahina* striding in the front, *Agivalu* close behind in the post he loved right well, nigh to his Chief : *Tumailagi* his friend next behind. Swiftly they made westward even to where *Mana* dwelt that they might settle first with him and his whom they loved not. Reaching the fighting ground they sent their challenge, nor was *Mana* unwilling for the fray. He was no fisher, yet was he their friend. A mighty man was he and he had a band that knew no fear.

The battle was joined, stones and spears seemed to darken the sky that day. Now did *Tumailagi* come to see his end. *Matahaiki* had marked him out and so hard pressed was he by many another that he took shelter behind a clump of banana trees. But that availed him not. With mighty throw *Matahaiki* hurled spear, so swift, so sure, so straight that it passed clear through a banana trunk and spitted the hiding warrior to another. Here too did *Agivalu* fall. Face to face and man to man he fought, and men lay stretched out all around him, but the gods were against him that day and

*Mana*'s men were not to be denied. They rushed the brave from all sides, their clubs rained blows, broke arms, crushed skull — he lay a corpse.

And it was nigh the last of *Talamahina*'s fights. *Takiula* accounted for him, though now his spears were all gone to fight the Chief with, his club broken, and he had only the round stones, big as a man's fist to fight on with. There was a rain of stones, but 'twas his that reached the leader. It struck low, or *Talamahina* had been slain. His leg bone cracked, he could stand no more. Out of the fight he crawled and with aid was carried home. Alofi was not for him or his that time.

And *Mana* got *Talamahina* after all, for no sooner healed than he was ready to fight again, his heart still sore with those fisher folks. He sought yet again to reach them but *Mana* blocked the path, and in the fight the Chief of fell : he passed to where fish are of no account, nor cause for cry of battle.

Loeb refers to *Mana* as a place, whereas WWB refers to a person, and Loeb does not mention *Tumailagi* nor *Takiula*, nor *Talamahina*'s demise.

## 10. GREEDINESS OVER A WHALE

WWB's informant is *Lagiholo*; Loeb does not cite an informant.

Loeb, page 114:

The townspeople were all at church at the time, although it was a Monday. Two men from Fatiau came down to the beach. They saw the whale, and hurriedly spread the report of the find to their own village. The people from the small village of Fatiau then came down and divided the whale between them. After the church was over, all the people of Avatele and Tamakautoga flocked to the beach. Nothing remained of the whale excepting the tail, around which the shark were playing. The people of Fatiau were greedy and refused to give up any of their spoils to the people of the neighboring villages.

Taulaga was an Avatele man. He begged Futogia of Fatiau for a piece of the whale, but Futogia was greedy and he refused to give up any of his share. Then Taulaga made a deceiving plan (*fakavai*) . "Give me piece of the fish," he said, "then you come over to my *kaina* and I will give you some clothing to pay you for it." Taulaga received the fish which he at once proceeded to eat. Afterwards Futogia visited Taulaga in order to receive his *fakalofa*. Futogia stayed around the house all day gossiped. Taulaga made no mention of the clothing, and the visit was made in vain. It was in this manner that Taulaga took revenge on Futogia for his greediness....

Haitaue had chipped off many pieces of the fish and loaded them up to the bushy part of the cliffs as a place of concealment. After all the people had scattered he went up cautiously to visit the portion that he had loaded into the bush. "Oi! Where were the many pieces of fish that he had carried up and hidden in the cache?" The place was empty; not a single piece remained. When Haitaue had thrown down the pieces of fish they had fallen into a chasm and were lost to sight. Even the head of the whale had gone down to the bottom of the chasm and was irretrievably lost.

Haitaue suffered great anguish because of his loss, and he almost went out of his mind (*fakaatu kehe*). Thus he was repaid for his former selfish rejoicing.

WWB in Tale of Romance #35, *What Happened to Greed*:

The whale, that monster of the great deep, has oftentimes been seen off Niue's coasts but rarely have Niueans had a taste of whale meat. Of one such instance I would tell.

The Period of Darkness was just breaking before the Light of the Gospel of Jesus. Some had heard and had believed, and most of the villages had at least a handful of the Faithful. Being as yet weak in numbers and yet desirous of common worship of the One and only God, some of the villages combined to build one House of Prayer, and thus it was that at Avatele a coral and lime Church was raised, to which the Christians both of Fatiau to the east and Tamakautoga to the north foregathered for public worship as good Christians should.

The Sabbath had passed but on Monday morning at break of day there was to be another service — and folks had tramped the miles westward and south to offer praise and prayer once more. Two Fatiauanans who should have gone thought otherwise, their names *Paku* and *Futogia*. They preferred a stroll down to the sea and made their way along the well-beaten trail to the lower cliff edge direct from their home and reached *Hikau*. Looking down upon the reef they were astonished to see a monstrous fish lying broadside on it, its huge tail occasionally flapping showing that life was still within that gigantic form. "*Tafua! Tafua!*" a whale! a whale! they both exclaimed, and hurrying down, soon stood as pigmies beside it. It was past fighting now, soon it breathed out its life, and *Paku* and *Futogia* talked earnestly of what had best be done.

It was decided that *Paku* should make haste to Avatele and spread the news, while *Futogia* should arouse the nearby village. Soon all Fatiau were down at the reef and carving into the gigantic feast. It was the heathen party one and all, the godly had gone on praying, and these godless ones worked hard to get all they could ere others came a-seeking. Into the nearby bush they hasted, into caves, anywhere where prying eyes could not readily see, and there they stored the unlooked-for feast.

Meantime *Paku* had done his part and Avatele and Tamakautoga hastened to the spot. Arriving at the cliff edge the newcomers in their host looked down upon a busy scene. All heathen Fatiau was at work, and it might lead to trouble were these newcomers to drop down to lend a hand till formally invited. Now came Fatiauan after Fatiauan up the trail, loaded with solid chunks of flesh : in single file they came, and the outsiders asked in friendly fashion for a share. But No! there was none for Avatele and Tamakautoga : and yet there was no fight. It was sad to see even the Christian *Futogia* thus giving way to greed.

But one, *Taulaga* made plan quickly. To *Futogia* he appealed, "I pray you, *Futogia*, give me a chunk of whale. If so you do I will give you when next you come to Avatele the shirt you have so long been coveting." It was too much for *Futogia* : "Agreed; for shirt I give you whale meat," and *Taulaga* went home loaded. Yet ought *Futogia* to have given for friendship's sake, not for greed and barter. Meanwhile others on the reef were still busy — the busiest of them all Chief *Haitaue*. He had worked prodigiously, and in his haste had cast mighty chunks into the bush nearby, careless of aught save getting all he could, ere others grasped it.

And now the carcase alone remained and the hard worked women went slowly home. Avatele and the sister village were sad and grieved, yet had the Christian folk amongst them kept the crowd from blows. Left alone, Chief *Haitaue* went to cast up his goodly haul. Behold! he found none, not even smallest chunk. In his haste he had not noticed that the shrubs to conceal his hoard concealed a fissure broad and deep. Into that chasm all his whale meat had gone, piece by piece, and far out of all possible reach it lay. Thus was *Haitaue*'s happiness turned to grief, nor could he keep his loss a secret. It was too big for that.

And what of *Futogia*. He had not forgotten the shirt, a very precious garment then, when only lavalavas had so far been known. Hied he therefore to Avatele and held *Taulaga* to his promise but *Taulaga* absolutely refused. Such greediness on *Futogia*'s part was only fit to be met by like greediness on *Taulaga*'s. In friendship given of the whale, in friendship he had given the shirt. Such the reasoning of *Taulaga*.

When the empty-handed villages heard of Chief *Haitaue*'s loss and *Futogia*'s hapless tramp, then broke forth *Kulukaki* the poet of the western coast, and this Song :

*Titigigie* prayed for food  
 Appeared forthwith the mightiest of fish;  
 All thought to have a share  
 But *Fatiau* was greedy.

Hastily the news went round,  
 The lame, the blind found each their way  
 They looked : they saw : they coveted :  
 But *Fatiau* was greedy.

With saddened hearts we came away,  
 'Twas Christians held us from a fight,  
 Yet prayed we sad might be their lot  
 Those *Fatiauans* greedy.

Chief *Haitaue* sought his share,  
 A chasm held it safe and sure :  
*Futogia*'s shirt was but a myth,  
 Those *Fatiauans* greedy.

When next a whale doth come ashore  
 And good men pray while others find,  
 With such stern lessons in their mind  
 Will *Faitau* be greedy?

Loeb's account does not mention *Paku*, nor does it include the song by *Kulukaki*; otherwise, the main elements are the same.

## 11. THE TWO DIVERS

WWB's informant is *Toafolia*; Loeb does not cite an informant.

Loeb, page 118:

Tulitoga and Tagaloahe kula were two Tafari men. They were the children of the *iki* Foufou of Avatele. They went up once to make kava to the gods (*faikava atua*) at Fatuana, then they went to bathe at Mataloko. There they found some people from Motu in swimming.

Now, when leaving a pool it was the custom of the people to dive to the bottom and see who would be first. A man was just in the act of diving when the Motu people noticed that there were two men from Tafari looking on. As soon as they became aware who these two men were they disliked them (*fakavihia*), and made fun of them (*va*), calling out "Dive Tafari, and don't be slow about it." The two men dove at once in order that they should not be killed by their enemies. They did not come up again to the surface, but swam the length of the pool under the water and only rose to the surface when they were out in the ocean. Then they followed the sea down to Avaiki. This is the song they sang,

Dive carefully, dive quickly, lest we get into trouble,  
Dive cleverly, and then we will be sure to rise again.

WWB in Tale of Romance #14, *Long-Distance Divers*:

At *Fautuaua* representatives from every village on the island had gathered to make laws. It was but a mile back in the forest from *Uhomotu* where dwelt the King and before which the sea beats upon the coral reef.

It was hot and their duties over, it was agreed to visit *Mataloko*, a well known bathing pool to this our day, there to relax in swimming and diving. Rivalry soon showed itself and soon chosen men from each village were at it in earnest. Now came diving and after leaping from great height, there was competition as to who could remain under the waters for the longest time and distance.

All joined in save two young men from Tafari which is where Hakupu and Fatiau lie today. These men were *Tulitoga* and *Tagaloa-hekula*, the stalwart sons of the great Chief *Foufou*. They seemed to be indifferent to the contest, the shouting and the clamour. Yet were they not really so. When all but they had tried, the rest cried out, "Shame be upon you, ye sons of *Foufou*. Take now your turn and dive or Tafari will be disgraced before us all." Now both *Tulitoga* and *Tagaloa-hekula* had long practiced the art of remaining under water for great distance, and had watched the rest, none of whom could compare to them.

Therefore, now that they were challenged they took the dive, both at the same moment and making the full length of the passageway through the reef reached the open sea. Still kept they beneath the waters and turning south kept on till a point hid them from sight. Then rising to the surface they swam steadily on to the cave at *Avaiki* which is nigh to Makefu. There they landed and by way of trail returned.

Meanwhile those at *Mataloko* knew not what to make of it. Was it a dive beyond any known of them, or had the two been drowned? At first as the distance lengthened alike with the time, men shouted their approval and applause, but when the two did not appear upon the surface, then did men fear many things, the giant feke with its tentacles, a shark or the sea-god's wrath. To *Uhomotu* all returned with hearts saddened for *Foufou*'s sons. When the two appeared that evening in the village, great was the astonishment and wonder at their tale. Such diving and such swimming was not known in Motu. Tafari took the crown.

Motu was defeated and *Tulitoga* and *Tagaloa-hekula* took pains to press it home. Had not Motu jeered at them? Therefore they composed this Song :

Dive cleanly, swim swiftly,  
Else shall you be mocked!  
Tafari dived, came up for breath  
But Motu saw us not.

Loeb has *Fatuana*, whereas WWB has *Fautuaua* and Loeb does not refer to *Uhomotu* nor Chief *Foufou*; otherwise, the main elements are the same.

## 12. THE QUARREL BETWEEN *LIGATOA* AND *FAKAPUNA*

WWB's informant is *Toafolia*; Loeb does not cite an informant.

Loeb, page 135:

Once two Tuapa men, named *Ligatoa* and *Fakapuna*, quarrelled over the ownership of a tuitui tree. *Fakapuna* gave the first blow and split the head of *Ligatoa*. Then the offspring of *Ligatoa* heard of this at Mutalau, that the head of the parent had been split. So they gathered all of the *toa* of Mutalau that they might split the head of *Fakapuna*, and thus pay back for the split head of *Ligatoa*.

WWB in Tale of Romance #8, *All For a Candlenut*:

Two of the most highly prized trees on Niue have ever been the *Fetau* and the *Tuitui*. Both bear nuts which have much oil therein, which as now, was used both on the body and the hair : but in ancient times this also was an added use : namely making every part of the body ready for battle.

Time was when two men great of fame, both of *Uhomotu* (now Tuapa) by name of *Ligatoa* and *Fakapuna* quarrelled over the right to a *Tuitui* tree. Each claimed possession and the quarrel grew to blows. In the fracas *Ligatoa*'s head was cracked by *Fakapuna* and he was wounded sore. Some of his sons and daughters had left the father's village and married amongst those of Mutalau. When the news of the father's plight reached the latter village then did those sons rise up and swear by all their gods that they would have vengeance : for their father was dear to them. Therefore did they gather together many braves, and well armed set out across the island, a large band. The news of their coming went ahead of them and *Uhomotu* feared not but hastily calling together the warriors of the village, *Fakapuna* took the warpath too. 'Twas at *Gutukiu* that they met, a famous fighting ground of yore, and there *Ligatoa*'s sons paid *Fakapuna* back in plenty

and he was glad to escape with many a wound but yet a whole scalp of his own. When the fight was over and the sons of *Ligatoa* looked upon the dead of *Uhomotu* then were their hearts sad for they had been fighting with their boyhood's friends. Men call such today Civil War, and when hearts are not angry it appears a fearful wrong. Therefore did these same sons repent and think it an evil thing to slay men of their own village, all for one broken skull. *Ligatoa* rejoiced at the love of his far-off children, yet did he too grieve that they had been o'er hasty. It was long however ere *Uhomotu* forgave Mutalau its breaking of the peace, yet were they once more friends in time, and *Gutukiu* is but a memory of the ancients, the fight that there took place over a *Tuitui* tree : a ne'er forgotten episode on that cleared field for battle within the forest deep.

Loeb does not mention *Uhomotu* nor *Gutukiu*; otherwise, the main elements are the same.

### 13. THE EXPLOITS OF LAUFOLI

WWB's informant is *Toafofia*; Loeb indicates that he received multiple versions of this story.

Loeb, page 149:

The achievements of Laufoli have already been presented by Smith, and only a summary of his material need be given here.

It appears that Laufoli was a noted warrior of Niue, who aroused the envy of the people of Tonga (Tongatapu, according to Uea). One time a party of Tongans came to Niue where they were much surprised to see that the tops of the pandanus trees had been cut off. When the visitors heard that Laufoli had cut off the tops of these trees with his staff they invited him to come to their country and try his skill.

The first test that the Tongans put to Laufoli was the cutting down of a banana tree. A piece of ironwood had been placed in the banana tree so as to make the test more interesting. Laufoli failed when he tried to cut down the tree with his staff at his first attempt. He then held the staff in his left hand and succeeded in cutting down the tree.

The second test was the jumping of a wide chasm, a feat which Laufoli performed with ease. This chasm is supposed to be of volcanic origin. The third test was the climbing up to a cave in which lived Toloa-kai-tangata, or Toloa-the-cannibal. Laufoli came to the cave of this cannibal, and after cutting off his hands, feet, and tongue, he put him to death.

Three days after this feat the people of Tonga made Laufoli climb a high mountain and attack the enemies on top. While climbing the mountain Laufoli was assailed by large and small stones. The large stones he avoided, and the small stones he straddled. When he arrived at the top of the mountain he killed many of the people there, and the others he pardoned.

When this episode was finished the people of Tonga made peace with Laufoli, and they gave him the king's daughter as wife. A girl was born, whom they named Malama. Presently Laufoli had a dispute with his wife, who told him to "shut up" (*fakamate*), and who called him a stranger (*tagata paea*). The words of his wife so angered Laufoli that he returned to Niue.

After Laufoli came back to Niue he gave himself the following names: Toloa, Tapivai (Summit-of-water), Mouga (mountain), Mougafafau (Built-up-mountain), Tagaloaheiki (Tagaloa-of-the-chief), Tahikona (Bitter-sea), Taputoga (Sacred-toga), Poitoga (Run-toga), Mitiakau (Suck-the-(banana)-tree), Tuitoga, Titimatatoa (The-front-of-the-girdle-of-the-toa). These are the names that Laufoli gave to his wife: Mataginifale (Wind-in-the-house), Potutagaloa (Corner-of-Tagaloa), Potuhetoa (Corner-of-the-toa).

The manner in which Laufoli met his death was, according to Uea, as follows:

*After Laufoli had finished telling about his adventures, he decided to kill himself while he was yet able to rule and before the hands of the people could touch him. So he dug a hole at Tuafutu and he lit a fire resembling the ti oven. After this he sent word to all of his friends to come and do his bidding. After they had opened up the oven Laufoli called out, "Which toa will come and push me into the oven?" But everybody was afraid and nobody would consent to do this thing. They all feared that Laufoli would pull the person that came to do his bidding into the oven. Laufoli next cleared a space and performed the war dance. When this was finished he ran and jumped into the oven.*

*When the oven was nearly cooked it burst open. That is the reason why ti ovens always are liable to burst; it is because the one that Laufoli jumped into burst open. The spot on which Laufoli fell they named Veli (to fall) because Laufoli fell there, and no women or children were allowed to approach the spot; it was tapu.*

*These were the toa who were with Laufoli at the time of his death, and to whom he called out. He especially pleaded with Kulatea, who was afraid. He also called out to Katikula (Mitiakau), Fohiano, Potuhetoa, Potutagaloa, Matalakitifa, and Mougafafau, the son of Vemoa I...*

As further evidence of the recency of the Laufoli incident, it may be added that all of the versions of the story which I received are almost identical with those recorded by Smith...

Loeb had versions of the story of Laufoli in addition to those in [Smith \(1903\)](#). Perhaps one of those versions was from *Toafofia*, WWB's informant for Tale of Romance, #7, *The Labors of Laufoli*:

Though 250 miles of trackless waste lies between the isle of Niue and the Tongan Group, there was oft coming and going between them in the Long Ago. Tonga out to conquer and awhile victorious yet got at last a lesson which made it the part of truest wisdom to keep away from Niue. 'Twas in those earlier days of friendship that my story lies.

Among the visitors from the distant isles came a man of great renown amongst his race. A Tongan great and strong was he, famous for many a daring deed. Now Laufoli held the same high place in the hearts of Niueans, and it was but natural that two such braves should meet. In friendly rivalry they tested one another in many a feat of strength and hardihood, and Tongans present as well as Niueans gave loud applause to their respective champions. Though Laufoli afterwards made such good record as well may wipe out from our memories an act unworthy of the man, yet in his keenness to get the best of the visitor it must needs be told that he resorted to a trick.

Unbeknown to any he selected a tall *fa* tree, bent down its top and broke it off, then let the limb fly back. Now did he call the Tongan and the crowd to see his mighty handiwork, how with his cutting stick he had swung and slung it upwards and with unerring aim had severed off the top. He challenged the visitor to do the same, but such a feat was quite beyond his ken : he did but marvel as did all the rest. And Laufoli took the praise.

Soon after, the whole party returned to Tonga, inviting Laufoli to surely visit them where he would have warmest welcome, for was he not a strong and mighty man? He went, like many another in those brave days of old, alone across the great deep, with naught but the stars to guide him where his haven lay; but with that unerring instinct of our race he feared not to overshoot the mark, and after many days drew up his canoe on the shore of Vavau Isle.

Meanwhile the Tongans had held council concerning this visit of the Niuean. Friendly indeed they would be but they would put him to four tests. If these he passed then surely was no honour too great for so wonderful a man. These then they agreed upon and prepared for:

1. The Strengthened Banana Trunk.
2. The Stony Mountain.
3. The Chasm of Leaves.
4. The Cannibal of the Cave.

Laufoli, like all in those wild times, never travelled without his weapons, his spears, his clubs, his cutting sticks. These he had carefully covered with many leaves, laying them in the bottom of his canoe. Arriving he stepped out upon the beach and went forward to where many were hastening to give him welcome. Soon he was informed of what had been arranged and right gladly did he consent thereto. He was ready for the first that day and hour.

Now did they lead Laufoli to a stout-stemmed banana with succulent but sturdy trunk and called upon him to lay it, at one blow, low. The crafty Tongans had previously driven down from the top through its very heart, the hard young sapling called Toa. Thus would Laufoli strike something unexpected and be foiled. He smiled, so easy thought he such a test. Forthwith he sent for his belongings but they could not be seen so well he bestowed them, and he himself had to fetch them to the testing ground. Tonga was there to watch and laugh. Selecting that stick with which he slashed best at home he shaped himself but found that the tree had been selected so that the usual swing there was no room for. It had to be a reverse stroke or none. Yet was not Laufoli disturbed in mind. All strokes were the same to him. He raised his stick, he struck with mightiest power, there was a sucking sound, a crack, a swish and the trunk fell, clean severed by the blow. Tonga's laugh was turned to wonder : gave they Laufoli praise : for their hearts were good towards him, and was not he their guest?

The next day came to second test. Tongatabu is flat but Vavau is mountainous, and climbing is not what Niueans have to do, for our isle is even as is Tongatabu. Laufoli however thought little of such a test of strength. Were not his legs, his thighs as rocks for hardness? But he was not prepared for the strange action of that mountain. For lo! as he made his way upward, mighty stones came rolling down upon him, stones that would crush and kill, and lesser stones as well, a torrent of stones and no refuge therefrom. Then did Laufoli's anger rise in his heart. He saw no test, but treachery therein, and he burned to reach those hurlers at the summit and lay upon them

his good club. With nimble steps he jumped aside as the great rocks came tearing towards him, the smaller ones he utterly disdained, standing with legs apart he smiled as they went hurtling through. None struck him and he gained the top : then struck he and in his fierce wrath slew those men, all save one who craved for mercy and Laufoli's anger now appeased was granted it. Thus again did Laufoli triumph. Great praise was his : the Tongans' hearts were good towards him, and was he not their guest?

A rest and the third test came. To what appeared as a deep sloping trench the Niuean was led. He was told to make his way along it to a point selected far ahead. Its real depth was hidden for it was filled with leaves laid on trestles. To tread thereon was to fall, to disappear, to drown in the waters far below, and if Laufoli escaped this test and trap, then would they have seen a wonder done before their eyes. And they saw it, for looking ere he leaped, he thought the path of wisdom lay along the sides, and with an agility ne'er seen surpassed, he sprang from side to side, back, forth, back, forth, till his goal was reached, nor had one leaf been touched : a great shout went up : gave they again Laufoli praise : for their hearts were good towards him, and was he not their guest?

This final test was left : accomplished they could ask no more of him. Toloa, the Wild Man of the Cave, was the terror of all. He was a giant Tongan whose wits had left him : his food was man when he could lay his hands on him : all sought to slay him, but all feared. It was for Laufoli to end the terror or himself to die. War club in hand he sought and found the Cave, went boldly in to find the giant absent. The way led down, so down he went and saw bones everywhere, bones of his fellow men. Not wishing to avoid the meeting Laufoli waited long : then towards sunset heard the Terror coming as he crunched the trail above. At the top of the Cave, the wild cannibal stood, and thus he spake aloud "Whence comes this smell of Man?" Then looking down he spied the Niuean. The giant smiled at the thought of getting food so easy and so nigh, then started to descend. As he put his great foot down one blow from Laufoli's club smashed it to pulp : he thrust the other down and again that club descended. Then the maddened wild man put forth his hand to grasp that which assailed him and again that club struck true : then came the other reaching out and it too fell helpless. Now came the great body full upon Laufoli but he stepped aside, and soon the cannibal was a lifeless corpse. The terror was no more a thing to fear on Vavau. Taking the teeth out from the massive jaws Laufoli thrust them in his loincloth, then ascended and went back to those who had sent him on his mission. Cried he "Your terror has departed. I have slain Toloa in his cave." With one voice they cried "You surely lie, O Laufoli, it could not be." Then showed he them the teeth which he drew from his loincloth, and they believed.

Thus had Laufoli passed every test : they could ask no more of him. Then did the Tongans pour gifts upon the noble Niuean : none were too good for him : many a Tooga those most beautiful of all mats made, hair oil in plenty, Hiapos too to wrap himself therein when cold, coconuts and all manner of foods. Loaded down, and full of honour and renown Laufoli left the friendly isle, and once more stood on Niue.

The years passed, and for Laufoli life held nothing more of interest. He wished to die. He feared that if he grew old and his strength departed, then in some island quarrel he might fall a victim unable to defend himself : and that to Laufoli's mind was no worthy end to a man of high renown. Therefore he determined that he would make an end of himself, and it should be done

openly, bravely and in the sight of all. He was a great man, therefore dared none to gainsay him. He dwelt at Veli on the East Coast, nigh to Liku, and calling his relations to him, he gave orders “Make you a great oven for a human baking.” And they made it. Now did they make huge fires therein, and when all was ready they break it open. Great was the furnace and the heat.

Thus did Laufoli draw nigh and spake his last words — “Behold! I die. Cast much earth and covering upon this oven when I do leap therein. Make large the grave of Laufoli this day, I charge you.” Then he leapt and the great heat wrapped him close. Yet went he not alone to his death, for the people obeying him, piled up the mound all too quickly, and with a mighty roar the huge oven exploded and slew many of those standing by, the workers also. Therefore is it to this day when a big oven of native make shall explode, men say “This is Laufoli’s work” and lay the fault on him, nor try to find the cause within themselves.

WWB then recites the Death Song of Laufoli, which is not mentioned by Loeb. The content of these two long stories is remarkably similar. The main differences are that Loeb mentions that (i) Laufoli was given the king’s daughter as wife, with whom he had a daughter, *Malama*; (ii) he went back to Niue because his wife told him to shut up; (iii) he gave himself several names when back on Niue; and (iv) he called out to several *toa* before dying in the oven.

#### 14. THE WARS OF MOHELAGI AND PALALAGI

Loeb on pages 151 to 156 tells of the wars of *Mohelagi* and *Palalagi*:

The stories of the wars between Mohelagi and Palalagi rest in part on historical occurrences, as these two men lived about a hundred and fifty years ago. Mohelagi was a chief of Liku, while Palalagi ruled in Motu at Tamahavea. The parentage of Mohelagi is unknown. Palalagi is noted for being a deserter from his own country, for he was born from Taiti parents but upon marrying Tialenifo, a Motu girl, he deserted his own people and went over to the Motu side.

At the present day many of the people of Liku are descendants of Mohelagi, while many of North Alofi are descendants of Palalagi through his son, Pineki II. It is interesting to note that the ill feeling occasioned by the ancient wars has not as yet subsided. Both the Motu and Taiti people were eager to furnish me with manuscript in support of their respective views.

Loeb then recounts the story of how the original cause of the wars was the death of two of *Mohelagi*’s sons and how *Palalagi* was defeated at *Fetiki*. He states that “*There are several stories concerning the troops of Palalagi, who were put to flight that day,*” and then recounts one of those stories, which ends with the death of *Mohelagi* at *Mougakelekele* from a large spear made by *Palalagi* and thrown by *Helagi*. Loeb mentions subsequent battles fought by *Palalagi* at *Tafagu*, *Talikifea*, *Mamalava*, *Tukuofe*, *Fetuna* and finally *Fugahehake*, where *Palalagi* was later killed by *Naea*.

Several of the elements of pages 151–156 are found in WWB’s composite story in Tale of Romance #30, *Unworthy of the Name He Bore*, which he attributes to *Toafofia*:

*Palalagi* was in olden time a name to swear by upon Niue. The mighty *Palalagi* whose strength was as the strength of ten had fallen at length at *Fugahehake*; but others bore the famous name

down the long years, and one of that name of renown, the last ere The Period of Darkness passed away forever, I would now tell of.

Alas! he was not full worthy of the name he bore. Great he was and a powerful Chief among his fellows, but today he is not a man whose memory all Niue delights to honour, for he turned his hand against his own, and his end was at the hand of friend turned foe nor in a worthy quarrel.

*Palalagi* was the son of *Laufuti*, and the mother who bore him was named *Nau*. Born in the south he was Tafiian and there long he dwelt, growing up among his own kindred, taking part in their councils and fighting in their fights. But his choice for wife fell upon a northern woman, a Motuan, and her he married : nor took her to his home but went to hers : and by much talking and persuasion was prevailed upon to side with Motu not Tafiiti, and to go forth in their fights, and ere long to lead his former foes therein. Tafiiti therefore both despised and hated him. They cast his very memory out from amongst them and sought earnestly to put their hands upon the turncoat.

Now was this strange thing. Before *Palalagi* changed sides he ever had led to victory, but after he joined the northerners he was continuously beaten. Seven fights he had and in not one victorious; there were *Talikifea* and *Fetiki*, *Tukuofe* and *Mamalava*, *Fetuna* and *Mougakelekele*, *Fugahehake* too : he lost all and many were slain, yet was not he. *Mohelagi* was the closest of all *Palalagi*'s friends : long had they counselled together, worked together, fought together. They were as brothers of the same mother, born at one and the same time.

There came a day when *Mohelagi* sought of his longtime friend a simple thing. "Bring me, good friend, I pray you, a piece of shark's fin with which to cut my hair, now over long." And lo! *Palalagi* made rough answer "I have none : cut it off with land crab shell, 'twill do as well." *Mohelagi* grew angry and made no effort to smooth the matter over, the rather did he cast cutting words, words true enough, but words best not uttered between friends. "Remember you not, O *Palalagi*, the day your enemies tied you hand and foot, fast to the tree at *Fafagu*? Would that I had not troubled to set you free who will not do a simple thing for a friend." "I have paid you back a hundredfold for that," said *Palalagi*. But *Mohelagi* denied. Then hot words, then hotter still, then in hot blood they fought. Fierce was that struggle, hand to hand, friendship changed to fiercest hate and *Palalagi* fell.

Men point out his grave today. Not even dead would Tafiiti have him, his son lies near, that son who slew *Uea*, from whose dying lips Niue first heard of the One and only God in Heaven. Father and son were ruthless men but they lived in ruthless times ere The Period of Prayer had dawned and knew not better.

Note that while WWB distinguishes between a *Palalagi* who died at *Fugahehake* and a descendant named *Palalagi* who fought with *Mohelagi*, Loeb treats both elements as referring to the same *Palalagi*. In Loeb's account (page 152), *Mohelagi* asks for a shark's tooth to shave his head to mourn the death of two of his sons, whereas in WWB's, he asks for a shark fin because his hair is long.

## 15. THE BIRTH OF MAN

Both Loeb and WWB remark the similarity between a Niuean tradition of the birth of man and the Biblical tradition, "There were giants in those days."

Loeb, page 164:

*The words say that a long time ago on the island of Niue there grew up generations of Lukilo, then there grew up generations of Lomea, then there grew up generations of Ikatea, then there grew up generations that crawled. This is the meaning of these generations, that there grew up the small people of the island following those first generations.*

It will be noted how closely this tradition resembles the Biblical tradition, “There were giants in those days.”

WWB in Tale of Romance #1, *There Were Giants in Those Days*, related by Toafofia:

This is a saying of the old men, such as I, who in childhood spoke to and learned of those of the Long Ago. Niue had first a race of *Lukiloans* : then came a race of *Lomeaans* : their place was taken by a race of *Tegameaans*, who were followed by a race of *Ikateaans*. This is the day of yet another race, even the *Tolotoloans*. And what, what will the next be? Will they be children always, without a trace of manhood?

For here is the meaning of this seeming riddle. The Niueans, according to us old men whose standard reaches to the far, far past, have deteriorated, they are not as their forefathers. The earliest Niueans were as big as the big Black Ants, whose place was taken by the smaller Ant of Brown; these were followed by the Hermit Crabs, to be succeeded in turn by the small White Sprat. This day sees Niueans as Crawling Things! And what will be the end thereof?

WWB refers to the *Tegameaans* and the *Tolotoloans*, whereas Loeb does not. WWB, being an Anglican priest, would have immediately noticed the connection with the Biblical tradition; one has to wonder whether Loeb would have made the same connection independently.

## 16. BRINGING A *TOKAMOTU* FROM *FATUANA* TO *VEVE*

Both Loeb and WWB tell the story about the bringing of a *tokamotu* — a rainmaking fetish according to Loeb — from *Fatuana* to *Veve* by the sons of *Hafonua*.

Loeb, page 168:

A man named Hafonua was made *patuiki* by his relatives. All his relatives then paid him great respect and laid the finely woven *tegitegi* mats in his house and on the road which he travelled. His glory did not last long, however, for presently he stole the girl Puleloto, the wife of his brother Tifonua. Because of this, his relatives cast him aside and would no longer supply him with food. Finally Hafonua fled with his wives and children to Veve. A famine developed on the island because the *tokamotu* had been left behind and had been neglected. This condition induced Hafonua to send two of his sons, Fualave and Fakahuikula, back to Fatuana in order that they might steal the *tokamotu* and bring it to Veve. This famous mission was performed, and the *tokamotu* was once more carefully guarded. As soon as the *tokamotu* was given the proper treatment the rain fell on the island and the famine was at an end. Then Puleloto, the stolen bride, gave a great feast, for the time of plenty was at hand. This is the song that Puleloto composed at the feast. [It will be noted that she assumed the credit for having stolen the *tokamotu*.]

*The daybreak is brightening the skies,  
I begin my song,  
Blessed and true is the song.*

*It was the core of the island, the tokamotu  
That I brought in the leaf of the coconut tree from Tefua  
To the place in the island at Veve,  
Blessed and true is the song.  
At the cross road to Lalopeau  
The feast of thanksgiving is approaching  
To bless the island at Kavatonu,  
Blessed and true is the song.*

WWB in Tale of Romance #10, *The Removing of the Mace*, related by *Toafolia*:

Well back from *Uhomotu* — the royal village now known as Tuapa — in the forest, many of the great Chiefs with the King of the island at their head, builded a great Council Home at *Fautuaqua*. With care they selected the wood for the posts and rafters, and had it thatched close so that even the fiercest rain might find no way therein. Here they should meet and settle the laws of the land; and as a sign of their authority they decided that a mighty club should be made, and suspended from a rafter in the centre of the building. For this mace the choicest wood of all Niuean trees was brought into use, and with their rough tools they shaped and polished it. Great was the pleasure of the King and his chief men when all was finished, and the fame thereof spread throughout the land, making good men rejoice at the authority that ruled over them, but the wicked to tremble lest it should reach them with its might.

On the eastern side of the island where the breakers never cease to roar and life was hard, there dwelt at *Veve* the Chief *Hafonua* who had had no part in this work of his King and was envious of the powers of his brethren. Many and wild sons had he, *Tafaia* and *Fualeva* amongst them and his village feared him for he spared neither young nor old in his wrath. Now did he summon his headmen before him and disclosed his plan. They too should have a great Council House and if laws were to be made, they should be made in his village alike with *Uhomotu*. Therefore was it necessary to secure that mace and he would do it even if it meant a fight. The Council House was raised. Taking only his two sons with him, he now crossed the island along the beaten trail, then hid close to the great Council House till nightfall. Suspecting no danger all the royal village were within their *falés* a full mile away. Nor locks, nor bolts were known then, therefore those wild men walked in, and one climbing the rafters, let down the mace into his father's hands, and home they went forthwith.

Great was the consternation in *Uhomotu* when it was found that the sign of the King's authority had vanished. The wizards were called in and long and deeply did they consider, yet found no solution of the matter. But of this they were sure, that it was the devil's work and all that they could do was to pronounce their curses on the thief, invoking torment and pains upon him; and let it go at that.

Home the fierce Chief had borne it, and amid feast and rejoicing that mace hung suspended from the main rafter of *Veve*'s Council House. Then something happened. Sickness befell that village

and many died. The groans of the stricken ones touched even that hard heart and the old chieftain sought counsel from his wizards. To them the mace was the rock of offence, and it must leave the village. To return it whence it came was out of the question, therefore did that Chief commit it for the nonce to the care of the neighbouring village. In their simplicity they received it with joy, but here too even in *Kavatonu* sickness quickly followed its arrival. Seared at deaths so inexplicable they too suspected that polished mace, and forwarded it promptly on to the next village with word that if they refused to receive it there would be war and they be forced to welcome it. Yet again death kept close to it. It was a hopeless case.

Therefore did the Chief of *Veve* order it to be returned to him and sent back whence it came : and back it was borne through the bush by his stalwart sons, nor was his order fulfilled till once more they had caused it to hang whence they had removed it. Then did the plague cease in the East : *Uhomotu* rejoiced : and peace reigned in the land.

As in the story about the two divers in the section on *Games and Sports*, Loeb again has *Fatuana*, whereas WWB has *Fautuaua*. Loeb gives the sons' names as *Fualave* and *Fakahuikula*, whereas WWB has *Tafaia* and *Fualeva*. Regarding the *tokamotu*, Loeb (page 94) states:

The treasure of the island was the *tokamotu*, described to Smith by King Fata-a-iki as "The Alito, i.e. the precious thing, or Toka-motu, of this island in ancient times was a parroquet feather, which was bound up with a hair girdle, and then wrapped in the inside leaf of the banana, and also a fan palm leaf." However, the chief old men of the island described the *tokamotu* to me as follows: "They made from the core of the kafika tree a sharp pointed wooden knob [in form like the end of the *tika*, or dart]. They covered this with tapa cloth, and fastened the whole with dried banana skin." I am at a loss to understand this discrepancy in the two accounts. I believe, however, that the account given to me is the true one, because the two best informed men on the island, Uea and Falani, agree in all essentials of the description. Also it was the custom on the island to store up treasures, such as parroquet feathers, and the precious tail feathers of the *manufolau* (a small black bird that appeared only in stormy weather) in dried banana skins and the folded leaf of the fan palm. It is possible, therefore, that Fata-a-iki<sup>6</sup> confused the *alito*, or treasure of the common people with the *tokamotu*. The *tokamotu* was kept suspended on the inner part of the roof of a sacred wooden meshed house at *Fatuana*. The house was very tapu, only chiefs being permitted to enter, and they only with permission.

WWB describes the *tokamotu* as a mace made of wood — "*a mighty club*" — which is quite different from the dart in the description above. WWB makes no mention of the stolen wife, *Puleloto*. And WWB describes how the *tokamotu* was returned to *Fautuaua*, whereas Loeb states (page 168) that "Hafonua rests at present in a cave at *Veve*, and with him is buried the *tokamotu*."

## 17. THE ADULTEROUS WIFE AND THE HAIRY LIZARD

Loeb, page 170:

The hairy lizard was, and still is, regarded with horror by the natives. I often heard of a story related on the island about this animal. A man was angry with his wife, because she was

---

<sup>6</sup> A mis-spelling of *Fata-a-iki*.

committing adultery. One day he brought her home a dish which he pretended to be fish that he had caught on the reef. The wife ate the dish in the dark. Then the husband informed his wife that she had just consumed a hairy lizard. Immediately the wife commenced to vomit, and soon afterwards died. A variation of the story reads that the husband fed his wife the tapu portion of her lover's body.

WWB in Tale of Romance #37, *A Wife's Chastening*, related by *Toapuho*:

Fatiau's Chief had a wife who vexed him sore. She would not keep to her own hut but was forever gadding about, careless of her home and duties and finding her pleasures apart from her husband. Things reached a climax, they could go on no longer thus.

Deep thought the Chief of Fatiau, and had in mind making an end of her. In his hands were Life and Death. There was the cliff so high, the sea or the chasm. Yet he decided against these, and chose the rather to chasten her in the body that she might still live and work for him. Thus spake he to himself, "Now will I give her pain, even as she hath given me," yet saw he not the inequality of the thing, to mete out grievous pains of body to pay for pain of mind.

Said Fatiau's Chief, "I go down to the reef, even to the cave *Hikihoe* and there will I catch crabs for both you and me to eat." Forthwith he went, but on another hunt. The lizard — no food for man — haunts the Pandanus tree. To tree after tree he went till at length he spied a hairy lizard in the waving leaves. He set fire to the trunk and soon brought the reptile down to earth. Placing it in a basket he proceeded to the cave where he lit a fire and roasted it.

When darkness fell he journeyed home and found his wife asleep. "Awake! Arise! and eat of this that I have brought thee," cried he; and she was glad for her hunger was great as she had lain awaiting her lord and master. Dark was it, so that she knew not what she took from the man's hand. "But why so tough? Were you not after crabs?" said she. "I found no crabs but caught this herring instead. Eat and be glad I have brought you anything." She ate but liked it not, and fear came upon her for the Chief's voice was fierce. Secretly she kept a portion and already in great pain, she stole later from the mat as he slept and making light saw that it was a lizard! This was her climax, even as her conduct had been his.

Long was she sick, grievous were her pains, anger was in her heart, yet dared not she speak her thoughts. He had cause for anger, that she knew. He had not cast her over the cliff, nor into the sea or the bottomless chasm, therefore had he forgiven. He would warn her. She was wise. She took the warning. She was faithful unto death.

Loeb's mention that he "*often heard of a story related on the island about this animal*" again indicates that he had obtained this story from several informants. In Loeb's version, the wife dies; in WWB's, she lives.

## DISCUSSION

Table 1 at the end of this study presents a summary of the differences between Loeb's and WWB's versions of the 17 stories compared above. Loeb states that five of the stories — concerning kingship, the exploits of *Laufoli* in Tonga, the wars of *Mohelagi* and *Palalagi*, the bringing of a *tokamotu* from

*Fatuana* to *Veve* by the sons of *Hafonua*, and the eating of a hairy lizard by the adulterous wife — were obtained from several informants; hence the possible use by Loeb of information obtained from WWB is less relevant. Of the 12 remaining stories, the differences between Loeb's and WWB's versions are discussed below.

There are several instances of differences in spelling. As noted elsewhere<sup>7</sup> in regard to the handwriting of the time, the handwritten lowercase “u” and “n” were often identical, which suggests that at least one of the differences in spelling — the second to last letter in *Fatuana* and *Fautuaua* in the stories of the two divers and the bringing of a *tokamotu* to *Veve* — could be attributed to a mis-reading of the handwriting. The dots on “i” were sometimes placed far from the letter and so the difference between *Palafoumiku* and *Palafounuku* in the story about a visit to Niue by the Tongan chief *Teiloa* could simply be a mis-reading of “mi” as “nu”. In the story about *Tafaki* and famine, Loeb has *Mataaho* for the old name of Tuapa, whereas WWB has *Matahao*; the difference is simply the transposition of the “ah” or “ha”.

Unfortunately, as mentioned at the beginning of this study, WWB's working documents on which the *Tales of Romance* are based are not available to check whether his writing could have been mis-read. However, this can be done with the finished work, the *Tales of Romance*, and WWB's writing of the words mentioned above are clear and not susceptible to mis-reading. In fact, in the *Tales of Romance* and elsewhere in *The Chronicles*, he often recorded Niuean words by printing them letter by letter, perhaps to ensure that they could not be mis-read. Whether the same can be said of any of the written materials that may have been provided to WWB and Loeb is unknown.

In several stories, Loeb is missing references to persons or places that are found in WWB's version of the story. It is quite possible that WWB added some of these to embellish his *Tales of Romance*, as he often did to his writings, and this would explain why some do not appear in Loeb's versions of the stories. This could be the case for WWB's references to the old capital of *Uhomotu* and the old name of Lakepa, *Tamalagau*, and to the missionary *Paulo*.

On the other hand, this would not explain the missing reference to *Gutukiu* in Loeb's version of the story about *Ligatoa* and *Fakapuna*'s quarrel, nor to the races of *Tegameaans* and *Tolotoloans* in the story of the birth of man, nor to the person *Paku* in the story about the whale.

WWB's tendency to embellish might also explain why *Hiligutu* dies as a warrior in his version of the story, rather than living to a ripe old age, and why the adulterous wife remains faithful for the rest of her days after eating the hairy lizard, rather than dying, as in Loeb's version.

In three stories, WWB is missing a reference made by Loeb. In the story about *Mulia*'s conversion, Loeb refers to a long worm, a *kelimutu*, whereas WWB does not. In the story about ceremonies of childhood, Loeb refers to the bathing of the child by the light of *tuitui* and the naming of the child. In the story about the premature burial at sea of *Hiligutu*, WWB does not refer to the night dance, *tafeauhi*, nor to the black ghost, *mena lalauli*, although the title of his story, *The Black Devil*, suggests that there may have been a reference to a black ghost in the story obtained by WWB from his informant. WWB wrote his stories such that they were, in his view, “faithful to the spirit and setting of the original”; perhaps the missing references were not considered by him to be important elements of the stories.

<sup>7</sup> See the footnote to Tale #8, *Of Niue's Call*, in Part IV, *Tales of a Roaming Grandfather*.

Some of the differences in the content of the stories are not substantial. For example, in the story about the origin of taro, Loeb refers to a chief and WWB to a king, and in the story about the vengeance of *Lefutogia*, there are minor differences regarding the domiciles of the brother, sister and brother-in-law.

Given the differences listed in Table 1 and discussed above, we can conclude that of the 17 stories compared herein, there are eight stories for which the differences are sufficiently minor that they could have come from the same source. These include the stories about (i) the visit to Niue by the Tongan chief *Teiloa*; (ii) the vengeance of *Lefutogia*; (iii) ceremonies of childhood; (iv) the premature burial at sea of *Hiligutu*; (v) the introduction of taro; (vi) *Tafaki* and famine; (vii) the two divers; and (viii) the adulterous wife and the hairy lizard.

WWB's informant for five of these eight stories was *Toafofia*; the informants for the other three stories were *Lagiholo* and *Toapuho*. We know that one of Loeb's informants was *Toafofia*; in his Introduction (page 3) he lists *Uea* of Like and his adopted son *Maka*, *Falani* of Lakepa, *Manamana* of Tamakautoga, *Toafofia* of Tuapa and *Leotuki* of Alofi. In fact, we know that Loeb met with *Toafofia* because he mentions (page 40) in regard to an historical incident <sup>8</sup> that “*In the course of this encounter three ancestors of my informant, Toafofia, lost their lives.*” It is unlikely that Loeb would have known this without hearing it directly from *Toafofia*.

Note also that WWB's informant for five of the stories listed in Table 1 for which there are differences in spelling was *Toafofia*. This would suggest that both WWB and Loeb worked from *Toafofia*'s written material and that either one or the other, or their translators, mis-read the spelling.

There is also the question of the relationship between *Toafofia*, the informant, and *Toa Folia*, the magazine; it is quite possible that WWB or Loeb, or both, obtained *Toafofia*'s written material from the magazine. We will never know whether Loeb obtained *Toafofia*'s written material from WWB or from *Toafofia* directly, or from somebody else, but given that Loeb almost certainly knew *Toafofia*, we should give him the benefit of the doubt and assume that he did not get it directly from WWB.

Regarding the three stories for which the informants were *Lagiholo* and *Toapuho*, which Loeb does not list as his informants, all that can be said is that it is possible that Loeb obtained their written material from WWB, but it is also possible that they were among Loeb's less important informants and so were not mentioned by name in his Introduction.

Not having WWB's working documents, which would have included the direct translations of the stories from the Niuean that could have been compared to the texts in *History and Traditions*, we can only speculate. It could simply have been that WWB gave Loeb the *Tales of Romance*, without his working documents, and, if so, it is understandable that Loeb did not acknowledge WWB since they would have been of little anthropological value. [Margaret Mead](#), in her review of *History and Traditions*, <sup>9</sup> questions “*the adequacy of his [Loeb's] method of presenting the bulk of the material in translated texts from a selected group of informants as a means of giving a complete picture of the native culture.*” WWB's stories based on the translated texts, sometimes embellished, would have been even more questionable.

<sup>8</sup> Concerning the reaction of the crew of a British man-of-war in 1852 to the theft of articles on the vessel by a Niuean.

<sup>9</sup> [Margaret Mead, 1928, review of \*History and Traditions of Niue\* by E.M. Loeb, \*American Anthropologist\*, New Series 30\(1\): 151–155.](#)

So, did Loeb use information obtained from WWB in *History and Traditions*? From the evidence presented above, we have to conclude “probably not.” And yet, we know from the note that WWB wrote in the Bibliography to *The Chronicles* that “*at his request I gave him freely of my information.*” The word *freely* suggests that WWB did indeed give Loeb his working documents. And there is also that curious reference by Loeb to the biblical tradition, “*There were giants in those days,*” in the story about the birth of man, which was the title given by WWB to his version of the story. Perhaps we should conclude “probably not very much.”

Another systematic study of Niue that should be mentioned here is the work of S. Percy Smith (1902, 1903).<sup>10</sup> [Smith \(1840–1922\)](#), who founded the Polynesian Society in 1892 and was on Niue as Government Resident for nearly four months from September to December 1901.<sup>11</sup> Loeb often refers to Smith in *History and Traditions*. In Part II of this document, the several topics in *The Chronicles* that were also addressed by Smith are noted in the footnotes. It can therefore be asked whether WWB used information obtained from Smith in *The Chronicles of Savage Island*. The answer is almost certainly affirmative. But then WWB lists Smith’s work in the *Bibliography* of *The Chronicles*, thereby acknowledging him, and so we should not be surprised.

Regardless of the extent to which Loeb may have used information that he obtained from WWB, *History and Traditions of Niue* is obviously a book of huge value. The 17 stories that appear in both *History and Traditions* and *The Chronicles* represent only a small part of each; hence, both Loeb and WWB clearly made important contributions to their subjects of interest, regardless of the overlap. We are fortunate to have the works of all three authors writing in the early 1900s.

## PART IV

### TALES OF A ROAMING GRANDFATHER

BY

REV. WILLIAM WASHINGTON BOLTON, M.A.

#### Preface

*Tales of a Roaming Grandfather* were transcribed from the handwritten stories that WWB sent from Tahiti to his grandchildren in Victoria, British Columbia, from 1939 to 1941. See the Preface to Part II, *The Chronicles of Savage Island*, for the guidelines used during the transcription. Each story was written on two sides of a single sheet of paper, with few paragraph breaks.

#### Contents

1.	His Highness.....	1
2.	The Minah Bird .....	2
3.	Native Cookery .....	3
4.	Of Fire Walking.....	3
5.	Of Marbles and Kites.....	4
6.	Of Bungled French .....	5
7.	Of Nomenclature (1) .....	6
8.	Of Niue's Call .....	7
9.	Of Nature .....	9
10.	Of Boats and Canoes .....	10
11.	Of Shells and Pearls.....	11
12.	Of Nomenclature (2).....	12
13.	The Boy King (1) .....	14
14.	Of Penmanship .....	15
15.	Of Troubles.....	16
16.	Of Oro and Others .....	17

<sup>1</sup> WWB drafted this table for the first 75 Tales and sent it to his grandchildren. Tales 76–93 were added to the table at a later date, perhaps by Joan Finch, secretary to Percy Ritchie Sandwell in Vancouver, who completed a [typewritten](#) version of the Tales in November 1979.

## 1. His Highness

I am the proud owner of a pig. No ordinary “Captain Cooker” of the Great South Sea with its elongated snout, its lankness and its ever hunted look, but of purest Berkshire breed.<sup>2</sup> Just where that breed stands in the hierarchy of swinehood I know not (for a swineherd is a wholly new vocation) but defying all Laws of Heraldry he is to me a Prince whatever experts in other breeds may say. He came to me a baby and none but I should raise his dwelling. The site the choicest in the orchard : a lofty wide spreading *purau* tree<sup>3</sup> (never without full leafage and its yellow tulip shape flowering to ward off sun and tropic heat) covers his home. To call it a Sty would be an insult to His Lordship. Pomare of old named his abode “Aorai” (The Clouds of Heaven),<sup>4</sup> my Prince dwells in S<sup>t</sup> James’ Palace<sup>5</sup> with its Courtyard for exercise. To one side below a steep bank runs the Hamutu brook,<sup>6</sup> a trellis work gives him a view (as he rests) of the tumbling waters. I could wish that he would not uproot the surface of his play yard but then swine have their own special habits and who am I to correct this one with a concrete surface. He must have his way, only he has to keep the Palace tidy. He has his meals of course outside and what meals! A fortunate fellow indeed and served with unbroken regularity. Breakfast at 7.30, a light Lunch at 12.30 with supper at half past Five. No kitchen swill for him! His menu varied and extensive : manioc (boiled arrowroot) and baked breadfruit, bananas and sliced mangoes, cabbage and carrot, tomatoes<sup>7</sup> as an extra, varied with coconut in the shell too immature for copra making with its tasty milk. Maybe I am feeding him on altogether wrong lines but anyway he grows apace and his corpulence already is unbefitting for his tender age. He is doomed to die of Old Age for never will I allow his execution and the serving him up hot from the nearby native oven : ’twould be to me akin to a cannibal feast for we are closest friends. Maybe it is but cupboard love with him but his joy at my approach touches this swineherd’s heart. As I work in the orchard with spade and hoe he never ceases word of welcome — a ‘grunt’ would be to insult him — I refuse to think it may mean “more food, more food” for have I ever failed him at his meal hours? Once in the hours of night he broke bounds, found a weak spot in a corner of his courtyard. I heard him calling me beneath my window. Was he off to the mountains at the back? Was the Call of the Wild already urging him to leave comfort and affluence for the uncertainties of life, doomed to be hunted by dog packs and finished off with a rifle? I was ashamed of him, if he deserted me I would wipe him from memory. But NO! When I rose he was busy with that everlasting rooting and came to me at my call. We walked together to S<sup>t</sup> James’, I courteously showed him the entrance and with a grunt (was it of Thanks) he resumed his residence. For awhile I allowed him a companion, some months older, but he was a native fellow and a bully, wanting the Palace to himself and consuming two thirds of the meals, so I gave him his ticket-of-leave without compunction, there was to be a square deal or none. In keeping with his high rank he has never been given a low down ‘trough’ such is for common swine who love to put their trotters in along with their snouts. He has his spacious tins, kept scrubbed and sweet and has been already trained to good manners. But hark! I hear him calling! He sounds his gong, ’tis supper time, I must away!

<sup>2</sup> See [The History of the Berkshire Breed](#).

<sup>3</sup> [Hibiscus tiliceus](#) or [Hibiscus hastatus](#).

<sup>4</sup> The site of the palace of the Pomare family, which reigned on Tahiti from 1743 to 1880, is Arué, 5 km east of Papeete; Mount Aorai is the second highest mountain on Tahiti and visible from Arué. Perhaps Arué and Aorai are different spellings of the same name.

<sup>5</sup> [S<sup>t</sup> James’ Palace](#).

<sup>6</sup> Probably the Hamutu River, which runs through the Lycée Polyvaent de Ta’aone in Pirae.

<sup>7</sup> WWB has *tomatos*.

## 2. The Minah Bird

He and she are alike as two pins, the size of starlings, yellow beaked, brown of hue with white feathers appearing when in flight or angry. For alas! they are very hot tempered and being very pugnacious have succeeded since their first arrival from far off India in driving away into hidden recesses of the mountains well nigh every bird of their size. Who brought them hither I cannot tell you but I have learned a lot about them since living on a Plantation. It may interest you. Three pairs own my property, three pairs only and each pair has its own portion, its reservation, where trespassers are not allowed under any circumstances. What a to do! when interlopers dare to venture. I do not have to go out to see what all the trouble is about. The jabbering and angry shrieks tell me that a fight is on, nor does it stop till the owners have put the trespassers to flight. The reservations are as follows : one pair has the front garden with its lawns, another has half the orchard at the back, the third has the rest including His Lordship's sty<sup>e</sup>.<sup>8</sup> I have never seen them intrude upon their neighbours. Of course that means 3 breakfasts from me instead of one but it must be done. They know the hour and are waiting on near by tree or hedge for their choice meal. Should I be lazy and late they let me know it : "Get a move on you lazy fellow," they shriek. So you see the Minah bird is impatient as well as bad tempered and I have to bear with it. They are also the strangest parents I have ever heard of. Each pair have their home in a coconut palm near by and their nest where the huge frond (leaf) joins the palm trunk. I know when they are nesting for then only one is seen on his ground — perhaps it is he or perhaps it is she. They are very devoted for it is ceaseless coming and going till one day they spring a surprise on me. Along with both of them appear two more, full winged but helpless as to feeding themselves. They follow their parents about relentlessly, fluttering their wings and bodies about and uttering plaintive squeaks without cessation. Those parents have a terrible time but they — like all loving parents — seem not to mind at all. So weeks pass till the parting comes suddenly and tragically. 'Tis morning and both parents and children are acting as usual when to the children's utter surprise, their fond parents bitterly attack them. At first the youngsters are astounded, they cannot grasp the situation, but there is no doubt about its meaning, "Get out and look after yourselves." "We have done our duty and have had enough of you." So we must write down the Minah bird as having little Heart. The poor youngsters take refuge from assault and battery in near by tree, those heartless parents stay awhile then rising high in the air as if for a good look round take flight to some far off Plantation. I see them no more, they have turned their backs on me as well as their offspring but I am not wholly bereft for the left-behind-ones take their place and the round begins again. If they marry, I suppose they must toss up who to see who is to own the reservation for two only are my visitors. A native told me of one which became so tame that it flew to him whenever he left his home, eat<sup>9</sup> out of his hand and used his shoulder as an auto. Once some cruel person had broken its leg, it flew to hospital and his friend made a splinter. All was well again and then one day it ceased its visits. Perhaps he fell in love with a Miss Minah and heartlessly turned his back on his friend, better that than a stone, a cat or a hawk, enemies too strong for him to fight. Well! Well! the Minah is a dear little fellow though he cannot sing, is hot tempered, impatient and can forget his own, and I love to have them around. I hope I am in their "good books" not chattered about as 'easy money and a silly old man.' That I shall never know.

---

<sup>8</sup> WWB used both *sty* and *stye*.

<sup>9</sup> WWB use of *eat* here might be as the archaic form of the past tense.

### 3. Native Cookery

I can well recall the astonishment throughout the Homeland when the Stove you are so familiar with was first introduced from the United States.<sup>10</sup> As a boy I stood and watched with wonder at this iron firebox, where no fire could be seen and food atop did not burn to a cinder nor when hidden away in what was called the Oven. Cooks had always dealt with the open fireplace and meat was roasted on a spit which was wound up like a clock and turned the joint slowly round and round, the gravy in a basin below poured and repoured over it by the wearied cook's ladle. Things had changed indeed to have a stove in the sitting room warming the place without smoke or soot blowing back from the chimney. The chimney-sweep's day was well nigh over. No longer was his cry of service heard on the streets and his broom with its long handle in sections called into action. All children loved his sooty face and to taunt him and his little boy companion with being niggers! But housekeepers had a terrible time covering every article of furniture to protect it from his soot. Things you see have changed with us in cooking but the native however civilized clings to his old-time fire. And it has its advantages, the health giving juices of meats or vegetables are not lost as with us. Things in reality are steamed not roasted. Let us see how this is accomplished. The ground is the fireplace to begin with. A round space, a couple of feet across is scooped out, leaving a fairly low basin bare. A fire is lighted, small twigs and branches the fuel. When all is going well, stones the size of a man's fist are heaped upon the flame. Now the fire has died down and the stones are hot. They are spread out for a base. The food to be cooked is wrapped up in separate leaves, the banana leaf a favourite it seems to me. Vegetables are served the same way as fish or meat. Carefully arrayed on the stones, leaves are piled upon them till a goodly mound is raised. That done, matting today takes the place of still larger leaves and this is kept in place by good sized stones all round the basin. Everything now is done. The time for uplifting is known to a nicety by these native cooks. The oven is carefully dismantled, the food unwrapped, its juices preserved intact and all is ready to be served. To taste, is to pronounce all far surpassing our Stove productions. But these native cooks have a dish that requires no cooking, a dish that I have never yet ventured to tackle, its very name repelling. That dish is "Raw Fish"!! Yes, absolutely raw and many white folk call it a delicacy and are insistent on its production on their tables. It is not every native man or woman who knows the secret of perfection. Lemons are used in just the right quantity and condiments added which are quite beyond me to name. There is no disguise about that dish. The fish are there in all their rawness. That dish is never on my table nor is a sauce compounded in a gourd of scraped coconut and unboiled shrimps! Its very odour is enough for me. You have heard of the Breadfruit tree. The fruit the size of a cannon ball is roasted not steamed. When black as a cinder, the outside shell is peeled off and the fruit pounded with a stick till it looks like a suet pudding. It is devoured in chunks, and however it is digested is beyond me but I have yet to hear a native complaining of indigestion. On the whole I have always preferred in my various homes to use my Blue flame stove<sup>11</sup> and to cook for myself, amateur though I be.

### 4. Of Fire Walking

I must tell you at once that I never walked along that long, broad, terrifying trench of red-hot stones : not from lack of courage to face danger but from lack of Faith in the *Tohunga* or priest of the ceremony whose incantations seemingly spell success to those who step down and tread from end to end. A "doubting Thomas" might break the spell and bring disaster to him. Who can tell? But I have seen the thing and my white friends have had the faith and passed safely through. It is a great

<sup>10</sup> See Howell J. Harris, "Inventing the U.S. Stove Industry, c. 1815–1875: Making and Selling the First Universal Consumer Durable," *Business History Review*, 82 (Winter 2008), 701–33.

<sup>11</sup> See, for example, the [1897 Sears Roebuck & Co. Catalogue](#).

mystery which none can solve. Great scientists have tried to discover the secret but have utterly failed. There are 2 islands in Polynesia where the cult centres, one close to Fiji and one close to Tahiti viz Raiatea.<sup>12</sup> I have watched the digging of the trench, some 60 feet long and 9 ft broad, the piling up of the huge logs, the fierce blazing, then the dying embers lying on those red hot stones. Now the folk gather together, those who would only watch and wonder and those who would walk therein. Soon comes that Leader with his special followers who gravely, slowly tread the fiery path. Now he stands at one end of the trench to sanction those who would emulate him and his. But NO, not to all. May I pass thro' says one. You may : and barefooted he steps down and also gravely, slowly walks along to the far end. Has he suffered pain or even discomfort? None at all. Look at his feet, they are not even red with the heat. He says his face and neck felt very warm but from his neck down he was perfectly cool. Such is the reward of Faith. But woe to him who defying the refusal of the Leader dares to step into the sizzling path. One I knew who dared and paid the price. It was here — not Raiatea — that it happened where for the satisfaction of Tourists the ceremony had been arranged. The site was but a few yards from my home. This tourist had been to Raiatea and had wantonly dug up and carried off a skull from the old-time sacred Marae<sup>13</sup> or Altar of *Opoa*, now a huge ruin. This was known to the natives though he thought he had successfully evaded their watch. Natives think — and I think rightly so — that the Dead should be left alone forever. That man standing by the trench was eager to test the mystery. Asking leave, the *Tohunga* sternly forbade him. Why not? said he. You do not go was the answer. But I will despite you, and casting off his sandals he stepped down. With a cry of pain he would have fallen flat to his deathbed but was snatched by natives standing on the brink of the pit, drawn up and out. He was a cripple for weeks ere a Liner bore him away on crutches. He paid dearly for his theft and brazen flouting of the Leader.<sup>14</sup>

Fire walking is indeed the supreme mystery of the South Sea, greater even than those wonderful ruins to be met with from Easter Island to the Carolines<sup>15</sup> (for which look at your map). Who raised those mighty pillars, laid those stone roads on islands, today with but a handful of folk, which must have required the labour of thousands? Maybe a vast continent has countless years ago sunk into the Great Ocean — low lying at its best — and the islands of today are remnants left, not the tops of mountains as some would hold. To have seen these mysterious things is a great privilege : to speak of them I trust may be of interest.

Some day I must tell you of other strange things to be met with in the Great South Sea — real Curios oft little known.

## 5. Of Marbles and Kites

Till white men came to Polynesia and brought with them balls hard and soft, and bats, and footballs, native boys and men had their own weird games. Girls and women could do without, their place was at home, cooking and cleaning up which was shameful of the men, their pastime only to be found in weaving fans and mats. But these “superior” beings, both men and boys, had two games in common with us from time beyond count and of these I write. What think you they used for marbles? Nuts and not perfectly round! nor were they small as ours. When I was a boy we called our largest marble a “Tor” (maybe you do still) and small hands could never handle it properly. It was so with native children. I have watched them trying hard to fire their nut, but no good. Oh!

---

<sup>12</sup> [Raiatea](#).

<sup>13</sup> [Marae](#).

<sup>14</sup> See also *Raiatea* in Part XIII, *Roaming In the Great South Sea*.

<sup>15</sup> Palau and the Federated States of Micronesia of today.

what joy when this white man put his hand in his pocket and brought out a handful of real marbles to give them. It was always well to carry some when dropping in on some of the more lonely islands. I did my best but some had to go without, probably they won them for themselves later on. I hope so. Of course they quarreled <sup>16</sup> as all boys will over their games, such a noise! and jumping around! but they really were very happy and I left them always with regret. To see their marbles do a “wobble” on its course was very funny. A friend of mine was so engrossed watching a game on a very lonely island that his ship went off without him and it was months before another came to pick him up! They have a season for marbles just as you do, to play “out of season” seems (strangely enough) to be no fun. So also with their kite flying — it is when the strong “Trade Wind” blows. Then up go kites of all sizes and shapes, men as keen as boys. What would you think — and the police too — to see kite flying carried on in Victoria’s streets? But here it is done despite the autos and the horse carts, and chauffeurs <sup>17</sup> will leave their “stands” (awaiting hire) to join in the exciting flights. The poor kites get all tangled up with the electric wires, to hang down helpless and dejected, the string breaks by the fierceness of the breeze and away goes the kite to sea, up, up it soars till lost in the sky and may be travelling yet. Who the champion kite flier of Tahiti is I cannot tell you but he is safe which was not always so and this short story will show. It is a true one. Long years back there was a championship for kite flying being held in one of the Districts on Moorea. <sup>18</sup> Four boys (brothers) of the neighbouring District thought it would be great fun to get into the game. So when the contestants had sent up and off their kites these young rascals set off theirs which soon left the first lot far behind. Their owners were wild and savage, so followed secretly the flight of the conquerors till they should drop, hid themselves knowing that the owners would also follow to recover them, then sprang out upon the poor boys and speared and clubbed them to death! <sup>19</sup> That meant a savage war when hundreds were killed and it was carried over to Tahiti where hundreds more were slain. And all this terrible result for 4 boys “out for a lark”!! Kite flying is quite safe here now but on Tahiti also (as on Moorea) it lead to a sad tragedy. It was heathen days when they worshipped their gods in a walled enclosure called a MARAE. It was forbidden under pain of Death for anyone to enter the enclosure except the priests as certain acts were being carried through therein — all open to the sky. A Great Chief’s son, a young lad of whom much was expected when he became a man, was enjoying himself, alone, by flying his kite. It was going beautifully. Over hill and dale he sped following its course, he splashed through streams, jumped obstacles, nor looked where he was going; into the sacred enclosure he sped! and fell a corpse, a priest’s spear in the heart.

## 6. Of Bungled French <sup>20</sup>

You are of course “learning French” but I am sure not the way I had to when at school. It was grammar, grammar all the time but to speak it no attempt was made. It is a nice language and a very useful one in Life. Our own language must of course be to us the greatest and grandest of all and has carried me everywhere, but that is no reason why we shouldn’t learn to speak in the tongue of others. There is one difference between French and English which many do not notice and I will write of, and which also calls to my memory two funny stories which may amuse you as they have others and alas! though I did not want it have even got into the Papers. We English speak “flatfooted”, the French lightly as if they were afraid of stamping down hard. One of the chief

---

<sup>16</sup> WWB has *quarrled*.

<sup>17</sup> WWB has *chauffers*.

<sup>18</sup> [Moorea](#).

<sup>19</sup> For a detailed account of this incident, see [Chapter XVI of Tahiti, Memoirs of Arii Taimai, by Marau Taaroa and Henry Adams \(Paris, 1901\)](#).

<sup>20</sup> See also *Nouns, Names and Negatives* in Part XIV, *Tahitian Vignettes*.

difficulties for us is to do that with their language. To hear French nicely spoken is as if the words floated on air, they trip along like a fine dancer does on the boards. Take any French word and pronounce it as we would and see the result, it has lost all its beauty and that is what I mean by “bungled French.” Not only does it lose its beautiful smoothness but it loses all its meaning too as these tales will show. An American lady tourist called upon me when I was living in town, not outside Papeete (Par-pay-tay). She sought knowledge of the island’s history and had been directed to me. She asked me many questions which I was right glad to answer, and before leaving she said, “There are yet two things, these about the little town itself which I would so like to know. Who is that evidently wealthy Frenchman — her surely cannot be a native whose name appears so frequently on properties the whole town over?” I asked her the name of this rich owner. She said, “M<sup>r</sup> A. LOUER.” It would have been very very rude of me to laugh. I said, “Madam, I perceive that you have no knowledge of the French language. What you have noticed is the sign we as well as Frenchmen use, to say to the passerby — This House, this Property is ‘TO LET.’” She smiled and thanked me and then gave me her last. “I am surprised that in so small a place there should be the necessity for an Infants’ Home. It is a fine place in fine grounds and a large sign gives one its name RAR-LON-TEER.” Ah Madam, I replied, again your error is excusable. That is no Infant’s Home. It is a school for day scholars nor has it any name. That large board reads “Ralentir aux enfants” and is placed there to warn wild autoists that children are about and not to run them over, to have a thought for thoughtless boys and girls and “go slow.” She thanked me warmly and departed.

Now you see what comes of “stamped down hard” on the French language! The lady did not quote the “aux” but she would surely have pronounced it “orks.” Never mind the trouble your lessons in French give you, keep at it and specially struggle to gain “the light touch” which pleases the French so greatly when they hear it from our lips. They don’t at all like “bungled French.” We English are more tolerant and rather like “broken English” which is often very charming to hear. My rule in all my travelling has been to speak my own tongue to those who do not know it well, slowly, very clearly, not gabble it. You should hear Tahitians talk, it is a perfect torrent, no stops and they never seem to tire. Beware of becoming “a great talker” : Silence is often golden.

## 7. Of Nomenclature (1) <sup>21</sup>

If you do not know the meaning of that word, look it up in your dictionary. I am going to talk to you about it in connection with some islands in the Great South Sea which is the real name of the South Pacific Ocean, not South Seas for there is only one Great Sea. I wonder if you know where God the Holy Ghost island is? That is a very strange name to give an island. It was the Spaniard Quiros <sup>22</sup> who named it so in 1606. Look in your map for the New Hebrides <sup>23</sup> Group and the most northerly is “Espiritu Santo.” It seemed to me to be all wrong to be dwelling for many weeks at a lovely spot on it called “Hog Harbour”! The early navigators often gave the name of the Saint’s Day or a Christian Festival to an island they met with on that day. There is Christmas Island and Easter Island and many another. Even the days of the week have been used. If you look at the top of Australia you will see a Strait called Torres, another Spaniard the first to sail through that dangerous passage way from the Pacific to the Indian Ocean. When I went that way I saw Tuesday island, Wednesday island, Thursday island, and Friday also, all within a day’s sail of one another, named from the day when first seen by white folk. Thursday appealed most to me being a famous pearling station, a cosmopolitan place with a hospital, a garrison, a fine Cathedral, even electric light! Now look south and you will see Sunday island, one of the Kermadec Group. It did not look at all

<sup>21</sup> See also *Of Nomenclature* in the chapter on *South Sea Curios* in Part XIII, *Roamings in the Great South Sea*.

<sup>22</sup> [Pedro Fernandes de Queirós \(1565–1614\)](#)

<sup>23</sup> [Vanuatu](#) since 1980.

inviting to me to take up my residence there, though some have tried but given it up. There is Pentecost island and a Holy Cross (Santa Cruz) one and these I will let you find yourself. I must not forget to tell you of 2 very strange islands which though they have quite ordinary names I call “One Man Island” as in each case everybody on them has the same name. They are not Robinson Crusoe islands at all. One is called Palmerston in the Cook Group, the other Yorke in the Torres Straits. Palmerston is an Atoll, its coral ring and lagoon not more than a square mile in size. No natives lived there but years ago (1862) a seaman named Marsters<sup>24</sup> landed with no less than 3 wives and a score of bairns! These bairns growing up sought wives or husbands on other nearby islands and as natives have no surname they all came under the one name of Marsters. There are now about 100 of them and not another name can be met with. Their language is a very weird English which the old Marsters ordered to be used.<sup>25</sup>

“Yankee Ned,”<sup>26</sup> an American negro seaman, deserted from his ship and settled down on Yorke island, made a large fortune in pearling, had no less than 8 wives! and had an immense number of children, grandchildren and great-grandchildren for he lived till almost 90 years old. He had no surname, nor have they. They are called “Yankee Neds.” This weird old man loved the gramophone and a new one arriving when he was near his end, he insisted that it should be played over and over again until he passed away. That was not at all what should have been but there have been many strange, terrible and bad characters in the South Sea, men think that they can do what they like and it makes no difference to anybody but it does, for natives despise them really and tell quiet white folk that they would be right glad to be rid of them. And I agree with them also that their native names of islands are far prettier than those we give them.<sup>27</sup>

## 8. Of Niue’s Call<sup>28</sup>

### New-ay

Of all the many islands in the world that I have known, naturally England is dearest to me, for there I was born long years ago and roamed among its lovely villages and hills and dales. But after that dear island I know none more full of beauty than these 3, Java, Tasmania and New Zealand. Yet I left them one and all and went to live on one of the loneliest islands in the world. There is no nearer land than Tonga, 300 miles away in one direction, Samoa is 350 miles and Rarotonga 580!! in other directions. I think you may like to know Why and How I went there now long years ago. The Niueans had appealed to New Zealand — which Protects them from all possible enemies — for education for their children. Hakupu (Har-koo-poo) begged hard. They said they had 100 children longing to be taught and they raised a large building as the schoolroom. Please send a Teacher. The Government told them that they should have what they wanted, but when they asked for a volunteer they could find no one at all willing to go. It was too lonely. I was then roaming amid the lovely

<sup>24</sup> [William Marsters \(1831–1899\)](#), born Richard Masters.

<sup>25</sup> Regarding this and the subsequent paragraph, see also *One-Man Island* in the chapter on *South Seas Curios* in Part XIII, *Roamings In the Great South Sea*.

<sup>26</sup> Edward Mosby (1840–1911); see [here](#).

<sup>27</sup> For more information about the islands mentioned in this Tale, see [Espiritu Santo](#), [Christmas Island \(Australia\)](#), [Christmas Island \(Kiribati\)](#), [Easter Island](#), [Thursday Island](#), [Sunday \(Raoul\) Island](#), [Pentecost Island](#), [Santa Cruz Islands](#), [Palmerston Island](#) and [Yorke \(Masig\) Island](#).

<sup>28</sup> Niueans traditionally spell *Niue* as *Nine*. WWB’s handwritten lowercase “u” and “n” are often, but not always, identical, so it is possible that he intended to write *Nine* in this Tale. However, this is considered doubtful given that the Tale was intended for his grandchildren and there is no explanation here (or in the other five Tales concerning Niue) regarding the distinction between *Niue* and *Nine*, which he almost certainly would have mentioned if he had intended to use the latter. One wonders if the custom of writing *Niue* as *Nine* is due in part to the handwriting taught by WWB and other expatriate teachers to the scholars of Hakupu.

scenery of New Zealand and read of the difficulty, so hastened to the Capital and asked the Ministers if they would let me answer Niue's Call. They were very much surprised at my request but very kind. They said that they feared the life there would be too hard and unpleasant for me but I told them that I was strong and hardy and would love to teach native children though I had never done so before. So all was settled and I said that I would give 2 years of my life to them — perhaps more if the children were not by then ready for someone else who would find a house prepared by me for a Teacher with wife and children, so as not to be really lonely. That was Why I went to Niue.

But how to get there was a problem. In those days only 6 boats in a whole year visited the island for it is a very dangerous place to approach and the last schooner had “foundered” with all on board. They were trying to get another vessel to take its place and asked me to go to Samoa and wait there perhaps for months till they sent a boat to take me to Niue. I went to Samoa and waited long. What happened there I must tell you some other time. Then a strange solving of that difficulty happened. News came to Samoa by canoe! that a terrible murder had taken place on Niue and would the Government please send a man-of-war quickly. There was one — the Veronica — there at the time. So off it went — and I on board. That was How I went to Niue, on a warship of His Majesty's.<sup>29</sup>

Of that wonderful school I hope to tell you someday — I seem to be always saying “Some day” as if I was going to live to be 100! — It was a great privilege and a continuous joy. I found a great barn with a thatched roof, rough flooring, but plenty of windows — for it is a very, very hot island — a cupboard, but like Mother Hubbard's nothing inside except some chalk they had got hold of, no forms, no desks but wonder of wonders — a Blackboard!! They all sat on the floor for lessons! but they found a chair for me. There were 100 scholars as they had said running from 5 years of age to 15 and 16, boys and girls, they did not know a word of my language, nor I of theirs. The Chief turned out of his dwelling insisting that I — a White Chief — must live there poor as he said it was, whilst he and his lived in an even humbler one close by. Did you ever hear of such a beginning for a school? I am sure not, nor your Teachers either. But where there's a will there's a way and Oh! how wonderful were the results. They love and write to me still, such beautiful hand writing. Today most of them are married and have children of their own who go to school where their fathers and mothers did, but though they have had many another Teacher, they say they can never, never forget the first of them who was always gentle with them though they were such “dunder heads”, who taught them games as well as “the 3 R's”, and to sing the “beautiful” songs of the far away land from which he had come to live amongst and help them. I had and still have rich reward for answering Niue's Call.

---

<sup>29</sup> For a discussion regarding the date of WWB's arrival on Niue in 1921, see *From Victoria to Niue*, in Part I, *Notes on the Life of WWB*.

**Plate 1. My Town House at Alofi : Niué island.**

The other party is my Assistant Native Teacher. April 1924.

**9. Of Nature**

I wrote you once that she — let us call her like we do a ship a “she” not “he” (the reason for which I cannot tell you) — was my constant dear companion and my friend. But I must confess that sometimes she is very contrariwise, she has her whims and is not at all nice as she ought to be. At times indeed she goes right off the handle and gets very very angry and the reason for that I also cannot tell you for she has secrets which she will never let on to, and it is so vast a Space from whence she comes that it is impossible for me to go up high to make enquiry. It is best to get out of her way when she is mad, and so I do. She refuses to let me see the lovely warm sun, hiding it with dark clouds which she calls to her aid, then she flashes lightning around as if to terrify me, then roars out — which is not what a lady should ever do — with thunder as if to deafen me. But sure enough, after anger comes tears for relief, and Oh! such flood of tears. It is well to get under shelter till her eyes are dry, then away go those clouds of hers and the sun shines down again and she is once again the dear gentle thing I love and we work together once again in happy company. But I cannot hide from you another fault of hers which tries me very badly. She is very Untidy and when I politely tell her so she says quite indifferently that she is deaf. From time to time she lets the winds have a run from the caves in the sky where she keeps them, and then look at the lawns and the paths!! leaves everywhere. Out come the rake and the broom and then — I suppose for fun — she tells the Sun to get extra busy and I am sweltering. I feel sure that sometimes those winds of hers get out of hand, they are no longer breezes, but race madly over us till they become hurricanes and bring disaster with them in their wild career, roofs blown off, trees down, not to speak of the awful seas which hurtle ashore carrying alas! ships and sailors to their death.

It seems as if I were telling you only her bad side and nothing of her good one, so to make amends I will tell you how she gets back at me who thinks so much of her really. She tells me how she makes

everything grow for me, the grass and the hedges, the bushes and the flowers, the fruit trees and the palms, and then I dare to grumble at the long grass to be everlastingly mown and scythed, the hedges to be trim'd, the flowers to be freed from her useless weeds — (Useless indeed!! when everything she owns has a value and place in her program) — the fruit trees pruned and sprayed to drive away her insect pests — we nearly quarrel over that which she calls an insult, since all life is hers — and the palms watched for like a cat a mouse lest a weighty nut fall on my head and there is an end both to our friendship and to me. She says that I am an ungrateful fellow and deserve a flood and an extra special tornado to wipe me out from her world and her memory. And what can I say in answer? Nothing. I apologize. She is very forgiving.

But after all, though she is so masterful — and rightly so — it is a pleasure to feel that I am able to help her in some small degree. She lavishes so much love on some things that they grow lanky, weedy, without strength to carry through. Then is my chance. The hand of man comes in and the weakling becomes strong, her lovely work is perfected. I am sure that she is pleased.

So when you reach riper years and should the urge be yours to tend a garden, remember who is your best friend in that career, lean hard upon her, take counsel with her, heed her warnings, be gentle with her in her moods and you will have rich reward.

## 10. Of Boats and Canoes

By boats I do not mean those great beautiful ones which steam in proudly to your harbour, nor canoes of a kind which you may have paddled in but boats often only fit for the bone yard and canoes which have a funny side piece to prevent them from overturning. It is strange how nearly I have come to disaster in both whilst voyaging in the Great South Sea but somehow or other I have never been shipwrecked which I ought to have been so as to round out Life's experiences. I try to be content when I ought really to be very grateful to Providence. We call such boats "Schooners," they have no engine to help them along. They are small and fat, smell horribly, leak abominably, they are the playground of rats and cockroaches who run all over and around you of nights, there are no nice awnings to shield you from sun or tropic rain, you sit with the rough crew at meals, the cook utterly unworthy of being a member of so noble a profession, the nights oft so hot that you lie upon deck on a mattress past redemption, and "beat about" when the winds are contrary till you wonder if you will ever reach port. Yet again and again I have essayed them and their memory all in all is one of happy travel. So when you go aboard those lovely, well appointed steamers to cross the Gulf or run down Puget Sound bethink you how fortunate you are and be very grateful.

The Polynesian uses what he calls an "outrigger" to keep his canoe balanced. It is a long, strong piece of wood the length of the canoe held fast by 2 half circles of another kind of wood selected for its curving shape which are bound tightly by sinnet (coconut fibre made into the strongest of string) to both the canoe and the pole which is some 4 feet away. Waves have something to do to master that contrivance but sometimes when a sail is set, the wind catches you suddenly unawares and over you go, the outrigger high in the air. Loosen the sail cord, heave down the outrigger, rock the canoe backwards and forwards to clear out the water, then into it again and off you go paddling, none the worse for the ducking. In old days they used Double canoes, 2 canoes with a deck between them. They were huge things carrying as many as 100 aboard. That is how they went vast distances, or as warriors to attack their enemies. They are not built now, but you see on every isle men with adze and axe shapeing a canoe out of a fallen tree just as I had seen them do on your island long years ago.

I think the strangest looking schooner ever seen must have been the one built over 100 years ago on Rarotonga in the Cook islands by John Williams,<sup>30</sup> the missionary who was killed and eaten by the Erromanga natives in the New Hebrides.<sup>31</sup> I have stood on the beach where he was clubbed to death. There were no tall enough trees on the island for masts so he used coconut palm trunks tho' they never stand straight up, and for sails he used the mats natives made to sleep on, sewing them together with sinnet. No wonder it came to grief soon after its builder on an island with the strange name of Puka Puka (Danger Island).<sup>32</sup>

Now let my advice to you be : when you travel keep away from the “schooner” : and be a fine swimmer before venturing in a sailing “outrigger canoe.”

## 11. Of Shells and Pearls

The Tua-Motus (i.e. Distant Islands) in French Oceania are famous for both, not seashells which perhaps you collect but those large oyster holding ones where at times precious and sometimes very costly pearls are found. This Group is not the only place in the world for those lovely things. I recall Thursday Island in the Torres Straits and Broome on Australia's western coast but I know the Tuamotus best so I will tell something about what is called “pearling” there and hope that it will interest you. The islands of that long, scattered group are one and all Atolls which your geography books tell you are rings of sand with a lagoon into which you pass by a break in the ring. But that is very far from a true description. They are rings of coral which grows up to sea level where the busy insects die. The winds bring sand and a little soil on which grow coconuts, pandanus (from which the natives make a scent) and other bushes. Some of these 80 atolls running for over 800 miles are enormous rings : Rangiroa is 126 miles around and its lagoon 20 miles across and only a few of them have a Pass. They lie so low in the sea that when approaching them you think there must be coconuts growing in the water. The Group is a very risky place for ships not only because of the strong currents but because you cannot possibly see them o' nights and they pop up in all directions. So the first white men called them the “Labyrinth” and the “Dangerous Archipelago.”<sup>33</sup> We had to be ever on the watch and wrecks were to be seen too numerous to mention but those lagoons hold precious stones and men will dare much to get them. Now see how “pearling” is done, different places have however somewhat different ways but I will tell what I know. The water is so clear that you can see away down to the sand bed where the shells lie. It is forbidden to take small shell but where large ones appear, the boat is brought over the area and over go the divers with a basket or bag attached by a line to the boat and remain down till you think that their poor lungs will burst. Now the shells are drawn up and the diver rises very slowly as otherwise he would gravely injure his lungs, gets into the boat and rests whilst others are busy opening the shells, cutting out the oyster — which is cast back into the sea — the while on the lookout for pearls. If one is seen that shell is put aside. Divers do not live long, their lungs play out. Since my coming, some white men brought a Diving dress and outfit but the natives made such a storm about it as being unfair to them (and to the oyster?) that the Governor forbade its use. Those men wanted to get rich quickly, but Time is nothing to natives. There are 2 kinds of pearls, proper pearls and Pi-pi (peepee) pearls. The oyster is a lazy fellow till he has to bestir himself. He has an enemy, a borer who likes — perhaps for fun —

---

<sup>30</sup> [John Williams \(1796–1839\)](#)

<sup>31</sup> An illustration of Williams' schooner, *The Messenger of Peace*, from his book, *A Narrative of Missionary Enterprises in the South Sea Islands*, showing the coconut trees for masts and the mats sown together for sails, can be found [here](#).

<sup>32</sup> It was the [John Williams I](#) that was wrecked at [Puka Puka](#), as WWB noted correctly in Part II, *The Chronicles of Savage Island*, Chapter V, *The John Williams IV*, and not *The Messenger of Peace*.

<sup>33</sup> The Tuamotus were named “Labyrinth” by Jacob Roggeveen in 1722 and “Dangerous Archipelago” by Louis Antoine de Bougainville in 1768.

to bore a small whole in the shell. This of course must be stopped up, so the oyster makes a wonderful mucus, covers up the hole and piles up more to make all quite safe. A large pearl means a large whole, a small pearl a smaller one. But some oysters are much too lazy to do more than cover the hole and a bit over and do not care to make all smooth and comfy. These are Pipi pearls and worth little or nothing. A black pearl is the most rare of all. He is a lucky man who finds one. So much for pearls. The shells are a different matter and pass through many hands before they reach their useful ends. When the power schooners reach Papeete the sacks full are carried off to the yards of the merchants where the rough surface is scraped off. It is an awful clatter and din as women scrape away. They go then into barrels which are borne off by steamers to the markets of the world. natives often burnish up a half shell till its back is as beautiful as the inner side, the rich dark brown under colour glistens with all the colours of the Rainbow as you hold it and move it for the sunlight to play with. The oyster is only an oyster but he gives men and women (and children too) 2 lovely things which nothing else can offer, pearls and his burnished home.

## 12. Of Nomenclature (2)

We English with our harsh vowels and diphthongs spoil the lovely, soft, and smooth sounding names of Polynesian places, islands and people. I think that you will be glad to know how to say them as they should be said so I will give this time a little lesson in pronunciation. The vowels are not sounded as we do but strangely enough everywhere as they are in French R. A. E. O. OO. There are only 13 letters in Tahiti's alphabet but they have our vowels anyway and they must always end a word with one. So your surname would be *Polotoni*.<sup>34</sup> You would never recognize Jane or Pat, they would be quite different persons when they had done with you. When you see an elipsis in a name it means that a letter has dropped out of use, especially that terrible "ng" which the Maoris are so fond of and I for one have never mastered properly : and the letter "K" which some groups still use, especially Niueans who seem to love that letter above every other. Now try these names. And first of a few Places. *Papeete* should be *Par-payay-tay* spoken very lightly : *Hitiaa* should be Hee-tee-r-r drawn out very slowly : *Papeari* Par-pay-are-re, *Tautira* Tow- (as NOW) teer-r : *Hakupu* Har-koo-poo and so with all places you may meet with in my talks with you. As to Islands *Tahiti* should be Tar-hee-tee and sounds prettily, *Niue* New-ay not Nee-oo-ay because it has one of their diphthongs — not ours of course : *Makatea* Mar-ka-tay-r : *Aitutaki* Eye- (another diphthong) too-tar-key : *Efate* Ay-far-tay : *Haapai* Har-ar-peye : *Niuafoou* Knee-oo-r-foooo : *Savaii* Sar-var-e-e, *Vavau* Var-vow and so on. But I am sure that Personal names will interest you most. In addition to their birth name, they have secondary names — not nicknames — which they<sup>35</sup> take from anything that "tickles their fancy." For instance; when Captain Cook<sup>36</sup> was here a great Chief had the terrifying name of *Tu-nui-e-a'a-i-te-atua*. He took the name *Pomare* (i.e. Night-Cough) because one of his children kept waking him up at nights with the noise : and the Pomares are the Royal Family of Tahiti today but of course there is now no Sovereign. But Niue goes one better. They have their birth name but when the first lock of hair is cut off — a great ceremony I oft went to by invitation,<sup>37</sup> they change to quite another : when they enter school they change again, when they marry they change again and when they are dead and buried their relations bestow another name for the tombstone.<sup>38</sup> Now what do you think of that, it nearly drove me crazy trying to keep Tab!! But the strangest change of all was surely *Te-a-ra-maa's* (who was Private Secretary to Queen Pomare) who became "Sir Robert

<sup>34</sup> WWB also mentions that *Bolton* was pronounced as *Po-lo-to-nee* on Niue in Part II, *The Chronicles of Savage Island*, Chapter XII, *That Union Jack*.

<sup>35</sup> WWB has *thy*.

<sup>36</sup> [James Cook \(1728–1779\)](#)

<sup>37</sup> See Part II, *The Chronicles of Savage Island*, Chapter X, *Shearing the Lock*.

<sup>38</sup> Multiple names on Niue are also mentioned in Part II, *The Chronicles of Savage Island*, Chapter XVIII, *The Maota and Other Things*.

Peel”<sup>39</sup> a great Englishman of his day and signed all letters so. It would be like Pat suddenly changing his name to “Neville Chamberlain.”<sup>40</sup> I used to think that the Welsh had the longest words in any language and most people will tell you so but NO! we are all wrong for I will give the names of some natives here which will surprise you. They have no surnames but make up for that deficiency in full. I will divide the name for you to give you a helping hand. *Terii-mateata-ite-rai-anua-anua* — that is a good one. *Haa-mana-hia-amahe-anuu-a-mai* — that is better : *Ai-roro-atua-terii-ru-ruma-ona-iterai-te-poma-teao* (better still) but I come now to the Champion. I know her : she is a young girl, gentle and unassuming though she is a real Princess (a Pomare), a real little lady in every sense of the word. I cannot divide it for you; I fear I have not the space to do so but you can try to do it for fun — *Hinaariitetuanuiiteraiipoiaitearataiafaanuievau* 48!!! letters.<sup>41</sup> She surely wins the prize.

**Plate 2. Granddaughters of Prince *Hinoi*, Daughters of Prince *Ariipaea***

The Princesses : *Aimata* (Standing), *Hin'arii* (at her feet),  
*Tetua* (on her left), *Maeva* (on her right)

Great-Great-Granddaughters of Queen Pomare IV

<sup>39</sup> [Robert Peel \(1788–1850\)](#)

<sup>40</sup> [Arthur Neville Chamberlain \(1869–1940\)](#)

<sup>41</sup> There are ‘only’ 47 letters. The name of the princess in Plate 2 is *Hin'arii*, rather than *Hinaarii*, so perhaps WWB included an extra “a” here. This name (but not the other three), is also discussed, with the same spelling as in the text, in WWB’s article, *Pot-pourri of Tahitian History*, in the 16 April 1940 edition of the *Pacific Islands Monthly*, pages 34–36, in Part VII.

### 13. The Boy King (1) <sup>42</sup>

Your Teachers will tell you of the Boy Kings of today but this a tale of one over 100 years ago, the Boy King of Tahiti. When his father died <sup>43</sup> he was an infant in arms. He had an older sister <sup>44</sup> but she had to step aside but not for long as you will see. I will write of his Crowning, his School, his Letter, his Portrait and his Passing and I think all will interest you. The Tahitians could tell me nothing, some said he was a full grown man so I had a long search which extended to Australia and to England. Now all is clear and the natives are very glad to know so much about the little lad. I must squeeze into a few words what would require many pages to tell fully.

He was born on June 25, 1820 and his name till he became a king was *Teriitaria*, <sup>45</sup> named after his Aunt who loved him dearly and took care of the baby, building a special house for herself and him at Arue only a mile and a little over from my rustic home. <sup>46</sup> When he was 3 years and 10 months old it was decided that he should be Crowned, a thing which never before had been done either on Tahiti or anywhere in Polynesia. What a To Do that was! I have before me as I write to you a full account written by one of the missionaries who took the whole arrangements in hand. <sup>47</sup> The Coronation took place <sup>48</sup> in a large (then open) space of ground now a coconut plantation called *Outuaiai*. I often go there and picture the scene. Two stone platforms were built, one higher than the other and “*occupied by the little king seated on his chair in the middle with a canopy over his head, a table before him upon which the Crown was placed in the centre, the Bible on the right side, the Laws of Tahiti on its left, with a small vial* <sup>49</sup> *holding the Anointing Oil.*” His mother (the Queen), his sister (then 10½ years old) and his Aunt sat close to him. On either side of them were the Judges of the island and missionaries, their wives and children at each end. On the lower platform sat the visiting Kings and Chiefs from all the neighbouring islands with their attendants, as also the magistrates of the Districts of Tahiti. On both sides of each platform were the Singers. The people stood around, a vast crowd far as the eye could see, 8 thousand of them!! And what about the little King himself? He was dressed at his home in a special robe and carried to the scene close by “*seated on his chair which was borne by 4 stout boys, sons of Chiefs, 4 others supporting the canopy over his head.*” Poor little fellow in a “robe” on a broiling hot day. His Crown was happily not of gold with jewels studding it but was made by M<sup>rs</sup> Nott, a wreath of sweet smelling blooms held fast by the ribs of the coconut leaf — though I rather fancy that she secretly used some whalebone from her STAYS!! <sup>50</sup> It was Nott who took the Crown from the table and put it on the little fellow’s head saying, “*Pomare I crown thee King of Tahiti. Here upon the people gave 3 shouts saying “Long live the King”.*” The anointing went through all well though it is written “*it was with difficulty that throughout the ceremony he was kept still*”!! Can you wonder at that? There

<sup>42</sup> See also the article “*The Boy King of Tahiti and His Crowning*” by WWB in the 23 June 1937 edition of the Pacific Islands Monthly, pages 45–46, in Part VII. The boy reigned as [Pomare III](#).

<sup>43</sup> [Pomare II](#) died on 7 December 1821.

<sup>44</sup> *Aimata* (28 February 1813 – 17 September 1877) was seven years old when her father died. She became [Queen Pomare IV](#) on the death of Pomare III on 11 January 1827.

<sup>45</sup> WWB wrote the name as *Terii Taria* in the PIM article.

<sup>46</sup> The house was raised at Papaoa, close adjoining Pomare’s tomb, and was known as the Queen’s House.

<sup>47</sup> The quotes in this Tale appear to be from *The Report of the Windward Division of the Tahitian Mission for 1824*, which has been transcribed and scanned [here](#). Accounts of the coronation are also found on pages 218–222 in Volume II of “*Voyages and Travels Round the World*” by the Rev. Daniel Tyerman and George Bennet (J. Leavitt, 1832) and on pages 107–113 in Volume III of *Polynesian Researches by William Ellis* (Fisher, Son & Jackson, London, 1831). Both Tyerman and Bennet attended the coronation.

<sup>48</sup> On 21 April 1824

<sup>49</sup> WWB has *viol*.

<sup>50</sup> Stays in [corsets](#) were often made of whalebone. Tyerman and Bennet (1841) note that “*The crown was somewhat in the form of the English royal crown, very neatly made of purple velvet; the fillet and wings covered with broad gold lace enriched with some very fine pearls and valuable stones.*”

was much Singing and Praying and then they bore the newly crowned King to Church (as if he had not had already as much as he could stand), a vast building raised by his father to “Jehovah” called the Royal Mission Chapel standing close by (now rotted and gone) 712 feet long, 54 feet wide, with 133 windows and 29 doors. Crossing the floor obliquely was a stream, its sides and bottom paved. There were 3 pulpits all going at the same time 200 feet apart and it could hold 2000 people.

You will surely by now be quite exhausted by this account of the Crowning of the Boy King. The rest must wait for you to recover.<sup>51</sup>

## 14. Of Penmanship

Fine writing is something that every boy and girl at school should aim at and take great pains to attain but Oh! how few succeed. They always regret it in after years but then it is too late! Now methinks I can hear you saying “Those who live in glass houses should not throw stones” for some of my Tales are shockingly written. But that is not my fault, it is my pen’s. My nib often goes “on strike” he is a strange fellow, sometimes very very good, at other time very very bad. He has a bad temper when he is tired and I can do nothing with him though I clean him like a mother does her baby and (for he is a Fountain nib) never allow him to have too much to drink. He knows he distresses me but the rascal knows also that I cannot get another here anything like as good as when he is nice to me. And so I am often quite ashamed of my penmanship which you see and sometimes wonder if you can read it. There is always danger when you write to someone to whom you feel you have loads to say; you get into a hurry which is fatal — and M<sup>r</sup> Nib gets mad — away you go, faster and faster lest you forget something you want to say. Your Holy Book says “out of the abundance of the Heart the mouth speaketh” which makes it a joy to hear a great Speaker, he is full of his subject, he knows it perfectly like you knowing your Lessons and so pours it out like a flood. That’s what that says. And I say — with regret and many apologies to you and all my correspondents — “Out of the abundance of the Mind, the pen scribbleth.” Yes! scribbles, shame on it! I always think and have told all my classes that scribbling is horrible. Yet M<sup>r</sup> Nib compels me at times to do it. Blame therefore him, not me. The Type-Writer has been no good friend to penmanship. Boys and girls now say “I don’t mind how badly I write because when I am grown up I shall always use a type writer.” Fancy getting something else to do what you should do yourself! I have never used a type writer and I never shall. Newspaper Editors always demand all handed to them to be “typed” because of the waste of their time trying to read bad penmanship — and I can hardly wonder. But they never ask it of me, they say “Your writing is clear as print.” So you see I have my reward for taking pains when at school to write well. Many cannot even sign their own names so that you can tell what it is. They type a letter to you and at the end comes some mysterious Scribble — it is their name. Do be sure to have a clear, bold, good Signature. You have no need to be ashamed of it! There is another thing that I do not like about that Type-writer, it largely kills “the Spirit” of any letter, just as to translate a letter in English into French or any other language slaughters the “niceties” of the original. Ours is a beautiful flowing language with pretty turns and phrases that can never be reproduced; translate it and all is drab and harsh. How ever near and dear the writer of a typed letter is to me — and however much I love to read and reread it, I always feel that that Type-writer has no business to come in between us, the pen (M<sup>r</sup> Nib be he ever so nasty) has had to give away to a lifeless machine, and it has no business to do so. Do then try now to write beautifully and clearly and find a M<sup>r</sup> (or M<sup>rs</sup>) Nib that promises to be (I hope he (or she) will keep the promise) a good companion and hold him (or her) in with “a tight rein” when your Mind would scribble and M<sup>r</sup> Nib only too glad to help you. This time he has behaved himself fairly well but he could do far

better. Someday, Oh that Someday, I must tell you of my teaching Penmanship to native children and what they thought of and did with the Ink which they had never heard of before.<sup>52</sup>

## 15. Of Troubles

You have your troubles, I have mine and I am sure you would like to cheer me up to bear them even as I would you. Yours are of a different kind from mine, perhaps it is that awful Arithmetic or Toothache, French or Measles, mine are from four-footed beasts. The other side of the Hamutu rushing mountain rivulet is a Dairy farm where cows and horses graze and also mules. All but the latter are born Trespassers, Invaders, Burglars, Robbers. There is a constant War on between those Huns and me, one against scores. I have my troubles but I have my victories.

Before however I tell you of Battles, Engagements with the enemy, I must tell you of the harmless mules, one in<sup>53</sup> particular. He is unique I am quite sure among his kind, I never saw or heard of such a mule. There can be no doubt that he has a Broken Heart. All the rest are dumb, no sound ever comes from them but he! poor fellow gives full voice to his great Grief. Night as well as Day it goes on. It rends my heart to hear him. He is calling to his Beloved who doubtless far away in some distant village has cruelly forgotten him. His first sound is a long drawn out deep throated one, so exactly the sound of a steamer's siren that one thinks a vessel is giving notice of departure from the harbour. But No! for it is succeeded by a series of moans and groans and wails till one thinks his lungs will burst, yet he has still a little wind left for a heart rending sob or two. It is the weirdest voice of any animal I have ever come across and unforgettable once heard. He too clearly has his Troubles and I deeply sympathize with him. Not so however with the rest. War is War and we wage it relentlessly. The horses are elusive fellows, they can unfortunately Jump which a cow cannot and they clear my beautiful hedges so well and ably — with me not in the saddle but hotfoot after them — that I am almost ready to applaud. It is like a Grand National Steeplechase (ask your Teacher)<sup>54</sup> with an attendance of One not thousands. Of the cows I have 3 chief enemies, a black one with only 1 horn, a brown one with none, and a black and white demon, possessed I am sure by a Devil. I have chastened them however. The one-horned had crossed the stream one day and was looking at my rich pasturage thro' the fence when I suddenly appeared. She was so scared (she hates me) that in her hurry down the steep bank she stumbled and fell head over heels full into the stream! I cheered. She is a wiser cow now. The no-horner likes dessert, so after meals in her plantation breaks in and eats my young papaya (leaves and all) then has a sweetmeat or two off my bananas. I caught her at it, she looked around for some way of escape : the shortest way the best, through my hedge. She fled but in her mad hurry she did not see or had forgotten the long, deep trench I have dug with my own hands against flood and trespassers. Again I cheered as she went down, her forefeet in it, her nose hitting the bank with a thud! She gathered herself up and disappeared through the palm trees a sadder and another wiser cow. The Demon and I have had many a battle : she was an adept with my gate which was a stout bar dependent on 2 pegs. She would put her horns under it, send it flying high and walk in. Was I beaten? I made 2 half circles of iron, stapled them one to each post and waited. Along she came, put her horns under and — Hello! what's that white man been up to now! She tried, she worked furiously, she squirmed in her fierce efforts but my faithful bar held fast. At last she turned right about face defeated and (I am sure with a cow's naughty word which I failed to catch) departed. I have seen her no more.

<sup>52</sup> See Chapter XVIII, *Kuenaiia*, in Part II, *The Chronicles of Savage Island*.

<sup>53</sup> WWB has *is*.

<sup>54</sup> The [Grand National](#) is a National Hunt horse race held annually at Aintree Racecourse in Liverpool, England.

## 16. Of Oro and Others

You have One God to worship, the natives of Polynesia had many. You “love” God, they only “feared.” Your God is a “Spirit” not like us, flesh and bones, and so were theirs. You do not make an Image of your God, for He has no form we can imagine and carve, nor had theirs but they made Idols, that is they made or carved things out of wood and out of stone, in which they believed their spirit gods came and dwelt. When you read that heathens “worshipped” their Idols, you should not think that they gave worship to what they themselves had made — though many have done and do — but to the God who dwelt in them and who they thought was well represented in those weird things. They dressed them too, not in clothes for they themselves had only mats to cover them, but in fine feathers.

One of their chief gods was *Oro* the god of War and what do you think the Tahitians used, to have him with them? A long fair-sized log. Wrapped in a mat with feathers of very special birds stuck in it, they fought for its possession fiercely, for they thought — and correctly enough since their gods unlike your God could not be everywhere at the same time — that to have it was a mighty honour and would bring them victory in their constant wars. Poor *Oro* came to a sad end, at least his log “House” did. When Tahitians became Christians, their king took hold of *Oro* and used him as one of the posts he wanted for a wash house. Then later the same king thought *Oro* a fine target and practiced on him with his gun.<sup>55</sup> He bored so many holes in him that he could no longer stand up, so he was knocked down and chopped into fire wood and kindling. I am sure *Oro* if he had been a reality instead of a myth must have long ago got out of his Idol in hot haste. Besides their ordinary canoes they made “Sacred Canoes” to carry their gods about in from island to island. They were double canoes with a platform holding them together and beyond the stern they had what sailors would call a “forecastle” which carried the “House of God,” a sort of chamber corresponding in size and height with the Idol — the Image — the god which ever you like to say — to be conveyed. The prow rose gracefully up some 12 to 15 feet high ending in a carved figure of either a man, a bird or an animal. Fancy a pig as an adornment!!

They had endless gods, even a god of Thieves from whom they sought counsel as to how best to steal! Every idol had priests to look after it, no others could handle it. Those priests were cunning fellows, they made a good living out of the people frightening them into to doing all sorts of evil acts, even murder. But their power came to an end when Tahitians changed from many gods to One Only and though terribly frightened lest after all, their new teachers might be wrong, made big fires and threw their Idols into them, others threw them into the depths of the sea so as to be quite safe. In the grounds of the museum here there are 2 huge Idols,<sup>56</sup> each weighing over a Ton for they are carved out of stone, one a hideous man, the other a still more hideous woman. They were gods in one of the Austral islands (see your map) and no native knows the names of the gods who dwelt inside.<sup>57</sup> King Pomare sent his “family idols” Home “for the people of Europe to see and know Tahiti’s foolish gods,” his own words. They are in London : but I have a photo of them before me as I write to you.<sup>58</sup>

---

<sup>55</sup> WWB has written *gun* above ~~rifle~~.

<sup>56</sup> The three (rather than two) *tikis* were transported from Raivavae in the Austral Islands to Papeete in 1933, when WWB was living on Tahiti, where they were exhibited until they were moved to the Gauguin Museum at Papeari in 1965. See Tale #80, *Of a False Scare*, regarding the islanders’ reaction to the move of the idols from Raivavae, and *A False Scare* in Part XIV, *Tahitian Vignettes*, where photographs of the *tikis* taken in November 2014 can be seen. The history of the *tikis* (in French), including five other deaths attributed to their removal from Raivavae, can be found on the Tahiti Heritage website [here](#) and [here](#).

<sup>57</sup> They are named *Moana et Heiata*, after the name of a sacred site on Raivavae, *Moana Heiata*.

<sup>58</sup> WWB quotes further from a letter written by Pomare in *Pomare II’s Correspondence* in the Appendix to Part IX, *Old Time Tahiti*. For an account of the Pomare’s rejection of the idols and an illustration of the idols given to the London

## 17. Of Highways and Trails

Tahiti is shaped like those fish who have a tail quite distinct from their body and head which are sunk into one, not separate so as to be clearly seen. The tail is Lesser Tahiti, the rest is Greater Tahiti. Round all the latter is a Highway — over 100 miles in length — skirting the mountains and running close to the sea, it divides for the tail, going each side but not meeting at the end for there are high jagged cliffs and no one lives there save some wild “nature men” of whom I may tell you some day. This Highway is called “The Broom Road” though there is no lovely broom bush here as you have and no one could tell me why but I had to know. Years passed and at last I came across a very old letter written from here to folk in Australia and all became clear. When Queen Pomare 100 years ago said it was time there was a decent road, not Trails, the Order was given and those who had to be punished, instead of being kept in jail were made to do road work; and another Order was made that every owner of property before which the road ran was to keep it clear of leaves and weeds. In those days they had no nice brooms such as we use now, but natives made their brooms from the rib of the coconut leaf. Everybody had to get busy and white men saw brooms at work hard and fast everywhere and every day for no one wanted to be fined or jail’d, so they named the nameless Highway “The Broom Road” and that name has never been changed. The natives pronounced the word “*Pu-ru-mu*,” the nearest they could get to “*B-roo-m*” and that is the word they use today when they speak of any road, they are all *Purumus*. Fancy your taking a walk on a Broom!! and inviting your chum to go with you. <sup>60</sup> As to Trails I came across another letter written Home in 1798!! in which the poor fellow tells of the difficulty he and his companions find in getting from one village to another. Their then Road was the sea beach whenever possible “and

Missionary Society on 19 February 1816, see [Tyerman and Bennet \(1841\), pages 23–25](#). The engraving of the idols, which is found on page 24 of Tyerman and Bennett (1841), is reproduced in a footnote to *Pomare II's Correspondence*, together with links to information on the idols on the website of the British Museum, which bought the idols in 1911.

<sup>59</sup> The tiki in the centre is also from Raivavae; see [Suite des tribulations des tikis de Raivavae au musée Gauguin](#) at the Tahiti Heritage website.

<sup>60</sup> Pictures of the old Broom Road can be found [here](#) and [here](#).

narrow foot paths inland seldom wide enough to allow 2 persons to walk side by side.” There are naturally many such trails still in use leading up into the mountains. When on Canadian plains <sup>61</sup> there were trails for me not made by man but by buffalos. They were easy going and always lead to water I was glad to get. Animals like trails; they have no wish to fight their way aimlessly in their wild haunts. On Niue you have to very careful once you leave the Highway round that island but that one is only 40 miles round and I often tramped it. There it is dangerous to leave the trails which run crisscross inland for it is a coral island and full of deep chasms and holes and jagged pieces. One day I was lost for I followed a false trail and men had a long hunt for me far into the night before they found me sitting quietly waiting for daylight for I dared not move once night fell. The women and the children were out too, crying and sobbing and praying to God to save the teacher they all loved so much. Someday you may read in one of my manuscripts the full story of “Lose-ing the Trail.” <sup>62</sup> Many a War Trail I have tramped on other islands, trails which once ran red with blood but today delightful rambles for stout, sturdy limbs such as I trust may be — like mine — your fortunate lot to have through all your Life.

## 18. The Boy King (2)

The same year 1824 that he was Crowned the missionaries had opened a school, for the sons of Chiefs, on the neighbouring island of Moorea at the village of *Afareaitu* to which they gave the high sounding name of “The South Sea Academy” (notice South Sea, not South Seas). Orsmund was the Headmaster. <sup>63</sup> Till he was 5 Nott took him in hand ar Arue and made a beginning with his education then he went off to school where altho’ he was a Crowned King he was a thorough boy, keen for play but diligent at lessons and his Headmaster loved him dearly and sought to bring him up like he did his own sons with English manners, English dress and English as fluent as his own mother tongue, nor did he seek in vain. And now comes his Letter. An American man-of-war came to these waters, its Captain <sup>64</sup> aiming to arrange a Business Treaty with these islands. The Leeward islands turned him down so he tried his hand with Tahiti but not openly as he ought to have done. He heard that the little king was on Moorea at school so dropped anchor there and having won over the Headmaster and that island’s Chiefs to his side, it was not at all difficult to get the little boy’s signature to a Treaty <sup>65</sup> which of course he could not understand but did as he was told by the man he loved. When the Treaty was borne over to Tahiti for the great Chiefs to sign they were horrified. Tahiti looked to England for everything and they owed everything they had to that land. There was not a single Frenchman then on these islands. They came on the scene years later. The Chiefs said what will England say to this and the British Consul thought the same. They refused the Treaty and it ceased to be. Those Chiefs wrote to their little King and to his master in strong words and the latter must have told the boy that it would be best if he wrote a Letter <sup>66</sup> to the British Consul making excuse for what he had (all innocently) done. I knew that he had done so but where O! where could I find it. Nobody knew but I was determined to persevere and get it. One day I was visiting the British Consul in his office (the kindly man is now dead) and told him of my want. He said to me, “You are welcome to search thro’ this huge hoard of old stuff which I have never

<sup>61</sup> WWB was a missionary at Moosomin, Northwest Territories (now southeast Saskatchewan), from 1884 to 1886.

<sup>62</sup> See Part II, *The Chronicles of Savage Island*, Chapter XV, *Hue and Cry*.

<sup>63</sup> WWB has *Orsmund* here and elsewhere. The South Sea Academy was established in March 1824. Mr John Muggridge Orsmund had previously served in Huahine, Raiatea and Bora Bora; he was headmaster for seven years. See [Ellis, Polynesian Researches, Vol 3, page 269](#).

<sup>64</sup> [Thomas ap Catesby Jones \(1790–1858\)](#), on the sloop of war U.S.S. Peacock, was, at the time, commander of the Pacific Squadron.

<sup>65</sup> The Treaty is archived at the School of Oriental and African Studies, University of London, and is reproduced in the [Sydney Gazette and New South Wales Advertiser of 14 July 1832](#).

<sup>66</sup> No reference to this letter was found online.

troubled to look at,” and threw open a steel cupboard higher than I am crammed full to the top with papers. So I went to work day after day till lo! here was the Letter!! and tho’ it takes up my limited space I will give it to you in Tahitian as the little King wrote it and translate it for you. It is quite a treasure, very quaint and of course his master must have helped him compose it. You will be able to “swagger” to your companions and say, “I know Tahitian and you don’t.” But first its English. “*Dear Sir, I have not abandoned King George IV. I still look to him, I still regard what he says, he is my refuge. But it was a custom of my Father to be kind to all men, therefore I wrote that paper for captain Jones. Pomare iii.*”

Now for the poser — every vowel sounded please — and as the French do.

*Griffin Town. Afareaitu  
Moorea. October 13. 1826*

*E hoa ino e*

*Aore au i faarue Arii George iii. E hio â vau iana, e faaroo â vau tina, o oia tau haapu raa. E peu râ na tau Metua e e ite maitai atu te taata atoa i papai, ae au tana parau râ ia Cap<sup>n</sup>. Jones.*

*Pomare iii*

Hang on to that word *Maitai* (my-tie) for it means Good as well as Kind. It will be a swell word to use when asked to do something.

Now here I am and no Portrait! Well, well, have Patience.

## 19. The Swallows’ Cave<sup>67</sup>

This is the tale of Vavau, the northernmost island of the Tonga Group, of what I saw and learned there which I think will be of interest to you. As my ship near’d that lovely mountainous island we passed and saw many tiny ones one after another which you will not find on your maps. How could any map show them all when Polynesia contains no less than 2650 and hence its name. There was *Fatu-manga* the home of myriads of birds, the sky around almost darkened as they flew around, there was *Nua-papu* with its “Mariner’s Cave” and at the entrance to Vavau’s harbour there was *Kapa* on which is *Ana-beka-beka* which is Tongan for “The Swallows’ Cave.” And what a harbour! You could put 6 Esquimalts<sup>68</sup> in it and there would still be room, for it is 4 miles long and 2 miles wide, one of the 3 largest and finest in the world. Rio (Brazil) and Sydney (Australia) are the other 2. Both caves are famous the world over but very few have ever entered *Nua-papu*, not even Mariner himself I trow, for to reach it one has to dive deep and long to gain the Entrance beneath the waves (a coral barrier) then up from the depths to find Fairy Land, fit place for mermaids to make their Home. Yet some have dared, the first a Tongan youth who finding out the secret of the Water Maidens brought thither a dusky maiden who loved him well but whose parents forbade a marriage. All Tongans are expert swimmers and divers. There she dwelt whilst he sallied out, and in their hidden canoe brought to her daily “the fat of the land.” But some, wondering at his long absences and the disappearance of the Maid, followed him by stealth and saw him leave canoe and take the plunge. They followed and his little game was up. Not so many years back a white man, the Captain of a ship, essayed to invade the mermaid’s Sanctuary. Despite warning he said that what

<sup>67</sup> See also *The Swallows’ Cave, A Tragedy* and *A Send Off* in Part XI, *Roaming the Pacific Waters*.

<sup>68</sup> [Esquimalt, British Columbia](#).

natives could do a white man could. What foolish boastful talk! He took his crew with him in their boats to see him do it. He plunged, saw clearly enough the Entrance but misjudged the moment to rise, tore his naked body with the poisonous coral spikes and rose to the surface a wreck soon to die through over confidence. Since then but one has dared and succeeded, and he Prince *Tugi* Prince Consort to stately Queen *Salote*,<sup>69</sup> all honour to his grit. That Cave was not for me. It was at *Neiafu*, a bright lively little town, no mere native village, which lies at the head of the harbour where is the most enormous Acacia tree I have ever seen or heard of. Its branches with their leaves give a shady resting place, covering a square beyond all conception, a full Eighty yards! The time to enter the Swallows' Cave is as the sun is sinking in the western sky, for then its rays reach within the portal and play upon the sides producing colours and shades of the most lovely hues. It is within rowing distance of *Neiafu* so I went that way. The Entrance is quite easy for boats and has an arch above as if cut by masons, a lovely dome with an opening at the very top through which one sees the sky through branches of trees growing up there. A huge round chamber awaited me with great stalactites hanging down from the roof, a few deep recesses in its walls. It is in the dome that the Sea Swallows build their nests and who at my coming came sweeping down and round as if protesting at this invasion of their home. On one side as I sat in the boat was a wall of sapphire shading off gently to a tender green, on another a soft red shading off to cream, the Dome a Prussian blue reflected in the water transparent to the bottom, fathoms below. When struck by my oar the walls produced a bell-like note which rang out echoing within that lovely vaulted chamber and sent the winged inhabitants once more hurtling from their nests till I retired from the scene.<sup>70</sup>

There are 2 kinds of oranges here, a vivid green one, juicy and sweet like the yellow ones you buy but woe betide you if your lips touch the rind, they will smart and sting for an hour (I know to my cost) and a yellow one nearly as large as a soccer football for which these Tongan youngsters use it. It is all pulp with a good stiff rind and lasts till the boys' toes go through it. Fancy playing football with an orange and without boots! But it's good fun to them.

What a send off and a surprise was given as the time to weight anchor drew nigh. There came marching along the wharf a native Band, khaki clad, two and two they marched, 18 pieces in all, piccolos and trumpets, trombones and drums. They had stands for their music as forming a circle they played us off and far away down that lovely harbour their melodies came floating to us over the sea. So now you have visited Vavau and I hope you also love it.

## 20. Of Strange Customs<sup>71</sup>

We English have many, some strange, others natural, which have been passed on from generation to generation and which we would find it very hard to give up. I will not take up my space by naming any of them, your Teachers can tell you those you cannot think of. So also throughout the whole South Sea the natives had and still have the same and of some strange ones I now write. It is a good thing that some have been given up for they were either nonsensical or cruel. Here then of Tahitians.

<sup>69</sup> [Sālote Mafile'ō Pilolevu Tupou III \(1900–1965\)](#)

<sup>70</sup> William James Diaper (1820–1891), who visited [Fonualei](#) after its eruption on 11 June 1846, states in *Cannibal Jack* (1928), page 199, that “This Tonualei is the real island, whence originated that beautiful, romantic, traditionary story of the two lovers and their cave home, entered by diving under water from the sea, and mentioned by Mariner in his *Account of the Tonga Islands...*”

<sup>71</sup> See also the article “*Some Old-Time Tahitian Customs*” by WWB in the May 1942 edition of the Pacific Islands Monthly, pages 32–33, in Part VII, in which the sub-headings are *Marriage*, *Making Peace*, *The Use of Liquor*, *Personal Decoration* and *Disposal of Dead*.

Fancy having to bare yourself down to the waist, women as well as men and children when you were in the presence of a Great Chief. It was fortunate that Tahiti is in the Tropics! and the same had to be done as they passed where the Great (not a Lesser one) was residing. What a ridiculous custom. When a funeral had to take place instead of its being very solemn and quiet, Custom demanded something entirely different. They called it a *Haeva* or Ceremony over the dead. About 20 men and boys daubed all over with smut and clay both reddened and white, armed with sticks, ran around the dead body and the neighbouring houses beating the house walls (but happily not the corpse). There was a Master of Ceremonies clad in a clown's habit who was attended by other men and boys painted on their bare skin as if they had on black coats turned up with white edging, their thighs red, their legs white, their faces made as hideous as possible to represent Demons and Devils. At last the rushing about and the wild shouting ceased, then the body was borne to its grave.<sup>72</sup> That for a funeral and now for a marriage. Instead of the bride receiving presents the mother and uncles of the bride gave out *tapa* cloth to all those gathered for the occasion. That done in the home all repaired to the Family *Marae* or Altar wherever it was where a large piece of white *tapa* cloth was spread on the pavement before the *Ahu* or Altar. Next thing was for the bride and bridegroom to change their dress — in public! — then the mother took a sugarcane, broke it into small pieces and placed them on a large leaf; this done she and special other women cut their heads with the teeth of sharks and let the blood drop upon the leaves. Close friends of the bride and groom presented this mixture to them seated on the ground close to the Altar some few yards from each other. This strange mother then produced the skulls of the last dead of the family! pouring coconut oil upon them, then laid them with the mixture. This was the climax of the marriage ceremony, the gathering dispersed, neither bride or groom had uttered a word, but the company were chatty and laughing all the time. Such was the Custom.<sup>73</sup>

You have your meals together but on Tahiti the women had distinct houses from the men for meal time nor did either sit at a common table. Each man, each woman and each child had their “food basket” of coconut leaves and sat apart. How would you like that? but it was the Custom.

A very painful Custom was Tattooing. It was considered a most graceful adornment for both men and women. But unlike the Maori they did not mark their faces.

On cruel Customs I will not dwell, they are best ignored, but I feel sure that you are glad that English Customs have always been so very different.

## 21. Of Perseverance

I trust that you have it and in plenty : not fussiness which worries you and everyone around you but the quiet determination to “never say die.” It would ill become me to write to you about it if it was not my habit also so I have thought it might help you if I gave you some examples to show you what can be done when things look hard and even hopeless. They are on a very strange subject which may surprise you for it is “Lost Graves”!<sup>74</sup> They were lost to all knowledge, none knew where they were but after years of quiet persevering quest they were found. There were 9 of them, 6

<sup>72</sup> See also [Ellis, Polynesian Researches, Vol 1, pages 412–414](#)

<sup>73</sup> See also [Ellis, Polynesian Researches, Vol 1, pages 271–273](#)

<sup>74</sup> See also the following articles in Part VII, the Pacific Islands Monthly: (i) *English Missionaries' Graves in French Oceania* in the July 1936 edition, page 28; (ii) *Graves Restored / Early L.M.S. Missionaries in Tahiti* in the 19 August 1936 edition, pages 21 and 23; (iii) *Work of Mr. Bolton* by Captain J.D. McComish, in the 19 August 1936 edition, pages 23–24; (iv) *Presents Mission Tablet, Moorea* in the December 1936 edition, page 8; (v) *L.M.S. Bolton* in the 23 April 1936 edition, page 14.

men and 3 women — missionaries and their wives — the earliest to Pass Away as far back as 1799. All that was known was that 4 lay on Tahiti and 5 on the neighbouring island of Moorea.<sup>75</sup> But before I tell you as shortly as possible their story I will give you another which was the other way round i.e. the grave was there but who was he that was buried there? That mystery was also solved. One day as I walked alone along the seashore some 3 miles from Papeete I passed a Point where palms and trees and undergrowth were thick but I saw a tombstone almost hidden in their midst. Going up to it I saw only these words cut deeply in “Jim the Pilot. 1844.” Now who was he? Why he was laid there was easy for the land was in all probability his. Natives in those days buried their dead close to their homes, you see them only a few yards away. I asked the natives around. None knew. I asked old residents in town. None knew and they said I would also never know. My answer was, “Wait, you shall know some day.” Nigh 3 years passed and I was still quietly ever on the watch for Jim when one day I sought some information in the library of our Museum here from a book I knew was there written by Commodore Wilkes of the American Navy telling of his exploring tour of the world. Finding the book, I sat down, opened it casually, and the first heading to the contents of the chapter before my eyes was “Jim the Pilot”!! I had found my Quest. His story was there.<sup>76</sup> Those 9 graves also took years also took years to solve. I had received a request from the London Missionary Society to whom I had written for some information asking me to find them. They said that they feared it was hopeless but would I kindly try. Once again I said, “Wait and you shall know.” In this case I called to my aid 2 devoted friends now no longer on Tahiti, an active little Frenchman (someday I may tell you of the terrible tragedy which befell him) and a fine American. Both these men spoke Tahitian fluently which I knew would be needed. We set to work determined to succeed. All the aid London could give us was that 2 died at Matavai some 8 miles from Papeete and 2 at Papara 30 miles away but the other 5 “*lay somewhere on Moorea*” which is 38 miles round, its villages all close to the seashore. At last we got a clue for Matavai from an aged native and following it up found the 2 boulders of a special stone in those days used as headstones where the 2 men — one murdered by a savage — were laid. At Papara we learned of a native woman who had lived for over 100 years in the village, had known both men and had told her cronies where she had seen them laid. We traced those cronies still alive and were lead to a coconut plantation where hidden from view by the wild grasses lay the sought for graves. Moorea was the hardest Quest. Which village? We found some letters written by King Pomare to “my friends at *Uaeava* (way-var) Moorea.” Now where was *Uaeava* for there is no village on Moorea today so called. At last we learned that it was the old-time name of Papetoai. So off to Papetoai. None knew the site but at a later visit a woman came forward and told us that when she was a little girl, she and all other children had been forbidden to play on a certain spot “*as white folk were buried there.*” Where was that spot? Close to where we are standing. It was a fairly large area covered with dense *lantana* — worse than blackberry bush — “Bring axes.” They were brought and we hacked and slashed and cut away. Soon we could see an open space in the centre. We got there and again had found our Quest. So that they shall never again be “lost” concrete slabs engraved with name and date now lie on the graves at Matavai and Papara, but at *Uaeava* this could not be done as though we were sure of the 2 men, for one we knew had been laid at his own request by the side of a beloved boy of his — and the little grave is there — we could not tell which grave belonged to which

<sup>75</sup> WWB found the graves of John Jefferson (died in 1807) and Thomas Lewis (murdered in 1799) at Matavai; Samuel Tessier (1820) and John Davies (1855) at Papara; and Henry Bicknell (1820), William Scott (1815), Sarah Henry (1812), Mary Davies (1812) and Sarah Hayward (1812) on Moorea.

<sup>76</sup> See [Charles Wilkes, Voyage Round the World \(Geo. W. Gorton, Philadelphia, 1849\)](#). “Jim the Pilot” was a Tahitian who was employed by Wilkes onboard the *Vincennes* to guide the vessel while at Tahiti in September 1839. Chapter XI, page 143: *Jim is quite a respectable-looking man, dresses in the European fashion, and speaks English, which he has acquired on board of whale-ships, tolerably well. Although a good pilot, so far as a knowledge of the shoals go, he does not understand what to do with a vessel in case of difficulty.* Chapter XII has the heading *Application From “Jim” the Pilot*, which must have been the heading that WWB found. See also Chapter XXVI, *We Enter the Harbour — Jim the Pilot*, in [Omoo](#) by Melville, which refers to events at Tahiti in 1842.

woman, so there hangs today in the little Church close by a very large Tablet with a black background bearing the names and dates of one and all in letters of gold. The placing of that Tablet was the final scene in the long drawn out Search. London was very grateful but we had our richest reward in that what was thought to be hopeless had been a test of Quest Perseverance and when the Test was called upon it had not failed.<sup>77</sup>

May these examples be ever an incentive to you to likewise persevere in all that comes to your hand to do throughout your lives.

**Plate 4. The Missionary Graves at Papetoai, Island of Moorea. Just as we found them.**

## 22. The Boy King (3)

His Portrait. London wrote, “Never heard of such a thing. Have all the rest but not his.” Tahiti said the same, there was none in existence. It was of course before the days of photography and would be an Engraving. I felt sure that it must be somewhere and waited for years, still on the watch. One day I was passing a shop in Papeete which I must have passed hundreds of times when I noticed a large frame holding a number of photos faded so that it was hard to make any portrait out. But at the very top I could just make out a boy’s head. I asked the owner — an Englishman — what he knew about the photos and where he had got it. He said that long years ago he had bought it “for a song” at the auction of a dead Chief’s belongings but who they were had not interested him and he had carelessly let the sun play havoc with it. That boy I was convinced was the little Boy King, for at the base there was a scroll on which I could faintly make out “La Famille royale.” So I was on track at last. That framed lot was useless, it could not possibly be reproduced. Did nobody have another? No! said everybody. Yet there were still members of that Royal Family on Tahiti, perhaps they had a like frame. I knew one Prince, a charming, simple fellow. Ask him. O! yes! there’s a frame at my

<sup>77</sup> See also WWB’s article, *The Lost Graves of the Pioneers on Tahiti and Moorea*, in Part VIII, the Bulletin de la Société des Études Océaniques N° 59 (1937), pages 685–688.

place with a lot of people dead and gone whom I don't know from Adam and Eve. Have a look at it. That frame and every one of the 25 portraits was as fresh and clear as the day when it and they were made. There at the top was my long sought Boy King, his father and mother each side of him. Who sketched him none can say but I feel convinced that it was the Headmaster who loved him so, and who of all the white men then on Tahiti was the best educated, and might well have had the gift of Drawing among his many wonderful gifts and accomplishments. That framed group of Royalty has been reproduced and copies have gone to all parts of the world.<sup>78</sup> London was astonished even as were the unbelievers here. The Editor of an Australian paper wrote asking if I would let him have an enlarged copy for his magazine, he would return it. He did and I think it could find no better or more fitting resting place than with like young boys (and girls) at school who are my own flesh and blood. In the miniature<sup>79</sup> you can plainly see his Eton collar, his master saw to it that his hair should be short and combed and parted. I think you will like to possess and show it to your friends with these Tales of him that I have dug up after my long years of search. No portrait!! indeed! when all the time they had it under their noses. Of course they sought of me the names of all the rest — their own relatives — so again I set off and traced each one. They were delighted.

So all was going well with the little lad. Much was hoped and expected of him but his course was nearly run. He was taken ill at school, high temperature, pneumonia so common a sickness here. Orsmond carried him over to his mother at his own Palace in Papeete. Men walked softly in its paths, for their little King was dangerously ill. He grew worse, not better, his strength was sapped, he was dying and in his beloved and loving master's arms he Passed Away. The date January 8, 1827, his age 6¾ years. They laid the little Boy King's body to rest in the Pomare Graveyard but a stone's throw from where he had been Crowned.

---

<sup>78</sup> The frame with the 25 portraits, with the names of the family members, can be found in *The Pomare Family of the Past* under *Inter Alia : Jottings and Details Various* in Part IX, *Old Time Tahiti*. It was prepared by Mrs. S. Hoare, a Papeete photographer, about 1886–1887.

<sup>79</sup> WWB has *minature*.

**23. A Cricket Match** <sup>81</sup>

It was Saturday afternoon in Apia (Samoa), <sup>82</sup> all shops closed and everybody was off to picnics or to games. There was to be a Native Cricket match in the “compound” behind my residence and Feeling was running high as to the outcome of the game. Of course I was there, the lone white man amid a wildly noisy crowd and to add to the din there was a Band which never, ever ceased. All round the pitch there ranged the picturesque Samoan homes, oval in shape, the thatched roof supported by poles, no walls, mats for blinds to ward off sun or rain, and flooring of cream white pebbles. These were the Stands, all the mats were up, and every seat was occupied, but a kindly native whom I knew not, found a place for me on the edge of a floor that faced the Green just as Time was called. As to the game itself as played by natives — white men holding fast to England’s Rules — there are 2 wickets set very close together, no bail atop, the should-be 3<sup>rd</sup> stands apart on a line with the others, some 2 yards away. These are for those who make the Runs for the batsmen only bat. The runners carry wands, the batsmen use an implement which is a cross between a huge baseball bat and a club, its end foursquared. The game was certainly 20 a side and may have been more for the fielders were all over the place, some hiding from the sun till need arose. There were Umpires at each end, distinguished by an umbrella to ward off the sun or a walking stick for those who did not mind it. The Overs consisted of one ball each and the batter’s idea was not to save his wicket — which is the true foundation of the Game — but to lift the ball to the sky, the Runs he left to the others. The Bowling was all overhead and the Catching distinctly good. At times the ball

<sup>80</sup> The portrait was published for the first time in WWB’s article, *The Pomares of Tahiti*, in the 22 April 1938 edition of the *Pacific Islands Monthly*, page 17, in Part VII. WWB has *J.H. Orsmond*.

<sup>81</sup> See also *A Game of Cricket* in Part XI, *Roaming the Pacific Waters*.

<sup>82</sup> In early 1921.

landed on a roof, stuck there or slowly careened down, which counted for nothing, the runners making no move, but when they did move they got on such a pace that they failed to stop till 10 yards past the Stump. I looked in vain for the Scorer, I fancy the Umpires carry the totals in their heads. No one kept to his position in the field and when the ball went up towards the heavens, several would collide in catching it. The order in the Stands seemed to be to clap when you felt like it. I failed oft to see the reason but joined in heartily for good companionship.

Despite the excitement of the crowd and the antics of the players 'twas that Band that really held me. I counted 60 in it and not an instrument amongst them. They were squatted in row behind row on the sward and had 4 Conductors who all worked overtime despite the fearsome heat. They sang what seemed to me to be Samoan “shanties” (loved of sailor men) never ceasing the clapping of their hands. Their selections varied. At one time they all moved in perfect time as if rowing, at another they lay flat on their backs, at another half a dozen stepped out and danced wildly, weirdly, the while the 4 Conductors hesitate to use their stout batons, stepping among the tiers and belabouring the bare backs of any who grew slack. For hours they sang, yet the voices never grew hoarse. Of a truth they were supplied, like the cricketers at play, with much *Kava*; for women oblivious of their danger from the fielders, kept bearing across the field and pitch, galvanized buckets slung on poles, passing in and out among the Band, handing out the fluid in coconut shells.

The sun was fast setting when Time was at long last called, stumps drawn, the cricketers retiring and that Band had rest. I never learned who won.

## 24. Of Coined Words (1) <sup>83</sup>

Native races have been hard put to find words for things not seen before. Some of them are very strange, even amusing compounds. We ourselves have not been without the same need. Think for a moment. When 2 wheels were joined together in a line and a seat above for us to sit on what should it be called? So bi-cycle came into our language. When a third wheel was added? Why not tri-cycle. When a carriage was made to move itself, needing no horse, what now? So auto-mobile came into our dictionary. You can readily find scores of others.

When the Christians' Holy Book — our Bible — all of the other great religions have also their Bibles — has been translated for native peoples the missionaries have had as hard work as natives to find native words for countless things. They often could find none so made words out of Latin and Greek and Hebrew, “coined words” which have become part of their language today. It was very arduous work. The Tahitian Bible took 22 years to write and the chief translator was a bricklayer! when he left England. He was the first white man to speak Tahitian, then he added those other languages I have mentioned to his fine brain and gave his native peoples what he believed to be the greatest gift in his power to give them, the “Word of God.” His body was laid to rest at Arue, quite close to me and I often visit the grave to see that all is right. His name was NOTT. <sup>84</sup> Here are some Tahitian “coined words” I have come across. The words in brackets are merely understood to be there by Tahitians, they do not need to say them, but without them we English could not understand what we were saying to one another. But both languages have words that can only be understood by what goes before or after them. Try BOW — a ship's bow — an arrow's bow — a lady's bow!! You must sound each vowel separately (as in French).

<sup>83</sup> See also *Nouns, Names and Negatives* in Part XIV, *Tahitian Vignettes*.

<sup>84</sup> [Henry Nott \(1774–1844\)](#)

Horse	<i>Puaa hora fanua</i> (The) animal (which) gallops (on) land
Trousers	<i>Piripou</i> Coverings (for the) pillars (i.e. our legs)
Measles	<i>Ma'i farehau</i> (The) sickness (of) soldiers (first brought here by them)
Cannon	<i>Pupuhifanua</i> Blowing from the mouth (upon) the land (i.e. from ships)
Stonemason	<i>Taata patu afai</i> (The) man (who) builds up stones
Accordion	<i>Upa upa ume ume</i> (A) musical instrument repeatedly pulled
When I first saw <i>Hooraa Uaina</i> as a shop sign I thought of course that it was “Hurrah!! here is Wine.” I learned to my sorrow that it meant with <i>Fare</i> before those delightful words merely (A) shop (for) wine	
Steamer	<i>Pahi auahi</i> (A) ship (of) fire
Vest	<i>Piri ero</i> (Thing) close (to) chest
Now they have had to add (among many other new things)	
Aeroplane	<i>Pahi reva</i> (The) ship (of the) heavens
Automobile	<i>Pereoo uira</i> (A) carriage (of) lightning

But Niue is even more amusing which I will tell of someday.<sup>85</sup> They had lived very lonely lives.

## 25. Of Malifa (1)<sup>86</sup>

Mar-lee-far

I was in Apia (Ar-pee-ar) the picturesque little capital of Samoa when I was suddenly “shanghaied” — if you do not know what that means ask your Teachers. I was waiting there for some vessel to take me to Niue and learning all I could of Upolu and Savaii which together form the British Protectorate. I had noticed 2 schools at the back of the Town set amid coconut groves, one for white and half caste children called *Ifi-Ifi* (Ee-fee-Ee-fee) and one for natives boys and girls called *Malifa*. One day the Administrator<sup>87</sup> (Governor) who had been very kind to me said, “Will you help us?” I

<sup>85</sup> See Tale #29, *Of Coined Words* (2), and Chapter X, *Word Building*, in Part II, *The Chronicles of Savage Island*.

<sup>86</sup> See also *Teaching School* and *A Tribute* in Part XI, *Roaming the Pacific Waters*.

<sup>87</sup> Colonel Robert W. Tate was [Administrator of Samoa](#) from 1920 to 1923.

said of course I would. He said that Malifa had no Headmaster. The last one had gone to New Zealand and they were waiting for another, would I fill the gap? So there I went daily for many, many weeks and had a delightful time, of which I think you will like to hear being at school yourselves. I had 2 native masters to help me, both fine fellows *Taūa'a* some 40 years old, *Maiūū* in his 20s. They did all the hard work, drilling the scholars daily and marching at their head in and out of the large airy building at every session, drum and fife <sup>88</sup> band going gaily, nor was it boys alone who played those fifes. The older children had a very fair knowledge of English and when they and I got all tangled up my Assistants flew to my aid, so all went well. I hope you are not thinking that they were “niggers” and dirty. That would be very wrong for they have a lovely and soft rich brown skin and were always cleanliness itself. With their clean hands and their spotless white dresses and coats you would think they were attending a Party not a School. The boys wore a *Pareu* round their loins, a long wide piece of cotton stuff (white with lovely patterns on it, sometimes red, sometimes blue) wound round and round. Their Arithmetic ability surprised me, they loved it, their writing would put most boys (I cannot speak for girls) to shame, their Reading I always found a joy to hear, all touched as it was by the soft and melodious Samoan tongue. I found that it was the custom at Malifa at the opening of school each day for the Headmaster to take some object and tell them about it. They know so little about Factories that they thrill over what goes on in such a place. So I would talk to them about whatever came into my head : a watch, an umbrella! a piece of money. They were always very attentive and pleased but when I gave them Talks on their Own insides they were in ecstasies. Of their beautiful Singing I must tell you in another Tale for it would overflow my space and I want room to tell you of something that I can never, never forget.

One afternoon shortly before the steamer was expected to arrive with the new Teacher when I should resign my happy post, one of the boys in his early 'teens — I think 13 — slipped into my hand as I was leaving the schoolroom a note which I shall never tear up. Here is what he wrote in his own halting words, not a word misspelt save mine he had never seen.

Malifa School — Dear M<sup>r</sup> Boleton, Just a few lines I let you know how I please for your teaching me some new way for finding the British language. Please M<sup>r</sup> Boleton will you leave your work in Niue because we are very much pleased for your help in Samoan children, now we wanted you to stay in Samoa for a long time and teach me in every way in English language. When you came here we know many things from you that's why we wanted you because you are a wise man and you are true teacher, that's all I want to let you know. I hope this letter is not say “Goodbye” but merely “Au revoir.” *Fa tu esi*.

What Teacher the whole world over could want higher praise or richer Reward than that. I had won their love and am content. Will you someday act like *Fa-tu-esi*?

## 26. Of South Sea Curios (1) <sup>89</sup>

I hope that you are Observant but never inquisitive in matters which do not concern you — a very bad habit with some, that you are quick to note what is out of the ordinary, and are not going through Life half blind missing much that is pleasing and often wonderful. I will give you here some out of the many curious things I have come across during my long wanderings in Polynesia and I hope that to hear of them will interest you.

<sup>88</sup> A small, high-pitched, transverse flute that is similar to the piccolo, but louder and shriller due to its narrower bore.

<sup>89</sup> See also *South Sea Curios* in Part XIII, *Roamings In the Great South Sea*.

And first of An Erratic Isle.<sup>90</sup> It would never do to homestead on Falcon island in the Tongan Group where Queen Charlotte<sup>91</sup> reigns. It has a very nasty habit of disappearing. When first seen by white navigators both Spanish and French in the 17 hundreds<sup>92</sup> they noted it down as a mere coral reef. In 1865 H.M.S. Falcon saw it still a reef and the Commander named it after his ship. That same year the Tongans noted smoke issuing from it. Twenty years later it was an island over a mile long and 150 feet high. It gradually subsided and by 1894 it was but a reef again. But in 1896 up it came again. Four years later it disappeared once more. In 1927 up it came again, longer than before and 350 feet high. It was there when I sailed by but I am told that one end is sinking whilst the other end had added to itself as many as 4 miles. There must be a submarine volcano at work and a huge one for as we sailed on we passed through acres of pumice stone floating on the sea of glass and one of the crew dropping a bucket overboard brought me up water for a delightful warm bath. There is a similar erratic island (I forget its name) off Alaska.<sup>93</sup> It was there when I passed by<sup>94</sup> but may be it had disappeared since then. Ask your teachers, they should know about such a Curio of the deep.

2. The Curfew Bell. Late hours are *Tapu* (forbidden) on many an island. The warning note is usually the native drum, a hollowed half trunk of a large tree, the sound from which carries an extraordinary distance but a conch shell serves as well. Starting the curfew in the main village, the next village miles away picks up the sound and passes it on to its neighbour. In an astonishingly short time the word rings round the island, "Lights out and everyone to his mat." Then quiet reigns till sunrise. I found myself ever ready to obey.

3. Marriage "Settlements." The Trobriand group, off Papua, boasts of gardens second to none. Girls there are in luck from birth, their early death not sought as in other wild spots. Their luck lies in the (vegetable) Yam. Every girl has a garden space from her birth, tended carefully by her father and brothers. On reaching marriageable age she finds herself endowed with valuable garden land. Her people upon her marriage continue to work the land for her : her Food House ever full to overflowing, the husband looking upon this as a fair arrangement for taking her as wife since he has no time himself to look after the garden. He has sisters of his own and must needs attend to their acres. Poor fellows! every man is kept incessantly busy whilst the ladies of the land have Time to play and chatter to their hearts' content.

4. The *Malau* bird. On Niuafoou<sup>95</sup> which lies between Samoa and Fiji there dwells a pigeon<sup>96</sup> surely unique amongst its kind. It is remarkable for 2 things — its enormous egg and its total indifference to motherhood. The hen burrows a hole in the side of the cliff where it lays an egg each day for an octave, scratching away the covering it made the previous day. Having well covered the lot it departs, leaving the sun to do her work. The Incubator having done its part, the squabs have to fend for themselves with the aid of their father, the mother off on her own pleasure, her chicks no concern at all of hers. It is well that our own dear mothers have entirely different ideas or where should we be today!

---

<sup>90</sup> WWB has *Erractic*.

<sup>91</sup> WWB has *Charlotte*.

<sup>92</sup> According to Wikipedia, the first Europeans to see the islands were those with the Dutch explorers Willem Schouten and Jacob Le Maire in 1616.

## 27. Saint Patrick's Day (1) <sup>97</sup>

When I was teaching in Apia — Samoa — I was frequently at the residence of the Governor, a warmly welcomed guest both by him and his Private Secretary, a big New Zealander with a big heart. We became great friends and still are so. He was a Captain in the Great War and was an ardent lover of England, its homes, its old-time manners, its customs and its countryside. Government House was built by the author R. L. Stevenson <sup>98</sup> whose books you may have read or will do so (such e.g. a wonderful story for boys and girls as “Treasure Island”). It is a large airy residence, two storied, upstairs was his Writing Room, downstairs a very large Dining Room, for he loved to have guests, and next to it a little room with an open fireplace in it for a log fire! Everybody laughed at such a thing in so hot a place as Apia but he said tho’ it would never be used it was “a touch” of his loved Homeland. From the front there is a lovely view of Apia and the sea looking down the 2 miles : all the way a gentle slope. On the left is a quickly rising hill, a little mountain. Whether he, a weak and sickly man, ever climbed it I cannot say but anyway he always said “My grave is to be on its summit.” And so it was. Of course I had made my pilgrimage there despite its difficulty. Today I am told a path has been cut, steps made and ascent and descent is easy. But not so in my day. However the Great Chiefs bore the coffin of their beloved friend up that height is a marvel : but they did. One day shortly after I had made the ascent on S<sup>t</sup> Patrick's Day <sup>99</sup> my Captain friend asked me if I would help him out of a difficulty. Indeed I would if I could. Then he told me that all the time he had lived in Apia his relatives in New Zealand had asked and asked him to give them an account of Stevenson's Tomb, but he was no writer except on official matters. Would I write it for him? Of course I would and getting pen and paper wrote what he wanted right off hand. It began, “It was S<sup>t</sup> Patrick's Day...” He thanked me in his warm-hearted way, said it was just the thing and posted it off to his relatives.

Years passed and I was in a hospital in Auckland with a very bad knee. Some insect — maybe a cockroach — had had a nice meal off my right knee as I lay asleep in a schooner heading for that port. One day my dear Nurse came to my bedside with a magazine in her hand and said, “We nurses have just received our copy of the “Nurses Magazine” and in it we have read a story that we are sure, though there is no signature, that you wrote. <sup>100</sup> Now don't deny it for we all say that it is just as you talk to us and tell us so much that we love to hear as we nurse you back to health.” So I asked her to let me see the article and I would tell her the truth. She handed to me and it began “It was S<sup>t</sup> Patrick's Day”!! What could I say but own up, but how it came into the pages of a government nurses' magazine years after I had written it quickly off for my friend is still a mystery to me. I think that you might like it — or at least some excerpts from it for I fear to tire you with these Tales of mine — so you shall have it yourselves as those kind nurses had, and may it give you the same pleasure it gave them. They deserved it and much more. My special night nurse had always longed to work in Apia's beautiful hospital and I told her that she should have her wish so I wrote to my dear Captain friend who was still there <sup>101</sup> and quickly came the Order for her to report herself for the Staff. So you see the happy results to one and all, my Friend, his relatives, the magazine readers and my kind nurse, that came from “It was S<sup>t</sup> Patrick's Day.” What rich reward was mine!

<sup>97</sup> Regarding this Tale and the next, see also *Stevenson's Grave* in Part XI, *Roaming the Pacific Waters*.

<sup>98</sup> [Robert Louis Balfour Stevenson \(1850–1894\)](#)

<sup>99</sup> 17 March 1921.

<sup>100</sup> While references to various nurses' magazines were found online, there were no references to the story about Stevenson's grave.

<sup>101</sup> But, if so, he was no longer [Administrator of Samoa](#) in 1924.

## 28. Saint Patrick's Day (2)

It was S<sup>t</sup> Patrick's Day and a Public Holiday. That Day I made my way, my Pilgrimage, to the grave of Stevenson — *Tusitala*, the Teller of Tales. Before the full heat of the sun should beat down upon me, I sallied forth, climbed the steep ascent and stood beside it. The way was pleasant and the going fairly good. Many white folk' bungalows on the road, set well back and oft times hidden among the groves of palms, cocoa leaves and breadfruit trees, past a Village with its Native Church, all too garish in its white daubing and formal style amid the grass-roofed native homes, past Plantations, some well kept, others all uncared for, and so to Vailima 2 miles and a half from Apia, all up a gentle grade... The new way in is not the old way. You turn down a shady lane and soon come to an unpretentious ironpipe gate which leads into a grass-covered road bordered on either side with shaded trees. Those were planted by Man and not Nature, and the way winds round and up, till you are at the home in which Stevenson took so keen an interest in building... At the old-time gate there is a Notice Board which lettered in Samoan reads as follows: "The Road of the Loving Heart. Mindful of the great kindness of Chief *Tusitala* during the time of our trouble while were prisoners, we have made this Road as a remembrance which shall not fade away, even forever." Then follow the names of a dozen Chiefs, Mataafa <sup>102</sup> the would-be King among them. On past that gate one goes along a bridle path, where mauve-coloured butterflies abound, to a rushing brook coming down from the mountain — at the base of which one stands — winding its way to the sea after having first circled the house behind you. A rustic bridge takes you over the little stream which is but one of Five meeting around here before they run down to the harbour : and Stevenson accordingly named his property *Vai-lima*, the first syllable Samoan for Water, the last for Five. <sup>103</sup> Now the ascent started and so does the undergrowth. Little wonder that the Bearers had to struggle hard and fight their way Up with axe and rope to carry out the wish of their dead friend to rest upon the summit. Deep shade shielded me from a blazing sun as I made my way slowly up the steep slope, a heavy rain overnight making foothold on roots and rocks most slippery. The way itself was clear — though but a narrow trail — for Pilgrims to the Shrine above are never lacking. That trail twists and turns, at times is almost perpendicular, the density of undergrowth hides all behind you and all before save for the next few steps. Higher and higher you climb till at last 1,300 feet up you suddenly step out of dimness into light, a cloudless sky overhead, where exactly on the summit — surrounded with tall hibiscus bushes and many a feathery drooping fern — lies the Grave. The Tomb of concrete 15 feet by 9 with a massive concrete slab atop is plain, no columns, fluted work or statuary, impressive in its very strength and simplicity : bronze Inscriptions so well known let in on 2 sides... that to Her whose ashes were laid here along with his in 1915 at one end. At one point on the knoll nigh the head of the grave there is a cleared break in the trees and shrubbery, and you look down upon Apia and far out to sea, whilst a similar break to one side discloses Vailima and a vista of rugged mountains far as the eye can see. The thought of those glorious views would seem to have settled his last Resting Place for *Tusitala*. Forty years and more have passed since the day <sup>104</sup> when his worn out frame was carried up and laid there, and few of those who took part are now alive, yet in the villages below even the children know of him, and so it is throughout Samoa. As I stood by that grave far from his Homeland and from mine I felt right glad to be there, and to be privileged to lay my tribute of appreciation — a blood red bloom — upon his Tomb.

---

<sup>102</sup> [Mata'afa Iosefo \(1832–1912\)](#)

<sup>103</sup> According to Wikipedia, which cites the reference [here](#), the name [Vailima](#) means "water in the hand" and not "five waters".

<sup>104</sup> [R.L. Stevenson](#) died on 3 December 1894. WWB visited the grave on 17 March 1921, so 26 years had passed when he originally wrote this text; he copied the text for this Tale in January 1940, when 45 years had passed.

That was what I wrote which gave pleasure to my Friend and kindly nurses and now will add but this for yourselves. If you turn to Holy Writ and look in the book called “Ruth” you will read in the first Chapter (verses 16 and 17) what the faithful, loving wife inscribed to her ever ailing husband. As you may not have at hand what that ailing husband inscribed to his dear mate, ever his firm support and strength, I have added it here as I copied it down standing on that summit years ago:

Teacher : tender comrade : wife :  
A fellow farer true through Life :  
Heart whole and Soul free :  
The August Father gave to me.

He had travelled far and wide. He was known to millions, both young and old. He was famous. His grave site might well have been claimed by his Homeland for this fine Son of Hers, but he loved Samoa and its people, he loved Vailima : and with his own hand he wrote and had had inscribed upon his tomb so that none could cavil or find fault

Here he lies where he longed to be

and his wish was carried out.

---

When you read his books, now and in years to come, I trust you will recall this little Tale of mine.

## 29. Of Coined Words (2) <sup>105</sup>

Poor Niueans! What a time they did have finding words for what the white man brought in amongst them. I could fill many pages with their brave attempts but will keep to those which I think will interest you most, and give you chiefly the English meaning rather than the Niuean Words themselves, for some are very long and would take up too much space. They had never seen “A Shirt”, they had worn nothing more than a wrapper round their loins: they dubbed it “The garment to be inside of” and to this day most of them refuse to hide the tail end, no! no! none of it must be lost to view. Half a coconut served them well as a Cup but whatever is this? A Jug. We use only one word, they use 5 which means “A long Cup with a mouth”! They tried hard at “A Frying Pan” gave it up and made a dash at English, it is a “*Pani falai*” which is pretty good, isn’t it. When these newcomers opened a school for them as well as their children they had a great time coining words. The Alphabet is “The Eyes of Writing”. Ink was fairly easy, just “Writing Water” (even as medicine was “Plant Water”). In early days everybody used a quill pen only; so they called it easily a *Penefulu* “A Feather Pen”. They seemed to think much more highly of a Pencil for it is “The Talking Pen” but a Slate Pencil had to take a humbler place, it is only “A Stone Pen”. When Nibs came into use they worried much over the strange thing. They would not give up the Quill idea altogether so call them “The Eye of the Feather”. A Button is “A Moon” because round and white; a Blanket is “A Sheep”; Mustard is “The thing to eat which stings”. To jump is “*Hop-o*” that is finely correct, but what think you is to Kick, it is “*Holi*”!! Deaf is to have “A Frozen Ear” and other words (in use of course before the white man came) are Toes “The eyes of the feet”, just as Fingers are “The eyes of the hands” and Nails are also “Moons”. They have no word for Dad or Mum yet have “Papa” and “Mama” in their language but Alas! “Papa” means “A Wooden Club” and “Mama” means “A Mouthful”. I wonder what your Parents would say if you called them thus! Some of our

---

<sup>105</sup> Niuean words are also the subject of Chapter X, *Word Building*, in Part II, *The Chronicles of Savage Island*, and *Quaint Speech of Niue*, in Part VII, *The Pacific Islands Monthly*, July 1942, pages 45–46.

words they have adopted in full because they seemed easy to pronounce. Their Alphabet like all other Polynesian peoples is short of many of our letters and these they found and still find very hard to get at. J is hard whilst P is easy, as is T; Z quite impossible. One day my roof was leaking and I wanted the homely Washing Tub in my Wash House. I called for help and eager helpers came. My Niuean was very weak, I got out what was a Bowl, it was rushed in, then I got out what was a Saucepan and in a moment it was mine, then came a Basin, then old Tins. It was time I did something myself, I went forth and laid my hand upon The Thing I really wanted. Those dear eager folk answered with a joyous shout “The Tub! The Tub! Why did you not tell us from the very first.” They laughed and so did I.

I have told you that they have long words — and phrases too — but they have short ones also. We are like them but sometimes the two languages do not agree. We are short winded, they are long, and vice versa. In “I cannot say” we beat them hollow for theirs is “*Kua nakai ma eke au ke pihe atu*” but in “What do you want it for” they win out for they cover it all in “*Moha*” just one word. They are in love with one letter “K”, they seem unable to keep away from it and as I have given you a sample of Tahitian in the Boy King’s Letter I think you may like to see a sample of Niuean in a Notice I received to attend a Nigger Minstrel Show at Alofi. You will see “K” bobbing up all the time. The English is “Be sure and come to see the Black men of Africa who were once slaves in America and hear their Songs of Sorrow and Joy”. That’s short and to the point but now see it as the Notice reads:

*O mai oti ke kitia e tau Tagata Uli Aferika he vaha nefaka  
tupa ai he tan Meleke i Amerika, moe logona ai e tan Lologo  
nefa uhn e lantolu, kna hagao ke he mate matekelea ha  
lautolu, katoa moe, Tan Lologo atu motu mo efalu a  
mena fulufuluola Kehekehe.*

That’s long winded enough surely! Try it as an exercise and don’t strain your vocal chords with those Ks. Every vowel separately sounded — like the French — and roll out those last two lovely words — *fulufuluola Kehekehe* — the meaning of which you can guess at. What I specially like about the Niuean language is the Humility of its Pronouns — there’s no I, I, I about it as if I was the most important person of all, they are never vain, they always follow the verb. And now with “*Toka e mena ai*” I close which, being interpreted, means “Enough”.

### 30. Of Malifa (2) <sup>106</sup>

The natives’ school attends the whites’ school for Singing which when I was with them the Headmaster, a New Zealander, took in his care a wonderful Teacher of Song. I have never heard the like in any School and I am sure that like me you would have been thrilled. It was all Part Singing. The elder boys had a rich bass voice, the Tenors sweet and clear, the Altos deep and full throated, the Sopranos clear as silver bells. They sang without accompaniment by any instrument or score in their hands. I looked forward eagerly to those weekly lessons. He had taught them by the Tonic Sol Fa method <sup>107</sup> — ask someone to explain this to you — and among their repertoire were such old favorites as “Hail! Smiling Morn,” “Sweet and Low,” “Little Boy Blue” and that soft Samoan “Song of Farewell” which once heard can never be forgotten. These were light work compared to the supreme test he had given them. When they burst forth into Handel’s “Hallelujah Chorus” the climax was reached. Up, up they soared, nor ever faltered. Back and forth went that wondrous Song

<sup>106</sup> See also *Teaching School, A Tribute, Tit for Tat and Love’s Offering* in Part XI, *Roaming the Pacific Waters*.

<sup>107</sup> [Tonic Sol Fa Method](#).

to the very end, then dismissed they would scamper off to play all unmindful of their gift of voice trained to perfection by the White man. I could not have enough of such sweet melody so laid a plot, offering to talk to them of the great world outside but the gathering must be under the open sky and at the end they must sing for me. It was a great success. Amid the gently waving palms the dark skinned and the white skinned sat upon the sward, their teachers too and many a visitor or friend, as I took them on a magic carpet to Canada or Australia, to Japan or Alaska, or my own Homeland. When I ceased, the Head boy would rise and thank me on behalf of the large crowd — Samoans have courtly and perfect manners so unlike others — then came my reward full to overflowing. But No! they had not done with this stranger in their midst. When they learned that I was off to Niue, they would not let me go without still more thanks. Both *Ifi Ifi* and *Malifa* said that as I so loved to hear them sing they would give a Farewell Concert all to myself. A Concert for One! Who ever heard of such a thing? Nevertheless it was so and that lone man will never, can never forget it. It was held in the former's large schoolroom and their Headmaster sat beside me, leaving everything to the scholars. "Malifa" opened the programme with a Samoan Chorus "How can I bear to leave thee," then came various Part Songs, English and Samoan, by the combined schools, and "Rule! Britannia!" clos'd Part i. There was an interlude and that same Head boy stepped forward and begged me to accept from them as a token of Ifi-Ifi's love a Samoan paddle. He was forthwith followed by native boys and girls who in Malifa's name made further offering, the girls flung over my neck *Ulas* (necklaces) of seeds and shells, the boys laid in my hands tortoise shell rings, embossed in silver, and embossed in gold. Then a strapping young fellow made the gift of a lovely grass made fan from my two faithful Assistants at Malifa, anxious to show their love but shy to do so.

Now follow'd more Samoan Choruses, the last 2 those they knew I loved best of all — the words in their melodious language but I knew well their equivalents in my own tongue, "Over the deep blue sea, we speed you" and "Goodbye dear Friend we never will forget you" and with "God! Save the King!" that unique and wonderful Concert for just one lone wanderer came to an end.

Malifa is not all that I hope to tell you of that proud Nation, the Samoan, but other Tales must wait their turn.

### 31. Of South Sea Curios (2)

You may have been told of "Tin Can Island" but in case you have not I will write to you of it. That is the island where the careless mother pigeon dwells.<sup>108</sup> It is a very dangerous island for ships to approach and very difficult to land on. Everybody no matter where they are loves to receive letters and to write to friends or on business so what could be done here? A brave white man solved the difficulty and it is still carried on. Brave because there are those horrible sharks hovering around every island, hungry for a meal. It was very interesting to watch that postman. Here he comes breasting the waves carrying in one hand a long stick to the top of which is attached a tin can well wrapped in waterproof material. He reaches us, a sailor draws up the wand, opens the tin and places therein the mail for ashore, lowers the stick to the fine strong fellow in the sea and with a cheery word from one and all off he goes, a postman to be proud of. Now 2 natives do his work.<sup>109</sup>

To make gardens and farmers' fields fertile in their produce white folks the world over sprinkle on the surface what is called phosphate. It is wondrous stuff, very valuable since it is found in only a few spots and those are islands. There are 3 islands in Polynesia where it is found, one only 100

<sup>108</sup> See Tale #26, *Of South Sea Curios (1)*.

<sup>109</sup> See also *Tin-Can Island* in the chapter on *South Seas Curios* in Part XIII, *Roamings In the Great South Sea*.

miles from Tahiti — its name Makatea — and 2 fairly close together 1000 and more miles away — their names Nauru and Ocean Island. It is of the latter 2 I want to tell you and a very curious tale it is; How a doorstopper lead to Fortune, just a lump of something or other which we use to keep a door from slamming. <sup>110</sup>

About 40 years ago <sup>111</sup> the Supercargo (the man on board a ship who attends to the trading of the goods carried) of a Sydney (N.S.W.) Trading Company brought back a strange looking piece of rock which he saw on Nauru. His employers thought it was a lump of petrified wood, of no value so used it as a door stopper. One of the officers of the Company kept looking at it and wondering. At last he decided to test it, so he knocked off a chip, ground it up and lo! he found it was the highest grade of phosphate. That door stopper has brought millions of pounds to the Company and finding more on the neighbouring island the millions of tons still left are no longer owned by the Company but by the Governments of England, Australia and New Zealand who watch over them with a careful eye and sell the wonderful plant food to the world. Makatea is to me not a pleasant place to visit as everything — and you — is covered with a fine greyish dust which you cannot escape from as the winds seem ever blowing.

I have told you of the Minah bird and the *Malau*, I must not forget that highway robber the Frigate bird. He is a lovely looking fellow with his two long tail feathers trailing out behind him as he flies aloft looking for plunder. He is abominably lazy. Catch fish? Not he but waits till he sees some other bird successful who mounting up with a fish in his beak heading for his nest, the robber swoops down like a flash of lightning upon the other fellow who drops the fish in his fright and the meal is caught ere it reaches the sea below. Some islands keep the beautiful fellow as pets and it sits on his perch, perfectly free to fly away. But No! not he. Sometimes he takes a little exercise but back again he comes. Yes indeed there are many curious things in Polynesia.

### 32. Spaniards Ahoy! (1)

The last of a sailor's term of welcome or warning. But whatever have Spaniards to do with these little Tales of the Great South Sea and especially with Tahiti? Read on and you will see. Neither the British nor the French were the first white residents — I do not say the first visitors — on Tahiti. They were Spaniards and of these I will tell. When the first white men saw the waters of the great Ocean (of which they had never heard) from the Darien hilltop in the Panama Isthmus (see your map) none of them not even their leader essayed to venture on it. But Magellan <sup>112</sup> did, finding his vessels' way in through the strait far to the south that bears his name to this day. Then West, West, ever West he sailed wondering wherever he was going until he had actually crossed it and reached the Philippines. He saw nothing on his way, Polynesia, with its thousands of islands was still unknown. When the news of the vast new Ocean reached his Homeland the Pope (papa, Italian for Father) of Rome did what you will think a very strange thing but he did not think so for he and all the peoples and nations who looked up to him thought himself to be the greatest and the supreme Sovereign in the World. Alexander the 6<sup>th</sup> was his name and in 1493 he gave the whole Ocean (which had been named the Pacific since it seemed to be always so calm, which as you know who live by it, is very far from the fact) to His Majesty the King of Spain with all the lands or islands it

<sup>110</sup> See also *How a doorstopper lead to a Fortune* in the chapter on *South Seas Curios* in Part XIII, *Roamings In the Great South Sea*.

<sup>111</sup> A detailed account of this story can be found [here](#). The rock was brought back from Nauru in 1896 and tested for phosphate in Sydney in 1899. WWB wrote this Tale in January 1940.

<sup>112</sup> [Ferdinand Magellan \(c. 1480 –1521\)](#)

might contain!!<sup>113</sup> Of course those countries and nations which did not look up to him as their Leader took no notice whatever of such a Gift and sent their ships to find out what the great Ocean held, and we English were the keenest seekers. Your Teachers can tell you the names of those daring sailor men. I must keep to Tahiti, which Wallis first saw and called it “King George III Island.”<sup>114</sup> Soon after him the French Captain (de Bougainville) saw it and not knowing of his predecessor he called it “New Cytherea.” When they reached their Homelands the news spread over Europe and the King of Spain was furious. But Cook was on his way by then, had landed and gone away. He of course gave it no name since his fellow country man had done so tho’ you will be told in books that he called it with those nearby “The Society Islands” the name he gave to a group 100 miles away but which is now used for one and all. The King of Spain sent strict Orders to his Viceroy in Peru to send out his ships and try to find out just where and what those “intruders” were up to. He seemed especially keen about Tahiti — he did not know that name of course, nor exactly where it was, but His Orders were Find it and report at once. So Captain Boenechea<sup>115</sup> set out in 1772 and reached the island to which he gave the name “Amat” after his Viceroy.<sup>116</sup> Poor Tahiti with 3 other names to carry!!! He dropped anchor at the southern end — not as the others had done at the northern — on the tail of the Fish as Tahitians describe their island — as if you were to see a good snap of it you would say at once “Yes! it is just like a flat fish.” He set up a huge wooden Cross which read (of course in Latin) *Christus Vincit. Carlos iii Imperator 1772* and went back at once to report that Cook had been staying on the island and making friends. His Majesty thought that the best thing to do was to settle Spaniards on it but first to send some missionaries to prepare the way. So back came Boenechea bringing 2 priests and 2 what are called “lay brothers” one of whom was by far the best and the brightest of the 4. The Captain had taken back with him 4 natives and this young man, then a warrant officer, had been their best friend and had learned much of their language by the time he and they returned in 1774 — but only 2 for the other 2 had died, one in Peru, the other in Chile. The priests had furniture with them and everything looked very rosy for Spain but (now please have PATIENCE).

### 33. The “Enquirer” (1)

Come! let’s have a sail in my fine yacht “The Enquirer” and see what we can learn en route. I hope that you are a good sailor for it is quite a long voyage I propose to make, all round the coast line of both New Zealand and Australia. Bring an Atlas and a Note Book for I feel sure you will need them; I have my Charts and Sailing Directions. I carry my Guide Book in my head!! We must only touch certain points otherwise we should have to sail “till the cows come home” and I should have to cover reams of paper. We “up anchor” at The Bay of Islands N.Z. very picturesque and where rich folk keep their powerful launches to go after “Big Fish” (monsters of the Deep) their only superior in size the Whale. Hello! Where are we now? Mercury Bay. What a strange name. Did men find mercury there? Not at all. Capt Cook having observed the Transit of Venus (ask your Teacher) at Tahiti, here took in a transit of another Star called Mercury. Note that down please. And now what? Poverty Bay! What a name! Cook sent a boat ashore to get water and wood and food but the

<sup>113</sup> [Inter caetera](#) was a papal bull issued by Pope Alexander VI on 4 May 1493, which granted to Spain all lands to the “west and south” of a pole-to-pole line 100 leagues west and south of any of the islands of the Azores or the Cape Verde Islands.

<sup>114</sup> Samuel Wallis, an English sea captain, sighted [Tahiti](#) on 18 June 1767. Wallis was followed in April 1768 by the French explorer Louis-Antoine de Bougainville. Captain James Cook visited the island in April 1769 to view the Transit of Venus on 2 June; he set up camp at Matavai Bay and stayed on until 9 August 1769. See WWB’s articles “Discovery & Discoverers of French Oceania” and “Some Common Errors in Tahitian History” in the 15 February 1939 edition, pages 32–33, and the 16 May 1932 edition, pages 52–53, respectively, of the Pacific Islands Monthly.

<sup>115</sup> [Domingo de Bonechea Andonaegui \(1713–1775\)](#)

<sup>116</sup> Viceroy of Peru Manuel de Amat y Juniet

Maoris were unfriendly, said they had nothing to spare; of course untrue. Close by we run into the Bay of Plenty. Here Cook got all he wanted : those Maoris were very friendly. What's that Point we are just rounding? Kidnappers. That's a funny name. Why? The Maoris there brought supplies to Cook in their big canoes and his men stepped into them to help hoist the goods aboard, when off paddled the Maoris with the poor sailors for a cannibal feast. Cook had to fire his cannons over their heads which so scared them that they turned back and the men — a Tahitian among them — got safely aboard. You have made a note of course of all gone before and this? O! Yes. Well! here's something more for your book, here's Turn again Point. I must tell you that we English were the first white men to see the East coast of New Zealand whilst the Dutch were the first white men to see the West coast and Tasman (1642) was years ahead of Cook. It was just the same with Australia. Cook had by now thought he had sailed quite long enough South for this time so he turned north at this Point but we won't : we'll keep on. What about that Note Book of yours? No! No! I'm not forgetting Captain dear. But New Zealand is coming to an end, there's no land ahead! Right and wrong. Here we are at Cook Strait which he found later and so learned that there were 2 islands where Tasman reported only one. We had better go thro' it or we shall never get Home. But look over there to your left. There's Massacre Bay where Tasman sent a boat ashore for food and water but they never returned, they went into the Maoris Cooking Oven and were eaten themselves!! What a lovely mountain that is with its white nightcap on. Yes that is Mount Egmont called after a nobleman at Home and it is always snow capped. Now for the top of the island. See that long straight Sandy Beach. It is 90 miles long and a fine place for Auto Speeding, so smooth and hard. What's the name of the Cape that ends it? Tasman was a very courteous man. His Chief the Governor of Java (Dutch East Indies) had sent him out on a voyage of discovery. He had found Tasmania — but that was not its original name — and he called it after his Governor's name that horrible one of Van Dieman which as a little boy I thought meant that the island was inhabited by devils! So now he courteously gave the name of the Governor's wife to the Cape you see yonder. Soon after he ran into the 3 small islands we are heading for and being a very religious man he gave them the name of the Feast Day on which he discovered them — the Feast Day of the Visit of the Magi — the 3 Kings — to the infant Christ lying at Bethlehem. <sup>117</sup> Be sure and make a note of that, you can give it as a poser to your classmates at school. Tasman went east from there and discovered Tonga but we must steer west and cross the Tasman Sea, a very turbulent sheet of water, well nigh as bad as the Bay of Biscay, its storms are terrific but we must take our chances if we want to see Australia's coast. I think perhaps a little rest ashore first may be welcome to you, so back we'll go to the Bay of Islands, cast anchor and visit the north island with its wonderful caves and their underground rivers, the hot springs of Roturua where the Maoris need no stoves and you can have a hot bath, or a cold bath, a sulphur bath or a mud bath! which sounds horrible but really is far from unpleasant. I hope you have enjoyed the sail and like my yacht "The Enquirer." Were you sea sick? I hope not.

### 34. A Native Feast <sup>118</sup>

Many a one I have attended but none to surpass for size, for food, for merriment that held at *Matafanga-tele* a village 3 miles from Apia (Samoa) given to his Honor the Governor. Not that village alone but others close adjoining combined to greet him and I was one of his party. A Feast is not Eating only, there is Dancing, formal Speechifying, ceremonial *Kava* drinking and oft Musical Drill. But I must here confine my tale to the first named only, which is quite enough to go on with. I

<sup>117</sup> Cape Maria van Diemen, named by Tasman in 1643, is at the northern end of Ninety Mile Beach on the northwest coast of the North Island of New Zealand. The Three Kings Islands are a group of 13 islands about 55 kilometres northwest of the northernmost point of the North Island. WWB circumnavigates the North Island clockwise in this Tale.

<sup>118</sup> See also *A Malang-a to A Wild Finale* in Part XI, *Roaming the Pacific Waters*.

was fortunately early on the scene, walking under a blazing sun to reach the pretty village just as busy hands were Laying the Table which was Mother Earth. Coconut leaves were the table cloths, mats on either side for seats! From all quarters there came pouring on the scene men and women carrying food in baskets of (the Jack of all trades) palm. Out poured taro, fish baked in leaves, breadfruit, legs, wings and breasts of chicken, and shrimp salad too! One lone thing still wanting — Pork. It came, not piecemeal but a monster pig, roasted whole, born on a long, stout stake carried by 4 men. Those huge knives that cut grass yet hew trees down, which are axe, saw and a whole carpenter's tool chest in one to the Samoan got to work. The meat was cut into thick strips 6 inches long and let fall upon that lengthy table, it did not seem to matter where. Of course there were no plates, nor knives nor forks. Half a coconut shell were the cups, what they were to hold was left to conjecture. All was ready, soon everybody was present. His Honor was lead to the head of the Table and we all squatted down. Opposite me were 2 *Taupous* (Tor-pows) which was an honor in itself. I must tell you why. Every village has a *Taupou*, the Village Maiden who acts as a Village Hostess. She is a most important person, almost a sacred person, has her own especial Home where she is tended by an elder woman guardian (or Duenna) and many servants at her beck and call. On marriage she loses her post. For all their high position they are only young girls after all. My vis-a-vis quickly showed their bright side. They were buxom lassies and for dress they wore a very light corsage of tissue paper and the same for a skirt, the colour deep blue and maroon. There was no Grace pronounced so all fell to. My *Taupous* seemed half starved whilst my appetite was poor but when — with a gracious smile — one of those Exalted Maidens broke a taro in her comely hand and offered me one square inch, adding thereto one small shrimp I could not well refuse. I saw His Honor bravely tackling a chicken's wing with hands and teeth as if to the manner born so took courage with my Shrimp. The company ate hard and fast, yet if all the seated ones had eaten steadily till night fall they would surely have failed to clear that immense Table groaning under the weight of the delicacies upon it. And yet it vanished before my eyes. My *Taupous* in fact behaved abominably, they seized article after article before them or within their grasping reach, fat pork, fish, taro, slipping them behind their backs whence boys with long narrow leaf baskets seized them, stuffed them in and made haste for "the tall timbers." I confess that those shameless Eves tempted me beyond resistance and I assisted readily, giving all my share and more that was not my share to those brazen thieves opposite. One does not have *Taupous* to please everyday. His Honor had served himself well so had All. Bowls of water now were passed around and there was Washing Day — but Alas! no Towels. Our drink had happily been coconut milk. I fear'd 'twould be that obnoxious *Kava* which tastes like gingered soap suds, but Samoans delight in. Too much and your legs give in, but strangely enough your head never. All was over. I rose, bowed to my Tissue paper Maids of Honor, took in all that followed and walked home ere darkness fell.

### 35. Spaniards Ahoy! (2)

Alas! misfortune after misfortune befell those new arrivals. First one of the sailors of the *Aguila*, the same ship as before, was killed by a falling tree as the crew assisted the natives in felling timber for the Dwelling House, he the first white man to die upon Tahiti. Next, a worse thing for them, for their Captain died aboard and was laid alongside one of his men. Those graves are irretrievably lost though many and I amongst them have sought to place them. Then to crown all : those 2 priests proved to be Cowards, rankest cowards, the only missionaries I have ever heard of who were Afraid and Scared. You will read of those in Canada who braved the Iroquois <sup>119</sup> and died heroically; of Livingston in Africa; of John Williams in the South Sea and countless others, all brave men (and women too) but these 2 disgraced themselves, their high Calling and their Country. They were afraid, once the *Aguila* had sailed away, to leave their compound, afraid to let the natives in, afraid

---

<sup>119</sup> WWB has *Iriquois*.

to attempt to learn the language of the “idolators” they had come to convert to the True God. But their rank cowardice was more than made up for by that lay brother of theirs who was left behind to act as Interpreter. He must have been a young charmer, went everywhere, met everybody, saw everything, walked and canoed completely around the island, welcomed by one and all. His name was a pretty one, a truly Spanish one, Maximo Rodriguez and fortunately he kept a Diary,<sup>120</sup> a copy of which lies before me as I write. I am sure you would love to read his Tale, it is full of adventure and wonderful things, and best of all he is no Boaster. Of course those cowards were jealous of him, as he was disgusted with them, so Tautira — the village where they lived — was not at all a happy place. This lasted for a full year. At last (and Oh! how glad those cowards were to see the sails of the *Aguila* again as she drew near to whence they spied her through their barred windows) they might escape from the Terror which filled them. The new Captain had come to see how things were going, and was surprised to have these priests appeal to him to rescue them and bear them off Home. He could but comply, the slacker lay brother was no less glad to leave but not so that charmer Maximo. But Orders were Orders so aboard went the 4 and that was the end of Spaniards as residents of Tahiti. Others came and went but no more priests<sup>121</sup> came till long years after when the French had Tahiti under their control. And Captain Cook came too. He had missed Boenechea and Langara<sup>122</sup> who had succeeded him — I often wonder what would have happened had he met them — but in 1777 (on his last visit before he was killed by the Hawaiians through a foolish mistake of theirs — thinking he was giving orders to Fire when he was really giving orders to cease it) he went to Tautira and saw the Cross Boenechea had set up. That was much too much for him. He ordered the ship’s painter to come ashore and paint on the reverse side in large letters (he kept to Latin also) this: *Georgius Tertius. Rex. Annis 1767, 1769, 1773, 1774 et 1777*. He must have smiled to see it as we do to read of it. The Cross alas! was of wood, not stone or coral, so has long ago rotted and gone. But Carlos heard of what the impudent Captain Cook had done to his Cross and sent orders to Peru to send a vessel to remove it and destroy it but that mission was never carried out, Spain in Peru was too busy with other troubles to bother about it and at Home his Country went tumbling to pieces and with it went its ridiculous claim to owning the whole Pacific Ocean. So Tahiti was left to itself once more till Eleven years had passed when the “Bounty” appeared<sup>123</sup> —

<sup>120</sup> An account of Maximo Rodriguez’s Diary can be found in [The Literary Gazette and Journal of the Belles Lettres, Arts, Sciences, &c \(W.A. Scripps, 1837\)](#) and is reproduced here: *Among the donations presented to the [Hakluyt] Society, was one by Captain Fitzroy, R.N. namely, a very curious Spanish MS., being the Diary of an expedition to, and residence upon, the Island of Tahiti, by Maximo Rodriguez, in 1774. This Maximo Rodriguez was a Spanish soldier and interpreter, who accompanied an expedition from Lima to the island of Tahiti; and he, with three other persons, were left upon the island for about thirteen months. Cook, in his voyage, mentions the fact of the Spaniards having visited the island, and heard much from the natives of one “Mateema,” the Tahitian pronunciation of the Spanish Maximo : and, in a subsequent passage, he says, “Will any thing ever become known to the world of the proceedings of the Spaniards at this island?” By a very singular coincidence, after a lapse of sixty years, the original diary kept by the said “Mateema” was placed in the hands of a captain in the British navy, at Lima, by Don José Manuel Tirado, presented to him by the daughter of the before-mentioned Rodriguez, who, having heard that Captain Fitzroy, in H.M.S. Beagle, had been employed in surveying the coasts of Chile and Peru, and that he was making inquiry for all MSS. that could be obtained, sent it to him, begging his acceptance of the diary, saying, “that she felt sure it would be better placed in the hands of an Englishman, and more valued in England, than it ever could be as concealed from the world, and uncared for, in her library at Lima.” The Diary was subsequently translated by Bolton Glanville Corney and published in Volume 3 of [The Quest and Occupation of Tahiti by Emissaries of Spain During the Years 1772–1776, Told in Dispatches and Other Contemporary Documents](#). WWB includes a condensed version of the Diary in *The Spanish Marine’s Story*, an Addendum to *Old Time Tahiti*.*

<sup>121</sup> Catholic priests, that is. Four of the Anglican missionaries that arrived on the *Duff* in 1797 were ordained ministers — James Cover, John Eyre, John Jefferson and Thomas Lewis — and others — such as George Platt and Alexander Simpson — arrived at a later date. See [Tahiti, Island of Love by Robert Langdon \(London, 1959\)](#) and *L.M.S. Pioneers, Their Work at the Octagonal Church at Tahiti* in the 22 January 1937 edition of the Pacific Islands Monthly, page 6, in Part VII.

<sup>122</sup> The article on [Langara](#) in the English version of Wikipedia does not mention his voyage to Tahiti in 1775; see instead the article on [Langara](#) in the Spanish version of Wikipedia.

<sup>123</sup> On 26 October 1788.

you probably have seen the Film of its story as told by 2 of my warm friends here — the Americans Hall <sup>124</sup> and Nordhoff. Then another Eleven years and the English missionaries came <sup>125</sup> — not visiting but as residents. They lasted : we are their successors, the Spaniards didn't. Now you know.

### 36. The “Enquirer” (2)

Well! and what do you think of the Tasman Sea now you've crossed it? Pretty rough and stormy wasn't it. But you've proved yourself a good sailor, good as I am who once was a bad one but long travel has cured that. So here's Australia and let's get busy. Got that Atlas and Note Book handy? Very good. We'll begin here where you now see the land of the great Continent, and where Cook first saw it in 1778 Cape Howe, then turned North. If he had gone a little further West he would have gone through Bass Strait. Who was he? A naval medical officer who loved to explore and he with his officer chum named Flinders got a little boat and sailed away from Botany Bay to find out what they could. They found Van Dieman's Land was an island, not part of the great Island Tasman thought it was : We'll meet Flinders again. Poor Bass came to a tragic end in South America. <sup>126</sup> Here's Botany Bay. What of it? Far too much to tell you all. The lovely flowers captivated Cook's botanical friend aboard so he called it by that name. It is quite close to Sydney of today with its wonderful harbour but Cook missed it altogether, a remarkable thing with such keen eyes as his. Now up we sail and take of course the inside passage along the Great Barrier Reef. When I went that way years ago I thought it would never end. Ask your Teacher for its length <sup>127</sup> for you might think I had added a 0 too many! Why a “Barrier” Reef? Because there are 2 kinds of reefs, one often miles away from the shore, that is a Barrier Reef, one hugging the shore, in fact it is the shore, that is a Fringing Reef. Make a note of that in your book please. Here is Cape Tribulation and well might he call it so for opposite it his ship nearly came to grief. A spike of coral pierced the side of his vessel. By a miracle it broke there, and remained in the puncture and the ship was thus kept afloat till he reached the shore. Here we are at the entrance to the Torres Straits and will say goodbye to Cook (who headed away for the Hawaiian Islands and alas! his death) and must meet Lieutenant Flinders again. The Dutch had made their way into the Gulf of Carpentaria <sup>128</sup> and it was so long that they believed it reached down to the Antarctic Ocean. Now Flinders of course knew better, he had been halfway along the South Coast. His friend had gone but he tried and tried to get leave to get another boat “a cutter” and see really what was what. At last he was free and sailed up to the Gulf then kept going West, then turned South, then turned East then North again and reached Botany Bay from whence he had started. He had found what Tasman and Cook had thought 2 huge islands and called each by a separate name was one huge island — a Continent. Going Home he wrote a book <sup>129</sup> about his marvellous, lonely journey and called the continent “Australia” — the first to use the name. He died before the book was off the press but the British government read it and said, “That shall be its name.” Are you putting that down in your note book? Yes of course I am. I must tell others about that for sure. And yet this hero seemed quite unknown to many Australians I met. They said to me, “And pray who was he?” We have seen the Gulf haven't we, and now we are on the Dutch side. Here we are at Dampier archipelago. Was he a Dutchman? No, a daring Englishman, and a bit of a pirate, who in 1699 got that far south, but found nothing worth taking. If only he had known about the pearls beneath his ship! We shall pass Broome where

<sup>124</sup> See *The Late Mr. Bolton of Tahiti* by James Normal Hall, reprinted from the February 1945 edition of The Strand Magazine in the June 1947 edition of the Pacific Islands Monthly, page 43, in Part VII.

<sup>125</sup> Protestant missionaries arrived on the *Duff* on 5 March 1797, so eight years had passed, rather than eleven.

<sup>126</sup> Speculation on Bass' fate in or on his way to South America can be found [here](#).

<sup>127</sup> The [Great Barrier Reef](#) stretches for over 2,600 km.

<sup>128</sup> WWB has *Gulf of Carpentaria*.

<sup>129</sup> See “A voyage to Terra Australis: undertaken for the purpose of completing the discovery of that vast country, and prosecuted in the years 1801, 1802 and 1803,” [Volume I](#) and [Volume II](#), by Matthew Flinders (G. & W. Nichol, 1814)

fortunes have been made. Here we are at Dirk Hartog Island. He really was the first to see the Continent. He had rounded the Cape of Good Hope on his way from Holland to Java and thought “If I use the Trade Wind as far as I can going East and then turn North I may reach Java all the quicker.” To his astonishment he ran into a land those on Java had then never heard of. That was in 1616. So Tasman went to find out more. We have to be very careful now for we are near the Houtman Rocks. I will warrant that Dutchman will turn in his grave at the very thought of them tho’ he had his experience as long ago as 1698. Now Ho! for the Great Australian Bight — please note not Bite — the sea rages and fumes but never bites — ask your Teacher what a Bight is — then thro’ the Strait we first saw and we like the gallant Flinders have circled Australia. Now ashore we go, hope you have enjoyed the sail. Take good care of that Note Book. “Au revoir” for of course we shall meet again.

### 37. Of Streets

You may well say What a strange subject for a Tale, a street is a street and that’s all that there is about it. But wait a moment. Streets have names haven’t they and these names are not like putting a lot of names in a hat and using the first one drawn out. Every Street has its name for some reason or other and there often is real History in it, and generally they are interesting, often quaint. I do hope you are Observant, not going through Life “with your eyes on the ground.” People who do that miss a great deal. You should keep your eyes about you, not to be inquisitive but to Learn. There is always something to be learned of whether you are very young or very old. I wonder if you could tell me why any street in Victoria is named as it is. If not, get busy and learn why. That is what I did when years ago I came here to live. I wanted to know all the names — there are 45 to be exact in the little town of Papeete — and why those names? Some were easy, others nobody seemed to be able to tell me but slowly I hunted them out and of these I will write. The most difficult of all was “Rue de la petite Pologne.” Whatever had Poland to do with Papeete? Nobody even the officials knew. When the French laid out the Town and put what was then a big native village into shape, there was a “Rum Shop” (saloon) at one corner of a lane which ran up from the waterfront and its owner, genial and very popular was a little Pole an exile from his Motherland. He called his shop “Little Poland” like Victoria has its names for hotels and restaurants and saloons and everyone knew it by that name. So when a street was made running up from that shop, the Authorities gave his Name to the whole street. He must have been very pleased for he loved his dear Land far away over the Seas. It took me long to find the Reason why. Rue des Remparts was another poser. It runs alongside a broad deep ditch dug all along the back of the town. I was told that the French dug the ditch as a Rampart against the Patriots (natives) when they were fighting one against the other in the 1840s. Nonsense. It was dug as a Bulwark or Defense against the streams from the mountains at the back of Papeete which formerly ran wherever they liked all over the place and lead them one and all to the sea. The enemy was Water not Men. You see the public thought Rampart must mean soldiers.

Another curious name is “Cours de l’Union sacré.” Whatever kind of Sacred Union could that be? That is a comparatively late name, given to keep in mind forever that when the Great War broke out in 1914 all little differences were forgotten and men whether French or Polynesian stood shoulder to shoulder in a holy fellowship.

The strangest name of all is a street with a Date for its title. I have never seen or heard of such a thing anywhere else. The Road Sign reads “Rue 22 Septembre 1914”!! It is to recall to all who pass along it of the cruel, brutal bombardment of the little defenceless town by a German Fleet which set the town afire and destroyed all the stores where now the Street runs in the very heart of Papeete.

I must tell you also of a “lost” street. Whatever can that mean? They have a Cook Street named after the famous Captain but no “Wallis” Street, the first white man to learn of and see Tahiti. I thought very strange so asked the Mayor why he was ignored. He said, “But we have a street so called.” I said NO, he said YES. He was sure that I was wrong but would look it up in the Town Hall. We were both right. When the town was laid out, the very first street opposite the Pass was drawn and given Wallis’ name, Cook’s the second. It so appears on the map made by the French but whilst Cook Street was made, Wallis was not and came to be entirely forgotten. There are residences today on it, not along it. It is “lost.” But the Mayor and his Council told me that that fine sailorman should not be ignored and they soon after made a new road — but alas! at the other end of Town and the sign reads “Rue Wallis.” I was glad.

Try now your hand on Victoria’s streets, it would be a fine game and you would learn about many Things and many Persons.

### 38. The Taupou’s Grave<sup>130</sup>

(Tor-pow)

Thus Chief *Iiga* (E-en-ga) of Savaii talked as we walked together to visit it : a fine, tall fellow, my “good companion” in long ramblings.

---

She was the pride of the village of Saleaūla which lies along the northern coast of this island of Savaii. Was she not the High Chief’s daughter, and herself most beautiful? Gentle and kind was she and pure of heart. When (arrayed in all her finery) she stepped forth from her falé to lead in the social round of feast and gaiety, then all men acclaimed her, and the women folk were of one mind that she did great honor to her sex. But sickness came and she drew nigh to death, and all made earnest prayer, day in, day out, that she might live; yet it was not to be. Then was there great grief in that village, for their *Taupou* lay dead. The young men mourned for her whom they had loved to serve and her maids of Honor refused to be comforted.

The grave was dug not close to, but within sight of the House of God, for the High Chief would fain have his daughter lie against his falé, that he and his might tend it readily as long as life should last. Great was the sorrow that day in Saleaūla as the Village Virgin was laid in her last sleeping place, and the earth put back which hid from sight that form which all loved so well. In due time they raised a tomb above it, the flat slab of coral rock all plastered over with lime; then upon that what you white men call a sarcophagus as if *TULUA* lay there robed in her winding sheet. That was in 1895 and she slept in peace as the years went on.

The seasons had come round ten times, and all was peace in Saleaūla : yet all unknown a great and fearsome thing was close impending. Nature was at war with herself behind the village, up in the mountains and valleys of this island of Savaii. No surface war when fierce winds blow and the mighty sea rolls shoreward in tidal wave. Below and hidden from the sight of men went on that titanic struggle. How long it had been fighting against itself no man could tell but at last the muffled roar thereof reached the ears of the village in tremblings and rumblings which made all hearts quail. They greatly feared, yet went their daily round. Then came the blow, so awful, so appalling which the villagers still speak of with bated breath.

---

<sup>130</sup> See also *The Taupou’s Grave*, in Part XI, *Roaming the Pacific Waters*.

Two miles back lay a deep ravine which cut off the mountains beyond from Saleaūla : a broad ravine too : a labour to get down and up. Suddenly as that memorable afternoon wore on, there was an unearthly noise, indescribable — for nature’s voice is not as man’s though men try to give it name — and the ravine came up! mounting toward the sky. It was no longer a ravine but a towering hill, and from its summit there poured forth flames and smoke, and over its awesome lip poured rivers of molten lava seawards : and Saleaūla lay directly in its path. Slowly it came, not faster than half a mile a day but it was relentless. Ample was the time given to get human life away : but their homes? and which way would it take? Men drew near and tho’ the fierce heat hurt them, they stood and — fascinated — watched. Eight miles of land it spread across and took down all that was in its path; the coconut trees fell one by one, sizzled in the flood, then lay still till utterly consumed : streams hissed and fought till they could fight no more, then they too died. Saleaūla was now in real danger : slowly the living, creeping thing came on and gripped the back of it, the falés fell one by one, toppling over as if loath to surrender; graves so precious were wiped out, the taro patches disappeared : Saleaūla was doomed : but No! the lava turned and the Western half was safe. But the Eastern! where *Tulua* lay and the Church raised its roof and where there was thickest settlement, there was seemingly no hope for these. The molten flood came slowly on, trees and falés falling, creeping towards the *Taupou*’s grave. Men and women stood afar off and held their breath as that hallowed spot was about to be wiped out and buried six feet below.

When lo! some Hand Invisible stayed its direct course, some word seemed given forth to Nature in its madness : Halt! it cried, and the flood stayed as it reached the spot and swept around instead, then went forward wiping all out till it reached the sea. There today lies the *Taupou*’s grave — a miracle of nature — a thing unconceivable <sup>131</sup> were it not true and to be seen by all — let him explain who can. The natives in their simple faith affirm that God, All Mighty, knew her Purity and Gentleness and saved her Resting Place that men might learn what He thinks of such. And there it is, and you stand on the black forbidding lava and look down six feet into the circle, and there, exactly in the centre is the Grave, a clear space all around where flowers grew and still do grow : so peaceful when all else you see cries War.

And that House of God nearby? It too was saved. The lava flowed directly towards its East end and where the Table of Communion stood. Fifty yards back stood the Pastor’s falé and between House and Church was a garden plot. The red hot flood brought down the falé and swallowed up both it and the garden but again the Command went forth “No further” and no further did it go. But it swept around each side of the House of God, yet left a space between the walls and itself : and then — as if it had obeyed its master but resented the command — the two waves met and forcing in the front door poured in to fill the Nave, filled it up to the window sills and stopped short before the Table! Who can account for such wonders?

---

As I stood on that lava field of eight square miles and saw the utter desolation wrought, it was Awe that gripped : but above Awe rose a feeling of supreme Content at the saving of God’s earthy House, and the *Taupou*’s lonely grave. <sup>132</sup>

---

<sup>131</sup> *Unconceivable* is an archaic form of *inconceivable*.

<sup>132</sup> [Mt Matavanu](#) erupted from 1905 to 1911.

### 39. Of Japan's Weird Ways (1)

When roaming in Japan long years ago <sup>133</sup> I saw and learned much that was new and strange to me, some of which I think will be of interest to you. Fancy the whole of Canada giving every year an entire week to Dolls' Shows men and women just as happy and interested in Dolls as the children. But that is the custom in Japan. Rich and poor put on their best clothes, keep open home and bring out from their hiding place their own childhood's dolls and dolls of past generations. These last are "heirlooms" very precious, some are "Emperors" and "Empresses" others are "Nobles" and "Great Ladies" and all are exquisitely appraised. Placed on shelves in the home, small tables are placed before them, laden with choicest food. There is a glorious time and the doll shops, a blaze of colour (and the meeting place of one and all) do a roaring trade. Then all is out away for another year, the rag doll alone being left for the toddler to cuddle and learn to carry on its back in preparation for the real baby brother or sister later on. I fortunately came in also for the Festival of the Boys — the Girls have theirs in the month of June. From countless poles in a town or village huge paper fish (the carp) fly in the breeze. That fish stands for Sturdiness. Each family hangs out as many fish as there are boys. For that week all boys "boss" their parents, they have their innings : every wish so far as possible has to be gratified. Poor parents! what a time they must have with the girls' innings ahead!

I was invited to a Tea Party. Yours are bright and happy ones full of laughter with heaps of good things to eat. This was Japanese style, a very serious and solemn affair. There were many guests. In a large room a low table was placed as a front and two others as sides; where there should have been a fourth side was some distance back a very low bench for seats. With long legs it was a very cramped "sit down." Soon the "Mistress of the Tea" appeared, a very formal lady so stiff of dress that I thought she would break in two as she bent low to make her bow. Then little girls appeared, a dozen of them all attired in their very best kimonos with heavily greased hair, all terribly serious. First they handed round some kind of "cookies" each on a tiny separate plate, one cookie for each guest, laying them on the floor before each of us, then bowed till their heads nigh touched the ground. Not a word spoken by anyone. The cakes distributed the Solemn Lady standing at the front table poured tea into tiny cups which the diminutive maidens bore around going through the bowing again. I put the thimble of a cup to my lips but passed the cookie to my neighbour whom I did not know but he looked stout enough to eat anything. Then with an awesome bow the Grand Lady with her painted and powdered face worked her presence away with bow after bow, followed by the little girls all walking backwards. The Tea Party was over. It was quite a strain. But such is the custom. I had to refuse politely the next invitation.

One had heard of Sacred Birds and even Sacred Monkeys but I had never heard of a Sacred Horse till I saw him on a lonely island in the far famed Inland Sea (see your map). No other horse is allowed there and he is fed and attended to not by stable boys but by priests. He was pure white and his open air residence all that could be desired. Of course he is never used as a beast of burden, he is far too holy for that. I wish that all Japanese horses were sacred, then they would not be such scrawny, unkempt looking things. The Japanese best like to be horses themselves.

Every Public Garden seems to have its Nursery. Of course I wanted to see the children, those wonderful dwarf trees and plants : a perfect chrysanthemum growing in a thimble, and cherry trees no higher than your hand. The secret of those wonders is known only to a few, so usually twice a year their owners, rich or poor send their tiny well beloved midgets to hospital for doctoring and nursing. Japan is full of beauty : for its people are passionately fond of flowers.

---

<sup>133</sup> WWB visited Japan in May 1913 on his way from Victoria, British Columbia, to England. See Part I, *Notes on the Life of WWB, Trip to England in 1913*. See also *Letters from Japan* in Part X, *Tales of Roaming*.

## 40. Of Japan's Weird Ways (2)

"It went against the grain" to see a human horse between the shafts of my light single seated carriage of two wheels which you may know is called a Rikisha. And what horses they are both in looks and in action. My first 'horse' trotted along holding a sunshade over himself with one hand, so huge that all I could see from my armchair were a pair of bare legs and straw sandled feet. A tall 'horse' (and there are some) tilts you at an uncomfortable angle, the more diminutive he is, so much easier for you. When it rained my 'horse' put on a cape of straw which made him look like a porcupine, he spread oiled paper over my knees and clear over the front of the hood. I felt as if I was in a Palanquin<sup>134</sup> on wheels. When your Runner — the proper name of the 'horse' — comes to a hill another man suddenly appears who goes behind and shoves. They seem always to sing a sort of sailormen's "shanty." It is not the etiquette of the road for a Runner to stop but for people to get out of the way. A loud "Hi" and the party afront gives a jump to one side. At night a paper lantern is hung on one of the shafts of the carriage and streets seem all alive with glow worms. Your Runner is very considerate, he will call out to you when you are going into a rut or a hole or crossing rails for the springs are strong and you might easily take a 'header' if you are not set firm. And the universal Japanese carriage was after all an American missionary's invention.<sup>135</sup>

Courtesy is an excellent thing but it can be overdone. Heading for a hotel in the countryside, my intent seemed somehow already known; for all the porters, the lackeys and the dainty maids of the house lined the steps, the manager on the top step, ready to greet me, bowing thrice to the ground as I mounted those steps. Fancy that at our hotels! It was amusing to watch a lady and a gentleman meeting in a street. They would spy one another 30, 40 yards away. Stopping short each bowed low. Then a few yards, another halt, another bow; this repeated again and again till the final bow brought them face to face. A weird way indeed.

A bald Japanese I never came across. The women's coiffures are oft enormous and you can tell the married, the unmarried and the widow at a glance as you pass them by : look at their hair for they were always hatless. The married have a large, broad curl on the top of their heads. They have in fact 2 curls, the back one is the highest, they lie crosswise. The unmarried puffs her hair out entirely round her head and in the centre of the circle has a neat little coil with glass pins stuck through. The widow either wears it down her back tied at the end with a little bow, or cuts it short. Hairdressers are visited once a week and as a pillow would be fatal, the women sleep with the necks resting on a wooden block cut to fit the neck. At 15 a girl has her hair up and takes to the block.

There seemed to be no escape from weird ways : here was a man sawing wood with a backward not a forward stroke, here were horses stabled their heads where their tails should be, here were house roofs all ready to be placed before the building was commenced, and scaffolding without a nail, long bamboo poles tied together with rope reaching up to a 5<sup>th</sup> or 6<sup>th</sup> storey. I saw no lifts but everything being carried up a long slanting walk either in baskets or on shoulders. The climax came when I entered a huge Department Store : no stairs leading from one floor to another; but a gentle slope of stone between the counters, either hand, leads you up as you go round and round till you reach the top where is a garden with its pond and goldfish and you take your sip of tea<sup>136</sup> beneath a full sized cherry tree its great branches loaded with blossoms, every blossom in their thousands made by hand! They are a strange people — the Japanese; their ways not our ways nor their thoughts ours.

<sup>134</sup> A type of litter, a vehicle of human-powered transport without wheels

<sup>135</sup> Reverend Jonathan Scobie (1827-1897) is said to have built the first rickshaw in about 1869 to transport his invalid wife around Yokohama; however, there are numerous other theories about the origin of the rickshaw, as explained here.

<sup>136</sup> WWB has *tree*.

## 41. Of a Castle in Nippon

In the dear Homeland there are many Castles, stoutly built and picturesque, many in ruins battered to pieces in warfare but still beautiful, clothed in ivy, whilst many are today inhabited. Great Lords and Ladies made their homes within those massive walls and they are redolent with history for those who want to know.

Though Nippon (Japan) traces back to as many — if not more — centuries as we do, I had not thought of such a building ever having been raised there, but so it was though they knew nothing of those in then unknown Europe. There were many of them, for each Great Lord must needs have one for defense but all have passed, like their owners, save one and to that one I made my way and we will gaze on it together. It stands in majesty and perfect condition at *Nagoya* not in the town itself but a short distance out on rising ground. Low, flat country surrounds it which throws the Castle out all the more strongly in relief. A moat broad and deep surrounds it, then comes a lofty wall faced with rough hewn blocks of stone, and within that moat and wall there are 400 acres of land, room for all the Great Lord's retainers if need arose to shelter them. He had his residence at one corner of the enclosure and close by was his Citadel or Keep, his last defense, which rises storey after storey each getting less in size till at its 5<sup>th</sup> and last you stand in a room only 12 yards square. The gateway leading in, after crossing the moat, is nearby and doubled, an outer and an inner, each with doors of tremendous size both in height and weight and thickness. That "Daimio"<sup>137</sup> was taking no chances at his gate. A soldier threw them open — for there are large barracks now on those broad acres, and a soldier also acted as my kindly cicerone. We entered where once the family gathered, the rooms not separated like ours by walls but by screens of lovely workmanship and colouring; and sparse of furnishings as are all Japanese homes, thence to the Keep. A huge key was produced and the old lock was slow to move but at last the little wicket opened and we stepped into utter darkness, then mounted by narrow, winding stairway those many storeys. Small window slits are frequent and the mounting view was beautiful. Here archers could ply their shafts and there are trap openings in the floors for hurling stones or boiling water on any foe who had forced an entrance beneath. All the way up there is a chain and windlass for there is a well at the base known as "The Golden Well" which has never as yet run dry. If all the acreage had been taken, the Lord could still hold out for none could cut off his water. Two Golden Dolphins, each 8 feet high are seen resting on pedestals, one at each end of the building's roof. My cicerone said there was \$80,000 worth of gold upon them (he gave it in Japanese coinage). I knew of their tragedy. In 1873 they were taken down and sent to the Vienna Exhibition, the Nagoyans greatly fearing both the fate of their treasure and their own fate against the demons of Nippon without their protection. On the return journey the ship was wrecked and the Dolphins lay long at the bottom of the deep hard by their home coast. They had to be and were recovered, borne in triumph to the castle, lifted once again to their commanding site the countryside over and the demons were "laid" for aye.<sup>138</sup>

With assiduous care, moat, vast wall, residence, Citadel and grounds look as if they were waiting, all prepared, for the Daimio, and his women, servants and his warriors to walk in through the Gate.

## 42. Of Temples Quiet and Noisy

How would you like to climb 2,150 broad stone steps at the same time? I became a Pilgrim and did it up and down for I wanted to see the Temple and the Perpetual Fire on the summit. It was on the Sacred island of *Miyajima* (where rikishaws and dogs and deaths are not permitted — if the last

<sup>137</sup> A feudal lord of Japan who was a large landowner.

<sup>138</sup> A history of the *kinshachi*, or Golden Dolphins, can be found [here](#), but there is no mention of the shipwreck.

named can be foreseen, where deer roam free and fearless, where crows and pigeons are held sacred too) which lies among The Thousand Islands of the lovely Inland Sea of Nippon, the Queen and loveliest of them all. Those steps lead from the village far below to the highest peak of the island and wind round and round the mountainside, while tiny shrines where Buddhas sit and piles of Lucky Stones are met with on the way. Just below the summit is the Fire which has not been suffered to go out for over One Thousand years. It is a wood fire housed in a rough shed begrimed with smoke. Great logs keep it glowing and no more. A very old priest was in attendance. Think of all the wood brought up there and consumed in 1000 years! and yet the island is close akin to a forest. Going up, there is the Temple's bell hung in a beautiful little tower. Another pilgrim — for I was a foreigner and an Unbeliever, kindly pulled the rope for me, just once, that I might hear its tone. A deep rich sound wafted itself off, it seemed to fill the air, echoing and re-echoing by hill and vale till it died out across the Sea. Entering the Temple which was barely furnished I saw a book kept there for visitors' names. Here is the Heading written in a very fair hand : — "M' Man and Woman : this Book is a Read at Miyajima, take it name." I took it. Then descended. By the countless pilgrims old and young I met upon the way I thought of boys and girls at Home oft grumbling at "having to go to Church." They might well with 2000 steps to climb!

This for a Quiet Temple, now for the reverse. There is Tokyo's great Temple in *Asakusa* Park its entrance guarded on either side by gigantic Protecting Deities standing in wire work cages, fiends with screwy limbs and hideous faces, the gratings spotted with paper prayers chewed into tiny balls and thrown at them. If his prayer will only stick the worshipper may go ahead and turn the Prayer Wheel and turning it once completely round become possessor within himself of all the Buddhist Holy Books without reading a line of them! And all around him is a very pandemonium of noise, dense crowds from morn till midnight, for here is "Coney Island"<sup>139</sup> of Japan (ask your teacher for that). There is no getting away from that noise though you pass those hideous guardians and enter the great hall where devout folk (from little toddlers upward) are busy bowing and scraping before the Altars, on which sit Buddha's images cut off from view by curtains. In front of the main Altar is a huge trough with stout bars atop into which you throw your money offering.

But Kyoto's Temple — the *Kiomidzu* — is even worse. Here before a grated goddess of hideous mien were men and women chatting and laughing as they tied their Lovers' Knots, threw a coin into the cage, rang a bell by a long rope, clapped their hands and tied the charmed knot to the grating, calling out aloud the name of the caged Deity. Standing beneath the broad porch roof and looking up I saw a beautifully striped snake of hugest size. Though it was doubtless sacred and might be harmless I thought it wisest to depart whilst the going was good. I left that noisy Temple and found quiet in the countryside. Please now, ever "go to Church" with readiness and be thankful that you are a Christian, not a Buddhist.

### 43. Of Cooks – Good Eats – and Coal

Old people have 'poor appetite', young people despite their meals are always ready for an extra 'snack'. Something to eat is a matter of great interest to growing boys and girls so I will whet (sharpen) your appetite, already keen enough, by telling you of some extra good things to eat if only you will go to Japan. But first of the Cooks who cook them. They are the most independent servants I have ever come across and at the same time will never "let you down." They do all the ordering and marketing for you. It is nothing to them to serve up wonderful meals three times a day and seem to rejoice if the last one is a large Dinner Party. They are also always ready to help one another out

---

<sup>139</sup> [Coney Island](#) is a peninsula and beach on the Atlantic Ocean in southern Brooklyn, New York City, New York, United States. Coney Island is possibly best known as the site of amusement parks and a major resort.

of a difficulty — never bothering to ask your leave — lending your fish or your Entrée, your pudding and your tableware. No one seems surprised to see someone else's silverware on his table. Yours is often a mile away, but a return is as certain as daylight.

Your cook is indeed a wonder. You may think Seaweed a horrible thing to eat but not after tasting his Seaweed Sauce. You may think it impossible to eat flowers but not after a dish of Chrysanthemum Salad. On a long platter he serves up a white concoction strung on a stick like you do chestnuts one after the other, he calls it *Midzu Am-e* and is Butter Scotch made from the sugar extracted from the homely rice. It is the Candy of the country from Princes to peasants and if you want more of it than he thinks fit to lay before you, you can buy it on the street where'er you may be. I dare not tell you of more good things to eat or you will become ravenous and want to leave Home and those who love you to sail away to Japan and I shall be blamed.

But the word 'Street' reminds me of the "Sewing Lady." There, sure enough, along she goes on her clattering wooden clogs, carrying needle, thread and multicoloured material in her basket together with a 3 legged wooden stool. Have I torn my sleeve? Down she sits where you meet her, right in the middle of the pavement and repairs you on the spot. I have often seen her busy with a client's pants, stitching away as he stands by her talking to some friend the while. That of course is woman's work but what I did not like to see was women doing work which men alone should do. It was women coaling ship at *Nagasaki* (see your map) the main coaling station of the Empire and a great and important port. The mines are on an island close by (*Takashima*) and the coal is brought from there in 'lighters'. From my steamer perch high above them I watched for hours the busy scene. The lighters hugged close to the side of my great Liner. They swarmed with women very scantily clad and soon black with coal dust. They stood on lines and passed baskets full from hand to hand up and up and up an inclined plane, the last 6 standing on crazy looking ladders leading to the opening in the side of the Liner where was the Coal Shute to the hold. A deft twist to the basket by the last woman, the coal disappeared, the basket was thrown to a woman who caught it, hurled it to the shovellers and soon it was on the grand circle once more. Everything done with rhythmic (ask your teacher) regularity and astonishing speed. Each lighter held 30 tonnes, and each had 20 women to unload it. My Liner took aboard 3,000 tons. It did not seem at all right to me, nor will it to you.

From Nippon I learned many things which I have but touched upon in these Tales lest I should weary you. We have roamed together hither and thither as the spirit moved me till we rest at *Nagasaki* — and from there I left Japan.

#### 44. Of the Kalahimu <sup>140</sup>

(Kale-he-mu)

He is of diminutive size this Niuean crab but what he lacks in size he makes up for in cheek and inquisitiveness. He's a public nuisance like the flies and war is waged against him night as well as day. He is a land crab whose home is the Bush if only he would keep to it but he seems much to prefer the habitations of Man. He enters your home without any invitation, he crawls up your walls in the most astonishing way and gets into places where least expected. It is always wise "to sound" your slippers and your boots or you may get at any time of day a really exciting surprise. He has heaps of fight in him like all his kind: the crayfish of the sea, the *Uga* of the rocks and caves, and all are freely eaten by the natives.

<sup>140</sup> See also Chapter XI, *Hunting the Kalahimu* and *A Matter of Taste*, in Part II, *The Chronicles of Savage Island*.

My little enemy is particularly fond of an evening stroll and elects for his chief promenade the broad grass-covered way that circles the island. I was invited to take part in a hunt one dark night for the crusty little fellow with nippers, half the village was out. There being no moon flares were used — bundles of cane tied loosely together — some brought a kerosene lamp, others bike lamps, I attended with a candle lantern. Out of the village we trooped into the dense forest, the great trees and the coconut palms shutting us in, tho' peering upwards I could see a lovely starry canopy above us. Along the sides of the road was the place to look where the coral touches the grass. There were those who carried and worked the flares, others a coconut basket like a carpenter's tool bag but sewn up save for a tiny space into which to drop the captured. Yet even at that the little nippers got often out and the bearer would cry out of a crab grabbing his or her arm or their neck or in their hair and I was quite useful in that direction for tho' very very old I still have excellent eyesight yet utterly failed throughout, to spot the little brown shelled fellows. Men women and children were all on the jump, every now and then swooping down and grabbing the unwary stroller and into the basket it went. It was a pretty sight those flares in the dark of the forest and a cheery one too for all were chatting and laughing and the sight of their White Chief out to hunt the *Kalahimu* seemed to amuse them greatly, though he was useless save at the call of distress. We walked many miles and half way were all refreshed by the youngest who climbed like cats up those palms in the dark and dropped huge nuts for us to have a most welcome and needed drink. They were a generous crowd, giving of their plenty to those who were less successful, and no little one's bag went empty. The road edge was indeed the best hunting ground but we nailed them climbing the trees and oft upon the road itself at the cost of a nip to naked feet thus made aware of their prey. If every bunch had our bag there must have been well over a thousand caught for we reached home with a bag of 50. The flares were exhausted, so was the oil, my candle lantern the only glimmer.

A buxom young lady who helped me with the infant class was very partial to that lantern of mine. She always preferred it to my kerosene one. Never once had she brought it back with any candle left therein. All the grease had likewise disappeared. I was not mean. I started it out on its way with a full measure of candle every time. One day I was spreading bread and butter for some expected white visitors and my candle lady was helping to prepare the table. Knowing young folks' love of a snack at any time I offered her a slice. "Thank you very much," said she, "but I do not care for white men's butter. I do like your candles though: they taste so good!" So that was where they went. Tastes differ largely at times. Again I could not be mean. She must have eaten several packages of candles, for I never refused her the use of my lantern. N.B. They were not tallow candles but of composite make such as you use in your home.

#### 45. Of Drunken Fish and Flying <sup>141</sup>

The *Aukara* on the broad "Fringing" reef of Alofi is a serious business to the Niuean native. It is the catching of fish in the cracks, the pools and the chasms of the reef by means of a special soporific (ask your Teacher). It must be done during two months only of the twelve and all according to strict custom and tradition. One thing special is insisted on, There must be none peering down from the cliff above, neither white nor native for that would cast a spell over the business and ruin all chance of success. Therefore I was on the reef and in the very thick of the crowd. Men were busy pounding in coconut leaf baskets the seed of the local Ebony tree, seed the size and shape of a small crab apple, a hard exterior green in colour, a soft pulp inside. They are ripe during June and July. The mash was ready. As the tide ebbed over the large area selected for operations, the natives beat the sea with sticks driving the fish back from the sea towards the cliff; then some of them kept guard where the reef edge is, so that no fish should pass out again. Now the word is given and standing in

<sup>141</sup> See also Chapter IV, *Drunken Fish and Flying Fish and Others*, in Part II, *The Chronicles of Savage Island*.

the shallow water round the cracks and pools and chasms — which latter often run far under the coral — the mash was drawn in the baskets through one and all. At once the whole space even where I stood in the wet turned a bright magenta, from a little distance it look'd like blood! This has the effect not of poisoning the finny ones below but of blinding them and confusing their poor wits so that they swim aimlessly about and are too drunk to care what happens. Now over 100 men, women and children, some with nets but most with long 20 foot sticks bearing 3 and sometimes 4 points bound to the head, got very busy. I saw many sink beneath those horrid looking waters, some with small glass bottomed boxes the better to see, so making things still more lively for the fish. I saw one old dame sink in a great pool at my side and counted slowly 4 and 20 ere she returned to the surface. She had been richly rewarded. The men strip save for a loincloth, the women went in "Mother Hubbard and all" and looked like drowned rats, the naked boys and girls were in Paradise for the time. Here a man had speared a splendid "Blue" fish with a parrot's beak; another brought one up with all the colours of the rainbow on it. Strange things appeared I had never before seen, eels many and many an octopus too. I saw a young woman take a dive into a great chasm, reappearing she made a clear space close beside me, an octopus not only on her arms but held tightly to her chest. She was not a pleasant sight for the horrid thing had cast its fluid of ink all over her. With a knife she cleared herself then sought in vain a bath, so resumed her fishing for the drunkards a very sooty object. Everyone was desperately busy and the total catch must have been well over a thousand. Darkness drew a veil over the wild scene.

A very different sight it is to see the netting of the Flying Fish. The canoes assemble outside the reef and forming a line abreast, paddle slowly forward. As it is always on moonless nights, each canoe has a huge torch or flare high up on the prow. I often stood on the cliff edge, nothing of boats or men to be seen, only the steadily moving forward of the Flares. Behind the light there stands — not sits — a man with a kind of immense butterfly net who scoops in the fish as they rise from the sea and fly at or past the light. The two others sit behind. In the dark that strictly kept line is a wonderful sight. Perhaps 10 canoes will push off from a village, others to join in as they proceed along the coast, there are 20 now in perfect line, still others add themselves till twice that number may be seen moving along the sea which is like a pond for smoothness: and all abreast. As many as 180 sometimes gather for the capture of the dainty tasting (much like mackerel) flier, a mighty fleet abreast, known only by its flame. It is not easy work for often those winged fish miss the net and strike hard the men in face or naked body. They leave their mark do those scaly ones ere they fall into the canoe. Room for 3 but not for 4 so I had perforce to stay ashore. But did I want fish for my lone supper? It was ever easy, going on the reef as the tide ebbed I had my own *Aukara* without the mash. Peering into a pool there sure enough was my supper. The lure of my bait was irresistible. What his name or species were, was no concern of mine.

**Plate 6. At Look Out Point, Alofi Bay, Niué Island, April 1924.**

A sheer drop to the reef below : then the Pacific Ocean. The cannon was fired when a ship was seen heading for the island. Only 6 in a Year! The whole island thus learned the great news.

**46. Of Inspection and Roll Call** <sup>142</sup>

Malifa's scholars had long been under training, Hakūpu's had had none. Apia was well to do, Hakūpu was poor. There could be no rushing of things. For Beginnings have ever been my joy. Every day of School the first thing was Inspection. The 100 lined up in ordered ranks and I pass down. Clean hands and faces there have to be, the teeth are ever rows of pearls — sugar cane sees to that — and tidiness of clothing however poor and humble they know I'm strong on. Neatness of patching is evidently not a strong point with their mothers but all have done their best to look neat, especially and of course the girls! All stand at Attention: "Eyes to the front" but the little girls could never refrain from breaking the rule and giving me a beaming look as much as to say "We love you teacher dear". But the boys! They needed ever watching. Here is one with a big feather in his thick mop. Out it has to come and promptly disappeared inside his shirt. Here is another with a necklace of leaves to set off his bare chest. The chest may remain bare — for it is powerfully hot — but the leaves have to go. I sigh at the vanity of another who despite the heat wears a great coat far too big for him. If he likes to swelter, well let him, it covers his otherwise bare uppers. Half a bracer is though better than none by some or perhaps that other fellow has the other half. Everybody will — like his father — wear his shirt ends outside his pants, it seems to be thought a shame and waste to hide any portion. And the boots! Most are bare footed, others wear lint bandages (for coral ground is very cruel) but some boys think boots are the Real Thing so they borrow or beg the loan from their elders, with never a lace to hold them.

<sup>142</sup> See also Chapter VIII, *The Roll Call*, in Part II, *The Chronicles of Savage Island*.

Inspection is over. I give the word “Form Fours” and next comes the daily Drill and I turn into a Sergeant-Major. All goes with a swing and ’tis time for Lessons. Inside the great barn we troop, the boys on one side, the girls on the other. Now comes the Roll Call. 100 names in a new lingo to me. It needed courage but it had to be done. There the names faced me such delightfully ‘easy’ ones as *Ligitagoloo* and *Tiahifineone*, *Tapuakihau* and *Faranitama*. Try them yourselves. Some had English names but alas! So mutilated that they were well nigh as hard to call: *Alaita* (Alice) *Letuki* (Lucy) *Tiosefa* (Joseph) and *Lopeti* (Robert). It was easier going with *Lele* : *Fane* : *Elisa* : *Makeline*. Then the Blackboard and we got down to real work. There was no afternoon school for the boys and girls — for the heat was ever great and ’twas best for them to be out of doors : but there were sessions for Adults. Happily not all the Adults of Hakūpu for I should have been swamped but the younger of them, married or unmarried, picked for the privilege by the Chief of the Village. They too — at first — sat about me on mats, slates in hand till the Ink came and desks too. I found it easier to point the finger and say “You” than to call upon *Manogi Vetu* : *Tumitimea* : *Hakeagala* and *Liuvaie* to take their turn. I think both young and grown up loved their geography lesson, before a huge map of the World the Government had given me.

White folk write a letter of excuse for their children’s absence. Here is a Niuean letter which I cherish greatly. “*Please you don’t be angry for me. I’m sorry because I did not come to school last Friday. I hope to see you again by and by. That’s all my loving master. I’m Foli haké, lazyman.*” I must not forget to tell you about that Ink. I always filled the wells before morning school and was astonished at the way it disappeared. By next morning most of the wells were almost dry. I put it down for some time to the great heat and evaporation (ask your Teacher for this). One boy’s well however was drained dry so I tackled him for the cause. Without any hesitation he replied, “We like your ink, it is such a lovely drink!” So it was the scholars not the sun who drew so heavily on my supply. I warned them that if they changed too fully from coconut milk to Ink they might have to go back to their slates and slate pencils. The horror of such a thing soon worked wonders. They loved their copy books and some were sent by request to a great Exhibition <sup>143</sup> in Europe. They deserved it.

#### 47. A Devoted Brother <sup>144</sup>

*La(n)giholo* told this tale of the Years gone by.

*Lefutogia* was a youth of Tafiti, between whom and his sister *Nukai* there was deep affection. They felt it much when *Lupekovi*, a great man from the same south of the land, even from Hakūpu, sought her, claimed her in marriage, and bore her off to another home. Not long after, *Lefutogia* made journey thither and was warmly welcomed by his old-time play mate. But things were not as they should be. This did not take long to see. *Lupekovi* was treating her harshly, berating her with angry words and laying upon her heavy tasks. The soul of *Lefutogia* was moved to protest, yet was he but a youth and had not strength to fight. Therefore he returned to Tafiti, full of love for his poor sister and of hate for the man her husband. He should pay for it, even if it took years for the reckoning. Now did that youth of Fatiau which is in the Chieftainship of Tafiti start in to train himself for the fight to the death which was to come, strengthening his muscles in many ways, learning of his elders how to cast the spear and to wield the deadly club. All Fatiau wondered to see the youth so keen yet kept he his secret in his heart. One special test of strength he set himself, and when he should succeed in that, then settled he that *Lupekovi* should be taught his lesson and his

<sup>143</sup> Possibly the [National Colonial Exhibition](#) in Marseille in 1922

<sup>144</sup> This story is told, with slight changes, in Part II, *The Chronicles of Savage Island*, Tales of Romance #34, *A Devoted Brother*.

dear sister should know peace. He had his private training quarters at *Tanu*, in a cave close to the sea and there he exercised most strenuously none interfering. Hither he brought a huge bowl of oval shape, so large that he could but just stretch his arms across to grasp and lift. Sinking this in a pool in the cave so that it was just covered, he made this bowl the test. When he should be able to lift it bodily out and raise it to his head water and all, then was he *Lupekovi*'s match : the day of days have come. Great was his devotion nor thought he of desisting even as the months passed by and still that bowl remained his master. But meantime he became a wonder in long range fighting and in close. Who in *Fatiau* could cast the spear now as this youth? Who could evade the blows of clubs as cleverly as he? And now the years passed on and the youth became a man. Behold! his beard grew and he felt within himself his strength was likewise growing. Now could he lift the bowl clear of the pool, now could he lift it to his knees, now could he lift it to his shoulders nor spill one drop. Then came that he had worked for all these years, when he passed the test completely, a wondrous day for him. Now stood he upon the cliff looking towards where his dear sister dwelt, he called upon both her and his god for triumph. Squaring his now broad shoulders and sparring with those great muscled arms, he thrust his beard in his mouth, true Niuean sign of fury, and dashed down to his task.

To *Hakupu* he made his way by stealth and had long interview with his weary sister. He would not slay his enemy in his sleep : it was to be a fair and open fight. *Lupekovi* should know nothing till the sister should hear her brother's voice calling out a challenge. "For you O Sister dear, deep in grief as you are, I shall come on a day when rain falls not ceaselessly as now but in passing showers. When I call, come forth, make answer : then tell *Lupekovi* to come forth with spear and club, for the avenger of your wrongs is nigh." So was it. Ere many days the lighter rains began and the woman sitting on her mat within the grass covered home heard a voice she knew and loved calling, "*Nukai*, Sister mine, Where art thou? Where can *Lupekovi* be found?" She rose, went forth and made answer so that all could hear. "O Brother of mine, *Lupekovi* hath wrung from me the secret. He is here and even now hasteneth to meet you in the death struggle." It was on the Village Green they met, the Challenged and the Challenger. That was a terrific fight, *Hakupu* never saw so terrible a battle : Old veteran against young manhood. But Love and Right were on *Lefutogia*'s side and *Lupekovi* fell at last to rise no more. Thus was *Nukai* avenged for her wrongs : and the devoted brother led her back through the forest and the well worn trail to *Fatiau* her first home, and there in peace and happiness she dwelt for long.

Note. It was on that same Village Green I once saw a fearsome battle, not of man to man, but a bunch of women! I'm glad that you were not there to see it.

#### 48. On Leaving School

I think that I can hear you saying, "Now just think of writing to us a Tale about leaving school when it seems like Xmas and our Birthdays with all their joys (and presents too) as if it will never come. What a day that will be when we say goodbye to our Teachers, thanking them for all their kindness and their help, and to our fellow boys (or girls), put our books in our satchels (or our trunk) and leave school for good. We shall feel like another person than ourselves, no more classes to attend whether we want to or not, no more Orders to do this and that, no more Drill or forced Practice at what (or on what) we have grown so tired. That will be a Great Day, a Red Letter Day <sup>145</sup> indeed when we "leave School."

---

<sup>145</sup> A [red letter day](#) is any day of special significance. The term originates from Medieval church calendars.

True enough you will leave a certain school, a particular building with a particular name to it, but let me tell you very plainly and very clearly that you NEVER, NEVER do “leave school,” you leave only to enter another School with a name no other school can use. Schools have their Names of course to differentiate them one from another. At Home there is Eton School, Harrow School, Marlborough School and many hundreds of others, in Canada the same and so in Victoria and there is a reason for every name given. You are naturally very interested in University School <sup>146</sup> and so before I tell you more of the school you will one day enter I feel sure you may like to know how it got its Name. I do not think anyone in Victoria really knows, for the 2 who started its career with me are dead and have left no word as far as I can learn and I doubt if I have ever told it to others.

The first school in Victoria, long, long years ago, long before there were such places as Public Schools, was “The Collegiate.” It had its Ups and Downs. At one time it was like a candle blown out, it disappeared. Then all of a sudden Up it came again. That was a strange thing for a School to do — like a Jack-in-the Box. That old School was below the Cathedral near the large tide-swamp now filled up, and for games the boys had to go to Beacon Hill. It was alive when we thought it time that Victoria should have a really large school, with large buildings and large playing grounds, much larger all round than the Collegiate. Now what should be its Name? We thought of many but none seemed quite the thing. Then it came into my head, “What is larger than a College? Why of course a University,” and they agreed with me that that would be an excellent Name, so it was adopted. If the Collegiate has disappeared again, you know and I don’t. It had a fine record of which it ought to be proud, it taught and trained and turned out fine boys into fine men who served and maybe still are serving their City and their great Province well. I think our was a fine name and a grand one but the finest and grandest name of all is the name of the School you will enter when, as you say, you “leave school,” the School named **LIFE**, the School you will never leave as long as you live, the School I am still attending everyday, learning, learning something more. It has a Staff just like other Schools, the Headmaster (or Mistress) is Teacher Experience, a wonderful Teacher, unsurpassable in adding to one’s knowledge. Then there is Teacher Reading, always at books and magazines and papers full of useful information, who passes it on to you. I am very fond of that Teacher and hope you also will be. Then there is another very fine Teacher for those who have the time to spare and can pay the rather heavy fees, named Travel who is perfectly delightful and just pours out information till you feel quite dazed, whose Classes you never tire of attending. I could give you others but you will, I hope, live to begin to meet them one and all on that Red Letter Day when you “leave school” to enter the far greater one. Your name, like every other boy (or girl) is already down on the list of Candidates for Entrance, and in but a few years (though you may think them many) you will step into that vast building with other untold, countless millions, a man (a woman) your tender years behind you, with Life ahead of you to Make or Mar.

Foreswear to yourself now, ere you “leave school” for that other one, that it shall not be the latter. It is up to you. You must fight those things that would hinder you and drag you down, **Alone**, **Alone**, with your own Conscience your Counsellor.

---

<sup>146</sup> In 1906, WWB co-founded the University School (now [St. Michaels University School](#)) in Victoria, British Columbia with Mr James Clark ‘Barney’ Barnacle. Then in 1908, Queen’s School in Vancouver moved to Victoria and amalgamated with University School. J.C. Barnacle was Headmaster from 1906 to 1923. WWB was Warden from 1906 to 1920 and Headmaster from 1925 to 1928. The Headmaster of Queen’s, Capt. Rupert Valentine Harvey, was Warden from 1908 to 1914. University School and St. Michael’s School amalgamated in 1971.

## 49. Of Travel

It is my earnest hope that someday you may be able to travel and see this wonderful globe in the sky which we call The World and on which we live. There are so many different lands and so much that each one holds for you that it is no easy matter where to begin. I think everybody should first travel in and over their own Land so Canada from end to end is your proper beginning. Then comes ●<sup>147</sup> Oh! horrors! here's a huge Blot in my Manuscript (Hand Written) and whose fault is it? Not M<sup>r</sup> Nib's but mine. I am sure that you feel ready to jump clear off your seat when you make a Blot in your Copy book. You say, "Now what will Teacher say?" and blame your pen. That is not fair. It is not his fault but yours. You did a shameful thing, you made him Drunk and drunken people often do really shameful and disgusting things. So always blame yourself. You may say, "Why don't you take a new sheet of paper and start again?" No! No! that would be to hide my faults and make it appear as if I never made mistakes. We should never hide our faults. Correct them Yes but never pretend that we have none. So I leave it here for you to see and be shocked at. Now what was I going to say when that horrible black spot appeared and has upset me and quite right too : I deserve it. Oh! Yes! After Canada there should come that loveliest of all Islands — England. When folk speak of England their thought centres round London which though the greatest and most wonderful City in the World is not the England I am thinking of any more than Paris is France. It is when you leave London and ramble in the countryside, the country towns and villages that you see how lovely England is. What a treat is in store for you! and the more you know of England's Past the more entrancing your visit will be. The very ruins are not ugly sores but add beauty to the landscape. Yes! England surely next.

Now there comes a matter which may help you to decide Where next? Your geography book has told you of the "Zones," there are the Frigid, the Temperate and the Torrid. Which do you prefer? If the first, Alaska calls you, if the Temperate keep to those lands within it and there are plenty for a lifetime's wandering, if the Torrid rank first therein the Great South Sea. It is hot but it is free from those deadly sicknesses that await you in Africa and India (ask your Teacher for their names) and you have the lovely sea breezes ever with you, no parched land or deserts. Keep South and not on the Line which means the Equator itself. You will be quite hot enough but if you want to be all sizzled up, done brown and well nigh fried alive, make for Singapore. You will have all you want and more. Perhaps when you are Grown Up you will have fallen in love with that terrible word Archaeology (get out your Dictionary) and want to wander among the remains of ancient cities. That never has appealed to me but it may to you, who knows? You will be off to see Nineveh and Babylon and many another place you have heard of in Holy Writ. One thing you should have with you, the most important of all your baggage, a Camera which now you should learn to handle perfectly. That is where I made a Great Mistake and it is too late now, so take warning. With its records you will not have to recall by your good memory when you are very very old what Travel has shown you but there before you lies the scene itself. If nowadays you love to study your Atlas book as I did when at school then sure I am that Someday you will wander o'er the World.

P.S. Please forgive that Blot!

## 50. Of the Lure of the Great South Sea

Do you ask What is a Lure? When you set a trap with a nice piece of toasted cheese, that is a Lure which that little rascal cannot resist. So also a lamp light is a Lure which the foolish moth must willy-nilly burn its gossamer wings upon. But we also have our Lures, some good, some bad. There

---

<sup>147</sup> At this point in the text there is indeed a huge blot of about 0.5 cm in diameter.

are many persons who cannot resist a very bad Lure which is called “Drink.” I hope that you will never, never be drawn by that Lure. I can say that to you because I have never “Drank,” and that is why I am so strong and healthy though so very old. But when I have not been very well I have always taken a little dose of the horrid stuff like I used to have to do when given Castor Oil before chemists made it almost nice to take. I do not have to ask a Doctor for I know — like animals know different leaves and grasses — that it is medicine Nature has provided for us. But it is never a Lure to me.

Countries and Places have their Lure for us. They call and call and we cannot resist. Perhaps it is their loveliness or their memories which, try as we will, we cannot put away, so we return again and maybe yet again. I know that Lure : you may know it perhaps someday. It is a Feeling inside you hard to put into words. Examples best explain it, so mine will serve. I was roaming in the New Hebrides when word reached me that my helping hand was needed amongst you.<sup>148</sup> That was the Call of Duty, so I readily obeyed and cheerfully — though I left my heart behind. It would be like you if you had to go to far away England for education. You would go because it was your Duty and would be happy there and work hard, but all the time your heart would be Overseas where dear Mother and Daddy were. You would have the Lure of Return ever with you, and neither work nor play could silence its appeal. So when I returned to be again amongst my own dear flesh and blood and friends who overwhelmed me with their kindness there was ever ringing in my ears a Cry from the Great South Sea. It was those loveable natives of Polynesia calling, “Oh! Come back! Come back! You belong to us now and we want you.” Day and night that Cry could not be silenced. I knew that it would have so to be, that somehow, somewhere amongst them there was work for me to do : but it must not be till my helping hand was no longer needed which would have been to desert my Duty, and Duty comes First in your and my Life, even above Love. Having seen far stronger, abler hands than mine take the helm, that longing, lonesome Cry had right of place for the years that might still be mine. To serve others, especially those below our own grade and standing will I hope ever be your Joy too. So I took ship once more, and sailed away down South to those Isles of Perpetual Sunshine whose Lure had gripped me in its arms from which there was no escape. As with me, so has it been with countless others. If it be your lot in years to come, may it be to like perfect happiness. Though it may mean loss of Country and of Home, of lifelong friends and loved ones, all in measure is made up for, not in wasted years of idleness but in useful and unselfish work for others who need you in your Old Age.

## 51. Of Nan King

I carry with me wherever I go a little Safe, strongly built but not heavy. It is not to protect either money or jewels from thieves, but for quite another purpose. It has a stout lock and is full of little drawers all labelled. Everybody the whole world over carries that same Safe for it is Memory, but some people are careless, leaving the door open and the drawers too and away fly the notes lying there never to be regained. So today I went to the little drawer marked China and saw some notes there about *Nan-King* and thought that you might be interested in them, so have copied them out, not all of course but enough this time. Nan-King was once the Capital of South China just as Pe-King was the capital of North China. It was a large, interesting City when I stayed there,<sup>149</sup> enclosed in a huge and lofty mud wall so broad on the top that carriages could be driven along it round the town. What it looks like now after savage bombardment from Air and men of war on the

<sup>148</sup> WWB returned to Victoria in 1925, where he was Headmaster of University School until he departed for Tahiti in 1928.

<sup>149</sup> WWB visited [Nanking](#) in June 1913 during his trip from Victoria to England.

mighty Yangtze I cannot say.<sup>150</sup> I like to think of it only as I saw it. That wall was Twenty miles round its circumference and Seventy feet high! and it had thirteen great gates in it. Out of one I made my way to the Ming Tombs only a mile or so from the City which lie on a lonely mountainside with trees here and there and a Temple at the entrance reached by marble steps of great width. For (I think) the last mile along the plain leading to the Tombs huge stone animals line the way on either side. What I could not understand at first was the number of boys about those gigantic dromedaries and elephants. They were there ready to bet you a coin that they would lodge a pebble on the back of the animal. I was quite ready to bet that they couldn't. Lots slid off but I lost till those young brigands were quite assured that they had a fine tuck in of candies when they got home. I am sending you two snaps which I have carried with me for 20 years and will now entrust them to your safekeeping for long years to come. A nice American who was staying in Nan-King at the same hostel as I was, took them as we went about together. He would have me appear in each. Do take great care of them. One shows you the size of those stone figures : the other shows you the roof of a house with its scooped ending.<sup>151</sup> That scoop is to throw the "devils" off before they can climb down and get in through the doors to scare the inmates. As you must surely know the Chinese are terribly frightened of demons and devils which of course is absurd. None have ever been seen or ever will be. I hope you are sensible enough not to believe in "ghosts" either. I thought of going up the river from Shanghai to Nan-King but instead went by land along the banks of a canal which ran for miles. I was glad for I saw fishing done without rod or line or bait. Alongside a flat bottomed boat a row of cormorants sat on a long pole. One by one over they went diving, and sure enough up they came with a fine fish pierced through with their sharp beak. Each had a ring of metal round its neck so small that the bird could not possibly swallow its catch. I am sure you will not call that Sport. Those black feathered birds looked very disconsolate at working so well and getting nothing for it, but I hope those fishers are well fed before going to roost. Poor Nan-King! it had been laid in ruins again and again, but its motto seems to be "Never say die" so once more it may rise.

---

<sup>150</sup> The [Battle of Nanking](#) began after the fall of Shanghai on October 9, 1937, and ended with the fall of the capital city of Nanking on December 13, 1937 to Japanese troops.

<sup>151</sup> The latter photograph is missing.

**Plate 7. Nanking, June 1913**

**52. Of the Monument of Tears**

It was a long, long journey to see it, but I made it, clear across the Continent of Asia. Here was I in Korea and that Monument was just as you step from Asia into Europe. It seemed strange how few had seen or even heard of it, and so that you at least may know of it I will lead you — of course only in imagination — to the spot; for you may perhaps never thither wend your way as was my good fortune many years ago.

When I was a boy at school lurid reports and tales reached us in England of the cruelties and horrors existing in far away Siberia where men and women, Russian prisoners, were exiled and dragging out a miserable existence. To me and I think to most, Siberia was nothing but a land of snow, its rivers ice bound, fit land only for wolves and Esquimaux. There we were wholly wrong. I have crossed it, so I know. True, like your own Canada, the great northern space is an Arctic region but south of that, in general, it is a lovely land. Where wild flowers grow and cattle graze, great rivers flow majestically in all directions, hordes of natives have their homes there, the only blot on the scene those still exiled heartbroken convicts.

To tell you of all that I saw and learned upon my way to that almost unknown Monument would well nigh make a book, but we must really halt at some spots which I think may be of interest to you and not be too impatient to reach the Monument and learn its story. Not far from Harbin there is the little insignificant hamlet but famous as the birthplace <sup>152</sup> of one of the World's Human Monsters, Genghis Khan the Tartar who with his legions swept over Asia and Europe carrying

---

<sup>152</sup> In Chapter II of *Across Siberia* in *Tales of Roaming*, WWB refers to "a little hamlet, famous as the birth place of the Tartar Conqueror Genghis Khan" between Harbin and Qiqihar. However, [Genghis Khan](#) is thought to have been born in modern-day northern Mongolia, not far from the current capital, Ulaanbaatar.

death and destruction, till his dominion reached from the Arctic to the Himalayas, from the Pacific to the Danube. We have such Monsters with us today alas! (ask your Teacher) but their day like his is ever short. The deep blue waters of Lake Baikal tell of its almost fathomless depth, a sheet of fresh water 40 miles across where sturgeon abound and hair seals live. Today one skirts along its steep southern end, formerly steamers plied upon what looks far more like a Sea. Near *Taiga* is *Tomsk* (a university town) with the splendid Shrine of a Holy Man <sup>153</sup> who is believed to have been the Czar Alexander I who fled his capital and became a hermit.

And now the Ural Mountains hove in sight, no snow peaked range, neither rocky nor stupendous, the rather, round shouldered and abounding in red firs. Up, up one slowly climbs to reach the summit (nigh *Ourjounka*) where the old-time trail for men and caravans capped the top : and rising exactly on the summit stands the great white marble Monument, tapering upwards. <sup>154</sup> On one side facing East, clear cut in huge black lettering, reads ASIA, on the other side facing West reads EUROPE. It was here that the long trails of exiled men and women, chained together like beasts of burden, flung themselves down, as grief stricken they bade farewell to the Land of their birth and entered the dreaded and unknown Siberia. Rightly is it called the Monument of Tears. Their heartbroken Way can still be clearly seen as up and down the Ural Range they plodded along with brutal guards to urge them on. They have Passed but your and my sympathy for them can never die : 'twas high privilege for me to echo their lamentations as I passed with a lingering heart that Monument of Tears.

### 53. A Native Play <sup>155</sup>

I feel sure that you love going to the theatre and seeing charming actors and actresses play their parts, so I will give you the story of a truly wonderful theatre and Play which I attended at *Fagalo* on the island of Savaii (Samoa). The whole thing was arranged in honour of the Governor and his party of whom I was one. The theatre was a copra shed, the Stage, the Stalls (for us), the Pit and the Gallery were all on the same level. There was a policeman at the door to see that none but ourselves got in free tho' the charge was very small : yet even at that I saw one youngster shedding off his only garment in the hope thereby of being charged still less. The Band (for selections given at the intervals) consisted of guitars, ukeleles, a violin and an ear splitting trumpet, whilst an old lady nearly square both in face and figure, very light of garment but furnished with a perpetual smile and a necklace of ivory toothpicks introduced each Scene. But no mortal, even a native could have possibly untangled the knot the actors got into. The hour of commencement was 8 pm, kerosene lamps the lighting, and we should have been there all night had not the Square Faced Lady thought it best, at long last to draw (not drop) the curtain "for keeps," and leave the conclusion to each one's imagination. The Plot centred round King George V <sup>156</sup> and Queen Mary. Not a man however took part therein, tho' there were far more "males" upon that stage than there were "females." The apparel those women had devised to disguise their ample frames was beyond

<sup>153</sup> [Feodor Kuzmich](#) (or Kozmich) was a hermit who emerged in Siberia in 1836 and died in the vicinity of Tomsk in 1864. He was glorified as a saint of the Orthodox Church and was believed to have been [Alexander I \(1777–1825\)](#) under an assumed identity.

<sup>154</sup> The current monument on the [Trans-Siberian Railway](#) separating Europe and Asia is located near [Yekaterinburg](#). However, the earliest route of the Trans-Siberian Railway bypassed Yekaterinburg and went through [Chelyabinsk](#) to the south; this is the route on which WWB travelled in 1913. The Monument of Tears was located between [Zlatoust](#) and [Miass](#), near Chelyabinsk. *Ourjounka* is the spelling found in French texts; *Urzhumka* is found in English texts; the Cyrillic is *Уржумка*. For photos of the Urzhumka Station and the Monument of Tears, see Part X, *Tales of Roaming, Across Siberia*, Chapter IV.

<sup>155</sup> See also *Royalty and a Bad Mix Up*, in Part XI, *Roaming the Pacific Waters*.

<sup>156</sup> [George V \(1865–1936\)](#)

description. They were “quick change” actors too, their robing room at the back fairly well walled off by huge banana and coconut leaves. I tried hard to keep tab on the number of Acts, am sure there were 5 whilst each Act had separate Scenes so bewilderingly quick in succession that I lost all count. My good friend Chief *Iiga* sat beside me and did his best to interpret but he too got lost and another Chief on my other side fared just as badly. It appeared that Queen Mary had become the mother of a baby son. The Rag Baby was wrought on the stage and hugged and kissed by all. But somehow or other Prince Edward got lost or was stolen. The Queen however now appears with another baby, but grown up, Princess Mary to whom she announced that she is about to die and gives her daughters a bracelet. We see her no more. Mary sleeps at a table. A thief comes up out of the floor and steals the bracelet. That was too much for us all. The House could scarcely restrain itself (and we too) from shouting, “Stop thief!” and rushing the stage which would surely have led to a free fight but the old lady sensed the danger and drew the curtain. In comes the King and tells his daughter that he is about to marry “President Wilson’s married daughter”! The girl and all of us cried “Shame” and in return she tells him that she has a Lover whom she proposes to marry. The Pit roared out, “Go to it.” The Maid and her Lover appear and as they dance a hornpipe in rush police who grab the Lover and carry him off to “Rome”! Mary prepares herself by a hearty meal — eaten before us — and a large drink (*Iiga* told me it was raspberry vinegar) to walk from Samoa to Rome to see her Beloved One but in the mountains she is seized by robbers, when lo! one of the gang is the Rag Baby her brother and there was going to be a real fight for his sister between him and the rest, when every one of us — save the Governor — rose in our seats eager and ready to join in but that old Square Face cried out, “Hold, hold, there’ll be real murder, we’ll best cut out the rest” and drew that curtain so deftly that none of us had yet gained the stage. It was for the best for Samoans are husky fellows and their women likewise and ukeles and a brass trumpet are ugly weapons in a “free for all.” That was a fine Play, my summary does it but the faintest justice. Each scene was brightened by pithy remarks and dancing; and of one thing I am confident that if that Play despite its crudeness was produced on Victoria’s Stage it would surely “bring down the house.”

## 54. Of Scenes Unforgettable

As you pass through Life you will meet with scenes which you can never forget. I do not mean sad ones such as Partings and Death but happy ones, full of picturesqueness, maybe of persons, maybe of places, happenings all unexpected, photographed on your mind and memory for all your days. Of some such vivid scenes keeping only to persons, I would like to tell you which have happened to me : too beautiful and striking to be lost when I pass on. They have sprung on me at all sorts of places and at all sorts of times.

I can never forget one early summer morning at *Chel-ia-binsk* in Siberia. A Russian military Governor had arrived by train from S<sup>t</sup> Petersburg. I was standing on the platform as he stepped down. A tall handsome old man with curled snow white moustaches, and a beard brushed fiercely apart. Resplendent with medals, robed in a lovely light blue cloak and a military cap with a perfect blend of light and dark blue, the latter on its crown. Awaiting for him was a Detail of mounted Cossacks all superbly horsed, and a *drovsky* <sup>157</sup> with 3 of the most lovely grey steeds one could ever hope to see. The middle one (under the Arch which was inlaid with ivory) stood pawing to be off, the others free of shafts mad to get going. When at last the great man stepped into the carriage, soldiers saluted, men doffed their caps, the Detail swept round to clear the way, the 3 Grey Beauties sprang into the air, their silver bells clashing in perfect harmony — and he was gone.

---

<sup>157</sup> An open four-wheeled horse-drawn passenger carriage, formerly used in Russia.

I had reached Auckland New Zealand in my roamings and attended the ordinary morning service at S<sup>t</sup> Mary's (?) Cathedral. <sup>158</sup> My seat was close to a side door entrance, not the main one. Just as the City's clocks struck 11 a.m. there entered close to me a man slight of height but erect and of most pleasing features. He was clean shaven and dressed in ordinary Sunday garb. He did not look around but moved quietly forward, evidently quite at home in that Church. At once and simultaneously the whole large congregation rose and remained standing till the newcomer reached his pew and knelt him down. It was Admiral Jellicoe. <sup>159</sup> He had borne a mighty burden a few years back : his duty to keep the High Seas open for the Motherland and her daughters. He had fulfilled his task, and here in far off New Zealand his fellow <sup>160</sup> men, and women would show their <sup>161</sup> deep respect and gratitude. I cannot say if other saviours of their country are thus treated, but that spontaneous act of love gave me a thrill, quite unforgettable.

And now of one of late years, a joy to see tho' a tragedy for another. He was my dear friend but had got into serious trouble through his bad temper. He was to be tried in a Court of Justice. His spirit was crushed, his strength was sapped. I went alone with him, he would have no one else. To mount the many steps was quite beyond him, my strong arms supported him. He was granted a chair before the Judge and I stood by his side. To be sentenced he was obliged to stand. He gamely tried but sank back. So in my arms I held him so as to face the Judge; he held his head up bravely as I bid him do, but all his weight was on me. But what a privilege was mine and what a scene! He is dead now and I tend his grave in a native village near here. Poor fellow, what bad temper cost him! but it gave rise to that Court scene which I think must be well nigh unique and certainly unforgettable. Let these suffice. Mine are of the Past : Yours are yet to come : may they be as welcome to recall in your Old Age.

## 55. Of Oahu Island (O-r-hoo) (1) <sup>162</sup>

Poor Oahu! it is like many a mother with a famous daughter — actress or singer. Everybody knows of the daughter but the mother who gave her life no one knows or gives a thought to. All the civilized world knows of that amazing city of Honolulu but very few could tell you the name of the island on which it stands. Now I was not going to treat the mother like that, so during my many months stay, I paid it my respects, walking over one hundred miles round its coast and clear down its centre from north to south, and found it far more entrancing than the bustling city. I think you may like to know some of the happenings and scenes upon my lonely pilgrimage and should you, someday, travel thither you will have a little guide book at your hand to see and enjoy Oahu for yourself. Leaving Honolulu and heading south past towering Diamond Head bristling with its guns I came to an amazing Fish pond, amazing in its size and in its fish. Their colouring is quite beyond me to describe and it seemed shameful that they were there in their thousands, doomed for the cooking pots of the City. Now for the Lighthouse on a high rocky Point where I found one of its keepers was a Londoner like myself. They were very courteous and took me up to the gallery round the light for the glorious view of sea and other islands. The huge crater 20 miles round on Maui loomed in the distance and Damien's leper island (ask your teacher about him and it) could be clearly seen. No road now, so a long clamber over rough lava rock with a precipice on one side took me down into a valley where sugarcane thrived and the heat was terrific. I had noted that valley

<sup>158</sup> The church in Auckland was indeed [S<sup>t</sup> Mary's](#).

<sup>159</sup> Admiral of the Fleet [John Rushworth Jellicoe \(1859–1935\)](#) was a British Royal Navy admiral who commanded the Grand Fleet at the Battle of Jutland in World War I. He served as Governor-General of New Zealand from September 1920 to November 1924.

<sup>160</sup> WWB has *fellows*.

<sup>161</sup> WWB has *their their*.

<sup>162</sup> See also *Oahu's South* in Part XI, *Roaming the Pacific Waters*.

from the steamer as we approached Oahu. Here was a mill, a school, some cottages and a couple of Chinese stores and I thought a drink of lemonade was justified. Then more climbing as the mill road twisted and turned as it wound its way up to strike the main road, where you have your choice UP to the left and Honolulu, DOWN to the right and the East Coast. Let us take the latter and so reach *Kan e o he* where there are lovely underwater coral gardens with those same multi-colored fish enjoying themselves, and the countryside a maze of banana groves and pineapple, a flat land now. As I neared the next village *Wai-a-ho-le* I noticed what looked like a huge black snake crawling up the hillside to the central plateau. Really, it is a pipe 3 feet wide carrying water upwards to the thirsty land above. No visitor mounted or afoot should miss the stretch from here to *Ha a ūla*, it is the most picturesque part of Oahu : the mountain side clothed in green of many hues from trees and shrubs, the water side with its foaming breakers on the reef, fields where cattle graze, Churches along the way each with its little tower, many a pretty bungalow peeping out upon you, water buffaloes which seemingly count 10 between each step as they plough the muddy rice fields, children quaintly clad on their way to or from their school; then *Ka ha na* Bay round which you go passing thro' a park land at its head — like the deer park at Richmond or Windsor — and so to the Rest House in Haaula where mine Host — a Swiss and his good wife a Belgian — received me courteously, carried out his flaring advertisement “Good Eats here” and gave me bed of down embowered in mosquito net. There was yet full 30 miles to cover of the East Coast, so let us take a good rest here ere we pay a visit to the “Sacred Falls” and so forge northwards. <sup>163</sup>

## 56. Of Oahu Island (2) <sup>164</sup>

A visit to the “Sacred Falls” of Haaūla <sup>165</sup> is not easy going, either up or down, there is nothing for it but to wade the stream. There is a pool, and on the water's way to the sea there are 14 “Stations” or natural Stone Altars, on which native Hawaiians place leaves, with a stone atop to keep them from suddenly departing. The appeal is thus made for aid to some Old Time God who took refuge here from *Pélé*'s wrath who was hunting him over hill and dale with her volcanic fire and ashes. Old beliefs and customs oft die hard even among Christian People. So on to the Highway once again. Here was Blue Grass <sup>166</sup> as in Kentucky (U.S.A.) and of course many a horse ranch (ask your Teacher of this). Now came Laie the Mormon Settlement. Just as I saw long years ago in Salt Lake City, so here with the Mormon's usual energy and tidiness there are broad avenues, neat cottages, well cut lawns, ferns, flowers and welcome shade trees, and in the centre of all this pleasing site their Temple stands of weirdest architecture, but then they are a weird sect. I was told that when I reached the Wireless Station at *Kahuku* I should stand at the northeast corner of the island, and a few miles further on, clear on the north coast I should find *Pu'u o Mahuka* — if I could reach it — one of Oahu's Cities of Refuge of olden time. It lay upon the Headland of *Waimea* at the brow of the promontory, a sheer drop of 700 feet to the flat land below, the climb to reach the summit a stiff and winding one. There were other Cities of Refuge on Oahu but this one served for the north. The walls are in ruins but show 2 enclosures, why 2 none seem able to explain. All shelters have gone. It was very lonely up there as I roamed around. There was still a Temple (in ruins) to be found before I covered the last 5 miles to *Haleiwa* where another Rest Home awaited me the day's tramp done. I found *Kupopolo* none to guide me. At its back was a high bank, and its front and sides had a wall to keep out intruders. Those broken stones gave me the cue, but I had to break thro' some dense shrubbery to reach where the Altar of Sacrifice once stood. When heathenism was abolished, the

<sup>163</sup> [Father Damien \(1840–1889\)](#). [Kaneohe](#). [Haaūla](#). [Richmond](#). [Windsor](#).

<sup>164</sup> See also *Oahu's West and North* in Part XI, *Roaming the Pacific Waters*.

<sup>165</sup> [Sacred Falls State Park](#) was closed indefinitely after a fatal rock fall in May 1999 in the canyon where the waterfall is located.

<sup>166</sup> Possibly [Blue buffel grass \(Pennisetum polystachion\)](#).

natives made havoc with all connected with it. There is a fine beach at Haleiwa, a river of fair size running into the sea there, and on its bank a really up to date Hotel embowered in palms and shrubbery. The West coast which runs from *Kaena* Point (not far from the Hotel) to Diamond Head is not inviting to the wayfarer. True there is *Makūa* with its Barking Sands. At a distance these sands look no different from any other but they really are tiny shells which under a certain degree of dampness and a certain wind, explode and bark like a dog. They refused to bark when I was there. There is Pearl Harbour the great Naval Station and mills with their lofty stacks, everything modern and bustling. So back to Haleiwa and down the Centre, away from noise was what now remained with 30 miles to go. Ah! and what a road, no narrow, dusty one, but a broad and well oiled one, a joy to walk upon, not a loose stone, nor sign of dust. Sugarcane all the way and golden gadflies for companions. A gentle upgrade for 7 miles at first, till one reaches “the height of land” then sugar turns to pineapples. Far as my eyes could reach there were miles upon miles of pineapple, and the whole countryside alive with busy folk, weeding, ploughing, burning, loading for the mills. One had to watch out for speeding autos on that glorious Highway.

And in the very heart of Oahu I came upon the vast Schofield Barracks (ask your Teacher for particulars). The miles increased in number, the distance decreased to Zero as Honolulu’s lights brightened the night time skyline. And so the long, long tramp was over : but Mother Oahu I can ne’er forget for I fell in love with her upon the way, and still am so though Fate forbids our meeting.<sup>167</sup>

## 57. Of Mormons (1)

The World is full of strange and funny people, as you will see for yourself as you grow up. Amongst the strangest are the Mormons whom I have mentioned in a former tale. They are of our own white race, by far the most of them Americans, and they are the chief inhabitants of the large State of Utah with their beautiful city of Salt Lake its capital, lying by the shores of that vast sheet of water where, far away from the sea, you will see flocks of seagulls swooping overhead. Fifty years ago<sup>168</sup> I was a visitor there and stayed at a lovely and sumptuously furnished home known as the “Beehive House” but also the “Amelia Palace.”<sup>169</sup> You may wonder why and if she was a Queen. I must tell you that they have their own special Bible which their Founder,<sup>170</sup> the first Mormon said he found the plates of, being told where to find them by an Angel!! No other person ever saw them and other heavenly visitors translated them for him little by little. That Founder was killed by a maddened populace where he lived in quite another State;<sup>171</sup> but a greater and still stronger Leader<sup>172</sup> took charge, and he with those who believed such non-sense (for it does not make Sense as it should to be true) trekked by ox wagon across the prairies till they reached a new, and open land where they still abide. He added much to their Bible, some things were really wise, others what he or his people wanted. One foolish one was what their Founder had also claimed, that Mormon men should have not One but many wives. This was the cause of serious trouble with the United States Government, but he kept adding to his wives — for he was very rich and could give

<sup>167</sup> [Pélé, Laie, Pu’u o Mahuka](#). WWB has *Puu-o-mahuha*. [Makūa](#). [Schofield Barracks](#).

<sup>168</sup> WWB wrote this Tale in October 1940, so he visited Salt Lake City about 1890, when he was living in San Francisco. For the circumstances of his travel to Salt Lake, see *Playing the Sleuth* in Part XII, *Memoirs of the Church of St Mary the Virgin, San Francisco*.

<sup>169</sup> [Beehive House](#). [Ameila Palace](#).

<sup>170</sup> [Joseph Smith, Jr. \(1805–1844\)](#)

<sup>171</sup> Smith was killed by a mob while awaiting trial in Carthage, Illinois, for charges of treason.

<sup>172</sup> [Brigham Young \(1801–1877\)](#)

them everything they wanted — till he had 2 dozen and more!! <sup>173</sup> Amelia was an imperious young woman and said that she was not going to live amongst the other wives in the “Lion House” a fine residence for anybody but must have a home of her own. So a far more splendid house was built, across the broad avenue, and there she “Queened” it over all the rest. But now the Country’s laws are obeyed <sup>174</sup> and there is peace and perfect order in that beautiful City. The Bee was chosen by their Leader as the Symbol of their Sect for he would have all his followers ever “busy as a bee.” We have the Lion as ours, others have the Eagle, just as Nations have Flowers as their Emblem, the Rose for us, the Thistle for Scotland, the Chrysanthemum <sup>175</sup> for Japan, the Fleur-de-Leys for France. Mormons want to convert all the world to believe the same as they do and are great missionaries. A century ago — all but 2 years — they came to Tahiti, <sup>176</sup> and I have found pair after pair of young men living on other islands in Polynesia. But just like the Christians, they also have quarreled among themselves and work apart. Here in Papeete we have 2 Tabernacles. One has over its front door a large Notice Board giving the name Mormons claim for themselves. You call yourself a “Christian.” What would you think if you had to say you are one of “The Latter Day Saints of Jesus Christ”!! Saintly persons are very, very few in these Latter Days. Their Founder’s name was plain Joseph Smith : “Joseph Smithites” would have been terrible, fortunately he said he found the name of a great Leader of olden time in those “golden plates.” He was called the far better name of “Mormon” and that “find” fixed the matter.

I am sure that you will be ready to agree with me that they are indeed a strange and funny people.

## 58. Of Mormons (2)

The Sea is salt water, not fresh. It has a salty flavour and if perchance you have to gulp a little down whilst bathing it is none too bad. You doubtless love to dive and float, and emerge with your skin all glowing and smooth. But you would have quite a different experience were you “to go in for a swim” in Salt Lake City’s waters. I found it delightful as everybody does, but you must beware and would find those waters very strange. It is close akin to brine (see your dictionary). If by ill luck you get a mouthful of it when plunging in, you will be sad and sorry for yourself. To get it into your eyes would be terribly painful. You cannot possibly keep your body under for a long dive, you bob up at once like a cork. Some find floating quite a difficulty but never there, you lie flat out willy-nilly when you have a mind to. But the strangest thing is when you leave the water. Unless you use your towel instantly you find yourself covered with salt! Those with long hair have a bad time unless they avoid diving. Rowboats have to be sturdily built or they would quickly ruin. They cannot remain overnight in the water and have to be scoured down upon withdrawal. In a Rowing Club’s quarters I saw all sizes of sculling boats — (shells) ruined, twisted like a ram’s horn. Many a mile I rowed alone on those glassy waters beneath a blazing sun. Boatmen told me that it was dangerous because of strange undercurrents in what is really more like a small sea, but nothing happened. Utah will never run short of salt. They pump low reservoirs full of the lake’s water, the sun gets busy and in a few days, fine salt is shovelled into buckets by the ton. A strange people those Mormons with a still stranger Lake. <sup>177</sup> I must not forget however to tell you of one custom

---

<sup>173</sup> Brigham Young married 55 wives of which 21 had never been married before, 16 were widows, six were divorced, six had living husbands and the marital status of six others are unknown. He had 56 children by 16 of his wives; 46 of his children reached adulthood.

<sup>174</sup> During the 1870s and 1880s, laws were passed to punish polygamists, and in the [1890 Manifesto](#), the LDS Church banned polygamy.

<sup>175</sup> WWB has *Crysanthemum*.

<sup>176</sup> Mormon Elders Noah Rogers and Benjamin Grouard arrived on Tahiti on 14 May 1844. See [Unto the Islands of the Sea: a History of the Latter-day Saints in the Pacific by R. Lanier Britsch \(Deseret Book, 1986\).](#)

<sup>177</sup> [Great Salt Lake.](#)

they have which we could well imitate. Everybody, either man or woman has to pay into the Treasury one tenth part of whatever they make of money or produce. That is why there is no poverty there and none go hungry. There are huge Store houses in the land to which farmers take a tenth part of all their farms' produce, perhaps flour or potatoes or maize or other things. All this is distributed to those in need. And so with all cash. My young barber told me that every weekend he took a tenth of his pay to the Treasury and was glad to do it. Fancy what a difference there would be in great cities or in small if that was done everywhere.

Another custom requires that every young man if chosen must serve for 2 (or 3?) years as a missionary abroad. Those I have seen or met with here or on other islands or lands are all fine young men spotlessly dressed, never touch liquor and extremely courteous. I think I have told you already that they <sup>178</sup> are never seen alone, always in pairs. The years over they return home and others take their place.

In that beautiful City of theirs with its clean broad avenues and shade trees there are 2 outstanding buildings, their Temple with its six spires and their Tabernacle which can seat nine thousand people : the former no one but a Mormon is ever allowed to enter but the huge Tabernacle is free to all and very marvellous it is with its egg shaped Dome unsupported by any pillars! Its acoustic (ask your Teacher) properties are quite as wonderful. Standing as I did at one end I could distinctly hear a button dropped by a friend at the other where he looked a midget! I hope that you will want to know more about this strange but interesting people. If so, those around you can "put you wise."

## 59. On "The Hell of the Pacific"

Mischievous boys when they rob an orchard know very well that if they are caught they will get a hide-ing. That is right enough. But what would you say if for stealing just one apple you were sentenced by a Judge to imprisonment for life! and transported by ship to a far off land never to return. That was what happened in the Homeland in the days of your great grandparents. Boys and girls as well as men and women were all "Convicts" and were landed in North America. Those were hard, cruel days when our forefathers had little mercy for one another and scoffed at Gentleness as Weakness. When the English in North America started their own new country the "United States" they said "No more convicts sent here" so the Homeland had to send these wretched people to the land just then discovered, the East half of Australia, to a site where now is the great City of Sydney with over one million inhabitants. But food was scanty and the really criminal ones among the convicts gave so much trouble that it was decided to separate them from the rest and send them to a lonely island 900 miles away called Norfolk Island by Capt Cook who discovered it. It is only 5 miles long by 3 miles wide with a high cliff all round it, a tableland of rich farm soil and in its centre a little mountain its summit easy to reach — which I often did <sup>179</sup> and saw below me the farms and the homes of the islanders, a lovely little isle. But in its first days of man's residence the story is too terrible and horrible to tell you. Someday you must read "*For the Term of his natural Life*" by Marcus Clark <sup>180</sup> : then you will know. Things were so awful that something had to be done. Every soul was removed to another lonely island — Tasmania and Norfolk island was once again uninhabited. But not for long, <sup>181</sup> for just then the close on 200 descendants of the Bounty Mutineers complained that Pitcairn island was now too small for them and the Motherland said, "You can go and live on Norfolk island," 2,200 miles away. So they went and are there to this day,

---

<sup>178</sup> WWB has *there*.

<sup>179</sup> WWB visited [Norfolk Island](#) in 1924; see Part XI, *Roaming the Pacific Waters*.

<sup>180</sup> See [For the Term of His Natural Life by Marcus Clarke \(Melbourne, 1874\)](#)

<sup>181</sup> The last convicts were removed to Tasmania in May 1855, while the Pitcairn islanders arrived in June 1856.

a quiet people, half British, half Tahitian. They retain many Tahitian customs and love singing in chorus and dancing far better than hard work. Happiness rules where once was Misery : peace reigns where once a constant merciless war was waged between convicts and their guards. No longer does it deserve that terrible Title which was once all too true and was upon all lips in that far away part of the world till it was borne to the Homeland and made even hardhearted men in Authority see that something had to be done. Relics of the dread Past are to be seen today upon that entrancing little spot in the vast pacific Ocean. Still there stand the towering walls of the main prison at Kingston — just fancy giving the name King’s Town to a convict settlement!! — the cells have gone but you can see the entrances to the underground dungeons and the wells from which many a leg iron, many a ball and chain, many a handcuff has been recovered — and one of the latter was found for me. You walk on roads and across bridges “convict made.” You see where the gallows stood and mounds long and narrow where those wild spirits were laid, a glad end to their misery. This is a sad Tale but it is right that you should know, so that you may realize how good it is for you to be born in these later days and realizing “make good” your life by gentleness towards all.

## 60. Of Mangareva

Man-gar-ray-var : it sounds to me like a pretty name and runs smoothly off one’s tongue. But white men when they came across new islands would insist upon giving them European names. So nearly 150 years ago Captain Wilson called them — for they are really a ring of islands — the “Gambiers” after his good friend at home and a fine sailor man Admiral Lord Gambier <sup>182</sup> (see your Atlas). Untold centuries ago there was a huge volcano <sup>183</sup> there which sank into the sea, leaving here and there around its lip small patches of land. There are 10 of these in a circle but only 4 of any extent, *Rikite-a* the largest on which I stayed in years gone by and noted things which I think may now be of interest to you. When first seen there were thousands of natives crowded on the Group, now there are only 1500 altogether and the reason is very plain — white man’s folly. They had lived their own native life, very scanty covering, their homes of wicker work and grass and leaves. But missionaries came who unfortunately were born tyrants and ruled the simple natives with a rod of iron. Their bodies must be covered, wet or dry, their islands must have road cost what exhausting labour it may, and homes of coral rock and stone must be their homes with doors and windows — cause of deadly draughts. Soon they had colds and fevers, before unknown, and thousands became hundreds, and the few left today are not the bright, happy, laughing and carefree people of other Polynesian islands, yet are they very kind and courteous to strangers, especially the English for it was not us but mad Frenchmen who did the damage. France at last stepped in and banished them but it was then too late. Christianity cost the Mangarevans dear.

Each of the main islands has its coral built Church, raised for hundreds but attended today by a handful, but *Rikitea*’s is an amazing structure, vast in size, its twin towers rising square and high, all of coral hewn by hand out of the reefs, and dazzling in its whiteness. <sup>184</sup> Within is even more amazing. Its Altars are a lovely sight with their pearl shell work on the *Reredos* (the shelf at the back), all the colours of the rainbow glisten in the sunlight as it plays amongst them. There is moreover priceless treasure to be seen above the main Altar, for in the front of the Tabernacle (ask your Teacher) there is embedded a lovely pearl, the size of a pigeon’s egg. I doubt if there is such

<sup>182</sup> WWB’s maternal grandmother, Sophia Rose Pym, née Gambier, was the sixth daughter of Admiral Samuel Gambier, brother of Lord James Gambier; thus Lord Gambier was WWB’s great-great-uncle. See Part I, *Notes on the Life of WWB, Genealogy*. See [Gambier Islands](#).

<sup>183</sup> WWB has *volcan*.

<sup>184</sup> See images of the church [here](#).

another in the world. It was given by the then King of the Group whose treasure trove it was, and had been found long years before in the pearling grounds of the one time crater. And in the side Altar of the Mother of Jesus (the Blessed Virgin Mary), whose Image is above it, the Figure has for a Crown a gorgeous tiara of pearls, the central one a fit companion to that of the main Altar. The flowers in the great vases are permanent, all made out of pearl shell, rose and blue and gold. There is room in that great building for 2000 but Rikitea today numbers but 500, and across its front between the twin towers — above the entrance doors there is to be read in huge lettering no name of Patron Saint but only this — “Quis ut Deus” (That will puzzle you I warrant!).<sup>185</sup>

What a sight was our deck when we sailed way; those generous folk well nigh swamped us : oranges and bananas, breadfruit and mangos, peach and pear, coffee beans by the sackful, to say nothing of the chickens and the pigs. In desperation we had to cry Enough Enough : then with many a handshake they let us go.

## 61. Of the Sweet Potato

What a strange vegetable? You will say : Fancy a potato tasting of sugar! You will not find it in cold or even in most cool countries. It loves and thrives best only in the Tropics, just the reverse of your ordinary one. Long months back I tried to grow the latter and took the greatest care of the rows. Soon up came the stalks and leaves and kept on growing like the poor roses which are fool'd by the perpetual summer and get no rest as yours do. Then came the day to gather the crop. With bucket and spade I uprooted the ground to find nothing! From all the rows I gathered just two small marbles, which I boiled in a tea cup of water. Since then I have kept to the sweet potato, the native name of which is “*Ku-ma-ra*.” Now you would hardly think it possible that it could and does tell a wonderful tale and has solved a mystery which has baffled learned men for many, many years. Where did the Polynesians — the Maoris, the Samoans, the Tongans, the Tahitians originally come from? Was it from the East or from the West. That they found these Thousand Islands inhabited their records show, but those natives were no fighters and the newcomers took over their islands and made slaves of the people. Book after book has been written to show that they came from Asia (see your map) but always there have been weak links in the evidence and the Polynesians were as much in the dark as the white man. Then the *Kumara* spoke up tho' it is only a humble vegetable and said, “Perhaps you will listen to me, for I hold the secret.” The sweet potato has ever been to all Polynesia, like the baker's bread is to us. It is not a vegetable of Asia, but a native one of South America! of Peru and Chile. It came in the great double sea canoes with the natives of those countries who set up their mat sails to venture out into the Great Unknown where there might be more room for them than on the crowded mainland.<sup>186</sup> Perhaps they intended to return — at least some of them, but it was one thing to sail with the wind and quite another to sail against it over thousands of miles. They reached Easter Island, some stayed, others went forward, the reached the Gambiers, the Tuamotos, the Marquesas and the (present day) “Society Group.” Yet still forward they went to the north; not the south till far later when a huge exodus from the last named group set sail (with their beloved *Ku-ma-ra* along with them) to find New Zealand and become the Maoris of today whose pictures you likely know well in the illustrated papers, and the women are there busy cooking the vegetable that their forefathers brought with them over the Great South Sea. Up a valley a mile out of Papeete there lies on the bank of a mountain stream a heavy flat slab of stone

<sup>185</sup> [Quis ut Deus?](#) is a Latin sentence meaning *Who is like God?*

<sup>186</sup> According to Wikipedia: The [sweet potato](#) was grown before western exploration in Polynesia and has been radiocarbon-dated in the Cook Islands to 1000 AD. Current thinking is that it was brought to central Polynesia c. 700 AD, possibly by Polynesians who had traveled to South America and back, and spread across Polynesia to Hawaii and New Zealand from there. It is possible, however, that South Americans brought it to Polynesia.

the size of a kitchen table. Its face is covered with carving of figures, two heads with seeming only one body, and a great snake seems to twine-ing itself all over the place.<sup>187</sup> The Polynesians have never carved on the face of stones so it is older than their arrival hundreds of years ago, and must have been cut and set up by a race of natives whom they found here; and maybe it is a thousand years old. Those natives lived on coconuts and fish, they had no *Kumara* to enjoy with its sweetness. We of today are more fortunate, and whether it is baked or boiled, mashed or plain it is a welcome dish on every table.

## 62. Of Our Birthday

We stood at Milestone 82 on Life's long, eventful Highway. WE (I say) not I, for all should note and remember that one's Body and one's Self are 2 clearly distinct entities : Self the master, allowing no dictation. There have been protests, complaints of tyranny, of needless privations, of not giving my "In'ards" fair play, but my retort quickly puts a stop to that : "Pray, my fine Body, were I to leave you what would hap to you? Promptly you would be in the grave or ashes in cremation's urn. Better far leave things to me" : and so far they own that I have guided them aright. But it was Our Birthday and weeks previously I had promised them a birthday treat, one that would also be a test to show me if their condition was as fine and healthy as they were always boasting. It was to be a stroll of measured miles along the island's Highway, and I was willing to throw in an extra 5 as a special privilege, so make it 5 and 20 miles! They became wildly excited, the old Heart pumped till I feared too great blood pressure for its good health, the Lungs fairly gasped with joy, and those veteran old legs tingled with delight. "We'll show you," said they, "we'll show you." They knew that there was to be no nonsense, no playing on the way, nor hastening, and I would set the pace. We mapped the course, 40 kilometres, all marked like milestones on Tahiti's Highway, the starting point our rustic bungalow thence through the little town of Papeete to a warm friend's sumptuous bungalow, 12½ miles from the start : then turning (no undue rest allowed) retrace our steps. No company allowed, lest they should either unduly hasten us, or growing weary, cause us worry or delay. We all agreed.

To bed with the birds and up with them is Our fixed rule. 'Twas a glorious summer day, though winter here, a foolish title where perpetual summer reigns. Of course my Minah birds must needs join Our Birthday breakfast so they had an extra bountiful supply of fruits they love and bread crumbs. We had the same and were off, soon to reach the broad well rolled Highway, no cinder track or grass for us. Mile after mile we sauntered on, 'busses, buggies, bikes all hurrying by, the sea close by us all the way, a gentle breeze softening the sun's fierce rays when the giant trees by the roadside failed ever and anon to do so, the palm leaves gracefully bowing as if to give us welcome and best wishes for a long life. Four hours sharp and we had reached the Turning Point. Did my friends there welcome us? Indeed they did and urged lost rest and rich repast. But No! the In'ards fare I had brought with me, thick sandwiches of bread and honey, but I allowed — for was it not their Birthday? — a brew of tea. Then off again to meet still more of speeding autoists as if in a race of life or death when of a truth they have Time to burn on such an island as Tahiti. Doubting friends were met in Town : "How fare you," was the query : Our answer, "Not turned a hair."<sup>188</sup> Four hours to the minute again, and we were Home, so fresh that I called upon those lazy Arms to

<sup>187</sup> See *The "Mystery Stone" of Tahiti* by WWB in the 24 March 1938 edition of the *Pacific Islands Monthly*, pages 44–45, in Part VII, and *The petroglyph bowllder at Tipaerui, Tahiti* by K.P. Emory in *Bulletins de la Soci  t   des Etudes Oc  aniennes* 11: 10–15, in Part VIII. The petroglyph is currently in the park of the *Mus  e de Tahiti et des   les* in Papeete.

<sup>188</sup> After vigorous activity, such as racing, the coat of a horse is likely to be ruffled and sweaty. It has 'turned a hair', a familiar stable term as far back as the 18<sup>th</sup> century. If a horse has not turned a hair, it can be regarded as cool and calm. Jane Austen took the term out of the stables and into wide readership in *Northanger Abbey* (1797).

join the picnic, and we worked till sundown with rake and hoe and mower in garden and in orchard. Then to the kitchenette for I tend them ever with a parent's care and they were really hungry. That duty done, the Brain made plaint, "Have you forgotten me?" "No! No! indeed, though I break the rule, for is it not your birthday?" We read of what men and women once had done — not might do — for or against their fellows — for the Present appeals to the Young, the Future to full Man and Womanhood, and the Past to the Agèd such as I : and all of Us now full content, we passed to well earned slumber.<sup>189</sup>

### 63. On the "Lazy" South Sea Native

One often hears people talk of the easy life these natives must lead with everything at their hand without the slightest effort. This is all nonsense so I want you to know the real facts which you can tell others when they slander as hard workers as any white folk. A great friend of mine (who has lived on Tahiti for over 30 years and who speaks the native language to perfection) and I were once talking of this subject and I will let him speak rather than I, though I agree with every word he said. I have seen it for myself. At twilight before the dawn our Tahitian is off to the mountains for *Fe'i* (the mountain banana). The plant thrives only on the sides of the mountains in distant branch valleys of the ranges. The sun is high in the heavens when he returns, bearing a load that would break the back of the white man. A dip in the river and it is time to prepare the native oven. When prepared and covered, it needs no looking after so his weary body is refreshed with a short nap. The repast over, off he goes to his coconut plantation and the back breaking task of making copra to be shipped overseas. Next his taro patch demands his attention, a heavy task as he stands in the deep mud under a blazing sun. Back home again he is occupied with the hundred and one small chores of the place. The sun gone down he snatches an hour or two of repose till the sound of the conch-shell trumpet summons him to the shore — the hour for fishing has come. He is well versed in the wisdom of the sea, from boyhood he has learned it. The nights of the moon, the ebb and flow of the sea, the run of the fish, each of its kind, the lurking place in coral pockets of one or other, the types and materials of hooks and lines, the varieties of bait and lures are things which are only acquired by long study and persevering practice. It is midnight before he returns to the shore laden with sufficient for his family and a string or two of fish to send to the morning market or give to less fortunate fishers or a fatherless home. And people call that native "lazy"! To us white folk he is invaluable, he plaits the pandanus and coconut leaves for our roofs, he can build marvellously without need of calling upon the white man's lumber yard. Off he goes with his great knife and returns with limbs exactly suited to the purpose and which need no paint for endurance, they last for years. He learned the art of stone foundations,<sup>190</sup> centuries before cement came to white man's aid, and what he can do with strips of bark in place of our nails is uncanny. Landscape gardening is beyond him but he is a wizard with his native blooms. This of the Men and occasionally one has seen a lazy one amongst them but of the native Woman ne'er a one. They seem born to work those dear brave mothers with their numerous offspring. Any mother will tell you that a woman's work is never done and it is true. Of children, you are the same the whole world over, the only time you are lazy is when you are ill and I trust that that will very seldom be. The native has the secret of Life in his heart, they go about their work with contentment in its call and a song upon their lips. Do that yourselves as I have ever aimed to do and you — like the South Sea native — will have a happy life, however limited, like theirs, your wealth.

<sup>189</sup> This hike took place on 3 July 1940. See Part I, *Notes of the Life of WWB, Birthday Hikes on Tahiti*, for references to articles in Part VII, the Pacific Islands Monthly regarding WWB's hikes in 1944 and 1945, on his 86<sup>th</sup> and 87<sup>th</sup> birthdays.

<sup>190</sup> WWB has *founditions*.

## 64. Of the Portent and the Thunder

(Found in an old Note-book of a Trader — once of Victoria B.C. — a resident of Moorea, whose grave is on the island of Tupuai.)<sup>191</sup>

Portent = A sign of something to come

---

The clouds had been gathering into heavy masses of a dull leaden hue and slowly drifting up from the north since early morning. Now, the lowest of them swooped down upon *Rotui*<sup>192</sup> and obscured the summit with swirling, eddying wreaths of vapour, rising again and showing the sharp outline of the mountain with its lace-like fringe of trees, marvellously clear and distinct against the blackness beyond. The surf broke on the reef with an apparent sullen tone to its roar, rising in a line of inky blackness and curling over to break — not as usual in a mass of sparkling brightness which pained the eye with its brilliance but in foam to which the clouds had lent some of their blackness, till it too seemed sombre in hue. The ocean beyond, also gaining its colour from the clouds gradually became darker till it was difficult to distinguish the dividing line of the horizon. Occasionally faint flashes of lightning lit up momentarily the distant masses of cloud while the sullen rumble of thunder could now and then be heard. A thin white line on the ocean, behind which the clouds seemed to merge themselves in the sea, showed at last where the squall, the precursor of the storm was coming : and the long fronds of the coconuts began to ripple in the first light gusts. The squall reached the reef which suddenly was apparently obliterated, and it could then be seen that close upon the heels of the wind was a wall of rain, utterly impossible to see through. The lightning had by this time increased in brilliance while the thunder changed its rumble to a roar. Then the squall reached us and the ripple of the coconuts changed to a complaining sound as the leaves threshed around, while the long trunks bent to the fury of the wind and then to the rain. The rattle of it on the roof was almost louder than the thunder, which kept up, peal after peal with hardly an interval between. “Well, Tarie,” I said. “This seems to be quite a little thunder shower.” “Yes,” she said seriously, “someone of the family of the Kings (highest chiefs) is dead.” “Why,” said I, “does a prince die every time there is a thunderstorm?” “Now,” she said, “you want to laugh at me, but if you listen I will tell you. When it comes like this today then we know that a child of the Kings is dead. It has always been so. Long before the white man came it was so, and it will still be so while any of the Kings are left on Tahiti. When Pomare V<sup>193</sup> died I was on Huahine and a storm like this came there, only it was a worse storm than this; and a very old man there said : “This is a storm of the Kings. When the next ship comes from Tahiti they will tell you that Pomare is dead.” And he bought black cloth and made himself a black *pareu* (loincloth) and a black shirt, and he made his wife and daughter cut off their hair and make themselves black clothes, for he was a *Fetii* (relation) of the King. And, true, when a ship did come, they said that Pomare had died on that day the old man said he did.”

(Note by WWB) Pomare V died on June 12, 1891.

---

You may think this is a Tale hard to believe but I know of a similar one from an eye witness. In January 1901 an earthquake and a tornado struck Papeete. Two women, both mothers of many

<sup>191</sup> A slightly different version of this tale appears in the 17 April 1939 edition of the Pacific Islands Monthly in Part VII. In 1898, [George Archibald McTavish \(1856–1922\)](#) moved from Victoria to Moorea, where he lived under the name of MacFarlane. [Link to Ancestry.com](#) (registration required).

<sup>192</sup> A mountain on [Moorea](#)

<sup>193</sup> [Pōmare V \(1839–1891\)](#)

children sat together in one of their homes. One was a pure native, the other had British blood in her veins. They talked to my friend of the Portent of the Storm and from its great severity they were certain that some very great person in the world had died. The Half Caste was convinced that it must be the greatest Ruler of that day, Beretania's Queen. It was so.

Queen Victoria died on January 22, 1901.<sup>194</sup>

## 65. Of the Caves of the Great

Once, long centuries ago, men, women and children lived in caves, but when they bethought them of building homes for themselves in the open ground be they of mud or stones or branches with the leaves of trees for roofing, they left caves for the wild animals; but not wholly so. Throughout the Great South Sea I have seen on many islands another purpose to which caves were called into use. It was there where natives laid away their Chiefs when they died. Thus would they honour them above all other of their dead. But to make sure that they should never be disturbed those caves were selected in the most inaccessible places, high up in the mountains, oft in the face of a cliff where even a goat might find it difficult of approach. And today it is well they did for the white man has too often no regard for natives' feelings. His museums appeal to him far more urgently. Today you must win the fullest confidence in your word and promises before those caves are even pointed out to you. As to taking you there a fortunate person you are indeed despite the risk of breaking your neck in the going. Some are so well concealed moreover by nature that roaming the mountainsides alone you will pass them blindly by. The natives know my deep respect for the Dead be they High or Low, Rich or Poor, Known to all or Known to none, so let us toil and clamber, take desperate chances (though not for those sure footed ones with their nerves of steel) and enter one and note what is to be seen in the great gloomy place which Nature has made for itself but Man and Animal have ever claimed as Sanctuary. Some are wet, others dry, it is the latter mainly used and with reverence you move and gaze around.

A skull is never a pretty thing to see, nor are human bones : but once, what you look upon, they carried through a hectic life a real Man, a Warrior and a Leader. Here beside "him" lies his long sharp pointed spear, the symbol of his authority, its wood indestructible for it is from the Toroea tree : it is carved beautifully from end to end. Once it was decorated towards the top where that strong armed native grasped it, with the sacred red feathers tied firmly with plaited sinnet (coconut fibre — their string) and of a certainty had a name of its own. There was a day when skull, bones and weapon played a thrilling part, now all three rest in peace.

There are other things to be seen, many an implement for religious or domestic use beautifully wrought either in wood or stone. Here is a stove cut from a block of blackest stone, finely grained, its weight far beyond one man's strength to lift, clearly a very precious possession of one of these many who lie around, not carelessly but in tiers where the walls cave in. But the strangest sight are two large blocks of similar stone shaped like *Atus*,<sup>195</sup> a deep sea fish most highly prized for food, their eyes of shell let expertly into the stone. There was care taken of their placement for they are exactly parallel and between them is a fishing spear, once — as was the custom — bound as the one nearby but not alone with red feathers, it had green and yellow ones besides. As this Cave of the Dead, so others scattered over the many mountainous islands of this Great Southern Sea. We will leave them as we found them, all speaking of peace not war. When our time comes for lasting rest may others tend us with like jealous care.

<sup>194</sup> This tale was published in the 17 April 1939 edition of the Pacific Islands Monthly, page 17, in Part VII.

<sup>195</sup> [Skipjack tuna \(\*Katsuwonus pelamis\*\)](#) .

## 66. The Exile's Return <sup>196</sup>

I think you may like to have another Tale from the lips of my friend *Iiga* (E-en-ga) the Samoan Chief — Years later I came across a Guam (see your Atlas) newspaper recording that he arrived on June 18, 1915 after his wondrous voyage from Saipan in the Marianas <sup>197</sup> (see your map). He told me his story sitting in his picturesque Samoan home, his melodious voice charming to hear. Read it slowly like as he told it me.

---

It was in 1909 when Germans ruled Samoa (D<sup>r</sup> Solf <sup>198</sup> the Governor) and I lived in my home here at *Fale-a-lupo* on Savaii. We felt that as we had to pay taxes we should have some knowledge as to where that money went, and though we had other grievances, this was the chief. We wanted and asked for a Balance Sheet and the Governor refused. We were angry. We are a proud Race and our hearts were sore. Chief after Chief went over the water to Apia and came back with no kind answer : so we determined to go in force and have it out, even if it meant a fight. We manned many large *faūtasīs*, stripped off even our lavalavas, putting leaves in place, painted and oiled ourselves, took spears and axes, and set out with shouts and songs of defiance for the seat of Government. When off *Mulinūū* Point at the turn into the harbour, the Governor came down to the beach and beckoned us to come ashore. We heard afterwards that we had been seen upon our way and men had ridden posthaste into Apia and told D<sup>r</sup> Solf : that his counsellors had begged him to give us our rights : that he had hastened to the top of the Observatory to see for himself : that his heart quailed before us, and so on landing he called us to him. He told us that we should not have come thus : that what we demanded should be given us, and that we should return to our homes with glad, not angry hearts. So we did not fight but instead went home. But we did not really know the Governor. What he did was to trick us. He sent a letter quickly to Suva on Fiji, and cabled from there for the German China Station Squadron, telling them to come at once to Samoa : and then he waited. As soon as he had his men-of-war he sent word to us to give ourselves up, but we would not till one of our old missionaries talked with us and showed us that as we had failed as Heroes for our people, we should now be willing to be Martyrs for their rights. When we saw that Light we surrendered, 10 of us, all Chiefs.

The Governor ordered us deported <sup>199</sup> and we were carried off to the Marianna Islands to the north which belongs to his nation. There our hearts were sad, as the years passed, far from our homes, and nothing could be done to help us. Then the Great War came, and the Japanese one day appeared and seized those islands. Now I saw my chance. I had my Samoan built canoe and I made up my mind that I would get away : for everybody said that Germany would surely win in the end and that those islands would be hers again. I knew that the nearest land for me was Guam which belonged to the Americans but it was 135 miles away. So I set out alone, taking some food and water. I paddled by the guide of the Sun and the Stars. There was much wind and sea, but I know how to handle a canoe, and there was a strong current which happily ran my way. I thanked God for that current. Three days and three nights I spent on the sea : it was very lonely for I saw no sail, and at night I dared not sleep. When I had paddled 90 miles I was very weary and I sighted land. It was a little island <sup>200</sup> and I rested only a short time for I was afraid that only at Guam would I be safe. So again

<sup>199</sup> An account of these events can be found [here](#).

<sup>200</sup> [Rota](#)

I went in my canoe and as I got near I was at last quite exhausted and nigh death, but God saved me. If it had been only a little longer I should have died in my canoe. When I reached Guam I managed to make the shore where there is the Naval Station. The people came down to the beach and wondered much when they saw me. They did not know where I came from. I was different from the Guam natives and my canoe was strange to them. They helped me out of my canoe for I was near death, and gave me food, but no one understood my language though I spoke German as well as Samoan. Then the American Governor <sup>201</sup> came and when he heard me speak the German he said to his people that I must be a spy and had come to them like this on purpose. But I showed him my papers which said that I had been 5 years in a German school at my home and that I was a good man and not bad. So as he could not read, he sent for an officer who could : and when the officer read them the Governor was pleased and very good to me and wondered much at my long journey. There was a German man-of-war interned at Guam and the Governor saw the Captain and told him my story. The Captain said, “I knew *Iiga*, in Samoa, very well : he is a good man.” So I met him and he too was kind to me. They put me in the printing office for I wanted to learn English, and as I set the type I learned very much. Then news came of the Influenza <sup>202</sup> breaking out in Samoa and that my friends were dying, and I longed to get Home and see them, though I had been thinking that when the war was over I would visit America and learn of it, for the Americans were very kind to me. When they saw me sad, they said that they would send me to Honolulu to catch the mail boat for Samoa, and they paid my way. I was in the Hawaiian Islands for some months till money was sent me from Savaii to return. When I got back I was glad to be home again, but very sad for thousands had died and most of my friends; but God was good to me, and though I had been so far away and might have died in my canoe, He brought to my much loved land and here I have remained.

<sup>202</sup> [The Influenza Pandemic of 1918](#)

<sup>203</sup> [A type of multihull sailing vessel or outrigger canoe](#)

<sup>204</sup> From [The Pacific Islands: an Encyclopedia](#), page 277: I’iga Pisa (1882–1965), a significant figure in Samoa prior to independence [in 1962], grew to fame as a composer of poetry and songs. Volatile and prone to enthusiasm, as a young *matai* [chief] in 1909 he acted as lieutenant to [Lauaki Namulau’ulu Mamoe](#), the orator chief from Safotulafai in Savai’i who challenged Germany’s rule under Governor SOLF. Lauaki sent him to American Samoa to garner support, for which he was imprisoned by Solf. When Lauaki was exiled to Saipan, I’iga Pisa went with him and settled down to learn German. Instead of returning with other exiles in 1914, Pisa made a dramatic lone canoe voyage to Guam where he worked for the American navy, learned English and travelled to Hawai’i. Back in Samoa he served under a series of New Zealand secretaries of Native Affairs as translator and bureaucrat, becoming a particular friend of C.G.A. McKay, later Secretary of Island Affairs in Wellington. I’iga Pisa served on the Constitutional Convention of 1954, was a *faipule* [Representative] in the parliament, a member of the Board of Agriculture and recorder of Samoan histories. Last of the exiled *matai* left alive at Samoa’s independence, he dictated a history of Lauaki’s opposition movement which has been translated into English.

<sup>205</sup> For a longer version of this story, see *A Brush With Wolves* in Part X, *Tales of Roaming*.

story. When in the 80s of last century I first left the dear Homeland it was to go to the North West Territories (as they were then called) in Canada where I lived in a tiny settlement of prairie farmers called Moosomin.<sup>206</sup> There I had a small and very humble shack, and to roam about that vast land I owned a pair of Canadian Trotters, lovely animals, fast movers. It was winter time and deep, firm crusted snow covered the land. We were 100 miles to the north of our home, had left the level prairie land and were deep in the great timber belt. It was lovely travelling, gliding over the surface of the snow in my Bob Sleigh or Toboggan, a sleigh without runners, on which I lay at full length, a pillow at my head, wrapped in a beautiful buffalo robe, with a “Russian helmet” (of wool) covering my head so that nothing but my eyes were to be seen. Raccoon gauntlets covered my hands, moccasins my feet. My beauties seemed to love the keen bracing air as day after day we roamed from one sparse settlement to another. Now it was time to head for home and we left the last southern settlement in the forest lands — a few Crofters’<sup>207</sup> pit-made homes — in the afternoon, with many miles of timber ahead of us till we reached a broad sloping valley where once a mighty river ran but now ’tis but a small river, with deep banks on either side save where fords are found. Across on the summit of the further side I knew there lived a Settler where we would house for the night. There would be a full moon anyway, so everything was rosey. We were enjoying ourselves hugely and I talked to my lovely dumb companions telling them what beauties they were and lauding to the skies their swinging pace, when the forest’s deep silence was broken by a howling cry. The team pricked their ears and broke into a gallop. I steadied them. Soon there was more than one cry, the welkin<sup>208</sup> rang with many : and the pack was behind us, they had struck our trail. Never lose your head in a crisis has ever been my motto. We would see who won out. That fearsome cry was still far off but wolves travel fast when after prey. So did my Beauties. Drawing my revolver from my pocket (I always carried one when on long, lonely roamings) and laying it at my side within easy reach, the race was on. Those hunters let us know where they were sure enough. Daylight had gone but as we broke out of the timbers and reached the sloping side of the great valley the Moon made things as light well nigh as day : and right across, a light gleamed. My settler friend was housed for the night, his cattle housed in the large stockade he had built alongside his home. Could we make it — yes if only we struck the Ford : to miss it would be to crash down the steep bank. I left it to my scared companions who were galloping madly as the cries behind us grew clearer and clearer. By some hidden instinct those dear fellows felt a trail beneath their hoofs and held to it. Down we went at a mad pace, they struck the Ford and falling back on their haunches — who taught them that? — they slid across the ice. Now up they went, galloping hard. Then I spoke — a report went off, not once for my friend might think it was but a branch snapping — again it spoke and yet again. The door opened — then a figure dashed to the stockade and flung wide open the doors. He knew what was behind us for the pack was hurtling down the valley by now. In a trice we were up and had gained the level, with a rush we were within, the gates were rushed together and barred. We had won. Ere I had unwrapped and got to my panting, sweaty steeds those fierce wolves were close at hand, soon they were at the gate, a maddened pack frustrated of their prey. Back to the timbers they went; and the next day we were home. That was not the only time my dumb friends pulled me through difficulties, but enough at this time. I was only a young man then<sup>209</sup> and took chances. They never failed me. They faced blizzards when no one else stirred out of home, they covered immense distances, be it with sleigh or buckboard.<sup>210</sup> If they were my slaves, I was theirs, no other hands than mine tended, fed and groomed them. We were friends, it was not possible with them to “let me down” but the closest call of all was that moonlit night when we were hard put to it to escape the fangs of Timber Wolves.

<sup>206</sup> [Moosomin](#) is in southeast Saskatchewan, which was split from the Northwest Territories in 1905.

## 68. Of the Kremlin

For long years I had thought of it, standing in Russia's ancient Capital Moscow, as one huge building fitting residence of the all powerful Czars. There I was greatly mistaken, and I want you not to fall into the same error. It was my good fortune years ago to treat that great City's streets and squares and see for myself what the Kremlin really is. It is a City within a City, a maze of lofty stone buildings, not skyscrapers but imposing in their size, their beauty and their strength. It is a walled City within a vastly greater walled City. It has its gates with sentries posted, its own great Churches, its palaces of the nobles, its arsenal, its vast stone houses, its monasteries and its nunneries its own fascinating museum of relics of the Past. I walked within those towering walls before Bolshevism was known and the regime of past generations of Rulers and Ruled still held sway.<sup>211</sup> The czar of all the Russias<sup>212</sup> was not there at the time but at Saint Peter's Burg (or City) now changed to Lenin Grad by those to whom the Past is hateful and to be wiped from memory. But Moscow is still Moscow, a Capital still as it was when founded over 700 years ago, with the Moskva River<sup>213</sup> running through it, on which I looked down from the City's walls to see vessels and boats plying their trade. The pines still grew around and a hill in the centre of the one time forest was the first clearing made, on it the Kremlin rose a Citadel, a Fortress defiant of all. Its walls are not a circle but a triangle (isosceles<sup>214</sup> — ask your Teacher) the base running parallel with the river; the pale brick of its walls, once of oak, have battlements atop broken by 5 huge gateways. They have each their name, I can recall but one — the Gate of the Redeemer — which is the main entrance, and through which with a special Permit I passed; let past its armed sentries. It opens on to the famous Red Square. Above the gate were frescoes representing the Saviour, and every passer by — not only those entering were one and all compelled — and I too out of Courtesy — to uncover their head in reverence thereto. Above that gate there was a Tower<sup>215</sup> with a peal of lovely bells which rang out at midday and at sunset. I was glad to recall that an Englishman made them and did the work some 300 years gone by.<sup>216</sup> Not all the ancient wall was standing, part has been replaced with broad boulevards with lovely gardens on either side, a joy to traverse, the Tartar hordes no longer feared. The Kremlin Palace of the Czar was a noble sight, a long building of white stone with a cupola covered with gold. And its Churches!! The Greek Orthodox Church, not the Roman Catholic is the Church of the Russian people and their Fanés<sup>217</sup> were always beautiful to see — even as here — as I crossed their country, the roof a Cambridge blue topped with a golden Cross. They are as beautiful within, but never a one has an organ, the human voice fills their place. Here I heard them, the men's deep basses are wonderful, their rumble is as if a mighty organ was thundering out its tones. They must be heard to be believed. I learned that there were 350 Churches in the City counting those within the Kremlin walls. Opposite one huge Church therein — akin to a Cathedral there is a lofty bell Tower. Near it stands the largest bell in the world — called the Tzar *Kol-o-kol*.<sup>218</sup> Its weight must be enormous. During a fire it fell to the ground and cracked. I walked comfortably thro' that crack and stood within, it seemed a veritable room, the clapper in the middle. Another thing that caught my eye were the ancient cannons ranged outside the museum with their countless cannonballs. What ugly monsters they looked and the balls the size of a soccer football. They would certainly make a big hole where they struck — the folk of those days knew not of bursting shells. But the Tzar cannon was beautifully wrought and ornamented despite its murderous aim and some few others followed suit. There was the Church of the Assumption to be seen, the

<sup>211</sup> WWB visited Moscow in 1913 during his trip from Victoria to England.

Coronation Church of all the Czars for centuries. Near its south porch was the carved walnut Throne of Ivan the Terrible (ask your Teacher of him).<sup>219</sup> Now to the great Red Square, scene of joys and sorrows, triumphal crowds and sickening bloodshed. Here stands one great Church with towering pinnacles, used as a stable by the French Cavalry in 1812 when Napoleon made the supreme error of his life, forced to retreat with no enemy to meet after his long march from his homeland and to line the road on his return with thousands of his dead and dying troops. Now I had seen enough of memories of Russia's Capital and ancient Fort to carry one through life. Since that day, the whole atmosphere of both has vastly changed — there are Czars no longer, Christianity has been suppressed and so far as possible abolished, but not even the present Vandals nor Time can destroy the stupendous work of those great builders of a Day that is Passed, the lovely Kremlin must remain as ever, imposing in its grandeur, its bells still ringing out carillons<sup>220</sup> of Joy and Triumph that despite the madness and cruelty of men all down the ages of Russia's history, their handiwork of Ages past stands fast and firm.

## 69. Of Borobudur

But first of Buddha. There are as you know other great Religions than yours of Christianity, each also with its many millions of Believers : among them there is Mahomedism,<sup>221</sup> Hinduism and Buddhism. I trust that you will never become narrow minded i.e. intolerant of other people's opinions. They have as much right to theirs as you have to yours. And so with Religion. Jesus, Mahomet and Buddha each taught what was to them the Truth and to turn from either of them with contempt is the very opposite to being broad minded as all should be. So we will think of Buddha only as a great Teacher, and learn something of the man himself and what he left behind him. He was born some 500 years before Jesus, the son of a King who reigned over one of the Kingdoms nestling about the Himalayas on India's borderland. His parents had a dread from the first that he would leave them and become a hermit and this he did but not till he was in his 30's. For full six years he lived alone thinking, thinking all that time till one day he came full in view of the Light he was seeking as to Truth and starting out to spread his Light to others, he became no longer *Gautama* — his family name — but Buddha "The Enlightener." His religion is far too mysterious and involved to attempt to explain. It spread from hundreds to thousands and from the latter to millions and got split up and mixed up in the process. Christians gather for Worship in Churches, Mahomedans in Mosques, Buddhist in Temples : the latter's are a mixture of monuments and chapels in some countries where its teaching spread and *Borobudur* in Java is of that kind. It is a wonderful and beautiful creation in stone. Its name means "Many Buddhas" and there certainly are; I grew tired of counting the small images, the actual number<sup>222</sup> slips my memory, they lined tier after tier as I slowly mounted up the steps which only long legs could take with any comfort. It was well worth the climb to reach the summit. It was not raised on flat land but on an eminence : it is in fact a fair sized hill terraced and clothed in stone. It has platforms one after the other, each receding, so that the whole creation is a broad and flattened out pyramid. Round and round you walk — stone underfoot and at your side all the time, there are breaks in those sides like battlements with their corners giving opportunity for a Buddha to be seated — never a Buddha standing, that would be unthinkable. The architecture is wonderful, the workmanship from base to summit without a flaw. There are recesses too, maybe priests of the Cult once used them — not now for that lovely pile is left to itself; like Christians, so Buddhist have split and the Javanese ignored its very existence as time went on. The forest clothed it, hid it from view, the Dutch in the 1800s (the Lords of Java)

<sup>219</sup> [Ivan IV Vasilyevich \(1530–1584\)](#)

<sup>220</sup> A stationary set of chromatically tuned bells in a tower, usually played from a keyboard.

<sup>221</sup> *Mahomedism* and *Mahomet* are variant spellings of *Mohammedism* and *Muhammad*.

<sup>222</sup> There are 504 statues of Buddha at [Borobudur](#).

knew nothing of it, Sir Stamford Raffles <sup>223</sup> rediscovered it and made it famous. <sup>224</sup> It is probably 1200 years old but shows no sign of ruin. And what a view of the countryside it gives as you mount up amid this wealth of exquisite <sup>225</sup> stone masonry! You see over the head of the surrounding forest to mountains with rice fields climbing up their sides, and towering volcanoes, active not asleep : and over your head a blazing sun for the Equator itself is but little distant. There were no pilgrims to disturb the quiet, no guardians of that treasure store of chiselled stone. I thought of Buddha to whose memory it was raised and gave warm thanks to Raffles for his painstaking research. And if you say “Pray who was Raffles?” ask your Teacher. This only I will say : he was one of England’s heroes (though few know it), he was an Empire Builder for his Motherland. He did great things for us and was forgotten like his Borobudur, so that when in later years England realized his work and worth there was endless search to find his grave in his Homeland!! <sup>226</sup> If you ask, “How came he to be in Java?” “Was he a mere roamer and good luck rewarded his research?” It was 1810 and Napoleon had sent his soldiers and taken Java from the Dutch. Raffles lead the British force with its High Officers to Batavia <sup>227</sup> (see your map) and the French were defeated and surrendered. Then when we had caged Napoleon on S<sup>t</sup> Helena we of course returned it to the Dutch but till then (1811–1816) Raffles was Governor General of the lovely island. It was then he first learned of and looked upon that masterpiece of Buddhism that it was my privilege to visit and I trust your pleasure to here read of.

As I started this little Tale so would I close it with words for your remembrance. Intolerant people are very unpleasant persons to know. Everyone wishes to avoid them as far as possible. Be just the opposite yourself. A broad mind means fast friends and happiness through Life.

## 70. Atimaono

Just 30 miles from where I pen this little Tale there is a Sugar Plantation of many acres, formerly a Cotton Plantation. Of Cotton and Sugar production I know as little as you do but it is of Man I write, a big, masterful man of Irish and Scotch descent whose story is bound up with those same acres. He had lead an adventurous life in many parts of the world : the Iberian Peninsula (ask your Teacher) had seen him, so had India, so had Australia till he headed for this lovely isle with an eye to producing what the world just then much wanted — Cotton. He had many and great difficulties to contend with but triumphed over all, yet made bitter enemies; a very unwise thing for foreigners to do in lands under other Flags. The Governor, a French Count and his Countess, were however his warm friends and when he had gotten the huge estate in fine running order he determined to give them a big surprise. Nearly three miles back from the seafront, at the eastern boundary of his Plantation, there was a small plateau on the mountainside 1600 feet above sea level. Keeping his intention to himself he turned most of his 1200 labourers to work. He had a fine road made up the hill and a site cleared for a residence. He had them prepare, down on the flat, all the material for a 6 roomed home and outbuildings. All was cut and marked ready for erection. They laid out a lovely

<sup>223</sup> [Thomas Stamford Raffles \(1781–1826\)](#)

<sup>224</sup> On an inspection tour to Semarang in 1814, Raffles was informed about a big monument deep in a jungle near the village of Bumisegoro. He was not able to make the discovery himself and sent H.C. Cornelius, a Dutch engineer. In two months, Cornelius and his 200 men cut down trees, burned down vegetation and dug away the earth to reveal the monument.

<sup>225</sup> WWB has *exquisite*.

<sup>226</sup> Raffles died in London, England, a day before his forty-fifth birthday, on 5 July 1826, of apoplexy. Because of his anti-slavery stance, he was refused burial inside his local parish church (St. Mary's, Hendon) by the vicar, whose family had made its money in the slave trade. A brass tablet was finally placed in 1887 and the actual whereabouts of his body was not known until 1914 when it was found in a vault. When the church was extended in the 1920s his tomb was incorporated into the body of the building.

<sup>227</sup> Part of [Jakarta](#).

garden and transplanted bushes and small trees to be watered by the never failing supply from a neighbouring spring. He bought and transferred furniture and furnishings of every conceivable kind from Papeete which he stored ready for the Great Day. Folk wondered great but he silenced every query till he was full ready. Then he acted. His small army carried up the huge stacks of material and the house and outbuildings rose as if by magic. Men say that all was done “in just 3 days”! The paint was dry, the floors were polished, the shades were hung, beds made and kitchen furnished. And now the climax. With relays of horses he covered the 7 and 20 miles to Papeete and invited, nay begged and — brooking no delay — induced the Count and Countess to return that day with him for a surprise. They went. When Atimaono was reached the Count and his Lady were carried in sedan chairs up the winding road. Here grouped before the porch was a Staff of servants. With a bow to the Countess he presented to her, this “Maison de Campagne,” this for her country residence. It was hers, hers only. They entered : a banquet of finest viands <sup>228</sup> and choicest wines awaited them. She named it “Mount Calme.” Truly W<sup>m</sup> Stewart was a masterful man. All those of that Great Day have Passed. Seventy years have passed since then. The plateau is void but the site is still marked by some lofty Norfolk Island pines and some luxuriant mango trees. Those 17,000 acres he had from the outset named the “Terre Eugénie” estate in honour of the Empress, the wife of the then French Emperor Napoleon iii. “Mont Calme” and “Terre Eugénie” are still recalled at Atimaono : but Survey Maps — which have no souls or sentiment — record the latter only as “the Tahiti Cotton and Coffee Plantation Company of London with a capital of One hundred thousand Pounds” and Stewart’s magic house on the heights as a prosaic “White House,” which it was. <sup>229</sup>

## 71. The Squire

I met him, not where you might think in the Homeland where Squires — at least in my young days — studded the land, each with their Manor House, broad acres and dependents, but in the then wild North West Territories of Canada, his new Home, south of the just laid railway line, within a few miles of where the United States joins up to Canada. In physique he was big and in temperament somewhat masterful, but always the perfect gentleman. Why he had uprooted was never any concern of mine to know. He had a large brood of sons and daughters, the youngest in the 20s, and everyone of them was a worker. He allowed no drones. Of course his wife was petite, a charming little lady, her lord her Oracle, and her to him his All in All. He spurned hired help both inside his roomy Manor House and with his large acreage. True to type, he had of course to have his Church nearby. They had raised a lovely little Chapel, and awaited wandering clerics to officiate. The Great Hall with its huge table laden with plain but wholesome fare — oft touched off with tasty “game” — had touches on its walls of that one far across land and sea. The Squire’s chair at the head was a lordly affair, fit seat for his bulky presence. I was ever a welcome guest and saw the happiness that abounded : each had their task, the boys outside, the girls in the Home. Order and Cleanliness were the rules to be observed by all, and should a growl be emitted from the Big Arm Chair — for the Squire had many years to his Roll Call and was no longer over active on his “pins” <sup>230</sup> — whether of farm or of housekeeping — all would haste to put things right. He was no Tyrant, but brought up to Rule. His broad acres were no plaything, they had to be made to pay. It was not all work. When the lamp was lit in the Great Hall, the girls’ needles flew fast, others made music, there was an ample library, and the Squire had ever ready listeners as he talked of the Past, the Present and the

<sup>230</sup> Slang: legs.

Future. Rarely did the boys fail to give me an afternoon's shooting over the "sloughs" (s-lew-s) for duck and the whirlwind snipe.<sup>231</sup> The Moose Mountains nearby were a misnomer; like the buffalo they once had been, now we could only hunt the deer. It was inevitable that as Time went on, there would be changes in that Manor House, the daughters fell in love with sturdy yeomen of other acres and married, their brothers followed suit. There was no sickness in that Manor House, its inmates were of healthy stock : but years later I learned that the Reaper had gathered in with his scythe my dear old friend The Squire, and they had laid his body to rest by the side of his much loved little Chapel, far from his forefathers who have rested generation after generation in God's Acre hard by the ivy mantled Church, hoary with the age of centuries, of which he oft had told me, but — for his Own's wider future — he had left, though his heart was there, must ever be. I understood him perfectly for he was an Englishman even as I.

You are Canadian — or American — born. No matter. You come of English stock, and I want you to know from an old, old Englishman what that high privilege of birth entails, and test yourselves that you may be true to type. We are endowed with an almost fanatical attachment and devotion to our Motherland. It is to you and me not Fatherland — but Motherland. Fathers are strong and can look after themselves but our Mothers!! Thinks of your own Mother when grey hairs shall appear, and you will understand. Our island Home is very, very old and our love for it is very, very great. We must be Broad-minded : always open to reasonableness of dealing : our Temper must not be "on the trigger" all the time but always under control : we must love Manliness : set highest store on the honour of our Word : love also Method and Orderliness : be dead against all hurry and bustle but possess tireless Perseverance : Courtesy to all our rule, be their grade what it may : have a Reverence for the Past however antiquated its Customs may now appear : be known to all for our plain Common Sense : and proud beyond all telling — but never boastful — of our great heritage.

Such an one was The Squire, make it your aim to be like him : so well you also go down with honour to the grave when the Reaper calls. May your years be as many as mine ere that day comes.<sup>232</sup>

## 72. The Klondyke<sup>233</sup>

When in 1897 that short mountain stream, one of the feeders of the mighty Yukon River, was discovered to be a river of gold, the whole white world went crazy. Men — and women too — poured in to gather of its spoils. They came from every quarter of the world. That stream was not an easy one to reach and Alaska was then but little known. The Yukon River was the Highway but to reach it there were towering mountain ranges to be crossed, lakes navigated, and what the higher portion of the Yukon held as to danger and difficulty few if any knew. It takes its rise in Atlin Lake, is fed by Bennet Lake, flows on placidly awhile then forces itself through darksome Miles Cañon,<sup>234</sup> with a whirlpool in the middle for a change, then charges through the Whitehorse rapids, thence to Lake LaBarge, then for<sup>235</sup> 1000 miles flows on, gathering size the while as it is fed by many a good sized stream, a lovely majestic river, twisting and turning ever and anon, reaches the Arctic Circle, then dips down to end its 2000 mile course in the Behring Sea. I know it for I have voyaged

<sup>231</sup> Possibly [Wilson's snipe \(Gallinago delicata\)](#).

<sup>232</sup> The Squire was Captain Edward Michell Pierce (d. 1888), who established [Cannington Manor](#), southwest of Moosomin in what is now Saskatchewan, in 1882. WWB is referred to in the section [The Settlement of Cannington Manor](#), by Capt Pierce's daughter, Lily (Mrs George Shaw Page), in the chapter *Life in Old Country Settlements* in the book [The Story of Saskatchewan and Its People, Volume II](#) (1924).

<sup>233</sup> See also *Alaska and the Yukon* in Part X, *Tales of Roaming*. WWB travelled the Yukon in the summer of 1914.

<sup>234</sup> Spanish: canyon.

<sup>235</sup> WWB has *then* for a 1000 miles.

from source to end. That wild gold rush had fascinated me for years. I had seen that mad mob on their way, had later heard their tales. Someday I would see for myself, would journey as they did, meet their dangers and walk the banks of that far famed River of Gold whence fortunes had come and still were coming. There came the day when I stood at Whitehorse (see your map) with 500 miles to go to reach the Klondyke. I had crossed that dread mountain Pass from Skagway and faced and triumphed over both cañon and those madly surging Rapids. There was tied by the little town the luxurious stern-wheeled steamboat which with a sister one made regular runs to the haven I sought : but those were not for me. As the pioneers so I would voyage in a cockle shell, a flat bottomed boat, and like them take my chances. Whitehorse was one of the Stations of the North West Mounted Police and the Inspector, a most charming fellow wishing me all success was firm : I could not travel alone, the danger was not from the river but from bad men who were still along its banks. Lone voyagers had disappeared mysteriously. I must have company. For days I sought for one headed my way who preferred chances to comfort. Then I ran across him. No doubt he was a hard citizen, unkempt, out of funds, but eager to be off. The Inspector strongly demurred. "What! A Seattle "tough" for your lone companion? Oh no." But I said, "O! Yes! Never fear! that fellow has a good heart beneath his rough exterior." And so, but with much misgiving, that kind Inspector let me have my way. And I was right for from the start, all down those 500 miles he fairly spoiled me. Ashore each evening he would let me do nothing. "Smoke your pipe," said he, "I'll see to things." He raised the tent, made the campfire, cooked and washed up and was first up at daylight to repeat his kindly work. My return was poor : he loved a siesta in the long afternoons so I bade him sleep whilst I sat in the stern of our flat bottomed boat, paddle in hand to keep it on its course and avoid the eddies. He slept and I took in all the sights as we glided by. And how beautiful was the ever changing scenery. The twists and turns of the river as it wound its way without haste through the mountains gave no chance for monotony. The river was ours, we were the lone voyagers all along the way, save for those stern wheelers which passed us with a cheerful greeting, but animal life ashore was ever springing a surprise. Rounding a curve, the shoulder of a mountain, there stood a great Moose taking a drink. Poor fellow, it was a shame to disturb him. We meant him no harm but he took no chances, ambling off up the slope. Foxes aplenty and now and again a bear would be seen rolling along on the bare mountainside, for Alaska's hills by the riverside are rarely precipitous, more like huge mounds reaching to the horizon. A flat bottomed boat in rough waters is an unwieldy fellow, it requires strong and careful handling. Lake LaBarge was not in good temper, in fact it is ever very quick tempered as boxed in by hills, the wind comes suddenly hurtling through them and whitecaps soon abound. We made it. The Five Finger Rapids also tested us. To have shot through the wrong ones would have spelled disaster. I had been told 100 miles above them to shoot between the 4<sup>th</sup> Finger and the Thumb. My flat tub wanted to do otherwise, but I forced its tubby nose to do my bidding and we went through with a rush to meet an unexpected Curler — which none had told us of — and we had all we could do to keep on balance. I fear my chum did not appreciate the thrill. He spoke of his wife and children in Seattle and begged me not to leave them fatherless. I had to give him another shock. On the way down, at a Road House we called in at, I offered a lift to a man for the day for we should pass his objective. My chum clearly knew the breed : "Look at him with his neat clothing, those hands of his which have never seen toil, he lives by his wits and carries as you can see a six shooter in that pocket." But I bore him along and he was courtesy and gratitude itself. So the delightful days passed, the mileage still ahead steadily decreasing. Our record run was no less than 70 miles and nothing to do but to keep "Number 169" the official name — by the police — of our craft, in a straight course. As we neared our goal, the Yukon became very broad with countless islands, then rounding a spur of high land we entered a charming country, a punch bowl in shape, at the far end of it a stretch of level land on which stands Dawson, a city raised by Klondyke cause, the smaller stream pouring out quite close to the town. We made for the Yukon's bank, tied up to a pile in the stream alongside N<sup>o</sup> 169's companions, the craziest lot of crafts imaginable, relics of the past, our own immaculate beside them, and stepped

ashore. That same day I walked along the banks of the Klondyke, reaching it by a bridge which joins the Diggings to the Town. Man with pick and shovel first had his innings and reward, then Dredges got to work. There is a mighty pile of debris far up that golden stream and that pile grows steadily in its length. Far up, that wondrous stream still runs unscathed; though its beauty as a whole as a piece of Nature's handiwork has gone for aye. I stood beside the River of Gold as it gently flowed and was content.

### 73. Eagle Hawk Neck <sup>236</sup>

If you look at your map of Tasmania you will see at the far southeastern corner 2 peninsulas — Forestier's <sup>237</sup> and Tasman's — joined by a tiny isthmus, probably unnamed but you see it above. It is there I want to take you and passing it we will visit Port Arthur, <sup>238</sup> the latter now largely in ruins but once another "Hell of the Pacific" and The Neck its Gateway. You will see Hobart the lovely little Capital not far distant and it was from there that I made journey to see another of my dreams come true. I took the long way round by land not the shorter one by water for Tasmania is a very beautiful island and I would miss seeing nothing of it. My Mecca was 60 miles away. The Neck was 50. In one official Report of those terrible days I read that that year there were at Port Arthur : convicts — men, women, boys and girls all from the Homeland 7,105 : guards 835 : soldiers 317 : Total 8,257. There was no hope of escape by water, the one chance was by land, but that tiny, narrow isthmus had to be crossed and the thing was impossible. This was how the Gateway 10 miles from that huge prison was guarded. The Neck is a hummocky, <sup>239</sup> sandy stretch of land, at high tide only 100 yards across, at low tide 400 yards. A brick guard room stood in the middle of the Neck where were stationed 30 soldiers under their officers. Two sentries by day and 4 by night always on duty. On either side of the guard room was a line a savage dogs, bulldogs and mastiffs. Each dog could reach to within 6 inches of each other right or left. Two hundred yards off, nearer to Port Arthur was another line of small sharp tongued watchdogs who giving the alarm of anyone approaching would bring out the whole guard. At night a row of lamps was lit, lighting up the whole Neck. On its water sides guards were set at equal distances apart whilst a patrol moved along the lines both day and night. The name was appropriate enough, for only a man with wings could ever hope to pass that Neck. The Penal Settlement stood at the head of a lovely Bay. Man's inhuman cruelty to man was its only blur, now a thing of the Past. The first ruin met with is the spacious Church of stone, with tower and lofty spire, the roof has gone, the walls once encircling 2000 of the condemned now covered with a mantle of ivy. Next comes a row of well built houses "Quality Row" where the Doctor, the Chaplain and other high officials dwelt. Then as if refusing to be hidden by the lofty trees of oak and elm rise high the gaunt buildings of the main Penitentiary itself, massive in their strength. I stepped within. The cells were bad enough but the "dark" cells were appalling. I tested one for a space and soon seemed to "feel" the darkness. Here men and women too were sealed up not for days but weeks. Then to the Prison Chapel, a thing beyond belief as a House of God. The devilish arrangement made it impossible for anyone to see another, the Preacher alone was visible. Then to the Model Prison thought a masterpiece, a fiendish building. There was a Central Court in it from which rows of cells lead off like spokes in a wheel. It was here also impossible for one prisoner to see another. Each spoke lead off into a yard of its own and into this tiny yard one prisoner at a time was admitted for daily exercise. A short distance from the huge Penitentiary and down the Bay a promontory juts out on its western side. Upon that site once stood Point Puer, the boy convicts establishment. The bitter cry from there reached even to their

<sup>236</sup> See also *Eagle Hawk Neck* and *The Convict Settlement* in Part XI, *Roaming the Pacific Waters*.

<sup>237</sup> WWB has *Forrestier*.

<sup>238</sup> [Port Arthur, Tasmania, Australia](#).

<sup>239</sup> Any topographic surface characterized by rounded or conical mounds. WWB has *hummocky*.

Motherland and orders were given to raze the buildings to the ground. To complete the picture here but touched upon of Man's inhumanity to his fellows however criminal, there is in Hobart — or there was for many many years have passed since I roamed thither — a remarkable Museum — gathered together by a local resident — a collection of relics of the Pioneers and with these a veritable Chamber of Horrors — like Madame Tussaud's at Home — where relics not only of documents are to be seen but the very Implements of Torture employed. They seem to belong to the Dark Ages, yet they were being used in my own lifetime. No need to harrow happy minds of today with details save to say that I did not allow test on myself of the "Cat o' Nine Tails" but tested the "Leg Irons" a terrible drag but nothing to compare with the fearsome "Ball and Chain" which strong as I am I could scarcely lift. And now a change of scene ere I stop my pen or you will surely say, "Your lovely little island heart shaped has no heart at all and rightfully was it called Van Dieman's Land for demons held it in their grip." Quite true; but the first white settlers were of different mould. They too came from the Old Country but they were free and loved nature. They turned Tasmania into an orchard, save the western side which was rich in minerals and untold wealth underground. They made the isle a little piece of England transported to the other side of the world. Where they settled they gave the pretty villages which I met all down the heart of Tasmania to reach Hobart the names of homes from whence they came. I saw Epsom and Cambridge, westward lay Guildford, Derby and Ramsgate : and made my way through Epping Forest true to name, for it at Home was long the haunt of Highwaymen and so it was in their new home. There is Richmond Park and Bushy also. But what surprised me was to come to Lake Tiberias, and the River Jordan and soon after to Bagdad!! Some devote reader of the Holy Book will possibly account for the first two : I fancy another was a devotee of the far famed "Arabian Nights" Fairy Tales. You may never taste Tasmania's fruits though they are to be met with as jams the whole South Sea over, but one thing you may even now possess of which Tasmania holds more than anywhere else in the world : that metal more precious even than gold — Osmiridium — used the world over for the tips of fountain pens. I am penning this to you thanks to Tasmania's horde. One name, one only stands out pre-eminent in the island's history. In the very centre of Hobart there stands a lifesize statue of the famous Arctic Explorer Sir John Franklin.<sup>240</sup> He first saw the island as a Middy,<sup>241</sup> sailing with Flinders as Captain on that wonderful circumnavigation of Australia. He was Governor of Tasmania from 1837 to 1843 and won the love of all with his sailor's heart. His memory is dear to every Tasmanian. Try — yourself — to think kindly of Tasmania despite "Eaglehawk<sup>242</sup> Neck," and its dogs.

## 74. The Isle of Palms

In the lounges of famous hotels and the spacious Saloons of luxurious Liners, I could not help but notice the lovely Palms which hold first place there and add a touch of beauty to their surroundings. Oft I wondered where they came from originally, for doubtless many were the product of seed carefully tended in some expert nurseryman's hot house in various parts of the world. Then came a day when I stepped ashore on Lord Howe Island 400 odd miles from Australia, and all became clear. Those palms are known as "The Kentia Palm" and here is their Homeland. It is only a little island, some 7 miles long by 2 miles wide, but it is very beautiful, covered with a dense and luxuriant vegetation. The Palms the world sees are dwarfs compared with their giant parents which, countless in number, a very forest, tower up 50, 60 and 70 feet. They have a fit companion in the Banyan Tree which must be seen to be believed, for each one demands ample room, no crowding like those palms. A single Banyan covers acres of ground. The island is a shady forest. The Kentia

<sup>240</sup> [John Franklin \(1786–1847\)](#). WWB has *Sir James Franklin*.

<sup>241</sup> Midshipman.

<sup>242</sup> WWB had *Eaglehawk's Neck*.

is a strange fellow. No seeds from the ones you see are of any value. Perhaps since my days there, the difficulty has been mastered by science, I cannot say. So every year for long years passed, between 4,000 and 5,000 bushels of the Giants' seeds have been collected by the residents, few in number and all white — no natives — and exported to all parts of the world. There would be bushels more but for the greedy rats. They have a lovely and an easy time. The palms now grow so close together that their tops are well nigh a mat along which the rodent takes his walk and eats. No jumping from one feast to another or climbing from the ground for a meal. There were no rats on this palm island till a few years back. That was an unfortunate day when a steamer ran upon the rocks which encircle the little island, and the rats in its holds made for safety. At first they were content with the bird life which was abundant; then they attacked the nest, eggs were dainty food. It was not long before supplies ran short. Then they turned into vegetarians and attacked the long slender strings of the palm seed. The few score folk tried shooting but the enemy was countless. They dared not use poison, for the Lord Howe Island is a Dairy Farm. So they turned to Owls. But the rogue was by no means beaten, he was full of fight. He went for his new enemy's nests and robs parents of their broods. And so the war goes on. It would be useless the way as done with the coconut palm, to ring the trunk with a band of zinc, when there is that carpet above on which they dwell. The Kentia is not the only palm on that favoured isle. There is the graceful "Mountain Palm" both large and small varieties which with ferns and lichen cover the face of the island's towering hills, for Lord Howe is far from flat land : Mount Gower rises 2,800 feet and Mount Lidgbird runs it close. There is yet another, "The Curly Palm" which prefers lower ground and boasts huge waving leaves. And besides the palms there is what Man has given the island, fruit in plenty to be had for the picking : peaches and pomegranats, oranges and bananas, a favoured island indeed. It can boast of more than its palms. Till Lieutenant Ball <sup>243</sup> in 1788 ran across it on his way in H.M.S. Supply to Norfolk Island, neither native nor white man had ever seen it. When those great migrations of the Melanesians set out from the Asiatic coasts in their canoes for the Unknown Ocean, now called the Pacific, they missed it. Nature held it inviolate, only the birds knew of it and made it their home. And even today it remains unique. No other island that I know of is wholly Government property, not an acre has been or can be owned by individual white folk. It is a "Reserve" of the New South Wales Government. The residents are shareholders in a Company which collects and distributes those Palm Seeds, and that Company is controlled by the Government and can be dissolved at any time if so thought fit. It is a very close Corporation, outsiders stand no show at all. A boy born on the island acquires so many shares on attaining his majority, and girls are dowered on their marriage. But those charming Seed Gatherers have no fear of Eviction. They live in positive luxury and are Hospitality itself to every visitor. There is neither Doctor, Nurse nor Hospital, they seem to have no illnesses till Old Age claims them, then the grave is dug mid the ferns and palms. They have of course a School House and a Church, a Bowling Green and a grass Tennis Court, hard of surface but a veritable lawn. There are no shacks, but Bungalows with wide verandahs, each set in their own paddock with grassland all around where fat cattle and full rounded horses graze in the rich meadows. A happy and contented people. I found it hard to leave that delectable Isle of Palms, even as I am quite sure would you, should your Roaming in years to come lead that way.

## 75. The Gateway

Just as Gibraltar is the Gateway from the Atlantic to the Mediterranean so is Singapore from the Indian Ocean to the Pacific : and our Motherland, old but strong, holds the Keys of both. My far roaming took me to the latter Gate. and what I saw and learned I would fain pass on to you. It lies very, very close to the Equator and is exceeding hot but during my stay, at no time of day did I find it unbearable. I was out to learn and now pass on to you what I trust will be of interest. The island of

<sup>243</sup> [Henry Lidgbird Ball \(1756–1818\)](#)

Singapore lies at the southernmost tip of the Continent of Asia, and at the south of the isle lies Singapore Town with its nigh half million inhabitants. The island is flat, heavily timbered with excellent roads to walk on. It is separated from the Continent by the Straits of Johore (the neighbouring Sultanate) which are fairly wide — even a couple of miles in some stretches but so narrow at Singapore’s north that a rock causeway joins island to Malaya, as that part of Asia is called. No bridge but solid rock, one side of it given up to the railway, the rest for the use of traffic and pedestrians such as I. The Naval Base of which so much has been heard these many years past is a good ten miles from Singapore Town. It was in the making in my day <sup>244</sup> and a very busy stretch of land and sea it certainly was. The whole British Empire is proud of it today : it guards the Gateway and is a fitting resting place for our splendid men-of-war. We won possession of the island through that fine far seeing Englishman Sir Stamford Raffles of whom I have already spoken. It was the home of pirates who menaced all traffic coming from which way it would. Johore’s Sultan <sup>245</sup> could do nothing with them. It called for stronger hand to root out that nest and destroy it. It was a free gift to us and we quickly cleaned out the robbers : and the man who did it has had a magnificent life sized Statue <sup>246</sup> raised to him on the Town’s waterfront. He stands with one hand outstretched as if to point out to us the waters of the Gateway which he made safe for all. It was but a fishing village of 100 souls all told when he landed on the site : today it is a hive of industry, the harbour crowded with steamers and sailing craft, the streets alive all day with rickshaw runners, many magnificent buildings, splendid esplanades, cricket and football have fine grounds in the very forefront of the City and hotels deluxe, the leading one in my day appropriately named “Raffles.” I have told you of the Sacred Horse on the *Miyajima*, here on Singapore I had an interview with Sacred Monkeys. It was in this way : I was on the main road leading to Johore and some miles out of Town when in a clearing at the roadside there lay a grave around which were many Malays. It was the grave of a Holy Man and to it they were bringing their sick, together with offerings of food, of incense and of money, all of which its guardians were gathering in. They sought to gain the blessing of the Saint. I watched a mother and her little daughter. She stood at the end of the grave behind her child, and holding the arms of her little one, they bowed and bowed, raising and lowering their arms till I wondered they were not weary. Then lighting their joss sticks and finding a space for them nigh the head of the grave they moved off to give place to others. I was informed that if I made an offering for the well being of that Shrine I could see its Sacred Monkeys. Naturally I “shelled out.” What I saw made one wonder that the whole hosts of monkeys of Singapore did not live around that grave. Perhaps the Monarch whom I was soon to see makes it too warm for intruders. He certainly is a big one and has a nasty temper. He made it hot even for his particular subjects. He was slow in coming but once arrived he made things lively. The guardians gave forth weird calls, yet nothing stirred. Next they threw ripe bananas upon the large cleaned space of ground at the head of the Shrine and again they called. At once I saw a stirring in the trees around. Down from their tops I could see monkeys swinging from limb to limb. They came from every quarter and in a trice the quad was alive with them. They were not well mannered, they were in fact distinctly selfish. There were many mothers carrying their babes in their pouch, but the Bachelors or their Husbands, I know not which, had no thought or care for them. It was a wild scramble, very far from Holy. Then suddenly that Monarch came upon the scene. That straightened things up at once. he was four times the size of any other of those Sacred Monkeys. Though late in time, he was going to have his share of the good things provided. They knew it and let him dutifully. Then a wild rush for the trees. Up, up they swung themselves, and they were gone. I wondered if I should yet live to see Sacred Snakes which would be a fitting climax. Let us return to the Town and gaze again ere we leave at its creator Raffles. Three times in the last years of his duties on Sumatra, nearby, he visited it. He watched and counselled its growth with intensest interest and as ‘his own child’ (as he called

<sup>244</sup> WWB visited Singapore in about early 1925.

<sup>245</sup> [Hussein Mua’zzam Shah ibni Mahmud Shah Alam \(1776–1835\)](#)

<sup>246</sup> Photos of the statue can be found [here](#).

it) grew with astonishing rapidity, his joy was abounding. Singapore gave him a glorious Farewell,  
<sup>247</sup> they knew his worth, he well deserved it.

## 76. Of Buried Treasure

In various parts of the world there are spots, especially islands, where man believed and many still believe lies hidden Treasure. The most wonderful and alluring stories are told of pirates, filibusters and revolutionists getting with untold gold and silver, precious stones and even images, hiding them thinking to return when the hue and cry died down, marking the spot on rough map drawn, but the Grim Reaper with his scythe gathering the freebooters in ere that day came, some by quarrels among themselves, others by shipwreck, others by misadventure. But those maps refuse to die and turn up every now and then in most mysterious fashion. Some are said to be come across in well worn books in second hand stores, others handed over at the point of death to some crony with urge to follow up as he had failed to do. An unbelieving world has yet to hear of any such buried treasure having ever been unearthed. Success could not be kept secret for men acquiring sudden wealth cannot escape the eagle eye of their fellows. These tales must needs be written down as Myths by balanced minds but still the search goes on. It is of such search in the Tuamotus Group of Atolls that I write of, for you to smile at men's still foolish dreams. Pinaki is an uninhabited Atoll, a fairly broad ring of coral surrounding a lagoon, uninviting even for a landing as I sailed by some few years back, <sup>248</sup> its nearest neighbour whereon natives dwell is Nukutavaki, but a short distance off. But Pinaki has been held for nigh 2 centuries past to hold upon its reef or within its unruffled waters fabulous treasure and many a hunt has been made for it by white men for the natives had ever had their unbelief. The last attempt was but of Yesterday whilst I had my home in Papeete. We saw the ardent Treasure hunters off, they were certain this time of the Find. True enough others had failed though they had trenched that hard coral reef the whole ring round and sounded the bottom of the lagoon with drilling instruments. These men however had the correct map of the spot. They had gained it from the hands of an ancient mariner as he lay dying in Sydney. He had had it for long years but had not the means to follow it up, he knew the story. There had been a revolution in Peru, its leaders had despoiled the Churches of their wealth both in cash and lovely jewelled goods, their spoil handed to a confederate and his crew to carry it to Panama, their treason and their sailing not north but west, their fear of pursuit and determination on passing through the lonely Tuamotus to bury it. That done they sailed off for Sydney but for safety's sake had scuttled their ship off the Australian coast and were welcomed ashore as shipwrecked mariners. The chance of return appeared hopeless, they scattered and died, the Captain the last with the all important map who gave it to the now fast dying man. And these deluded fellows believed it all. They went. They delved and drilled, they pickaxed and dived. The map utterly failed to give aid. We saw them return, a sad and chastened lot, they had wakened from their dream. Pianki once more had rest as it lay in the sunshine of the Tropics.

A few years passed and lo! another expedition — with its map — this time for Hiti Atoll with the lamentable result. We are wondering, which atoll will be next? I trust that none of mine will ever suffer from this craze of Buried Treasure. <sup>249</sup>

<sup>247</sup> Raffles left Singapore for Batavia, Sumatra and England on 9 July 1823.

<sup>248</sup> WWB wrote this Tale in June 1941 and so probably visited the Tuamotus in about 1938.

<sup>249</sup> [Tepoto Sud](#), [Raraka](#) and [Makatea](#) have also been identified as being the site of buried treasure from South America. See *Killorain's Treasure Island* on pages 17–25 in [Ireland: Irish short stories and poems by Tony Crowley](#). See also [The Treasure of the Tuamotus by George Hamilton \(Stanley Paul, 1939\)](#). Reports in the press of 1934 regarding the expedition witnessed by WWB can be found [here](#) and [here](#).

## 77. Of the Bower

Our Home, my Body's and I. Once in the Long Ago the site on which it stands was part of a large Sugar Plantation, the hills and rows were very evident and no small task to level. Later the whole acreage was planted with coconut palms in ordered rows and I have many of these to grace the site, but other trees were added here and there around and Nature planted more, whilst on my corner plot of ground undergrowth had been let grow rampant and defiant. The latter went down before the handsickle blade but the trees are sacrosanct, giving shade and beauty to my dwelling place. There is the Frangipani, an ungainly looking tree of a truth, without definite shape but all made up by its lovely blossoms cream white and fragrant. There is the Breadfruit tree, massive of trunk and towering high, loaded at each season with its outcrop, very cannon balls for size and weight. Dropping when ripe they are to be avoided with care. There is the Mango, a full fledged tree requiring plenty of room. Some have been seen many years, others are still young, their fruit varying greatly, some altogether too redolent of turpentine, the "Mission" a tasty one and juicy. There is the Kapoc, a straight up and towering tree, stretching out its long spidery arms as if seeking company. I find it a useful tree for it bears large flat pods which fall when ripe and burst open. In these is a silky soft wool which comes in very handy for stuffing both pillows and mattresses, though it means a tedious job picking out the scores of seed entangled with the wool. The Palms about me are of course most graceful fellows but they are not altogether a blessing. The huge lengthy fronds (leaves) keep falling down and with their great length play havoc with all they reach. They crash through the carefully tended and close cropped hedge, they lay low the flower beds, they break off branches standing <sup>250</sup> in their way. The huge nuts themselves are a menace. If they struck humans they would crack a skull like a hammer an egg. The wonder is that there are so few accidents and very rarely a death thereby. I have had some close calls as I work beneath them but one grows indifferent to the danger. A long bamboo pole with a double crook of iron at its end is my weapon for those clusters of nuts when they look dangerous. From the very start I was rich in Nature's gift but there were others lacking and up to me to supply. Orange trees are growing nicely, so also citrous for lemonade, whilst there are bananas studding the site, their huge bunches of fruit quite beyond me to consume alone. There are rows of the slender papaya, a graceful tree with its crown of bright green leaves, the fruit hugging the trunk and to be carefully handled when ripe for to bruise it is to reduce it to a pulp. A ladder comes in handily here. I could not do without ground fruit, especially the luscious pineapple, so have 200 plants in ordered rows and weeds are arrested by laying between each row the rotting leaves of my palms. A charming outlay is all this, but in no sense unique. It has countless counterparts on this favoured isle. The only difference between this and other white men's is that hired native labour tends the grounds while it is my privilege having time and strength to be the labourer. No other hands than mine have formed or tend the spot. The Bungalow itself is simple in its construction and provisions, the frame of wood, its roof of thatch, its walls of plaited leaf or bamboo. Rich fernery on stands enshrouds its base. The Highway with its auto traffic night and day is half a mile away. Quiet reigns the day long and at night I can only hear the babbling brook (The Hamutu) by the side of my dwelling as it makes headlong for the sea or the roar of the breakers as they thunder against the reef. Here then is our Home, a veritable bower <sup>251</sup> shady and beautiful to look upon and dwell in, and to my mind rightly is it named. <sup>252</sup>

---

<sup>250</sup> WWB has *stand*.

<sup>251</sup> A shelter (as in a garden) made with tree boughs or vines twined together; an arbor

**Plate 8. “The Bower”**

W.W.B. in the orchard.

**78. Of Bird Money**

You will surely say, Whatever can that mean? I know of Bird seed and a Bird Cage but what have Dollars and cents, Pounds Shillings and Pence got to do with the feathered tribe? Yet that same money is constantly on the lips of Tahitian natives and the Chinese shopkeepers, who call it *Moni Manu* and you have to know what they mean as they name their prices or you are in for a difficult time settling your account with them. They will charge you a *Tara* or a *Toata* or a *Raera*, maybe all three together which being interpreted mean respectively a Dollar, a Quarter and a Real and none of them, as you might think at first, American coins. After a time you learn to remember that their “Dollar” means 5 francs, their “Quarter” means a quarter of their Dollar, in French money one franc twenty five centimes and the “Real” half a franc which is 50 centimes. It is Chilean coinage, the coins themselves no longer in use and to be met with only in the Museum or as Curios in private hands; but how it came into general use on Tahiti, and throughout the whole of French Oceania and became the money language, still clung to by the natives, is a mystery both to Tourist, many a white resident and even to the natives themselves to whom their Past is largely a blank.

From the time Tahiti became known to the outside world, the port from which both men-of-war and merchant ships set sail for it was Valparaiso, the chief port and City of Chile. Trade required money and Tahiti had none of its own though there was English money circulating from British ships, French money from those of France, Spanish coin from Mexico and other countries besides these, a perplexing mixture and confusing with no Bank to help straighten matters out. The coins of Chile were those chiefly in use surpassing all the rest in their quantity, and all business came to be conducted therewith. Those coins carried the effigy of an Eagle, its wings outspread and came to be called *Moni Manu* “Bird Money” to distinguish it by the natives from all other coinage that floated

in upon Tahiti. So things went along more or less in confusion till the French took command of the island when Bird money and Francs were settled at fixed value for each and for some years ran together in all businesses. When later on Tahiti became a French Colony the Home Government decreed the death of Bird Money, it vanished from circulation but not from the minds of the Tahitian people nor (as one sees from the language of the islanders) as they deal with one another or white folk for their goods. When the Chinese filtered in, they naturally mixed with the natives both socially and in trade and picked up the “lingo” commonly in use amongst them and “Bird money” seems yet out for a long, long life. Till Panama was cut in twain — and that was no so very long ago,<sup>253</sup> both the way Home to Europe and the cargoes loaded at Papeete for that Continent was via Valparaiso. That Town and Port loomed large to Tahiti’s eye, and its Bird Money on every hand pressed home its importance but of a truth it was but a halting place where cargoes changed ships before or after sailing round the tempestuous Horn. Its day is past so far as Tahiti is concerned, its coinage too.

## 79. Of Cannibals

What!! in this part of Oceania? Surely this Tale will be a Legend of the Past? Not so. It sounds impossible but ’tis true and in the days of the French Protectorate over the Georgian Islands<sup>254</sup> (Tahiti, Moorea, Tetiaroa and Mehetia) and also of the Atoll Group (The Tuamotus : “Distant Islands”). Christianity had triumphed over Paganism, but there were isles still wild and savage as this Tale will show. On my way far south from Papeete heading for the Gambiers we passed far off on the horizon the Atoll Tematangi (Bligh Island to the white folk — after Bligh of the Bounty<sup>255</sup> — who first laid eyes on it). It stands alone as you will notice if you look in your Atlas. The schooner “Sarah Ann” left Valparaiso in March 1856 for her home port Papeete to call in at the Gambiers for pearl shell. There were 17 aboard, the Captain, his wife and babe nigh 2 years old, the Supercargo (who tends to the trade of a vessel), 2 Papeete merchants, 9 of a crew, 2 boys the sons of a M<sup>r</sup> and M<sup>rs</sup> Stevens of this port, and a servant maid of the Captain’s wife. At the Gambiers they met with a French sloop of war which was on the point of sailing for Tahiti and left with the assurance that the Sarah Ann would be also there in 10 days time. She never arrived. The weeks, then months passed and it was accepted that it had foundered with all aboard. The mother of those 2 boys was heart broken. A full year passed when a schooner arriving reported that passing Tematangi at a distance a wreck was seen upon the reef. Sailing nearer with the intent to land and investigate, natives gathered brandishing spears and appeared so hostile that it was considered unwise to land. Upon their shoulders and upon branches of the pandanus tree and attached to bushes of the thick undergrowth there were seen clothing that could not possibly be theirs and no white folk appeared upon the scene. The Protectorate at once took action. Their steamship was despatched with marines (sea soldiers) aboard. Arriving, no natives were to be seen. Search was made for any hapless survivors without success but the natives’ huts though empty had freshly caught fish hanging on their posts and the mats were still warm. Many a gunshot was discharged into the thick bush and to show that white men meant real business huts and canoes were burned. The steamship returned to report; and of the wreck itself no vestige remained to lend a clue. Nothing could be done. But that heartbroken mother thought otherwise. She was going to learn, if learning was possible, the fate of her beloved 2 boys. She chartered a schooner, the “Julia,” and headed for Tematangi. Passing the Atoll Anaa she took aboard 25 natives and their Chief named *Teina* to speak to the Tematangians if

<sup>253</sup> The [Panama Canal](#) was completed in 1914.

<sup>254</sup> Now the [Windward Islands](#), the eastern group of the Society Islands

<sup>255</sup> WWB has ~~after~~ *Bligh* and, inserted with an arrow, *but not he...* WWB’s initial understanding was correct; the Bligh that first sighted Tematangi was indeed the [Bligh](#) of the Bounty. Bligh was Commanding Lieutenant on the Bounty when the mutiny took place in 1789 and Captain of the Providence when he sighted Tematangi in 1792.

found. Upon landing not a soul was to be seen. The Anaans set out to comb the underbrush, their Chief remained and stood alone. He heard a piece of coral rolling close beside him, turning he saw a hand protruding from a pile of coral. At his far reaching rallying cry his men returned on the run, tore away the pile and saw the entrance to a cavern. From it they brought out 12 adults and 4 children. They, hearing no sounds above them, thought the ship's folk had gone aboard and that all was safe again. They were led aboard the *Julia* and the search went on to come across human bones, a skull with long blonde hair still on it, parts of a child's body sundried attached to the top of a pole to act as a "fetish," a charm for their gods, and teeth and feet and finger bones. These relics were taken aboard as evidence. Tematangi was left behind but ere it reached Papeete 3 of its prisoners died presumably of fear of what awaited them. None however were put to death but they were confined to their end, they saw their island home no more. What must that devoted mother have thought within herself as she looked upon those cannibals who had killed and cooked and eaten her dear boys! Such is the Tale of Tematangi and 'tis true.<sup>256</sup>

## 80. Of a False Scare

In the Tale of "Oro and Others" I wrote of 2 huge stone idols now standing in our museum grounds but the names of the Gods no native knows. That was all, but they and their arrival which I witnessed call for fuller handling which I think will interest you. Those ancient and towering effigies had stood from time out of mind in the thick forest of the interior of the lovely little island of Rai-va-vae one of those islands of the Austral Group 100 miles and more south of Tahiti I had visited and thus stepped outside of the Tropics<sup>257</sup> for a nonce. Their removal had the consent of the Governor of the Colony without which it could not have been done but it was far from being welcomed by the natives of where they stood or by those of this island whence they were brought. Though Christian in name and profession the awe and terror of the old gods still grips these people. Raivavae was to them the special residence of the fierce old Sea God *Ruahatu*. Impressed upon their memory was the legend — but to them the truth — of how 2 fishermen casting their net into the deep where unknown to them the god was sleeping had entangled it in his long hair. The god aroused rushed to the surface and in the tempest of his anger caused the sea to rise above the mountain tops of the islanders' home. When these huge idols were safely landed at Papeete the whole native population were in a highly nervous state of mind. Some predicted a devastating tidal wave and even went so far as to have their moveables packed up in readiness to make for the mountains. When a few days later flashes of fire were seen issuing from and playing upon the waters of the harbour real terror prevailed the fiery old god was preparing a volcanic eruption. On top of this the man who above all others had counselled the removal of the idols and himself had conducted the removal and brought them safely to landing at this port fell desperately sick. The old Sea God had given him "what for" for daring to steal his images. Natives became desperate, scared so greatly that there was strong talk to petition the Governor *en masse* to have those huge effigies at once returned to the forest they came from. The days passed harmlessly, they mounted into weeks and neither hurricane nor volcano appeared to disturb our peace. The sick man became the centre of interest, a steady crowd kept close watch over his home. Would the fetchers and carriers for the great god *Ruahatu* do his work for him with this destroyer and plunderer? Despite their fears — perhaps their hopes — the sick man stood upon his feet again.<sup>258</sup> But those flashes of flame upon

<sup>256</sup> The source for the story of the "Sarah Ann" is probably *Rapport sur la tragédie de la goélette Sarah Ann* by X. Caillet in *Bulletins de la Société des Etudes Océaniques* 67: 222–233 (June 1857). This story was told by Robert Louis Stevenson in Part II, Chapter IV, *Traits and Sects in the Paumotu*, of [In the South Seas \(London, 1900\)](#), although in less detail than WWB and with an error — Stevenson states that the Sarah Ann left Papeete and not Valparaiso.

<sup>257</sup> Raivavae is located at 23° 52' S. The Tropic of Capricorn is 23° 26' 16" S.

<sup>258</sup> The man who conducted the removal of the idols in August 1933, Steven Higgins, died not long thereafter, in 1935. The history of the tikis (in French), including five other deaths attributed to their removal from Raivavae can be found

the water! what could they mean but some supernatural action. Then into the harbour a vessel came and the Captain when told of the wonder and the Scare blandly remarked that on leaving he had tossed overboard a pot of phosphorus and flour, the mixture he and others use on schooners to poison insect vermin all too prevalent aboard these vessels. The phosphorus coming in contact with the salt water had generated a gas which ignited as its bubbles burst on the surface of the lagoon! The natives collapsed as also did the scare, *Ruahatu* had failed to come through with his part of the business, Papeete held his images and meant to keep them, none now protesting. They are truly hideous but they still stand in the open as they had stood for centuries in the wild forest of Raivavae, but none pay them reverence today.<sup>259</sup>

## 81. Of Tahiti's Heart

You have had many a tale of Tahiti from my pen but one and all of them have had their setting round the coastline. The mountains run so close down to the sea that there is only a narrow strip of flat land between the two. At times it is not more than 100 yards, in some places there is none at all but happily there is room in others extending even nigh a half mile back. In the days when the natives numbered many, many thousands<sup>260</sup> they had to make their homes up the valleys and on the sides of the mountains, the Great Ones among them monopolized the seashore strips, the humbler ones were forced to find room elsewhere. But those valleys were often broad and beautiful, each one with its river hurtling to the sea and the mountainsides gave both welcome shade and room, so all were full content. It is to inland Tahiti that I want to take you, lonely now but well worth knowing, its Past an open book for those who have eyes to read it. I know that tangled mass of mountains and have tramped those valleys but to most white residents it is an unknown land. As I have roamed Inland Tahiti there has oft come to my mind Vancouver Island, there is so much alike and yet there are many striking differences. Long years back it was my happy lot to traverse that fair island from end to end clear and sheer down "its so called backbone" from Cape Commerell its northernmost tip to Victoria its most southern, taking everything in my stride.<sup>261</sup> When mountains barred the way they were climbed straight up and down, when lakes stopped "footing" it a raft of saplings with stout straight branches for sweeps bore me on their waters to their end. The islands are alike in that they have no real backbone. Nature has cast her mountains higgledy piggedly all over the land, the valleys one tires of counting each covered with lovely verdure and each with its cooling stream. Both are covered heavily with timber, there are few wide open spaces to be found. But there the woods are resonant with birds' songs, their chattering and their twitter : here all is silent, bird life is conspicuous by its absence. There a chain of lovely lakes dot the island from end to end, 10, 20, even 30 miles in length; here there is but one, a lovely sheet hidden away by precipitous mountains each contributing to its waters by waterfalls large and small — its length but a half mile but Oh! how icy cold as I plunged in and swam it. There wild Life is abundant, I met the lordly Wapiti not only singly but in bands, the black bear who treed himself for safety, the stealthy cougar and the wolf, whilst every sheet of water was the home of ducks and loons. Ahead of me the fleet footed Quail ran for safety but the ptarmigan (white of plumage as the snow they dwelt on)

---

at Tahiti Heritage [here](#) and [here](#). They are named *Moana* et *Heiata*, after the name of a sacred site on Raivavae, *Moana Heiata*.

<sup>259</sup> The idols, or tikis, from Raivavae can be seen in a photograph of the Tahiti Museum in Tale #16, *Of Oro and Others*. See also *A False Scare* in Part XIV, *Tahitian Vignettes*, where photographs of the *tikis* taken in November 2014 can be seen.

<sup>260</sup> The numbers are debated, but from the discovery by [Wallis](#) in 1767 to the arrival of the [Duff](#) in 1797, the population of Tahiti declined precipitously due primarily to introduced diseases.

<sup>261</sup> See Part I, *Notes on the Life of WWB, Exploration of Vancouver Island*, and Chapter Two, *Early Explorations, 1894–1910*, in [Beyond Nootka by Lindsay Elms \(Misthorne Press, 1996\)](#). WWB explored Vancouver Island in 1894, 1896 and 1910.

greeted me unafraid on the snow capped mountain tops. Here how little! There no native had ever dared to wander for to them it was their ghost land and as those I tried to entice to join me said, their devils held sway. Here even to the fastnesses men, women and children had lived and their place was taken by the only animal life to be seen, wild cattle and wild pigs. They were to be seen but for a fleeting moment for their fear of slaughtering man with his dogs is great. Those former residents have left their mark behind them. You come across old-time house-platforms and the stone erections evidently once their *Maraes* (Temples). Like as I saw on Oahu Island (Honolulu its name to most) so surely would these wild hills and valleys have been veritable ‘Cities of Refuge’ when the avenger’s hand or a ruthless Chief was after them. The caves here and there would shelter them of nights as they have served me, though the wild pig finds them a welcome sty which is not always to man’s liking, but roaming inland over Tahiti one must expect to rough it. As here so if you would see the full beauty of Vancouver’s island you must leave auto, Roads and trails behind you, climb to its snow capped summits and look around : you, even as I did will get rich reward. <sup>262</sup>

## 82. Of Cinderella Island

There is no island the whole world over that bears that name but there is one that ought to be named so by white folk — letting the native name remain for their use — because of its perfect likeness to the Cinderella of the Story Books. For centuries it was thought little of even by the Polynesians who dwelt on it or the Groups of islands around it yet it turned out to be one of the richest — if not the very richest — of all the islands in Oceania and for its size unique in its vast wealth throughout the Seven Seas. Its native name is Ma-ka-te-a and it lies 100 miles north east of Tahiti : you will recall mention of it in “South Seas Curios.” <sup>263</sup> It is named by the French as one of the Tuamotus but why so I cannot tell you for those are Atolls, rings of coral with a lagoon in their centre as you know, whilst Makatea rises high out of the water and has no lagoon, just like Niué. It may once have been an Atoll a million years ago. Oeno is the highest of the Tuamotus but the reef is only 25 feet above sea level whilst Cinderella rises 230 feet and is flattish on the top, one little knoll sticking its head up. It has a “fringing” reef but no “barrier” one and is a dangerous island to stand by but huge steamers of many nations take their chances with anchors fore and aft, there is no possibility of a harbour and many a ship has left its bones there since the day when Cinderella came into wealth.

The Dutch sailorman Roggeveen <sup>264</sup> was the first of white men to see it and he gave it (for you and me) a terrible name “Van Verkwikking” but we English call it the translation from the Dutch “Refreshment Island” — the poor fellow and his crew had scurvy and he obtained there greatly needed green food. Then for over a century it was left to itself so far as white men were concerned. Trade to the Atolls passed it by, for they were rich in pearl shell, pearls and copra whilst Makatea was not worth a landing with its greyish white rock alone to greet you. Poor Cinderella had a very lean time, Papeete handed out but meagre goods to the few natives dwelling there in return for fish their main food. But there was one thing in their favour, they owed no man anything, their isle was theirs and absolutely free from those terrible mortgages and loans of cash which were piling up on their neighbours. When the new Century 1900 opened things were thus and looked likely to last so forever but in 1908 so the story goes (I hope correct) a retired French naval officer Captain Bonnet residing here made his way there. He must have known something more than about ships and guns, a knowledge of chemistry and of minerals must have been his, for landing and handling that greyish rock and that all prevailing dust he found that mass of seeming rock rising 230 feet in the air was phosphate, none finer the whole world over. Returning hot haste to Papeete he and his cronies

<sup>262</sup> See also *Tahiti’s Heart* in Part XIV, *Tahitian Vignettes*.

<sup>263</sup> Tale #31, *Of South Sea Curios* (2).

<sup>264</sup> [Jacob Roggeveen \(1659–1729\)](#)

promptly formed a Company, acquired all necessary rights from the natives who from poverty reached affluence more than sufficient for their simple needs, Bonnet and his friends found a fortune and still that Company goes forward, nor can anyone foresee its end for the deposit is sufficient for a thousand years.<sup>265</sup> It is a busy spot to visit despite its dust, 1000 folk are resident. Cinderella smiles for Whilst the rest of the Tuamotus are hobbling along burdened with debt she forges ahead, with untold wealth at her command.

### 83. Of Bicycles and Tennis

In my early boyhood days bicycles as they now are known were but a dream. They might be invented someday by some genius, meantime we had to be content with the Velocipede — “Swift Walking,” for sitting on a hard wooden seat between 2 wheels the size of the Safeties<sup>266</sup> of today, we progressed by peddling with our toes! The was certainly faster than plain straightforward walking but very very hard on the toes! Then a genius invented the pedals but still that very hard seat and the wheels still had spokes of wood and the tyres were of iron such as vehicles used and still are shod with. Yet though still only a boy, many a long journey I made thereon. Then another genius invested the “Penny Farthing,” a 5 feet front wheel (for me) the “Penny” and a one foot wheel for the back one, the “Farthing.” It had to be mounted in 2 steps, little projections on the bar that held the 2 wheels together. It had a “break”<sup>267</sup> like its predecessor but it was a wicked thing, requiring the most careful and judicious handling. If put on quickly or too hard it “kicked like a mule,” the little back wheel to which it was attached rose up with a rush and sent you head over heels over the handle bar. I had that experience till I learned the gentle touch. The Penny Farthing held the day till I left my Homeland<sup>268</sup> and for a quarter of a century I rode no wheel. The last of that type I saw was one suspended above a Bicycle Shop as a Sign in Salt Lake City, Utah. That weird bike came to its end when another genius, reverting to the original idea of 2 low wheels of equal size, invented not only the Safety with its pneumatic tyres and spokes of steel but a seat with a spring! There came the day at long last when I purchased a Safety, and mounting it at the door of the shop rode off through the traffic; for balance once learned is never forgotten alike with swimming once acquired. Since then I must have biked 1000 miles and more but now in my Old Age I bike no more, for no other reason than that Walking is the foundation of lasting bodily Strength and Health and I would fain preserve those priceless gifts I have.

Alike with Safeties, Lawn Tennis was unknown as a game in my boyhood years. There was Tennis requiring a Wall<sup>269</sup> and Croquet was the rival to Cricket as a national game. Its headquarters — where the Annual Championships were held — were at Wimbledon, the lovely lawns not 400 yards from my home. Then (I cannot recall by whom<sup>270</sup>) Lawn Tennis was invented and where Croquet reigned as Queen for gentle folk is today the famous Court to which all players pay high reverence. As a youth I left mallet for the racket and gathered in still other trophies, the while the years increasing and the orbit of my athletic life expanding. Rugby called — with its “Cap” for England which I only missed through a damaged knee : the Running Track with England’s Half Mile Championship mine and a Cambridge “Blue” : the Sculling Oar enticed me : Lacrosse came across the Ocean and the lot fell to me to be one of the first English team to meet the fleet Canadians : Soccer also appealed and the Boxing Ring found me revelling in blows. Trophies steadily increased

<sup>265</sup> Phosphate mining on Makatea ceased in 1964.

<sup>266</sup> See [John Kemp Starley \(1854–1901\)](#).

<sup>267</sup> Possibly an archaic form of *brake*.

<sup>268</sup> In 1884 and again in 1887

<sup>269</sup> A [real tennis](#) court is a substantial building encompassing an area wider and longer than a lawn tennis court, with high walls and a ceiling.

<sup>270</sup> [Major Walter Clopton Wingfield \(1833–1912\)](#) invented lawn tennis in 1874.

but Alas! the majority were lost — “short landed” as the Shipping Company put it — in their padded box as it followed me across the Sea. There are still a few which are yours when I “Pass on.” <sup>271</sup>

But Life cannot be wholly Play and Games and Trophies of Victories gained. Early Manhood broke, and the Call came to serve no longer Self but others. That same Call came from afar, and bidding Farewell to my Homeland I stepped out into Life in perfect bodily condition which has never failed me.

Be you also wise in the days of your Youth, and you may be granted even longer years than my present 4 score years and 3.

## 84. Of a Great Navigator

These short tales written for both your amusement and instruction would be wholly incomplete did I not tell of that really wonderful sailorman Captain Cook. Just as Nelson <sup>272</sup> ranks as our greatest Naval Hero with his sea fights so does Cook as our greatest explorer of unknown waters. Throughout the Pacific Ocean, its Great South Sea and its North Eastern portion as far as Vancouver’s island you cannot escape from him. His name is on islands, on Strait and Bay and his memory is held in highest esteem even to this day wherever he made landing. How came it so? It was because of the man’s sterling Self. He was not ruthless as so many Captains of his day, nor held natives he came across in contempt, he was no bully or tyrant to those crews who sailed with him, those rough fellows fairly loved him, obedience he would have, but their health was ever his anxious care. He was the first to master that dread disease of sailors, the life eating Scurvy, brought on by endless diet of salt pork. Vegetables were his antidote and tirelessly he sought for and stored them upon his ships. He was fearless in taking chances but never foolhardy, courteous to all he met, savages though they were; to sum all up in just one word, that word which I have harped upon all life long, he was gentle i.e. Tolerant though it cost him his life. You have come across him many a time in these little tales : it could not be otherwise. How came he to be so famous and to leave a name behind him that will never die? Let us see. He was the child of poor parents in Yorkshire; like thousands of boys he wanted to be a sailor, his parents agreed. Before the mast <sup>273</sup> he sailed in rough merchantmen, <sup>274</sup> no Royal Navy for him. Quickly he rose step by step, rank by rank till of sheer merit and ability he was Captain. By some means — I cannot exactly tell — his ability came to the knowledge of the Admiralty. <sup>275</sup> A new Ocean had broken in upon men’s knowledge of the world. England would know of it and its possibilities for trade. Cook was called upon to sail into the Unknown and given His Majesty’s ships to do it in. Three voyages he made <sup>276</sup> and as he sailed he wrote. Nothing escaped his eye or pen. All went down in his “log.” It was more a Diary than a Log. The Government, charmed, published “Cook’s Voyages” which thrilled the nation. Those volumes illustrated by talented artists who sailed under him leave mere romance far behind. Other nations translated them. They are the tales of a sailor, simple and direct. The list of Gifts which he carried in his ships to be handed out to native peoples is astonishing, livestock of many kinds, clothing and women’s drapery, axes of course and knives both large and small, looking glasses of course and combs, a hundred other things. All these have long passed away but there was one thing which

<sup>271</sup> For additional information concerning WWB’s athletic career, see *Notes on the Life of WWB, Caius College*.

<sup>272</sup> [Horatio Nelson \(1758–1805\)](#)

<sup>273</sup> Nautical: as a common sailor, who bunk in the forecabin, forward of the foremast

<sup>274</sup> Any non-naval vessel, including tankers, freighters and cargo ships

<sup>275</sup> Cook volunteered for the Royal Navy in 1755. It was his [mastery of surveying](#), particularly of Newfoundland from 1763 to 1767, that brought him to the attention of the Admiralty and the Royal Society.

<sup>276</sup> The first from 1768 to 1771, the second from 1772 to 1775 and the third from 1776 until his death in 1779

Time could not destroy though carelessness has largely. In 1772 he took with him large store of Medals — King George III's bust on one side, his 2 ships on the other. Today the few that remain are worth more than their weight in gold. One found on the island of Pora Pora (Leeward Isles) in a native's possession was secured — O shame upon that buyer! — for 2 shirts and 2 handkerchiefs! Methinks Alas! that most of them were melted down for bullets! Never mind : Cook's name remains, unblemished and untarnished.

## 85. Of a Four-Footed Isle

I opened my mind's little Safe just now and out of it dropped a Note marked "New Caledonia." Now just to think of it! I have never taken you on a visit to that charming island. I will try to make amends. Explorers seem to have been very fond of that word "New." There is "New" Zealand, "New" Hebrides, "New" Guinea, "New" South Wales : and Land Settlers too with their "New" Brunswick, "New" Jersey, "New" Orleans, "New" York and one quite close to you "New" Westminster. And here we have yet another "New." Nothing on it appears to me to be like the old Caledonia, especially its shape which you can see is just like a sausage, fat, rotund and long. But it has what no sausage possesses, a back-bone, a ridge of mountains clear down it, unbroken. And there it is like Tasmania which I have told you is as different one side from the other as chalk from cheese. On its East side all is rocky, wild and a mass of rich minerals, on its west side is lovely grazing land, now dotted with farms. It lies in Melanesia, not Polynesia, its natives a very deep brown. There were savages and cannibals in those wild fastnesses till lately. It was because there had been a massacre of French sailors ashore that France hoisted its Flag and took possession.<sup>277</sup> They then used it as a Convict Settlement, like Norfolk Island and Tasmania. The Capital is Noumea at the head of a lovely Bay, a land locked harbour. In it but a short row from Noumea there is a goodly sized island on which huge prison buildings were raised. It is properly called *Ile Nou* a terrible place. When with a Permit I rowed over, there were convicts with their guards roaming around but there was one row of Cells, each happily a good sized room, with steel bars in their front reaching high, where Maniacs were confined. They had gone mad through long confinement. At my approach each hurried to the grating and glared at me like an imprisoned tiger, their hair and beard long and unkempt, a most unpleasant sight. That is the unhappy side of New Caledonia. The happy side would be far too long to enumerate. There is a fine hard road far up its western side which I took for 50 miles and more, farms on either hand and the ocean studded with islands all the way. Of course there are countless waterfalls and rivulets making from the mountain to the sea and being thirsty I stopped here and there to have a drink. Where the cool waters took their jump I did not need to get wet for the natives are ingenious. A number of little spouts of water were issuing from hollow sticks. A clay dam in a ledge above, stays the waterfall's course in full and diverts the water into the sticks from which it shoots out like a fountain. The one tree above all others which cover the island is the *Niaouli* which are like the eucalyptus and paint the scenery a soft grey blue. But if to the business man the huge store of valuable minerals predominates in his mind, to me it was the amazing herds of deer. Surely there is no other island of its size the world over that has 300,000 deer roaming its land. The first were brought from Sumatra and Java, they multiplied till they are a menace. They mingle with the 100,000 grazing cattle, huge "drives" make no impression on the vast, elusive swarm. Though sought, I could not find it in my heart to slay that beautiful, soft eyed four footed thing. When Man upsets Nature he has to pay for it.

---

<sup>277</sup> In 1851 a French landing party at Balade was attacked by the natives and massacred, with the exception of a single member. France initiated a formal annexation and Auguste Febvrier Despointes led the expedition that raised the French flag at the spot of the massacre on 24 September 1853.

And now my space is filled and I seem to have but just begun. Some other day I must go to that Safe again and find out what else perchance it holds for you. Enough for now.

## 86. Of Erromanga

I have taken you with me for a little jaunt in New Caledonia and not far off lies another “New” but different in many ways from its neighbour. It is a group of islands lying almost parallel to one another, it has those unpleasant angry fits of nature we call Volcanoes and does not belong to one White Nation but to 2, we British and the French share it equally which fact is called a strange sounding name A “Condominium”, the only one (I think) now in the world. Everything when I was there which is now in the Long Ago,<sup>278</sup> was in doubles, there was English money and there was French, there were English laws and French laws, there were English Courts and French Courts, there was an English Administrator (Governor) and a French one and neither language was the “boss.” The poor native Melanesians had a bad time with such a mixture as far as I could gather and things in the group have always been in a muddle. Neither nation appears to be willing to give up its share, perhaps before you have grown old the difficulty will be solved. The mixture however did not concern or bother me, nor need it you as we have a look around and learn of things. Now those Volcanoes: I was on Tanna where there is one, a very decent fellow, it does not suddenly break forth, on the contrary it never ceases, it does not belch forth that destroying lava but keeps that to itself and shoots out instead a pillar of smoke by day and a pillar of Fire by night. You can easily climb up to the brink and have a look in but there is that steady column ever rising, and on a pitch dark night, whether you are on land or far out to sea that fiery column mounting up into the night sky like a mighty flare is a beautiful sight. But on other of those islands their volcanoes play havoc and huge portions of the land have been devoured by the molten lava, like where the Taupou’s lonely grave lies on Savaii.<sup>279</sup> Just when and where the next outburst will be none of course can tell but everyone, native and white goes about their work taking chances save on Malekula where you have to keep a sharp look-out for man eaters — not tigers but cannibals, whose numbers are happily steadily growing less.

But of all the group, Erromanga<sup>280</sup> was my Mecca. It is known far and wide as “The Martyrs’ Isle”. Here brave men — and women too — died for the Faith they held so dear that no danger could halt them. We should never reserve homage only to Christian martyrs, a Buddhist, a Sorcerer who dies at the hands of his fellows for the Faith that is his is fully worthy of the honour. So I wanted to tread where these brave ones had perished — and been eaten! and see the isle they gave their lives for and those who followed them won from savagery and paganism to civilization and the Worship of the Supreme. I knew that a Memorial Chapel had been raised to their Memory on the beach where those pioneers had landed. I found it despite the trees and undergrowth. Within I grieved to see its condition. Untidiness I have ever abhorred but am ever ready to forgive, but Neglect is quite another thing. Here forms where piled up “any old how,” the dust was thick, and leaves a-plenty. The great Tablet bearing those gallants’ names (like that I placed on Moorea to like gallant ones) I had to hunt for and found its face to the wall, part of other lumber. How different from that lovely shrine on Norfolk Island to another Martyr<sup>281</sup> — a Bishop that time. I have often wondered since if Shame has reached those responsible for its upkeep in Australia. I trust it has. I copied the list of the brave. “John Williams and James Harris killed November 30, 1839    George Gordon and Ellen

<sup>278</sup> WWB visited the New Hebrides, [Vanuatu](#) since 1980, in 1925.

<sup>279</sup> See Tale #38, *The Taupou’s Grave*

<sup>280</sup> WWB has *Erronanga*.

<sup>281</sup> [John Coleridge Patteson \(1827–1871\)](#) founded a college on Norfolk Island for native boys and was murdered on the island of Nukapu in the Solomon Islands. See Tale #91, *Of the Isle of Pines*.

Gordon killed May 20, 1861    James Gordon killed May 7, 1872.” It was at Dillon’s Bay <sup>282</sup> the 2 first named landed from a boat which sheared off a little from land with its seamen at the oars. The 2 with another man saw natives hurrying into the bush ahead along the beach. They followed with gifts in their hands, they turned a corner where a stream runs out and were lost to view. ’Twas but for a moment. The seamen saw 2 heading fast back at the run — not Harris, he died ere he could turn — the younger man ran ahead of Williams with a Savage hurtling after them, they reached nearly opposite the boat which rushed towards shore, the younger leaped into the sea and reached the boat, Williams looked safe ere that savage should reach him but Alas ! he stumbled, fell and the Savage was on him, his club descended not once but again and yet again. He was a corpse. The boat crew had no fire arms, they came from Williams’ ship “The Messenger of Peace,” they left the body to a horde of savages which seemed to spring from nowhere. I walked that beach and turned that corner, I saw where those cannibals had held their gruesome feast. Years later that Martyr’s bones and his friends’ were gathered and today lie safe, beneath the Native Church in Apia on Samoa. I had once more made my pilgrimage and was content.

### Plate 9. New Hebrides

A very wealthy man. Pigs’ tusks.

<sup>282</sup> In December 2009, descendants of John and Mary Williams travelled to Erromanga to accept the apologies of descendants of the cannibals in a ceremony of reconciliation. To mark the occasion, Dillons Bay was renamed Williams Bay.

A sacred Grove of Idols

**87. Of Tahiti's Pioneers (Part I)**

It has ever taken Courage and Enthusiasm to pioneer into the Unknown portions of our World and even to this day the quest is not ended. In my youth there was "Darkest Africa" to be made known, still earlier there was the Arctic Circle, with the vast interior of Australia also to be explored and the same with what are now the Central States of the U.S.A. alive with folk and action today. The Antarctic lands were a mystery demanding answer, finding the solution but a few years back. Central Asia invited search. The main work is done but there are still dark spots on which light must be thrown before our World in its entirety<sup>283</sup> is an Open Book to be read and known of all. These brave enthusiasts were not only sailormen, there were scientists among them, merchants, pure adventurers, and not least those who would spread the Faith they held amid the pagan and the savage wherever they might be. And the Great South Sea called. Sailormen had discovered what it held of lands and peoples but they had but passed through. Theirs was but superficial knowledge, it was left to others to know thoroughly and to lift the savage from his degradation to a higher plane. These men and women we call Missionaries and of those who pioneered on the little spot of the Earth called Tahiti I would briefly tell of. If you turn to my little Tale of "Spaniards Ahoy!" you will read of the 2 earliest Pioneers who with 2 companions started out from Peru with Enthusiasm and seeming Courage to solve the problem, but who when they met the savage face to face lost both Courage and heart for the task, and fled.

Then stepped in Englishmen, and in 1797 they landed, leaving their dear Homeland to make a fresh home in surroundings be they what they might. And what a strange and motley lot those same 2 dozen were. There were 4 ministers, but all the rest were mechanics or labourers fired with

---

<sup>283</sup> WWB has *entirety*.

Enthusiasm to both convert the savage and teach him Arts and Crafts. How little they knew of true conditions! There was a Hatter! when every native woman was an expert at weaving hats : there was a Tailor! when the only cloth they had was beaten out of the bark of trees : there were several carpenters! when the natives had neither saws nor nails, all was done with sharpened stones and sinnet fibre for rope : there was a Blacksmith! when there was no iron, or matches to light forge or fires, friction of wood with wood their <sup>284</sup> only method : there was a Bricklayer! <sup>285</sup> when everything built was of wood. But mark well that same Bricklayer, he was the finest, the hero of them all as you may recall in other Tale. <sup>286</sup> Five of them had wives and there were 3 children in this Band of Pioneers. They saw a long, low Barn standing on the Point where they landed. The Chief of the District — whose name was *Pom-a-re* <sup>287</sup> — told them through an interpreter — a runaway sailor who had learned the language <sup>288</sup> — that he had raised it in hopes of seeing Bligh again but they were welcome to it. They could not herd altogether so they divided it up with bamboo partitions into bedrooms, sitting and dining room. They were high with hope, but quickly they saw with horror what they were up against. The great idol *Oro*, so his priests said, demanded human sacrifices ceaselessly to keep him in good temper : there was a slaughter of innocent men (never women) all around them, the corpse put in a long basket (coconut) and laid on his altars before burial : still more horrible was the slaughter of babies when parents did not want them. Theft as you will have learned soon depleted their stores, nor stopped at that. The gardens that they toiled at were ravaged of all they planted not alone by pigs but human ones in chief. They were no born linguists, the new language was a fearsome task. They were laughed at, derided, insulted, they had no guns like the sailormen — which was true enough (at first) — the peoples were ever fighting, one District, one Chief with another, they loved War and gloated in the massacre of women and children and the aged. There came a day when 4 of the men, walking the trail to visit Pomare and crossing a stream — close to my “Bower” — were seized by natives, stripped, ducked and threatened alike with the rest of them with death. They reached Pomare who was furious at their treatment. They returned to the Barn and told their story. A vessel lay at anchor in the harbour. Now came the Test. With several of them Enthusiasm had waned, now Courage failed. They — like the Spaniards — fled. Not all, but the majority. Let us pay honour to those who stood Firm : there were but 6 and among them was the Bricklayer.

Enough for the present. <sup>289</sup>

### Plate 11. The Bricklayer’s Grave

On the right and the Inscription :

*Sacred to the memory of*

*The Rev. Henry Nott, Missionary, who departed from this life of sin and sorrow, and entered into his rest on the 2<sup>nd</sup> day of May 1844, after having endured a great fight of afflictions. He had been for 48 years the faithful servant of the London Missionary Society, having been sent out by them to*

<sup>288</sup> Peter Haggerstein or Hagersteine — Peter the Swede — who had deserted from the “Daedalus”, the storeship of Captain Vancouver, which arrived from Nootka on 15 February 1793. See Appendix XII, *The Cession of Matavai*, in Notes on the Life of WWB.

<sup>289</sup> For a detailed account of the early Anglican missionaries, see [Tahiti, Island of Love by Robert Langdon \(London, 1959\)](#). Langdon lists the Bolton Papers in the Mitchell Library as one of his sources.

*this island in the ship “Duff” commanded by Captain James Wilson, in the year 1796. He was translator of the Sacred Scriptures into the Tahitian language.*

*‘I have fought a good fight. I have finished my course. I have kept the faith.’*

The above being almost obliterated by age, mine was the pleasure to have the lettering recut a few years back by the hand of a Japanese.

M<sup>c</sup>Kean’s tragedy was that talking to the French soldiers’ Commander, a native sharpshooter aiming at the Frenchman missed his enemy and killed his friend.

## 88. Of Tahiti’s Pioneers (Part II)

It was 1802. Other pioneers had arrived from the Homeland to help fill the depleted Band. The older hands had learned much, suffered much but had held on and things looked brighter but the savages were savages still, slaughter and murder were on every side. Pomare had made an ever increasing number of enemies in his vain efforts to be supreme. At last friction broke out into warfare. The first fighting was far to the south but steadily the flames grew closer : and the Pioneers knew full well that they were looked upon as Pomare’s friends and were bound to suffer alike with him if mastery was not his. There was a vessel at anchor, H.M.S. Porpoise. The sailorman had to leave but he refused to leave his fellow English quite defenceless. He gave them muskets, flints, powder and bullets : a former friend had given them 4 small cannons. Their Courage held : if a fight it must be, they would be true to their Flag, and naught should harm their womenfolk. They worked hard to make themselves secure, they cut down all the breadfruit and coconut trees which they thought might be favourable for the enemy to annoy them with their muskets and slings. With the trees they formed a strong pallisade round the lower apartments of their new home to which they all retired, the verandah along the front was barricaded as also the upper apartments with chests and bedding so as to be musketball proof. The 4 small cannon were planted in 2 upper end rooms. They tore down every fence round houses, outbuildings and gardens and (what must have been the bitterest task of all) pulled down their Chapel to clear around them as much as possible in order to prevent an unseen approach and the firing of their dwelling from the flames of the too near Chapel

should it be burned. But Pomare won : their labour was all in vain : but they had stood the Test : their Courage had not failed them. Their ruined Chapel they rebuilt.

It was 1808. Pomare (the 1<sup>st</sup>) was dead. His end was sudden. He was paddling his canoe to a vessel opposite his dwelling when he collapsed and died. So Pomare II <sup>290</sup> came on the scene, still a pagan, still a savage, more ruthless even than his father. He loved battle and massacre and laughed to scorn the Pioneers' teaching and simple life. Determined to lay waste the District of *Atehuru* and massacre the people he picked a quarrel with them over the bones of a dead Chief, a relative of his, saying that they had made fish hooks out of them. He attacked and glutted himself with blood. That was the climax. The whole of Tahiti rose in fury and made for *Matavai* — where the white folk dwelt. Again there was a vessel in the harbour, and fearful of their fate, the majority fled, leaving only 4 with Pomare — the Bricklayer among them. He lost the fight and took them with him across the Strait to the little island of Moorea. Now the savages had their innings with his friends. They ravaged Matavai, destroyed every building, the 2<sup>nd</sup> Chapel went up in flames. They bore off every article they could lay their hands on, carried off the cattle, the sheep, the poultry and the pigs. The work of Eleven hard years lay in ruins. Again Pomare essayed victory and again he failed. Despairing of the future 3 more took ship and left him. The Bricklayer alone stood firm. Neither Courage nor Enthusiasm had waned in that brave soul. He would yet tame Pomare. And so it came about but not in the way that lone man sought.

It was 1815. The pagan Chief was going to master Tahiti. His crafty mind evolved a plan. There were now many Christians not only on Tahiti but on neighbouring islands. He would declare himself a Christian and proclaim a Holy War — Christianity against Paganism. It worked to perfection. All Christian warriors rallied to him, he crossed the Strait, his numbers grew. There came the clash of arms, half way down the western side, the pagan's famed Leader fell to a musket ball, many another fell, the rest fled, Pomare had won. From that day he was Chief of Chiefs — in our language King — and Paganism died on that field of battle. Across the Strait stood that courageous Bricklayer : when he heard the news, he rejoiced, not over the slaughter but at the Triumph of his Cause. The Savage sun had set without a chance of sunrise. True that Pomare was never more than a Christian in name but all followed his lead, idols were burned, altars thrown down, no longer were there those in human sacrifices nor babes destroyed. It was right that the courageous Bricklayer should have lived to see that Day. All the rest had fled : he had stood firm and Alone, the Pioneer of Pioneers of the island of Tahiti. All honour to his memory. <sup>291</sup>

## 89. Of New Caledonia

I have told you of picturesque Ile Nou which Man has spoiled with its Convict buildings but Man cannot deface another beauty spot nearby. Across Noumea's harbour is seen a high mountain, its soil is dark red in colour. If you walk to the top of one of the hills at the back of the town as the sun is setting, its rays play on the side of the mountain so that it glows as if it was on fire, a lovely sight, from which it gains its name, *Mont d'Or* or Mount of Gold. Nature can play tricks just as we do. As I roamed up the island I saw acres and acres of those *niaouli* trees looking sadly forlorn without a leaf upon them and getting among them I saw everyone had been ring barked, just as I had seen other trees in far away Alaska similarly served. There it was the rabbit when the snow was many feet deep and bark had to serve as food; but here greedy Man wanted more feeding ground for his

<sup>290</sup> [Pōmare II \(c. 1774–1821\)](#)

<sup>291</sup> WWB arranged the centenary memorial services for Henry Nott on 2 May 1944, while living on Tahiti. See *Centenary of Pioneer LMS Missionary* in the April 1944 edition of the *Pacific Islands Monthly*, page i; *Henry Nott Centenary* in the May 1944 edition of *PIM*, page 10; *Henry Nott, Homage Paid to Great Missionary by Men of All Races* in the June 1944 edition of *PIM*, page 11.

stock and was slaughtering graceful trees for pasture. Going on and looking out for an hotel for a meal upon my way I came across a little one where the French chef surpassed himself in effort to please the stranger. He gave me as an Entrée no less than 4 courses of fish and expected me to tackle Oysters, Prawns, Crab and Fish, then as if that was not enough I had to tackle Chicken followed by diverse fruit. And the charge was very, very small.

Walking was clearly not a strong point, at least not in and around the little capital. Just as one sees on Tahiti, bicycles seem countless, everybody rode and the sidewalks were cluttered up with machines leaned up any old how against the shops.

The hours of business in French Colonies are quite different from ours: work of every kind starts at 7 a.m. and stops sharp on 11 a.m. for lunch or dinner and a siesta (I have never been able to train myself for the latter) then work starts again at 1 p.m. and closes for the day at 5 p.m. The school hours run similarly. Early rising is universal. I am sure you would be greatly surprised if you went to the shop of a fish monger and found “live” fish for sale : but in Noumea’s daily market which opens at 5:30 a.m. you would see nothing but “live” and “dried” fish at your disposal. The reason is that the heat is too great. Fish deteriorate amazingly quickly, in the tropics. So in this market you see tanks on wheelbarrows, filled with salt water, and swimming about are fish very much alive. You walk along the rows of tanks on wheels and pick out your fish. The fish monger grabs the selected victim and runs a string through its gills, and off you go, with one or many struggling, wriggling fish, to home and dinner. “Water” reminds me of Noumea’s gutters. Down the sides of every street, I noticed a stream rippling along, and nice, clear water it appeared. Many miles to the north, a dam was built across a river and its water led to a reservoir at the back of the little town. It is always overflowing, the main water feeds the houses, the overflow runs down the streets to join the sea. The very sight of that clear sparkling stream makes one feel cooler under a blazing sun. Before we leave Noumea I must not forget to tell you of the interview of a friend to those wild eyed convicts in their cages on *Ile Nou*. One had made friends with the birds : for calling out, a couple flew in from the trees around and settled on his feet, another begged that a very loyal message be sent for him to his “brother Monarch” King George, another had tattooed on one arm “The Lord Preserve France but not Frenchmen”. He had evidently not forgotten or forgiven those who sentenced him for Life.

Your Atlas will show you many islands, grouped or single, lying about New Caledonia. Huon<sup>292</sup> was named after Captain Huon Kermadec<sup>293</sup> (I have spoken of the Kermadecs).<sup>294</sup> Surprise Island was named because of the astonishment of the first white man to see it. He thought it was part of the ocean, it lies so low. Well! Well! there are heaps of surprises for those who roam as you and I have done.

---

<sup>292</sup> Huon and Surprise are part of the [Entrecasteaux reefs](#), the northwest part of the [New Caledonia barrier reef](#).

<sup>293</sup> [Jean-Michel Huon de Kermadec \(1748–1793\)](#)

<sup>294</sup> See Tale #7, *Of Nomenclature (I)*.

## 90. Of My Canary Bird

When I was a boy I kept birds of many kinds in cages : but when I grew to manhood and realized what a precious, priceless thing is Freedom, I ceased it for good and all. Have not animals and birds as much right as we to freedom from iron or steel bars? Of course they have. How then was it that in my Old Age I had a Canary Bird in my keeping? Read on and you will see. Papeete was overrun with tourists, accomodation was very scarce. I was living on the waterfront, from my verandah you could throw a stone into the placid lagoon. There called a big, burly fellow, courteous and pleasant looking, said that he had heard that I was living by myself, could I? would I? let him have an upper room. One cannot be selfish, however much one loves the hermit life, under such circumstances. I told him he was welcome as my guest. He then broke the news that retired from the U.S. Naval service he had for his pastime taken up the dealing in Canaries and had come to Tahiti thinking it likely that residents might be glad to secure the yellow birds. Could he bring his birds? They would give me no trouble, he would tend them. I could not well refuse. They came : two huge cages full of birds, such twittering and such a mess! He was an ardent bather, he fairly lived in the water across the road. Where he got his meals I know not. Weeks passed and now he kept indoors, looked sick and as if in pain. I asked him of his welfare, he told me he was in perfect health and had no pain, which seemed most strange to me. Then he took to his bed, and unable to stir, mine was the task of feeding, watering, cleaning; and the broom was ever busy on my always clean verandah. Then I had to fetch his meals to his bedside and still he insisted that he was well nor suffered pain. I began to fear I had an insane man on my hands. I asked if he would have a woman's hand about him, he refused. I suggested a physician : he flouted the very idea. And so the days and weeks passed and many a friend of mine was furious at the imposition of both a sick man and that gathering of Canaries.

Then in the middle of the night I heard my own Canary Bird piping up, true 'twas very feebly. He was calling me. I rose and he asked me to bring a Doctor to his side! Out I went into the pitchy darkness to a warm old friend, he was out — it was 2 a.m. — but would surely soon return : so went across the town to one I had heard of, and that unfeeling physician absolutely refused to leave his home. Back to my friend who was also in bed. Come? Would he? Of course. He stood by the bedside, looked, then began using his hands upon my poor Canary Bird — its Cage was the bed — who piped out like a squawking fledgling. He pronounced the trouble Acute Sciatica from over bathing. He injected some liquid in my bird's plump body then left, telling me that he would keep the patient filled till the next steamer came when he would be sent back to whence he came. I asked the solving of the mystery of my bird who was singing now so low, the secret was plain enough to my old friend — that weird Faith known as Christian Science.<sup>295</sup> And all those weeks those caged ones kept me busy, especially with the broom for I have ever loathed untidiness. But there is an end to all things. The steamer was well nigh due, he was eager to leave. I asked him of his birds, he told me of a local man who would take charge of them. Those Cages (not the birds) fairly flew to him, my verandah was my own again. The steamer was in, my guest arose, I clothed him, half carried him downstairs to the waiting auto, again half carried him up the gangplank, and down to his fine lone cabin, shook hands and left him, then stood guard on the wharf lest my Canary Bird should manage to escape at the very last moment. But No! I had seen the last of him.<sup>296</sup>

---

<sup>295</sup> See [Christian Science](#).

<sup>296</sup> See *My Canary Bird* in Part XIV, *Tahitian Vignettes*, for a somewhat longer version of this story.

## 91. Of the Isle of Pines

That is not its official title which is Norfolk Island of which I have already written <sup>297</sup> but I want you to visit it again with me for there are things there far more pleasant reading than that terrible tale of convict woes in the Past. Just as the Kentia palm of Lord Howe island (that Isle of Palms <sup>298</sup>) is unique in the world, so Norfolk Island possessed another gift of nature alike unique though now transported to all parts of the world, its tall shapely Pines — like those used in my childhood days — and maybe still used — in Noah’s ark, though Noah could himself never have known them. <sup>299</sup> There is one magnificent avenue of them, planted by man in strictest line on either side when you have climbed up from Kingston and make your way — the ocean on your left hand 400 feet below — to the Cable Station. A mile in length, they stand symmetrical some 30 yards apart like so many sentinels rising to a height of 150 feet, a beautiful sight which day after day held me spellbound as I sauntered along that broad and well laid avenue. At its far end there stands a perfect gem of a Church, dedicated to S<sup>t</sup> Barnabas, raised as a memorial to Bishop Patteson <sup>300</sup> murdered by the natives of the Santa Cruz Group. He suffered death for other men’s iniquity. There were “blackbirders” rampant in his day, fierce ruthless men who stole natives for the Queensland plantations at so much per head. At one of the northernmost islands of that Group (I think it was Nukapu <sup>301</sup>) he went ashore from his Mission ship to make friends with the natives. He did not know that the last ship calling there had carried off to slavery many of the men. They thought that he also was a Blackbirder. He entered their Council house, that was the last seen of him by his men who had rowed him ashore. A club had ended his life. His friends and admirers at Home raised funds and the result is as if the Chancel <sup>302</sup> of some exquisitely modeled Cathedral had been bodily transported to this lovely spot. Its floor is of black and white marble tiles, all the wood work is finely carved, beautiful mosaic work all inlaid, its huge eagle lectern is of brass and like all the rest of its abundant brass is kept glittering as if new. Its pews face one another. It has four stained glass windows designed by that great artist Burne-Jones. <sup>303</sup> It is indeed a gem and worth travelling far to see. The Memory of the martyred Bishop is secure for aye. And from there you take your choice of valleys running down from Mount Pitt. Here stand giant fern trees, their light green tops like huge umbrellas towering 100 ft in the air. Around these grow lemon and orange on a carpet of greenest grass. Ferns everywhere, on dead trees and on living ones. Soon you find yourself lost in a jungle, the liana grips the vegetation and long beards of moss hang nonchalantly from branches overhead. You tread on maidenhair and force your way through flowering shrubs. It is Dreamland. There are neither snakes nor poisonous insects; flies and mosquitos rare. Wild pigeons are plentiful and so are quail, a pheasant soars up overhead, snipe wing their zigzag course, whilst parroquets <sup>304</sup> dazzling in their colouring of purple, green and gold flit from tree to tree on either hand.

The Isle of Pines is a Beauty spot, hard to equal, impossible to surpass. Man’s Cruelty has passed, Nature once again is Mistress there. <sup>305</sup>

<sup>297</sup> See Tale #59, On “*The Hell of the Pacific*”

<sup>298</sup> See Tale #74, *The Isle of Palms*

<sup>299</sup> A discussion on the type of wood that was used to build Noah’s ark can be found [here](#).

<sup>300</sup> [John Coleridge Patteson \(1827–1871\)](#)

<sup>301</sup> WWB has *Nakupu*.

<sup>302</sup> The space around the altar in the sanctuary at the liturgical east end of a traditional Christian church building

<sup>303</sup> [Edward Coley Burne-Jones \(1833–1898\)](#) was a British artist and designer See *The South Coast* and *London* in *After Thirty Years, Two Months at Home*, in Part X, *Tales of Roaming*. WWB has *Burn Jones*.

<sup>304</sup> WWB has *parrquets*.

<sup>305</sup> The source of WWB’s account of the murder of Bishop Patteson and the reference to Burne-Jones is probably *John Coleridge Patteson : an account of his death at Nukapu, and description of S. Barnabas Chapel, Norfolk Island, dedicated to his memory* by H.N. Drummond (Ralph & Brown, 1930).

## 92. Of the Marquesas

We have roamed together through the various Groups of islands which form French Oceania with one exception, the Group named above. I have never stepped ashore there and I will tell you why. All my friends who have visited them have returned with the same tale. The islands themselves are very beautiful, mountainous and covered with verdure but the natives are a fast dying race despite all the care the French Authorities have expended for now nigh a century. There were many, many thousands when white men first lit upon them, today there are scarce as many hundreds. The spirit of the natives is broken, to roam among them is not heartening but depressing, regret cannot be escaped from by the visitor for it is our own fault and ours alone. We brought diseases among them unknown to them till then, and what you and I look upon as simple troubles are deadly things to Polynesians. You doubtless have had measles, unpleasant enough but not very serious : with them they are as a Plague, sweeping all ages off by the scores. So with other ailments. I have told you of the Sadness which struck me when on the Gambier Islands; <sup>306</sup> on the Marquesas it is pitiful. So I picture to myself the lovely Group and let it go at that. But what I know as Facts thereof I hope may interest you. Their name is a strange one and not native. When Mendana, <sup>307</sup> a Spaniard, was sent out on a voyage of discovery by the Viceroy of Peru in 1595 and came across them he gave them the Title of his Chief <sup>308</sup> who was a Spanish Marquis. He reported only the Southern Group. You will see that there is a northern one which was first come across by an American navigator named Ingraham <sup>309</sup> in 1791 nearly 2 centuries later. One name today covers them both and it had to take a plural form I trow. There is a book — not Romance but Fact and one of the “Classics” on the South Sea — which I hope you will read. Its title is “Typee.” It is a wonderful story written nearly a century ago by Herman Melville of his stay on one of the Marquesan islands named Nuku Hiva. It is still in print. You should also read R.L. Stevenson’s tale of his sojourn in the group in 1900 : its title “In the South Seas.” You will learn much from both and be charmed with them I am sure. *Atuona* on Hiva Oa is today the little Capital, *Tai-o-hae* on Nuku Hiva was so formerly, till it became unendurable through the introduction by some unknown means of a poisonous fly <sup>310</sup> : which recalls a tragedy of my own knowledge.

Years back I roamed the Tuamotus on a vessel which also carried a young San Franciscan. <sup>311</sup> He was suffering from a painful skin disease and refused all aid offered. He told me that since boyhood he had sworn that one day he would see with his own eye “Typee.” Awhile before we met he had landed in that lovely valley and despite all warning had ridden horseback and lightly covered clear up to its head. Those flies had got in their work. When we returned to Papeete I kept close watch over him, the poison was too deep seated however for any medical aid, his brain became affected, his courage failed and it was but a few weeks later when we laid his poor body to rest in Pauranie, Papeete’s picturesque God’s Acre. <sup>312</sup> I also long years back had hoped to tread where Melville trod but a kindly Providence had intervened as I have told above. Three years ago an Australian endeavoured to form a company of enthusiasts for a colony to make their residence in France’s

<sup>312</sup> WWB’s grave is in the Pauranie Cemetery.

Marquesas.<sup>313</sup> No one can reside or purchase land in French Oceania without the consent of the Governor. He promptly squashed the wild scheme. The Marquesas are reserved for the natives and the natives alone. Time enough when the last has Passed On.<sup>314</sup> Then those lovely isles will doubtless be thrown open to settlement and happiness will return where once it reigned.

### 93. Of the Darling Trail

Long years ago, ere I started my far roaming I read a book entitled, “White Shadows of the South Seas,” written by an American named O’Brien<sup>315</sup> who dwelt and since has died at Sausalito<sup>316</sup> hard by San Francisco. One description of what he saw intrigued me greatly, it was the Darling Trail which wound its way up the mountainsides of the towering hills at the foot of which Papeete nestles. Little did I then think that one day I should treat that winding path and see for myself the glorious view of land and seascape to be seen when its end was reached. Having tested that Author in that and many another description I must needs confess — and those who knew him here cordially agree — that for effect he was given to exaggeration and oftentimes to romance. No matter. He need not have, anent this Trail, plain facts are rich enough in beauty : and I think you will be glad to tread that way along with me, but you must needs be strong of limbs and lungs — if not, best stay at home. Before we start, you may like to have a few words as to the man himself, so far as I have been able to gather them. Darling was an American, born in either Washington or Oregon State. Delicate in health as a boy, his father, a physician, turned him out among the woods and hills to live close to nature. He loved it and became in very deed “a nature man.” He grew up strong in body but somehow or other warped in Mind. He became an ardent Anarchist and whenever he met his fellows he preached that evil doctrine. His State disliked his company and ordered him away. He went to California, lived as before but spread his doctrine as before. Again he was ordered off. He sailed for Tahiti. With the private means at his disposal he secured a site for his dwelling place far up the mountainside, some 2 miles from the little Capital and with his own strong hands he carved out and made the Trail. But he could not control his tongue. Spreading dissension among the seamen of the waterfront, he was deport’d, sail’d for Suva in Fiji, fell a victim to the ’Flu then raging over the world : So came he to his end. Now we are off and having passed through the environs of the little town, level and entrancing in their shade and beauty, we step across a narrow tumbling stream, past the last residence and reach the Trail. Once well defined, marked on one side here and there by hoped for shade trees (stunted now and all forlorn) it is no longer clear. Ferns have claimed it and alas! thick set prickly bramble too. It needs a hatchet to make headway. Slowly we mount upwards till at last we reach an open glade, at the head of it the residence that once housed Darling. A ruin today, it was at its best but a shack, its frame of flimsy posts, its roofing of kerosene cans laid flat! But what a view! Far down, below, lies Papeete, its house tops alone to be seen pushing their way up through a forest of trees, beyond these the still lagoon, the quay side clear in view with schooners of all sizes moored or anchored just offshore, beyond these the Barrier Reef with its ever foaming waters, then the deep blue ocean, and across the Strait, the towering, rugged mountains of Moorea. A glorious scene : often have I made my way up to gaze once more upon it,

<sup>313</sup> Articles on page 5S of the 15 January 1938 edition of the Melbourne weekly magazine, *The Argus*, and on page 14 of the 2 June 1938 edition of the Hobart newspaper, *The Mercury*, about the project organised by Mr Fred Briggs to establish the International Goodwill Settlement on Nuku Hiva can be found [here](#) and [here](#).

<sup>314</sup> The population of the Marquesas increased from 4,838 in 1962 to 8,658 in 2007. The proportion of the population of the Marquesas in 2007 that was born in French Polynesia was 94.4%.

<sup>315</sup> *White Shadows in the South Seas* by Frederick O’Brien (1869–1932) is primarily about Hiva Oa in the Marquesas. The book was published in 1919, a year before WWB left for the South Pacific, and was made into a [movie of the same name](#) in 1928; it was the first movie to be released with a pre-recorded soundtrack and won an Academy Award for Best Cinematography. See also Part I, *Notes on the Life of WWB, Departure for the Great South Sea*.

<sup>316</sup> WWB has *Sausalito*.

the going hard but rich indeed the reward. The Trail, the Shack, the man have had their day, Nature receives back her own but welcomes the able and the strong to see what she can show them at the end of the Darling Trail.<sup>317</sup>

---

<sup>317</sup> Ernest Darling (1871–1917) is the subject of Chapter 11, *The Nature Man*, in *The Cruise of the Snark* by Jack London, which was published in the September, 1908 issue of *Woman's Home Companion* magazine. The article, with photos of Darling, can be found [here](#). Statements that Darling made about his life, which were published on page 7 of the 20 January 1911 edition of *Grey River Argus* of New Zealand, and page 3 of the 6 June 1911 edition *The Mercury* of Hobart, can be found [here](#) and [here](#). For an account of his life, see *Pambu* No. 14 (September, 1969); *Pambu* is the monthly newsletter of the Pacific Manuscripts Bureau, Research School of Pacific Studies, Australian National University, Canberra. Darling died of the same [Influenza Pandemic of 1918](#) that struck Samoa, as mentioned in Tale #66, *The Exile's Return*. See also *Darling, the Nature Man* in Part XIV, *Tahitian Vignettes*.

## PART V

### LETTERS

BY

**REV. WILLIAM WASHINGTON BOLTON, M.A.**

**July, 1893**

Church of S Mary the Virgin  
San Francisco. Cal.  
July 1893.

My dear Bishop, <sup>1</sup>

I venture to add a word more to what I said in our interview relative to the question of “Compline” <sup>2</sup> which you have now under advisement. I know full well how earnest that consideration will be and with that dispassionateness with which you have steadily evidenced towards the Church of S Mary and its workings but I am sure you will not think I am attempting in any way to force your hand if I here make a few remarks which time would not permit when we met.

It appears to me that the question raised embraces a very large field and reaches out to well-nigh every priest in the Diocese. What other Diocesans may do or have done in the matter is neither here nor there for the priesthood — it may perchance come with your consideration of the question but we are bound to obey the godly admonitions of yourself and I am prepared to do so as I have tried to with those other Fathers in God under whom it has been my high privilege to minister to souls. I have not before raised the question with yourself — mainly because I have seen other priests in this city, older and more established in the ways of the American Church than I — use other offices than those in the Office Book of the Church without any notion that they were overstepping bounds.

I may refer to such an office as the “Three Hours Agony.” But when men are saying that at S Mary’s the priest and the people do what they please without reference to Authority I have thought it time to show, to yourself at least, that those of the advanced guard desire in accordance with those principles that they hold so dear to obey those who are set to rule over them.

If then we may not use any office within the walls of the Church of S Mary than those actually framed and printed in the Prayer Book — I find that we are once cut off from some of the most helpful offices that can be imagined for the development of the higher spiritual Life. We have been using an “Office of Intercession,” a copy of which I enclose (the collects themselves being taken

---

<sup>1</sup> This and the following three letters were written by WWB when Rector of the [Episcopal Church](#) of Saint Mary the Virgin in San Francisco. William Ford Nichols (1849–1924) was [Bishop of the Episcopal Diocese of California](#) from 1893 to 1924.

<sup>2</sup> [Compline](#) is the final church service (or office) of the day in the Christian tradition of canonical hours.

from very ancient sources) — “The Stations of the Cross” — “An Office for the Dead” besides others that I need not here mention.

Is the rule as to the use of the Prayer Book of such a character that it cannot permit such extra offices when the regular offices have been said? Does not this seem to restrict the worship and devotions of the Family? We, having said those formal offices, desire and love to continue on our knees before our God humbling ourselves and confessing. Must we go out of the Church building to do this?

Again “Compline” itself is as you well know almost wholly taken out of the Prayer Book — does it not seem to stand somewhat on the same ground as the “Agnus Dei”<sup>3</sup> which has been declared to be allowable since the words appear in the Gloria in Excelsis?

I have taken such ground (amongst other) in the past but I can readily see how much better it is that priests should have nothing said in the Churches without the Authority of the Diocesan and shall strictly follow this course in the future unless you give me such wide margin as that I need not trouble you for permission for Blessings and Ward Offices — Processions with Hymns. It will be with profound anxiety that we shall all await your decision and we shall be much in thought about it as we daily gather before the Altar. Whatever may be the outcome I trust that we shall show that our professions are more than mere talk. If you grant us (and so the Diocese) permission for “Compline” and desire to give special dispensation for every other office and Acts of Worship I will give you the particulars of such, at such time as may be convenient to yourself.

Believe me  
Faithfully yours  
W. W. Bolton

**September 15, 1893**

2311 Union Street  
San Francisco. Cal.  
Sep. 15. 93.

My dear Bishop Nichols,

Now that I am able once more to get to work — the interval of enforced rest and retirement being one of much thought and also brightened by countless acts of kindness of which yours has not been the least — I am anxious to arrive at so clear an understanding relative to the Extra Services — of which you dealt so thoroughly and helpfully in yours of August 8<sup>th</sup> — that both yourself and myself may feel that within the walls of St Mary’s obedience to authority is not contemned.

---

<sup>3</sup> In the Mass of the Roman Rite, and also in the Eucharist of the Anglican Communion, the Lutheran Church, and the Western Rite of the Orthodox Church, the [Agnus Dei](#) is the invocation to the Lamb of God sung or recited during the fraction of the Host.

1. The strict wording of P. B <sup>4</sup> is that Morning & Evening Prayer shall have been said (or are to be said). I desire to know whether the greater does not enclose the less i.e. whether it was not because the authorities thought a Daily Eucharist an impossible standard that they set the lower standard of Matins & Evensong ere aught else could be introduced: and therefore whether I having a Daily Eucharist — supposing that I did not say the lesser offices — would be authorized to say Compline. Of course on Sundays all the offices great and less are said — but the question might come up on a weekday. If you rule against the Eucharist then I will add the lesser Offices on such day so as to come within the sight of the Special Office?
2. Your ruling affects only and can(?) only affect “the public Worship of the Church” i.e. at Guild meetings or special meetings of the Faithful in the Church building we can use our Guild Offices — Offices for the Dead — in fact anything with Catholic precedent?
3. The “Intercessions” I am now selecting directly from the Collects of the Prayer Book and will submit the same to you as a whole. I should be glad if you would advise me of where alterations should be made in “Compline” and unless you wish to take the initiative I will then select from the P. B and submit to you for satisfaction. I trust that we may be able to avoid reprinting of the office.

There are a great many Services that I shall have to lay before you but they are not now in season so can wait until the above are brought into line in accordance with your ruling.

Believe me  
Faithfully yours  
W. W. Bolton

**December 11, 1893**

2311 Union Street  
San Francisco.  
December 11. 93.

The Rt Rev W. F. Nichols

My dear Bishop,

I have been again laid by, and the fiat has gone forth against my going out at night (if possible to avoid). It has occurred to me that it might be possible for you to come to us on Sunday afternoon at our regular 4 pm Office, instead of at 8 pm. I should very much like to be present; but of course your regular appointments must claim first consideration. My candidates are agreeable to either hour. A few days' notice will be sufficient.

Believe me  
Yours obediently in the Faith  
W. W. Bolton

---

<sup>4</sup> The Episcopal Church publishes its own [Book of Common Prayer](#), containing most of the worship services.

**January 15, 1894**

2311 Union Street  
San Francisco.  
15<sup>th</sup> January : 1894.

My dear Bishop,

As Lent is fast approaching and Lenten Cards have to be gotten out I desire to approach you again on the subject of Special Services – “extraordinary acts and exercises of Devotion suitable to the Season.”

The matter of “Intercessions” and of “Compline” you have directed upon at my request and I have followed your direction as regards the first — the second of course awaits your further direction as my last letter to you makes mention of — I have not dared to alter the ancient form but will of course do so upon your direction.

There now remain certain acts of Devotion suitable to the Season, Catholic in their nature and their use that I would ask your direction upon as regards the Form to be used thereat. They are as follows:

1. The Blessing and Imposition of Ashes on Ash Wednesday.
2. The Blessing of Palms on Palm Sunday.
3. The Blessing of the New Fire on Easter Even.
4. The Prophecies, the Passion and Solemn Collects on Good Friday.
5. The Tenebrae on Wed. Thurs. Friday in Holy Week. <sup>5</sup>
6. The Stations of the Cross.

Then there is the more modern act of Devotion – “The Three Hours of Agony” for which I presume most of your clergy are preparing; but at present do use very varying Forms at. I beg to enclose a Form that I have used (and of which I have considerable copies) at this last Act and would ask that if possible you could kindly authorize its use. If I understand aright the P. Bk “Concerning the Service” the Ordinary <sup>6</sup> can authorize more Forms than one which therefore by allowing the one for “The Agony” we here have, will not necessarily entail the non-use of others in other parishes.

It appears to me (I trust that you will correct me if I err) that a priest can use extra acts of Devotion (provided that the words are to be found in the Prayer Book) without consulting his Ordinary. If however he seeks the Bishop on the matter then he is subject to Direction. If the Bishop choses to approach the Priest and to direct in the matter then again the Priest is subject to direction. And again it would appear as if an act being Catholic, the Ordinary merely rules upon the Form to be used thereat but that any act contemplated for use that has not that Catholic stamp upon it has both as to the use thereof and the Form to be ruled thereon e.g. “The Agony.” I desire to clearly understand this very important matter and I have therefore elected (rather than to proceed and await to see

---

<sup>5</sup> Tenebrae is a Christian religious service celebrated within Western Christianity on the evening before or early morning of Maundy Thursday, Good Friday, and Holy Saturday, which are the last three days of Holy Week.

<sup>6</sup> An ordinary is an officer of a church or civic authority who by reason of office has ordinary power to execute laws.

whether you would ignore the whole matter, choosing not to direct at all) to lay the matter before you even at the risk of being directed contrary to my own heartfelt desire.

It appears to me that such acts as above quoted are directly referred to in the statement in P. Bk as to “extra ordinary acts of Devotion.” The mere use (if more frequently) of Matins — the Eucharist — the Litany etc. can scarcely be said to be extra exercises. And as to the suitability of the acts I speak of above, the long use and the blessing that has come through them to souls does very strongly testify.

I would further be glad to know just what is the position of the Church building (consecrated and unconsecrated) as to the right to hold offices therein. My last had a similar query and it is not unimportant seeing that in the buildings the most varied gatherings are held. I specially refer however to offices at this time.

I desire to thank you for giving publicity to your former reply to me on this matter and to ask the same favour as regards the reply you may see fit to give this letter. I am very far from desiring to heckle my brethren but I feel strongly that the Law to one is the Law to all and that we should all be brought to fully realize this. From what I have heard your former pronouncement has not been looked upon as so far reaching or so important as it clearly is. As I understand it the use of both the Act and the Form of the modern “Three Hours Agony” is in this Diocese absolutely dependent upon your formal consent given. I shall be interested to know how many apply – if they do not, it will be because of what I have above stated, they have not realized you have made a very serious and strict pronouncement. I have followed with intense interest this whole question since the new Prayer Book appeared. A ritual student could foresee that it had to be met first as the celebrated “Ornaments Rubric”<sup>7</sup> at Home. The positions taken (as by the papers) in the various Dioceses and by various parties are exceedingly diverse. I have received letters from many parts on the subject of your reply to my queries and doubtless a large number will read with great eagerness what further pronouncements you may have to make. I ought maybe to have written earlier to you but sickness put me so back with many things that I set the opening of 1894 as the time to approach you on this matter.

Believe me

My dear Bishop

Very sincerely yours

W. W. Bolton

**March 7, 1939**

Very special!!!  
many happy returns  
of the Day

Taaroa :  
Pirae : Tahiti.  
March 7. 1939.

---

<sup>7</sup> The Ornaments Rubric is found just before the beginning of Morning Prayer in the Book of Common Prayer of the Church of England. The interpretation of its second paragraph was debated when it first appeared and became a major issue towards the end of the 19th century during the conflicts over what vestments and ceremonies were legal in the Church of England.

My dear Jane <sup>8</sup> and Pat, <sup>9</sup>

I am sending you with this a photo lately taken of your old Grand-dad's Home Sweet Home which I think you will like to have. I have numbered things and given the names on the back. The frangipani has flowers of a lovely scent — chemists sell at a high price — and natives make garlands of the flowers for their hair. The kapoc is not a pretty tree, it looks lonesome, stretching out its spindery <sup>10</sup> arms as if for company. It is very useful to man. It bears fruit like large fat pea pods which fall ripe and burst open. In these is beautiful silky soft wool which we use to stuff pillows and mattresses with, but not without a lot of work as the seeds — scores of them — have to be picked out of the wool by hand. The mango is of many kinds, the best is called the "mission" mango, it is a grafted kind and large as a melon. Behind the outhouse where I keep my tools and where at a table — with benches for seats — native callers — who love feasting — have from time to time a guzzling, there is another shed for the native oven. This is a round hole not deep, which is filled with fair sized stones. On top of these a wood fire is lit and when the stones are red hot, the food wrapped in banana leaves is placed and covered with more leaves and piles of old sacks. The result is wonderful, all the juices are retained. But it is all wasted on me, my fare is the plainest of plain food. Here also is the pump, for though I have electric light from the far off town I have the *Ha-mu-tu* river as my reservoir. It means heavy work pumping up to the lofty tank so as to give force in the bungalow but I am very strong and it is good exercise. Back of the pump comes the palace for His Highness. You will find all about him in the separate paper which I wrote sometime back for you, leaving it so that if your Grand dad Passed away, it would reach you as a little reminder that though so far, far away none of you are forgotten. Now we will go inside, up the half moon stone steps; and to the right I will show the kitchenette with its blue flame stove, its safe, its shelves, everything tidy and close at hand. Next to it comes the bathroom with its shower for hot days and garden toil. Then comes what I call the guest room, sometimes occupied but mostly empty. Then mine, such a cosy nest with its large ever open window, its mosquito net — though rarely used — and lofty ceiling which is the roof itself towering high above every room. And now my study where I sit writing to you. It is part of the verandah but shut off by screens. Here are my books and papers and a lounge for an oft tired body when I look out upon the great Plantation with its countless ever waving palms laden with their nuts. The highway is away off. All is quiet the day long and at night I can only hear the babbling river as it makes headlong for the sea, or the roar of the breakers as they thunder against the reef. Now if you do not think it 'Home Sweet Home' — I have given it no native name — I shall be surprised. Perhaps some day when you have grown up, and your Grand daddy is very, very old, you may take ship and journey hither. What a happy meeting that would be. But methinks that if you could speak French as beautifully as your Granny does you would have a happier time for then you could mix with the society of Tahiti which I have had no wish to being old, so old, yet not too old to find companionship in Nature which works side by side with me in orchard and in garden, the sweetest and gentlest of friends. So I am never lonely.

Your affectionate  
Grand dad.

---

<sup>8</sup> Jane Elizabeth Bolton is WWB's granddaughter — the daughter of Arthur Gerard Bolton and Annie Jocelyn Byrd Innes — and March 7 is her birthday.

<sup>9</sup> Jane's younger brother, Gerard Patrick Bolton.

<sup>10</sup> Variant spelling of spidery; long and thin.

**August 12, 1939**

P.O. Box 259  
Papeete. Tahiti.  
August 12. 1939.

My dear Jane,

This is your Daddy's birthday <sup>11</sup> and of course I am writing to him as I do to his brother and sister <sup>12</sup> year by year and now add a line to you and Pat and Mother to make the thing complete. You will I am sure be familiar with that wonderful framed series of photos of Father and his sister and brother. Wonderful because it took me 25 years to collect! You will see your Daddy in one, in his football jersey of which he was very proud and the bad boy slipped off to town unbeknown to Granny and me to have the yearly photo taken not as we wanted but as he did. But I was very pleased really and am very proud of that likeness.

You will have seen our King <sup>13</sup> and Queen <sup>14</sup> and you must write and tell me if you had a good view of them and what they look like, the King so quiet and sedate for it must be a heavy burden to be King of his great Empire, and our dear smiling Queen who makes his life so happy by her gentle, thoughtful ways. <sup>15</sup> There used to be Kings and Queens in the Great South Sea, but now all have gone except one, the Queen of Tonga. Her name is *Salote* (i.e. Charlotte). She is a tall, big woman, every inch a Queen. The Prince Consort is her cousin and her eldest son (like our "Prince of Wales") has been educated like she was in New Zealand and after attending an Australian University is going (or has gone) to England to learn still more to fit him to be a King. The Queen is very retiring, so when I was at Nukualofa <sup>16</sup> tho' I might have met her through our Consul I did not, lest she might think I was only curious which would of course be rudeness. We have here only a Prince — his name is *Ariipaea* — we are such good friends — and he has 12 sons and daughters! The Princesses are such dear well mannered girls, not afraid to work. Someday you may see a photo of several of them which I had taken for my Manuscript on Tahiti, written and lent to enquirers of this lovely island's Past and Present.

As you liked my little story of "His Highness" I am enclosing another little story of my birds <sup>17</sup> which I hope you will also like. I have no dog, "Gyp" was my last, over 50 years ago, he was my dear faithful companion. We loved each other like Daddy and you loved Bessie the poor dear who suffered from rheumatism in her old age if I remember aright. I never liked cats.

I enclose some stamps, my friends are widely scattered as you will have noticed from what I send you from time to time. Will you let me know Pat's birthday for I fear I have it incorrect in my Book of Remembrance, he may be older than I think. I hope he will become a fine athlete and so carry on the tradition of his forebears.

---

<sup>11</sup> Arthur Gerard Bolton was born on 12 August 1893 in San Francisco.

<sup>12</sup> Vyvyan Muriel Grant (née Bolton) was born on 2 December 1890 in Victoria and Eric Seymour Bolton was born on 1 February 1892 in San Francisco.

<sup>13</sup> George VI (1895–1952) was King of the United Kingdom and the Dominions of the British Commonwealth from 11 December 1936 until his death.

<sup>14</sup> Elizabeth Angela Marguerite Bowes-Lyon (1900–2002) was the Queen consort of King George VI from 1936 until her husband's death in 1952, after which she was known as Queen Elizabeth The Queen Mother, to avoid confusion with her daughter, Queen Elizabeth II.

<sup>15</sup> King George VI and Queen Elizabeth toured Canada in 1939; it was the first visit to Canada by a reigning sovereign. They visited Victoria, British Columbia in May 1939.

<sup>16</sup> WWB visited Tonga in early 1921, on his way from New Zealand to Niue via Tonga and Samoa.

<sup>17</sup> See Tale #2, *The Minah Bird*, in Part IV, *Tales of a Roaming Grandfather*.

With love to you all, Your affectionate

Grand-dad.

**July 15, 1940**

P.O. Box 259  
Papeete. Tahiti.  
July 15. 1940.

Dear Jane and Pat,

I am very glad that you like the little Tales so much and since you do not think there is “Enough” of them I will send you further ones from time to time, numbering them as before so that you may see if any get lost on the way. I enclose a few to go on with. You need not think that their writing tires me, they are as easy to write as it would be to chat with you if we were together. You will note an additional word in their Title which I think they are entitled to as they are quite different from the Tales of the usual Grandfathers which are either Fairy Tales or Romance made up in imagination and not real Facts met with in far scattered parts of the world recorded to benefit not merely to amuse you. I am so glad that you pass them on to your friends and I hope that if your cousins — though all far older than you — my other grandchildren would like to read them you will loan them readily for they are for one and all of you. I could not have written them when they were your age for my Roamings were then but limited. Now those long roamings are over and what I learned is yours as a gift.

Fancy!! the other day I stood at Milestone 82 on Life’s long happy journey. I hope you do not think of me as an old, old gentleman, bent nearly double with a 3<sup>rd</sup> leg (his stick) to help him along. That would be a great error. For my Birthday present I gave myself a special treat, not of good things to eat but a lovely walk of 5 and 20 miles and finished the Day till sundown at work in the garden and orchard. So you will see that I am still very strong. Speaking of orchard I must tell you about my birds — it was a feather lost from one of them (I hope not in a fight!) you were sent. I told them some weeks ago that I thought them very unsociable with their 3 separate breakfasts and that they would have to breakfast together at one grassy table or go without. They must have held a meeting : “All right. If that is what you want we’ll not only eat together but we’ll invite all our friends to share in.” And sure enough they have : and instead of 6 there are now 60 by actual count this very morning! And what can I do? I cannot refuse to feed them so have to ration myself for those rascals’ benefit. I wish they behaved better at their meal, they simply have no manners at all : they grab, scramble over one another at the table, scream at one another and fight till I have to interfere : then away they go and quiet reigns once more.

I have not heard from or of your Daddy for an age, and wonder where he is and how he fares. I do hope those terrible war wounds are not hindering him doing what he aims to. <sup>18</sup>

---

<sup>18</sup> WWB’s son, Arthur Gerard Bolton, fought at the [Battle of the Somme](#) in October 1916, and the Bourlon Wood operation in September 1918, during which was wounded in the leg. See [Arthur Gerard Bolton \(1893–1940\): His Service During The Great War](#).

I enclose along with some stamps — my correspondents are few these days — half of your previous envelope as a curiosity. Poor Xmas Card what a journey it had : clear across the Pacific to Indo China, then  $\frac{3}{4}$  of the way back again! I have it safe.

Now I must close with love to Mum and yourselves from

Your affectionate  
Grand father

**December 1, 1940**

P.O. Box 259  
Papeete. Tahiti.  
December 1. 1940.

My dear Jane,

I want you to do something for me. Friends here appear to like my short Tales very much, which I think is very nice of them for they really have but little merit. As I think you know I have made copies of each in case of accident to yours on the long journey. But I did not make copies of the first 3 : and my friends grumble at not seeing them. So I want you to make a copy of each which I think I called “His Highness” : “The Minah Bird” and “Tables and Manners” and post them to me. My rule is — and I do hope it will always be yours — never to put off till “tomorrow” what should be done “today.” So get down to it right away — perhaps you are an expert typist — if so it will do just as well to have them that way. I have a few more yet to send you — if you are not quite weary of their arrival — making 75!! in all. With them to keep in years to come, your old Grand dad is not likely to be forgotten when he joins your dear father where partings are no more.<sup>19</sup> We are living through terrible and sad days but I do hope that you and Pat will have a really happy — if it cannot be a Merry Christmas, and that the New Year will be one of Health and Progress in every way to both of you.

Your affectionate  
Grand Dad

---

<sup>19</sup> WWB is alluding to the death of his son, Arthur Gerard Bolton, who took his own life in 1940.

September 15, 1941

P.O. Box 259  
Papeete. Tahiti.  
September 15. 1941.

My dear Jane,

Your note of June reached me today. You see it took a very long time to journey hither. You should not trouble to write of safe arrival of the MSS, a p.c.<sup>20</sup> is sufficient to show me they have escaped mishap on their way. You need not think of them as wearying me, the rather I fear that they may begin to weary you and the rest of you. I do not have to sit down pen in hand and think and think and think whatever I can say. When an incident recurs to mind or some local incident occurs, then down it goes, rattling off with a ready pen. You speak of nearing N° 100! Yes! that is a terrible number of Talks for the listener. They may indeed as the years go on reach that goal but not if they have to be other than true Facts, and then we will close the book for good. It will be the end of a lovely service I have been privileged to render to you all in my old age.

You have asked me to tell you of the tragedy of my little French helper.<sup>21</sup> It is too sad to write into these Tales and it hurts to even think of it but the rough outline I will give you here. He had 2 children, a girl and a boy, little ones who were all in all to him. His wife had left him. He gave them into the care of another woman who treated them cruelly. When with tears and entreaties they appealed to him to succour them, in a frenzy of rage at the woman's treatment of his precious ones, he killed the woman!! He is (or was) imprisoned for Life in a Penitentiary in Northern France. So passed he, my ever ready and devoted servant, out of my life. It was terrible way, thus to revenge his bairns. As you have written of your Canary bird, I must tell you in my next bundle of my Canary bird which I feel sure will amuse you.<sup>22</sup> I am glad to know that your school friends find interest in what I write of but never thought of their getting into print. I would like to see how they read, if you can spare a copy. I hope no Editor's pen sets out to maul them. I recall the Bible you mention. I think it wisest for you to retain it. Books suffer badly in the Tropics, their covers have to be dosed with medicine. I have to keep my most valuable ones wrapped up all the time. Take care of it for me.

Tell your dear Mother that I have written to Miss Soames and await her reply and thank her for me, for the care she has taken of those things which were sent her which were in your dear Daddy's keeping. This is that dread month is which he received what was of a truth his death wound at German hands. I always observe September the 27<sup>th</sup> as a day of saddest memory when at Arras Cambrai in 1918 he won the Military Cross but at what a cost!!<sup>23</sup> May Pat prove as fine an athlete as was he in his early manhood. With love to you one and all,

Your affectionate  
Grand-Dad

---

<sup>20</sup> Postcard

<sup>21</sup> The details of this story are given in *Revenge*, in Part XIV, *Tahitian Vignettes*.

<sup>22</sup> See Tale #90, *Of My Canary Bird*, in Part IV, *Tales of a Roaming Grandfather*, and *My Canary Bird*, in Part XIV, *Tahitian Vignettes*.

<sup>23</sup> From the [London Gazette](#), October 4, 1919, regarding his Military Cross: "Lt. Arthur Gerard Bolton, 7th Inf. Bn., B. Columbia R. For marked gallantry and initiative during the Bourlon Wood operations, 27th Sept. to 1st Oct., 1918. During the attack on 27<sup>th</sup> September, when his company was held up by heavy machine-gun fire and large belts of wire, he worked his way forward and, by putting up a smoke screen, enabled his platoon to advance by short rushes. In this way he captured two machine guns, with their crews, and enabled the advance to continue on his front. He then led his platoon through to the objective."

**June 6, 1946**

P.O. Box 259  
Papeete. Tahiti. S. Pacific  
June 6. 1946.

My dear Jock,

What a surprise! and how charming, useful and much needed a gift comes from your loving thought and kindness. Those deep thick rubber soles make my long strolls easy a-foot and they should outlast even gym boots. They reach me as a birthday gift for but a few weeks and on July 3<sup>rd</sup> I reach Milestone 88! still physically strong as ever. I warmly thank you, dear.

Unless my mental Calendar has gone awry this is Pat's birthday, and he 19! His career lies ahead of him and may he have the lasting health and ability to make it a success. Let me have one of your interesting letters telling me how you and your bairns are faring for my thoughts dwell oft on my own special triplet and their offspring, Vyvyan, Eric and you.

It will I feel sure interest Jane to hear of the steady progress of those Tales of mine to unthought of publicity. They have been prepared by the warm admirer who walked off with them to Australia for broadcasting and are being submitted to that end to the Radio Authorities in both Australia and New Zealand, as also to South Africa and London! And later they will be handed to England's publishers for issuing them in book form. They are said to be — by experts in the business — not only extremely interesting for both young and old folk but full of wonderful and useful information, so Jane will see that her favourite "The Swallows' Cave" may take wider flight than those swift winged beauties themselves could ever make.

I have not heard from Vyvyan or Eric for a long time but now that the mail service is becoming more normal we on these scattered islands will not be so cut off. Meanwhile we here enjoy perfect peace and plenty and are shocked at the madness of a quareling world and the fearsome rationing that seemingly has to be.

Believe me dear Jock ever to be

Sincerely Yours      Dad.

BOLTON—BUSHBY. — On February 11th inst., at the Church of St. Paul, Esquimalt, Vancouver Island, by the Rev. Arthur Beanlands, assistant rector of Christ Church, Cathedral, Victoria, the Rev. William Washington Bolton, rector of the parish, to Agnes Jane Bushby, second daughter of the late Hon. A. T. Bushby.

**July 2, 1894, page 5 — *Exploring the Island***

**EXPLORING THE ISLAND. <sup>2</sup>**

**An Attempt to Be Made to Travel Inland From Cape Commerell to Victoria**

Five men will leave Victoria by the Danube to-morrow on a trip of exploration. Their objective point is Cape Commerell, at the extreme northern end of Vancouver island, and the intention is to traverse the island from one end to the other with the idea of exploring the unknown interior and afterwards publishing the results. The utmost reticence has been observed as to the details, and the members of the party are under promises of secrecy, so that of course it is impossible to say who is the promoter of the scheme. It has leaked out, however, that Rev. Mr. Bolton is to be the leader of the expedition, while J. A. McGee, of Snoqualmie, a well known timber cruiser, goes along as guide. A photographer and sketcher, Mr. T. B. Norgate, has been secured, and tidings of the progress made on the arduous journey will be sent to the outside world by means of carrier pigeons to be taken from Victoria. All the necessities for the trip, including a small tent, will be packed on the backs of the men who, in addition will each carry a rifle. A peculiar and apparently comical feature of the dress is that plug hats are to adorn the heads of the hardy adventurers, as it is asserted that the glossy silk hat slips through the brush much easier than any other form of headgear. Overalls will protect the lower extremities of the party. As nearly as possible a bee line will be followed between Cape Commerell and Victoria, and it is expected that two months will be required to complete the journey.

**THE CITY.**

Rev. W. W. Bolton and J. W. Laing, of San Francisco, who are shortly to start on a trip of exploration on Vancouver island, arrived in the city last evening and are quartered at the New England. Mr. Bolton was in charge of a party which previously but unsuccessfully attempted to make the same trip.

**July 3, 1896, page 8 — *Marine Notes***

**MARINE NOTES.**

On Wednesday evening, the steamship Danube sailed North, carrying among her passengers Rev. A. E. Price, Robt. Cunningham, H. Fry and party, who are going to Enjoyment cove, Kingscomb inlet, Rev. W. W. Boldon, J. W. Lang and party of surveyors, who left on a trip of exploration of Vancouver island, and four special constables. [sic]

**August 16, 1896, page 1 — *Exploring the Island***

**EXPLORING THE ISLAND.<sup>3</sup>**

**The Laing-Bolton Party Back From Their Journey Through the Interior**

Mr. J. W. Laing and Rev. W. W. Bolton of San Francisco, who started with a party six weeks ago to explore the central interior of Vancouver island, reached Victoria last night having successfully accomplished their object.

As he sat eating his supper at the New England, clad in a suit of overalls much the worse for wear and his face adorned with a scrubby growth of hair, Rev. Mr. Bolton had anything but a clerical look, nor did Mr. Laing appear to better advantage in a tough looking thunder and lightening blanket coat such as lumbermen wear in the woods. The pair looked more like a pair of longshoremen than a divine and a rich San Franciscan. However they explained that for the sake of lightness they had not burdened themselves with an extensive wardrobe during their excursion.

Rev. Mr. Bolton had in 1894 made a trip from the north end of the island to Woss lake, and from Alberni to Victoria, and their present trip was for the purpose of exploring the island's interior from Woss lake to Alberni, so as to complete the tramp through the whole length of the island. Woss lake it may be explained is 100 miles north of Alberni. The party consisted of Mr. Laing, Rev. Mr. Bolton, Mr. Fleming, the photographer; C. W. Jones, a timber cruiser; and J. Garver, cook. They went in by way of Alert Bay first and traversed the island to Nootka, on the west coast, taking many photographs of the scenery. Then they turned inland by way of Tlupana Arm to the interior and by tramping and

---

<sup>3</sup> [Victoria Daily Colonist, 16 August 1896, page 1, fourth column](#)

rafting made their way south through the rough country of the central part of the island. Progress was naturally slow as Rev. Mr. Bolton describes the country traversed as a mass of mountains and a collection of snow peaks and glaciers. This accounts for the best day's travel being only eight miles.

The party declare that the country, as far south as Great Central lake, is absolutely worthless, being rocky, with no good timber, nor is any mineral to be found with the exception of masses of marble in inaccessible places. The centre of the island is between Great Central lake on the south and Buttle's lake on the north, and it is what might be called the hub of the island, for great broken points of rock tower up there, and were named "Central Craggs." It has hitherto been supposed that Victoria peak and Crown mountain are the highest points on the island, but one of the "Central Craggs" climbed by the party was 7,500 feet high — 100 feet higher than Victoria peak, and there were others found over 8,000 feet high. The whole country from the northern end to Great Central lake is described by Rev. Mr. Bolton as only of value to the sportsman, the artist and the mountaineer. When they arrived at Buttle's lake the party went down on the trail to the east to the head of Upper Campbell lake, where Mr. George Bushby and party had brought up fresh supplies for them from the Coast. Only provisions for ten days were carried at a time, offsets being taken to the Coast to secure a renewal, as it was considered impossible to pack enough at once to last the whole trip. There were 350 photographic views taken during the journey of typical varieties of the scenery. Buttle lake and Great Central lake were found to be only 15 miles apart, and instead of the present route that is taken to reach Buttle lake it can be reached easier by horseback from Alberni to the foot of Great Central lake, thence across the lake by boat or rafting and then by climbing the remainder of the way through a rough country. Arriving at Alberni Mr. Laing spent a short time examining the mines for the purpose of finding out for himself whether they were good enough for investment. He seemed very favorably impressed with them and the result may be that San Francisco capital will be interested for investment there. Mr. Laing and Rev. Mr. Bolton leave for home at the end of the month.

#### A LAND OF WONDERS.<sup>4</sup>

— —  
Explorers of Vancouver's Unknown Wilderness Meet Under Interesting Circumstances.

— —  
Mysterious Messages From an Unknown Race Once Peopling Our Island Home.

— —  
British Columbia and British Columbians have much to thank Mr. J. W. Laing for — more perhaps than the majority have yet had time to realize. In the first place his recent expedition into the unknown wilds of this island has enabled him to place the provincial government in possession of a variety of valuable information, in maps and field notes that will be of the greatest possible value in correcting the existing maps of the little known island interior which he has so recently explored. Since his return to civilization he has, too, been active in disseminating information of the beauties and resources of the unknown Island interior — still terra incognita to almost everyone, although so close upon the boundaries of advanced civilization — even taking time during the course of a just completed visit to California, which was intended to be all holiday, to make the members of the Geographical Society of the Pacific acquaint[ed] with some of his interesting discoveries.

---

<sup>4</sup> [Victoria Daily Colonist, 17 January 1897, page 8, fourth and fifth columns](#)

This San Francisco society is in affiliation with the Royal Geographical Society of London, of which Mr. Laing is a fellow, and it has as its president no less well-known a person than Professor George Davidson, whose good work as a geodetic surveyor is familiar to every student of Pacific Coast history. It was at Professor Davidson's request that Mr. Laing's lecture was given, before the largest audience that the Coast Geographical Society has assembled in years. First of all, Mr. Laing dealt with the earlier history of this interesting island; Vancouver's career, his bravery, his energy and his extreme accuracy in his surveys being especially emphasized, and Mr. Laing's remarks in this latter connection being afterwards heartily endorsed and supported by Professor Davidson.

Then the recent expedition through the Island was described in detail, Rev. Mr. Bolton assisting, and a large number of the views taken by Mr. Fleming being thrown upon the canvas. The trip carried the party from Alert Bay, on the east coast, to Nootka Sound on the west, 315 miles of wildly picturesque country being traversed, rough and inhospitable not infrequently, but deeply interesting to the travellers, and to all who, from them, have the opportunity of learning of its wonders.

The journey westward took Mr. Laing and his companions to and around Buttle's lake — as related in the Colonist on his return to Victoria — and he was able to correct the false impression given by existing maps as to its form and prominent characteristics, the two large islands said to be found being nothing more than large rocks and the lake itself terminating in two arms instead of maintaining an undivided surface to the end. The lake takes its name from the discoverer, Mr. John Buttle, one of the pioneer brigade of Sappers and Miners who played an important part in the early history of British Columbia, and who was the first white man to note its silvery whiteness breaking the dark green and grey of the widespreading panoramas.

This was 36 years ago, when Mr. Buttle was on an extensive prospecting tramp, entering the wilderness, as Mr. Laing and his companions did, from the East coast. He then viewed the prospect o'er from a lofty eminence 20 miles or more to the southwest of the lake to which he gave his name.

Last Tuesday he had the opportunity of being present at Union Square in San Francisco, when Mr. Laing told the story of a nearer inspection, occupying a seat on the platform and reviving memories of his younger days of activity and ambition as one by one the picturesque scenes were unfolded, familiar in all probability to him alone of the hundreds in the audience. He is now an old man, his hair being touched with the frosts of three score years and ten, but he retains all his mental faculties undimmed, and entered with zest and enthusiasm into the subject old with him, but fresh with Messrs. Laing and Bolton.

It was during the course of their interesting though hazardous journey which formed the topic of Mr. Laing's recent talk in the Bay City, that he and his companions made a remarkable discovery — a discovery which has excited the curiosity of scientists and students throughout all the civilized world. The explorers were at the time crossing Great Central lake, the largest body of fresh water on the island, with a length of thirty miles, when the curious markings upon the face of a giant rock attracted Mr. Laing's attention. The canoe was stopped, and investigation disclosed that a message had been left by some prehistoric dwellers of the lake deep traced in the imperishable rock.

The hieroglyphics forming the inscription were arranged in five parallel lines — somewhat similar to a musical staff — while above was what apparently had been intended for a log of wood and a growing tree — a third figure, placed at the right hand, resembling nothing so much as a seven-branched candlestick.

The impression, despite the fact that centuries must have passed since it was chiselled by someone whose race even is now a forgotten people, remains clear and distinct. Photographs were taken of the rock, and sketches made of the interesting inscription. They have been sent, among others, to Dr. Franz Boaz, the eminent investigator, of the Smithsonian Institute, who is now studying them with keen delight. He promises to bring all his ability to bear upon the interpretation of the meaning, and aided by what the Indians can tell of the great race now extinct, who once inhabited the country round about Great Central lake, discoveries may even now be close at hand in regard to Vancouver island's ancient people that will astound the world of sciences. Who knows?

**April 17, 1906, page 6 — *Rev. Bolton in Vancouver***

**Rev. Bolton in Vancouver <sup>5</sup>**

While in Vancouver Mr. Bolton was interviewed by a representative of the News-Advertiser, which quotes him as making the following statements:

“Victoria will make an effort to retain its franchise in the British Columbia Amateur Lacrosse association, although the Capital City club will have no team in the league series.” This statement was made last night by Rev. W. W. Bolton, president of the Victoria club, who is in the city on business in connection with the annual meeting of the provincial association, which will be held at New Westminster on Saturday, April 21st. According to Mr. Bolton, it has been decided to retain membership in the senior association, but no team will compete in this series.

“Lacrosse will boom in Victoria this summer,” said Mr. Bolton, “and we hope to put the game on a proper footing. We have three intermediate teams, three junior and several school teams, and valuable trophies have been offered for all of the competitions. Lionel Yorke has been secured as coach, and he will commence upon his new duties on Monday next. We have arranged with the school authorities to have Mr. Yorke visit the schools each week for the purpose of coaching the younger element, and in this way we hope to have some good material to draw from for the senior team in a couple of years. We propose arranging matches with all of the mainland teams and will arrange matters so that the senior, intermediate and junior teams on the mainland can visit Victoria during the summer at our expense. It will be a good outing for the teams and we intend to bear all of the expense in connection with these visits. The officials of our club [feel] that if the younger players are given encouragement that we will be in a position to place a strong twelve in the field in a year or so.

“Of course, we will retain our franchise in the provincial senior association, and I feel assured that when we again place a team in the field it will be a good one, and one that can be depended upon to make a good showing in the race for the championship. This season Victoria will apply for admission to the provincial intermediate association, which body will hold its annual meeting in this city on Saturday, April 28th. I will also endeavor to organize a junior association. We have some good teams in Victoria and I understand that there are some good junior teams in both Vancouver and New Westminster. We have the necessary financial backing in our city this year, and it should be one of the most successful seasons in the history of the game in the capital.

---

<sup>5</sup> [Victoria Daily Colonist, 17 April 1906, page 6, third column](#)

“The junior and intermediate teams have already commenced practice in Victoria, and the season’s schedule will be drawn up shortly. Since my arrival [in] the city I have interviewed Mr. Larwill, secretary of the intermediate association, and have also visited New Westminster and talked over the situation with a number of lacrosse men in the Royal City, and the consensus of opinion is that a strong intermediate association can be formed, which will include the present members of the association, Vancouver and New Westminster, and a team from Victoria.

“The annual meeting of the senior association promises to be the most important meeting of the kind ever held in this province, and many important matters will come up for discussion. I would like to suggest that the meeting convene at 10 o’clock in the morning, and we can be able to get through with the business early in the evening. However, this is a matter which will have to be decided by the delegates from the various clubs.”

### August 12, 1906, page 12 — *Mr. Bolton’s School*

#### **Mr. Bolton’s School.** <sup>6</sup>

At the other end of the city from Corrigan College, close to the beautiful district of Oak Bay, is the school kept by the Rev. W. W. Bolton, who has been connected with scholastic life in the island for nearly twenty years. Mr. Bolton has been established in Belcher Avenue since 1898, where he has also been fortunate enough to be in a position to have to refuse boys, owing to want of room. This is a school where there are always more applicants for vacancies than there are vacancies. At present there are five boarders and fifteen day boys who are instructed by Mr. Bolton and one assistant. Boys are received between the ages of 7 and 14, and for the most part pass on into English public schools, though many go to High school. But apart from the ordinary school routine, Mr. Bolton has many private pupils whom he prepares for all other examinations. Perhaps in no place in Canada is more attention paid to the physical training of the boys. Mr. Bolton is an ardent athlete himself and firmly believes that the best way to bring boys out as manly men is to encourage them to live healthy lives out of doors, when not engaged in their school duties. He is therefore to be seen with them at all times during play hours, on the golf links or on the shore, engaging in their pursuits and teaching them how to play as well as how to work. Mr. Bolton is a graduate from Cambridge, where he represented the light blues in the Inter-varsity sports in 1878–79: in the latter year he won the half-mile amateur championship of England. He has played football for Blackheath and other well known teams, <sup>7</sup> and it is not to be wondered at therefore that he is the president of nearly every athletic body in the district.

---

<sup>6</sup> Victoria Daily Colonist, 12 August 1906, page 12, fourth column

<sup>7</sup> According to *After Thirty Years, Two Months at Home* in Part X, *Tales of Roaming*, WWB played for the Wimbledon Hornets *against* Blackheath and other teams.

**June 7, 1907, page 2 — *Big Boarding School Planned for Victoria***

**BIG BOARDING SCHOOL PLANNED FOR VICTORIA**

**Rev. W. W. Bolton Already Has Arrangements Well Under Way**

A large boarding school, modelled after those which are common in England, will be established in Victoria. This announcement is made by Rev. W. W. Bolton, who has conducted a small educational institution in this city for many years. His accommodation being taxed to its utmost capacity he had decided, on the advice of numerous friends, to organize a company for the purpose of providing the capital necessary for the construction and maintenance of the proposed new school.

Rev. Mr. Bolton announces that the preparations are well under way and that the institution is assured. He intends that it shall have room for one hundred boarders. He also contemplates obtaining a large area of land in one of the most suitable suburban districts, so that it will be possible to give the students the advantage of a first-class recreation grounds. With a thoroughly modern school, an efficient staff of teachers, and a fine play ground, Rev. Mr. Bolton believes that boys will be sent here from as far east as Winnipeg. It is the people within that section to whom he intends to cater and he is confident of success.

“I believe that Victoria must become recognized as the educational centre of the west” he remarked yesterday. “Though I have no prejudice against public schools there is a demand for a private institution of the type found throughout the old country. I do not think that, once such a school became established, there would be any difficulty in obtaining patronage.”

In order to provide temporary quarters for a school Rev. Mr. Bolton has entered into negotiations with the federal and imperial authorities for the use of the old naval hospital, which is vacant. He has had no definite reply but believes that he will be able to come to an arrangement.

**October 8, 1908, pages 2 and 15 — *Corner Stone of New School “Truly Laid”***

**CORNER STONE OF NEW SCHOOL “TRULY LAID”<sup>8</sup>**

**Ceremony Marks Another Milestone in Education in This Province**

With appropriate ceremony and under conditions which augur well for the success of the institution, the corner stone of the new University school, now in course of erection at Mount Tolmie, the large fifteen-acre grounds of which form an ideal site for a school, was laid yesterday afternoon. There was a good attendance of those interested in the welfare of the institution and short speeches were delivered by Premier McBride, to whom fell the pleasant duty of well and truly laying the corner stone, while Hon. Dr. Young, minister of education, and Rev. W. W. Bolton, M.A., warden of the school, also spoke. Every preparation had been made for the event, which was happily celebrated in

<sup>8</sup> [Victoria Daily Colonist, 8 October 1908, page 15, second column](#) and [photograph](#) on page 2.

real Victoria weather, the uniforms of the University cadets and the bright gowns of the many ladies who attended the ceremony making a pretty picture when prompt on the hour of 3 o'clock Premier McBride performed the ceremony. The city school board was represented by Trustees Jay, Riddell, Staneland, Christie, McNeill and Superintendent Paul. Mayor Hall was unable to be present.

Premier McBride, who was accompanied by Mrs. McBride, Hon. Dr. Young and Capt. Henry J. Rous Cullin, bursar of the school, was greeted on his arrival by a salute from the cadets drawn up fronting the platform, which had been erected for the occasion. The soldierly bearing of the lads drew forth complimentary remarks from the premier who made a close inspection of the boy warriors and congratulated Cadet Captain Bowser and Cadet Lieutenant Corsain on the appearance of the corps.

The ceremony was a short, but impressive one, opened by Rev. Mr. Bolton, M.A., with the reading of Psalms 125 and 128 and the regular office of the Church of England, used on occasions of this nature, after which a brief prayer for the future welfare of the school was offered up.

The corner stone which had been lowered into place bore the following inscription:

This Foundation Stone Was Laid by  
The Hon. Richard McBride,  
Premier of British Columbia,  
October 7<sup>th</sup>, 1908.  
Founders:  
Rev. W. W. Bolton, M.A.  
J. C. Barnacle, Esq.  
R. V. Harvey, M.A.  
"Well and Truly Laid."

At the proper moment, Premier McBride amid applause tapped the stone with the trowel and declared "This the foundation stone of the University School for Boys to be well and truly laid."

Premier McBride, turning to Rev. Mr. Bolton, declared how much honour had, he felt, been conferred upon him by his being requested to perform the ceremony of laying the corner stone of an institution which, he was sure, would be a credit to Victoria, to the province and to the three gentlemen by whom the institution has been founded.

"It was a kind act this asking me to perform this ceremony," the premier stated. "If the glorious weather we are now enjoying can be taken as an omen of the future prosperity of the school then truly we must at once conclude that success has already been achieved. There has been during the past years under the direction of Rev. Mr. Bolton growing up in Victoria an institution which the citizens of this city, and indeed of the province at large, may well be proud. There are other institutions such as the public schools which have been doing a great work in the education of the young, but Rev. Mr. Bolton and his associates, have also been doing their share in the upbuilding of the country's youth and to them every credit must be given."

Premier McBride expressed the hope that the new school would at no distant date vie with the leading schools of the country and he trusted that the parents of the boys who are yearly being sent to schools outside the province would appreciate the fact that right here in Victoria will soon be an institution which should meet with their heartiest support and at which, as he was sure would be the case, an education such as every young British Columbian should possess, could be obtained. If the efficiency of the youthful cadets whom he had had the pleasure of reviewing, was any indication of the

thoroughness of the training given by Rev. Mr. Bolton and his associates, he could look ahead to the future progress of the school with the utmost confidence. The magnificent location, the splendid architectural beauty of the proposed buildings, showed clearly that those behind the enterprise had been up and doing. It was with the utmost pleasure, the premier declared, that he referred to the efforts of J. S. H. Matson, to whom, he understood, was due the successful accomplishment of the enterprise and to each and every one of the gentlemen interested in this most worthy institution he heartily wished every success and to the assistants and pupils a most profitable future.

### **At Top in Education**

Hon. Dr. Young heartily seconded the premier's congratulations and good wishes. It had been his good fortune, he stated, to keep close account, during the past two years, of educational matters not only in this province, but throughout the Dominion, and with all due respect to the other provinces, he was assured that right here in British Columbia no better system of education, or one which showed better results, could be found. Indeed, British Columbia could be rightly termed the banner province in matters educational. The University School would, he was sure, do credit to British Columbia, to the whole Dominion, and would compare favorably with the great schools of the Mother Land, the more so when the high standing of the gentlemen in whose hands the conduct of the institution is placed, is considered.

A glance at the curriculum of the school clearly shows the splendid conception which these men have, how splendidly broad is their work, how thorough. In the past two years British Columbia students have taken the highest honours in the McGill matriculation examinations, capturing the Governor-General's silver medal in both years. Out of a total of eighty-eight successful students in that examination for the year 1907-08, no less than sixty-seven were from this province and of these forty-two were Victoria students. Last year there were about 250 British Columbia students taking university courses. Of these forty-six were at McGill, fifty-six at the University of Toronto, eighty at the Royal Institution of Learning at Vancouver, and about seventy here.

### **Future Full of Promise**

It was, Hon. Dr. Young declared, a matter of great congratulations that in a province so sparsely settled as this there should be so many students fitting themselves for a university career. He praised Rev. Mr. Bolton, Mr. Barnacle and Mr. Harvey, and expressed his belief that under their capable direction the University School for boys would reach a high standard and become an institution in which every educationalist could have the greatest confidence. The functions of the modern day school have shown great change from the earlier years. Much that they now teach is not only academical but also a national and he hoped that at no distant day the splendid corps of cadets which he saw before him would find its counterpart in the public schools of the province, thus aiding in the upbuilding of the nation along the lines suggested and urged by Field Marshall Lord Roberts. Rev. Mr. Bolton, in return for his efforts and public spiritedness has the right, Hon. Dr. Young maintained, to the heartiest co-operation of the public of Victoria and the province, and his motto "Mens sana in corpore sano" so ably followed in the past, would assuredly turn out boys, not only intellectually but also physically, fit.

Rev. Mr. Bolton, on behalf of himself and colleagues, thanked Premier McBride and Hon. Dr. Young for their kind remarks and as a token of that innate respect for womanhood which every one of his pupils possessed, he asked, on their behalf, that Cadet D. Thomson be permitted to present Mrs. McBride with a slight token on behalf of the boys. The beautiful bouquet, tied with the red and black colors of the school, was received by Mrs. McBride amid applause. Premier McBride briefly

expressing the thanks of his wife as well as the appreciation of himself and Hon. Dr. Young at the cordial reception tendered them by the pupils and stating that he was certain that at any future time any assistance which the minister of education could give to the new school would surely be forthcoming.

### **Success Crowns Efforts**

Rev. Mr. Bolton, in expressing his thanks to those who attended the ceremony, referred to the time, twenty years ago, when he had endeavored to interest the public of Victoria in the founding of just such an institution as the present. But it was not to be. Two factors mitigated against him. Providence was against the idea at that time. Also, at that time, there was no Mr. Matson. To the latter, Rev. Mr. Bolton paid the highest tribute for the unswerving kindness and business ability which had made the present University School the success which is promised and made his early dream an accomplished fact.

“This is only the beginning,” declared Rev. Mr. Bolton, as he viewed the rising building, the corner stone of which had just been laid, “but in time we will make an institution of which we may all be proud. We propose to turn out young men who shall first be Christian men, then manly men, and thirdly, capable men, men who will be a credit to Canada. We want to have among our alumni, in years to come, a chief justice of British Columbia, perhaps a minister of education and we hope, a premier.”

Rev. Mr. Bolton again thanked Premier and Mrs. McBride, Hon. Dr. Young and the many friends who had attended the ceremony and made it such a success.

After the ceremony tea was served in a marquee nearby and a pleasant hour spent.

In the corner stone was deposited, besides a copy of the records of the school to date and the school coat of arms, the various coins of the Dominion as well as a complete set of stamps.

Among the invited guests were the following:

Premier and Mrs. McBride, the Minister of Education, Hon. Dr. Young, and Mrs. Young, Hon. D. M. Eberts and Mrs. Eberts, Archdeacon and Mrs. Scriven, Mrs. and Miss Bolton, Mr. and Mrs. Lugin, Mr. and Mrs. Matson, Mr. and Mrs. Coles, Mayor and Mrs. Hall, Colonel and Mrs. Holmes, the School Trustees of Victoria, H. B. Thomson, M.P.P., Mrs. H. J. Rous Cullin, Mr. and Mrs. Alexis Martin, Mr. and Mrs. D. R. Ker, Mr. and Mrs. R. T. Elliot, Senator and Mrs. Macdonald, Mr. and Mrs. Macdowell and Miss Bell, Mr. and Mrs. J. A. Mara, Rev. A. J. Stanley Ard, Rev. Mr. Collison, Hon. Edgar Dewdney, Major Bennett, Mr. and Mrs. Phillips, A. T. Goward, Mr. and Mrs. Barnard, Mr. and Mrs. and Miss Davies, Mr. and Mrs. A. S. Barton, Dr. and Mrs. Hasell, Lt.-Col. and Mrs. Hall, Hon. J. S. Helmcken, Mr. and Mrs. Harry Helmcken, Dr. and Mrs. Helmcken, Mr. and Mrs. Bullen, Mr. and Mrs. Boggs, Mr. and Mrs. Hooper, Mr. and Mrs. Griffiths, Lt.-Col. and Mrs. E. G. Prior, Mr. and Mrs. Harry Pooley, Miss Miles, Miss Sanders, Miss Scholfield, Miss Dixon, Miss Charlish, Mrs. and Miss Tuck, Mr. W. T. and the Misses Williams, Mr. and Mrs. Wilson, Mr. and Mrs. C. Rhodes, Mr. and Mrs. Godfrey Booth, Mr. and Mrs. George Gillespie, Mr. and Mrs. Hayward, Mr. and Mrs. W. H. Langley, Mr. and Mrs. Young, Mr. and Mrs. Weiler, Mr. R. Angus, Mr. and Mrs. Veitch, Hon. W. J. and Mrs. Bowser, Dr. and Mrs. Bell-Irving, Mr. and Mrs. H. O. Bell-Irving, Mr. and Mrs. Bridgman, Mr. and Mrs. Burton, Mr. and Mrs. Cave-Brown-Cave, Mr. and Mrs. Kingham, Mr. and Mrs. Maher, Mr. and Mrs. Rebbeck, Mrs. Shaw, Mr. and Mrs. Ambery, Mr. and Mrs. Greame, Mr. and Mrs. Gribble, Mr. and Mrs. Hartley, Rev. and Mrs. Sheldrick, Mr. and Mrs.

Matthews, Mr. and Mrs. McGuigan, Mr. and Mrs. Rand, Mrs. Spencer, Dr. and Mrs. Walker, Mr. and Mrs. Wilgress, Mr. and Mrs. Sutherland, Mr. and Mrs. Bagshawe, Mr. and Mrs. Cevaland, Mr. and Mrs. Cumine, Mr. and Mrs. Day, Mr. and Mrs. Decker, Mr. and Mrs. Inverarity, Mr. and Mrs. F. B. Pemberton, Mr. and Mrs. Bevor-Potts, Mr. and Mrs. W. F. Robertson, Mr. and Mrs. A. T. Robertson, Mr. and Mrs. D. Rogers, Mr. and Mrs. Thomson, Mr. and Mrs. Woodward, Dr. and Mrs. O. M. Jones, and others.

**Lord Strathcona Pays Visit to University School**

Always interested in the education of youth and keenly alive to the good work which can be done not only along the regular educational lines, but also in the physical and military drill of the boys, Lord Strathcona was an interested visitor yesterday at noon to the University School. Owing to the many calls upon His Lordship's time, his visit as originally planned was to last but a few minutes. Instead he spent over half an hour at the school, thoroughly enjoying the beauties of the location, the extensive and complete buildings, but what probably more than anything else attracted his attention and drew forth his praise was the appearance of the cadet corps, its precision of drill and the soldierly bearing of the boys.

Lord Strathcona has done much by his deep interest and the more substantial contributions of large sums, to introduce military training among the youth of the land and teach the young idea [?] to shoot and his appreciation that right here in Victoria is a cadet corps which is a credit to the school was expressed in a delightful address in which he complimented the staff and students.

**Welcomed at School**

After his visit to the Royal Jubilee Hospital and St. Joseph's Hospital, His Lordship, accompanied by his grandson, Donald Howard and his grand daughter, Miss Howard, and C. C. Chipman, chief commissioner of the Hudson Bay Company, whose son is being educated at the University school, set out for the school in an automobile.

The distinguished party were welcomed by a guard of honor of the cadet corps under the command of Captain S. McGuigan. Rev. W. W. Bolton, warden of the school, knowing the interest which His Lordship has always taken in the cadet corps, presented him with a photograph of the University Corps, No. 170, a gift which His Lordship declared he would prize highly. He asked to be taken over the buildings and the party, conducted by the principals, inspected the studios, dormitories and class rooms, the appointments and arrangements drawing forth words of praise from the visitors. In the dining hall the roll of honor was scanned and thence a visit was made to the gymnasium, which especially pleased His Lordship, particularly the miniature rifle range at which the cadets are regularly trained in shooting and the gymnastic apparatus. His Lordship was a keen observer of everything which came within his notice and his subsequent remarks of approbation will ever be treasured by those who have worked hard to make the University School the success which [remainder of sentence is missing in the article]

**Cadets Inspected**

On the return of the party to the campus where the cadet corps was lined up ready for inspection Lord Strathcona and his party together with Rev. W. W. Bolton and principals J. C. Barnacle and R. V. Harvey were photographed. In the halls of the school will ever be seen this memento of the visit of the Grand Old Man of Canada.

---

<sup>9</sup> [Victoria Daily Colonist, 3 September 1909, page 2, second column](#)

The cadets were duly inspected by the visitors and his lordship addressed them expressing his pleasure, on the occasion of his visit to Beautiful Victoria, to have the opportunity of visiting University school and inspecting the corps. His lordship [not capitalised] was sure the students appreciated the value of physical training and drill they were receiving. The object of this training was not offensive but rather that the cadets may be ready, if need be, to defend their mighty inheritance, the Dominion of Canada. He was sure that young as they are now, not one of the corps but would give a good account of himself and when each got out into the world, let each remember that no kind of labor is in itself degrading. Let all work honestly at whatever they find to do and in time their efforts would be rewarded by the respect and honor of their fellow men. It would be a good thing when these corps are established in every city of the Dominion. The loyalty so shown is a great thing for the crown and empire. At his request his lordship was given an opportunity of shaking hands with each of the cadets and he did so proceeding down the line and afterwards shaking hands with, and giving to, each of the other scholars a kindly word especially to little seven-year-old Noel Le Maistre, the smallest boy in the school.

Rev. Mr. Bolton, in thanking His Lordship for his visit and the honor which his distinguished presence conferred upon the school, declared that all recognized the great interest which His Lordship has taken in education, especially in that side which deals with the physical training of the boys. The founders of the institution have attempted to begin the building of the great public [sic] school of the west and the presence of His Lordship with them and his great name would be an inspiration to them for all years to come. Rev. Mr. Bolton thanked His Lordship and party most heartily on behalf of himself and fellow teachers for their visit.

### **Great Place for School**

Lord Strathcona again addressed the staff and students stating that he had always felt there was room in the west for such an institution as the University school. While the public school system is a most admirable one there was something lacking in it which the private school on a large scale can alone supply. He wished those engaged in the enterprise the very fullest measure of success for he felt that the result of this effort would be the turning out into the world of men capable, able and strong for the empire.

Three rousing cheers for His Lordship were given by the cadets and students. After asking the warden to allow the boys a half holiday he drove away with his party followed by the whole-souled cheering of the boys and principals.

**CROWN MOUNTAIN**<sup>10</sup>

— —  
(Ascended Friday, July 29, 1910, by Hon. Price Ellison, Miss Myra K.  
Ellison, Mr. H. McClure Johnson, Col. W. J. H. Holmes, Messrs. Frank  
Ward, J. Haworth, J. Twaddle, C.F. Haslam and A. L. Hudson.)  
— —

Yon mountain, Crown of fair Vancouver Isle,  
Whose domes no foot hath trod,  
Whose outlook is o'er ocean wide  
O'er vales and hills and racing tide —  
Men strive to master thee.

Through forest, stream and rock-faced heights,  
They plod their steady way,  
Their aim to plant the Union Jack  
Despite the climb and weighty pack,  
Upon the noble Crown.

They win. What matters now the weariness  
The blow-downs and the falls!  
The honor theirs which none can take  
Their witness left which none can shake  
Save snow and maddened storm.

A Maid amongst them. Light of feet.  
With nerves as strong as steel  
How could men halt or hearts give in  
Her gallant deed all praise doth win,  
True daughter of her Race.

— Rev. W. W. Bolton

## M. MOERENHOUT

### Translation of Pacific Classic To be Task for Australian Scholars

(By Eric Ramsden)

STUDENTS of Pacific history throughout the world will be interested to learn that two Australian scholars have been entrusted with the important task of translating Moerenhout's "*Voyages aux Isles du Grand Ocean*." Though published in Paris almost a century ago, this important work has not, hitherto, been available for students in an English version. The work is to be undertaken on behalf of the Hakluyt Society.

It is to be hoped that it will be published eventually in one of the cheaper series. Another book long overdue to be re-published in that way is Mariner's "Tonga." The latter is only available in the early two-volume editions, and is so inaccessible, except in a library, that many young people of to-day have never turned its fascinating pages.

J. A. Moerenhout <sup>1</sup> was one of the most controversial figures in Pacific history. In the tense drama played on the Tahitian stage towards the close of the 30's of the last century, he was one of the central figures. Indeed, it would not be exaggeration to suggest that France owes more to him than possibly to any other man that she is in possession of Tahiti to-day. True, he was supported by the guns of Commodore du Petit Thouars <sup>2</sup> and the might and majesty of King Louis Phillipe. [sic] But it was the Belgian, Moerenhout, the first United States Consul, and later Consul for France, who pulled the political strings, who set the stage.

Not a great deal is known of his antecedents. Moerenhout's life might well form the subject of a memoir by some enterprising student. The part he played in Tahitian history at least entitles him to that distinction.

We know that he came to the Society Islands as a trader, was at Mangareva in 1834, and that two years later took a prominent part in the agitation that followed Queen Pomare's unfortunate ban against the landing of French priests, Fathers Laval <sup>3</sup> and Caret <sup>4</sup>. At the time he was Consul for the United States. W. T. Pritchard, <sup>5</sup> the British Consul, says that Moerenhout's religious zeal on behalf of the priests, led to the Belgian being superceded in that office by an American citizen. "He gave his full hearty co-operation and protection to the priests from the first," says Pritchard (who, of course, was violently anti-French).

When France decided to take up the case of the priests (who, incidentally, had landed at Tautira, on the opposite side of the island, instead of at Papeete, in the ordinary way), the naval officer, du Petit Thouars, appointed Moerenhout to be French Consul. Further trouble arose when the Queen refused to receive him. "The Queen decided that she had had quite enough of M. Moerenhout," says Pritchard, "without again receiving him in an official capacity!" The Commodore declared that Moerenhout's

---

<sup>1</sup> [Jacques Antoine Moerenhout](#) was born January 17, 1796 in Echren, Antwerp, Belgium, and died July 13, 1879 in Los Angeles, California. See also WWB's *The Consul Moerenhout* in the Appendix to Part IX, *Old Time Tahiti*.

<sup>2</sup> [Abel Aubert Du Petit Thouars \(1793–1864\)](#)

<sup>3</sup> [Honoré Laval \(1808–1880\)](#)

<sup>4</sup> The article has *Carret*. Francois d'Assize Caret died in 1844 in Tahiti; see WWB's article, *How Rev. McKean Was Killed*, in the 15 February 1940 edition of PIM, pages 46–47, in Part VII.

<sup>5</sup> [George Pritchard \(1796–1883\)](#)

rejection would be equivalent to a declaration of war against the French nation. The Queen surrendered.

Moerenhout, the avowed enemy of poor bullied and harassed Pomare, was instrumental in securing signatures to a petition calling upon the French to intervene, during the absence of the Queen on one of the other islands. Those who signed are said to have been promised 1,000 dollars each. It was France's golden opportunity. The Queen was deposed, and a provisional government established. Moerenhout was rewarded by an officer in the latter as "King's Commissioner."

Pritchard also suggests that Moerenhout did all he possibly could to annoy the Queen, "conducting himself most offensively in her presence," particularly when Pomare, under the impression that Britain might come to her aid, insisted on sailing into Papeete harbour with her own royal flag unfurled.

The Queen subsequently told Sir Thomas Thompson that Moerenhout "shook his head" at her, "threw his hands" before her face, and stared fiercely at her. "I protested against his conduct and told him that he was a very troublesome man!" she said.

We know, too, that Moerenhout was attacked in his home on one occasion. His wife is believed to have saved his life by throwing herself in front of him. A Spanish negro was executed for the crime — the only prisoner to suffer capital punishment during the Queen's reign.

Thereafter, Moerenhout seems to have faded out of the picture. French rule was well established by the 40's, however. It is possible that some of the older residents of Papeete have some knowledge of his later career. Though I was unable, in the time at my disposal while in Tahiti, to give much attention to the history of Moerenhout, I succeeded in finding a number of documents in his handwriting. The papers were all of an official character.

His "*Voyages aux Îles du Grand Océan*" <sup>6</sup> appeared in two volumes in Paris in 1837. The book is rare. <sup>7</sup> Collectors seek it these days. Included is a portrait of Tati, the high chief of Papara, who signed the appeal to the French King at Moerenhout's behest. <sup>8</sup> Tati was the father of Arii-Taimai (whose rare volume of reminiscences is even more keenly sought after nowadays), and the direct ancestor of the numerous Salmon clan. <sup>9</sup>

<sup>6</sup> The article has *Voyages aux Isles du Grand Ocean*.

<sup>7</sup> Volumes 1 and 2 can be found [here](#) and [here](#).

<sup>8</sup> The portrait can be found between pages 258 and 259 of the first volume:

<sup>9</sup> See WWB's article *The Memoirs of Ariitaimai* published in the September 1945 edition of PIM, page 59, in Part VII.

The most interesting plate, however, is an early view of Papeete waterfront, showing the buildings then in existence.<sup>10</sup> It is possibly one of Moerenhout's own sketches. In the short space of less than a century, much data of great historical value has been lost in Papeete. Enthusiastic research by Mr. W. W. Bolton, M.A., has decided several points of importance that, hitherto, were in doubt. Mr. Bolton recently received the thanks of the Papeete Municipality for a record which he voluntarily presented to that body. It represented many years of patient endeavour, and careful scholarship.

**23 July 1935, pages 28 and 30 — *Graves of Early L.M.S. Missionaries***

## GRAVES OF EARLY L.M.S. MISSIONARIES

### Discovered in French Oceania by Englishman

From Our Own Correspondent.

PAPEETE, June 12.

DEVOTING his talents during the last few years to the unremitting labour of digging out authentic material connected with Islands history, Mr. W. W. Bolton, M.A., a scholarly Englishman who has been a resident of Tahiti for a long time, has collected an enormous mass of material, all of which must find a place in the complete account of events which will one day be written. Possessed by an insatiable lust for details, the curiosity of a true searcher after knowledge, and a remarkable faculty for observation which permits very little to escape his attention, Mr. Bolton has gathered together and recorded in his voluminous notebooks a wealth of data which will be of great value to the historian.

Of more immediate interest, however, especially to English people, is the rediscovery by Mr. Bolton of the graves of several of the pioneer English missionaries who died and were buried in Tahiti and Moorea. The locations of all of these, with the exception of Rev. Henry Nott, the former bricklayer, whose grave at Arue was restored a few years ago by a group of local admirers, had become lost owing to the neglect brought about by political changes, to the final withdrawal from the scene of the

<sup>10</sup> The plate can be found between pages 448 and 449 of the second volume:

English missionaries in 1886, and to the decay and obliteration wrought by an overwhelming growth of tropical jungle.

One of the most important events in Tahiti's early history was the arrival of the ship *Duff*, sent out by the London Missionary Society in 1797, which landed four ordained ministers, fourteen artisans, five women and two children. These pioneers of the Gospel were well received by the natives but the work of evangelisation was hampered by ancient customs, by the opposition of renegade foreigners, and by the prevalence of European diseases brought by whalers and others for which the missionaries got the blame. One or two missionaries died of sickness, others fled to New South Wales, and some deserted the cause to marry native women.

As time went on political upheavals and tribal wars disturbed the island to such an extent that the mission establishment at Matavai was destroyed — one of the missionaries was murdered and the rest departed, with the exception of Nott (who remained in Moorea with Pomare II) and Hayward (who went to Huahine Island in the Leeward Group). Most of the evangelists returned to Moorea in 1811 and 1812, but work was not resumed in Tahiti till 1817, King Pomare having in the meantime accepted Christianity and thus opened the way.

The graves located by Mr. Bolton are those of Rev. T. Lewis (who was murdered by natives in 1799 and buried at Matavai Bay), Rev. J. Jefferson (who died in 1807 and was also buried at Matavai Bay), the wheelright, H. Bicknell (who was buried in Moorea in 1820) and two other missionaries who arrived later than the *Duff* company and who were buried in the Papara district of Tahiti. The present day directors of the London Missionary Society are much interested in these discoveries and arrangements are now being made to have the graves restored and suitable commemorative stones erected thereon.<sup>11</sup>

According to the records of the London Missionary Society the original inscription on Rev. Henry Nott's gravestone at Arue was as follows:

"Sacred to the memory of Rev. Henry Nott, missionary, who departed from this life of sin and sorrow and entered into his rest on the 2<sup>nd</sup> day of May, 1844, after having endured a great fight of afflictions. He had been for 48 years the faithful servant of the London Missionary Society, having been sent out by them in the ship *Duff*, commanded by Captain James Wilson in the year 1796. He was translator of the sacred scriptures into the Tahitian language."<sup>12</sup>

**Mr. W. W. Bolton, M.A.,** of Papeete, who in recent years has carried out historical research in Tahiti and has been responsible for discovering the graves of several of the early missionaries, recently received a gift from the London Missionary Society. It was one of the original engravings of the cession of Matavai by Tu, King of Tahiti, to the missionaries of the Duff, and is dated January 1,

1803. These engravings are now exceedingly difficult to obtain. The Mitchell Library in Sydney has one.<sup>13</sup>

From Our Own Correspondent.

PAPEETE, July 5.

THE interesting task of locating the “lost” graves of Tahiti’s pioneer missionaries, whose bodies were laid to rest in the district of Papara, was brought to a satisfactory issue on May 29 when reinforced

---

<sup>13</sup> See also *Light on Half-Forgotten Incident of Early Tahiti* in the July 1942 edition of PIM, page 14, and “*Cession of Matavai*” in the February 1943 edition of PIM, page 24, in Part VII.

The photograph below, taken in the *Musée de Tahiti et des îles* in October 2014, shows what is almost certainly the engraving of the *Cession of Matavai* given to WWB (to the right on the black platform), which he donated to the British Consulate in Papeete in about 1936.

concrete gravestones, suitably inscribed, were placed over the remains of Tessier (buried in 1820) and Davies (buried in 1855).

Both these men arrived in Tahiti by the convict ship *Royal Admiral*, which was on its way to Botany Bay in 1801. In 1808 both fled from the local disturbances to the island of Huahine on the brig *Perseverance*, and from there sailed for Port Jackson by the *Cyclops* in 1810. Davies returned first to the field, reaching Moorea in 1811, and Tessier followed in June, 1813.

After residing again in Huahine, Davies took the post at Papara held by Bicknell (a *Duff* man who had arrived in 1797). He remained in charge there for 35 years, dying at the age of 84. Tessier, after locating himself at Matavai (Point Venus), on Tahiti, went to assist Bicknell in 1818. On July 23, 1820, Tessier died and was buried by Bicknell, who himself died within a fortnight. Bicknell's body was taken to Moorea to lie beside the grave of a favorite child.

Mr. W. W. Bolton, M.A., who has throughout been the most interested and energetic party in searching for these "lost" grave sites, states that he encountered no serious difficulties once a careful search of the records in Sydney and London had been made. Lying in a large coconut plantation, which he discovered to be the burial ground of the early converts to Christianity and the site of the first chapel, there were two graves entirely different from all the rest. Instead of being marked by the usual boulders of black stone, these two were conspicuous among the many scores surrounding them. Tessier's was outlined with roughly cut coral blocks, whilst Davies' was covered by two flat coral slabs.

That these were the graves of white men was self-evident — even if it were not known definitely that the two white men lay in Papara. That they were the missionaries — but not of the *Duff* band — was soon learned. Here then lay the two fellow voyagers of the *Royal Admiral*, and as pioneers for the faith that was in them, honour was due. This has now been done.

The weighty gravestones were carried to Papara by truck and lowered into place by means of a derrick. There was a considerable gathering of interested folk to witness the ceremony, including chiefs and sub-chiefs, pastors and deacons of the Protestant Church, and a sprinkling of local white residents who had travelled far in order to be present. Suitable addresses were made by the French Protestant clergymen, Messrs. Moreau and Vernier.

The Papara people accepted the future care of the graves with ready willingness, sending warmest thanks to the London Missionary Society for not only thus vividly recalling the past, but also for meeting the cost of the renovation.

## 19 August 1936, pages 23–24 — *Work of Mr. Bolton*

### Work of Mr. Bolton

#### Letter to the Editor

I READ with interest in the July P.I.M. an article by the Rev. Cecil Northcott, M.A., on early missionary days in Tahiti. I regret to notice, however, that Mr. Northcott, like many another present-day writer on historical events, has not taken sufficient pains to ensure accuracy.

He states that the missionaries who held on in 1798 were five in number, viz., Mr. and Mrs. Eyre, and Messrs. Bicknell, Nott, and Jefferson. Actually, those who stuck to their post were Eyre (and wife),

Bicknell, Nott, Jefferson, Harris, Lewis, and Broomhall. (See “Transactions of the Missionary Society,” Vol. 1.)

Mr. Northcott further states that “Only recently Tahiti publicly restored the graves of the humble heroes who brought the Gospel to her.” Actually, the work of locating and restoring the graves (excepting those of Nott and McKean) has been done by my old friend, Mr. W. W. Bolton, of Papeete. After long and painstaking search he has located the graves of Jefferson and Lewis at Matavai, and of Tessier and Davies at Papara. Mr. Bolton is now busy in connection with the restoration of the graves of Scott and Bicknell in the neighbourhood of Papetoai, Moorea.

This work is purely a labour of love on Mr. Bolton’s part. He gratefully acknowledges the receipt of funds from the headquarters of the London Missionary Society to defray the cost of labour and material.

The graves of Nott and McKean at Arue were located and restored some years ago by a small self-appointed committee of English and American residents. They are now kept in good order by Mr. Smith, one of the members of the committee, whose property adjoins the site of the graves. Had it not been for the activities of Mr. Bolton and the members of the committee the sites of the graves of the pioneer missionaries of the South Seas would probably to-day be unknown and unmarked.

An article in the *Pacific Islands Monthly* of July 23, 1935, from your own correspondent in Tahiti, gives a very good account of Mr. Bolton’s activities.

In conclusion, I would like to bring under the notice of those of your readers who may be interested in the early history of Tahiti and the adjoining islands that the Mitchell Library in Sydney has practically everything that has been written on this subject, including many original letters and diaries of the early missionaries.

I am, etc.,  
J. D. McCOMISH.

### **Their Work at the Octagonal Church in Tahiti**

By Our Papeete Correspondent.

In grateful memory  
of  
HENRY BICKNELL  
arrived  
on the ship Duff  
March 5, 1797  
Died August 7, 1820.

Also  
WILLIAM SCOTT  
arrived  
on the ship Royal Admiral  
July 10, 1801.  
Died February 9, 1815.

Also  
SARAH HENRY  
Died July 28, 1812.  
MARY DAVIES  
Died September 4, 1812.

SARAH HAYWARD  
Died October 4, 1812.

The graves of the above lie nearby.

This tablet was erected by the  
L.M.S.  
1936.

THE scholarly researches by Mr. W. W. Bolton, M.A. (Cantab.), into the early history of Protestant missions in Oceania have brought to light very many interesting facts, and have performed the priceless service of saving from oblivion the last resting-places of the faithful pioneers who brought the gospel to the Islands.

In November, 1936, a handsome tablet in the Tahitian language (of which the above is a translation) — presented by Mr. Bolton on behalf of the London Missionary Society — was installed and dedicated with solemn ceremonies in the Octagonal Church of Papetoai, in the island of Moorea.

The graves of the two missionaries and those of the wives of Messrs. Henry, Davies, and Hayward, of the mission, were identified by Mr. Bolton — after long research among widely scattered sources — from the obscurity of over a century of neglect.

The church at Papetoai, in which the memorial tablet has been placed, is, without doubt, the oldest building for Christian worship now standing in Polynesia.<sup>14</sup>

The following, from the pen of Mr. Bolton, is the history of its construction:

### THE OCTAGONAL CHURCH

This remarkable building, both in its shape and composition, took years in building, by reason both of the immense labour of securing slabs of coral from the reef and the inexperience of the workers in the needed woodwork.

The architect was the resident missionary, Rev. George Platt, who superintended the work during the years he was stationed at Papetoai (1817 to 1824), his place being taken by W. Henry, of the *Duff*, also a resident till 1827.

The site selected was that of a former important *marae*, a stone as its foundation having been brought from Opoa, on Raiatea, thus constituting it a *Tapu-tapuatea*.

“The church is 60ft. in diameter, its coral walls nearly 20ft. in height, the doors and windows semi-circular, and well proportioned.” (Tyerman and Bennett’s report).

Over each of the doors is an inscription cut into the coral, one in Tahitian, one in English, and two in Latin. Time has dealt harshly with the two latter, but the others still are in perfect condition. The Tahitian reads:—

“This house was begun in the year of our Lord Jesus Christ, 1822, in the reign of Pomare III.”

The English is: “Holiness becometh thy House, O Lord, for ever.”

Some of the Latin reads:

“*Haec domus sacra . . . Anno Domini 1822 et in Anno Primo Regni Pomare III. . . . Gloria qui in Secula. Amen.*”

<sup>14</sup> The photographs below of the tablet and the interior of the church, with the tablet on the wall to the right, were taken in November 2014. The pastor of the Protestant Maohi parish of Papetoai, Ariapeu Arthur Faua, is also shown.

The fourth has been handled very roughly by later folk. All that is left are the three words at the bottom: “*Gloria soli Deo.*”<sup>15</sup>

**The Little Church at Papetoai.**

The rest has been erased, and “Ebenezer” is seen immediately above the “gloria,” whilst above that there appears the very prosaic statement in French:— “This Temple was rebuilt by the Protestant parishioners of Papetoai 1887–1891.”

Evidently a better word would have been “renovated,” as there has been no known break in its use since its first erection.

Search is now being made amid the correspondence in the possession of the L.M.S. if haply the full Latin inscriptions may be found.

In their report for 1823 the delegation sent out from London headquarters were loud in their praise of the piece “of extraordinary workmanship” then slowly rising.

At last, the work was finished and in 1829, under the pastorate of Rev. Alexander Simpson, it was opened for public worship.

From “The Annual Report” of the Brethren 1821–1822: “On the 20<sup>th</sup> of February, 1822, the brethren had the pleasure to lay the foundation stone of a new chapel which is to be of an octagonal form and built with hewn coral rock. The people are carrying on the building with spirit, observing that it will be the first house of stone in these islands.”

---

<sup>15</sup> See *Moorea’s Octagonal Church* in the Appendix to Part IX, *Old Time Tahiti*, for photographs of the inscriptions, including the restored Latin inscription, and *The Island of Moorea* in Part X, *Tales of Roaming*.

Note also that the church is the subject of Chapter LXXIX, *Taloo Chapel – Holding Court in Polynesia*, in *Omoo* by Herman Melville, where he describes a service held there in 1842.

22 January 1937, page 66 — *The “Haweis”*

## THE “Haweis”

### First Tahitian Trading Schooner

By W. W. BOLTON.

WHEN the evangelists of the London Missionary Society settled in Tahiti in 1797, their thoughts turned naturally to the question of providing a vessel for their own use. As early as 1798 they had discussed the project, but it was not until 20 years later that their ambition was fulfilled.

The *Haweis*, however, was not built without much heart burning among the brethren, for there were those who thought first of the Society which had sent them hither. There were others (a minority) who sought to build a vessel wherewith to trade for private gain to help out their meagre incomes, with wives and many children to support.

In 1811 there was an appeal to far off Port Jackson, their supply house, for “tools and 2,000 nails suitable to build a boat.” In 1812 deaths and much coming and going held back the attempt. In 1813 came Pomare’s permission to cut down *Tamanu* and *amae* trees for boat building and so the work went forward. Through 1814 and 1815 the vessel was slowly taking shape.

In August 1816 it was so far advanced that a request was made to the Society agent at Port Jackson (Hassall, of the *Duff* Company) “to send a competent man to complete the boat and take it to the Colony.” Captain John Nicholson came upon the scene with seven white men as part of the future crew. So they pushed ahead through 1817 till at last on December 6 of that year the vessel was launched from its stocks at Uaeva, Moorea, when since 1809 the brethren had massed for safety. It was a great day for the missionaries and their Tahitian converts.

Pomare, the Second, was there, and named the schooner.

The great event as written by one of the brethren stationed at Afareaitu on the opposite side of the island, who seems to have had no easy time in getting upon the scene, was written up in his daily journal as follows:—

“December 6. About 4 a.m. set off for Papetoai in a single canoe with Pati. Landed at Papetoai, passed through Tamai, crossed the lake and walked on to Maharepa. Here expected to borrow a canoe, but people all gone to see the brig launched. Walked to the next district. Only canoe about to be used to carry food to Pomare. Kindly put across Cook’s Harbour.

“Walked to Pihena. Saw the Chief, old and inform, all else gone to see the launching. Found the bottom of an old fishing canoe, the edges of which were scarcely two inches above the water, but being too much fatigued to walk any further I got into it. Keeping near the shore till we reached Oponohu harbour we crossed over safely and landed opposite Brother Hayward’s.

“We scarcely arrived when Pati observing the flag hoisted on board the vessel, wished to run on lest it should be launched before he could arrive. He took up his bundle of bread fruit, which he had brought from Afareaitu (a distance of 20 miles by sea) and ran on before. Shortly after I reached the place where they were endeavouring to get the vessel off the stocks. The King, the principal Chiefs, and vast crowds of people were present assisting.

“After some time the vessel moved from the stocks when the King performing the usual ceremonies pronounced as she passed along *Ia ora na Haweis* (Prosperity or peace be to the *Haweis*). Dr. Thomas Haweis <sup>16</sup> has always been considered the particular friend of the Otaheiteans and the King wished the vessel to be called after him.”

In June, 1818, she was ready for sea and with six natives added to the crew, the *Haweis* cruised through the Island groups, carrying the missionaries to isles they desired to visit, and gathering up oil, hogs, *et al.*, as cargo.

Then on January 1, 1819, she headed for New South Wales from her home port, Papetoai, arriving with flags flying at Port Jackson on February 15. Thus a dream was fulfilled, and the brethren had Tahiti’s first trading schooner notched to their lasting credit.

### 23 June 1937, pages 45–46 — *The Boy King of Tahiti and His Crowning*

## THE BOY KING OF TAHITI AND HIS CROWNING

By W. W. BOLTON, M.A.

### PART I.

WHEN Pomare II. died on December 7, 1821 he left two children, a girl, Aimata, seven years of age, and a boy, Terii Taria, a babe in arms. It was to the latter he ordered the succession should go and Pomare was the name he was to assume.

The infant, born June 25, 1820, was nursed by his mother Terito, but was placed in special charge of her steadier sister, Pomare Vahine, who was supernumary wife of Pomare II., edged out of her promised premier post as first Queen by the earlier action of Terito, and childless.

A special house was raised at Papaoa, a few miles distant from Papeete, close adjoining Pomare’s tomb, and known as the Queen’s House, where aunt and babe resided during his infant years.

Terito went her own wild ways, keeping her girl by her side, and scandalised the brethren of the L.M.S. by allowing herself freedom to the extreme extent of being tattooed. The babe, not the mother, was the one to watch and guard.

Even before the child could lisp, arrangement was made for Brother Nott, doyen of the mission band, to leave Huahine and take up his residence at Papaoa as instructor of the infant prince. His kingdom was being looked after by a Regent, Ariipaea, and a council, but the real power was in the hands of Pomare Vahine, a strong, virile and capable woman.

Some trepidation had been felt at the time of the death of the father that the chiefs would not be willing to accept an infant as their liege lord, but they had made no sign of dissatisfaction. The brethren were, however, taking no chances, and something new and even unheard of was planned, proposed and accepted: there should be a crowning as soon as the boy could stand upon his feet.

---

<sup>16</sup> [Thomas Haweis \(1734–1820\)](#) was a co-founder of the [London Missionary Society](#). Another account of the launching published in *The Australian* (Sydney), 13 July 1832, can be found [here](#); apparently the vessel fell on its side when some of the men dropped their ropes after Pomare threw a bottle of red wine at it and pieces of glass went flying in every direction. According to an [article](#) published in *The Australian* on 23 January 1830, the *Haweis* was lost at sea after leaving Port Jackson for New Zealand on 24 October 1829.

To make things still more secure for the tranquility of the state and the progress of Christian civilisation, there was started a school, in 1824, at Afareaitu, on Moorea, with the resounding title of “The South Seas Academy,” for the sons of chiefs, who were to be in residence, and little Pomare among them. The part to be played by Brother Nott was to be taken as headmaster by a later arrival, Rev. J. M. Orsmond.

### CORONATION OF POMARE III

The programme ready, great preparations were made at Papaoa for the crowning, which took place on April 21, 1824, the boy king not yet four years old.

Happily we have an account of this remarkable event in South Sea history from the pen of a contemporary witness, as it appears in the *Command Papers Presented to the British Parliament*, covering the years 1822–1847. The translation reads as follows.<sup>17</sup> The only difficulty to be met with are the sites mentioned, the names of that day being long disused. To-day they are Arue and Papaoa, wherein stood the vast Royal Mission Chapel.

There were two classes of people in that ceremony, some were ungodly and others were godly.

- (1) Those who carried the Tiari and the Oroa (flowers) were Mauihi-u-iti Vahine, Terai mano Vahine, Tuehau Vahine (women), and Tehapai. They threw the flowers along the road.
- (2) Next were the children of the missionaries and their wives.
- (3) Next was Mahine. His office was to carry the word of God. Messrs. Tyerman and Nott were on his right; Messrs. Bennet and Henry on his left; they assisted Mahine.
- (4) Next were the missionaries.
- (5) Next to them was Utami.<sup>18</sup> He carried the Laws; he was assisted by Paofai, on his right, and by Paraita, on his left.
- (6) Next was Tati, who carried the Crown;<sup>19</sup> Hapoto on his right, Onee on his left.
- (7) Next to them was Pomare, and the people who carried him, namely Taitumataata, Heivae, Uoho and Laaviri, on his right; Teupoopaari, Priui,<sup>20</sup> Roura and Tehope on his left. Aita

<sup>17</sup> The translation also appears in *The Coronation of Pomare III* in the Appendix to Part IX, *Old Time Tahiti*.

<sup>18</sup> WWB has *Utomi* in *The Coronation of Pomare III* in the Appendix to *Old Time Tahiti*.

<sup>19</sup> Tyerman and Bennet (1841) note that “*The crown was somewhat in the form of the English royal crown, very neatly made of purple velvet; the fillet and wings covered with broad gold lace enriched with some very fine pearls and valuable stones.*” This description differs somewhat from the crown in the *Musée de Tahiti et des îles*, shown below, which has been attributed to Pomare III. In *The Coronation of Pomare III* in the Appendix to *Old Time Tahiti*, WWB states that “*The Museum exhibits are those of Pomare V.*”

<sup>20</sup> WWB has *Piriui* in *The Coronation of Pomare III* in the Appendix to *Old Time Tahiti*.

Vahine, Maihara Vahine, Tenania Vahine (women) were also on his left; and Taaroa Vahine (mother), Aimata (sister) and Terataue<sup>21</sup> (aunt) on his right.

(8) Next was Pomare's *hunoa* (first husband of his sister), Tamatoa on his right and Tahitoe on his left.

(9) Next was Fenuapeho. He carried the table to place the crown upon. Pahititia carried the oil (coconut) for anointing the king. All the governors and district judges assisted them.

(10) We went inland by way of Taipu. It was there where Pomare III. was crowned.

(11) Then all the royal party, the governors, the missionaries, all the judges, and the society were assembled together.

(12) After Mr. Crook, the priest, finished prayer, Mr. Henry anointed the king and placed the crown upon his head.

(13) Mr. Nott read the Laws and pardoned all the guilty. Mr. Wilson exhorted the King. Mr. Davies prayed, and Mr. Jones read a hymn. Mr. Wilson prayed. When finished we returned to Outuaiai. There Mr. Henry prayed. These were the words of God: "Exalt the King and fear God." There it finished.

So far, this witness. But was Henry, the Archbishop of the day, and Nott merely his assistant? Henry himself makes answer. Writing from Moorea, October 15, 1845 (21 years later)<sup>22</sup> he says: "King Pomare III., that young prince, whom I anointed on the occasion, and on whose head my late reverend Brother Nott placed the Crown."

One hopes so, for when the crash came in December, 1808, Henry had fled, but the unflinching Nott stood fast.

Ariipaea the Regent is lost to us, appearing under another name, whilst of the other personalities mentioned, Messrs. Tyerman and Bennet were newcomers on the scene, being the delegation sent out from home to report on the missionary work being carried on by the society throughout the world — Bennet alone completed the tour, Tyerman dying on Madagascar.

The infant's brother-in-law was Tapoa, of Pora Pora. In 1822 when Aimata was eight years of age and Tapoa 16, there was a public betrothment of the two, which was looked upon as "marriage" according to the custom of the country and Tapoa was then given the name of Pomare as an honour.

Tati (1770–1864) had every right to his high post. He was the leading chief, had seen Cook in his childhood days, stood by the Pomares, both father and son, through stress and storm, and had refused the Regency, though hard pressed to accept it. He was of Papara, the last district to bend the knee to the Pomares.

Mr. Crook, "the priest," had played no small part in the new king's life, as his daily journal shows. He was the accoucheur assisted by his well trained wife. June 25, 1820: "Mrs. Crook took the child, managed and dressed it in the English fashion . . . the king would allow no one to touch the child but Mrs. Crook. June 26: The infant was most of the day at our house with Pomare Vahine . . . Our daughter Mary is denominated his mother, being the friend of the queen. The child is also called Mrs. Crook's son."

<sup>21</sup> WWB has *Teratane* in *The Coronation of Pomare III* in the Appendix to *Old Time Tahiti*.

<sup>22</sup> The article has 31 years later.

He it was who baptised the child, September 10, in the presence of a thousand people, where now he was crowned, and makes bold to address the directors in London on his behalf in a letter dated December 21, 1821: "I shall be glad to receive dresses for young Prince Pomare who is now 18 months old, some superior, some common." A godfather of quality with every right to play his part in opening the Coronation proceedings.

It was a good send off even if the principal personage might well wonder what it was all about, being but three years and ten months old.

(To be continued)

## 18 September 1937, pages 50–53 — *Tragedy of the "Moaroa"*

### TRAGEDY OF THE "MOAROA"

#### Fierce Fight Aboard Labour Vessel in 1869

By W. W. BOLTON, of Papeete.

THE *Moaroa*, owned by a Mr. Stewart, left Atimaono, Tahiti, carrying a cargo of cotton to Auckland, New Zealand, and was ordered on its return to collect and bring back native labourers from the Line Islands, under wages, for the large and then prosperous plantation.

It was during the second portion of his orders that Captain Blackett and a number of his crew met a terrible death, and the ship was saved only by the gallantry of its second mate, a Dane.

Herewith, lately come across, is given the report to the owner by the man who brought her home.

\* \* \*

Three-masted barque of Tahiti *Moaroa*, in the Pacific Ocean, July 24, 1869.

Latitude: 7 degrees 32 minutes South; longitude: 175 degrees 45 minutes 45 seconds East.

Sir. — In hope of meeting before my arrival at Atimaono a ship en route for the Society Islands, I have the honour to transmit to you the following report. I will commence with a portion of the log since the day when we arrived in sight of the Gilbert Islands up to to-day, and I will then continue it up to the day when I shall encounter a ship or arrive in port.

Wednesday, June 16, 1869: At 11 in the morning we had seen Hope Island, or Arurai. We were approaching the island in the afternoon. Many canoes and a large ship's boat reached us offering mats, coconuts, and other produce of the island in exchange for tobacco and red materials. We remained near this island till June 20, till 2 p.m. when we left for Byron Island, or Nukunau.

Monday, June 28: At six in the evening we were near Byron Island, and before nightfall 300 to 400 natives came aboard. Some remained throughout the night.

June 29 and 30, and July 1 and 2: We remained off Byron Island, buying coconuts, etc. On the 2nd the captain went ashore in an effort to persuade natives to embark with him.

July 3: We arrived off the island of Peru (Nonuiti); but as a white man of Byron Island had sent three men to warn the natives that we had need of men, none came aboard. The next morning, we met the three-masted barque *Annie*, of Melbourne, which had 159 natives, but no water. The captain made arrangements to embark these natives for Tahiti, but as I am ignorant as to the conditions, it is impossible for me to note them here. Mr. J. B. Lattin came aboard, at the same time, as a passenger to Tahiti and besides, we had engaged as interpreter, for 20 piastres a month, a native who had resided a long while in the Fijian Islands. This man, having left the *Annie*, with his woman, came on board.

Having embarked the natives, and received a quantity of powder provided by the *Annie*, we headed towards Hope Island where we arrived July 12, at 5 p.m. Two large ship's boats came alongside with 37 natives all of whom remained on board with the exception of two. On the 13th, 19 natives came on board and on the 14th, six women arrived to join their mates. At 4 p.m. we headed to Byron Island where we arrived on Friday, July 16. Passing the island we took aboard 68 natives and then set our course for Tahiti. Herewith further extract from the log.

July 17, 1869: Commenced with a calm, Byron Island to N.N.E., six miles off. At 5 a.m. the captain had given permission for all the natives (287) to come on deck, and there he distributed to them shirts and tobacco. All appeared to be tranquil, but the upper deck was crowded, near to 300 men were there en masse.

The men of the watch were behind the deck house, employed in preparing some boards to construct a partition between the square and the orlop deck, when suddenly and without any warning (I had, however, seen a boy steal the knife of one of our men, and had thereupon begged the captain and Mr. Lattin to pass to the stern) suddenly, I say, the natives launched themselves upon the stern and attacked my watch.

I was then standing near the door of the deck cabin, where I saw a native kill Mr. Lattin with a hatchet. The latter was then near the rigging of the mainmast. I seized a carbine and ran to the aid of the captain, but it was too late — he had received a knife thrust in the back, and another in the face, and had fallen dead near the floor of the deck cabin. I sent one man below, who had received a very dangerous wound in the back (a knife thrust). Besides the knife thrust, the captain had received a terrible blow from a hatchet in the face. This hatchet had been stolen by one of the natives from the box containing tools, which he found on the deck.

At 6 o'clock, I retired to the mess room with one man, the only one who remained by me of my watch, and there I met the lieutenant (first mate) and the steward with a gun. In trying to aid the captain, the steward had been wounded in the right shoulder, but I did not know it then for he had not told me of this for fear of discouraging the rest.

We defended the mess room against all the natives and I have the conviction that we should have been successful in retaking the deck house immediately if we had had good guns. Once safe in the mess, the natives blockaded us there completely, hurling at it firebricks secured from the kitchen, and covering the skylight and the hatches with anything they could find on deck; they even raised the staysail to put it over the skylight, but we prevented them from doing so with our carbines.

At 7 a.m. the men of the starboard watch were attacked in the bows but, having four old swords that I had put there the day before, they defended themselves, and the space was so narrow, leaving room for only one man at a time, that the natives ceased to attack them.

At 9 a.m. two of these men had succeeded in joining us by detaching some boards of the partition, and as I held open the door of the mess leading to the storeroom, we saw them arrive. They told me

that the three others would not be long in coming also, which in truth took place. I had then five men in all, but few arms, our long cavalry swords being well nigh useless in a hand-to-hand struggle.

Towards 11 a.m. the lieutenant insisted, despite me, to call in the interpreter, who was then lying bound by the natives in his cabin under deck. I forewarned him many times that the natives had seized the double-barreled gun of the interpreter and that it was loaded. But he paid not the least attention and was killed by a native with that gun. He fell dead. The ball entered his right shoulder after having smashed the frame which carried the skylight, and passed out about four inches from his heart.

When the natives saw him fall they indulged in a diabolical yelling on the upper deck. I then ceased to fire with my gun, thinking that by doing so the natives would take confidence and I should then be able to take them by surprise. They all massed upon the upper deck, continuing to laugh and yell, without doubt thinking of the great quantities of tobacco and materials that the captain had shown to them and which they counted upon to seize in a short time. I had resolved to retake the ship, but it was not so easy with two guns and revolver which did not work.

Then I decided to take a desperate measure which was to blow up the upper deck in the mid part of the ship and, during the disorder resulting, to throw myself across the smoke and retake the deck house.

We had received from the three-masted barque, the *Annie*, 45 boxes (in tin plate) each containing a half-pound of gunpowder. Of these I emptied 34 into a small wide barrel; and after having placed mats and sail cloth under the barrel to protect the 'tween decks with six other of the boxes I laid a train from the barrel to a large panel on the orlop deck.

I then gave orders that everyone should go below, even the steward, to the safest possible spot in the stern, so that they could all mount upon the upper deck immediately after the explosion, and not to attend me, because they were more numerous than I alone, and less near to the explosion, and I could not say what might happen to me being so close. But I had confidence and I have never been calmer in my life.

After having seen the men in safety, and having made a short prayer for the protection of my wife and children, I set fire to the train, at the same moment hurling myself below. The explosion was immediate and I was nearly choked by the smoke. I regained the upper deck where I found the men, who had arrived before me, also the interpreter, who had been set free by his woman.

I could not see a single native: but the sea was completely covered with black heads making for land.

My first care was to send two men below to extinguish the fire, and with the others I took all necessary measures against the natives seeking to return on board with their knives and other arms. Thank God, the ship was completely ours and nothing had taken fire with the exception of the sail cloth which had been placed under the barrel, and which was completely extinguished by two buckets of water.

I examined the pumps immediately afterwards and, as they had not been worked since 4 a.m. and there was only two feet of water in the hold, not more than we habitually had in the same period, I felt sure that the vessel had not been materially damaged by the explosion, though it had trembled like an earthquake.

I went below later to see the state of affairs. The partition of the crew's sleeping quarters was in part demolished but it had not suffered as had the cabin in the stern. All the damage had there been done by the oars with which the natives had attacked us through the skylight. The chronometer appeared to be working well. The clock was broken and entirely out of action; the thermometer was broken

and the aneroid barometer had its glass broken. I noticed other damage which it is needless to mention. At noon we stuck the time and hoisted the flag at the mainmast head.

I believe that all the natives arrived at Byron Island except two women, who had remained on board to go to Tahiti. I have omitted to say that all our stern cargo had been lifted by the natives during their blockade of the mess room.

Sunday, July 18: Commenced calm and finished with a light breeze. At 1 o'clock pumped the ship and commenced the repair of the deck which was as follows: under pools of water, planks and other things used by the natives to barricade the skylight, and on the port side near the door of his cabin was the captain whose head alone could be seen. It took me much time to disengage everything, having only five men capable of work. The captain was literally covered with wounds, the left side of his face almost wholly gone. We laid him upon a mat and having cleared the deck, repaired the rigging, and whilst I was tending the wounded I had the men wrap the captain and the lieutenant each in a new mat and, having attached 50 fire-bricks to each, and wrapped them in flags, at sunset after I had read a prayer for the dead, all being present and weeping like children, we launched them into the deep.

After having fulfilled our duties towards the dead, I bethought me of the survivors and the safety of the ship. I found that the deck between the bows and the final panel at the stern had been lifted nearly nine inches, and in the middle two planks had been completely torn up and hurled to the starboard side; the supports were demolished and seven of the beams of the deck either broken or more or less damaged; not sufficiently however to prevent the voyage to Tahiti under light sail. Having on board an old mainsail I had it cut in pieces and nailed over the open parts of the deck after having tarred it to prevent water penetrating, so far as possible. All the stanchions had fallen; we replaced them and I hope with the reparations we have been able to make I shall be able to conduct the ship to Atimaono.

Having thus placed on record as the circumstances as well as I have been able to do, I beg you to excuse the faults of orthograph: I am not English but a Dane.

I trust that you may receive this report before my arrival at Tahiti, shortly.

Signed: Charles Steenalt (Second of the *Moaroa*).

### **List of Killed and Wounded:**

Dead: D. Blackett, captain; J. Crisp, lieutenant; J. B. Lattin, passenger; Tiopa, sailor; Tiarei, sailor; Poti, sailor; Ava, sailor; Avai, sailor.

Wounded: Victor Watelier, right shoulder (slight); Amo, sailor, stomach (slight); Jack, sailor, right side (severe, grave); Sunday, interpreter, bullet in right thigh (grave).

Remaining crew: Charles M. Steenalt, second; Pupia, sailor; Rima, sailor; Auhiti, sailor; Henara, sailor; Oripoto, sailor.

It would appear that the *Moaroa* reached port in the last week of September, 1869.<sup>23</sup>

EDITORIAL NOTE: Other old records relating to Atimaono, of a later date, which have come to light recently, suggest that the greater portion of the foregoing report was a clever "fake." It is indicated that actually the natives were kidnapped;

---

<sup>23</sup> A similar, though not identical, account of the circumstances was published in the [Nelson Examiner and Nelson Chronicle, 1 December 1869, Page 3](#). See also the section "Barque *Moaroa*" in *Tragedy of Atimaono, Section I* in the 25 May 1938 edition of PIM, pages 33–39, in Part VII, and *The Tragedy of the Moaroa* in the Appendix to Part IX, *Old Time Tahiti*.

that they fought desperately for freedom; that a great many were killed; and that the remainder were cowed by gunpowder explosions and eventually taken to Tahiti.<sup>24</sup>

### THE BRITISH CONSULATE ON TAHITI

---

ANTEDATING by ten years the appointment by foreign governments of other consuls for the group, Captain Charlton,<sup>25</sup> domiciled at the Hawaiian Islands, led the way. In 1825 Great Britain saw the need in both places and named Charlton as its representative “for the Georgian and Sandwich Islands.”

The present day misnomer of the former was unknown in London. The Foreign Office had on file the Reports of both Wallis and Cook. To Wallis (1767) the *Sous-le-Vents* were unknown: it fell to Cook (1769) to first learn of them, and upon them he bestowed the name of Society Islands, after the Royal Society, which had given him whole-hearted support. They lie a full hundred miles away from Tahiti, and were wholly independent entities. Time and politics have brought about the change of name.

It was not till 1835 that the U.S.A. decided to follow the lead of Britain, and filled the post in Tahiti with the Belgian, Moerenhout. These two men, in addition to their official position were also alike as the pioneer “rum-runners” of the South Pacific, defying Tahitian Laws and Orders, and both lost their posts in the main for that same cause.

Complaints oft and loud were made by the Tahitian authorities to both London and Washington. To London was added the complaint of the long absences of Charlton; he came when it suited him. London saw the need of change, and Hawaii and Tahiti became separate jurisdictions. T. Elley, a local British resident, had acted as Vice-Consul since 1826 and was anxious to withdraw: he had had enough.

In February, 1837, whilst William IV. was King, George Pritchard<sup>26</sup> received the appointment of Consul. This is not the time to deal with his stormy career; but as to his removal in 1844 the fact should be better known that the British Government were very far from being displeased with him. Thus they wrote to him: “Far from wishing to express any disapprobation of your conduct, it would be more conducive to your own comforts as well as to the good understanding between Great Britain and France that you should be replaced by some person who had been in no way connected with the transactions which have taken place within the last two years.” (Command Papers, No. 173). He went to Samoa.

<sup>24</sup> For a more accurate account of the circumstances, see pages 206–208 of [Eric Ramsden, 1946, William Stewart and the introduction of Chinese labour in Tahiti, 1864–74, Journal of the Polynesian Society, Volume 55, Number 3: 187–214.](#) On page 190 of this article, Ramsden acknowledges WWB as follows: “One result of my visit to Tahiti in 1935 was the transfer of certain important documents in the British Consulate at Papeete, by permission of the Foreign Office, to the Mitchell Library at Sydney. For assistance in gaining access to those papers I must acknowledge my debt to Mr. W. W. Bolton, M.A., of Papeete, a notable research worker in the field of Pacific history, who had already made a survey of some of them.”

<sup>25</sup> [Richard Charlton \(1791–1852\)](#)

<sup>26</sup> [George Pritchard \(1796–1883\)](#)

He, like Charlton, had been acting in a dual consulship: the Sandwich Islands had been dropped, but the Friendly Islands had taken their place. Years later, Tahiti stood alone.

It is strange, but true, that there is no list of succeeding Consuls for Tahiti to be found in the Consulate records, nor is there any to be found in British Governmental publications, where such should be. A request for this desired information has now gone forward to the Foreign Office, in the confident belief that it will meet with the usual courtesy of that office.<sup>27</sup> Till then, it would be leading nowhere to give a few scattered names covering the century since Pritchard's appointment, none of whom seem to have done more than faithfully to carry out their duties. Once obtained, the list will be given publicity to a larger public than Tahiti and so complete this sketch of the Consuls themselves.

THE Consulate site has a history of its own. It was in 1818, when the second Pomare ruled the island, that the L.M.S. decided to open a mission station in the fast developing new town of Papeete. It fell to the missionary W. P. Crook<sup>28</sup> to see the matter through. He had arrived on the *Duff* in 1797, had been left alone on the Marquesas that same year, where he remained for nigh two years, then revisited England. But the call of the South Sea was upon him, and in 1816 he reached Tahiti's neighbouring isle, Moorea. Pomare had lately declared for Christianity as the religion of his kingdom, and had domiciled himself at Papeete. There was need of a new centre and it fell to Crook to see it done.

What has confused many searchers is the mention of Wilks' Harbour as the scene of his work. The two names are synonymous. The L.M.S. men had the habit of giving names of their leaders at Home to the places where they were stationed, creating villages at times into towns — Waugh Town, Roby Town, Haweis Town, to name a few.<sup>29</sup> Wilks was honoured with a harbour. He is often confused with the American Commodore Wilks;<sup>30</sup> but the man was one of the founders of the L.M.S., and the minister of the Tabernacle, Moorfields, London.

Every man must have his home, and Crook evidently wished to be on the safe side for his family. He had plenty of confidence, but took no chances, so he built his residence aloft on the mountainside, back of the developing settlement, where now the Semaphore and the Training School for native pastors stand. His correspondence is written from "Mount Hope, Wilks' Harbour." Brother Ellis evidently did not like the long climb, but puts it mildly: "Inconvenient on account of its distance from the settlement."

For his church, Crook secured a fine stretch of waterfront property at the southern end of the little town, away from its northern end, where the old-time *Nanu*<sup>31</sup> had stood, and where settlement was thickest. The land was on the Paofai strip running back to the hills, and it is yet unproved who was the donor — whether the King, or the High Chief Paofai — for Pomare, like other chiefs, had portions of property in other strips than his own, of Vaiete. Be that as it may, it was ample for its purpose.

There soon rose, in order as follows, a native church, with spacious churchyard; a commodious pastor's residence, in its own ground; another for visiting brethren, in its own ground; next to it, the printing office, also in its own ground; and finished with a plot, as a cemetery for the faithful.

---

<sup>27</sup> The information was provided to WWB by the Foreign Office in 1938. For a list of the fourteen consuls appointed from 1824 to 1941, see Note #3 to Chapter X in Part IX, *Old Time Tahiti*.

So things remained till, in 1837, Queen Pomare decided that there must be a separate home for the British Consul, who was then living in the brethren's residence. She solved the problem in quick order. The large and unused churchyard was the site, lying between the church and the main residence. There the Consulate stands to-day, hard by the pastor, but a road divides it from the native church. Consul Pritchard thought that the site had been given personally to him and, on leaving, sought to sell it to the Home Government, but the Queen quickly undeceived him. She had given it to the nation which had done so much for her people. It was British soil, and to it she fled in her day of distress; it is British soil to-day, and we of to-day have pride in our home.

That land has been British soil for just a century. Its buildings, however, have seen much change. The present charming bungalow and neat office is but four years old, raised by orders from Home, and supervised with meticulous care by Dr. and Mrs. Williams.<sup>32</sup> Alike with it, the native church has been in builders' hands; but the pastor's residence has an age-long look, and one hopes that it may so remain.

The rest of this valuable property was forced out of church hands; but that is another and grievous story, which fully documented may be read some day. It was a fiercely "raw deal" and does credit to none. Haply, we have our home to-day, and a most worthy occupant; which is all that the above short summary of historical facts requires to complete, for those who fain would know, a side-glimpse into Tahiti's past.

## ROMANTIC HISTORY OF PAPEETE'S PALACES

### How The Town Got Its Name.

BY W. W. BOLTON, M.A.

THE First Pomare (Ariirahi, or High Chief of Pare-Arue) was not content with a single residence in the district over which he ruled. The records show that he raised native homes for himself and family, one at Matavai, one in Papaoa and yet another in Pare.

And there was no mistaking where he lived. They were known by two lofty posts opposite the home, which was always nigh the beach, with the head of a man (a Tiki) carved atop on them, placed on the trail some 70 to 80 yards apart. Wherever he had a home it was so dignified, and the etiquette so strict, and the punishment for non-observance so severe, that all must bare themselves to the waist, both men and women, as they walked past, from the one post to the other.

But the Second Pomare, as he drew near his end, discarded the lot — and not without good reason.

When he returned from exile on Moorea, in 1812, where he had been since 1808, great changes had taken place in his district. Matavai was no longer the rendezvous of shipping. Another and an infinitely better harbour had been found. Matavai was but an open roadstead, yet had had to suffice; for the Papeete of to-day, with its spacious barrier-reefed lagoon, had far too dangerous a Pass for the white pioneers, such as Wallis, Cook and Bligh.

Whalers, however, had come upon the scene from the Sous-le-Vent Group, which was on the whale track from the North to the Antarctic; and whalers dared anything. They were not content with the unsheltered Matavai; they tried the Pass, and made it. They were quickly followed by the traders, who set up storehouses on the unnamed beach, and all vessels, even men-of-war, sailed in and cast anchor where wind and sea could be contemned.

The old homes therefore were no place for Pomare, nor the old etiquette attending them. He had passed that stage. Where white men gathered he would be; the place where the vast Nanu once had stood would claim him as a resident. Here, for untold years, had stood the "Long House", the "Nannoo" of the earliest maps, the social centre of the district, the outstanding feature of the entire waterfront, and the name on every tongue when mentioning the harbour. What went on within, besides debate (as first seen by white men in 1798), is best left to the imagination.

Pomare had property hard by, a fine, broad strip of land, family property from long years past, running down from the hills at the back (where a spring of purest water gushed up) to the placid lagoon. His strip was known as Vai-ete. He owned also the little islet in the lagoon directly opposite, which was "Motootoo" to the white men chroniclers, but Motu-uta to him and his, and to us, to-day.

On Vai-ete, at the back thereof, Pomare II raised a native home, his "Palace", for himself, his two wives and his then only child, a daughter (later Queen Pomare IV). On his island, he raised a sort of summer-house, where he could retire, away from the crowd; for, unlike his father, he was very far from social and very partial to the rum flask. But Vai-ete as a name could no longer serve.

In those days, there were words which were Tapu to the common folk; there was a language for the Chiefs, and another for the rest. Chiefs and their kin would say "Good-day" to each other with

“Maeva”; but ordinary Tahitians must use “Ia-ora-na”. So with much else. As “Vai” was the Chief’s word for “water”, it could not be used in the daily converse of the common herd. There was nothing for it but to use the general word for water — “Pape”. The last portion of the name was not tapu: “Ete” meant “basket” for all (the contrivance to hold the gourds containing water).

Thus Vai-ete became Pape-ete; and, being the property of Pomare and shortly to become right royal property, when kingship was at long last won (1815), it absorbed all other names of the various family properties on the extensive quarter-moon waterfront — Fare-ute, Arupa, Paofai and others (though still used freely by residents, both white and native), these leading only to confusion in trade. A town was in the making. One name alone must needs suffice, the Royal one naturally the most fitting. Thus arose a town and a name arose, wholly unknown to old Tahitians.

The site of that home of Pomare is in a vacant space to-day, though hard by it are to be seen the huge foundation stones which carried it, recognised but by few. Its builder dead (1821), his baby son (born 1820), dwelt there on and off till he was borne off to school on Moorea, to be brought back there in 1827, to die.

Now a Queen inhabited it, though but a girl of 13 years, and it was to be her home for 50 years — though forced to flee from it for a while when her sovereignty was seized ruthlessly from her by Dupetit Thouars,<sup>33</sup> and she fled for protection first to the British Consulate, hard by along the waterfront, thence to the ketch, “H.M.S. Basilisk”, and thence to “H.M.S. Carysfoot”, which bore her off to Raiatea till her sovereignty was returned to her. Then she lived once more under its roof, though the Protectorate held sway.

When the Queen fled from her home in November, 1843, the French Commandant (Bruat)<sup>34</sup> calmly appropriated her residence for himself, and remained there till a ready-made house was shipped out to him from France, which he erected at one side of the Queen’s nigh where now the Governor’s Office stands. When the Queen returned, Bruat offered her, as one of the terms of submission to the Protectorate, a new “Palace”, to be reared for her as a residence, but this she refused — she much preferred to dwell under the old roof. It was falling into disrepair, and already in 1838 she had renovated it, but nothing could wean her away from her girlhood home. There she lived and there she died in 1877.

Her son, Pomare V,<sup>35</sup> succeeding, remained on until in 1880 he decided for various reasons (needless of mention here) to sell his sovereignty and his people to France. Besides an annuity of 60,000 gold francs, he stipulated that the “Palace”, which — despite the Queen — the French authorities had started erecting in 1860 on the other side of her home from Bruat’s dwelling (but had ceased work upon when but half done) should be completed and furnished for his use.

Here, he dwelt alone, but for his entourage of kindred spirits. A large, roomy, two-storied building of wood, a cupola atop, and wide verandahs on all sides, gave him what he sought, space for dinners and entertainments, and all the wild accompaniments of a dissipated life. Here, in 1891, a physical wreck, he died, and the last Royal home changed its character; there were no longer kings and queens on Tahiti. It is to-day the French Treasury building.

So fell the final curtain upon Papeete’s palaces. Only their memory abides.

24 March 1938, pages 44–45 — *The “Mystery Stone” of Tahiti*

## THE “MYSTERY STONE” OF TAHITI

By W. W. Bolton, M.A.

A SHORT hour's stroll from Papeete's market-place, up the Tipaerui Valley with finally a rocky ascent on its south-western side, a mountain stream is met with which has gouged out for itself a narrow but deep course to the sea. When the heavy rains descend, the stream becomes a torrent eating into the high banks and in places overflowing.

Here, leaning slantingly against its western bank, there is, and has been as far as native memory goes back, a petroglyph stone (or boulder) marked with a mystic carving. There is no other large similar stone thus marked upon the island of Tahiti. Who placed it, if not Nature, where it stands and who wrought it are mysteries which white folk and natives — though they have their usual “tradition” — have long sought to know.

Scientists have studied it and have been forced to leave the mystery unsolved, both as to its antiquity and real interpretation. As to Tahitian lore thereon, Mr. A. K. Richer many years back secured the following explanation from Monsieur Buillard on whose family property it stands, all of whom regard it with veneration and have refused all offers to part with it, either into the care of the local Museum, much less to Museums in far-off countries that have sought its purchase. There it is and there it is to remain, lest ill-fortune follow its removal (unless Authority steps in).

The rock was carved in memory of Tetaurii Vahine (Tetaurii's wife) and her twin children, so the Tahitian story goes. Tetaurii, defeated, took refuge in Tipaerui Valley. His wife there gave birth to twins and soon after all three died. They were buried on the land of Oteoteroa close to the brook: and a spirit in the form of a monster eel gives them constant protection. If one touches the rock, milk will flow along the grooves and the offender will die.

Mr. Kenneth P. Emory,<sup>36</sup> of the Bishop Museum staff, Hawaii, on one of his several visits to Tahiti, a dozen years ago, visited and carefully examined the stone and contributed a long and valuable article thereon to the *Societe des Etudes Oceaniennes*, which appeared in the *Bulletin* (No. XI) of the Society issued in February, 1926, from which the following excerpts are taken with the hope of not only giving this remarkable Memorial of the Past a wider publicity, but also of bringing it to the notice of those among the readers of "P.I.M." who are qualified by their scientific training to do so, to try their hand as others have done in solving the weird carving.

Mr. Emory after quoting the above "tradition" adds: "There is the sinuous line which may represent an eel over the left head of the 'twins'. It is so obscure I doubt if it would be noticed unless one gave the carving very careful study. Therefore I doubt if the eel element would be included in a story made-up to-day to fit the carving. Yet the carving is so highly conventional and symbolic that I feel sure it had more meaning, if not another meaning".

In a description of the stone he writes: "The boulder presents a flat, smooth, water-worn surface 181 centimetres long and 119 centimetres wide which is almost entirely filled by the most conspicuous carving. During heavy rains the brook floods this rock but as yet the grooves of the carvings have been only slightly obliterated except for the linear figure or figures on the east and most exposed side. . . The width of the double-headed figure from elbow to elbow is 80 centimetres. The width of the grooves from 4 to 5 centimetres. . . That they are conventionalised human figures falling at once into general accord with Hawaiian and Marquesan petroglyphs there can be little doubt".

"At first sight", he continues, "the large central figure appears to consist of two human figures back to back and a symbol pendant between them. But in Hawaii and Marquesas the human figure carved in outline is always represented face on, not in profile. . . I believe that the large double-headed figure is that of a being face on with two heads. It should be observed that the left head is centrally located between the upraised arms.

. . . It is my guess because of the frequent representation of human figures back to back, or double-faced as seen in small Marquesan stone images and the Easter Island staffs that the concept of a double figure or figure with a double face, each face looking at an opposite direction was in the mind of this artist but he was at a loss how to indicate it in any other way than by placing the back face to the side of the front face".

Dealing with the petroglyphs to be seen on Porapora, on Raiatea and Huahine, he says: "These petroglyphs of the Leeward Islands of the Society Group which I have seen are geometric or fish, turtle and canoe figures". Then referring to the carvings of human figures on a boulder on Hivaoa Island, in the Marquesas, and quoting the archeologist Linton,<sup>37</sup> he notes: "The Marquesan boulder is located very similarly at the side of a brook-bed of a side valley and about three kilometres from the sea. It is dome shaped; the carvings about a dozen human forms and some unidentifiable forms are on the upstream and on top".

<sup>36</sup> [Kenneth Pike Emory \(1897–1992\)](#)

<sup>37</sup> [Ralph Linton \(1893–1953\)](#)

He ends upon the note: “The original home of this particular art is still a mystery”. Will it and the carvings of the Marquesan and Tipaerui boulders ever be known? One hopes so.<sup>38</sup>

## **THE POMARES OF TAHITI**

---

### **Origin of Royal House**

---

By W. W. Bolton, M.A.

THE Pomares were not always so named; it is but a secondary name chosen by the Head of the Family less than a century and a half ago.

The ancestors of that Head bore various names and dwelt on Fakarava, some 220 miles from Tahiti, one of the “Dangerous” (and, it must be confessed, cannibalistic) atolls of the present day Tuamotu Group.

Dates, of course, are impossible till white men appeared upon the scene; but, about 1600 A.D., one from Fakarava struck out in his canoe for broader and better fields, and made his way to Tahiti,

---

<sup>38</sup> See *The Mystery Stone of Tahiti* in the Appendix to Part IX, *Old Time Tahiti*.

entering through the Taunoa Pass where, as a Chief even of the despised Poumotus (their ancient name), he was made welcome in Pare-Arue by Mani-i-hiti, Chief of that district; and, later, he married his daughter. Upon the death of his father-in-law, he became Chief in his place — but in no sense paramount Chief of Greater Tahiti. His name is unknown.

From him descended Ta'aroa Manahune, who married Tetua-ehuri, the daughter of Vehiatua-i-Matai, the paramount Chief of Lesser Tahiti, which link became later on of great importance. There now comes a gap, where native tradition and memory fail, of two generations, when Vehiatua's line and him of Pare-Arue are compared, the former being known. About 1740 A.D., Ha'apai appears as the Chief of Pare-Arue, who had a son with whom things become definite and clear.

This son, Tu-nui-ea-ite-atua,<sup>39</sup> happily always shortened to Tu, was ambitious. He was not content with his small slice of territory; he would be paramount Chief of both Greater and Lesser Tahiti, and set to work to attain his aim. It was he who assumed the name of Pomare ("a night cough"), through a passing fancy of his, as was oft the custom, and became known to white folk as Pomare I, as if he had started a reigning house — which he attempted but never attained to — rather than as the First Pomare, which is a very different thing.

And here it must be noted that there never was, nor is there to-day, any Tahitian word for either King or Queen, Prince or Princess. They have but one word, Aarii, which is (e.g., Queen Pomare) always used. These titles are foreign importations. A paramount chief might be specially termed an Aarii-rahi, and this was what the First Pomare was determined on.

Through his cousinly connection with Lesser Tahiti and the Vehiatuas, he secured, without a fight, the paramouncy of the whole South Coast for a younger son of his, owing to a dispute among claimants; whilst a brother was Chief of the East Coast of Greater Tahiti; he himself being Chief of the North Coast.

But the west coast proved more than a match for him. Fight and struggle as he might, the Teva Clan of Papara, of the west coast, held him at bay. He died — suddenly, in a canoe, on Matavai Bay, opposite his home — a disappointed man, leaving his successor, a son, to achieve what he had failed to accomplish.

Pomare II left two children, a boy and a girl. The third died, an infant of months. Though the girl was by years the eldest, it was the boy, as yet also an infant, who was to be Pomare III. Dying as a boy, his sister became Queen, and the direct Pomare family of yesterday and to-day all follow from Queen Pomare IV. Her children were many, but those who survived infancy were six in number — five sons and a daughter. Of these, four left no issue. The Royal Family of to-day, therefore, traces back to but Tamatoa and Teriitua, the Queen's third and her youngest sons.

There seemed promise of a numerous progeny through Tamatoa, who had five daughters and a son, but son and eldest daughter died in their early years. Teriitua was not so blest a parent. He had but one surviving child, a son Hinoi I, who married one of his Tamatoa cousins, Teriimaevaua, whose offspring died. But he was not to be denied. Nita brought him two boys: the eldest, Hinoi II, who grew a very giant in stature, and Ariipaea, of normal size, but of abnormal geniality. The giant died childless, but his brother fortunately has a progeny which are far too great in number for the Pomare Family ever to die out. Rather, it is likely to spread in ever-increasing numbers as the years mount up.

---

<sup>39</sup> Elsewhere WWB has *Tu-nui-ea-aite-atua*.

This is the present-day direct family of the Pomare's, for Tamatoa's other daughters married white men, Englishmen, and though their offspring — to-day, but six adults in number — are within the circle of the Royal Family, they have ceased to bear the surname Pomare, as will their children, unless "adopted" into the Hinoi line.

There are, of course, sidelines of the family, for the first Pomare, as has been noted, left another son than Pomare II, besides a daughter, known to the first white men as Ovo; and, what is not known generally by other than French folk, children of an undivorced man and wife are by French Law bound to bear the husband's name whether they be his or not. He may refuse to "recognise" them as his, but they must needs bear his name. The actual parentage plays no part.

There may be such Pomares or other allied relatives or they may be not. The matter is not of interest, however, to that student of the past or present who seeks only the direct line of the Pomares of to-day, coming directly through the Sovereignty and without dispute.

THE BOY KING OF TAHITI, POMARE III.

This picture has unique value — it was found, after years of search, by Mr. W. W. Bolton, M.A., and is published here, for the first time — the only known picture of a very tragic figure in Tahitian history.

Pomare III. was born on June 25, 1820; crowned April 21, 1824; died January 8, 1827. He was educated at the "South Sea Academy", at Afareaitu, on Moorea, of which J. M. Orsmund was headmaster, and Mr. Bolton believes that it was Mr. Orsmund who drew the portrait of the royal child. "He was to be brought up as an English schoolboy", says Mr. Bolton. "Hence, the Eton collar (quite clearly seen in the original picture) and the close-cropped and smoothed hair".<sup>40</sup>

<sup>40</sup> The South Sea Academy was established in March 1824. Mr John Muggridge Orsmund — both *Orsmund* and *Orsmond* are common in the literature — had previously served in Huahine, Raiatea and Bora Bora; he was headmaster for seven years. See [Ellis, Polynesian Researches, Vol 3, page 269](#). See also the photograph of this picture that WWB sent to his granddaughter, and which is now on deposit in the Mitchell Library, in Plate #5 in Tale #22, *The Boy King* (3), in Part IV, *Tales of a Roaming Grandfather*. The frame with 25 portraits of the royal family that WWB found and from which the image of Pomare III was taken can be seen in *The Pomare Family of the Past* in Part IX, *Old Time Tahiti*.

## TRAGEDY OF ATIMAONO

### Story of the Rise and Fall of a Tahitian Cotton Enterprise

(From the MS. of J. L. Young, <sup>41</sup> written at Merami, Warren, N.S.W., about 1928, and edited by W. W. Bolton, M.A.)

#### SECTION I.

THE rise and fall of the Tahiti Cotton and Coffee Plantation Company Limited, of 9 Mincing Lane, London, 1863–1873 (also known as “La Compagnie Soares” and “The Atimaono Company”) was one of the romances of the Pacific, in which the personality of William Stewart, the originator of the enterprise and the manager at Tahiti, played a leading part.

In 1862, cotton, in consequence of the Civil War in the United States, had attained a very high price, which induced William Stewart to visit Tahiti in that year. He obtained from John Griffin Orsmond the transfer of lease of 385 hectares — 900 acres — of land at Teahupoo, on the peninsula of Taiarapu. This land had been leased by natives to Orsmond for a term of 100 years, from 1843, at a rental of 275 francs per annum. The value was small, only a portion being cultivable.

Apparently, on the strength of this acquisition, Stewart induced his brother-in-law, Auguste Soares, a Portuguese financier of London and Paris, to form an association styled “The Polynesian Plantation Company”, which was succeeded in 1863 by “The Tahiti Cotton and Coffee Plantation Company Limited of London”; capital, £100,000 sterling; general manager, Auguste Soares; manager at Tahiti, William Stewart.

In 1863, Stewart had persuaded the Governor, Commandant de la Richerie, to promise to assist him in acquiring an area sufficiently large to warrant the establishing of an agricultural enterprise: the intention being that lands in the Papara and Atimaono districts should be expropriated and paid for at prices to be agreed upon. The Protectorate Government (Tahiti was a Protectorate from 1842 to 1880) was to guarantee the lands free of taxation for 20 years, and exemption from Customs duties for a like period of all machinery and all other articles of prime necessity for the working of the plantation. It was on these prospects that the T.C.C.P. Company was formed in London in 1863.

But when Stewart, after visiting London, reached Tahiti, at New Year, 1864, he found that the Governor had received positive instructions from the Minister of Marine at Paris not to carry out any arrangements for expropriation of lands until further orders. These instructions were the result of protests to the Minister by interested parties at Tahiti, who from various motives were opposed to the proposed enterprise. Stewart, who was a man of action, then decided to deal with the landowners direct.

The Governor on January 11, 1864, formally notified the natives that they were at liberty to dispose of their lands to Stewart or to decline to do so. However, there is no doubt that the Governor strongly advised the proprietors that it would be to the general interest to encourage the cultivation of the waste lands by sale to Stewart, as well as that of the comparatively small area of native food plantations which were contained in the proposed aggregation.

---

<sup>41</sup> See [The Commercial Career of James Lyle Young: Contemporary Evaluations of a Notable South Seas Character in The Journal of Pacific History, Volume 44, Issue 2, 2009, pages 209–220.](#)

Stewart continued during 1864 and subsequent years to acquire the freehold of an area which, according to the plan made in November, 1867, by Surveyor John Turnbull, had a frontage of 3½ miles to the sea and extended inland and up the mountain side for more than 7 miles, the area being nominally some 7,000 hectares (17,000 acres), of which a large part was rugged mountain. But when, in 1875, the estate was sold at public auction the total area then claimed was 3,950 hectares (9,500 acres) of which 1,450 hectares (3,500 acres) was cultivable and 2,500 hectares (6,000 acres) mountain. All freehold; except 105 hectares of communal lands appertaining to the Chefferie of Atimaono, which was leased to Stewart in 1864 for a term of 50 years, renewable for a further term of 49 years at a rental of a little more than 400 francs each year.

### The Estate

THE Estate was called “Terre Eugenie” in honour of the Empress Eugenie, the wife of Napoleon III. It is to be noted that all titles to land stood in the name of William Stewart, although he acknowledged that he purchased for the company.

The total area cultivated up to the cessation of operations in 1873 was 1,300 hectares (3,100 acres)<sup>42</sup> as follows, as stated officially by the Court.

#### Under Sea Island

Cotton .. ..	1,000 hectares.	
” Coffee .. ..	150	”
” Sugar cane	50	”
” Coconut trees	50	”
” Maize, Rice, Vegetables, etc. .. ..	50	”
	<hr/> 1,300	”

In 1864, 1,000 Chinese were imported and others subsequently — also a number of Gilbert and Kingsmill Islanders. Numerous Tahitians and Cook Islanders were also employed, besides 60 or more whites and half-castes as overseers, artisans, clerks, etc. At an official enquiry in September, 1867, it was found that the number of labourers was at that time 916 Chinese and 323 Polynesians, of which 108 were women. This number was exceeded in 1869, when more than 1,500 were employed on the Estate.

The plantation was well laid out and cultivated, and extensive buildings erected, the foundations of several of which were composed of coral blocks from the Great Marae (sacrificial altar) of Mahaiatea, which was situated on the Estate. These comprised cotton ginning mill, engine and boiler house, cotton drying house, sugar mill, coffee cleaning machinery building, boat houses, etc. Substantial quarters for employees, and hospital accomodation for both white and coloured patients, also quarters for the latter. There was a comfortable house for Stewart, who entertained lavishly during the first years of his management, and more sparingly later on — due, it was said, to the advice of the Governor, the Comte de la Roncière,<sup>43</sup> who thought that too free a hospitality attracted officers and functionaries from their duties at the town of Papeete, 27 miles away.

<sup>42</sup> The article has *The total area cultivated up to the cessation of operations in 1873 was 3,100 acres*...

<sup>43</sup> [Emile François Guillaume, comte Clément de La Roncière \(1803–1874\)](#). Here and elsewhere, the article has *Rouciere*. This is another instance of the difficulty distinguishing between WWB’s ‘n’ and ‘u’, PIM no doubt having received a handwritten manuscript of this article from WWB; see the footnote to Tale #8, *Of Niue’s Call*, in *Tales of a Roaming Grandfather*.

At one period, three sailing vessels were employed in recruiting Polynesian labourers. Wages, which varied from 30 to 100 francs per month,<sup>44</sup> were paid in cash in local currency, mostly silver dollars, to the labourers at regular stated intervals. These were on the whole well fed and cared for, and not ill-treated, and were under the care of a French medical man resident on the plantation, who reported to the Chief Health Officer at Papeete.

Stewart, though a strict disciplinarian, was naturally a humane man and if, as occasionally may have been the case, discipline was enforced with a certain severity by overseers, he did not fail to rebuke the authors. Anyone who has had experience in managing coloured contract labourers knows how difficult it is, with the best intentions, to avoid disciplinary methods which seem harsh. Of course, the Tahitians and their connections looked with disfavour on a system which compelled regular work during regular hours and enforced discipline; so it naturally came to be an accepted fact that the Chinese and Gilbert Islanders were slaves.

### Attacks on Stewart

THIS view was made use of by the opponents of Stewart, for whom “any stick was good enough to beat a dog”. Among these were some who claimed that the land had been acquired by Stewart at prices which were too low — forgetting that originally most of the land, being unoccupied, had no practical value, and in fact an examination of the prices paid the natives, as appears in the Government records, shows that full values were paid, as values were at the time. His critics included some influential merchants at Papeete who were jealous of Stewart’s preponderating influence and feared injury to the interests; also some Chauvinists among French officials and functionaries who objected, not unnaturally perhaps, to the extension of British influence in Tahiti — the memory of the Pritchard affair was still recent — and, of course, the usual crowd who “bark as the caravan goes by”. Not least was the enmity of the British Consul,<sup>45</sup> who had personal reasons for disliking Stewart, and who had actually proceeded unsuccessfully in French Courts against him on a charge of “insulting behaviour” arising from a reply Stewart had made to a letter.

Stewart was a masterful man and was not at all conciliatory in manner to his opponents, some of whom were quite unscrupulous in their methods of attack. For instance, they used as a tool a worthless rascal, a former visitor to Tahiti, who inspired articles in the American Press, charging cruelty to the labourers on Atimaono, which it was asserted was condoned by the Government.<sup>46</sup>

In consequence of these attacks, which were republished in French and British newspapers, the Governor appointed a Commission to proceed to the plantation and investigate conditions there. The Commission was composed of 14 persons, all men of position, viz., the highest judicial and the highest executive functionaries of the country, a naval officer, two medical men, one French merchant, three French planters, one British planter, two American ship masters and the German Consul, who was also a prominent merchant. The British Consul was invited but declined to attend.

The Commission made its unanimous report to the Government on September 27, 1867, which was to the effect that the 1,239 labourers were well fed, well housed and well treated under the care of a qualified French medical man, and with good hospital accomodation. Further, that no complaints of bad treatment or of having been beaten or flogged, or of want of care or food, were elucidated, though numerous Chinese and natives were interviewed privately by different members of the Commission.

<sup>44</sup> The article has *from 30 to 100 francs per month and found, were paid...*

<sup>45</sup> Consul G.C. Millar; see page 192 of [Eric Ramsden, 1946, William Stewart and the introduction of Chinese labour in Tahiti, 1864–74, Journal of the Polynesian Society, Volume 55, Number 3: 187–214.](#)

<sup>46</sup> According to the article by Eric Ramsden referred to in the previous footnote, William Poole, though illiterate, was the source of a story entitled “Cruelties of the Slave Trade in the Islands”, which was published in the San Francisco Times and elsewhere. In contrast to Young, Ramsden’s well-documented article is much less flattering of Stewart.

Outside of such minor complaints as that some abusive language had been used by some of the French and English overseers, the only serious complaint — if it can be called serious — was made by the Chinese who claimed that Stewart's attempt to minimise suicide by their compatriots was unwarranted.

It appeared that certain Chinese who had lost money gambling had hanged themselves. Stewart as a deterrent had fined the fellow-gamblers of the suicides. They admitted that this measure had caused a cessation of the practice but maintained that suicide was a recognised way of ending trouble and settled all accounts, therefore fines were not in order! The Commission could not take that view, so the grievance remained.

The members of the Commission unanimously declared their complete satisfaction without reserve with all that they had seen and heard at the plantation, which gave the lie to the statements which had been made to the contrary, which they described as "infamous calumnies". The report of the Commission is contained in a pamphlet in English, including the Report in French, which was printed at the Government Printing Office in September, 1867, under the title "An outline of how it came to pass that so many absurd stories have been circulated about the cotton plantation of Terre Eugenie".

### **End of Atimaono**

THE ginned cotton was principally exported to England, and while the price of the article kept up, it appeared as if success might be assured; but with the fall in price of Sea Island cotton, from 1869 onward, from as much as 3 to even 4 shillings per pound, to one shilling per pound, and even less, success was impossible; and in 1872 failure became inevitable.

Money could not be found to carry on and operations practically ceased in 1873, and William Stewart was declared by the Court to be in a state of insolvency. All the lands had been purchased and held in his name and he was therefore legally the owner and responsible for the debts of the very large estate.

A delay was caused by the necessity of regulating the situation, which was done by Auguste Soares, the general manager of the T.C.C.P. Company Limited, making a declaration in May, 1874, before the Lord Mayor of London, that William Stewart had acted solely in the capacity of manager and had never pretended to any personal ownership of the lands or other assets of the company.

Meantime, William Stewart died at Atimaono on September 24, 1873, at the age of 48.

As the result of a suit brought by Andrew Crawford and Co., of San Francisco, who were among the creditors, the Tahitian Court on August 22, 1874, declared the T.C.C.P. Co. Ltd., to be insolvent. The creditors having agreed to a voluntary liquidation, the estate was put up to public auction at Papeete on August 31, 1875, at the price of 500,000 francs for Atimaono, and 20,000 francs for the rights to lease of lands at Teahupoo, and was purchased by a syndicate styled Laharrague, Robin et Cie, composed of the two gentlemen above-named with Mr. de la Casa, mayor of Paris, Mr. Francois Cardella, of Papeete, and others.

Under the management of Mr. Cardella, a little sugar and rum was made, and a little coffee and vanilla grown, and a precarious and uncertain revenue derived from the slaughter of some of the half-wild cattle, the progeny of the plantation herd, which had escaped into the mountain valleys. Gradually it was found that there was not enough revenue to pay expenses of management, and the estate became a wilderness.

Some of the proprietors entered into litigation with their associates, which proved fruitless; and eventually, about the year 1900, it was finally agreed to dispose of the estate piecemeal. It passed into

the hands of several owners, who have planted many thousands of coconut trees, and one established a sugar mill which has turned out some thousands of tons of sugar during the past 25 years.

Mr. de la Richerie was succeeded as Governor-Commandant of Tahiti on December 14, 1863, by Comte de la Roncière, who held office until June 5, 1869, when he was replaced by M. Touslard.

M. de la Roncière believing, as M. de la Richerie had done, that the enterprise of Mr. Stewart was a benefit to Tahiti and to its inhabitants, did not fail to give it encouragement and thus gained the ill-will of those who were opposed to Stewart.

### Mont Calme

Any sketch of the history of Atimaono would be incomplete if mention of this "house on the height" was omitted. Stewart's action in erecting the house impressed the imagination of the people of Tahiti, which was what he intended, among other things.

Mont Calme, also known as "White House", was situated on a small plateau on the mountain-side, at an elevation of 1,630 feet above sea level, nearly three miles in an air line from the sea and about half a mile from the Eastern boundary of the estate. The site is still marked by some tall Norfolk Island pine-trees, and a luxuriant mango tree, both planted by Stewart in 1866. The towering pines are still visible from the main road west of Taharuu River. These trees may be regarded as the only visible memorial of William Stewart, for all the many substantial wooden buildings which he caused to be erected, including his commodious residence, have in the course of more than 70 years fallen down through neglect or have been pulled down or burned, and so have totally disappeared.

Mont Calme was the result of a sort of Monte Cristo gesture on the part of Stewart. The Comtesse de la Roncière remarked to him, in 1866, that such an estate should have a health resort on the heights. He replied that it was too soon to think of such an expense, but began at once to prepare, not mentioning his intention to any person. He had a road made up the hill and a site cleared on the plateau, ostensibly to plant Cinchona trees. All the material for the six-roomed house and outbuildings was cut and marked ready to erect. He then put on most of his 1200 labourers to carry up the material and erect the buildings, to install the furniture and to lay out a garden and transplant bushes and even small trees watered by the supply from a neighbouring spring. He persuaded the police at the post on the plantation, near the Taharuu River, to stop all traffic towards the town for a day, in order that no news of the work in progress should reach that place. Then he hastened over the 27 miles to Papeete with relays of horses and induced the Count and Countess to return with him to be surprised!

On arrival at Atimaono, they were carried in sedan chairs up the winding road to the house, which he then presented to the Countess as a "Maison de campagne", furnished and with a staff of servants. She named the house "Mont Calme". She did not occupy it very often, for an ever increasing feeling of hostility to Stewart was manifested by his opponents, who resented the friendship between the Governor and himself, which had the effect of curtailing the visit of the Count and Countess to Atimaono. The building of Mont Calme, though loudly denounced as an extravagance by those who had no money in the plantation and therefore nothing to lose, was really intended by Stewart as an advertisement and also as an additional lien between the Governor and himself.

Stewart was not extravagant in the management of Atimaono in view of the size and importance of the enterprise and his belief in the permanence of the same. He could not foresee the rapid recovery of the cotton industry in the United States, after the termination of the Civil War in 1865, and the consequent fall in the price of the article, any more than did the planters of cotton in Fiji, Samoa and elsewhere at the same epoch, who equally suffered ruinous losses.

Mont Calme appears on the large plan of Terre Eugenie, made by the Surveyor John Turnbull in November, 1867, as the “White House”.

### **Barque “Moaroa”**

THE following incident throws a light on the conditions of recruiting labourers in the Pacific in those days.

(Editor’s Note: The following account of the “Moaroa” tragedy is not regarded by Mr. Bolton as complete or accurate. It evidently was pieced together by Mr. Young, from several sources.)

On July 4, 1869, off Nukunau (Byron Island) the barque “Anna”, of Melbourne, Captain Bruce, met the barque “Moaroa”, of Tahiti, Captain Blackett, owned by the Atimaono Plantation under the French Protectorate Flag. The “Anna” had 159 natives of the Gilbert Islands on board, recruited at various islands as labourers for Fiji — most of them no doubt induced to ship by false pretences. Two days previously, Captain Bruce had heard from a passing vessel of the action being taken by the courts at Sydney against the captain and supercargo of a vessel for kidnapping and incidentally murdering natives, and feared prosecution if he proceeded to Fiji with his passengers.

Meeting the “Moaroa”, which vessel was seeking labourers for Atimaono, J. B. Lattin, a Frenchman, who was the supercargo and also part charterer of the “Anna”, saw the chance of disposing of his cargo of natives without risk of taking them to Fiji. In concert with Captain Bruce, he told Captain Blackett that his water casks had leaked and that he had not water enough to carry the natives to Fiji, and therefore wished to be rid of them. For payment of £6 per head — euphemistically called “passage money” — the 159 natives were sold to the “Moaroa”. As Captain Blackett had not enough money on board to pay the sum agreed on, J. B. Lattin took passage on the “Moaroa” to get paid on arrival at Tahiti.

The “Moaroa” recruited about 150 more natives at Arorae Island, and some 200 more at various islands, and was bound for Tahiti on July 17 with about 500 natives on board, of whom not less than 100 were women and children.

On that date, at 7 a.m., the vessel being then becalmed about 5 miles S.S.E. of Nukunau, the natives rose and killed Captain Blackett and J. B. Lattin — the former with his own Winchester rifle, the latter with the cook’s axe. They also killed three of the watch on deck, who were Eastern Polynesian natives. The fourth escaped aloft, and slid down a stay into the forecastle. The natives then attacked the watch below in the forecastle but Maori Harry (a pure-blooded Maori) transfixed with a harpoon the first man who came down the ladder and so stopped the attack.

Heinhault, the mate (subsequently well known to the writer at San Francisco as Master of vessels, but under another name) retreated to the cabin with the second mate, the cook and the steward.

About 9 a.m., all the natives being on deck, the men in the forecastle ran through the hold and joined those in the cabin through the bulkhead. The second mate, having found some liquor, became foolhardy and insisted on opening one of the cabin portholes to parley with the natives, when he was instantly killed with a double-barrelled gun which had been taken from the interpreter — who, by the way, was not killed, but tied hand and foot on deck. This was about 11 a.m.

Maori Harry suggested to the mate to blow up the half-deck next to the cabin.

All the powder obtainable, 34 half-pound tins, was emptied into a small keg, which was raised on cases of provisions, until the mouth of the keg was close up under the half-deck hatch, on which many of the natives were collected.

The powder was fired by a train, the mate and crew sheltering themselves with blankets, mattresses, etc. The hatch was blown off with considerable noise and smoke and, when the crew immediately rushed on deck shouting, with what weapons they had, the natives became panic-stricken and all jumped overboard.

Some of the natives, finding that the vessel was not destroyed by the explosion, tried to board her, but were prevented. It had been calm all through the tragedy, with the vessel drifting along the land some four or five miles distant, but a light breeze sprang up just after the natives quitted the vessel.

Owing to the strong current running to S.W., between Nukunau and Beru Island, 20 miles to the West of the former, only few of the swimmers reached Nukunau, and a few of the strongest reached Beru, helped by the current. It is uncertain how many survived — some accounts say 8 landed on Beru of which 4 were women, other accounts say 12. Again, it was said that 30 reached Nukunau, others say more than 40, of whom several died soon after landing. Some of the survivors declared that they encountered a “demon” shark (“Bakou tuea” or “King Shark”) of great size, who devoured several and that fear and exhaustion caused the others to sink.

It was an awful tragedy. Several were no doubt burned by powder. The writer saw a man at Nukunau, in 1876, who had the mark of a burn on the hip, which he said was caused by the explosion. He said that several infants in arms and older children were among the victims and gave some harrowing details of the lamentations of the unfortunate swimmers who sank, one by one.

Captain Bruce, of the “Anna”, is the same man with whom the writer was wrecked in the “Rose” in the hurricane of March 20, 1871. He related part of the foregoing — the rest was gleaned from various sources in the Gilbert Group, and at Tahiti and San Francisco. The Islands from which the natives on board the “Moaroa” were recruited were as follow, with approximate population in 1869:— Beru (Francis Island), 1500; Nukunau (Byron Island), 4000; Onatoa (Clerk Island), 3000; Tamana (Rotcher Island), 2000; Araorae (Hope Island), 2000. These figures are not to be relied on, being merely estimates. Owing to the number of labourers recruited from 1869 to 1873, and the loss of life by starvation during droughts in the late 70’s, it would be difficult to ascertain what the probable numbers were in 1869 — possibly about the foregoing.

### Chinese Murders

IN 1869, the opponents of Stewart <sup>47</sup> made much capital of the execution of a Chinese who had been the ringleader in the murder and mutilation of three other Chinese. Four were accused, but after trial by the Courts at Papeete, only one was condemned to death. The Governor was also abused for having “introduced the guillotine to Tahiti”, and Stewart for having “demanded four heads” by accusing four men as murderers, which they were!

Tragedy seems to haunt Atimaono, the last being the murder of Mottu, an aged Swiss, who was employed by the owners of the estate in 1896 (of whom the writer was one at that epoch) as caretaker.

The natives of Papara had for some time been in the habit of trespassing on the property and killing the half-wild cattle. Mottu, while sitting by a path watching for the marauders, was sneaked on and killed by a stone thrown by one of them. His body was buried by the murderers and, for a length of time, his disappearance was a mystery to all but the murderers and their friends. After many months, one of the latter was overheard by a half-caste relating the story to a boy. The police were informed, the remains exhumed, the man who threw the stone was condemned to imprisonment at Noumea, and “Justice was satisfied”!

---

<sup>47</sup> The article has *Stewarts*.

The skull of Mottu is a gruesome exhibit at the Museum of Papeete to the present day.

## **TRAGEDY OF ATIMAONO**

### **Story of the Rise and Fall of a Tahitian Cotton Enterprise**

#### **SECTION 2.**

*(From the MS. of J. L. Young, written at Merami, Warren, N.S.W., about 1928, and edited by W. W. Bolton, M.A.)*

#### **Comte de la Roncière.**

THE career of Comte de la Roncière as governor of Tahiti was so much affected by the affairs of the plantation of Atimaono, and vice versa, that an explanation is in order. There can be no doubt that his administration from 1863 to 1869 was dictated by a sincere desire for the betterment of the population. He caused roads and bridges to be constructed, educational facilities to be extended, an agricultural bank to be founded, and in many other directions favoured progress.

But all this, notwithstanding, there accumulated against him strong opposition and even hatred, alike on the part of certain functionaries, the laxity and even dishonesty of whose methods he condemned, and of certain civilians. These latter included not only some of the merchants of Papeete whose interests clashed with those of Stewart, but the Protestant Mission party, who disliked the latter's mode of life.

Then, again, the Governor had earned the ill-will of the Catholic Mission by certain action which had been forced on him immediately after his arrival at Papeete, in carrying on an enquiry instituted by his predecessor as Governor. His enemies watched for their opportunity, and it came to them in an extraordinary manner in 1869.

James Stewart, the brother of William Stewart, who carried on at Papeete a small mercantile business and who also had a store at Atimaono, managed by one William Keane, having decided to quit Tahiti, sold the contents of the aforesaid store to Keane, who paid him with an order payable six months after date, drawn by William Stewart on his Auckland agents — the amount was francs 92,200. This was really a loan made by William Stewart to Keane to enable him to pay James Stewart and thus facilitate the sale of the store by the latter to Keane.

William Stewart had lent to James Stewart a few weeks before, francs 25,000, by an order on his Auckland agents, which order James Stewart had sent to Auckland for collection.

James Stewart then sued his brother for francs 100,000 composed as follows: Francs 92,000 plus francs 25,000 = francs 117,000 less francs 17,000, which James Stewart owed to the plantation = francs 100,000.

In vain, William Stewart pointed out that neither of these notes was due. The judge in the Lower Court gave a verdict in favour of James Stewart, which, on appeal to the Higher Court, was confirmed, and immediate execution of judgement was ordered, and the plantation of Atimaono was seized by the sheriff.

The Governor came to the rescue by instructing the Agricultural Bank (Caisse Agricole) to purchase cotton from the plantation to the value of francs 100,000, and this enabled William Stewart to pay the amount of the unjust judgement.

Both the judges — one a local lawyer and one a functionary — owed their appointment to the Governor — no judges from France being available at the time. Both were personal enemies of Stewart — and, *sub rosa*, of the Governor — and their action against Stewart was dictated as much by feeling against the Governor as against him.

James Stewart with francs 100,000 in his pocket, left Tahiti for Honolulu, leaving behind him debts to the amount of francs 60,000, and no books of account. (Incidentally, it was reported that not long afterwards he died in gaol abroad, under sentence for fraud.)

The Governor removed the two judges and banished one (the functionary) to Moorea Island, 12 miles away, but at his request allowed him to return soon afterwards. The functionary and others of his friends denounced the Governor to the Government at Paris, who ordered the functionary to be reinstated to his post, and recalled the Governor in March, 1869. He, however, remained until August, 1869, as the newly appointed Governor — on account of illness — did not come to Tahiti as expected.

Meantime, the aforesaid functionary conspired with his friends against the Governor, suborned certain interpreters and others to make false statements and to steal certain private documents from his office and, indeed, went so far as to begin to arrange for his seizure and deportation.

The functionary, however, was prosecuted and finally sentenced to one year's imprisonment and was sent to San Francisco en route to Paris. But the Minister of Marine telegraphed to the French Consul at San Francisco to send him back to Tahiti.

The Comte de la Roncière had one good friend, Mr. Louis Jacolliot, a judge at Tahiti who, on his arrival from Paris in March, 1869, was opposed to the Governor on account of his removal of the two judges, but who on examination of the affair decided that the Governor was right in interfering with the abuse of justice. He returned to Paris in August, 1869, and took up the defence of the ex-Governor with enthusiasm, as appears from his pamphlet "La Verite sur Tahiti", Paris, October, 1869 — but without avail.

The influences against the Comte were too great. Even an old scandal of the year 1833, though long since declared false, was raked up against him, and he went into oblivion. His sympathy with and support of William Stewart's enterprise was one of the proximate causes of his downfall, hence this extended mention of him.

### Stewart in Sydney

ONE of the episodes of Stewart's adventurous career was the following:—

In 1858, he was a wine and spirit merchant at Sydney, his brother James being a Customs House Agent at the same place. In that year, these two conspired with three Customs House officers to avoid payment of duties on 300 cases and casks of wines and spirits, and a quantity of tobacco, by obtaining certificates of export of the above mentioned articles out of Bond to New Caledonia on the schooner yacht, the "Lousia", of 78 tons register. The vessel left, ostensibly for Noumea, on September 2, 1858. But it was soon ascertained that the goods had never been placed on board; they were traced to various hotels in Sydney and suburbs.

The "Louisa" returned to Sydney on October 7, but left the same day, after the Stewarts had visited her. She went to Hobart, thence to Jervis Bay, near Sydney, where William Stewart joined her; thence to Lord Howe Island, where the schooner "Martha" was met, having James Stewart, his wife and family aboard, who transhipped to the "Louisa", which left for an unknown destination.

The "Louisa" was seen again in July, 1860, when Captain Anderson, of the "Maria", met her at Norfolk Island, under the name of "Mary Ann", Captain Wilson in command. The name "Louisa" was distinctly visible under the new paint.<sup>48</sup>

It has been stated, since the death of William Stewart, that the "Louisa" proceeded from Lord Howe Island to a South American port, calling at Bora Bora Island on her return towards New Zealand where, during 1859 and 1860, arms and ammunition were supplied from her to the Maori warriors.

The account of the Sydney episode was published in the "South Australian", of July 1917, under the heading "The Notorious Louisa", written by a member of the Australian Historical Society.

---

<sup>48</sup> According to an [article](#) published on 18 July 1860 in The Argus (Melbourne), page 5, and [another](#) published on 19 July 1860 in the Maitland Mercury & Hunter River General Advertiser (New South Wales), page 3, the vessel subsequently transported 16 islanders from Norfolk Island back to Pitcairn. The month of July, 1860, during which the *Mary Ann* was supposedly seen at Norfolk, conflicts with the [usual account](#) of the return of the islanders to Pitcairn on the *Mary Ann* in 1859, after having departed from Norfolk in 1858. Perhaps the month during which the report was published in the press was mistakenly assumed to be the month during which the *Mary Ann* was seen at Norfolk. The article of 19 July 1860 states that Norfolk residents related the sighting of the *Mary Anne* and its departure for Pitcairn to Captain Anderson, and not that Captain Anderson had seen the vessel himself. See also WWB's article *A Link With the "Bounty"* in the April 1945 edition of PIM, page 27, in Part VII.

### Life of Stewart

**WILLIAM STEWART** was born in the north of Ireland in 1825, of Scotch Presbyterian ancestors. He was tall, fully six feet in height, of a striking presence, with a long black beard and black hair (but partly bald) and with piercing dark eyes, widely opened and set well apart. He was well educated, speaking French, some Spanish and Portuguese, and some Hindustani. He had been in the army in India as a young man and, subsequently, in the wine business in Spain and Portugal. He was a man of the world, a good judge of wines and liquors, but rarely drunk to excess; he played cards but had the reputation of gambling in moderation. He was a charming host and companionable with those he liked, but masterful and arrogant with those who opposed his wishes. He was a strict disciplinarian, but was considered by his employees to be always just. He was generous as he proved on many occasions, but could drive hard bargains in business matters.

He died in his house at Atimaono on September 24, 1873, at the age of 48, his death, which was said to be due to liver disease, being undoubtedly hastened by chagrin. He died in penury, all that he had having gone to keep the plantation going. While not actually under arrest, he was forbidden to leave his residence without permission, he having been declared insolvent.

All those to whom he had extended hospitality and given largesse deserted him. Almost his only consistent visitor, while on his death bed, was a lady who was a descendant of one of the old Missionary families. She, and his wife, to whom he had been only recently married, attended to his last moments. He was buried, almost without ceremony and with a very meagre attendance of mourners, at Mataiea, between the main road and the sea, nearly 47 kilometres from Papeete. Several years afterwards, his bones were removed by his widow to the burial plot of her family.

Many years after his death, an incredible story became current, to the effect that he did not die in 1873, but escaped from Tahiti in a vessel. But this was only a reflection of the glamour which was associated with Stewart's career at Tahiti in the minds of those who remembered his outstanding personality.

The writer did not arrive at Tahiti until some time after Stewart's death, but was always keenly interested in the details of the rise and fall of the Atimaono enterprise, and had many conversations with those who were closely connected with Stewart in business, as employees, etc.

Thus, when the writer subsequently became owner of one-fifth of the Atimaono Estate, there fell into his hands maps, plans and documents relating to the history of the same, and he obtained access to numerous letters, etc., all of which enabled him to reconstruct in a measure the romance of Atimaono and of William Stewart.

There is no intention to paint him as other than he was. During part of his career he was apparently what is called an adventurer, with but little scruples of honesty, but it is not on record that during his residence at Tahiti he was ever justifiably accused of dishonesty. Whatever his faults — and they were many — he was certainly sincere in his belief in, and devotion to the Atimaono enterprise. He carried the burden on his own shoulders — and almost every man's hand was against him. He failed through no fault of his own, and his end was pathetic.

In a world in which are so many weaklings it is refreshing to meet a strong man, an organiser and administrator, even with all his faults of omission and commission. It would be easy to point a moral by Stewart's career, but let us leave him saying with the Spaniard: "Que sea su juez Dios" (Let God be his Judge).

---

### ADDENDA BY W. W. BOLTON

---

TO complete the story, now first given to the general public through the publication of Mr. J. L. Young's manuscript, it may be of interest to mention various additional facts which in the main are to be found in the obscure and now rare weekly newspaper of Papeete in its issues of that day. "The Messenger de Tahiti" came to an end in 1880. It is strange that this news-sheet should have escaped the attention of the author of the MS., who lived for years in the town.

The following items deal with many aspects of the life of a remarkable man, a born organiser who was known locally as "Big William", not alone for his fine physique but that, for Tahitians, all he did was on a colossal scale, stupendous.

#### An Official Visit

MENTION has been made of an official visit.

There was another visit paid by a large party of guests a year later, who in their report, express their astonishment at all that they saw and at the boundless and overwhelming hospitality of their host during many days. They dwell on "the vast Estate": "the astounding success after only four years", and at seeing "an establishment on so vast a scale functioning with such calm, such order, full proof of superb direction."

They seem to have been specially attracted by the Chinaman's Village: "a small town, two clubs where they dance, and a theatre for their plays. Always keen to make his workers happy, he permits each Chinese who behaves himself well a house where he can live alone. It is his home. This favour is highly prized, the number of separate dwellings grows yearly". From Taharuu <sup>49</sup> Valley the labourers were allowed to cut timber to make rafts on which to disport themselves in the lagoon.

Their host won their hearts for they thus conclude:

"Calumniators before taking up the pen should go and see for themselves, taking note of the work, and they would certainly blush at the very idea of wronging an establishment which does honour to him who created it."

Stewart was given the honour of a special visit by the Duke of Edinburgh in 1869, amid all the pressing engagements of the Prince, who must needs see the amazing estate. Later on, we come across an advertisement inviting cargo for his vessel "The Prince Alfred": he returned the visit in the only way he could.

#### The Countess de la Roncière

THE cordial friendship between the Roncières and Stewart gave free play to the evilminded. It crushed the woman: she could stand no more.

An official notice appears reading that the Countess had left Tahiti "in a poor state of health" and "quite unable to bid adieu to her friends": and the Imperial Judge Jocolliot reports that before a year was out she died at her residence in Paris, demanding an enquiry by the Government to kill the calumny, but which was bluntly denied her. The Roncières' enemies were strong at Home.

---

<sup>49</sup> The article has *Taharini*; again, no doubt a misreading of WWB's handwriting.

The departure of the Count himself, did not, as the MS. shows, end the bitter hounding of Stewart. There were still nigh four years more for him.

Once only does he appear to have hit back, but here again he lost out. He had been summoned to attend the Court (for a case not named) and had replied by letter refusing either to attend or be represented. In December, 1870, the matter was brought to the attention of the Superior Court when the charge was made that “the said Stewart refused to acknowledge in the said functionaries and magistrates the powers they claim, and protests their decisions and their judgements”. He was fined and the costs were his to pay.

### **Ill-will of Catholic Mission**

THE ill-will of the Catholic Mission towards the Count — which reacted upon Stewart — was the result of his report sent home as to the iniquitous and inhuman conduct of Father Laval <sup>50</sup> and his assistants at Mangareva (Gambier Islands). The French Parliament took up the matter and demanded the banishment of Laval from the Gambier Group, which was duly carried out, the man being retired to Papeete where he died in 1880.

The tract of land which Stewart acquired was owned in the main by the Vai-raa-to people and those allied to them through marriage. Throughout 1864 and 1865 there are to be seen in the little newspaper of Papeete long lists of those giving the required legal notice of their purpose to sell to Stewart, and among them appear the names of Royalty, two sons of Queen Pomare — Ariiaua and Tamatoa — both wishing to have “a finger in the pie” of ready cash. Not only the land was purchased but all the cattle browsing on the plots: they would help keep down the verdure and fed his army of labourers. There appears later on, a portion of the Annual Report for 1867 of the Company, issued from London, giving two items: “Land costs 750,000 francs”: “Improvements 1,671,415 francs”. Stewart appears on the Board of Directors but not Soares who was appointed later, acting at first only as general manager.

### **Introduction of the Chinese**

SINCE the introduction of the Chinese to Tahiti by Stewart, they have increased and multiplied till to some they appear as a menace to the community. Be that as it may, there are many who are the direct descendants of these pioneers. There are still Gilbert Islanders resident in Tahiti under the name of the Arurai, after Hope Island, in that group, from whence their progenitors mostly came.

### **Stewart's Misfortunes**

THE statement made as to the dissatisfaction of some as to the price Stewart had paid them for their land — in fact, that they had been duped — lends strength to the local belief that they placed a curse upon the estate. And the sequel may well be said to support that belief, not alone in the case of Stewart himself, but that every subsequent attempt, to this day, to revive the area has ended in disastrous failure.

The years 1870 to 1873, which latter saw Stewart's end, had been far more cruel years for him than the brief summary of the MS. lends colour to. Herewith the blows, as the little newspaper reports them:

Owen and Graham (Stewart's bankers in Auckland) seek to recover and send up J. E. Brown in 1870 as their Attorney. J. E. Brown was a New Zealander, by profession a book-keeper, who went later to the Marquesas to act in that capacity for Captain Hart (once Commodore of Stewart's fleet) who had

---

<sup>50</sup> [Honoré Laval \(1808–1880\)](#)

cotton interests there. Stewart sees his heretofore unencumbered creation plastered with a mortgage “dated May 10, 1871”. His undisputed supremacy becomes a temporary managership “for our account”, on September 22, 1872.

Next, this is taken from him, and J.E. Brown appointed on January 31, 1873. His full rule is restored, Owen and Graham “having renounced the mortgage” on March 28, 1873. It was but a flash in the pan, for the shareholders step in.

“By a Writ of Refere. Mr. John Edward Brown acting in the name of and as Attorney for the Tahiti Cotton and Coffee Plantation Ltd., has been placed in charge of the administration of the said Company’s Estates in place and instead of Mr. William Stewart”. — June 17, 1873. He now is wholly out of it.

Then came the final blow — the order of the Court declaring him, personally, a bankrupt was rendered on September 23, and on the 24<sup>th</sup> he died of a violent haemorrhage.

The following obituary notice appeared in the issue of the local sheet for September 26:—

“Mr. William Stewart succumbed on the evening of the day before yesterday, to the onslaught of a prolonged and cruel illness. He was the first European to introduce the culture of cotton to the colony, the development of which is a source of prosperity and riches to the country: and throughout the course of his management he attempted by every means possible to encourage both commerce and agriculture on Tahiti. Such are the rights of Mr. Stewart to the regrets of both the European and native population, and certainty such regrets will not be lacking”.

### **Where He Is Buried**

AS to where lie the remains of Mr. William Stewart to-day, there is need for correction of the MS. His first grave was not at Mataiea, but near his residence at Atimaono. When the estate had been liquidated, and the land opened for sale to the public in 1875 his widow removed his bones to the property of her mother’s people at Mataiea — not, however, to the “plot” where her father and mother were placed in a four-square mausoleum (still standing, but now empty) but across the highway dividing the property: “between the main road and the sea”, which lies but a short distance away.

William Stewart’s widow was one of the several daughters of Andrew Gibson, a highly esteemed English merchant in Papeete, and his Tahitian wife, Moehauti a Pupa. Stewart held him in the highest regard, for when he died (February, 1869) and his body was taken to the family property of his wife at Mataiea for burial, his friend had his small army of employees line both sides of the highway as the cortege passed the estate. Years later, when the Pupa property was sold, Gibson’s body and that of his wife were removed to Papeete’s picturesque cemetery “Pauranie”, where his epitaph reads in both native and English:— “A good name is better than great riches”.

### **“Moaroa” Tragedy**

WHILST the MS. account of the tragedy of the “Moaroa” is largely inaccurate, owing to its being gathered together piecemeal, its opening paragraph is valuable as giving the reason for Lattin’s presence as a “passenger” aboard, as also is its concluding paragraph as giving the fate of the natives, both of which items were unknown to the second mate, and so completes the story.<sup>51</sup>

---

<sup>51</sup> Apparently WWB was not aware that the account of the second mate, Charles Steenalt, which WWB published in the 18 September 1837 edition of PIM, was, if not “fake”, as the Editorial Note to that article suggested, at least distorted due to the vessel’s involvement in blackbirding. See the Editorial Note to that article and pages 206–208 of [Eric Ramsden](#).

### Authorship of MS.

THERE is considerable difference of opinion as to the authorship of the MS.

Those who claim it as the work of W. J. Stuart, who was employed by William Stewart as a highly efficient engineer, are met with certain statements in the major latter half which could not possibly have come from his pen, e.g. (1) The ownership by the writer of one-fifth of the estate which is recorded under the name of J. L. Young; (2) The arrival of the writer on Tahiti, years after — not before — the death of Stewart. The best solution would appear to be that W. J. Stuart wrote as far as the first mention of William Stewart's death: and J. L. Young, securing the MS. from his aged friend, who ended his days in Papeete, added the remainder, striking off a limited number of typed copies for his particular friends with "attached photograph" of the man whom he, like others, had never seen.

52

## 22 July 1938, pages 46 and 48 — "*Bounty's*" Lost Anchor

### "BOUNTY'S" LOST ANCHOR

#### Interesting Relic In Tahiti

BY W. W. BOLTON, M.A.

WHEN in 1789, Fletcher Christian and his fellow mutineers brought the "Bounty" back to Tahiti, he sought the same spot for anchorage as Bligh had used when loading his cargo of bread fruit trees. This was not at Matavai Bay proper, but its western arm, Papaoa, where an extensive valley runs down from the hills at the back to the sea.

He had no intention of stopping long — he was all for hiding from the long arm of the law and, having secured sufficient supplies and water, he attempted to weigh anchor. But the "Bounty" had grounded on a sunken reef, of which there are plenty to this day thereabouts. There was nothing for it but to use his spare anchor as a kedge,<sup>53</sup> to haul her off. This was successful, but the kedge was held fast by the coral it had bitten into, and there was no hope of its release.

There was but one thing to do — to cut the cable and leave the anchor behind. This was done and the "Bounty" passed out of the picture. But the incident was not forgotten by the natives.

Time and again, as the years rolled on, an effort was made to get that anchor, but the grip held fast. One generation followed another, and the story of the lost anchor of the "Bounty" passed on down, with the resolve of the district of Arue that some day it should be recovered. Nigh 50 years ago, when the present Chief of Arue was a strenuous young lad, there was a call for yet another attempt.

To the joy of the neighbourhood the long-fast grip had loosened. It was not wholly unexpected, as to them it was only a question of time, for they had seen in other cases the strong corrosive action of

---

[1946, William Stewart and the introduction of Chinese labour in Tahiti, 1864–74, \*Journal of the Polynesian Society\*, Volume 55, Number 3: 187–214.](#)

<sup>52</sup> See also Tale #70, *Atimaono*, in Part IV, *Tales of a Roaming Grandfather*, and *Atimaono's Plight* in Part IX, *Old Time Tahiti*. Photographs, taken in October 2014, of the golf course that then occupied the site of the plantation are shown in a footnote in the latter.

<sup>53</sup> [Kedging](#) is a technique for moving or turning a ship by using a relatively light anchor.

coral on iron. The flukes of one arm so long held fast were gone; there was left but the point. This they easily withdrew, and dragged the weighty anchor to the edge of the lagoon, leaving it for a time on the fringing reef, in shallow water.

Some years later, the relic was drawn up on dry land, and lay in a coconut plantation, soon to be covered over by the rank vegetation, and forgotten save by a few. Last year when the once young lad was the Chief of the district, he determined to remove the relic to his own home yard, and let those who wished to see it have easy access thereto. This was done, and it lies to-day as the picture portrays.

54

It was the wish of the Chief that the Home authorities of England be informed, and confirmation of its authenticity be if possible secured. The writer was kindly called upon to act for these eager folk, and it was then that he heard the above related story from their lips.

They were quite unselfish in their attitude. The anchor was to them British property, if Britain so desired, and action would be taken to gain the consent of the French authorities to its return. Herewith is appended England's answer, through official quarters. To the natives, there is no shadow of a doubt that the anchor is the "Bounty's", and, housed as now, doubtless it will be in the Papeete Museum an object of deep interest to many besides themselves:—

NATIONAL MARITIME MUSEUM  
GREENWICH S.E. 10. 18<sup>TH</sup> March 1938.

"Dear Sir — many thanks for your most interesting letter of the 11<sup>th</sup> January, together with photograph of what would seem from local tradition to be one of the anchors of H.M.S. "Bounty". It is unfortunate that there is no recorded establishment of anchors at that date, giving weights and dimensions: but the figures quoted on the back of the photograph certainly seem approximately correct. Indeed, it would not be possible to throw doubt upon the authenticity of the anchor on the score of size.

---

<sup>54</sup> Since 1993, the anchor has been on display at the [Voyager New Zealand Maritime Museum](#) in Auckland. The label of the display states that "*The anchor was presented to the Auckland War Memorial Museum by Mr H.R. Jenkins who obtained it from the Governor and Director of the Papeete Museum. In 1993 it was loaned to the New Zealand Maritime Museum.*"

According to the Seventy-Third Annual Report of the Auckland Institute and Museum, for 1942, which can be found [here](#), "*An exhibit of outstanding interest was received through the generosity of Mr H. R. Jenkins. This is the historic anchor intimately associated with the ill-fated H.M.S. Bounty, for this relic is believed to have been abandoned by Fletcher Christian and his fellow mutineers in 1789, when they used it as a keel to free the vessel from a coral shoal in the Papaea Arm of Matavia [sic] Bay, Tahiti. After generations of Tahitians had made unsuccessful attempts to raise the anchor, it was at last recovered about 1890.*"

In September 2012, the anchor was on display in the Edmiston Gallery in the Voyager New Zealand Maritime Museum. That particular gallery contained a collection of maritime art and an exhibition about New Zealand's nuclear free policy. The anchor was set against a small wall in a corner of the gallery, with no other reference to the Bounty in that gallery (nor, for that matter, anywhere else in the museum). There was not even a display label to indicate that the anchor is from the Bounty.

The fact that the anchor has been removed from Papeete to Auckland goes completely against the recommendation made by Professor Sir Geoffrey Callender of the National Maritime Museum, Greenwich, in his letter to WWB of 18 March 1938, quoted in the article, that "*Here in England there is a strong feeling that if the anchor is accepted, as having belonged to the 'Bounty', it should be preserved for all time near the place where it was discovered. Removed from its original setting, it would lose much of its intrinsic importance.*" Yet four years after that letter was written, the anchor was removed to Auckland in 1942, where it has indeed lost much of its importance.

Another of the [Bounty's anchors](#) was found at Pitcairn by [Luis Marden](#) and [raised in January 1957](#).

“It is odd that the stock should have disappeared. It has generally been found that the stock of an old anchor was practically imperishable in salt water. It looks as if the stock of this anchor must have been wantonly destroyed by some one requiring a piece of very hard wood.

“By the way, it is a mistake to suppose that the coral would corrode the iron of the anchor. What actually happened was that the anchor made good hold of the coral and that the coral, being living organism, retained a tight grip of the metal until the coral itself decayed. Then the grip relaxed and the anchor would have been released.

“Here in England there is a strong feeling that if the anchor is accepted, as having belonged to the ‘Bounty’, it should be preserved for all time near the place where it was discovered. Removed from its original setting, it would lose much of its intrinsic importance. Yours faithfully,

GEOFFREY CALLENDER.

W. W. Bolton, Esq. M.A.,  
Papeete, Tahiti.

Professor Sir Geoffrey Callender, F.S.A., F.R. Hist. S., is the Director of the Museum.

The anchor, as it is to-day.

15 December 1938, pages 25–26 — *The Numerous Princesses of Tahiti*

## THE NUMEROUS PRINCESSES OF TAHITI

### Explanation of a Curious Social Phenomenon

#### Letter to the Editor

WHEN — now full 10 years past — the writer came hither seeking (and finding) quiet and retirement after a strenuous career, clear up to a man’s Allotted span, he was surprised at the number of Princesses who roamed the streets of Papeete.

The absence of Princes was as remarkable. Possibly they hid themselves from public view through modesty. One only he saw — none could fail to see him — Prince Hinoi — for he was a huge man, head and shoulders towering above the tallest on the island, and of gigantic proportions.

It was natural enough to look into the matter for one's own satisfaction. It took time, for one met with a very maze of contradictions and there were tomes to be secured and read.

The upshot was truly astonishing. Some — happily not all — based their claims upon the fact that they were the grand-nieces of Queen Marau Salmon, the temporary consort of Pomare V. She had been a Queen for 13 years, and it was claimed that her nieces and grand-nieces and those yet to follow were princesses. It is as if our English Queen, who was a Bowes-Lyon, bestowed upon all her Bowes-Lyon nieces and grand-nieces yet to come that same high rank; which, as Euclid would express it, is absurd.

Maybe, the temptation was too overpowering to be resisted. It was something to be a princess among the swarm here of the gentler sex. Tourists fell to it — especially, one regrets to say, Americans — it was not everyday that one dines and wines with a princess — nothing was too good for such a divinity. Some even seriously contemplated marriage, bearing off to their far off homes a live princess — to the astonishment and fearsome jealousy of their friends.

As to princes, it was not modesty that accounted for their absence, but plain commonsense. They knew the claim was preposterous. If the women chose to play the game, let them! It really hurt no one save the gullible tourist and if he was such an ignorant fool, let him pay the price.

But, to the writer, it does not appear in that light — it is abusing an honoured title and not “playing the game”. These self-termed princesses should stand on firmer ground. Charm, beauty and oft fine figure are theirs; pretence and affectation are but sand. Disillusionment is bound to come sooner or later and, with it, contumely and content by those deceived.

This careless handling of European titles was further pressed home to the writer by the abuse of the still higher title of “King”. There was talk — and there still appears to be talk — of one of Queen Pomare's younger sons as “King of Moorea”. Kingship is synonymous with sovereignty. The sovereignty of Moorea was the Queen's. If he was “King”, then Moorea had suddenly become a separate State from Tahiti. What he really was is what the first Pomare vainly tried to become upon Tahiti, the “Paramount Chief” — the leading chief of all. Makini became that on Moorea in Cook's day; Teritapunui was created that by his mother, the then Tahitian sovereign. He was, if one can coin the word, the Ari'i of the Ari'i-rahi, and the lesser Ari'i of Moorea. If there be a special word it is certainly not the equivalent of “King”, which implies territorial possession.

The Leeward Islands being separate States from Tahiti till the London Treaty of 1888 was abrogated, and France mastered them with arms, there were rightly both Kings and Queens thereon; but Moorea, since Mahini's <sup>55</sup> day, has been as it is to-day, an appenage [sic] to Tahiti. The misuse of the title is as if Princess Beatrice, for long years past the “Governor” of the Isle of Wight (the small appenage to England off its south coast) was “Queen of the Isle of Wight”. There would be short shrift at Home if such a claim were made by ill-advised correspondents, much less talk.

It is surely high time that these flagrant perversions of titles should cease; and, if the writer is privileged to aid in some small measure in such good work, he is well repaid for his long and interesting research.

---

<sup>55</sup> *Makini* in the previous paragraph and *Mahini* here are inconsistent. In the literature, *Mahine* is referred to as the chief of Moorea in Cook's day; see, for example, page 489 of [Colin Newbury \(1967\), Pomare II and the Concept of Inter-Island Government in Eastern Polynesia, The Journal of the Polynesian Society 76 \(4\): 477–514.](#)

A thing which he has been long impressed with is that the (socially) upper grade of Tahitian half-castes have talked and talked to outsiders till they have lost in large measure the basic facts. In confusing themselves, they confuse their hearers. The writer has long suffered, so he knows; and it has taken years of quiet perseverance to sift the wheat from the chaff. It was well worth the trouble, for Tahiti's past is not inglorious — though it has dark spots and none darker than those preceding the coming of the white man — despite the novelist, who grows eloquent on “the noble savage” of a day now passed.

I am, etc.

W. W. BOLTON

**Kings and Princes in Tahiti**

**Who Have the Right to Names and Titles?**

Letter to the Editor

WHEN reading the August issue of your excellent journal we found on page 34 a letter of most extraordinary character, addressed to the Editor and signed by Tamatoa Brander Pomare and Pomateao Salmon Pomare.

We presume these signatures represent Monsieur Tamatoa Brander and Madame Pomateao Salmon Stevenson (nee Salmon).

Knowing these charming young people as we do, we do not believe either of them wrote the letter to which the above signatures are attached. Under no circumstances could we imagine them departing so far from the canons of good taste and good breeding as to have written the last two paragraphs of that letter.

Whoever did write it exhibits an amazing ignorance of heraldry, French law, Tahitian custom and the facts.

The surname Pomare is legitimately borne but by two people of that generation: Princess Teriinui-o-Tahiti, the daughter of the late King Pomare V., and Prince Ariipaea, the only surviving son of Prince Terihinoiatua — the nephew and adopted son of King Pomare V.

Princess Teriinui-o-Tahiti is unmarried.

Prince Ariipaea Pomare has a large family of sons and daughters, who inherit the same name Pomare, and through them alone the name Pomare will be perpetuated.

---

<sup>56</sup> See also *The Princesses of Tahiti* in Part XIV, *Tahitian Vignettes*.

Madame Pomateao Salmon Stevenson is given the title of Princess by courtesy only.

Monsieur Tamatoa Brander has never claimed nor ever received the title of Prince.

The writer of the letter is trying to bring again to life a lost cause, which had better be left decently buried with the individuals who initiated and carried it on during nearly fifty years.

Mr. Bolton's essay on the Pomare family, in the April "P.I.M.", is sustained by the records and the facts. It is accurate in every particular.

I am, etc.,  
VERITAS.

Tahiti, 9/10/1938.

### 15 December 1938, pages 38–39 — *Pomares of Tahiti and Heraldic Law*

## POMARES OF TAHITI AND HERALDIC LAW

Letter to the Editor

FOR the sake of historical accuracy, I seek space to further elucidate the article you kindly published on the Pomares of Tahiti.

The Pomare family and the Pomare surname must not be confused. Queen Pomare's three grand-daughters (there were five, but two died in childhood, as well as a brother) married as follows:— Vaetua married a Brander, whose mother was a Salmon; Navahoroa married two Salmons; Maevaua married her cousin, Hinoi Pomare. Hence, the children of the first two named lost the surname but, of course, were members of the Royal Family, as are their children in turn to-day. The tacking on of a family surname to that of the father is an anomaly unheard of anywhere, to the writer's knowledge, and gives an unfortunate sense of affectation.

The titles "Prince" and "Princess", borrowed from Europe, are of necessity governed by the laws of heraldry, and, if used elsewhere in place of native names, such as Arii, must needs conform thereto. A leading law is that the above titles cannot descend through a woman unless she is a sovereign reigning in her own right, not a consort to a king. Queen Victoria, and Tahiti's Queen, Pomare IV., were sovereigns in their own right. The latter's son, Tomatoa, was therefore a prince, and his five daughters were princesses. But the three daughters already named were unable to pass on the titles to their children. We see the matter clearly portrayed in Britain. The Princess Royal's sons have never borne the title of prince.

Queen Marau, the last queen, had two daughters. The title they bear does not come through her, a consort, but through the king. Divorce ended the transmission of the title to her son, born later. These daughters have the right to the surname Pomare; the son has not, nor has ever claimed it. Neither daughter has issue; but if they had, the title would lapse. So is it with the Brander and the Salmon issue, allied by marriage with the Pomares; but one must again insist that they are members of the Royal Family. They have only lost the right to title, and the use of the surname.

The marriage of the cousins, Hinoi Pomare and Maevaua Pomare, being dissolved, no issue surviving, Hinoi yet had three children fully recognised as his by law (two sons and a daughter), and

all three entitled through him both to bear his title of prince and his surname. The princess's daughter bears her white husband's surname to-day. The eldest son, Prince Hinoi II., is dead, leaving no issue. His brother, Prince Ariipaea, survives and is entitled fully and unquestionably to bear both title and surname. There cannot possibly be any other adult prince to-day upon Tahiti. The other few adults are either Salmons or Branders.

The headship of the Pomare family is very clear, when the facts are known. On the day of the last King Pomare V.'s accession to the throne, he — backed by Chesse, the French Commandant — announced that the succession, and, of course, with it the headship of the family, was to go first to his niece, Vaetua, and her issue; but, if she died or failed in issue, it was to go secondly, to his nephew, Hinoi. That was in 1877. But in 1880 he decided to give over his sovereignty to France. Hence, there was no succession in existence. The Order lapsed; and Vatua, having married into Pomare's wife's family, to his annoyance and disgust, he adopted as his son and heir his nephew. The headship thus naturally passed from a niece to his recognised son and heir. The elder branches of the Pomare family were thus eliminated, both by their marriages and the choice of the one-time king, from any special prior claim by birth. Hinoi was heir to title as well as property, and was always recognised by the Tahitians of his day as the head of the Pomare family, even as is Ariipaea to-day.

Of course, it may seem hard on those elder branches to have both titles and position denied them by heraldic law, and the arbitrary choice of their one-time head, but one must face facts, and also be sure of the ground before putting pen to paper. So also must one be ready to bow to facts, however unpleasing. Some here have willingly done so. There seem to be others who are unwilling, misled by imperfect knowledge.

The Pomare family is no mere family affair, which gentle breeding would forbid enquiring into, but the family of a line of sovereigns which calls for research and careful record on behalf of an interested public.

I am, etc.

W. W. BOLTON.

Papeete, 12/10/1938.

## 15 February 1939, pages 32–33 — *Discovery & Discoverers of French Oceania*

### Discovery & Discoverers of French Oceania

THE following remarkable list — which is of unique value — has been compiled by the records of the various navigators concerned, and from those of other voyagers, by Mr. W. W. Bolton, M.A., an English historian resident in Tahiti. Mr. Bolton, in courteously giving us permission to publish this list, says: "Documented corrections would be welcomed."

The total number of Islands in French Oceania is 105.

Island.	Discoverer.	Date.
<b>THE GEORGIAN GROUP.</b>		
(As recorded at The Admiralty, London, 1768.)		
Tahiti	Wallis	1767

Moorea	Wallis	1767
<b>Island.</b>	<b>Discoverer.</b>	<b>Date.</b>
Maiao	Wallis	1767
Makatea	Roggeveen	1722
	(Now grouped with the Atolls.)	
Mehetia	Wallis	1767
	(Claimed also for Carteret.)	
Tetiaroa	Wallis	1767
	(Claimed also for Cook.)	

**THE MARQUESAN GROUP.**

(So named by Mendana.)

South Group:

Fatuhiva	Mendana	1595
<b>Island.</b>	<b>Discoverer.</b>	<b>Date.</b>
Hivaoa	Mendana	1595
Tahuata	Mendana	1595

North Group:

Nukuhiva	Ingraham	1791
Nahuka	Ingraham	1791
Uapu	Ingraham	1791

(The North Group claimed also for Marchand and Chanal.)

**THE MANGAREVA OR GAMBIER GROUP.**

(So named by Wilson.)

Akamaru	Wilson	1797
Aukena	Wilson	1797
Rikitea	Wilson	1797
Taravai	Wilson	1797
Crescent	Wilson	1797

(Native name Timoe.)

**THE TUPUAI OR AUSTRAL GROUP.**(So named by the French authorities, 1851.)<sup>57</sup>

Raivaivai	Gayangos	1775
Rapa	Vancouver	1791
Rimatara	Henry	1811
Rurutu	Cook	1769
Tupuai	Cook	1777

**THE LEEWARD OR SOCIETY GROUP.**

(So named by Cook.)

Raiatea	Cook	1769
Huahine	Cook	1769
Maupiti	Cook	1769

<sup>57</sup> The article has *1881*.

Tupai	Cook	1769
Tahaa	Cook	1769
Scilly	Wallis	1767
	(Native name Manuai.)	
Pora Pora	Cook	1769
	(There is no letter "B" in Tahitian.)	
Bellinghausen	Kotzebue	1824
	(Native name Motu One.) <sup>58</sup>	
Mopelia	Wallis	1767

**THE ATOLLS OR TUAMOTU GROUP.**

(So named by the French authorities, 1851; formerly known as the Poumotus.)

Aha	Schouten	1616
Ahunui	Beechey	1826
	(Claimed also for Martin.)	
<b>Island.</b>	<b>Discoverer.</b>	<b>Date.</b>
Akiaki	Bougainville	1768
Amanu	Quiros	1606
	(Claimed also for Varela, 1774.)	
Anaa	Quiros	1606
Anuanuaro	Wallis	1767
	(Claimed also for Quiros.)	
Anuanurunga	Wallis	1767
	(Claimed also for Quiros.)	
Apataki	Roggeveen	1722
Arutua	Roggeveen	1722
Faaite	Bellinghausen	1819
Fakahina	Kotzebue	1824

Kauehi	Humphrey	1822
Kaukura	Cook	1774
Makemo	Cook	1773
Manihi	Schouten	1616
Manuhangi	Wallis	1767
Maria	Bougainville	1768
	(Native name Vahitahi.)	
Marokau	Bougainville	1768
	(Claimed also for Quiros.)	
Marutea	Edwards	1791
	(Claimed also for Cook.)	

<sup>58</sup> The article has *Motu O ne*.

Matahiva	Bellinghausen	1819
Motutunga	Cook	1773
Mururoa	Wallis	1767
Nangenengo	Wallis	1767
Napuka	Byron	1765
Niau	Schouten	1616
	(Claimed also for Greig.)	
Nukutavake	Carteret	1767
Nukutipipi	Wallis	1767
	(Claimed also for Quiros.)	
Paraoa	Wallis	1767
Pinaki	Carteret	1767
Puka Puka	Schouten	1616
Pukaruha	Wilson	1797
Rangiroa	Schouten	1616
Raroia	Roggeveen	1722
Raraka	Ireland	1831
<b>Island.</b>	<b>Discoverer.</b>	<b>Date.</b>
Reao	Bell	1822
	(Claimed also for Tonnerre.)	
Tahanea	Boenechea	1774
Takaroa	Schouten	1616
Takapoto	Roggeveen	1722
Takume	Bellinghausen	1819
Tatakoto	Varela	1774
Tauere	Boenechea	1772
Tekokoto	Turnbull	1803
	(the Supercargo)	
	(Claimed also for Buyers (the Captain).)	
Tematangi	Bligh	1792
Tepoto	Byron	1765
Tikei	Schouten	1616
Tiki hau	Roggeveen	1722
Toau	Roggeveen	1722
Tureia	Carteret	1767
Vairaatea	Wallis	1767
Vanavana	Beechey	1826
	(Claimed also for Barrow.)	

There appears to be no record of the discoverers of the 17 remaining small Atolls, unnamed in the above list.<sup>59</sup>

<sup>59</sup> This list first appeared in the Appendix of *Old Time Tahiti*, which was completed in 1938, and was also published in 1940 in the Bulletin de la Société des Études Océaniques N° 68, pages 272–275. Some of the Polynesian names in the BSEO article have slightly different spellings, which are footnoted there, and several also have European names; however, the dates of sightings are identical.

17 April 1939, page 24 — *The Portent of Thunder***The Portent of Thunder**<sup>60</sup>

**(Found in an old note-book of the late Trader Macfarlane, who was at one time a resident on Moorea, French Oceania. His grave is on Tupuai.)**

THE clouds had been gathering into heavy masses of a dull leaden hue and slowly drifting up from the north since early morning. Now, the lowest of them occasionally swooped down upon Rotui and obscured the summit with swirling, eddying wreaths of vapour, rising again and showing the sharp outline of the mountain, with its lace-like fringe of trees, marvellously clear and distinct against the blackness beyond.

The surf broke on the reef with an apparent sullen tone to its roar, rising in a line of inky blackness and curling over to break — not, as usual, in a mass of sparkling brightness, which pained the eye with its brilliance, but in foam, to which the clouds had lent some of their blackness, till it, too, appeared sombre in hue. The ocean beyond, also gaining its colour from the clouds, gradually became darker, till it was difficult to distinguish the dividing line of the horizon. Occasionally faint flashes of lightning lit up momentarily the distant masses of cloud while the sullen rumble of thunder could now and then be heard.

A thin white line on the ocean, behind which the clouds seemed to merge themselves in the sea, showed, at last, where the squall, the precursor [sic] of the storm, was coming; and the long fronds of the coconuts began to ripple in the first light gusts. The squall reached the reef which, suddenly, was apparently obliterated, and it could then be seen that, close upon the heels of the wind, was a wall of rain, utterly impossible to see through. The lightning had by this time increased in brilliance, while the thunder changed its rumble to a roar.

Then the squall reached us, and the ripple of the coconuts changed to a complaining sound, as the leaves threshed around, while the long trunks bent to the fury of the wind, and then to the rain. The rattle of it on the roof was almost louder than the thunder, which kept up peal after peal, with hardly an interval between.

“Well, Tarie”, I said, “This seems to be quite a little thunder shower”.

“Yes”, she said seriously. “Some one of the family of the kings (high chiefs) is dead”.

“Why?” said I. “Does a prince die every time there is a thunderstorm?”

“Now”, she said, “You want to laugh at me. But if you listen I will tell you, and you will learn some more that you did not learn in Meriti. You have been here a long time now, and have you ever seen a storm like this before? No, I know you have not. Sometimes there is thunder, but not much; but, when it comes like this, to-day, then we know that a child of the kings is dead.

“It has always been so. Long before the white men came it was so, and it will still be so while any of the kings are left in Tahiti. When Pomare V. died I was in Huahine, and a storm like this came there, only it was a worse storm than this and a very old man there said: ‘This is a storm of the kings. When

---

<sup>60</sup> A slightly different version of this article appears as Tale #64 in *Tales of a Roaming Grandfather*. WWB states there that the Trader MacFarlane was once of Victoria, British Columbia. In 1898, [George Archibald McTavish \(1856–1922\)](#) moved from Victoria to Moorea, where he lived under the name of Macfarlane. [Link to Ancestry.com](#) (registration required)

the next ship comes from Tahiti, they will tell you that Pomare is dead'. And he bought black cloth and made himself a black pareu and a black shirt, and he made his wife and daughter cut off their hair and make themselves black clothes, for he was a fetii (relation) of the king. And, true, when a ship did come, they said that Pomare had died on that day the old man said he did".

Pomare V. died on June 12, 1891.

. . . . .

In confirmation of this native belief, there was a local happening of the same character in Papeete in January, 1901, which is worth recording. An earthquake and a veritable tornado struck the little town. Two women of mature age, each the mother of many children, were together in one of their homes. One was a pure native, the other a half-caste, with British blood in her veins. They talked of the portent in the presence of one who related the story to the writer; and from its great severity, they were certain that some very great personage in the world had died. The half-caste was fully convinced that it must be the greatest ruler of that day, Beretania's Queen.

It was so. Queen Victoria died on January 22, 1901

— W. W. BOLTON.

## 16 May 1939, pages 52–53 — *Some Common Errors in Tahitian History*

### SOME COMMON ERRORS

#### In Tahitian History

BY W. W. BOLTON, M.A.

IT is ever hard to catch up with error, and silence it for good and all; but at least Truth should be given a chance.

As to Tahiti, there has been an astonishing lack of accuracy in fundamental matters, which writer after writer glibly passes on as facts. In the hope that some stay may be brought about in this dissemination of flagrant errors, the writer would call attention to some of the chief ones prevalent to-day. To enumerate them all would be to strain attention to the limit.

Error 1: That the present day "Society" Group was so named by Captain Cook.

When he arrived at Tahiti, after Wallis, he knew from the Admiralty records that Tahiti and its adjoining islands were already marked down as the Georgian Group. Neither Wallis nor he knew anything of another group within a hundred miles, but Cook was informed of the fact by a leading Raiatean native, named Tupaia, who was keen to return to his home, and offered to steer Cook if he would bear him back. Cook did so and, first of white men, saw the group of islands to the leeward of the Georgian, to which he gave the name "Society", after the Royal Society, which had worked for his voyage to the Great South Sea, to observe the transit of Venus. Both the "Command Papers presented to the British Parliament", covering the disturbing years of 1822–1847, and the annual reports of the early missionaries to the L.M.S., deal with the Georgian and the Society Groups as entirely different. How the Leeward name of 1769 absorbed — as it does to-day the Windward name of 1767 is another story, here irrelevant.

Error 2: That Pomare I. was the first King of Tahiti.

He tried for many of his later years to reach that height of his ambition, but failed. Papara District defied him, to his death. It cannot be too clearly pressed home that he founded no royal dynasty, but only a dynastic name. He was the first Pomare, that was all. It was his son, Pomare II., who was the first king, and raised his house to Royalty. To the first white men, both sailormen and missionaries, it was inconceivable that any land, even though an island, should be without its king, and they gave the rank and title to anyone who seemed to be of real importance. This led to endless trouble, even savage warfare, by those who could not conceive of one chief being head and front of the rest.

Error 3: That Papeete was one of the villages of Tahiti from time immemorial.

Not one of the pioneers even mention it as existing. Cook saw it from beyond the barrier reef, and noted it down as Nanu. He dared not try the Pass, to enter the roomy, placid lagoon; but, like Wallis and Bligh and Vancouver, had to be content with the Matavai roadstead. The first missionaries walked through the site of the present town, but it was a series of family waterfront properties, without a name, save that its one feature was the great House of Assembly, "The Nanu", which stood where now stands a pineapple canning factory. It was not till Pomare the Second's day that it took shape, from a straggling line of natives' homes to a place of settlement for white folk. It dates from the first decade of 1800 or shortly after. Pomare II. returned from exile to Arue in 1808 and writes from "Papeiti" in 1812.

Error 4: That Tahiti lies in "The South Seas" (plural).

The Pacific Ocean, save on its western coast line, is one, undivided whole, north and south of the Equator. Tahiti lies in "The South Sea" (singular). This term was first used by the Spaniards, then fixed historically by "The South Sea Bubble", and used in all reports from whalers as a general term for their hunting ground. The use of the plural, so common to-day, save when occasionally the singular is forced into use in an adjectival sense, is a careless, though undoubtedly poetic indifference to fact. To those of Europe who first gazed upon or sailed it, despite the broad Atlantic, the Pacific was its superior, "The Great South Sea". Geography has its rights, even though they be condemned, and to know the Truth is wholesome, even if unwelcome — as these notes may be to some who hate correction of what they have held as facts.

Error 5: That the Brander branch of the Royal Family holds the headship of the Pomare Family to-day.

If Pomare V. had not surrendered his sovereignty to France, Tamatoa Brander would be Pomare VIII. to-day; his father, John Brander, would have been Pomare VII.; his grandmother, Vaetua, Pomare VI. But, having given up his crown, he adopted as his son and heir his nephew Hinoi, the princely son of his youngest brother, who was recognised as head, after his uncle's death and throughout his life. He left two sons; his eldest, Prince Hinoi II., succeeding him, who, dying without issue, the headship passed to his brother of to-day, Prince Ariipaea.

Error 6: That heraldic titles can be used indiscriminately without reference to its laws.

These are very strict, else what is high honour and special right would become a matter of small moment. In the Pomare Family, those only are entitled to bear the supreme insignia of worldly honours who come through the male line. One branch alone — the Hinoi line — traces back throughout as male, not a female one. Its present day head is as stated above; nor does Tahiti lack for princes and princesses with his numerous, charming and unassuming group of bairns around him. The Pomare surname and high titles will take long a-dying.

15 December 1939, pages 37–38 — *Tahiti's First Ships*

TAHITI'S FIRST SHIPS

Valuable Historical Compilation

BY W. W. BOLTON, M.A.

(NOTE — Here is an invaluable addition to the history of Eastern Polynesia. Mr. W. W. Bolton, M.A., an Englishman, resident in Tahiti, has devoted several years to exact historical research; and, from an examination of endless data, he has compiled the following list of the first ships to visit Tahiti. This list, and especially the notes attached thereto, should serve to correct many errors.)

THE arrivals of the earliest ships at Tahiti, up to 1801, were as follows:—

1767 — H.M.S. “Dolphin”: Captain Wallis. Made a stay of 36 days. Left a pennant flying ashore. (See note.)

1768 — Frigate “Boudeuse”: de Bougainville. Stay of nine days. <sup>61</sup>

1769 — H.M.S. “Endeavour”: Cook. Stay of 90 days.

1772 — Frigate “Aguila”: Boenechea. Stay of 30 days. (Tracking the English in Spain’s preserve.)

1773 — H.M.S. “Resolution”: Cook. Stay of 15 days.

1774 — H.M.S. “Resolution”: Cook. Stay of 22 days.

1774 — Frigate “Aguila”: Boenechea. Stay of 60 days. (Brought two priests who stayed 350 days.)

1775 — Frigate “Aguila”: Langara. Stay of nine days. (Took the priests back to Peru.)

1777 — H.M.S. “Resolution”: Cook. Stay of 49 days.

1788 — “Lady Penrhyn”, a convict ship on its way home from N.S.W.

1788 — “Bounty”: Bligh.

1789 — Swedish vessel: Cox, the master. <sup>62</sup> Left a Union Jack as a gift to Pomare. (See note.)

1791 — “Pandora”: Edwards. Carried off the “Bounty” mutineers who had remained on Tahiti.

1791 — H.M.S. “Discovery”: Vancouver.

1792 — “Matilda”: A whaling ship. Wrecked in the Tuamotus. No loss of life.

1792 — “Providence”: Bligh.

1793 — “Prince William Henry”. Bore off the “Matilda’s” crew.

1793 — “Daedulus” <sup>63</sup> : A store ship. Two Swedes deserted and “went native”; became useful as interpreters.

1797 — “Duff”: Captain James Wilson, with L.M.S. party.

1798 (March) — “Nautilus”: A whaling ship. Bore off 11 of the L.M.S. band.

1798 (August) — “Sally”: A whaling ship. Explosion of powder secured by natives killed the High Chief Temarii.

<sup>61</sup> PIM has *Boudense*, yet another example of difficulty with WWB’s handwriting of *n* and *u*.

<sup>62</sup> Fur trade brig, *Mercury*

<sup>63</sup> Captain Vancouver’s storeship. WWB has *Doedulus*.

1798 (August) — “Cornwall”: A whaling ship.

1801 — “Royal Admiral”: Captain William Wilson. A convict ship.

### NOTES ON THE ABOVE

All these ships dropped anchor at Matavai (now known as Point Venus), except de Bougainville, at Hitiaa, and the Spaniards, at Tautira.

The pennant that Wallis set up ashore, at Matavai, was coolly borne off by Amo and Parea, to be used by their young son Teriirere at his marae in the district of Papara as a symbol of political power over the Teva clan. It had further travels, being borne off in triumph, later on, by their enemy Tutaha, to his marae at Paea. There Cook saw it ornamented with yellow, black and red feathers. Later still, when Pomare mastered Paea, he carried it off to his marae at Pare-Arue, the district where Wallis had planted it.

The Union Jack of Captain Cox gave added lustre to Pomare’s claim to supremacy and added bitter offence to his relentless opponents.

Boenechea laying claim to Tahiti for his sovereign raised a wooden cross ashore inscribed: “Christus vincit — Carolus III., Imperator, 1774”. Cook, on his last visit, inscribed on the reverse side of the cross: “Georgius tertius Rex — Anni, 1767–1769, 1773–1774 et 1777”. Carolus, on hearing of this, gave orders for its removal. But that mission never arrived — Spain had her hands full elsewhere.

The “Duff” did not arrive a second time at Tahiti. It started, but was captured by a Buonaparte privateer, off Cape Frio, on February 19, 1799, and was sold at Montevideo. Its end is unknown. Those aboard made their way back to England, after considerable difficulty and privation. This historic craft was a vessel of 267 tons, its length 96½ feet, its beam 25 ft. 8 inches. It had two decks, three masts, a square stern and a manhead. It cost the L.M.S. £5,000. Leaving Tahiti in 1797, the “Duff” was headed for Canton, where tea was shipped, for which the East India company paid £4,800 on the “Duff’s” return to London on July 11, 1798. Its flag was “purple, with three doves argent, bearing olive branches in their bills”.

There were 25 souls landed at Matavai from the “Duff”, viz., 17 men, 5 women and 3 children. Of the men, whose ages ran from 20 to 37, there were 4 ministers, 4 carpenters, a bricklayer, a wheelwright, a gardener, a grazier, a harness-maker, a weaver, a tailor, a shoemaker and a linen-draper. The graves of three of these are on Tahiti, and one on Moorea, beyond Tahiti. Two lie at Parramatta, N.S.W., one at Ryde, N.S.W., one at Port Jackson, N.S.W., and one was lost with his ship at sea. The remaining eight returned to England.

The “Royal Admiral” provided accommodation for only nine — all men. The graves of two of these lie on Tahiti and one on Moorea.

All the above graves, on the two islands, are known and marked.

**15 February 1940, pages 46–47 — *How Rev. McKean Was Killed***

**How Rev. McKean Was Killed**

**Light on a Point of Tahitian History**

BY W. W. BOLTON, M.A.

“SHOT at his door during the fight at Point Venus, June 30, 1844” — so runs the legend on the tombstone of Rev. T. S. McKean,<sup>64</sup> of Tahiti.

For years, the reason for this untoward happening puzzled the writer. Was it a pure accident, or done on purpose? Was it a French bullet or a Tahitian that ended his short career? — for he was but 37. Was he an impediment to the French, by a determined backing up of the patriots, or was he, like his fellow missionary, the accomplished but erratic Orsmund, considered a traitor to their own cause?

There was none locally, of to-day, who could throw light upon the matter.

There was a running fight amid the heavily timbered promontory, and a stray bullet from an unknown source found its billet on an onlooker who should have been elsewhere when bullets were flying — this was the only comment obtainable.

Then, haply, one day, there came into the writer’s hands a book with an engaging title, “Rovings in the Pacific”, its date 1851, written by one who refers to himself as “a merchant long resident on Tahiti”, but who was clearly Edward Lucett,<sup>65</sup> by much unmistakeable evidence therein.<sup>66</sup> It was he who, respected by both sides, made a gallant though ineffectual effort to bring about peace two years after the tragedy now dealt with, going to the patriots’ camp at Papenoo and arguing for settlement.

He was an Englishman to the core (his birth place Ealing, Middlesex) and he saw the hopelessness of the situation. He and his Tahitian wife, Mary, now sleep their long sleep, side by side, in Pa Uranie, Papeete’s picturesque cemetery, their graves the first to be met with as one enters the lofty iron gates, and passes to the right hand, an English surgeon, lying hard by.

Under the date, 1844, the long-sought information was clear, and the incident is vividly described as follows:—

“The French Governor<sup>67</sup> had marched to Point Venus, intelligence having been given by a renegade native that his countrymen were assembling in that quarter. The Governor proceeded to the house of the Rev. Mr. McKean, and remained some time conversing with him and another of the missionaries who happened to be present, endeavouring to persuade them to take charge of a drunken French soldier who could neither walk nor keep his seat on horseback.

---

<sup>64</sup> See [Memoir of the Rev. Thomas S. McKean: missionary at Tahiti: who was killed by a musket-shot, during an engagement between the French and the natives, on the 30th of June, 1844.](#)

<sup>65</sup> Edward Lucett (1815–1853)

<sup>66</sup> Volumes 1 and 2 of *Rovings in the Pacific, From 1837 to 1849: With a Glance at California* by Edward Lucett can be found [here](#) and [here](#). David Forbes in [Hawaiian National Bibliography, 1780–1900](#) states that “The author, a merchant long resident at Tahiti, had left his native England in 1837 for New South Wales, and after a stay there continued on to New Zealand. He gives a lively account of both places. He settled in Tahiti, but much of his life was spent trading among various Pacific island groups and in South America...”

<sup>67</sup> [Armand Joseph Bruat \(1796–1855\)](#)

“A boat was in readiness to convey the reverend gentlemen to Papeete, and the Governor urged them to take his man with them, saying ‘he knew that the natives would kill him if he was left behind and he would be no trouble to them as he was drunk. He would lie in the bottom of the boat like a log’.

“The missionaries gave their consent, and, the noise of firing being heard, the Governor mounted his horse to join his party; but, ere doing so, he rode to the fence and again called out to Mr. McKean, repeating his instructions respecting the care of the man. With eager politeness, Mr. McKean hastened to the end of the verandah and raised his hat in acknowledgement.

“As the Governor rode off, and Mr. McKean was in the act of re-entering his house, a musket ball struck him in the back of the head, behind the ear. He expired without uttering a syllable. The ball lodged below the socket of the eye. It is acknowledged that it was fired by a native, although no one grieves more for the unhappy occurrence than the natives.”

Lucett goes on to say that McKean’s house was converted into a hospital and barracks for the French soldiers “with the destruction of his stock and appropriation of any convenient articles of property”. He accompanied sailors of the British ketch, the “Basilisk”, which was then in Papeete Harbour, who conveyed the body in their boat across Matavai Bay to bury it “shrouded in its bloody vestments”, alongside Nott, who had died the month before.

There seems no reason to doubt that the sharpshooter took aim at Bruat who, on horseback, would be on a level with McKean on his verandah, and that the natives placed Bruat and his party as the cause of the tragedy.

This latter point seems evident from an incident, little known even locally, but recorded by the French historian, Caillot<sup>68</sup> as occurring that same day. With the French soldiers eight miles away to the north, the patriots, hovering on the south of Papeete, saw their chance and entered the little town. Ill news ever travels fast. That afternoon and night, revenge for all and sundry wrongs was had by committing to the flames the entire Catholic Mission buildings in its centre. Everything went up in smoke — alters and vestments, furniture and clothing, books and Mss. This latter was indeed a loss, for the then ailing Father Caret (he, with Father Laval, being the cause of all the trouble) had compiled dictionaries of both the Marquesan and Tahitian languages in his heyday, and his death was evidently not far off. He died in October of that year, aged 42. Those were strenuous days on Tahiti.<sup>69</sup>

The gravestones of Rev. T. S. McKean, M.A., (on the left) and of Rev. Henry Nott, in Tahiti. The story of the removal and recovery of these gravestones, and the building of the wall, was told in the “P.I.M” of January, 1938. — Photo by Simpson.

## 16 April 1940, pages 34–36 — *Pot-pourri of Tahitian History*

### Pot-pourri of Tahitian History

BY W. W. BOLTON, M.A.

THE second Pomare, before ever attaining kingship, had no small opinion of himself, nor allowed his followers to think otherwise. He named his residence the “Clouds of Heaven” (Aorai), his canoe the “Rainbow” (Anuanua), his torch for the night the “Lightening” (Uira), his riding on the shoulders of slaves his “Flying” (Mahuta), his drum the “Thunder” (Patiri) and completed the list with his title “Otunuiteatua”, which interpreted reads “The great Tu, the god”. What other high chiefs on Tahiti thought of these grand airs and mighty claims is not recorded.

. . . . .

RATS were indigenous in Tahiti, but not cats. Whence came the cats? Wallis and Cook were the benefactors. When the “Duff” arrived in 1797, its cats could not seemingly be spared, for we read in the Journal of the missionaries who came ashore: “Some of the Brethren being troubled with rats last night, we this day applied to the king for some cats”. They were handed over, 4 in number. Crook, who was left, alone, in the Marquesas makes an entry in his diary, dated June 12, 1797, before the “Duff” sailed away: “Went aboard. In the evening returned on shore with some goods and 2 cats”. The Captain was open handed this time. We have here — unless Mendana dropped some in 1595 — the progenitors of Marquesan cats of to-day.<sup>70</sup>

. . . . .

TAHITIANS of the past were a light-fingered gentry, from the highest chiefs down. Theft was a natural instinct and habit of the entire island, and they had a special god of theft, named Hiro, to bless them on their enterprise and success. To be caught red-handed, however, the penalty was death.

<sup>70</sup> See *Introduction of Cats* in the Appendix of *Old Time Tahiti*.

To guard their possessions the pioneer white folk had a hard time. It was well-nigh a hopeless struggle. Here is one entry out of many:

“December 27, 1798. Otuu, hearing Brother Broomhall had in his possession a large Bible with cuts, demanded to see it. The book was brought. After awhile, he sent Brother Broomhall to fetch another picture book. While absent, Otuu dexterously removed the plate that represented Adam and Eve in Paradise in a state of innocence, and returned the Book without any intimation of what he had done. He unfortunately had been previously informed that the persons the plate represented the parents from whom Englishman, Otaheitean and all men originally come.” There was no return of stolen goods.

. . . . .

**ROADS** had to wait: trails were good enough through the bush. Jefferson writes in 1798: “The roads are the sea beach, and narrow footpaths inland are seldom wide enough to admit 2 persons to walk abreast.”

It was so till the 1830’s, when Queen Pomare reigned. She delighted in riding — not slaves, but horses — and determined on connecting the villages round the coast into one continuous run for both horse and vehicle.

In an Australian newspaper dated in March, 1833, one reads: “Round the island, for a distance of 120 miles, is a raised road, which goes by the name of the Broom Road. It is formed by the natives who are sent there as a punishment for any offence they might have committed.”

There is no such bush on Tahiti as Broom, hence the name has largely remained a mystery, with wildest guesses attached. Yet the solution seems clear enough to those who dig into the past. Orders were issued that all owners of property fronting the highway, throughout its entire length, should keep their portion clear of leaves. The locally-made brooms (from the rib of the coconut leaf) were much in use and evidence. Hence white folk facetiously designated the nameless highway as the Broom Road, and the name stuck.<sup>71</sup>

. . . . .

**THE** “cloth” so often mentioned in connection with gifts of olden times was manufactured from the inner bark of the banyan and paper-mulberry trees, which underwent a long process of softening in water, and was then beaten with wooden pounders against a prepared wooden log until all the fibres had closely knit. The different grooves in the pounders gave a variety of textures to the material. The cloth was stained in patterns from various juices extracted from trees, bushes, plants, bark and nuts.

<sup>72</sup>

. . . . .

**FOR** long-winded names of individuals Tahitians are still famous — even Wales is left behind. The latter has its unpronounceable consonants, but with Tahitian every vowel has to be sounded separately, which is little less a difficulty to the outsider. Here are a few names gathered haphazardly — some of the dead, some of the living:

“Moeterauritetupaiahaviri”.

<sup>71</sup> See *The Island Highway* in the Appendix to *Old Time Tahiti*.

<sup>72</sup> See also *Native Cloth* in Part IX, *Old Time Tahiti*, and *Cloth Making (Tapa) and Mats* in Part XIII, *Roamings In the Great South Sea*.

“Haamanahiaamaheanuamai”.

The champion, however, so far found, most surely is:

“Hinaariitetanuiiteraiipoiaiterataiafaanuievau”.<sup>73</sup>

Try to call her to your side in a single breath!

. . . . .

THE second Pomare opened these notes: let him close them. He was an avid penman and as avid in requests. Here with a sample to the Directors of the Missionary Society in London:

*“Matavae, Otahete, January 1, 1807: Friends — I hope you will consent to my request, which is this: I wish you to send a great number of men, women and children here. Friends, send also property and cloth for us. Friends, send also plenty of musquets and powder, for wars are frequent in our country. This also I wish, that you would send me all the curious things you have in England. Also send me everything necessary for writing, paper, ink and pens in abundance; let no writing materials be wanting. Friends, I have done and have nothing at all more to ask you for.”*<sup>74</sup> He clearly lacked any saving grace of modesty and those religious folk in London must have received quite a shock over so prodigious an order, including the guns for slaughter.

---

<sup>73</sup> This name (but not the other two) is also discussed in Tale #12, *Of Nomenclature (2)*, in Part IV, *Tales of a Roaming Grandfather*. This person is shown in Plate 2, *Granddaughters of Prince Hinoi, Daughters of Prince Ariipaea*, in Tale #12. See also *Tahiti Vies With Wales* in the Appendix to Part IX, *Old Time Tahiti*, and *Nouns, Names and Negatives* in Part XIV, *Tahitian Vignettes*.

<sup>74</sup> This letter is also found in *Pomare II's Correspondence* in the Appendix to *Old Time Tahiti*.

Prince Hinoi II, of Tahiti, who died in 1934, was the son of Prince Hinoi I (died 1916), the full name of both being Terii-hinoi-atua. Hinoi II was a man of huge proportions. Prince Ariipaea, his brother, could, if he so chose, assume (according to Tahitian custom) the name of Hinoi III. This was the case — little known however — with Pomare V who, upon the death of his elder brother, Arii-aue (born on Motu-uta, the islet in Papeete Harbour, August 12, 1836, and died May 13, 1855) assumed the name of the heir to the Throne, in addition to his own name of Tera-tane.

**15 June 1940, pages 40–41 — *First Printing Press in Polynesia***

### **First Printing Press in Polynesia**

IT was March, 1797, when the first printing press was landed from the “Duff” at Matavai, Tahiti, for the use of the Brethren sent out by the L.M.S. Its career was troubled, its fate was hard. Here are the facts.

One only, of the company of 17, had learned the business, and he was one of the four ordained ministers. It is not known if he had had special training before setting out or if, previous to ordination, he had been a printer. Upon the shoulders of the unfortunate Thomas Lewis, aged 31, fell the burden.

The cases were landed and the Brethren, in their simplicity, thought to have all soon under way. The language was soon to be mastered, and a Spelling Book distributed, the foundation of Catechisms, Hymnals and Prayers, previous to the supreme aim, the distribution among the pagans of the Word of God.

But they soon found that the acquirement of the language was very far from an easy task and that the reports of the captains of calling vessels were far from the truth. The printing press had to remain in its cases in the storeroom; the months passed by, and progress was exceedingly slow.

Over a year had passed when they wrote Home, on August 26, 1798: "Our time has principally been engaged in labouring to acquire a knowledge of the language of the country, which we find all Europeans who ever visited Otaheite have utterly mistaken as to spelling, pronunciation, ease in learning and the barrenness of it. We have already joined some thousands of words and we believe some thousands yet remain."

It was heart-breaking work, even to learn to speak it, much more so to reduce it to print. As a matter of fact, it was not until March, 1805 (eight years' toil) that they felt capable of deciding upon an alphabet of the language — though Henry Nott had won out as a speaker four years previously. They wrote Home in August, 1801, that he would address the natives for the first time in their own tongue "on the next Lord's Day".

But that printing press was handled, though not set up, just before that letter of August, 1798. They determined upon some division of their goods, and we read under date of June 2, 1798, "To-day we divided among us some of the most valuable books. . . the others were carefully packed up in a dry cask"; and here comes in that father of all Polynesian Presses: "The printing and binding presses, with their appurtenances and some printing paper, Brother Lewis will keep in his possession, if possible." They do not state why it might not be possible. The man's tragedy, to come, was not then even in the offing. It seems more likely to be the fear of burglary, for they were heavy sufferers by then and had to set watch day and night to keep aught for themselves.

And, though the press was as useless to them as to the natives, save as iron, they would make a bid to save it. The very next day we read that they were busy "Fitting up a printer's shop."

Then fell the first blow. The printer left — was expelled from the Society — and, before another year was out, they laid his body in a grave not a stone's throw from where his press stood.

Bereft of what they had so eagerly worked for, the printed word, they kept bravely on, reducing the language to some printable order. Entry after entry is made, in their Journal, of their struggle and hard travail.

Those men are fully worthy of both record and praise. They had had no special training for such work. Apart from Jefferson, they were but poorly educated; for Lewis was dead, and Cover, with Eyre, had fled. They had all the difficult problems to solve by and for themselves. All through 1805–1806 they met twice a week, and stopped at nothing to aid them. "We have paid a native for attending our meetings in order to ascertain the proper pronunciation of every word which we have (so far) written down"; and they claimed that there was then a full 5,000 words in the Tahitian vocabulary.

Then fell the second and final blow for that pioneer press. In December, 1808, Pomare and all the Brethren fled from the island; Matavai was deserted; the chapel and the missionary houses, the storeroom, the blacksmith's shop, livestock of many kinds, the orange-groves and vegetables, and the printing shop — there was not a soul on guard. Down upon that tongue of land — to-day more generally known as Point Venus — the pagan hordes swept, and thoroughly wrecked the place, carrying off everything they could lay their hands on, and, in chief, what most of all they coveted and prized, iron.

So was *Finis* written to the pioneer printing press of Polynesia. It had never functioned, and it was smashed to pieces for its precious metal. Printing had to wait for a brighter day.

MOOREA, lying hard by, claims rightfully that it saw the first South Sea printing done. It came about in this way.

Eight full years had passed when, in February, 1817, a fresh contingent of the Brethren arrived from Sydney, among them William Ellis, later the author of “Polynesian Researches”, and for years the Foreign Secretary of the L.M.S. in London. He had had special training before leaving home as to both printing and book-binding and, along with him, came a second press, with ample fount, paper and binding for a start. The press was installed at Afareaitu, Moorea, in March, 1817.

Operations commenced on June 10, 1817. We read: “Pomare arrived to witness the first composing for the printing press done in his dominions. He was asked if he would like to do the first himself. He answered ‘Yes.’ The composing stick was then put into his hand and he was directed from whence to take the letters and how to place them until he had composed the alphabet at the beginning of the Tahitian Spelling Book. He appeared much pleased.”

That press was kept hard at work for many months, till a shortage came of paper and of binding. Sydney supplied paper. Ellis, ever full of resource, called upon natives of the island for goat, cat and dog skins, and showed them the craft of tanning, the result (“being but indifferent tanners”) not very good, but the binding was certainly strong. So the work went on — spelling books, catechisms, scripture lessons issued by the thousand.

In 1818, Ellis — a born roamer — decided to follow his friend John Williams, to Raiatea, and with him went the printing press. In 1819 two more printing presses were sent from Home. Before Pomare’s death in 1821, printing had ceased to be a novelty.

— W. W. BOLTON

## May 1942, pages 32–33 — *Some Old-Time Tahitian Customs*

### SOME OLD-TIME TAHITIAN CUSTOMS

BY W. W. Bolton, MA, of Tahiti

FORTUNATELY for those interested in the past, we have accounts by those who witnessed these strange customs, between the years 1797–1802, duly recorded. In this article, I have either outlined them or quoted in full.<sup>75</sup>

#### MARRIAGE

MARRIAGE ever played an important part in Tahitian society, whether aristocratic or plebeian. There was, moreover, a recognized table of affinity, or prohibited degrees, as to matrimony, though the high and mighty ones did not always observe such rules in eugenics. These unions through marriage were often matters of profound and social consequence among the Arii, for their women had equal rights and status with the men. Purea’s history, alike with Itea’s, proves this to the hilt.<sup>76</sup> Among the common folk, unions were not promiscuous, and the knot was tied in a normal, if in a less grandiloquent manner. Here is such an occasion.

<sup>75</sup> See also *Some Old Time Tahitian Customs* in the Appendix to Part IX, *Old Time Tahiti*, and *Some Customs in Early Missionary Days* in *Pioneer Missionaries of Tahiti*, also in Part IX.

<sup>76</sup> [Purea](#), also known as Oberea, was the chieftess who met with Samuel Wallis in July 1767. Itea was her niece.

With dawn, friends assembled for the ceremony. The mother and uncles of the bride were soon busy giving cloth (tapa) to the welcomed visitors, in one of the houses of the family a kind of altar was erected, covered with a piece of white cloth, and placed thereon were some old cloths which had lately been used to cover the tomb of the deceased father of the bride. The distribution finished, the parties went to the family's domestic marae, where the ceremony commenced, with spreading a large piece of cloth — this white — across the pavement. This done, the bride and bridegroom each changed their dress and took their seats on the ground, about six yards apart, with the marae between them.

Now the mother of the bride, with two or three female relations, having taken a sugar-cane and broken it into small pieces, laid the same upon the leaves of a tree called Amai. The mother and female assistants then wounded their heads with shark's teeth, and caught the blood upon the leaves, on which were placed the broken sugar-cane, which were thereupon presented by both male and female relatives to the bride and bridegroom. They were then offered to the god of the family, and laid upon the altar of the marae. There was no solemnity about it — all was done with levity.

Next, the mother of the bride produced the skulls of her deceased husband and elder brother, which she had preserved; and, anointing them with coconut oil, she placed them on the altar in front of the leaves, the broken sugar-cane, and the blood.

All now being finished, the cloth spread upon the pavement was folded up and, awhile later, was presented to the High Chief, at the place wherever he might be.

### MAKING PEACE

**PEACE-MAKING**, after war between districts, not being possible by pen and paper, objects were called upon in place thereof.

On the summit of a hill a pole was set up, upon which were fastened a dead dog and a young plantain tree. By this standard, notice was given to all that peace reigned supreme.

If any were to break down the pole, it would be looked upon as a deliberate challenge to war. If, by any mischance, it should fall, the High Chief must be at once informed, and a declaration made of its not being intentionally done.

Were chiefs to have misunderstandings, atonement could be made by one or other of the parties, who felt his case was weak, by certain specified gifts. If to a High Chief, it was a live pig and a young plantain tree; if to a lesser chief, a young chicken, together with a plantain tree, would suffice. The live stock was looked upon as a sin offering, the banana as a peace offering — and so the trouble was closed.

### THE USE OF LIQUOR

**LIQUOR** stronger than water was much in request. Kava was the stand-by custom of that day and was drunk to excess by both chiefs and the common people.

“It is a root of a sharp, peppery taste, which is chewed and spat into a wooden bowl, into which coconut milk is poured and after a little while, fermentation is excited, when the whole is strained and wrung through coconut husk, then served in cups of leaves made on the spot and thrown aside when once used.

“The effect it produces is a weakness in the legs at the time, but not of the brain; but its continued use is visible from the head to the soles of the feet. The eyes of the drinkers are much bloodshot and at

times very sore, the skin is covered with a thick scurf, and the soles of the feet become chopped or cracked. It also subjects some to fits.

“Notwithstanding the filthy manner of preparation, its nauseous smell and, to many, its disagreeable taste, it is as much admired by Otaheitean epicures as the finest wines produced in Italy or France are by the most refined sensualist at Home.”

But a change came in 1798, with the arrival on Tahiti of some Hawaiians who came on the scene by the “Nautilus”. On Hawaii, spirits had long been distilled from the Ti root, which grows just as abundantly on Tahiti. Ti has many varieties, and its uses were numerous, but alcohol therefrom was, up to that year, beyond their ken.

Under the direction of the newcomers, the new liquor was evolved, and it played havoc with the natives, from the High Chiefs to the humblest of the people. The labour of distillation was great with but a rough, unsightly machine as the only means.

Pomare II was very partial to the flowing bowl, and he sought something more up-to-date. He appealed to one of the “Duff” company, Hassall, at Sydney (NSW), as follows:—

“Matavae, Otahete, January 1, 1807 — Sir, I shall esteem it a favour if you can procure me a still, in return for which, if hogs will be acceptable, please to write to me that I may know how many. I am, Sir, Yours, etc., Pomare.”

Hassell replied diplomatically that the laws prohibited under heavy penalty any person from making a still; but, if at some future time circumstances permitted, he would send one.

### PERSONAL DECORATION

TATOOING was considered a most pleasing and graceful adornment for both sexes.

“It is commenced at an early age and gradually the patterns spread themselves over most of the body of the man; women are restricted to their hands, fingers, wrists, feet and ankles, mittens for the hands, rings for the fingers, bracelets for the wrists, sandals for feet and ankles. The men have chest and back, arms and legs covered with a great variety of figures, trees and vines, birds, beasts and fish, circles and squares, with feet like to the woman’s. The face and throat are rarely marked and, if so, it is but a small mark on the forehead.

“The Tatatau uses either the sharpened bones of birds or the teeth of fishes. The dye is the drippings of oil obtained by burning the fruit of the candlenut, which turns from jet black <sup>77</sup> to blue when it comes in contact with the skin.”

This custom was fiercely denounced by the missionaries; and Terito, the widow of the second Pomare, was considered quite out of the pale when she called in the Tatatau to adorn her body with the markings of the heathen.

### DISPOSAL OF DEAD

BURIAL was either sun-drying and cave, or the direct burial of the corpse. Coffins were unknown; and if the two Spaniards (the “Boenechea” Captain and his sailorman) were not interred in 1774 at Tautira in coffins, the responsibility for the innovation may go to the “Brethren”.

---

<sup>77</sup> The word *black* is missing from the article, but is included in *Some Old Time Tahitian Customs* in the Appendix to Part IX, *Old Time Tahiti*.

A boy known to the Brethren, who fell from a breadfruit tree on Christmas Day, died on December 30; and an entry in their journal for the year 1797 reads as follows:—

“Brother Puckey promised to make a coffin for the child, which was carried the next day by four little boys, and several of the Brethren followed. This being the first coffin ever made on Otaheite, they were surrounded by crowds of natives, who admired the construction of it and said ‘it would make a fine chest to put cloth in’. A long ceremony was performed by the father, which appeared to consist principally of an oration on the prospect of his future usefulness, had he lived.”

The father, mother and relatives were prevailed upon not to perform the usual custom at the conclusion of the office of slashing themselves on the head and elsewhere with a shark’s tooth, the blood, flowing freely, being caught on a piece of white cloth and laid upon the grave. This was the serious side of the burial. There was a preliminary, far from serious, at the home of the deceased, as a rule.

Some 20 persons, men and boys, daubed all over with smut, red clay and white in various forms, most of them armed with sticks, attended by one dressed in a fantastic robe called a mourning dress, ran about from house to house, also round the corpse, beating their sticks against the outside, those within pretending to be scared. Suddenly they disappeared. This tumult over, the walk to the grave commenced.

### July 1942, page 14 — *Light on Half-Forgotten Incident of Early Tahiti*

#### **LIGHT ON HALF-FORGOTTEN INCIDENT OF EARLY TAHITI**

*For the following interesting and half-forgotten chapter in the history of pioneer London Missionary Society work in Tahiti we are indebted to Mr. W. W. Bolton, MA, a resident of Papeete, who, as a hobby, has carried out much historical research in Tahiti. When the first LMS missionaries came to Tahiti in 1797, they were made a grant of land by the Tahitians. Subsequently, as a result of frictions and political changes, the validity of the grant was called into question. Mr. Bolton here briefly outlines the story — mostly as an explanation of the striking picture which accompanies this article.*

MATAVAI, which includes Point Venus, was no mere loan to the first arrivals of the LMS. It was an outright gift, though they sought only land for their residence.

These facts are clearly shown by the following extract from their daily Journal, written by Jefferson, the secretary. An entry dated July 13, 1801, after a meeting held between the first Pomare (Tu the Elder), Captain James Wilson (who had just arrived in the “Royal Admiral”) and the missionaries, reads that “Captain Wilson, reminding him of his having formally made over the district of Matavai to the missionaries, and asking if we were still to consider it as ours, he answered we were; and desired to know if we wished for the native inhabitants to remove out of it. We replied that we did not want that or their land, but only residence on it.”

And, again, when on March 6, 1816, Nott, accompanied by Hayward, re-visited Matavai for the first time since the flight of December 1808, he writes to Hassall at Sydney, NSW, on the 19<sup>th</sup> anniversary of their first landing together:—

“Our old neighbours informed us that the ground where our houses and gardens formerly stood, and the whole of the district from Taraa to Tapahi, the boundaries of the district, should be ours, if we would return to reside among them again.”

The above clear evidence of rightful possession, even if it be reduced to the Point where they had dwelt, was clearly utterly unknown when, on March 18, 1851, the annual Tahitian Legislative Assembly met and formally declared — Commandant Bruat assenting (under the French Protectorate; he did not become Governor until Tahiti became a French Colony) — “That the Tahitians never gave their lands in perpetuity for their houses and their churches.”

The LMS, in London, naturally complained bitterly at such complete obliteration of their rights. They had the evidence; the Assembly must surely have lacked it for such drastic action. There was no redress, however. The cession of Matavai was but a pictured farce. Ignorance, and it alone, must excuse those men of 1851.

Once, Point Venus was a live spot, and a beautiful one. Here stood the “Bligh House” and the “British House”, the Chapel and the Store House, blacksmith’s forge, and the would-be “Printing House”.

A report sent home in July, 1823, by Messrs. Tyerman and Bennett (a deputation visiting every LMS station in the world) reads thus: “Eastward of the House they planted a fine grove of orange, lemon, citron and tamarind trees, all of which are now in their prime, and bear large quantities of fruit, which the natives use. From these trees others have been raised all over this and other islands.”<sup>78</sup>

Here, history was made, both by the earliest navigators and the earliest white men and women residents; the spot is redolent with memories. But, to-day, save for the lighthouse, Cook’s so-called monument, and a few scattered native homes, Point Venus has a forlorn look. Point Venus, the fairest portion of old-time Matavai, deserves a brighter and a better fate than is its lot.

---

<sup>78</sup> See *Point Venus* in the Appendix to Part IX, *Old Time Tahiti*.

The above is a copy of the original steel engraving, drawn by order of the London Missionary Society to illustrate “The Cession of Matavai”. The original <sup>79</sup> was given to Mr. Bolton by the L.M.S., in recognition of his historical work, and was presented by Mr. Bolton to the British Consulate at Papeete, where now it hangs. Mr. F. Simpson made this excellent reproduction. The following description of the figures in the picture was prepared for us by Mr. Bolton:—

In the centre of the picture, on the shoulders of slaves are *Tu* the Younger (*Pomare II*) and his first wife, *Tetuanui*. Below her stands *Tu* the Elder (the first *Pomare*). On his right (and behind) is *Haapai*, his father. On *Haapai*’s right is one of his daughters, with *Mouroa*, her husband. Below *Haapai*, half crouching, is the aged priest, *Mane Mane*, speaking for *Tu* and making offer of the land. Below him, in the foreground, sits *Tetua-nui-reia*, the second wife of *Tu* the Elder, and the mother of *Tu* the Younger.

On the left hand of *Tu* the Younger (centre of picture) is Peter the Swede, <sup>80</sup> acting as interpreter. The woman just behind him is *Itea*, the first wife of *Tu* the Elder, and on Peter’s right, a little back, is *Fareroa*, *Itea*’s paramour. The kneeling woman is Mrs. Hassall. <sup>81</sup> On *Itea*’s left, somewhat back, are two of the missionaries (names unknown). The younger man, standing with hand in waistcoat, is William Wilson, nephew of Captain James Wilson, the Commander of the “*Duff*”, and who brought out the “*Royal Admiral*” in 1801. <sup>82</sup> By him stands

<sup>79</sup> The original was an engraving of the painting by [Robert A. Smirke \(1752–1845\)](#), which he did from a sketch by William Wilson. An image, in colour, of the original oil and ink on canvas is available in the Digital Collections of the National Library of Australia [here](#). See also the article “*Cession of Matavai*” published in the February 1943 edition of PIM, page 24, in Part VII.

<sup>80</sup> Peter Haggerstein or Hagersteine, who had deserted from the “*Daedalus*”, the storeship of Captain Vancouver, which arrived from Nootka on 15 February 1793.

<sup>81</sup> Elizabeth Hassall is holding her son, Samuel Otoo Hassall.

<sup>82</sup> William Wilson was also the first mate on the “*Duff*”.

Captain James Wilson.<sup>83</sup> Just back of him stands Jefferson.<sup>84</sup> The next missionary to Jefferson is unknown. Then come Mr. and Mrs. Henry;<sup>85</sup> and, seated on the ground, is Paitia, the Sub-chief of the District.

Note the breadfruit tree and the coconut palm, and Mount Aorai. The dwelling, the wall of which is just behind the missionaries, on the right, is the “Bligh House”, built by the elder *Tu* for Bligh, whose return he confidently expected. It became the first residence of the new arrivals.

## July 1942, pages 45–46 — *Quaint Speech of Niue*

### QUAINT SPEECH OF NIUE<sup>86</sup>

*(Niue is an Upheaved Mass of Broken Coral, between the Cook Islands and Samoa)*

BY W. W. BOLTON, M.A.

THE Niuean tongue is peculiar, and differs in many ways from other Polynesian dialects. It stands alone, even as does the isle itself; and, to acquire it, is not to feel at home when roaming, as the writer has these many years, among other groups or lonely specks in the South Pacific.

In the long hours of study and of acquiring some little fluency in the language, one comes across much that is both interesting and curious. The Niueans have been hard put to it to express things unknown till white men came, and their word-building is certainly ingenious and to the point.

They had “cups” from time immemorial; half a coconut shell did the business to perfection and what did they want with a handle! But a “jug” got them. They looked at it with a scrutinising eye and evolved the name “*Kapiniu loa ne fai gutu*” — “a long cup with a mouth”.

They knew no covering for the feet. “Boots”, therefore, were bad enough; but “shoes” as well! The former they dubbed “wrapping the sole with a long mouth” and merely changed “long” to “short” for shoes.

A “shirt”, which many men there prefer to exhibit right to the tail (a sheer waste of good stuff to tuck it away!) they call “the garment to be in side of”. It was a thing quite new to them, who wore but a wrapper round their loins — or still earlier, none at all.

A leaf kept their food off the ground. So there was nothing for it but to align a “plate” with the other essential at a meal: so it is a “flat cup”. As to “a frying-pan”, they gave it up as beyond their powers, and made a dash at it in Niuean sounds, namely “*panifalai*”, which is none too bad.

All their adjectives follow and do not precede their nouns, and their pronouns are never vain, dutifully following and not preceding the verb.

<sup>83</sup> The boy standing in front of the Wilsons is Thomas Hassell.

<sup>84</sup> John Jefferson was then 36 and the oldest of the missionaries. He was an ordained minister and secretary of the mission, and was appointed magistrate in 1802 by the governor of New South Wales, Captain Philip Gidley King. He died on 25 September 1807 and was buried at Matavai in one of the graves found by WWB by 1936.

<sup>85</sup> William and Sarah Henry; she died on 28 July 1812 and was buried on Moorea in another of the graves found by WWB by 1936.

<sup>86</sup> Other versions of this article appear in Chapter X of Part II, *The Chronicles of Savage Island*, in the section *Word Building*, and in Tale #29, *Of Coined Words* (2), in Part IV, *Tales of a Roaming Grandfather*.

You must walk warily with some of their words, for a single vowel makes a vast difference. To say “thick” you say “matolu”; to say “you” you must say “mutolu”; whilst to say “our” you must needs say “mautolu”.

When the missionary started in to turn the Holy Book into Niuean he had no small job on his hands, owing to lack of words. What Niuean had ever heard of corn or gold, the Sabbath or a Cross? Satan, too, and hell, heaven or synagogue, a horse or a sheep, mustard seed and silk, all were alike unknown.

Thus, to-day, we have many Greek and Latin, even Hebrew words, in use, for those missionaries were not to be beaten. They largely increased the Niuean vocabulary; and what they said, went. They started in to teach; and the poor Niuean was tied up in mental knots to give names to things. But they succeeded, as had their teachers.

“Letters” of the alphabet are “the eyes of writing”. “Ink” was easy — “writing water”, even as “medicine” became “plant water”. In those early days, Mr. Missionary used a quill pen only; so “a pen” is still a “penefulu” (“feather pen”). But “a pencil” evidently was something greater in their eyes, for it is “the talking pen”; whilst “a slate-pencil” is a “stone pen”.

When steel nibs came first to Niue they disturbed the native minds greatly. They would not give up the quill idea altogether, so they dubbed them “matafulu” — “the eye of a feather”.

A button is the same word as the moon, presumably since it was round and white; a blanket the same as a sheep, and with good reason, the former came to their hands long years before the latter; mustard is “the thing to eat that stings”. Pepper is just “pepa”.

To jump is “hopo”, correctly enough, but why should to kick be “holi”?

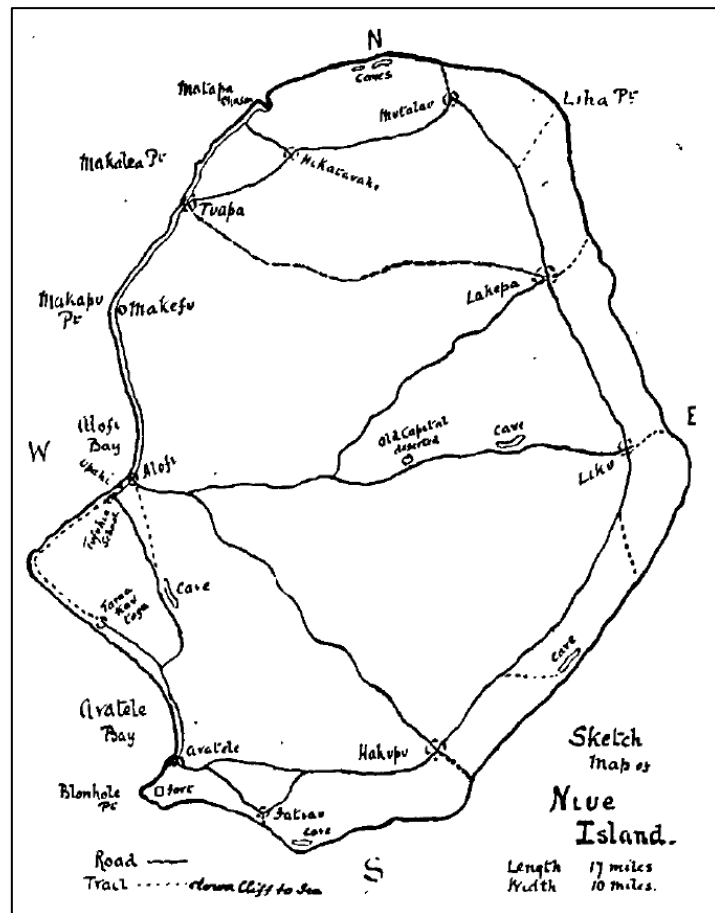

Time was not easily settled. Noon is “the sun perpendicular”; but as they have no quarter or half, they name the number of minutes either past (“mole”) or before (“keta”) the particular hour.

They have no word for “dad” or “mum”. They have “papa” and “mama”, but alas! “papa” means “a wooden club” and “mama” means “a mouthful”, and these surely are disrespectful words to use to one’s parents. Their words of endearment are very few, whilst “father” is but “male parent” and “mother” female ditto. A boy has to be content with “male child” and a girl is “female child”.

They have their ailments and name them adroitly. To be deaf is to have “a frozen ear”; to be blind is “eye-darkness”; and the parts of the body are as neatly covered. The toes are “the eyes of the feet”, just as the fingers are “the eyes of the hand”. The nails are the “moons” of one’s extremities, whilst tears are strictly apposite: “drops of water from the eyes”.

Whilst they are long-winded as a rule, they beat us handsomely at times. In “I cannot say”, we beat them hollow, for theirs is “Kua nakai maeke au ke pihe atu”. But in “what do you need it for?” they have us, for they cover it in just a single word, “moha.”

In Niuean speech every vowel must be clearly and separately sounded — no shirking and slurring as is oft with us. Try it with “tokaemenai” (and others which have preceded) and the reader will likely exclaim, with zeal and gladness its English equivalent, “enough”.

**August 1942, page 15 — W.W. Bolton attained the venerable age of 84**

**Mr. W. W. Bolton**, a well-known and highly esteemed member of the English colony in Tahiti, attained the venerable age of 84 on July 3. "He is the youngest man of his age I have ever known," writes our Tahiti correspondent. "He is strong in body, clear in mind, and is as keenly interested in all worthy things of life as the average man of fifty".

**November 1942, pages 27–29 — LMS Pioneer in the Marquesas,  
the Story of Missionary W.P. Crook**

## LMS PIONEER IN THE MARQUESAS

### The Story of Missionary W. P. Crook

BY W. W. BOLTON, MA

W. P. Crook <sup>87</sup> was but 22 years of age when the London Missionary Society's ship, "Duff", landed him and left him alone on Tahuata, Mendana's Santa Christina island, the first white resident in the entire Marquesan group.

<sup>87</sup> [William Pascoe Crook \(1775–1846\)](#)

He was to have had a companion, just twice his age, but Harris's courage failed him when the test came. It was on June 6, 1797, that the mission ship dropped anchor in Cook's Resolution Bay, and on June 27 she sailed away. Crook gathered up his last belongings aboard, and bore off with him, as his sole companions, his Bible and two cats!

He was a wide-awake, methodical young fellow and kept a diary, or journal, as he called it — a fortunate thing for us of later years, for in it we read of his daily life and doings, a vivid description of his ups and downs, told in the simplest way.

He must have been of winsome character, for he made friends at once with everyone. There was no tragedy for him as with his companions on Tonga, who paid for misunderstandings with their lives; nor lack of courage as with those on Tahiti, the majority of whom fled at the first sight of danger.

Teinae, the Chief in the Bay, agreed to Crook's and Harris's coming to reside with him. Their sea-chests and bags were landed the very next day, and Crook went ashore with the Chief. Not so, Harris, who did not land until the 14<sup>th</sup>, and at once found both food and manners highly disagreeable.

A first test came quickly. Teinae<sup>88</sup> went off to the neighbouring island of Hivaoa and left them to get supplies as best they could during his absence; and food was very short ashore, owing, seemingly, to drought. He added to their larder some welcome fish on his return. Off again he set, taking Crook along with him, to another island, Uapo, leaving Harris to the care of one Tepaihena, whose conduct was very far from satisfying both as to manners and supplies. But there was yet worse to come.

The belongings of both men were at Teinae's home, nigh a mile from the beach. Harris had a large red feather in his box and, unfortunately, he had shown it to the children of the Chief. Such a prize was too much for them and others. Upon Crook's return, the two men went aboard the "Duff," Harris determined to quit. On the 23<sup>rd</sup> he went ashore for his chest and bags and, securing the aid of two natives, started at once for the beach, despite Crook's warning against being benighted.

He was indeed benighted on the beach, and a crowd of natives gathered round him. They wanted that feather, and they broke open and plundered his box. He was thoroughly scared.

Crook heard of his plight early next morning and, gathering up his friend's bags, hastened to his aid. Harris was sitting disconsolate on his plundered box, gazing at the "Duff" at anchor in the Bay. On account of the heavy surf, the ship's boat could not approach to learn of the trouble.

The younger man, an expert swimmer, without hesitation swam off to the ship. The boat was brought as near as possible, the chest and bags put aboard, and Harris, unable to swim, was carried to it and safety. He had had enough.

Aboard the "Duff" was Peter the Swede, a beachcomber from Tahiti, who was acting as interpreter for Captain Wilson.<sup>89</sup> He had with him a Tahitian lad named Harameia, who, getting ashore, secreted himself, fearing trouble over a suspicion of theft. Crook attempted his return, but without success, and the lad, belittling the white folk on his island, was a thorn in his side.

WITH the "Duff's" departure, Crook was thrown wholly upon himself. He took up residence in one of Teinae's homes, up the valley, and made efforts to grow vegetables, the seeds of which he had with him. Not only was the weather against him, but his needed tools were promptly stolen.

---

<sup>88</sup> The article has *Teinea* here and elsewhere below.

<sup>89</sup> Regarding Peter the Swede, see the footnote in the caption of the *Cession of Matavai in Light on Half-Forgotten Incident of Early Tahiti* in the July 1942 edition of PIM, page 14, in Part VII.

Food became increasingly short. As he could seldom procure the use of a canoe to fish in the Bay, he took to the water himself, with line and baited hook in his hand, other bait tied round his neck, and gallantly sought his supper.

With such need around him, was cannibalism resorted to? As a fact, he saw the bodies of two persons, killed during a raid on Hivaoa, cooked and eaten by the priests of Tahuata; but he notes that “it is pretty certain that persons are not slaughtered merely to be eaten, as it does not appear that even during the severity of this famine anyone was killed for that purpose.”

Despite the necessities of the body, the young fellow did not starve his mind. He spent much time studying his Holy Book — so much so that the natives formed the idea that the Book was his god, and left him alone at his worship.

IN January (1798) the harvest of breadfruit was a good one, and things became brighter all round. He moved to the waterfront, and started to erect a home on the stone platform which once, as a residence, had sheltered Cook, and was known as Hetehete’s pipi.

In February, the “Alexander,” of Boston, anchored in the Bay, and stayed a few days. From its captain the lone white man received much kindness. He bore off Crook’s journal to date, together with a vocabulary of Marquesan words which he had acquired, to be forwarded to London, and which were duly received. He evidently had a gift for languages, as in less than a year he could converse with the natives, though his attempts to teach them fell on stony ground.

An Hawaiian, Tama, speaking broken English, was left by the “Alexander,” with the captain’s consent, and he became devoted to Crook, whom he championed when the natives spoke lightly of the Man with the Book.

With May, came an unexpected change for him. Seeing a vessel attempting to beat up to the harbour on the evening of the 21<sup>st</sup>, Crook went off to her in a canoe, with some natives. She proved to be the “Betsy,” an American whaler. He found that the captain, in despair of getting in, was about to bear away.

Crook advised him to make for Nukahiva, an island of which the captain had no knowledge; and the younger man, keen not to lose this opportunity of writing to his directors, resolved — though destitute of everything but the clothes he wore — to accompany him, knowing that it was possible later on to return to Tahuata. The natives returned without him and the belief was held that he had sailed for Beretania.

THE “Betsy” approached Port Anna Maria on the morning of May 24. A boat, in which Crook went, was sent in to sound the harbour. As it neared the shore of Taiohae, the natives gathered on the beach. Crook saw some priests among them, and called upon them in their own language to come to him.

On learning that he was “Kruka,” of whom they had heard, they entered the canoe and went aboard. When the anchor was dropped, the priests and Crook sprang overboard and swam to the shore.

One of the priests was of highest rank and forthwith presented Crook with the name of his little grandson, Pakouteie, which was also his own, and thereby the white man became his equal in rank. The next morning Crook was duly installed “in his new affinity and dignity.”

The “Betsy” duly provisioned and watered, departed in a few days, and Crook found himself in a new situation, minus everything. He had, however, procured a Bible and some coarse writing paper from the “Betsy” — but his cats could not be replaced! He learned later that they went wild after his

departure, and their place was happily taken by the white man's truest friend — a dog which Captain Fanning, of the "Betsy," had given him.<sup>90</sup>

He was in clover; everything was at his command. He sent early word to Teinae of his purpose to remain, and to let ships know of his whereabouts. He built himself a home, and planted a garden, natives willingly helping and building a fence around, against the roaming pig. Meanwhile, he did not neglect his special mission; but, despite steady effort, failed to impress.

Seven months passed thus, the young man fitting easily into his strange surroundings, when in December (1798) two ships anchored in Comptrollers' Bay. Crook went overland to the bay and boarded the vessels. They were the "Butterworth" and the "New Euphrates," both whalers, and had come from Tahuata. Aboard the former was a chief's son from Crook's former island, Temoteitei. They lay in the district of Tipee, which was ever at war with the districts of Taiohae; and, though the Tipeeans freely pilfered articles, the captains preferred to remain where they were.

THE captain of the "Euphrates" urged Crook to accompany him to England. He deliberated long upon the proposal. He felt that, alone, he could do little to uplift the Marquesans and that direct contact with the Directors might be of use to the equipment of a proper mission.

He finally informed the natives of his purpose of going, to return with better means of doing them service. They accepted the decision. The two whalers moved to Port Anna Maria on January 7, 1799, but did not anchor, standing off and on as exchanges took place through Crook — tools and earthenware goods for hogs, coconuts and native work. On January 8, Crook went aboard the "Euphrates," where was a lad Hekonaeke, who had been shipped in Comptrollers' Bay; and the two whalers sailed to Tahuata, where the once lone white man renewed old friendships.

They made a long stay. On January 28, Crook transferred to the "Butterworth," it being resolved that that vessel should at once proceed Home, whilst the former continued its whaling for a while. Aboard with him was the chief's son, Temoteitei.

Scarcely had they sailed than another whaler, the "London," appeared at Tahuata, on which the Tahitian lad Haramaia was shipped as cabin-boy. It also was making Home. Thus Crook had the genuine article aplenty to show to his Directors.

The "Butterworth," with Crook and Marquesan Temoteitei, reached London in May, 1799; the "New Euphrates," with the Marquesan Hekonaeke, in October; the "London," with the Tahitian Haramaia, in November. There is a note that "the change of climate much affected the health of these three islanders." Their fate is unknown.

CROOK'S promise that he would return with better means of service was unfulfilled. The Directors of the LMS, for their own reasons, let the opportunity pass and had other service for the young man, who had but to obey.

But Crook did not forget. Years later (1825), whilst he was stationed on Tahiti, he sailed again for Tahuata, and left three native teachers there. With a record of fine service, he left Tahiti in 1839, retiring to Melbourne, where he died on June 14, 1846, aged 71.

With this story of a gallant young pioneer before them, let those who seem to take pleasure in casting slurs upon missionaries in general, and those of the "Duff" in particular, ask themselves one question: Would they in like circumstances have had his courage?

**November 1942, page 30 — “May God Protect You” – How Teriiri’i Led His Men From Tahiti to Noumea**

**“MAY GOD PROTECT YOU”**

**How Teriiri’i Led His Men From Tahiti to Noumea**

THE following weird, official appointment, gazetted in the “Messenger de Tahiti,” on April 3, 1859, has been kept by Mr. W. W. Bolton, MA, a well-known historian, of Papeete, Tahiti, as a literary curiosity for many years:—

**In the name of God whose mercy is infinite.**

**CHIEF TERIIRII**

**You ask to come with me to New Caledonia. I consent. Come then with us. You shall follow the invincible eagles of our Emperor from the summits of Morare to the plains of Diahot. I name you from April 1, 1859, Captain Commandant of the native contingent of the troops stationed in New Caledonia.**

**You shall have 200 francs a month  
and food.**

**May God protect you.**

**The Governor.**

**SAISSET.**

It was not until Mr. Bolton read an article, “Early Settlers in New Caledonia,” by H. E. L. Priday, in the June issue of the “PIM,” that he learned whom Teriirii was to fight. The near-poetical phrase, “from the summits of Morare to the Plains of Diahot,” still has him — and us — beaten. Perhaps some reader can enlighten him. <sup>91</sup>

In 1859, Saisset <sup>92</sup> was not only France’s Imperial Commissioner for the Society Islands, but also Governor of French Western Oceania, which included New Caledonia. Teriirii was chief of Mahina and a Toohitu (Native Judge), and on July 3, 1847, he was made a Chevallier of the Legion of Honour.

In 1853, France had taken possession of New Caledonia, but the natives could scarcely be amenable to the idea. In 1856, when Noumea’s population numbered only 129, Noumea was almost wiped out by a native rising, and in 1857 many hundreds of natives planned to surprise the town again. On this occasion, Captain Paddon warned the townspeople just in time.

In that same month (January) 13 white settlers were massacred, and their settlement, Mont Dore, razed to the ground. It is here that first mention is made of Teriirii, and of the Tahitian-New Caledonian co-operation. He and his men helped punish the responsible tribe on that occasion, and apparently spent further considerable time there — it is not until 1859 that it is recorded that Teriirii and 24 followers returned to their native Tahiti. <sup>93</sup>

---

<sup>91</sup> This article can also be found in Part VIII, *Old Time Tahiti*, headed *A Weird Appointment*. WWB marks the phrase, here unknown, with an asterisk and writes on the opposite, otherwise blank page, \* *A poetical effusion for Mount Doré at the southern end to the delta of the river at the northern extremity*. This would have been after the following article, *A Phrase Explained*, was published on page 23 of the February 1943 edition of PIM. Morare is referred to in this [article](#) published in the Nelson Examiner and New Zealand Chronicle on 5 January 1856, page 4, which is an extract of the report of [Tardy de Montravel](#)’s visit to New Caledonia in 1854.

<sup>92</sup> [Jean Marie Joseph Théodore Saisset \(1810–1879\)](#)

<sup>93</sup> The massacre, which took place on 19 January 1857, is described by Priday in Chapter XI, *The Mont Dore Massacre*, of his book, [Cannibal Island](#). In his June 1942 PIM article, referred to in the November 1942 PIM article above, Priday

February 1943, page 23 — *A Phrase Explained*

## A PHRASE EXPLAINED

From Our Own Correspondent

NOUMEA, Jan. 9.

IN your November issue, Mr. W. W. Bolton, MA, of Tahiti, and the “PIM” ask for enlightenment on a phrase included in the “weird, official appointment” which gazetted the Tahitian chief Teriiri’i as Captain Commandant of the native contingent of the troops stationed in New Caledonia in 1859.

The phrase in question is the near-poetical one: “From the summits of Morare to the Plains of Diahot.”

The “summits of Morare” are the twin peaked Mont Dore, the beautiful mountain rising over Morare Bay (as it was then called, for now it is Boulari Bay). It was here that M. Berard and his 13 white settlers had just been massacred.<sup>94</sup> Mont Dore is the mountain that lies behind and to the south of the Noumea Peninsula; and putting the phrase in an unromantic way, one would say “from the south of New Caledonia to the far north.”

The Diahot (pronounced “Jowatt”) River is the island’s largest stream, the only one which runs with the axis of the island, and it empties itself into the most northerly bay, as a place called Pam. It is a mosquito-infested country, wild, and very sparsely inhabited even to-day; but, once, Australians worked there the only gold-mine that was ever made to pay — the Fernhill. There is also copper and zinc lead in the vicinity.

When Teriiri’s and his 24 Tahitians went back to Tahiti the Sydney-built and Caledonia - operated schooner “Kate” changed her name in his honour to “The Teriiri’i.”

February 1943, page 24 — *“Cession of Matavai”*

## “CESSION OF MATAVAI”

IN the July (1942) issue of the “PIM” we published a reproduction of a steel-engraving, “The Cession of Matavai” — depicting an incident of early Tahiti.<sup>95</sup> Now, from London, the Rev. Cecil Northcott, Home Secretary of the London Missionary Society, has sent us details of the origin of the engraving.

---

states that “*On this occasion a Tahitian chief, named Tariirii, and his men, helped to punish the offending tribe, this being the start of Tahitian–Caledonian co-operation.*” (Oddly, there is no mention of Tariiri’i in *Cannibal Island*, which was published in 1944, well after Priday’s June 1942 PIM article.) The text in the November 1942 PIM article above “*and apparently spent further considerable time there — it is not until 1859 that it is recorded that Teriirii and 24 followers returned to their native Tahiti*” implies that Teriiri’i was already in New Caledonia in April 1859, when he was named Captain Commandant by Saisset. This, however, conflicts with the gazetted text: “*You ask to come with me to New Caledonia. I consent. Come then with us.*” In Part IX, *Old Time Tahiti*, under *A Weird Appointment*, WWB states that “*He returned home from New Caledonia together with 24 Tahitians under his command in November 1859. He had taken part in 2 actions and his services were no longer required.*” This also suggests that he remained in New Caledonia from 1857 to 1859. WWB’s spelling of the name in the Appendix to *Old Time Tahiti* is, like Priday’s, *Tariirii*, rather than *Teriirii*.

<sup>94</sup> The massacre occurred on 19 January 1857, and not in 1859; see the previous footnote.

<sup>95</sup> See *Light on Half-Forgotten Incident of Early Tahiti* in the July 1942 edition of PIM, page 14, in Part VII.

The original “Cession of Matavai” is, apparently, a large oil-painting measuring 12 ft. x 8 ft. It was presented by the London Missionary Society to Captain James Wilson, commander of the missionary ship, “Duff,” which took the first LMS missionaries to the Pacific and eventually landed them in Tahiti in 1797 to begin their work of evangelisation amongst Polynesians. Recently this picture was given back to the London Missionary Society by descendants of Captain Wilson, and is now at LMS headquarters in London.

Our reproduction was of the steel-engraving which the LMS gave to Mr. W. W. Bolton, MA, of Papeete, in recognition of his historical work in Tahiti. Mr. Bolton subsequently presented the engraving to the British Consulate in Papeete, where it is hanging to-day.

### March 1943, page 20 — *Queen Pomare’s Diary*

#### QUEEN POMARE’S DIARY

LITTLE by little, scholars are piecing together the early history of Tahiti — and especially the turbulent period prior to 1840, and the “golden age” (1840–1880). Here is an extract from a letter from Mr. W. W. Bolton, MA, who takes a keen interest in Tahiti’s history and in Pacific affairs generally:—

“For years I have been making inquiries as to the existence or not of a diary, kept by Queen Pomare IV. At last I have run it to its lair.

“The Queen was evidently not a systematic person. She made her entries when the spirit moved her. It was dire stress alone which led to the use of her pen. She was no scribbler; her penmanship is clear and good.

“Up to 1843 — just a century ago — no diary for her. There is not a word of her early life, not a word of what led to the crisis in her affairs. No mention appears of the coming of the RC priests nor of Du Petit Thours’s [sic] two visits, nor of his threats, and her forced petition for a Protectorate.

“She starts off with her troubles in the year 1843 and stops abruptly ere she fled to Raiatea (from the French). There is no entry about her many years’ self-exile, nor of her appeals from there to Queen Victoria and others.

“Without a word of explanation, the diary ends with the entry that appears in the article in your November, 1942 issue, when she returned to her home.

“The book she used is a large, unnumbered, unlined volume which she used as a sort of day-book; many a blank page and then an entry, sometimes a list of names, sometimes a note by or for herself. It may, in a measure, be called a diary, but it is but a tiny fragment of a life which ran to nigh on three score years and ten. To preserve the binding she used some variegated cloth which time — and ants! — have sadly ravaged; but the pages are as clean as when she wrote thereupon.”

After Mr. Bolton wrote, the diary was carefully translated, with a view to publication. But Mr. Bolton, after consideration, evidently decided that the diary’s contents were of a too revealing or intimate character. The translation was stopped, and publication will not be proceeded with.<sup>96</sup>

**OLD TAHITI**

**Flag Goes Again To Battle**

“THE Bulletin of the Society of Oceanic Study,” of Tahiti, has just published an old letter, written by M. Adolph Marouo Poroi <sup>99</sup> (grandfather of the present Mayor of Papeete) which provides clear evidence of the recognition of Prince Hinoi as the legitimate successor of King Pomare V, by the high chiefs of Tahiti and its dependencies. Mr. W. W. Bolton and Mr. A. C. Rowland, who have been interested in this matter, now therefore see their contention supported and proved.

Exactly 50 years after the suppression of the Tahitian flag, as described by M. Poroi, Princess Terii-Nui-o-Tahiti, at a public function, with official sanction, presented a handsome silk Tahitian flag to the armed forces of Tahiti, to be carried into battle beside the Cross of Lorraine (flag of Fighting France).

**October 1943, pages 30 and 32 — *A Garden in Tahiti***

**A GARDEN IN TAHITI**

**Introduction of Melons, Citrus and Pineapples**

BY W. W. BOLTON

I WRITE of a garden not of the present day, but in the Long Ago; not of flowers, but of the homely vegetable.

Those first white men and women who arrived in Tahiti in 1797 and had taken up their residence at Matavai (Cook’s Point Venus) wanted green food other than taro, yam and sweet potato of the natives. The time would come for roses and dahlias, for carnations and the rest that they loved, but had left behind. Just now, it was green foods they needed, not alone for health, but to make more palatable the endless round of pork, the staple meat alone to be secured.

An orderly garden, with its trim beds set in rows, was unknown to Tahitians, and great was the interest shown by them at this fresh peculiarity of the newcomers. That interest, however, soon became more than a mental one, and those poor gardeners had a sorry time.

Let them speak for themselves. Their successes and failures, their hopes and disappointments, their worries and their woes, are to be read of in their daily Journal; and surely should interest all who to-day find pleasure and, in measure, occupation, in nursing to maturity both seeds and fruits for their table.

The beginnings were over; five years of labour had passed.

---

<sup>99</sup> Adolphe Marouo Poroi (1877–1938)

## 1802. — FEBRUARY:

“Cabbages, melons, pumpkins and cucumbers we have had in great abundance. Several bushels of Indian corn have been gathered in. Many of the European vegetables will not come to perfection or produce seed. The vine and fig tree brought from Port Jackson are doing well. Potatoes are good for nothing.”

But, with November, comes another story. They chronicle:—

“During the months of April, May and June all we had in the garden went to ruin in consequence of taking down the fences in the time of the late disturbances. Since the restoration of peace, the fences have been repaired and the garden digged and sown. Water melons have succeeded, but were destroyed by the natives, who are fond of them and commit frequent depredations. Several pineapples are in a very thriving state.”

## 1803. — FEBRUARY:

“Though there has been much wet, yet it has not been a good season, through the heat of the sun. In November were sown a few cabbages, mustard and turnip seeds, but they came to nothing. In December, sowed some Bengal radish seed; some succeeded. In January, sowed some Indian corn and French beans; these promise middling well. We have some fine water melons and pumpkins. The season for the former is over.”

## 1803. — MARCH 5:

“Brother Scott brought from Oparre to-day a quantity of fine oranges. A tree there has had some hundreds of fruit on it this season, but the natives have not the patience till they are ripe. They do the same with pineapples and have even baked them in their ovens to make them more eatable.”

## 1803. — APRIL:

“In the beginning of February, planted several pineapples, also a piece of ground with this country’s sweet potatoes, and two other pieces with the Sandwich Island and New Zealand sort. In March sowed some hundreds of orange seeds, also limes and citrons. The greatest part of our garden is planted with Indian corn, sweet potatoes, tarro [sic], pumpkins, pineapples and above. The method used in the Sandwich Islands of multiplying cabbage by slips taken from the stock of the plant does not answer in our garden.”

## 1803. — AUGUST:

“The seed remaining from those of the cabbage and brocoli [sic] brought from Port Jackson, kept too long, did not germinate. Removed some fig layers and put some cuttings of the grape vine in the ground; most of these are growing. Captain Simpson, having brought here from the Sandwich Islands some seeds of the papaya or paw paw tree, they were sown about November last. Most of the trees in blossom; the greater part seem to be of the male kind; all the flowers are falling off and no appearance of fruit; on the few that seem to be female the fruit begins to form in the shape of a cucumber.”

## 1804. — JULY:

“Near two-thirds of our garden is now covered with sweet potatoes; but, the bread fruit being plentiful, we have not yet begun to dig them. Our apricot plants in blossom; some fruit appearing on the old trees.”

## 1805. — FEBRUARY:

“In November last, the weather very dry, the afternoons uncommonly hot and scorching; yet our pumpkins prospered and the melons partly recovered the destruction by the caterpillars. Planted some peas, calavances and lentiles [sic] brought in the Spanish prize from the coast of Chile, but soon died. Several attempts were made to raise cucumbers, but without success. Through the whole of January mostly rain. Many of our papaya trees died through the excess of wet, the heat scalding their roots. Gathered a great many water melons, pumpkins, notwithstanding frequent depredations committed by the natives. We have of late not only had our garden much plundered, but also have had taken several pigs; likewise our goats are frequently destroyed by the dogs of the natives.”

## 1805. — MAY:

“Several more of our papaya trees died through excess of wet. Gathered a great number of pineapples. Our melons all done bearing. We have to complain of the depredations committed by goats and hogs breaking in during the night, so that we enjoy but a small part of the fruit of our labours. Great quantities of melon and pumpkin seeds, with several hundreds of pineapple plants, have been given away to different parts of the island.”

## 1805. — OCTOBER 28:

“Our garden was again robbed, but stealing from us is reckoned a matter of little consequence, and our losses afford the Otaheiteans a subject to laugh at. Not so their own.”

AND so the story goes on, until that fatal year, 1808, when both gardeners and garden were wiped off the map of Tahiti.

Years later, a handful of those gardeners returned and once more that garden was laid out. When Ellis<sup>100</sup> saw it (he of the “Reminiscences”) it was a wonderful orchard, rich in bearing; but that was its last bright day.

What was Tahiti’s first garden is a coconut plantation to-day. Oft has the writer walked over that site where the pioneer white gardeners “dugged and sowed.” Their labour and their day are passed, but their gallant efforts are surely worth recall.

---

<sup>100</sup> [William Ellis \(1794–1872\)](#). Ellis is known for *Polynesian Researches*. Perhaps WWB was thinking of William Thomas Pritchard’s [Polynesian Reminiscences](#), published in 1866.

February 1944, page 9 — *Pomare's Bible*

**POMARE'S BIBLE**

**For Sale — Then Withdrawn**

From Our Own Correspondent

PAPEETE, Dec. 10.

THERE was a stir in Tahiti, in November, when it was announced that Mademoiselle Alice Levy had presented Queen Pomare's Bible to the Tahitian Committee, to sell to the best advantage, for the benefit of the Fighting French War Fund.

British residents thought that the Bible should be bought for the British Museum; others suggested that it should go to that famous repository of South Seas literature, the Mitchell Library, in Sydney. It was reported also that the Bishop Museum, of Honolulu, would make a bid for the book. The sale was postponed so that the committee might communicate with these various institutions.

It was announced at the end of November, however, that the priceless volume had been withdrawn from sale, and might eventually become the property of the Papeete Museum.

The history of the Pomare Bible — as told to me by Mr. Bolton — is very interesting. When, after 22 years of labour, the Rev. Henry Nott completed his masterly translation of the Bible into the Tahitian language, he took the manuscript to England. The English Bible Society published this Tahitian version at its own expense. The first copy off the press was presented by the Society to Mr. Nott.

Before Mr. Nott departed from England, to return to Tahiti, he was granted an audience with Queen Victoria, at Buckingham Palace. Mr. Nott presented his copy of the Tahitian Bible to the Queen; and, later Queen Victoria sent the Bible to her sister Queen in the South Pacific — Pomare IV.

Queen Pomare wrote, on the fly-leaf of the book, the dates of the birth of her children.

We do not know how this Bible passed out of the possession of the Pomare Royal Family of Tahiti.

**ANOTHER RELIC**

That antediluvian relic, the Tipaerui Stone, continues to repose in the bed of an inland stream; much to the distress of our antiquarians.<sup>101</sup> The owners of the property fear that its removal will stir up ancestral ghosts who will exact retribution. Our mountains abound with treasure-trove of the past, carefully concealed for the same reason. Predatory scientists long ago decapitated the golden goose, when they broke their pledge to behold, but to leave inviolate, all that might be disclosed for their inspection.

February 1944, page 35 — *Lost Treasure of Tahiti*

## LOST TREASURE OF TAHITI

### Captain Cook's Portrait

BY W. W. BOLTON, MA

WHILST he was at Matavai, on his last visit to Tahiti, Captain Cook gave his portrait, painted by Webber,<sup>102</sup> the official artist aboard, to the natives, in return for their many kindnesses.

It was placed in charge of Haapai'i, the old-time Chief of Matavai, grandfather of the then Boy Chief (later known as the Second Pomare). For several years all vessels making that port had their names and that of their captain inscribed at the back, with the date.

That this portrait, painted in 1777, was in perfect condition and preserved with assiduous care in 1790, when the "Bounty's" mutineers were dwelling on the island, is to be seen by Morrison's<sup>103</sup> account concerning it, which is of lively interest. He writes in his Journal:—

"On the 1<sup>st</sup> of February, our attention was drawn from our work on the schooner by a Hira, to which all the inhabitants of the district were assembled. Everything being ready, Captain Cook's picture was brought out by an old man, who has the charge of it, and placed in front, and the cloth with which it was covered being removed, every person present paid homage by stripping off their upper garments, Paitea, Chief of Matavai, not excepted. The master of the ceremonies than [sic] made a long speech to the picture, acknowledging Captain Cook to be Chief of Matavai, and placing a young plantain tree with a sucking-pig tied to it before the picture, made a speech running to this purpose. 'Hail! All hail! Cook, Chief of Air, Earth and Water. We acknowledge you chief from the beach to the mountains, over men, trees and cattle, over the birds of the air and fishes of the sea.' After which they performed their dances."

No mention is made of the picture by the missionaries of 1797, but this may possibly be explained by the fact that much of their earlier Daily Journal unfortunately never reached the Homeland.

The portrait vanished. The most likely end to it came in that disastrous year, 1808, when Matavai was ravaged. All went up in flames, as the heathen party from the south wiped out that settlement of both natives and white folk, Haapai'i's home, and the precious portrait amongst the debris.

---

<sup>102</sup> [John Webber \(1751–1793\)](#)

<sup>103</sup> [James Morrison \(1760–1807\)](#). His journal can be found [here](#). Prior to departing Tahiti on 4 April 1789, he writes, "Captain Cooks picture was now sent on shore by Poeno with the Bountys Name & the intent of Her Voyage put on the Back."

**April 1944, page i — *Centenary of Pioneer LMS Missionary***

**CENTENARY OF PIONEER LMS MISSIONARY**

From Our Own Correspondent

PAPEETE, Mar. 10.

MAY 2, 1944, will be the centenary of the passing of the great Henry Nott, pioneer missionary and scholar. Our well-known historical writer, Mr. W. W. Bolton, is determined that the memory of this illustrious apostle shall not fade in the minds of the people to whom he brought the gift of the Gospel. He is preparing a memorial of the Rev. Henry Nott's services, to be delivered at the ceremony, at the place of Nott's burial, on the day of remembrance.

**May 1944, page 10 — *Henry Nott Centenary***

**HENRY NOTT CENTENARY**

From Our Own Correspondent

PAPEETE, April 20.

MAY 2 will be the one hundredth anniversary of the death of that famous South Seas missionary, Henry Nott; and Mr. W. W. Bolton, whose work as a historian is well known, has taken measures to have a fitting service of remembrance.

The late Mr. J. L. Phillips, in his time, and now Mr. Bolton and myself, have striven to hold in honour and remembrance this great architect of South Sea missionary achievement, and to remind the younger generation of Tahitians of the measureless debt they owe him. In this undertaking we have the hearty support of the present head of the French Protestant Mission in French Oceania.

In earlier times, some of our friends among the clergy were inclined to — let us say — a rather provincial attitude toward Henry Nott, and we did not enjoy the cordial understanding, accorded us to-day.

**June 1944, page 11 — *Henry Nott – Homage Paid to Great Missionary***

**HENRY NOTT**

**Homage Paid to Great Missionary by Men of All Races**

From Our Own Correspondent

PAPEETE, May 5.

STATELY ceremonies at Outu Aiai and at Ahu-toru, in the district of Arue, on Tahiti, on May 2, marked the centenary of the death of the great pioneer missionary of the London Missionary Society, the Rev. Henry Nott, who worked in Tahiti for 47 years. These ceremonies, likewise, marked the re-awakening of the Tahitian people to their debt of gratitude to this illustrious servant of the Divine Master.

Present-day knowledge of the inestimable services by Henry Nott to the people of the South Pacific Islands has come to us through the researches of the late Mr. J. L. Philips, of Mr. W. W. Bolton, and of the Rev. Charles Vernier, Presiding Pastor of the Protestant Mission in French Oceania.

They have established beyond controversy that the imperishable foundation upon which the superstructure of the Church in Polynesia has been erected, was well and truly laid — during the early years of the 19<sup>th</sup> Century — by Henry Nott. To quote from Mr. Bolton's memorial oration, on May 2, 1944, at Ahu-toru, where is Nott's resting-place:

“He is not famous in Christian circles, as are John Williams of Ra'iatea, Chalmers of New Guinea, or Paton of the New Hebrides; but we who know his worth and work rank him amongst the greatest missionaries who ever landed on the islands of the Great South Sea.”

The distinguished company who assembled, on May 2, at the church on Outu Aiai, to pay homage to the memory of Henry Nott, listened with emotion to the eloquent eulogy in the classic language of old Tahiti, by the Rev. Charles Vernier. The sincerity of that emotion was expressed in the oration, at Ahu-toru, by the Rev. Tearo (Pastor of Arue) on behalf of the Royal Pomare Family; in the impassioned eloquence of the Rev. Tapao (Pastor of Haapiti, Mo'orea) as he laid a wreath of fragrant flowers, the symbol of the homage of his people of Mo'orea, on the tomb of Henry Nott; in the reception accorded to Mr. Bolton's memorial oration, which was interpreted, both in word and spirit, into the Tahitian, by Monsieur Vernier.

Perhaps, the measure of that sincerity was best revealed by the Rev. Tapao:

“Our great teacher, Nott; the fragrance of these flowers will fade away; but the fragrance of your name and of your great service to our people, shall remain a perpetual and precious memory for us and for our descendants, forever.”

The people of Arue had practised, for this occasion, some beautiful old hymn-tunes, and we heard the finest church singing this writer has heard for many a long day.

Mr. Bolton delighted his hearers when he described the coronation ceremony, when Nott crowned the boy king Pomare III, at the very spot where the Arue Church now stands.

Both the historic point of land, Outu Aiai, and Ahu-toru (the burial place of old Tahitian royalty) are within sight of Matavai Bay, the place where Henry Nott landed on Tahiti in 1797.

That part of the centenary ceremony which was conducted in the French language was ably carried out by the Pastor of Papeete, the Rev. Rey-Lescure.

This tribute, with which Mr. Bolton closed his eulogy of Henry Nott — scholar, pioneer, translator of the Bible into the Tahitian language, founder of the Church in Polynesia — is worthy of remembrance:

“Here, you have laid a wreath, and rightly so. Wreaths are for remembrance: tokens of love, of esteem, of admiration, the whole world over. But this wreath is a token of more than admiration: it is a token, from one and all of us, of Homage. Homage to a man of noble character; Homage to a most worthy son of his homeland, Beretania, true to type, indomitable, not knowing the word ‘defeat,’ be the clouds ever so lowering, be the task ever so great; and above all, and this the climax, Homage to a man who, from early manhood till his death, was a devoted, faithful and most able servant to his Lord and Master, Jesus Christ.”

### August 1944, page 4 — *W.W. Bolton celebrated his 86<sup>th</sup> birthday*

**Mr. W. W. Bolton**, well-known known British resident of Tahiti, celebrated his 86th birthday in June <sup>104</sup> by a coastal hike of about 40 miles. Needless to say, his health is excellent.

### April 1945, pages 25 and 27–28 — *A Link With the “Bounty”*

#### A LINK WITH THE “BOUNTY”

BY W. W. BOLTON, MA

THE writer ventures to add a supplement to the very interesting article in the November “PIM” dealing with the removal of the Pitcairners to Tahiti, and trusts that the following historical items — but little known — may prove acceptable both to R. C. Macpherson and the magazine’s widely-scattered readers.

1825: The first mention made of a removal appears with the arrival at Pitcairn of HM Sloop “Blossom,” Captain Beechey, <sup>105</sup> RN, who reported home as follows:

“Pitcairn Island  
“October 21, 1825.

“We found all well: the Patriarch still alive and in good health. Their numbers increasing fast and the earth does not yield as it used: and Adams <sup>106</sup> very reasonably apprehends that a distress and famine will visit the rising generation if they are not removed. He has begged me to solicit the attention of the Government to this point, praying that they will send some ship to transport them all to some place where they can all settle together.” <sup>107</sup>

<sup>104</sup> WWB was born on 3 July 1858.

<sup>105</sup> [Frederick William Beechey \(1796–1856\)](#). The article has *Beechy* here and elsewhere.

<sup>106</sup> [John Adams \(1767–1829\)](#)

<sup>107</sup> See also *Pitcairn Island II* in Part XIII, *Roamings In the Great South Sea*.

1827: Canning, of the Foreign Office, took action on Beechey's report and wrote to Tahiti as follows:

“Foreign Office, London.

“March 3, 1827.

“To King Pomare III, —

“It has become desirable that certain individuals who have been living for many years past on Pitcairn's Island should be removed from thence to some other settlement in the Pacific. His Majesty has therefore given orders that a ship shall be employed, conveying them and their families to Tahiti, provided you may be willing to receive them into your dominions. The British Government persuades itself that you will not refuse your consent and will be pleased to extend your protection to them.”

1829: Fever — seemingly influenza — ravaged Pitcairn, brought by a whaler whose sick crew the islanders housed and nursed back to health. Whaler and men departed, but the 'flu did not. Adams, the patriarch and the last of the mutineers of 1790, fell a victim, aged 65.<sup>108</sup>

The same year, the Boy King of Tahiti having died, his sister, Queen Pomare IV answered Canning as follows:

“In relation to the persons now residing on Pitcairn's Island, they shall be kindly received and well treated whenever they shall arrive.”

**APART** from Captain Beechey, the islanders as a whole expressed few real wishes to remove. They were content. Though they came of stock who had defied and broken the law, they were one and all enthusiastic “Britishers,” devoted subjects of their King and profoundly conscious of their duty to obey authority. Adams had seen to that.

1831: In February, HMS “Comet” arrived at the island and Captain Sandilands dropped a bombshell upon the contented community with the news that he had orders to carry the whole lot off to Tahiti. The British Government had provided a six months' supply of food. Following closely upon the warship, there came the “Lucy Ann,” from Sydney, to receive them and their belongings. This vessel had been called into service from Norfolk Island and doubtless the Pitcairners first heard from its crew news of a spot destined to be their final home.

The unhappy people, whose numbers now had reached 87, were faced with a dilemma. They had no wish to go, their beloved leader lay in his grave among them — but it was an order from Home. They could not rebel; therefore, without any heart in the matter, they obeyed.

**PITCAIRN** was deserted, save for a few animals run wild. Tahiti was reached in March, 1831. Before one month was up, they had had enough. The morals of the Tahitians were not to the taste of the strict Pitcairners. The elders saw their younger members soon getting out of hand.

The change took a heavy toll: 12 died in quick succession of the malignant 'flu. Before April was out, Buffett and nine others hired a small schooner and fled: four on board died upon the way, and yet another on their arrival. Their voyage was prolonged, for contrary winds blew them to the Western Pacific islands, where a French brig came to their rescue and carried the remnant home.

The British Consul, Charlton, took pity on the remaining 65 and, chartering the Salem brig, “Charles Doggett,” Captain Driver sent them back in September, 1831 — five dying upon their arrival. The

---

<sup>108</sup> Adams' date of birth is uncertain.

removal to Tahiti cost 22 lives of both old and young. But the three “outsiders,” Buffett and Evans (who had joined the band in 1823) and Nobbs <sup>109</sup> (who had landed in 1828) came safely through the ordeal. <sup>110</sup>

The latter resumed his self-imposed duties, not only that of school master (to the natural annoyance of Buffett, whom the little community shelved in favour of an educated man), but of physician and surgeon, together with a lay chaplaincy he felt it his duty to assume.

1852: Rear-Admiral Moresby <sup>111</sup> called, in his flagship, “The Portland.” He was a deeply religious man and at once became most anxious that the islanders should have the full privileges of Mother Church, its sacraments. He offered to pay Nobbs’ passage Home for ordination, with £100 pocket-money, to start him upon arrival; and, so that they should not suffer during Nobbs’ absence, he left his own Chaplain, Holman, on the island.

Nobbs reached Home, was readily ordained by the Bishop of London, made much of, presented to Queen Victoria, preached from many pulpits, raised considerable money for the purchase of the most pressing needs of his parish islanders, and in due course returned as Chaplain to Pitcairn Island, with the princely salary of £50 a year for life. He died, aged 85.

1858: Now housed on Norfolk Island, 16 of the community grew homesick and in December hired the schooner “Mary Ann” and were once again on Pitcairn. They were the Youngs and the McCoys.

1863: There was another stirring in the hive, and 27 went back in the schooner “Saint Kilda.” They were Christians, Mills and Buffetts, and further Youngs. They left their Chaplain behind, and neither the Home authorities nor the mission societies took any action to fill the need. They may have been ignorant of the situation or resented the return, after so much had been done for them.

And so we reach the change of faith. Men were needed as labourers on white men’s plantations on Raiatea, in the Society Group near Tahiti. It was thought that some on distant Pitcairn might be willing to serve. The planters sent a schooner and secured a handful. That was in 1885–86.

The Seventh Day Adventists on Raiatea, ever on the look-out for fresh fields, learned from these of the vacant ground. They saw the welcome opportunity and seized it.

1886: In October the Seventh Day Adventist missionary, John I. Tay, an American, landed on the island, and Pitcairn changed its Sabbath together with acceptance of all other tenets of the new-found faith, none dissenting.

September 1945, page 59 — *The Memoirs of Ariitaimai*

## THE MEMOIRS OF ARIITAIMAI

## Letter to the Editor

FOR the information of your many readers, may I be allowed to add the following facts to the interesting article, by Mr. Eric Ramsden, on the above volume, which appeared in your April number. The book is indeed rare, but I can account for two.

1. — Upon the death of Tati (II), the eldest brother of Queen Marau, his effects were put up at auction, amongst them a copy of the Memoirs, which was purchased by Doctor Sasportas, a resident on the island, who most generously presented it to the Papeete Museum, where it is to-day housed.

2. — Irene Salmon (her native name is Teeeva), one of his daughters, also owned a copy, which I was loaned, upon my arrival on Tahiti. Realising its value (which she did not), I impressed upon her the necessity of taking care when she loaned it. Some five years back, she told me woefully that a passing tourist from the Americas, who had lodged in her boarding-house, had assured her, not only of its high value, but that if handed to him he would secure a handsome sum for the volume. She passed it over, and since then neither man nor book nor cash has been heard of. She died, deeply regretting her folly.

This edition is not the first or only edition.

1893. — The first edition was entitled “Memoirs of Marau Ta’aroa, last Queen of Tahiti. Privately printed, 1893.” No copy is known to exist to-day. How many were printed, by whom, and where, is also unknown.<sup>112</sup> Tati II is said to have possessed a MS of it in the Tahitian language, as their mother gave it to them by word of mouth. My fellow octogenarian, Mr. Arthur Brander, their nephew, who was educated in Scotland, has informed me that he took part in its translation; but no copy of the printed book came to him, as he was by then abroad. Marau distributed them amongst the numerous members of her family — the Salmons — and all are lost.

1901. — The Bishop Museum in Honolulu has two “typed” copies of the edition, printed in Paris, under the supervision of the American tourist, Henry Adams. In a note attached to the copies, Marau states that she requested Adams to change the title and use her mother’s name as the one from whom she had received the information. Whether or not he used these “typed” copies and duly returned them to Marau is unknown.<sup>113</sup>

1923. — Marau, finding fault with portions of the printed edition, compiled a fresh manuscript, assisted by a Mrs. Handy, but for an unknown cause refused to have it published, and this MS has disappeared, like its predecessor of 1893.<sup>114</sup>

<sup>112</sup> In Robert Langdon’s [article](#) in The Journal of Pacific History, Volume 4 (1969), pages 162–165, “A View on Ari’i Taimai’s Memoirs,” we read that “As was Adams’s custom after writing a book, he had half a dozen copies of his first provisional draft printed privately so that corrections and additions could be suggested by interested parties. He has left it on record that one copy of his 1893 edition was sent to Marau in the hope that this would encourage her and her family to furnish him with further information.”

<sup>113</sup> A copy of this edition of the *Memoirs* is available [here](#) and a photo of the Salmon family in the 1880s, including Marau and her mother, Ariitaimai, can be found under *A French Historian’s Witness* in Part IX, *Old Time Tahiti*.

<sup>114</sup> In Langdon’s [article](#), we also read that “An excellent outline of the events leading up to the publication of the 1901 edition of the *Memoirs* and of the use made of this edition by others is given by Bengt and Marie-Thérèse Danielsson in their introduction to a French translation of Adams’ book, *Mémoires d’Arii Taimai*, published by the Société des Océanistes (Paris, 1964). Further information on this subject, overlooked by Danielssons, appears in an article by Eric

Ariitaimai was not the native name given her by her parents. This was Ariioehau (Chieftainess of Peace). The name by which she is known was assumed by her on marriage to Alexander Salmon, when Queen Pomare IV gave Salmon the name for him (and his wife) of Arii-tai-mai (the chief who came from over the sea). She was born in 1822, married in 1840, and died in 1895. Marau, the transcriber of her mother's Memoirs, was born in 1860, married in 1875, and died in 1935.

I am, etc.,

W. W. BOLTON.

Tahiti, 1/8/45.

### November 1945, page 29 — *Mr. W. W. Bolton celebrated his 87<sup>th</sup> birthday*

**Mr. W.W. Bolton**, a well-known scholar, of Papeete, Tahiti, recently celebrated his 87th birthday by taking a moonlight stroll to Maraa Cave — a place 18 miles distant from his residence.

### February 1946, page 18 — *Christmas Party*

There was a happy Christmas party in Papeete, Tahiti, on Christmas Day, at the home of **Mr. and Mrs. J. S. Coster**. (He is the local manager of the Union SS Co., Ltd., in Papeete). Those who enjoyed the hospitality of the Costers and their daughter, Miss Daisy Coster, included the Mayor of Papeete, Mr. and Mrs. Alfred Poroi, and their three sons (Charlot, Maurice and Ernest); Mr. and Mrs. Oscar G. Nordman and their daughter, Anatila; and Mrs. W. J. Williams (wife of the former British Consul). The oldest English resident, Mr. W. W. Bolton, was a caller when the party was at its height, and was warmly welcomed.

### May 1946, page 9 — *Mr. W. W. Bolton has now reached his 88<sup>th</sup> birthday*

**Mr. W.W. Bolton, MA**, of Papeete, Tahiti, has now reached his 88<sup>th</sup> birthday; and, in a recent letter, he says that he is “still happily going strong.”<sup>115</sup> He celebrated his 87<sup>th</sup> birthday — and the end of the war in Europe — with a 40-miles hike, in one day.

---

Ramsden in the *Pacific Islands Monthly*, XV (Apr. 1945), 23, and in a letter by W. W. Bolton in the same journal, XVI (Sept. 1945), 59. Bolton's letter stated, *inter alia*, that in 1923, Marau found fault with portions of the printed editions of the *Memoirs* and compiled a fresh manuscript, assisted by a Mrs Handy, but for an unknown reason refused to have it published. Bolton added that Marau's manuscript had disappeared. However, it appears that this manuscript has not been lost, but is now in the possession of Marau's only surviving daughter, Princess Takau Pomare Vedel, of Tahiti. In an introduction to Ernest Salmon's Book, *Alexandre Salmon 1820–66 et sa femme Ariitaimai 1837–97* (Paris, 1964), Father Patrick O'Reilly stated that a book of memoirs by ex-Queen Marau was soon to be published by the Société des Océanistes. This book has not yet been published, and O'Reilly has informed the writer (personal communication of 10 March 1969) that Princess Takau, for various reasons, has not yet decided to go ahead with the publishing project.”

<sup>115</sup> In May 1946, WWB was still 87 years old.

**September 1946, page 12 — *Mr. W. W. Bolton Passes On***

**Mr. W. W. Bolton Passes On, At Great Age of 88**

DEEP regret was expressed among all classes of people in Tahiti when it was known that the scholarly old Englishman, Mr. W. W. Bolton, MA, had passed away, on Sunday, July 28, at the great age of 88. He had lived in retirement in Tahiti for many years, and had devoted himself to historical research, so that he became an authority on the early history of the Pacific Islands generally, and of French Oceania in particular. Many of Mr. Bolton's articles were published in the *Pacific Islands Monthly*; and on several occasions we referred to him, quite successfully, difficult inquiries on Pacific history which we had received from learned bodies in other countries.

After he had passed 80, Mr. Bolton celebrated his birthdays by going off on a long hike, through the delightful countryside. He usually wrote, for us, a cheery message at the conclusion of his 30 or 40 miles' tramp. This picture is a snapshot taken on his 88<sup>th</sup> birthday, a few weeks before he died.

Mr. Bolton was loved by all who knew him. One old friend writes: "The gentle serenity of his spirit commanded the affection of all who came within its companionship. I once asked him: 'How do you sustain your charity of judgement, your purity of ideal, your serenity, in a world that is crashing about us?' He replied: 'Because, my dear friend, I have a song in my heart.'"

**November 1946, page 52 — *The Good Work of Late W. W. Bolton***

**The Good Work of Late W. W. Bolton**

**A Tribute by an Old Friend**

The passing of Mr. W.W. Bolton, MA, of Papeete, (reported in the September PIM) will have come as a shock to his many friends in the Pacific (writes Eric Ramsden, <sup>116</sup> from New Zealand, to the editor). Mr. Bolton's particular field in Tahitian historical research was the Mission period. To his task he brought unique gifts of scholarship: naturally, he was proud of his Cambridge degree. At the University he also distinguished himself as an athlete.

On one occasion, he told me, he approached the late Sir Maui Pomare, then Minister in charge of the Cook Islands, for the post of schoolmaster at Niue. "What are your qualifications?" inquired the Maori Minister. The latter's degree, by the way, was American. "MA of Cambridge," replied the applicant. Recalling the incident years later when we met in Tahiti he remarked: "That satisfied him. I obtained the job!"

---

<sup>116</sup> [George Eric Oakes Ramsden \(1898–1962\)](#)

I doubt if there is anyone else who possessed such knowledge as did Mr. Bolton on the early LMS missionaries and their often tragic histories. It was he who sought out, at much personal effort, the resting places of several of them. It was due to him that the mother Society, in England, sent out appropriately worded tombstones. In several instances all knowledge of the burial plots had been lost.

It was Mr. Bolton we must thank for rediscovering the site of the first church at Matavai. Well do I recall the day he took me, in the company of Charles B. Nordhoff, the American novelist, to that spot, and pointed to the only surviving stone.

On another occasion, we visited the grave of Henry Nott. The way in which he scrambled over the wall that surrounded the adjacent family plot of the Royal Pomares occasioned, I was told later, some consternation in the district. Probably his action was accounted that of an eccentric Englishman. Anyway, the fact remains that he had friends in all parts of the island.

Stern, austere, something of a recluse, beneath a typically British exterior, he was uncompromising in his judgements. Nothing that he wrote was ever slipshod. Social life had no appeal for him: he was not a club man. In a small community where, on occasion, international rivalries are apt to prevail, he kept himself aloof from factions. To the French he was invariably courteous. Nevertheless, he was British to the backbone. With his background he could not have been otherwise.

For many years, he worked on a history of Tahiti. I do hope that an opportunity will be provided for the publication of his manuscript. There were, naturally, difficulties in the way of its appearance during his lifetime. Mr. Bolton never forgot that he was the guest of the French in Tahiti.

The island, its climate, and its way of life, suited him: he desired not only to live there but to die there. The gods were kind to him. To the end he was vouchsafed good health, and he retained his intellectual interests. Beyond that he asked nothing of life.

To a friend with similar tastes in research he was, naturally, a positive mine of information. It was a delight to walk with him, to share his companionship.

One day he took me to Pauranie, the cemetery outside Papeete. There he told me the story of a former British airman, once the boon companion of Robert Keable, the English writer. The plot in which he rested had not been purchased outright. It is the French practice, after a few years, if the money is not forthcoming, to remove the body and convert it into manure. Which, after all, is quite a sensible procedure — but something that is, nevertheless, somewhat repugnant to many British folk. Mr. Bolton was one of those British nationals resident in Tahiti who was endeavouring to raise the several hundred francs necessary so that the bones of his compatriot could rest undisturbed.

Later, we clambered up a grassy knoll, not far from the elaborate memorial to the Abbe Rougier, who, like my old friend, was also a scholar.

“That is where I shall rest,” said Mr. Bolton, pointing with his walking stick. The plot had not only been reserved, but paid for.

It is a lovely spot. Below, masses of rich, tropical vegetation, and the Bay of Papeete, with Motu-uta, once the island retreat of Queen Pomare IV, silhouetted in the setting sun against the rugged, mountainous outline of Moorea. A strange resting place, some may think, for an English scholar and gentleman. But who will deny him the right of selection? There, I trust, he will rest in peace, in the warmth of the Tahitian sunshine, a canopy of blue sky above, and below on the reef the murmur of the Pacific that he loved, to lull him to sleep.

**April 1947, page 76 — 150 Years Ago – Arrival of Missionaries In Tahiti**

**150 YEARS AGO**

**Arrival of Missionaries In Tahiti**

From Our Own Correspondent

TAHITI, Mar. 4.

MARCH 5, 1947, is the one hundred and fiftieth of the landing at Matavai, on Tahiti, of the first missionaries of the London Missionary Society.

This anniversary was celebrated in all Protestant Churches of French Oceania, on Sunday, March 2.

The ship “Duff”, which brought the missionaries, is known throughout the islands by the name “Te Rapu”. The story is, that on March 4, 1797 — the day before the “Duff” arrived — Tahiti was shaken by an earthquake. The Tahitians thought the “Duff” had something to do with it, and they named her “Te Rapu” — the stirrer-up; and the name has endured.

The history of the “Duff” missionaries has been so ably told in the “PIM” by the late Mr. W. W. Bolton, that there is nothing this writer may add, except this: The “Duff”, on her return voyage discovered the group of islands to which the Captain gave the name “Gambier”, in honour of the great patron of the LMS, Lord Gambier. Mr. Bolton — the historian of the LMS missionary enterprise in the South Pacific — was a member of the family of that Lord Gambier.<sup>117</sup>

**June 1947, page 43 — The Late Mr. Bolton of Tahiti**

**The Late Mr. Bolton of Tahiti**

*Mr. W. W. Bolton, MA, of Tahiti, died last year, aged 87.*<sup>118</sup> *The following article, by the well known American writer, Mr. James Norman Hall, was published in the “Strand” Magazine, in February 1945.*<sup>119</sup>

I WENT to pay my respects to my friend Mr. Washington Bolton, on his 85<sup>th</sup> birthday. A more vigorous, keen-minded, blithe-spirited octogenarian it has ever been my privilege to know.

He is an Englishman and a Cambridge man who entered Caius College in 1877. At Cambridge his interests were equally divided between scholarship and sports. In 1879 he won the British amateur championship for the half mile, and at the same period set a passing record for the thousand-yard race. He was also a boxer, a footballer (both Rugby and soccer), a long-distance swimmer, and an ardent tennis player when that now universal sport was in its infancy.

---

<sup>117</sup> Lord Gambier was WWB’s great-great-uncle — that is, WWB’s mother’s mother’s father’s brother. See *Genealogy* in Part I, *Notes on the Life of WWB*.

<sup>118</sup> WWB was 88 when he died.

<sup>119</sup> The article was first published in the *Atlantic Monthly*, Volume 173, Number 6, June 1944, with the title “*Mr. Bolton’s Birthday. A True Story*”. The photograph of WWB in his garden that accompanies the article “*Mr. W.W. Bolton, Now 85 Years Old*” in the July 1943 edition of *PIM*, page 9, also appears in this article.

On arriving at his house I found him absent. He had left a pencilled note on the table: "Gone for a walk. Back this evening."

His small house, although built in the native style, of palm-frond thatch, is somehow as English as eggs and bacon. It is a charming house, always in perfect order, and contains nothing superfluous to his needs.

His half-acre garden is as "Boltonian" as the house: the smooth green turf, the flowers and shrubs and flowering trees, the pineapples, bananas, and papayas, all planted and cared for by himself, give this quiet, sunny retreat an ideal aspect, like that of a place dreamed of.

At Cambridge he prepared for the career of a Church of England parson; but it was inevitable that he should have entered the teaching profession. He was born for it.

How often I have heard him say: "Hall, it's the finest, the most rewarding of all careers. When that fact is recognised universally, and the men and women enter it who should go into it, the rising generation will build the kind of world we've been fumbling towards for so many centuries."

AT the age of 67, he chanced to read in an Auckland paper that a teacher was wanted for Niue, a lonely little island dependency of New Zealand, 350 miles south-east of Samoa.<sup>120</sup> Mr. Bolton was then thinking about retiring, but when he learned that the Niue post was not wanted by others because of its remoteness, he immediately offered his services.

He spent nearly three years teaching the children of Niue, a crumb of land 100 miles square, with a population of 3,500 Polynesians. Then, in 1928, he set out for Tahiti, to rest for the remainder of his days.

He had rested for, perhaps, a week when he became interested in Polynesian history as it concerns Tahiti. So he started tramping the island over, exploring the sites of ancient buildings, and the scenes of ancient happenings, reading neglected manuscripts, making researches that no one before had had the energy or the interest to make.

The results, so far, are contained in two thick manuscript volumes, written out in his beautiful Spencerian hand. These he has placed in the custody of the British Consulate, for the use of anyone who may wish to consult them.<sup>121</sup>

In earlier days, he had roamed all over the far north, living with Indians and Eskimos.<sup>122</sup> With one companion, he had voyaged the full length of the Yukon, in a flat-bottomed boat, from its lake beginnings to the Bering Sea, shooting the Whitehorse and Fivefingers rapids en route.<sup>123</sup> I

<sup>120</sup> Hall apparently assumed that WWB went directly from Niue to Tahiti in 1928, after having spent three years on Niue (see the following paragraph in the article). WWB turned 70 in 1928, so Hall calculated his age when he read that a teacher was wanted for Niue as 67. In fact, WWB was 62 when he was appointed teacher in January 1921. WWB left Niue in 1924 and returned to Victoria, British Columbia in 1925, before going to Tahiti in 1928.

<sup>121</sup> Volume 17 of the Bolton Papers in the Mitchell Library consists of *Old Time Tahiti*, while Volume 18 contains an appendix and an index to *Old Time Tahiti*. Volume 19 contains an "Addenda to manuscript of *Old time Tahiti*". Hall may be referring to the first two volumes. All three volumes in the Mitchell Library have "For use by the British Community of Tahiti" written on the cover, which suggests that they were the volumes that WWB placed in the custody of the British Consulate. The Bolton Papers were donated to the Mitchell Library by WWB's daughter, Vyvyan, in October 1952; it may have been that the British Consulate returned WWB's work when his papers were transferred to Vyvyan after his death. Given that Volumes 17 and 18 consist of 480 handwritten pages, it is unlikely that WWB made a copy of *Old Time Tahiti*.

<sup>122</sup> He roamed over part of the far north, but there is no other evidence to suggest that WWB lived with Indians or Eskimos.

<sup>123</sup> See Tale #71, *The Klondyke*, in Part IV, *Tales of a Roaming Grandfather*.

remembered his telling me that he had celebrated his 25<sup>th</sup> birthday, in England, by a sixty-mile walk accomplished in twenty-four hours — twenty, actual walking time.

AS I cycled on from his house at Papeete, our little port town, I was thinking: “Well, that kind of activity is over, even for Mr. Bolton. Whatever he may be doing this morning, perhaps he too is thinking, somewhat wistfully, of that 60 mile walk of 60 years ago.”

I did some errands round town and then went to the Restaurant du Coin for my lunch. Tahiti, one of the first colonies of France to join the Free French movement under General de Gaulle’s leadership, was observing America’s Independence Day, and most of the people had gone to the country; but at the restaurant I met Mr. Arthur Brander, another of the island’s distinguished octogenarians, whose home is 10 miles out from Papeete, on the western side of the island.<sup>124 125</sup>

He greeted me with: “Hall, where do you suppose Bolton is to-day?”

“I don’t know,” I replied. “I found a note on his table saying he had gone for a walk.”<sup>126</sup>

“A walk!” exclaimed Mr. Brander. “I should think he *has* gone for a walk! He routed me out of bed at six o’clock this morning. Said he wanted to have coffee with me. He’s on his way to the cave in Paea and expects to return this evening!”

“What!” I said. “Why, that’s 40 miles, to the cave and back!”

“I know — exactly 40 miles,” said Mr. Brander, “and he means to measure the lot of them with a pair of eighty-five-year-old legs. He was going strong at my place, but I’m worried. He’ll never manage the whole distance.”

But he did. He reached the cave, with its cool under-ground lake at 10 a.m., and having rested and refreshed himself for an hour, started homeward.

Tahiti is not famous as an island of inhabitants who are given to any great amount of physical exertion, and Mr. Bolton’s walk created a stir. Throughout the afternoon news of his progress kept coming in from people who had passed him in carriages, motor-cars, and on bicycles.

THE latest news of his progress was brought by Mr. Bolton himself, walking at his steady, deliberate pace through Papeete, on to the district of Pirae, where he lives, down the lane leading to his house, and up the steps to his veranda at exactly 8 p.m. — 15 hours’ actual walking time for the 40 miles.

When I saw him he’d had a warm bath and was briskly rubbing down his legs with coconut oil.

“All right? Of course, I’m all right!” Then he added, with a grin: “But I couldn’t have done 60 miles to-day so save me. Forty was enough.”

I asked his advice as to the best way of preparing for a long and happy old age.

“First, choose carefully your parents and grandparents,” he said. “Be sure they are men and women of rugged health. That’s luck, of course. It was my luck. Then, go for long-distance, healthy living, ‘Go slow and far’ is a good motto. It’s about the same as to say: ‘Moderation in all things.’”

<sup>124</sup> WWB’s birthday is July 3, whereas Independence Day is July 4.

<sup>125</sup> WWB mentions Mr Arthur Brander in *The Memoirs of Ariitaimai*, published in the September 1945 edition of PIM, page 59, in Part VII, and in *Easter Island* in Part XIII, *Roaming the Great South Sea*.

<sup>126</sup> The article has *now* instead of *know*.

“Yes,” I replied, “a 40-mile walk on your 85<sup>th</sup> birthday is an excellent example of moderation!”

“I knew perfectly well I could do it,” he said, “otherwise I would never had made the attempt.”

Presently, I suggested that he should write the Secretary of the Achilles Club,<sup>127</sup> which is made up of Oxford and Cambridge Blues, telling how he had celebrated his birthday.

“It wouldn’t do,” he said. “You see, Lord Desborough<sup>128</sup> and F. C. Coxhead, my only contemporaries in the Club, may be still living. They’d want to go one better than me. They couldn’t, of course, being Oxford men. But they would, unquestionably, kill themselves trying to.”

---

<sup>127</sup> The [Achilles Club](#) is a track and field club formed in 1920 by and for past and present representatives of Oxford and Cambridge Universities.

Research in the above answers the following Questions.

1. Was “Papeete” the original name of the present town?

Answer. No : the name was “Nanu”.

2. Who brought the change from Arue about?

Answer. It was a gradual change, made chiefly during the Regency for the Boy King (Pomare III) : his mother Terito (Teremoemoe) as his sister Teretaria (Pomare vahine) the latter succeeding Hitoto

as the actual Regent, living from the death of their common husband (December 7, 1821) on the Papeete property of the Pomare Family in “Nanu”.

3. When was Papeete finally established as the Capital?

Answer. At the time of and by the holding of the Parliament in 1827 in place of Arue as heretofore.

4. If “Nanu” was the original name of the Water front how did the name “Papeete” absorb it?

Answer. Alike from Past Records and Present day Usage, it is evident that stretching round the shore line of Nanu (from present day Shipyards to the Colonial Prison) were strips of private Family property, running back from the waterfront to a line which may be roughly outlined as “The Ramparts” Road to “The Barracks” and so to “The Prison”. These Family strips of property were as follow [sic] :

(1) Fare-Ute, (2) Vaininiori, (3) Arupa, (4) Torupure, (5) Pape-ete, also known as Vai-ete, (6) Paofai, (7) Tipaerui.

Number 5 was wholly the family property of the Pomares and roughly extended from the Diademe Hotel to the Hospital in width : and from the water front to the Barracks in depth. They had also proprietary rights in some of the rest.

N° 2 was Swampland and was reclaimed for a habitable site by the embankment later made to divert the streams from the hills into one channel to the sea.

Orivini — back of Torupure — did not seemingly reach the water front : whilst Umapua — back of Paofai — is clearly from its meaning (Lime Kiln) a much later addition.

These 7 Family Properties were are [sic] we know in early days distinct, and are still used colloquially by natives as where they reside in the present Town ; whilst 2 of them are used Officially and by Outsiders — Fare-Ute and Papeete.

When a Town began to arise, business alone required one name not 7, and the Property of the Royal Family naturally took precedence. “Nanu” was lost by the frequent use of the 7, and the 7 were absorbed by the one — “Papeete”.

*Making research by Dates for proofs of the above, we find as to “Nanu”.*

(1) 1797. Maps. Captain Wilson of the Duff reporting his voyage with the Pioneer Missionaries — landing them in March 1797 — entitles thus : “According to the survey taken by Captain Cook in 1769, corrected by his later observations. The name of the places near the sea by W. Wilson”. Cook’s earlier maps must be examined remembering this note as to his later corrections. These maps show “Matavai Bay” “Papaouah”, Taunua is named “Atteroomah” and where Papeete stands today is marked “Nawnoo”.

(2) 1802. The missionaries report a party of refugees from Eimoo (Moorea) having taken refuge “on the small island that stands in Nannoo Bay” which the above maps show as Motootoo (Motu-Uta).

(3) The Spaniard Boenechea’s map of 1772 is an entire blank both as to Harbour and Papeete, though he sent his armed launch under the command of Lieutenant Gayangos on a complete circuit of Tahiti, starting from Tautira. The trip covered from the 5<sup>th</sup> to the 10<sup>th</sup> of December.

Gayangos touched at Matavai, then “brought up in a bay having 14 fathoms and fine black sand” the Pirae beach of today : then “proceeded to coast along inside the reef until we saw an opening” the Taunoa Pass of today and “thence kept to the open sea” missing present day Papeete Harbour altogether.

*As to the Waterfront properties.*

1. (1776), The Diary kept by Maximo Rodriquez — the young enterprising Spaniard left by Boenechea who made a complete tour of Tahiti, starting from Tautira.

July 5 he reached Matavai. July 6 he reached “Opare”. July 7 and 8 he stayed with Tu (The first Pomare).

July 9 “ I started off by land — I saw the whole of Opare. We arrived about midday at the place they call E-fare ura. I had to stay the night there owing to rain coming on”.

July 10 he reached Faaa.

Ura and Ute (accent on the U) mean alike “ i. e. Flame, Fire, Red and the results of Flame. Ute (accent on the E) means Song. Old natives are still to be met with who call Fare-ute, Fare-ura, nobody calls it Fare ute i. e. Singing House. As a fact, the “Long House” of the maps was there, either stained red by the use of the Mati and Touplant’s juices, or once burned down ; and was where Temarii lost his life by an explosion of gunpowder in 1797.

3. [sic] (1838) There being no “Ordinance” Maps in purely Tahitian days nor till the French began to reside upon the island, those after 1828 drawn up are no “proof” as to what was long years before, though correct at the date of their drawing. They are to be studied as not “the last word” as to what was before their days. “Papeete” had for years absorbed the other 6 when Bruat <sup>1</sup> arrived.

3. Their continued common use. The British Consulate building was in Paofai on the same spot as today. Queen Pomare wrote an appeal to her people from there, dated 10<sup>th</sup> January 1844 heading it “Paofai” though she lived in the town of Papeete, her home being on the Family property close by the present day Treasury Building. The Custom continues today.

*As to the gradual développement [sic] 1797–1803  
Years of the First Pomare.*

Throughout these years as recorded by the early Missionaries, Nanu was the name by which alone present day Papeete was known to them, to visiting sailors, and to natives.

*1803–1821. — Rule of Pomare II*

Up to this period Nanu was a closed harbour. The first vessel to enter the Pass is so far a matter of conjecture. Neither Wallis or Cook, Bligh or Vancouver made any mention of or concerned themselves at all with it.

The most likely ones to dare the then extra narrow way were whalers whose Captains dared anything : and these were (around 1810–1820) beginning to regularly frequent these waters, with Huahine their first headquarters, lying as it did on the whale track to and from the Antarctic [sic]. With Whalers there followed of necessity Traders and a Settlement, gradually to evolve into a Town.

---

<sup>1</sup> [Armand Joseph Bruat \(1796–1855\)](#)

(1815) With Pomare it's [sic] settled position as Paramount Chief and War over at last, he though resident in Arue (Papaoa) made steady use of Motu-uta as a Retreat during his last years and had raised a house in Papeete. This little islet was part of the Family property of "Papeete" and the latter's name became now established and recognized fact, accepted by all, as is to be seen from the following witness.

Ellis reports a Missionary stationed "at Papeete" and that a Church had been built. He speaks of "500 present at a service" and that "On the brow of a hill" (where today is the Semaphore and the Mission House) "Mr Cook [sic] had erected his abode... inconvenient on account of its distance from the settlement".<sup>2</sup>

He shows further that ships were by then using the harbour, writing of the arrival from England of "The Tuscan", of its anchoring at Matavai (the usual spot) but next morning the ship proceeded to "Papeete".

*1822–1827. — During the Regency (for the Boy King)*

1. (1824) Ariitaimai's Memoirs speaking of her mother "The Marama" of Moorea but resident at Papara upon her marriage with the second Tati, notes her reluctance to have anything to do with Papeete. "No native Tradition or dignity was associated with Papeete which grew into consequence only on account of its harbour".

2. (1825) Captain Bailey anchored his vessel at Papeete "opposite the Church". He had anchored the "Saint Patrick" at Matavai but "moved to Papeete" where there were 2 American vessels and an English Whaler.

3. (1826) Captain Beechey says that the Queen Regent lived at Papeete but that the British Consul, several other Europeans and some of the missionaries lived at Taunoa.

Note. Captain Charlton of the Schooner "Active" was the first British Consul — a resident of Hawaii. In 1825 the British Government appointed him "for the Havaian [sic] Georgian Islands" and he sailed between the two groups till trouble arose here over both his long absences and his trading in liquor, the missionary George Pritchard<sup>3</sup> being given his post in 1837. Wallis had named Tahiti and Moorea "The Georgian Islands". Cook named the Sous le Vent separately "The Society Islands" and did not include Tahiti and Moorea as is done incorrectly today.

4. Beechey further says that the best port is neither Matavai nor Papeete but in "Oparre, Papawa anchorage" (the Papaoa of today). It was at Papaoa that Bligh anchored the Bounty to load his bread fruit plants, after his leaving Matavai. Teuira Henry is in error or there is a misprint as to his moving from Matavai to Papeete.<sup>4</sup>

At Bligh's date (1789) there was no Papeete.

---

<sup>2</sup> Instead of Cook, this should refer to W.P. Crook. See WWB's article *The British Consulate on Tahiti* published in the 21 December 1937 edition of the Pacific Islands Monthly, pages 45–47, in Part VII.

<sup>3</sup> [George Pritchard \(1796–1883\)](#)

<sup>4</sup> See [Teuira Henry, Ancient Tahiti, Bishop Museum Bulletin, No. 48 \(1928\)](#). Teuira Henry (1847-1915) was the granddaughter of the missionary Rev. J.M. Orsmond (1784?–1856), who compiled much of the information in *Ancient Tahiti*.

*Papeete from 1827 Onward*  
*Rule of Queen Pomare IV*

In 1827 (January) the boy King who had passed his few years of childhood in Moorea at the Missionaries School was brought over to Papeete to die at the Home which had been raised for some years and which was succeeded by a more substantial one erected on the same site in 1838, both standing between and slightly back of the present day Treasury Building and the Governor's office, the huge foundation stones today lying loosely about near the Treasury.

Here the young Queen had lived for several years with her mother and her Aunt the Queen Regent and here she remained throughout her life. Arue was to her only a country change, though business would oftentimes follow her there as happened with her firsts [sic] interview with the R.C. Fathers Laval <sup>5</sup> and Caret <sup>6</sup>. Pomare IV stamped Papeete from the very firsts [sic] as (1) The permanent Royal residence and (2) Her Seat of Power. The one step left to create it the Capital immediately followed : Parliament was transferred from Arue which had been heretofore where the Laws were made, the essential foundation of a Capital.

In 1828 an engraving of Papeete of that year shows some dozen Store Houses scattered along the Water front.

In 1829 Moerenhout (later to become the firsts [sic] U.S. Consul and later the first French one) landed as he says "At the Port of Papeete".

There is no need to proceed further in the years as by that time Papeete's position as o [sic] Town was assured.

*As to the first "Parliament" at Papeete*

In 1824 — under the Regency for Pomare III — the Code of Laws drawn up under Pomare II in 1819 which were confirmed by "a General Assembly" of Chiefs and the public in that year at Arue (Papaoa) were revised and enlarged at a similar gathering again held at Arue on February 23. Two of the most important changes made were (1) The Monarchy to be a Limited not an Absolute one. (2) A Parliament — not a General Assembly — to meet annually : this to be attended not by the Public but by all the Chiefs and 2 representatives to be elected from each District to hold office for 3 years.

In 1826 this first Tahitian Parliament (or Legislative Assembly — not a General Assembly as above noted) met at Arue in the largely rebuilt Royal Mission Chapel at Papaoa, whilst the next and all succeeding ones were held at the new Center of Power Papeete : thus stamping it from the year 1827 as the Capital.

**Bulletin N° 59 (1937), pages 685–688 — The Lost Graves of the Pioneers on  
Tahiti and Moorea.**

**The Lost Graves of the Pioneers on Tahiti and Moorea.**

There were 9 to be found, 6 men and 3 women and they dated back to 1799. After close on 3 years research the quest has been accomplished and it is fitting that record should be made and placed amid the files of our Society for future generations to peruse. The result is not to the credit of any one man but to the hearty cooperation of many not only on the islands involved but far off London and Sydney. Correspondence of those long past years had to be unearthed, references had to be followed out to a conclusion, the confusion in the minds of local natives had to be carefully straightened out; the end was success and the pleasant labour fully rewarded before 1936 was closed.

The following were sought:

- (1) Thomas Lewis died November 27 – 1799 Buried at Matavai.
- (2) John Jefferson died September 25 – 1807 Buried at Matavai.
- (3) Sarah Henry died July 28 – 1812 Buried “on Moorea”.
- (4) Mary Davies died September 4 – 1812 Buried “on Moorea”.
- (5) Sarah Hayward died October 4 – 1812 Buried “on Moorea”.
- (6) William Scott died February 9 – 1815 Buried “on Moorea”.
- (7) Samuel Tessier died July 23 – 1820 Buried at Papara.
- (8) Henry Bicknell died August 7 – 1820 Buried “on Moorea”.
- (9) John Davies died August 19 – 1855 Buried at Papara.

Numbers (1), (2), (3) and (8) arrived on Tahiti in the “Duff” March 5 – 1797 : Numbers (6), (7) and (9) arrived on Tahiti in the “Royal Admiral” July 10 – 1801 : Numbers (4) and (5) arrived on Moorea November 1 – 1811 in an unnamed schooner from Sydney.<sup>7</sup>

Both Matavai and Papara being definite districts the Quest was thereby greatly aided; but “on Moorea” which was the only help London could render, was certainly a very large order; the coast line, the only possible site, being 38 miles in its circuit. A short statement follows.

*Matavai.* — Two leads — two only — had to be relied on (1) that Lewis was buried a short distance from the “Missionary House” (the second) of 1798 and not the “British” or “Bligh” House (the first) of 1797 and (2) that the first Christian Church upon Tahiti (and therefore the first in all Polynesia) was raised in 1800 “near the grave of Mr. Lewis”. Therefore if House or Church could be located, search was strictly limited.

It seemed indeed an off chance that any native resident should have been the recipient of Tradition of so long ago and for some time inquiries failed but then by happy chance information was acquired

---

<sup>7</sup> The schooner was the *Endeavour*; see Chapter 2, page 10 of Ten Decades — The Australasian Centenary History of the London Missionary Society by Rev. Joseph King.

that one — Oututaata — of Haapape an aging man knew both Church site and a grave. It was but a short walk from his residence to Point Venus (Matavai) and some 300 yards short of the sea in a large coconut plantation he pointed out a squared stone, rising high 3 feet from the ground which he stated had formed the entrance step to the Chapel : and some 80 yards there from he stood beside a black boulder — sure sign of a grave — to day far sunk — where he said “a Duffie missionary” was laid. He had known these facts all his life, had learned them from his fore fathers.

Asked for the name of the man, he had no recollection and as was found with the other dead it would have been so strangely handled that it would have been of little use. Asked as to a second grave, he answered that he had never heard of another “Duffie” dying at Matavai. Yet close to the known boulder, there was a similar second one, the 2 graves were dug side by side, Jefferson had been remembered, Lewis had not, the earlier Brethren had seen to that. Lewis to them had died “in sin” and an out cast from their midst. They had buried the body but his memory was to perish. It had. By his side they had laid his stiff opponent, their quarrel over; and to day one large re-enforced concrete slab suitably inscribed covers them both, leave being readily granted by M. Villierme <sup>8</sup> the present day owner of the property; and the District as a whole accepts with gladsome mind the charge and care for the years to come of that unique church stone and the 2 “lost graves” of Pioneers to be seen (by all who will) to day at Matavai.

*Papara.* — No lead save that the island was no longer heathen and that Churches dotted the land. The graves would naturally be near their House of God. But the present day Church is not of that date. There was an earlier one. Research found it to have been raised half a kilometre past the present village, in a present day large coconut plantation, the whole acreage dotted liberally with the black boulders — always at the head, not the foot. Amid them hidden by long grass there were 2 wholly different; one out lined perfectly with coral blocks, the other covered completely with a couple of thick coral slabs cut from the reef near by. There could be no doubt that these were of white folk. No need to ask the natives on that question. But a difficulty arose, for the Records spoke of 3 men dead at Papara whilst there were but 2 graves — It was long before the transfer of Bicknell to Moorea was traced. Through 2 resident natives — Tetu Ourima and Uramoae; Davies was clear enough — the grave of slabs, but opinions were unsettled as to the second till it was proved by printed Journal that Tessier was laid at Papara whilst Bicknell dying but a month later requested that his body should lie “on Moorea” beside one of his children whom he had lost some years previously. The name given by Paparans to both Tessier and Davies were impossible of deciphering but the records held. Here then lay voyagers together on the Royal Admiral, 35 years between their deaths. Full size reinforced concrete slabs suitably inscribed to day cover them both; they lie close to the Highway so that all who will can read.

*On Moorea.* — No lead, no light for long, but one thing showed up, there were but 2 “stations” on that island for many years one at the North (to day Papetoai) the other on the east side (Afareaitu). One of these 2 held the secret. Letters written Home or elsewhere never once gave any address than Eimeo (Moorea) the village they dwelt in was never mentioned. But Pomare (II) was other wise in his correspondence with the Brethren when there [sic] were “on Moorea” and he on Tahiti. It was with him “To the Brethren at Uaeva : Eimo”, always Uaeva. So Uaeva was the key to “Moorea” and to the graves. Officialdom in its surveys gave response at once. Papetoai is today composed of 3 sections of old time Uaeva. And Pomare so further research showed had given one section over to the Brethren where they combined and lived and from whence they worked. Afareaitu did not open as a station till 1817 so all things pointed to Uaeva for the 5 lost graves. It was in 1809 that Uaeva was first occupied and since then has never been given up as a village centre. None at first knew of any old time cemetery but some told of being forbidden by their parents to play “where white folk were buried” and pointed to a huge maze of lantana bush impenetrable to day. The axe got to work and

---

<sup>8</sup> Possibly Henri Edouard Villierme (1878–1952)

there the Quest was found : Bicknell with his child's little grave alongside, Scott near by, and the 3 women side by side, their graves alike, as peas in a pod. There being no possibility of differentiating the women and feeling that remembrance should be given to them as to the men, it was decided that a tablet suitably inscribed would best meet the case. A largø [sic] and handsome tablet therefore hangs to day in the native Church not a stone's throw away. This (unlike the grave stones) is not in English but in Tahitian so that the natives both now and in the future may know clearly of those who lie near by.

Thus was the Quest completed : the aim accomplished : and at Long Last due honour has been paid to those who left home and comfort for the Faith that was in them. Henry Nott's grave has always been known.<sup>9</sup>

W.W. BOLTON.

---

<sup>9</sup> See also Tale #21, *Of Perseverance*, in Part IV, *Tales of Roaming Grandfather*, which has a photograph of the graves at Papetoai just as WWB found them in 1936. The lost graves were the subject of several articles in the Pacific Islands Monthly from 1935 to 1937.

<sup>22</sup> *Tiki hau* in the PIM article.

<sup>23</sup> The name should be *Turnbull*.

<sup>24</sup> The PIM article has [Tematangi](#), which is the correct spelling at present. This may be another example of the difficulty of distinguishing WWB's handwritten "n" and "u".

# PART IX

## OLD TIME TAHITI

BY  
REV. WILLIAM WASHINGTON BOLTON, M.A.

### Preface

The original text of *Old Time Tahiti* is stored in the Mitchell Library, State Library of New South Wales, Sydney, Australia, as Volumes 17–19 of the Bolton Papers (Collection 1–7A). Volume 17 consist of *Old Time Tahiti*, while Volume 18 contains an appendix and an index to *Old Time Tahiti*. Volume 19 contains an *Addenda to manuscript of Old time Tahiti*. At the end of the Foreword, WWB writes “*Commenced 1928 : Completed 1938*”.

These volumes are now available on microfilm (CY Reel 4976). The handwritten text was transcribed from scans taken from the microfilms and provided in PDF files; see the Preface to *The Chronicles of Savage Island* regarding the guidelines followed during the transcription.

In his article in the June 1944 edition of the Pacific Islands Monthly, page 43, *The Late Mr. Bolton of Tahiti*,<sup>1</sup> James Norman Hall states that

“Then, in 1928, he [WWB] set out for Tahiti, to rest for the remainder of his days. He had rested for, perhaps, a week when he became interested in Polynesian history as it concerns Tahiti. So he started tramping the island over, exploring the sites of ancient buildings, and the scenes of ancient happenings, reading neglected manuscripts, making researches that no one before had had the energy or the interest to make. The results, so far, are contained in two thick manuscript volumes, written out in his beautiful Spencerian hand. These he has placed in the custody of the British Consulate, for the use of anyone who may wish to consult them.”

Hall may be referring to the first two volumes. All three volumes in the Mitchell Library have “*For use by the British Community of Tahiti*” written on the cover, which suggests that they were the volumes that WWB placed in the custody of the British Consulate. The Bolton Papers were donated to the Mitchell Library by WWB’s daughter, Vyvyan, in October 1952; it may have been that the British Consulate returned WWB’s work when his papers were transferred to Vyvyan after his death. Given that Volumes 17 and 18 consist of 480 handwritten pages, it is unlikely that WWB made a copy of Old Time Tahiti.

---

<sup>2</sup> Ariitaimai or Ari’i Taimai (circa 1821–1897); see Note #2 to Chapter VII for information in her regard. WWB has borrowed much of his pre-Christian history of the Tahitians from the *Memoirs of Ariitaimai*, which was written by the American, [Henry Adams \(1838–1918\)](#), based on stories told to him in 1891 by Ariitaimai, Chieftainess of Papara, through her daughter, Marau, divorced wife of Pomare V. See also WWB’s letter to the editor entitled *The Memoirs of Ariitaimai* in the September 1945 edition of the Pacific Islands Monthly, page 59. Unsourced quotations in *Old Time Tahiti* are from the *Memoirs*. The accuracy of the *Memoirs* has been questioned by Neil Gunson [here](#) and [here](#), and by Robert Langdon [here](#). See also the comment by James Lyle Young in the footnote in Chapter VIII.

## **Old Time Tahiti.**

### **A Sketch of**

#### **1. The Period of Violence**

#### **2. The Period of the French**

### **Foreword**

The following Sketch, written with no thought of publication, seeks to give a plain and consecutive story to visiting friends who, keen to acquire information and picking up the Past in haphazard fashion, find it extremely confusing and well nigh impossible to piece together. It is but a transcript of the labour of others for historical purposes alone, their writings woven into a single whole. The legendary antecedents of the island's inhabitants are purposely not dealt with. They are a story in themselves to be better read of in "Vikings of the Sunrise" (Buck) and other volumes of like nature. Only essential notes are allowed to interfere with the run of the story, and these are placed at the end of the Chapters. The eye soon wearies of making excursions among footnotes below, whilst the mind rebels against the all too frequent interruptions. All notes therefore, save the really necessary ones which throw immediate light upon what has just gone before, are to be found in an Appendix which can best be read and their value be fully seen when the complete story, itself a short one as here sketched, has been acquired by the reader. The writer would deeply regret any errors therein caused through imperfect knowledge though he has diligently sought information through all sources at his command. Opinions and the point of view may naturally differ, but Facts are the essential thing, and there may be those who have access to documents unknown or inaccessible to him. A welcome aid these to perfect accuracy, and corrections will be gladly made in this manuscript sketch.

W.W.B.

Papeete.  
Tahiti.

Note.

The reader will notice cases of poor English and incorrect spelling, not alone of Tahitian names, in some of the documents quoted. For these the writer is not to blame. It has been felt better to reproduce textually the original than to correct or revise.

Commenced 1928 : Completed 1938

A Polynesian native.

## THE PERIOD OF VIOLENCE

### CHAPTER I

Tahiti is, as it were, two islands joined by a fair-sized isthmus — the larger, Greater Tahiti, the smaller, Lesser Tahiti : and from unknown times was inhabited by native, Polynesian, Clans, each Clan with its ruling Chief. For the better understanding of what follows, the position of those Clans had best be given. The main “Districts” of today were the main centres of the past.

On the north lay Pare — Papaoa within it, known commonly as Arue — the two being portions of the Porionuu which covered both northern and eastern coasts; the latter containing Papenoo and Hitiaa. Going south on the western side from Pare came Faaa, Punaauia, Paea, Papara and Papeari. On Lesser Tahiti, Tautira lay on the eastern coast, Vairao and Teahupoo on the western.

When Captain Wallis, R.N., <sup>3</sup> in H.M.S. Dolphin of 24 guns and a crew with officers and marines of 140, <sup>4</sup> first saw Tahiti on June 18, 1767, the Tevas with Papara as headquarters held control over nigh 80 miles of coast, the whole western side of Greater Tahiti — stretching from independent Faaa adjoining the present town of Papeete — down to the isthmus of Taravao, as also the whole of Lesser Tahiti. The remaining 40 and more miles of northern and eastern coasts, with Faaa, were held by the rest of the Clans.

How they came to this commanding position will be duly shown. They were more than a match for the rest of the island till white men came on the scene, when this commanding position was lost to Pare-Arue and its Chief, Pomare II, <sup>5</sup> a story this sketch also covers.

When Wallis (Uari) and later on Cook <sup>6</sup> (Tuti) arrived, the Ariirahi of the Tevas being Head Chief of the largest portion of Tahiti, it was natural that the white men should assume him (Amo) to be the king of Tahiti. But not so. The South Sea islands knew nothing of kings in those days. They were ruled by Chiefs “Arii” and Great Chiefs “Ariirahi”.

The whole population was greatly confined as to residence, for the central portions of both Greater and Lesser Tahiti are but a riot of hills. The lower classes were crowded up the valleys and mountain sides, the upper on the strip of land which runs like a low shelf round the island shaped as it is like a hand-mirror — but the natives, knowing nothing of such a thing, likened it to a fish, it having both a body and a tail — the strip a narrow space in itself between the mountains and the sea, save where the larger streams as at Papenoo, Hitiaa, Papara and Tautira cut out a few broad valleys, a mile or more in their extreme width.

The present population of Tahiti is given a total of 14,154 including the numerous French, Chinese and Half-castes : and that of Moorea, the island close adjoining, as 1,837 including the same. The population as given by inference from Wallis in 1767, Cook’s 200,000 in 1769 and his scientific

---

<sup>3</sup> [Samuel Wallis \(1728–1795\)](#)

<sup>4</sup> WWB has written over his original number and the combined text is somewhat illegible, but appears to be 140. The [Dolphin](#)’s official complement was 160.

<sup>5</sup> [Pomare II \(ca. 1774 –1821\)](#)

<sup>6</sup> [James Cook \(1728–1779\)](#)

companion Forster's <sup>7</sup> 120,000 in 1774 appear extravagant <sup>8</sup> but much evidence seems to support them as possible fact. (See Note #3 to Chapter XI and *The Spanish Marine's Story* in the Addenda.)

When Wallis' guns began to fire in Matavai Bay as he dropped anchor "*there were not less than 300 canoes about the ship, having on board at least 2,000 men, many thousands were also upon the shore, and more canoes coming from every quarter*". Cook saw a fleet of 160 large double-canoes attended by 170 smaller double-canoes preparing to start out to attack the neighbouring islands of Moorea. This fleet, he concluded, could not contain less than 7,760, allowing 40 to each large canoe, and 8 to the smaller ones. This was a contingent from only 2 Districts. Along with these went transports, 40 in each large canoe and 4 in the smaller, raising the total to 9,000. At this rate the whole island could raise 1,720 war canoes and 68,000 men : and as these could not amount to above a third of the number of both sexes, children included, Tahiti's then population of 200,000 is not beyond credibility. <sup>9</sup>

**Moorea's outline from Papeete's highway.**

Cook's estimate of 40 men to each large canoe was low. Natives estimate each as carrying 50. Less than that number could hardly have managed those great double vessels, from 60 to 100 feet long, with platforms between. Forster counted in the largest of the canoes prepared against Moorea 104 paddlers and 8 steersmen, besides 30 warriors on the platform. The 9,000 who set out against the

<sup>7</sup> [Johann Georg Adam Forster \(1754–1794\)](#)

<sup>8</sup> WWB has *extravagent*.

<sup>9</sup> However, as noted by Robert Langdon in [The Lost Caravel Re-explored](#), page 109, there were both *va'a* and *pahi* in the fleet. "*This suggests that many of the canoes had come from Ra'iatea and were manned by Ra'iateans, for both Cook and Banks in 1769 and Hervé in 1772 had all stated that the pahi were peculiar to that island. This fact, however, now escaped Cook's recollection and he proceeded to estimate Tahiti's population on the basis of what he saw before him.*"

neighbouring island were not attacking the whole of it but only one District on its northern side with its Arii, Mahini. They were repulsed. Mahini, awhile later but not then Paramount Chief, must have had an equal force, if not larger. If one District could then muster such a number, the whole of Moorea should have had 40,000 inhabitants.

The population was recognized by the natives as excessive. A single breadfruit tree was often owned by 2 or more families who fought over the branches. Infanticide was common and carried out ruthlessly.

Of the above huge total the Tevas must have numbered at least 120,000 and it was amongst these that the first white visitors chiefly moved and noted things. They saw that some — not all — of the Ariirahi had one special right attached to their rank. This was the right to wear the Feather Girdles. On Tahiti, the Heads of 2 Families alone had the right to wear the Maro-ura or girdle of Red Feathers. These were the Heads of the Teva Clan at Papeari and Punaauia. The Tevan Head at Papara alone had the right to wear the Maro-tea or girdle of Yellow Feathers. These 3 Ariirahi were sacred personages. Wherever they appeared, all, men and women even to Arii, stripped themselves to the waist as a sign of respect : and as the very ground these Ariirahi trod became of necessity theirs, they were always carried when they went abroad that they might not acquire the property of their fellows. Yet they were only sacred where they were among their own people and Districts — and those others by right of some close marriage connection with that District. Cook saw him of Papara — Teriirere — with his father (Amo) and his mother (Purea) at Matavai Bay which was outside the Tevan Districts, being in Arue. He saw all strip before the child, this because of a marriage connection. Beyond that District he would be looked upon as a stranger. Both Wallis and Cook took Amo and Purea to be King and Queen, but Amo was not even Head Chief, only exercising the power as Guardian for his son, according to the native custom which made the Firstborn the Head of the Clan immediately upon birth.

Marriage was a matter of most profound and social consequence, and women ever played a conspicuous part in Tahiti's history. In the absence of sons, daughters inherited both Titles and property. A Chieftainess was an independent of her husband — in her own right of that post — as any other Arii : she had her seat in the Marae, the sacred Council place, and if she was ambitious she might do great things for her children as did Purea, the friend of Wallis and Cook, called by the latter Oberea and Berea; and as did the stepmother of the second Pomare, her niece Itia as will be seen.

The final struggle for supremacy was between Papara and Pare-Arue. These latter Districts were under one Chief, the Head of Porionuu with his headquarters at Matavai Bay. The modern town of Papeete was, for long, a mere strip of land of the Clan resident within Arue. This District's Chief might as an Ariirahi be called important. Beyond him on the eastern coast there was no Chief of the first rank. Both he and they were disunited and weak, the Tevas on the other hand were a great Confederacy, yet the Ariirahi of Papara was never the Paramount Chief of Tahiti. The Kingship which the first white men attributed, first to him and then to another, was never accepted by the natives. It was left to missionaries and guns to introduce a wholly new idea of government on Tahiti. When the white men finally swung to Pare's Chief the natives were as unwilling as ever for Kingship. The struggle as will be seen was long and fierce.

The Tevas claimed descent from the Shark God and though we of today must needs discard the fable, it meant to them the basis of their superior standing.

Generations back, an Ariirahi of Punaauia married a Chieftainess of Papeari, named Hotutu, and had a son. At his birth the father set out in his canoe for the Tuamotus — the pearl atolls — to obtain the Red Feathers the boy was entitled to wear in his own special marae to be erected later.

Whilst absent on his long voyage and quest, a strange visitor appeared at Papeari whither the Chieftainess had repaired, and of course had to be entertained by her. He was a demigod, one half human, the other half fish. He came through the Pass in the reef, into the estuary of the Vahiria river and thence ashore.

After many months residence, the Shark God grew weary of his hostess and left, giving as his reason that he had seen her dog licking her face which was too grave a fault for a person of refinement to pass over. Before leaving he told her that the child she should bear, if a girl was to take her name, but if a boy he was to be called Teva : “Rain and Wind will accompany his birth, and Rain and Wind wherever he goes will forestall his coming.”

In Ariitaimai’s day, the fast dying ancients could still point the place where he lived as a child, his first bathing place, and the different waters he fished in as he came on his way to Papara — lying midway between his mother’s and his step-father’s homes — where he raised his own marae; to Papara centre of Tevan power in Cook’s day; the home place still of the Clan and Papara District has annually the heaviest rainfall of the island.

Apart from the Domestic and Corporate maraes, of which there were 5 classes, the Family, the Social, the Doctors, the Canoe-builders and the Fishermen, every Chief, great or small had his own. About a dozen stood out pre-eminent upon Greater Tahiti owing to the high position of their owners.

A marae was an enclosure in parallelogram form, the level pavement sometimes raised high, sometimes low, and stone walled, with a stone platform used for religious rites at one end of the long court. Religion had a strange hold upon this people. They invoked their gods in every undertaking, the category of spirits a lengthy one, the priesthood ranking high and wielding great power and influence.

A Tahitian’s social position depended on his having a stone to lean against — whilst seated on the ground — within the enclosure of his Chief’s marae. The greater maraes were those under the control of Ariirahi, 3 of whom were entitled to those Feather girdles, and these dozen or more alone could order human sacrifices to the gods. A man who had neither a marae of his own, nor seat therein, was a poor man socially indeed.

Cook was greatly embarrassed when asked the name of his marae, for of course being a very great Chief he must needs have one of his own. He gave the name of his naval parish at Home. Forster missed the point : yet saved himself. He took the natives to ask of him his Marai — his burial place — he hoped to be registered in Stepney as buried, so gave that parish likewise.

Thanks to the maraes, few social mistakes were possible. Genealogy was everything. Chiefs might wander off to other isles and be lost to Tahiti for generations, but if their descendants returned and could prove their rights, they were granted all the properties and privileges which belonged to them. Impostors were put to death without mercy. Every Family kept its genealogy a secret to protect it from imposition, and every member aimed to keep it pure. The most powerful Chieftainess could have as many lovers as she liked, but she could not raise a child who was not of Chiefly origin, it was put to death the instant of its birth.

If Forster missed the difference of sound between “e” and “i”, all the early visitors fell into the error of taking “o” before a name as being part thereof. We see Oamo, Otahiti, Oberea, Oto in their books. But the “o” was and still is simply “It is”. When asked by Wallis the name of the island they answered “It is Tahiti”. When asked who he or she is they still make answer “It is Amo” “It is Purea”. It is not and never was the custom to give the bald name. One must drop the “o” to get the name.

By human sacrifice mentioned above, cannibalism is not to be inferred. They were propitiatory offerings to the gods. There were some 20 occasions when this was considered necessary, the paramount being War, a Great Chief's Firstborn, the founding of a Great Chief's marae, the launching of a Great Chief's canoe. The victims were known criminals of the lower classes and were always taken unawares.

When an occasion for such sacrifice arrived, expectant victims either made for the sanctuary ground around the marae, or fled to the hills and hid till the village drum announced that the man was obtained. Only male sacrifices were held to be acceptable to the gods and there had to be no disfigurement of the body either in life or at death. If the intended victim was fortunate enough to be armed and evading the sudden blow slew his assailant, the latter took his place. After being offered upon the altar of the marae connected with the occasion, the body was decently buried. When however a District could not provide a fitting human sacrifice, a hog was substituted.

This for Tahiti : but among the Atolls — the Tuamotus — cannibalism was not unknown : they had but fish and coconut year in, year out, their home but a ring of coral and sand.

(See *The Tragedy of the Sarah Ann* in the Appendix.) <sup>10</sup>

## NOTES

- (1) "Tahiti" is a Polynesian root word with many forms and variations in the various Groups of the Race. Its essential meaning is "Borderland" "Beyond All" : and in a qualitative sense "The most admirable" "The most excellent".
- (2) From early times to the close of these Periods the names both of Places and People took on new forms as the spirit moved folk to do : e.g. Teriitaria is also named Ariipaea and Terataue indiscriminately. Terito becomes Tetupaia, Taitaru, Teremoemoe and Ta'aroa Vahine : whilst one, Tearamaa, who acted for a time as Secretary to Queen Pomare even adopted that of "Sir Robert Peel" and so signed her letters. (Command Papers p. 461) Hence what may seem erroneous or incorrect appellations, comparing those throughout this sketch with other works of a fuller kind are not so, but an attempt to confine such names within reasonable grounds for the reader. Some Place names are absolutely lost to us of today, the site as a Settlement has been effaced by Time, and a guess not being history, no elucidation is attempted.
- (3) The largest Parish in the world — the Parish of all British sailors — was the "Parish of Stepney, County of London". The Customs House for all ships which left the port of London was in that parish, and in the eyes of the Law as in the minds of its sailors every ship was located there. This arrangement certainly goes back to the days of Pepys <sup>11</sup> in the reign of Charles II, <sup>12</sup> and may be earlier still. It was the custom to record all marriages and burials on board vessels on the High Seas in the Diocese of London, and the Bishop thereof was in charge of all islands of the Empire without special Diocesan oversight, as instance the early history of Pitcairn. Forster's burial wherever it might take place would certainly be recorded there.

<sup>10</sup> WWB actually has "(See page 439)". Here and elsewhere, WWB's references to page numbers in the original handwritten manuscript have been converted to references to the subject matter and its location in *Old Time Tahiti*.

<sup>11</sup> [Samuel Pepys \(1633–1703\)](#)

<sup>12</sup> [Charles II \(1630–1685\)](#)

- (4) With reference to Kingship, the following Extract from the daily “Journal” of the pioneer missionaries is important:

*“May 23. 1800. It is reported that the Commonalty are much incensed against the principal Chiefs, and are wanting to root them up altogether and to restore the ancient form of government, that is, every district to be subject to its own Chief, without the acknowledgement of a superior over him.”*

- (5) Of Cook’s double-canoes, Jefferson <sup>13</sup> writes in the Journal of date October 5. 1798 (a) That each canoe could carry on its platform 40 or 50 men. (b) That each canoe had upon its stem and stern the figure of a man, half as large as life, rudely carved. (c) That they are called Pahi the same word as for ships, whereas a canoe ordinarily was called Va’a, a sacred canoe being Va’a ra’a. These Pahi were not hewn out of a single log, but made of planks sewn (laced) together with sennit (coconut fibre).
- (6) As to the deserted valleys once teeming with population Ellis in 1817 writes of Moorea : *“Went to the mountains (up Afareaitu valley) was much struck with the remaining vestiges of former habitants which are to be found even to the very tops of the interior hills.”* The same scene is to be met with in every valley throughout Greater Tahiti. Davies writes in 1816 of the wide valley of the Papenoo river as still inhabited for 20 miles up, reaching even over the ridge to Lake Vaihiria, but today wholly deserted. They had always had their wars, their human sacrifices, their strangling of infants and their kava drinking to excess. The white man’s ailments from measles up were a new phase, clearly the deciding factor for the valleys becoming empty and the sudden and swift enormous death rate. Nor must full clothing be forgotten, taking the place of oil ’gainst wind and rain.
- (7) Polynesia, alike with Melanesia and Micronesia, is a Greek name, the last 5 letters “nesia” meaning “islands” : the first part of the names denote respectively “Many” : “Black” : “Little”.
- (8) The red feathers so highly valued by the Tahitians of old were secured, locally, from a wild duck now extinct and also from the Atolls where the boatswain bird with its 2 flaming tail feathers <sup>14</sup> is to this day extremely abundant.

---

<sup>13</sup> The missionary John Jefferson arrived on the *Duff* in 1797 and died in 1807. The location of his grave at Matavai Bay by WWB is recounted in *Graves of Early L.M.S. Missionaries* in the 23 July 1935 edition of the Pacific Islands Monthly, in Part VII.

<sup>14</sup> Possibly the [red-tailed tropic bird \(\*Phaethon rubricauda\*\)](#), also called the boatswain or bosun bird.

**Stepney Parish Church from an engraving made in 1815.**

## CHAPTER II

Of the numerous Tahiti maraes the following were the chief. Papeari had 2 very ancient and famous ones. That called Farepua had the distinction of being the only marae whose decorations, alike with its Chief's, were Red Feathers. The other was called Tahiti. It was he or she the Ariirahi, the Chief or Chieftainess who presided over the last named, who was the great noble, the social Aristocrat of the island yet was no King or Queen.

Papara's marae was a mile back from the sea, close under the mountains. From this one, a stone was taken to found a second near the shore, forming part of which was the great Pyramid of coral on Mahaitea Point which so astonished Cook.<sup>15</sup>

Proceeding thence around the island, Paea has 2 leading maraes, Punaauia had its own, Faaa also. The Porionuu — which ran from Faaa clear round the north and east coasts — had its chief maraes (1) Ahu-toru in present day Arué on the Point seaward of Pomare V's mausoleum (2) in Paré, east of Taunoa some 200 yards back from the shore.

On Lesser Tahiti there were three : on its western side were Vairao's and Teahupoo's, on its eastern side Tautira's. The greatest of these 3 was the last named but its powerful Chief and his line were extinguished by war was as will be shown.

There were also the maraes of Papenoo and Hitiaa within the Porionuu Districts. The above list is fairly complete so far as records show.

Tradition gives Papeari as the earliest centre of political power, thence it moved to Punaauia, then back to Papeari. White men however found the Chief of Papara politically superior to both of these. A revolution had overthrown Papeari once more, but whilst Papara was thus the political centre of the Tevans and the most dominant force upon Tahiti, it could not assume the social supremacy, for as long as Tahitian native society should last, the marae Tahiti at Papeari was the Marae of maraes, the "most excellent" of all.

A woman was the cause of Papeari's collapse for good. Beautiful women were always a lively interest in island society and many were Beauties by profession. They swam and disported themselves in the lagoons which lie between the Barrier reef and the shore, their fathers raised a platform paved with flat coral slabs — a paepae — before their homes where the Beauty sat, and, passers by stopped to discuss the rich colour of her skin, the beauty of her eyes, her long flowing hair or the perfection of her figure.

Such a Beauty was the daughter of Panee of Papara an intimate friend of Papara's Chief. Papeari's then Chief had a fancy for handsome women and carried off the girl by stealth. Panee sought his daughter in every direction and finally stationed himself on the boundary line between the 2 Districts — the Mataiea of today — questioning all who passed. Two coming from Papeari told him that the Beauty had already been discarded and dwelt among the pigs and dogs. Panee in a frenzy of rage fell upon all near, killing 5 and sent such a message to Papeari's Chief as could only be atoned for by death.

Having made war a certainty he hurried back to Oro the Chief of Papara and his friend. The attack was not long in coming. It failed utterly and Oro chased the woman stealer through his own District,

---

<sup>15</sup> See the etching in Chapter III.

over miles of hills not easy to be crossed till the beaten Chief took refuge with him of Hitiaa, full 30 miles from the field of battle. From that day the Chief of Papara instead of Papeari's issued the summons to all the Teva Clan and became the political head.

Three generations before Wallis appeared, another revolution had occurred and again a woman was the cause. For a time it meant the eclipse of Papara.

Tautira was then a large and powerful centre on the eastern side of Lesser Tahiti covering some 25 miles of coast. Taiarapu — Lesser Tahiti's native name — possibly held some 40,000 of the 240,000 inhabitants of the entire island, Tautira some 25,000 of that number with an army of warriors at call of 7,000 men. Its Chief was an Ariirahi, Tavi by name, noted for his generous spirit. His wife Taurua who came from Hitiaa was reckoned the most beautiful woman of her day. They had one son. Tuiterai was Papara's Chief and he coveted Taurua. He sent a request for a visit by the Chieftainess with a promise that she should return in seven days. In Tahiti's code of manners the request could not be refused without a quarrel. Tavi did not want to let his wife go but his generous nature was ready to go to all lengths to please a friend. The woman had no say in the matter as she was not of his rank.

Taurua went to Papara like a Queen of Sheba and Tuiterai enamoured of her broke his pledge and refused to send her home. This was an outrage of a most grievous kind and an act of war. The Song of Tuiterai has come down the centuries "Why should I give up Taurua? I will not give her up. I, Tuiterai of the Six Skies, her who has become to me like the Ura to my eyes, like the sunshine from Rarato'a."

Tavi of Tautira summoning his warriors sent them against Papara with orders to destroy both it and its Chief. The end was a strange one. Papara was sacked, Tuiterai was wounded, captured and bound, but when about to be slain he objected, on the ground that he being an Ariirahi could not be put to death by an inferior, that Tavi himself must slay him. He being a sacred character uniting in himself as was often the case both the priestly and the chiefly castes the warriors stayed their hands. They carried him to Tavi and Taurua with him.

Tavi was in a quandary. If he himself slew Tuiterai gone was his fame for generosity. But an enemy spared became a guest by the code of Tahitians. His generosity won the day, he not only gave Tuiterai his life but Taurua besides. Tavi's renunciation is still extant in song : "Take then your wife Taurua! We are separated she and I! Taurua, the Morning Star to me! For her beauty I would die! You once were my friend but now! Take then Taurua my Friend." Papara's power politically was however overthrown and Tavi became an even more powerful Chief.

Unfortunately for himself he asserted this power by imposing a Rahui for his young son. He had lost a wife, all things for him centred in his boy.

A Rahui was an exercise of Authority well nigh regal in its claims. It was a prohibition that during a fixed period, long or short, throughout the entire territory subject to that Chief, sometimes one kind of food, sometimes another, such as hogs and special kinds of fish, should be sacred to that Chief, none to be touched. This was done sometimes wisely, as when food supplies were seen to be running low through wanton waste, sometimes unwisely as evidently in this case, which was to accumulate them for a magnificent feast as a show of power. The penalty of breaking a Rahui by chiefs of lesser rank, even those connected by marriage was war.

Through family connections Tavi's authority reached far. Vehiatua, an hereditary title — one of a long line Ariirahi of Teahupoo on the opposite side of Lesser Tahiti had a daughter Tetua-e-huri who had married the Ariirahi of Par'e-Arué — wherein as has been noted Papeete now stands — and this

daughter was about to bear a child. Her attendants told her that she should eat pork daily. Chieftainesses like her were apt to do as they pleased when their husbands were of lower rank than themselves. This husband though an Ariirahi stood in the second rank through a bar sinister in tracing his descent in part from Fakarava one of the Tuamotu, islands looked upon with disdain by Tahitian aristocracy, a fact never forgotten as to the Pomares. The woman broke the Rahui and trouble followed.

Tavi, ignoring Paré-Arué, considered this a declaration of war by her father of Teahupoo, and about A.D. 1700 he crossed Lesser Tahiti with his warriors. He was totally defeated. Vehiatua did not spare Tavi but drove him and his clear off the island. He sought refuge in the Tuamotus and never returned. His son when grown up came back, and a small District was made up for him — the modern Faaoné lying south of Hitiaa. Flying his kite one day, a favorite pastime with Tahitians both men and boys even to this day, the wind carried him within the Papeari District which adjoins on the south side west as he followed the kite, and into the sacred marae of Farepua. A ceremony was in progress, the intrusion of a stranger at such a time meant instant death. In his keen pursuit<sup>16</sup> he had entered and was slain.

Vehiatua moved his seat of power from Teahupoo to Tautira and was now in turn the leading Chief of the Tevans and Papara's only chance of regaining its position was by a marriage alliance. The elder sister of the wife stealing Tuiteraï became the wife of Vehiatua. Tuiteraï himself after his defeat and restoration by Tavi had now seen Tavi not only defeated but extinguished. He gave no more trouble and the immense prestige of Papara as well as its central position for the Clan swung back as time went on the political power to the Tevans' old time headquarters. So it was when Wallis and Cook came upon the scene.

These 2 Chiefs, Tuiteraï and Vehiatua are genealogically important. Tuiteraï had a son by Taurua whose descendant, Amo, was Cook's first friend and supposed king of the island. Vehiatua's daughter, she of Paré-Arué, had also born a son whose descendant was Cook's "Otoo" his later friend, his real name being Tu-nui-e-a'a-i-te-atua shortened for use into Tu. It was he who under white men's aid nigh became supreme under the secondary, not a mere nickname, of Pomare.

Every Tahitian Chief along with common people took such names, usually to commemorate something that happened to him or his, and these secondary names carried with them like the original name both rank and lands. Po-mare means "a night cough" and has clung from its first adoption to the superior Chieftainship of Paré-Arué which in the end, after bitter struggle became politically superior to Papara, raised with its new centre Papeete above all Arii upon Tahiti and finally reached kingship.

Other things greatly helped to this end. Paré-Arué had good anchorage, Papara had none, therefore to the former came the white man's ships and naturally white settlement. Then came the missionaries who made it their headquarters. To Paré-Arué natives had, in chief, to wend their way to consult the white man and to get his goods. It was inevitable that the centre of Influence should swing thither and its chief become increasingly of importance. From that stage however to kingship was not easy as will be shown, but by the aid of foreigners it was made not as is generally supposed by the First Pomare but by Pomare II.

<sup>16</sup> WWB has *pursued*.

## NOTES

## (1) The Titles — King, Queen, Prince, Princess.

There was not nor is there today any special Tahitian word for either of the above Titles. When we speak of Pomare II attaining Kingship, to the Tahitian it was what can be rendered as “Paramount Chief”. Ariirahiship was and is the highest term possible amongst them. Other nations’ Kings and Queens are to this day said to be — Arii George and Arii Vahine Mary for instance.

Paramountcy, further, brought no “Blood Royal” with it as we understand that term. Their “Blue blood” came and could only come through some connection with the Opoa Clan on Raiatea — in the Leeward group, Opoa, the mystic seat of Oro the god of War for Central Polynesia. The Pomares had that connection through marriage. Ha’apai the first Pomare’s father married Tetupaia-i-hau-viri of Opoa, hence they were numbered amongst the aristocracy of Tahiti prior to their obtaining the Paramountcy.

The prefix Terii to a name was and is a contraction of Te-Arii — “The Chief” and formerly used to show the high blood of the individual but is now in common use.

The grades below the Arii were

- (a) Tahua, the priesthood.
- (b) Iatoai, the upper class.
- (c) Raatira, the middle class.
- (d) Manahune, the lower class.
- (e) Vao, slaves.

## (2) The Placement of Maraes.

There were 3 grades of Tahitian maraes corresponding to the 3 main classes of society above mentioned, those appertaining to the Iatoai, the Raatira and the Manahune. Those of the first named were raised on the promontories or the shoreline : those of the second at the head of the deeper bays or close thereto : those of the third in the interior valleys and on mountain sides. They differed in many ways, the first named in the beauty of the site, the height of the altar and the choice of materials used : the second much lower but showing care in the building : the third being very rudimentary affairs.

## (3) The Seats of the Mighty

The Bishop Museum Bulletin (N° 116) gives a list of 102 maraes so far discovered on Tahiti. Of these the chief were named as follows:

the District in brackets

- (Pare) Taputapuatea. This name could only be used when a stone from the Opoa marae on Raiatea had been secured for its founding.

- (Arue) Ahutoru. On Outuaia Point hard by the mausoleum of Pomare V.
- (Faaa) Ahurai.
- (Punaauia) Taputapuatea.
- (Paea) Taata. Here Cook saw human sacrifice.  
Taiaore.
- (Papara) Mahaiatea. The largest on the island. This is really the name of the promontory on which it was raised. The correct name was Tooarai.  
Mataoa.
- (Papeari) Tahiti. This is the fountain of Aristocracy.  
Farepua. Said to be the most ancient of all. Founded by the god Ta'aroa. Held its rank till a descendant of that god, a mystic and mighty personage of the Past, named Tetunae, raised a new marae nearby.
- (Vairao) Nuutere.
- (Teahupoo) Matahihae.
- (Tautira) Vaiotaha. Mentioned by the Spaniards of 1772–1775.
- (Hitiaa) Taputapuatea.
- (Papenoo) Ivirau.

## CHAPTER III

Tuiterai of Papara's son by the beautiful Taurua married a daughter of the Arii of Vairao, the third District in Lesser Tahiti and had 4 children, two daughters first and then 2 sons. The daughters married and the eldest took to herself an Arii of Raiatea, thus leaving Tahiti. Upon the death of Tuiterai the elder son claimed his father's position as Arii, the younger son disputed his claim. His plea was ingenuous. As the eldest child male or female was the only heir with an indefeasible right to the succession and in this case a woman who had left Tahiti for good, all the other children had equal rights and might with equal justice lay claim to the Chieftainship.

The Hivas — otherwise Judges — in the matter decided in solemn conclave against the elder son and moreover banished him from Papara. We have still his Song in lament : "I look toward my land, the mountains, the valley. Mist hides the mountains and my Drove of Pigs. O! that the rain clear away that I may see the great mountains and the sight of my home." They had ordered him into Lesser Tahiti on its southwest coast whence looking across 20 miles of water he could see those towering mountains at the back of his birth place.

Papara with its broad valley and lofty heights is a lovely spot and naturally to all Paparans was their World. Today every point, field and hill hold legend and history for its people. In caves selected so carefully that the sites are now unknown, somewhere on the face of the precipice above the opening of the great valley the skulls and bones of their Ariirahi lie hid, their troubles and triumphs over.

Folk still note the Banishment one's Drove of Pigs, a struggling line of trees on the high mountainside as seen from the village, and when a cloud strikes the summit of the hills and shuts them from sight they speak of "Aromaiterai's cloak", his "mist".

Though banished he would appear to have been more popular than his brother of whom nothing has been handed down. He married and his son married his cousin, the daughter of his rival brother and Amo's sister. Thus the breach in the family was healed and the 2 male branches of Papara's leading family became one again, sealed by the child of this marriage whose descendant of yesterday — Ariioehau — married an Englishman, by name Salmon, and became the historian of her people in her published "Memoirs" of 1893 republished in 1901.<sup>17</sup>

Now once more a woman comes upon the scene and causes trouble. She was the Pura of Cook's day, the wife of Amo who had become the Ariirahi of Papara. She was the daughter of the Chief of Faaa, the District which today adjoins Papeete. It has but 7 miles of coastline but then stood out as an independent Clan between the powerful Tevans to the south and the Porionuu combine to the north.

Pura's father was through his connections particularly strong. He had married one of the Papearian family of the illustrious marae Farepua. He had 7 children of whom 3 stand out pre-eminent : Pura — Cook's Berea and Oberea — Auri and Teihotu. Teihotu was the father of the notorious Itia who married Tu the first Pomare. Auri married into the Marama family of Moorea whose story and connection both with the later history of Papara and with the Pomares of Paré-Arué will be duly recorded.

Pura's story follows.

---

<sup>17</sup> See WWB's article, *The Memoirs of Ariitaimai*, in the September 1945 edition of the Pacific Islands Monthly, page 59, in Part VII.

With her husband the political Head of the Tevas, her mother of the same high blooded stock, her father holding the keystone between the Tevas and the rest of the Clans, Pura was a very great lady, 100,000 and over looked up to her and her husband, and when a son was born to her — about — 1762 he became the most important personage not only in the eyes of his parents but of all Tahiti.

From a habit of blinking which seems to have amused him in his child, the father now took the secondary name of Amo “Blinker” in place of his original one Tevahitua and became no longer the political Head but the Guardian of it for his child Teriirere. The mother, in accordance with Tahitian custom, gained by this birth an increase of freedom from a husband’s restraint when they were of equal standing in rank and was not slow in taking it. She held the reins. Amo soon gave her up as a wife, marrying her niece instead, her temper was far too much for him but in the interests of their child they were one for awhile.

They not only imposed a Rahui for him as Tavi had attempted long years back, but set their people to work on the enormous task of building the Pyramid at Papara which amazed Cook and his friend (later Sir Joseph) Banks <sup>18</sup> and was an exhibition of pride hitherto unknown to Tahiti. Society on the island was in a ferment : Amo and Pura might indeed be politically the superior but socially, individually were not exalted above the rest.

If during a Rahui any relative of equal rank should visit the Chief who had imposed it, custom required that the Rahui should be broken for the durance of the visit. Naturally none of the Teva Clan would venture so to do for fear of consequences with such a woman as Pura, but Faaa whence Pura had come and where one of her brothers lived was independent.

The wife of that brother undertook the task on behalf of her own child. Pura’s boy was no better than her own. She set out from Faaa in her great double-canoe with the tent in its prow such as only Ariirahi might use. A crew of 50 paddled this barge of State along the coast to Papara until opposite the Point where the huge pyramid was rising she made through the Pass in the Barrier reef and drew near land.

Pura was on the beach and forbade a landing. “Down with your tent. How many supreme Heads can there be? I know of none but my son.” Her sister-in-law wept and as a sign of deep emotion and grief fell back upon Tahitian custom, cutting her head with the shark’s tooth till blood flowed down her face. But Pura held firm and the canoe was turned about and returned a failure.

She had failed it was true but her daughter the famous Itia was a stronger character than her mother. She was her Aunt’s equal if not superior both in temper and in force. Both Wallis and Cook missed her story but Bligh <sup>19</sup> of the Bounty had much to say of her and of course the missionaries.

Itia came to Papara in the same formal state as her mother had. Pura forbade the landing but Itia stepped ashore. She sat on the beach and likewise cut her head till the blood flowed. By blood alone now could Pura’s insults be atoned unless she surrendered. Then in this crisis Amo’s younger brother, Papara’s High priest, stepped forward who pleaded with his sister in law to receive her guest and so far as he personally was concerned wiped out the feud by drying the blood of Itia with a cloth. Pura however stood firm, there should be no rivalry to her son. She would not receive her equal so far as the Rahui was concerned yet ceased to order her from the beach. She could remain there or go. The feud was compromised but not forgotten between Aunt and Niece.

**The pyramid. The Marae Tooari on Mahaiatea promontory** <sup>20</sup>

Years after this scene upon Papara's beach, the Paré-Aruéans — with whom Itia was then one by her marriage to the first Pomare — swept down upon Papara on other score but Amo's younger brother's kin were spared, his effort at reconciliation was remembered and repaid.

The building of the pyramid went forward and Purea ranged up and down the coast from Lesser Tahiti up to Paré-Arué wherein lies Matavai Bay, soon now to see Wallis land, he the first of white men, she the greatest lady of the island. Wallis saw her in her pride, Cook's last visit saw her in her fall. Itia triumphed in the end, she died as practically Queen of Tahiti no woman her equal. Purea had her Rahui and her boy's new marae as Head of the Teva Clan, but after all the mighty Tevas succumbed to 2 small Clans united in the north with a strain of contemptible Tuamotu blood in their Chiefs and Itia to the last urging father and son to the fray.

We now reach in this sketch the time to deal with the Approach and the actual Coming of the white man. And first of the Approach. The Pacific Ocean was first seen by Europeans from its western side in 1511, Francisco Serrano <sup>21</sup> a Portuguese having discovered the Molucca Islands. From its eastern side it fell to the lot of a Spaniard Nunez de Balboa <sup>22</sup> who saw it from the summit of the Panama Divide on September 25, 1513. Its first crossing was made from East to West by Magellan, a Portuguese who was in the service of Spain. <sup>23</sup> He entered it from the Strait which bears his name

<sup>20</sup> WWB has *Tooarî* here and elsewhere. This engraving, published in 1799, is based on a sketch by William Wilson — first mate on the *Duff*, which landed in 1797, and captain of the Royal Admiral, which landed in 1801. See Chapter IV for an account of the destruction of the pyramid in 1865. See also *The Great Marae* in Part XIV, *Tahitian Vignettes*.

<sup>21</sup> [Francisco Serrão \(died 1521\)](#)

<sup>22</sup> [Vasco Núñez de Balboa \(c. 1475–1519\)](#)

November 28, 1520 and had reached the Philippines where he was killed in an encounter with the natives April 27, 1521. His course lay too far north to see Tahiti. Quiros <sup>24</sup> also missed it in 1606.

The Coming of the white men starts with the 18<sup>th</sup> of June 1767 when Wallis coming up from the south first saw Tahiti. On June 23 when he warped his ship the Dolphin to an anchorage in Matavai Bay after striking a coral shelf and hanging perilously till a rising tide and welcome breeze bore him off, the natives contested his landing mistaking the soundings taken by the ship's boats as presaging an attack, the Tahitians pelting the boats with stones. This struggle was kept up till Wallis gained his end by killing a few with gunfire and smashing a few canoes. A peace offering was then brought him of pigs, dogs and tapa cloth.

He remained in the Bay well over a fortnight before intercourse was really free, when on July 11 a tall woman came on board *"who seemed to be about 45 years of age, of a pleasing countenance and majestic deportment... she seemed to be under no restraint either from diffidence or fear... she behaved all the while she was on board with an easy freedom that always distinguishes superiority and habitual command."* She had been seen ashore by the gunner, great respect being shown her by all the natives and had just arrived in the north of the island. This was Purea.

Amo's wife was outside her own District but through her relationship by her niece Itia's marriage to the Chief of Paré-Arué was received, though but a guest, as she would be in Papara.

Wallis was not only well treated by her but became most enthusiastic over her as his Report shows, yet he failed to get her correct position and rank or the part of the island she came from. She was to Wallis *"my Princess or rather Queen"*. She made signs that he should go into the country, doubtless to her own District but he had to push on and on July 27 he left amid the passionate tears of his Queen who *"in the bow of her canoe sat weeping with inconsolable sorrow."*

One thing he left behind him besides his special gifts to Purea of looking glass, turkeys, geese, a cat and iron utensils of which they had learned the great value from the spoils of a Dutch ship of Roggeveen's <sup>25</sup> squadron wrecked on the reef of Takapoto in the Tuamotus 45 years previously. He left a British pennant raised ashore at Matavai, the sign of his having taken possession of the island in the name of King George the 3<sup>rd</sup>, whose name he bestowed upon it. Our Foreign policy turned his action down, an attitude it was to repeat more than once in later years.

Purea took that pennant down to her pyramid a-building and seems to have converted it into the Marotea with which her boy was soon to be invested. It, like the Yellow Feathers was to be the symbol of supreme political power over the Teva Clan. It had however further travels, being borne off later in triumph by Tutaha to his marae in Paea. There Cook saw it, now ornamented with feathers yellow, red and black. Later still when Tu mastered Paea he in turn carried it off to Matavai whence it had come.

In April 1768, eight months after Wallis, the Frenchman de Bougainville <sup>26</sup> touched on Hitiaa on the eastern coast. His stay was short, too short to gain much information. He took away with him to France Uтуру the brother of Riti, the Chief of Hitiaa, and could thus have learned something of Tahiti. This native never returned, dying of smallpox on his way home. Both these sailor men returned to Europe with the most wonderful tales of Tahiti's beauty. Its women and its absence of all conventions contrary to a state of nature. Seemingly ignorant of Wallis' action de Bougainville gave the island a

---

<sup>24</sup> [Pedro Fernández de Quirós \(1565–1614\)](#)

<sup>25</sup> [Jacob Roggeveen \(1659–1729\)](#)

<sup>26</sup> [Louis-Antoine, Comte de Bougainville \(1729–1811\)](#)

third name “New Cytherea”. Cook was to give it — posthumously — yet a fourth name “Society” which, bestowed by him not upon Tahiti but on the Leeward Islands to the north west has erroneously stuck not for those islands alone but for the whole Group. Tahiti was now on the map for all time.

When Cook first arrived in April 1769 Parea, her husband and her boy had been shorn of most of their former power as will next be sketched, but so intricate was the situation that Cook got hopelessly tangled and confused, irritating the various Chiefs he came in touch with through ignorance of the true position of affairs, giving positions to those who had lost them and especially misled by Tahitian expressions which mean indifferently Cousins and Brothers or Sisters. This makes it exceedingly difficult for inexperienced white folk to grasp the true relationship of those they meet or hear of today.

## NOTES

### (1) The “Georgian” Islands (Windward)

Tahiti along with Moorea, Tetiaroa and Mehetia were so recorded by Wallis at the Admiralty on his return and so appeared on its maps (C.P. <sup>27</sup> map p. 534) having nothing to do with the “Society” Islands which were not discovered and were so named by Cook in 1769, first of white men to see them. The confusion of the 2 titles led in later years to fighting with the French and to the Declaration of London in 1847 which finally settled the point by the testimony preceding it but the general public and the map makers along with the governments of today still perpetuate the error.

### (2) The “Society Islands”, the “Tuamotus” and the “Australs”

The Leeward Islands (sous le vent) consist of a widely scattered group but the chief ones are fairly compact. Raiatea, about 100 miles from Tahiti, and Tahaa lie within the same Barrier reef : Huahine and Pora Pora lie 20 miles away east and west. Going still west comes Maupiti and at great distances apart lie Mopelia, Scilly <sup>28</sup> and Bellinghausen. <sup>29</sup> Maiao is also included and Tupai, close adjoining Pora Pora, known also as Motu-iti. The Australs lie N and S of the Tropic of Capricorn. The Tuamotus are Atolls pure and simple, covering some 16 degrees of longitude. Originally called Poumotus by the natives, meaning “Pillar islands”, this was corrupted by white men into Paumotus meaning “Conquered islands”. By request of the natives the French Authorities in 1851 named them the Tuamotus meaning “Distant islands”. Makatea though not an Atoll is today included in this group.

See Appendix for *Discoverers of Central Polynesia* <sup>30</sup>

### (3) The Hoisting of the Flag.

From Wallis’ “Voyage Round the World”. Dated Thursday June 25, 1767. Himself and his 1<sup>st</sup> Lieutenant on the sick list, he ordered the 2<sup>nd</sup> Lieutenant ashore “*with all the boats manned and armed, the marines being also put on board with orders to land opposite our station... in the clearest ground he could find. About 2 o’clock the boats landed... and M<sup>r</sup> Furneaux* <sup>31</sup> stuck up

a staff, upon which he hoisted a pennant, turned a turf and took possession of the island in His Majesty's name, in honour of whom he called it "King George the Third's Island" : he then went to the river, and tasted the water, which he found excellent, and mixing some of it with rum, every man drank his Majesty's health."<sup>32</sup>

### Tahiti and the Society Islands

<sup>32</sup> This text, which was taken from Hawkesworth, *An account of the voyages undertaken by the order of His present Majesty for making discoveries in the southern hemisphere*, Volume 1, can be found [here](#). WWB has *also* being instead of *being also*, *pendant* instead of *pennant*, and is missing the ellipses and some commas.

## CHAPTER IV

All was ready. The mighty pyramid of Papara was at long last finished : the great feast at which Amo and Pura's son was to wear the Marotea for the first time was prepared. Scarcely however had the vast assembly gathered than coming from the southward, a riot of newcomers broke in upon the scene. The plan had been schemed, fomented and brought to a head by a woman, Purahi by name. She aimed to catch Pura between two fires. She was a pure Tevan, first cousin of the boy Chief for whom pyramid and feast were arranged. He might be pure Tevan through his father but his mother was of Faaa. The Ariirahis of Lesser Tahiti lying south of Papara gave Purahi warm support. That feast was never held, in place thereof was war.

Teahupoo's two leading warriors, Teieie and Tetumanua, led the attack. They broke up the gathering, slaying right and left and wrecked Papara. It mattered not that the Chiefs of Punaauia, of Moorea, of far off Raiatea and Pora Pora were there. Pura with Amo and their boy fled northward over the mountains where lay Arué, the meeting place with Wallis. She dared not take the coastline route, for another force was heard to be sweeping down from the north all along the seaside including Faaa. Itia, wife of the young Chief, was in Pura's refuge. Itia had not forgotten. She had a hand in that sudden, swift attack from north as well as south.

Papara's power and would be supremacy were crushed, but Pura still held her head high and in 1769, scarcely 4 months after the raid, Cook stopped ashore for the first time to meet her and give her Queenly honours, though he soon gathered that she had lost a position which was hers when Wallis arrived.

The Chief he dealt with as to setting up his tents and instruments on the Point of Matavai — now called Venus for the Transit of which he had come — was not Tu who held the Ariirahiship but Tutaha, nicknamed by the white comers as Hercules from his great bulk and strength. He was from Paea, the Tevan District lying south of Punaauia and independent Faaa, but he had connections which allowed him rights in other Districts, rights which he determinedly made use of. Tutaha had been steadily pulling wires for the much younger Tu. He was the bitter foe and completely controlled the young Chief.

When Pura and Tutaha went aboard the Endeavour presents were made to them. Tutaha did not appear very well pleased at the special notice taken of the woman who seemed to Cook to hold the sovereign power in the land. Yet the difficulty was only increased for Cook by the appearance on the scene of another who was treated by all the natives with excessive honours in the very District in which Tutaha seemingly was supreme. It was the boy Teriirere, Pura's son. Cook now met Amo the father and they became fast friends.

Tu — later set down by Cook as Otoo — was not seen by the great navigator on this his first visit, being kept in the background by Tutaha for his own ends. This young man, married to the forceful Itia, was of the same giant proportions as his chief supporter. Though of Paré-Arué he had both Tevan and Tuamotu blood in his veins and stood out among the natives — though then unknown to Cook — as rival for Tahitian supremacy with Pura's boy. We shall see much of him before he partially and his son of the same name won out in full.

Cook often met another native, Tupaia by name. He was actually of Raiatea but had been driven out of the Leeward Islands by an invasion of the Pora Porans. Escaping to Tahiti he came with the favour of the imperious Pura, and in the height of her power was her First Minister. Being aware of Tutaha's

designs he advised Puraea to secure his death but she refused and he, foreseeing trouble, retired into the mountains.

It was Tutaha who had worked with the people of Taiaarapu for the attack on Papara which was so completely successful. It was he who had led the warriors south in the hope of catching Puraea between two fires. He did not want heads and plunder as the Lesser Tahitians sought. He wanted and he secured the symbol of supremacy, the Yellow Feathers of Papara, which were promptly bestowed upon Tu.

**Captain James Cook, F.R.S.**

Cook was the son of a labourer of Marton, near Whitby, Yorkshire. Born 1728. Apprenticed to a village shopkeeper. Went to sea in a collier. In 1755 (American War) enlisted in the navy. By 1758 was Master on the Flagship stationed on the American coast. In 1768 became Lieutenant in the Navy and was selected by Sir Edward Hawks, the 1<sup>st</sup> Lord of the Admiralty, to command the expedition to the South Sea.

This portrait was made by Dance, R. A.<sup>33</sup> Cook sat for it before his last voyage at the request of Sir Joseph Banks who bequeathed it to the nation. In 1829 it was transferred by his widow to the Greenwich Palace. A smaller portrait in the National Gallery (at first in South Kensington) was made by Webber, one of the draughtsmen of Cook's last voyage.<sup>34</sup>

**1<sup>st</sup> Voyage :** Edited by Dr Hawkesworth by order of the Admiralty.

**2<sup>nd</sup> Voyage :** Cook was his own editor upon his return home.

**3<sup>rd</sup> Voyage :** By Cook till his death : completed by Capt King of the Resolution.

None thought of driving the boy off the island as had been the fate of Tavi's boy. The quarrel was with Puraea, not with her husband or their son, both of whom however had to suffer along with her.

<sup>33</sup> [Nathaniel Dance-Holland \(1735–1811\)](#)

<sup>34</sup> [John Webber \(1751–1793\)](#)

Things on the island being now in a chaotic state, the Regency of the Tevans — Amo's right on behalf of his son — was offered to Tutaha and accepted. He had now both the rivals — Tu and Teriirere — under his control. Tupaia was invited to return from his mountain shelter to Papara to act as High priest, he being of the priestly caste, but was so dissatisfied with the state of affairs that he long hesitated and by the fortunate arrival of Cook at this juncture he won a passage not only to his home to which he leads Cook, the first of white men to learn of and see the Leeward Islands, but on to England. He died however on his way at Batavia in Java.

It was then into all the trouble that Cook had stepped ashore. He kept friendly with all, still paying special deference to Parea, Wallis' Queen. Soon, with his usual thoroughness, he was on his way to map Tahiti's coastline and, rounding Lesser Tahiti, landed at Papara in hopes there to meet Amo, wife and boy. They were still absent, Tutaha ruled but a hearty welcome from others awaited him and he went sight seeing. In chief he saw two things, the Pyramid and the wreck of Papara.

Banks who was with him writes of the Marae Tooari on Mahaiatea Point: "A most enormous pile, its size and workmanship almost exceeding belief." Its base 267 feet by 87 feet all of coral from base to summit : 11 steps each 4 feet high led to the top. It stood at one end of a parallelogram walled with coral and paved throughout with flat coral slabs. Such was Parea's monument to her son. It stood perfect till 1865 when its coral slabs were wanted for a bridge and its coral in general for the extensive buildings of the "Atimaono Coffee and Cotton Plantation" and taken despite the pleadings and the protests of the natives. Today only a great heap of shapeless coral remains. It has been used as a lime kiln for years : is all overrun with trailing vines and even trees of fair size : it is difficult even of approach from the Island Highway and still more difficult to walk upon and around.

The wreck he met with on the way. By the seashore as he walked in 1769, "Everywhere under our feet were numberless human bones" and in Papara itself were ruins and buried homes with all livestock gone. Papara even under Tutaha's Regency had not recovered from the shock of 4 months past.

In 1772 a Spanish Captain — Boenechea <sup>35</sup> — in the Aguila dropped anchor at Vaiurua in Lesser Tahiti, and gave the island yet another name "Amat" after the then Viceroy of Peru <sup>36</sup> who had sent him thither to investigate British doings in Pacific waters.

When in 1773 Cook arrived on his second visit he found conditions very different. In 1770 the coalition against Papara had broken down. Tutaha had quarreled with his former friends of Tairapu. Led on by ambition he persuaded several of the Chiefs of Greater Tahiti to join him in an attack on Lesser Tahiti and the 5<sup>th</sup> Vehiatua's supremacy thereon. Tu, never a warrior as we shall see, who owed so much to Tutaha was forced reluctantly to join the force. The fleet of war canoes made for the Isthmus and a fight within the reef ended in a draw. Tutaha now determined to attack by land. On the isthmus itself the two forces clashed and Tutaha met not only with defeat but death. Tu escaped and the victors made no attempt to follow up their victory. This Vehiatua died in 1771. The Spaniards had much to say in their records of the Vehiatua as Chief who died during their stay in 1775.

Cook found all the Chiefs on the island on friendly terms apparently. There did not appear to be the former rivalry, yet it was but dormant. Tu now no longer under Tutaha's control appeared before Cook at Matavai Bay and begged the gifts which on a former occasion Tutaha had secured for himself. Amo, once again Regent at Papara, and Parea also put in an appearance as also their son, Tu's rival,

---

<sup>35</sup> WWB has *Boenechia*.

<sup>36</sup> [Felipe Manuel Cayetano de Amat y de Junient \(1707–1782\)](#)

a lad now 12 years old. Cook quickly perceiving that Parea had lost both position and power now swung over to Tu. To Cook there must needs be a King and he was Tu of Paré-Arué. Cook treated him as such. Moreover the chance that made Matavai Bay in that District the best harbour, then so far known, for the English ships, made the Chief of it the most important person on the island for the sailormen. Through him the Captains secured their needed supplies and to him therefore went most of the axes, nails and other gifts, as also the main civilities of the British.

The other Chiefs saw differently and were greatly disgruntled. Their jealousy led to a serious fight in Paré close to Papeete of today and Tu fled to Matavai to ask the protection of Cook who was quite unable to divine the cause of the quarrel. A Porionuu Chief had never before been treated as a being superior to the Chiefs of other Districts and to the other Chiefs, Cook's infatuation for Tu seemed a deliberate insult. (For his portrait see the Appendix) <sup>37</sup>

Of Papara Cook and his companions saw little. The glamour of Parea had passed. He writes, "Old Oberea, the woman who when the Dolphin was here in 1767 and whom I had not seen since 1769 paid us a visit and brought a present of hogs and fruit." And Forster writes, "She did not stay long on board, probably because she felt herself of less consequence in our eyes than formerly." Amo also went aboard but was still less noticed.

A war with Moorea was now on. The Chiefs of Faaa and Paea wanted the help of Tu. He hung back. Not even Itia could persuade him. When Cook left, the fleet of war canoes were sailing. It was unsuccessful but peace there was still far off.

Whenever possible Cook gave a passage to likely natives and there now went with him a young Chief — Hiti Hiti — and in his consort ship, the Adventure, another, named Mai, who joined at Huahine in the Leeward Group, both of whom returned, full of the wonders they had seen, when Cook returned once more in 1777.

He had hardly left in 1774 when the Spaniard, Boenechea, returned in the Aguila, bringing with him 2 priests of the Order of Saint Francis, Fathers Narciso and Gerónimo and 2 others, one as servant, the other as Interpreter, landing at Tautira in Lesser Tahiti. He had brought furnishings for a wooden house which was raised for them. A few weeks later Boenechea died and was buried ashore, he the first of white men along with one of his sailors killed ashore by accident. The ship had borne off on its previous visit 4 Tahitians, two of whom died shortly after, one at Valparaiso in Chile and one at Lima in Peru. The remaining 2 now returned, from whom the Interpreter had acquired the language. In 1775 the same frigate returned and the priests with the other 2 men — one excepted — were glad to escape from what was to them a hopeless task. The Diary of Maximo Rodriguez, the young Spanish marine who had been left with the priests as layman and Interpreter, is extant and procurable in English having been published in 1914 by the Hakluyt Society of London.

When in 1777 Cook returned for the last time, the war with Moorea was on once more and Tu still refusing his aid. The Tahitians had to make terms with their foes before Cook sailed. He heard that the Chiefs intended to punish Tu and thereupon interfered, "the weight of my heavy displeasure should be felt when I returned again to their island."

It was on this visit that he learned but was misinformed of the death of both Parea and of Amo who by a second marriage had a son named Temarii. Their son for whom Parea had so stoutly fought was now the Ariirahi of Papara with a Regent. We shall see much of Temarii later.

---

<sup>37</sup> See the photo of Tu (Pomare I) in *The Pomare Family of the Past* in the Appendix.

**Cook's Bay, Moorea**

It was also on this his last visit to the South Sea that Cook saw Moorea for the first time at close quarters, sailing across the Strait to enter through the Pass into Opunohu Bay — not the one which is known by this name today. Here was one of the few occasions when he showed the strong arm, for thefts caused him not only to land an armed force by cutter in Pao Pao — the present day's "Cook's Bay" — but to burn several canoes and homes.

Nearly eleven years passed before other European ships visited Tahiti. Three months before Bligh appeared, the Lady Penrhyn, a convict ship, called in on its way back from Botany Bay and spent about a fortnight replenishing and trading iron for food.

When Bligh — who as Sailing Master had been on Cook's ship the Resolution — appeared on his own ship H.M. Armed Vessel Bounty in October 1788, Tu told him that which proved that after all he had paid dearly for the prominence Cook had given him. Both Moorea and the main island had attacked him. They had respected Cook's threat, but when 5 years had passed and no return of Cook, they came to the conclusion that they had seen the last of him and took their promised revenge. Tu was still in sorry plight.

According to custom he was now only Regent for his young son by a second wife — Tetua-nui-reia of Moorea. Itia had no surviving issue and had taken as her paramour a Teu Teu — a Chief's servant — named Fareroa. Tu himself had also changed his name to Teina. After the birth of another son he took the further secondary name of Pomare. This secondary name became a fixed one absorbing all previous names of father and son : the generations following them using it as we use a surname.

## NOTES

## (1) Pomare I and Itia

From the “Journal” of the missionaries : “April 9. 1797... he (Pomare) had taken another wife and she (Itia) one of her servants : but they live in the same state of friendship and with no loss of dignity.” Itia had been the mother of many children, those by Tu in their earlier years of marriage being destroyed at birth so as to retain for him the first place of Power which according to Tahitian custom was the right of the new born babe : those by others of non-chiefly rank were likewise destroyed relentlessly. The method of infanticide was chiefly by piercing the brain with a blunt topped bone from the leg of the bird Uaao — the Bird of Death — whose black and white feathers served to adorn the funeral pyre of the Great.<sup>38</sup> When unavailable, strangulation was resorted to.

## (2) The Arrivals and Stay of the Earlier Ships

1. Wallis	H.M.S. <u>Dolphin</u>	23 Jun – 27 Jul 1767	34 days
2. de Bougainville	Frigate <u>Boudeuse</u>	6 Apr – 15 Apr 1768	9 days

## CHAPTER V

Bligh and his mutineers exercised no small influence over the destinies of Tahiti and specially of its leading Chiefs. He was no stranger to the island as we have seen, and the position of Tu in Cook's day was a certainty in Bligh's. To find him in so desperate a state did not alter the fact. His District had been thoroughly ravaged and plundered. All Cook's gifts had been carried off : a cow was at Faaa, the bull at distant Hitiaa. Bligh brought them together but did not bear them off. The mutineers took them to Tupuai — the bull dying en route, the cow eaten.

Although Tu went with Bligh to Faaa by boat he dared not land. He would not go to Moorea with Bligh on any terms. So bad was his position that he begged Bligh to take him, Itia and their son to England. Bligh was at some loss for an excuse : *"I was obliged to promise that I would ask the King's permission to carry them to England if I came again. I have endeavoured to make the principal people believe that we should return again and that we should revenge any injury done in our absence to the people of Matavae and Oparee."*

**Bligh.**

It is important for the reader to remember that Tu, the father, was Teina when Bligh appeared, and Tu was now the child whom Bligh was allowed to see only with a stream between him and the boy, who was eventually to be the first King of Tahiti as Pomare II and a Christian at that. But he had far to travel in savagery before he was either Christian or King.

Bligh's infatuation for Teina led him to the extreme of giving him arms. *"I thought it but reasonable to accede to his request and I was the more readily prevailed on as he said his intentions were to act only on the defensive. This indeed seems most suited to his disposition which is neither active nor enterprising. If Tinah had spirit in proportion to his size and strength he would probably be the greatest warrior on Otaheite but courage is not the most conspicuous of his virtues."*

Bligh gave him personally a brace of “*pistoles... he told me that Iddeah would fight with one, her friend with the other... Iddeah is a very resolute woman, of a large make and has great bodily strength.*”

Here it may be noted that there is no letter “D” in Tahitian and that 2 consonants are never used together. All words likewise end in a vowel. Itia is the correct form of the woman’s name and Teina of the man. It may be further noted that there are only 13 letters in the Tahitian Alphabet, the vowels being pronounced A (as in father), E (as in weight), I (as in tier), O (no change), U (as in glue). The consonants are — with the vowels — A : P : T : E : F : H : I : M : N : O : R : U : V.

The Bounty sailed the first week in April 1789 and on the 24<sup>th</sup> of that month when off the Tongan Group to the west, the well known mutiny occurred. The mutineers returned to Tahiti after a vain effort to locate on Tupuai in the Austral Group <sup>41</sup> arriving back in June. In 10 days time, with Tahitians along with them and well supplied with food, which they readily secured from the natives by telling them that they were required by Cook who had sent the Bounty back for that purpose, they sailed for Tupuai again, but again their effort at settlement failed and in September they again returned. Sixteen landed, weary of adventure : the other nine with 7 Tahitian men and 11 women sailed again the next week and vanished for 18 years from the sight of men. Their story is that of Pitcairn.

Those left on Tahiti mostly stayed with Teina’s young son at Arué who befriended them. They set to work to build a 30 foot schooner to get away in for they knew their danger, the long arm of British justice. This boat, found later (for lack of sturdy masts for sails) to be too unseaworthy for their purpose, was launched in 1790 and came in handy for Teina. He called upon them to aid him in return for hospitality. “The War of the Mutineers” was the means of gaining for Teina a greater extent of dominion and power than any had ever had upon Tahiti. They refused however to go with him against Moorea, which at last he was ready to do, but cleaned his muskets for the purpose and Mahini of Moorea at last owned to defeat. He fled across the Strait to Faaa and uniting with that District’s Chief and him of Paea prepared to fight again.

In September 1790 the clash came but Teina’s opponents were caught between two fires. A new Chief was now ruling in Papara, Amo’s younger son Temarii, who now joined with Paré-Arué’s Chief whom Papara had so long bitterly opposed and attacked from the south, while Teina and the mutineers attacked from the north. The opposing forces were crushed, Mahini fell in the fight, and both Faaa, Punaauia and Paea submitted to Teina. The mutineers had brought their schooner and guns from Matavai Bay and fought both on sea and land.

A useful increase to Teina’s white assistants was a man named Brown who was landed on Tahiti in consequence of a quarrel aboard a Swedish vessel — under the command of Captain Cox, an Englishman — which called in whilst the mutineers were sailing back and forth to Tupuai. <sup>42</sup> With Brown was added a very welcome gift of firearms, ammunition and a Union Jack, an addition to the pennant of Wallis and used, like it, as an ensign of supremacy. Brown proved very helpful in the War of the Mutineers though he seems to have been, in general, unfriendly to the men themselves and kept in close touch with Teina till opportunity came to escape from Tahiti. It was not long in coming.

In March 1791 the frigate Pandora of evil fame arrived in search of the mutineers and the Bounty. Those of them, numbering 4, who were at Matavai with Teina’s young son were easily secured. The rest had gone to Papara to stay with the Chief they had lately aided and were prepared to aid again.

---

<sup>41</sup> [Tubuai](#)

<sup>42</sup> John Brown was dropped on Tahiti by the fur trade brig, Mercury, in 1789. See *The Bo’sun-Mate’s Story*, below, and [George Mortimer, Observations and Remarks Made During a Voyage... \(1791: 34\).](#)

He had in view the using of these white men to dispute that growing supremacy of Teina, so far as Lesser Tahiti was concerned. Captain Edwards <sup>43</sup> sent to 2 boats to Temarii. By handsome presents and convincing that Chief that non-compliance would lead to an attack by the frigate he was unwillingly forced to assist in securing those of the mutineers who by this time had fled into and across the mountains. One was captured on shore and 3 took canoe for Matavai and voluntarily surrendered. Led by natives, a party of the frigate's crew crossed the mountains and found the 6 missing ones on the sea shore. They surrendered. Two only of the entire number were missing. In a jealous quarrel, one with the other (and that aggravated by deliberate theft, though in self-defence) at Vairao — in Lesser Tahiti — one of them by name Churchill, who had (under the custom of Taio) actually been named a Chief in that District, had been shot and the natives in revenge for their friend and Chief had stoned the murderer Thompson to death.

The Pandora sailed with its prisoners — and Brown — in May 1791, their terrible sufferings and fate another story than that of Tahiti : and in December of the same year Vancouver <sup>44</sup> arrived in H.M.S. Discovery. He like Bligh had been with Cook in 1777 and found great changes. Most of his former friends were dead but Teina was very much upon the scene, strong now in power, Papara his only difficulty. Temarii now ruled in his own right with Mani-Mani, a High priest of advanced age, a native of Raiatea, wielding great influence at his side. Temarii and his wise old counsellor needed watching.

Teina was at his new possessions in Moorea when Vancouver arrived. He hastened back, the sailorman might prove handy for things were shaping themselves nicely for him. Lesser Tahiti had but lately largely fallen into his hands without a fight. The Vehiatua, of that day, dying, Teina brought pressure to bear, together with a just claim of ancestry through marriage constating cousinship for the Arrirahiship, Vehiatua leaving no issue. A brother of Teina was already one of the lesser Chiefs. The post was given to a four years of age nephew of the late Vehiatua with Teina's brother as Regent. That for the south of Papara. From Paea up to Paré-Arué was also his. That for the north of Papara. Another of his brothers Teriivaetua was Papenoo's Chief on the east coast. Teina's ambition soared.

He wanted not only Tahiti and Moorea in entirety but all the islands within reach, the Leeward Islands and the Tuamotus from which his forefathers had come. He held the pennant thanks to Tutaha, alike with the Union Jack of Captain Cox, which in native eyes gave him a distinct advantage over his equals in rank. Now he sought English men and English guns to keep it. Vancouver was not only begged to give more arms but to sally forth and conquer those same isles for him. The sailor declined, but gave him ammunition, he had no guns to spare.

Between his departure and the arrival of the Duff in March 1797, O'Connor an Irishman, Butcher a Scotsman, a Jew and others appeared upon the scene, all off the whaler Matilda which after calling at Tahiti had been wrecked on Tureia <sup>45</sup> in the Tuamotus in 1792, the Captain and crew reaching Tahiti in the boats and all but the above named getting away on the Prince William Henry which called in shortly after. There were also 2 Swedes, Cornelius Lind <sup>46</sup> and Peter Haggerstein, who had deserted from the Daedulus, a British storeship which called in on its way to Botany Bay in 1793. This man Peter made himself very useful as Interpreter to the missionaries on their first landing and later on, though they evidently had no great opinion of him. All the above men were beachcombers and utterly unreliable. They naturally became Teina men.

<sup>45</sup> [Tureia \(also called Papahena\)](#)

<sup>46</sup> Andrew Cornelius Lind. WWB has *Lynd*.

**Captain George Vancouver, R.N.**

**1757–1798**

**From a portrait in the National Gallery, London. The Dictionary of National Biography says :– “A portrait of Vancouver, ‘painted probably by Lemuel F. Abbott <sup>47</sup>,’ was purchased in 1878 by the trustees of the National Portrait Gallery, London.” His grave is in Petersham Churchyard, Surrey.**

Bligh had reappeared in 1792, this time in the ship Providence with the same object as before, the securing of breadfruit saplings for the West Indies and which this time he accomplished. The Lords of the Admiralty had consented to his carrying certain men who had been in training for missionary work by the London Missionary Society but on the eve of departure their courage failed them. Those who sailed 4 years later appeared of sterner stuff.

Bligh gone, these men arrived in March 1797 to find the 2 chief Districts still at violent loggerheads, the question of supremacy a live one. The Otoo of Cook, the Tinah of Bligh, was now wholly Pomare and by this name alone the missionaries and all later knew him. He had not been idle. With the help of the beachcombers he had reached out to the far south-eastern side of Tahiti, which under the Chief of Papenoo — his brother — and Hitiaa had taken no actual part in all these struggles, and was now master of the entire eastern coast down to the isthmus of Taravao.

---

<sup>47</sup> [Lemuel “Francis” Abbot \(ca. 1760–1802\)](#)

**Captain James Wilson <sup>48</sup> of the Duff**

But Temarii of Papara under wise old Mami Mami had countered all Pomare's strokes by a master one. He had adopted Pomare's son, Tu the Younger, who had married his cousin Tetuanui and had no issue. (She died in 1806.) Adoption of sons and daughters on Tahiti was as strong a tie as parentage. Between the now 2 fathers the young man much preferred Temarii and looked to him and crafty old Mami Mami to help emancipate himself from his father and drive him from the island later on.

When the missionaries landed at Matavai on Point Venus, they naturally fell into the hands of Pomare and Itia. In May Temarii appeared. The missionaries who had had no time to look into Tahitian politics or understand them bestowed royalty on Pomare.

An early "Journal" entry reads "*May 9. 1797. Temarii accompanied the King and Queen and stayed to dine with us. He is we find of the Royal race and son of the famous Oberea.*" Here as has been already noted, they erred, he being the son of her husband Amo by her niece. "*He is the first Chief of the island after Pomare by whom he has been subdued and now lives in friendship with him and has adopted his son. He is also high in esteem as a priest.*"

Tetuanui, the son's first wife, is often mentioned pleasingly in the Journal. She appears in the illustration *The Cession of Matavai*. (See *A Raw Deal* in the Appendix.)

Upon arrival, the missionaries found a large native house standing on the extremity of the Point which had been raised by Pomare for Bligh who he said would be returning to reside there but had so far failed to do so. It was of oval shape, 108 feet long, 48 feet wide, 18 feet high and thatched with palm leaf. Bamboo partitions were run up by the new tenants and doors to keep out the inquisitive natives.

---

<sup>48</sup> [James Wilson \(1760–1814\)](#)

It soon contained beside the various sleeping apartments, a large store room, a library, a surgery, a dining hall and a chapel. Such was what was to become known as “The Bligh House”.

Pomare chose Cover as a brother out of the mission band, Temarii chose Main as an offset. Main and Clode went to Papara where Temarii entertained them, presenting each with a canoe. Later the same year 2 of the band on their way round the island called in at Papara and found Pomare there. After visiting him they went on to Temarii *“who enquired into the cause of our visit to Pomare in a way that bespoke jealousy, envy and fear of that Chief... It is said that he is meditating revenge on Pomare and has chosen M<sup>r</sup> Main as his brother whom he has heard spoken of as a military man.”* This custom was called Taio.

The Duff sailed for Home in August and the missionaries at once found life both uncomfortable and alarming. The helpless band were plundered by friends and opponents of their mission alike. They became increasingly dependent upon Pomare and Itia. Temarii was the only one who did not beg of them but they were soon to lose him.

As these and succeeding arrivals of missionaries played no small part in Tahitian Old time history, it may here be of interest to note that of the 30 men, 6 married women and 3 children who sailed from London in 1796, 4 of the men were ordained ministers, one was a surgeon, the rest were of various trades : 7 carpenters, 2 shoe makers, 2 smiths, 2 bricklayers, a gardener, a butcher, a weaver, even a hatter, among other trades. Of these 39 souls, 25 were left upon Tahiti, the rest went to Tonga, one alone to the Marquesas, his companion failing in courage at the last moment. Those on Tahiti were the 4 ministers, 13 of the tradesmen, 5 of the women and all of the children. The surgeon backed out and returned on the Duff to England.

Those of them who left their mark were Henry the carpenter, Bicknell the wheelwright and, far above all, Nott <sup>49</sup> the bricklayer who lasted till 1844. In 1801 a further batch of 9 arrived, Hayward the best among them and Davies, but it was not till 20 years after the first contingent, in 1817, that the greatest of them all arrived upon the scene, John Williams <sup>50</sup> of London whose story belongs to the whole South Sea.

The Duff in its second sailing for Tahiti was captured by a Buonaparte privateer, the missionaries aboard with their families returning to England after suffering many difficulties and privations. Their further attempt in another vessel was successful and along with them in the Royal Admiral, which arrived in July 1801, they brought seeds and plants of watermelon, vine, fig, peach, pineapple and vegetables. The papaya was introduced shortly after from Hawaii in 1803. Who brought the prolific orange is seemingly lost to record but the evidence is strong for Cook. (For this fruit and also tobacco, see below.) The Royal Admiral was not a missionary ship like the Duff though commanded by Captain William Wilson, the nephew of the Captain of the Duff. It carried convicts to Botany Bay.

In Cook’s First Voyage (1769) there reads *“M<sup>r</sup> Banks was engaged the 4<sup>th</sup> in planting on each side of the Fort, a quantity of the seeds of watermelons, oranges, lemons, limes and other plants and trees which he had brought from Rio de Janeiro. He gave these seeds to the Indians in great plenty and planted many of them in the woods.”*

The introduction of tobacco must be credited at least in a measure to the Spaniards of 1775 for the Journal of Maximo Rodriguez reads *“We brought brocoli and sowed rice, tobacco and garlic.”* But

---

<sup>49</sup> [Henry Nott \(1774–1844\)](#)

<sup>50</sup> [John Williams \(1796–1839\)](#)

Ellis in his *Polynesian Researches* states that “*The tobacco plant is another exotic common now in all the islands : it was introduced by Captain Cook (1769).*”

#### NOTES

- (1) In Arué, off the Highway, handy to the lagoon and not far from “The King’s House” is a small, square, low walled enclosure wherein stand a couple of gravestones. The earlier one is of Australian sandstone and when first visited by the writer the inscription was hard to decipher but it was possible to make out that here lies

“... Rev Henry Nott  
... on the 2<sup>nd</sup> day of May 1844...  
for 48 years the faithful servant of the London Missionary Society... sent  
out... in the ship Duff... Captain James Wilson in the year 1796... He was  
translator of the... scriptures into the Tahitian...”

The latter reads

“ Rev. T. S. McKean M.A.  
Missionary of the London Missionary Society  
Shot at his door during the fight at Point Venus  
June 30. 1844.  
Aged 37.”

These graves are not readily to be seen as they are well nigh buried in the surrounding rank vegetation and few knew of their existence. In 1935 the historic portion of the Nott stone was resented. The McKean stone is of marble. (See *The Missionary Henry Nott* and *The Tragedy of T. S. McKean* in the Appendix.) <sup>51</sup>

---

<sup>51</sup> See also WWB’s article, *How Rev. McKean Was Killed*, in the 15 February 1940 edition of PIM, pages 46–47, in Part VII.

**Nott's inscription**

- (2) In revenge for the above — accidental — death, those in revolt against the French Protectorate at once turned their attention to Papeete, pillaging and burning the Catholic Mission that afternoon. The following morning they completed the business, destroying among other things the library of Father Caret,<sup>52</sup> then a resident — the one time instigator with the more notorious Father Laval<sup>53</sup> of the Gambier tyranny suppressed by the French Government — putting to the flames alike with his books his valuable manuscripts on the languages of Tahiti and the Marquesas.
- (3) The Duff. This historic craft was a vessel of 267 tons, had a length of 96 feet 6 inches and a beam of 25 feet 8 inches. She had 2 decks, 3 masts, a square stern and a “manhead”. Her flag was “*Purple with 3 doves argent, bearing olive branches in their bills.*” Her cost to the Society was £5,000. “... a first rate vessel, river built, 2 years old, copper bottomed and fastened.” After dropping her cargo of “missionaries and provisions” she headed for Canton (China) where tea was shipped for which the East India Company paid £4,800 in London where she arrived July 11, 1798, a 2 year voyage less one month. On her 2<sup>nd</sup> voyage she was captured of Cape Frio (South America) on February 19, 1799 and sold at Montevideo. Her end is unknown.

<sup>53</sup> [Honoré Laval \(1808–1880\)](#)

**The Duff.**

- (4) Of the 17 “Pioneer” missionaries left on Tahiti in 1797, the graves of only 3 are on the island, Bicknell lying on Moorea. Lewis murdered 1799 — Jefferson died 1807 — (Bicknell died 1820) — Nott died 1844.

The site of the graves of the first 2 are described in *The Graves at Matavai* in the Appendix : they adjoin the site of the first mission Chapel, the doorstep of which still remains in place — set in 1800.

- (5) The choosing of the “Taio”. The word means “Friend”. Pomare and Temarii made choice of set purpose beyond mere friendship. The custom constituted the visitor selected, “the special friend”, under the fullest protection of the native who chose him. This of course led to an exchange of presents. The natives naturally found this transaction with the white man very much to their advantage.

See in the Appendix : *The First Missionaries, The Missionary Henry Nott, Locating the Graves of the Pioneer Missionaries at Matavai and Papara, and Language Pioneering.*

## CHAPTER VI

August 1798, the same month one year from the departure of the Duff, saw 2 whaling vessels, the Sally and the Cornwall, drop anchor in Matavai Bay. From them Temarii secured some gunpowder and suspecting from the size of its grain that the white men were playing him some trick, he proposed to those about him to test it “*at the Great House called Nanu*” in Paré where he was staying. A pistol was loaded and unthinkingly fired over the poured out powder, a spark from the pistol’s priming dropping upon it and the whole barrel blew up.

The worst hurt was the Chief. News was brought to Matavai where Pomare was in residence and he called upon the missionaries to go at once and lend assistance. They applied ointment but the next day they were not allowed to give further treatment as Temarii declared it had but exaggerated the pain. Tu the Younger was present and from his scowling countenance the missionaries boded no good to the stricken man’s would be helpers. They quit.

Temarii lingered till early in September when to the consternation and grief of all but Pomare he died. With him went Papara’s hopes, but there were yet to be other blazes before they finally died out. The missionaries came under strong suspicion from some — being looked upon as Pomare men — of having cursed their medicine in order to kill the patient. They kept close at Matavai and already some had lost heart after an attack upon 4 of them prior to Temarii’s death.

March 1798 had therefore seen eleven of the band leave in a calling brig, the Nautilus, for Botany Bay taking with them a native by name Taia, thus reducing their number to 6. Two of these fell out of the remnant, Lewis being murdered on account of his seeming foolishness, another losing faith and sailing away in one of the passing brigs and is said to have later died at sea. The 4 were reinforced by the arrival of the 9 new men in 1801 : now in all 13.

Pomare promptly used the death of his rival to further his own ends. He allowed, without any protest from him, Tati, the grandson of that younger brother of Amo who had wiped away Purea’s blood feud, to assume Temarii’s post. Tati was markedly from the very first a man of peace working by diplomacy rather than by force and one whom Pomare felt he could control. The body of the deceased Chief, as was the custom, was borne in great state throughout the Tevan districts, the skull and bones at a later stage being secreted in a cave in Papara’s mountains, lost to memory today, but before that happening, an unexpected crisis suddenly arose.

The younger Tu had lost his adopted father and loathed to return to his father’s tutelage. He saw that submission to his father or driving him off Tahiti were now all the more the only alternatives. Tu gathered his forces in Papara and started northward for the attack, old Mani-Mani at his right hand. Pomare, ever at heart a coward, did not wait but fled to Tetiaroa, the atoll some 20 miles off Arué and Family property, leaving his wives Itia and Tetua to face the storm. Though in poor health Itia was quite equal to the occasion. Tu arrived prepared to fight it out upon the spot but Itia struck a bargain with her stepson, ceding to him the Authority he wanted, loose free from his father’s Regency, but obtaining the one guarantee she saw she needed to keep him still under her power. It was the life of the old High priest. It was given.

Old Mani-Mani was murdered by Itia’s men on his way from Matavai to Paré. Tu thus rose to a halfway supreme power on Tahiti by the treacherous murder of his friend and counsellor.

Itia was in the Mission house when the news came — “the British House” lately erected — and “*at once came to Brother Eyre’s door, she had a cartouch box buckled round her waist, a musquet she*

*had been seen with in her hand a little before was now laid aside, with a settled air of triumph on her brow, she shook hands in a friendly way with the Swede saying unto him, "It is all over," meaning the war and retired immediately to the Point" where Pomare had one of his many residences. There was little to choose between Pura and Itia, aunt and niece.*

Mani-Mani's calling made him of a truth sacrosanct. His Order was respected by all. They represented Learning and their training was long and arduous. None with any personal defect could be admitted, they must also be deft of hand for the service of the gods. There were long prayers to be committed to memory, and mystic rites, set speeches for great occasions, war songs and enchantments, invocations and counter blasts to witchcraft. The Order as a rule descended from father to son and the young novice had already been long at school, for there were the professional schoolmaster and school mistress in the land. Here were taught, orally, history and geography, mythology and numbers. Upon the young priest's graduation he was well paid in kind for his services and had servants to do his bidding. To be a High priest was to have reached a very pinnacle of renown, respect and Security. But it did not save Mani-Mani.

Pomare returned, the storm over, and father and son now combined from 1798 till the father's sudden death in 1803 in terrorizing all Tahiti save the indomitable Papara, the missionaries still adhering to them for which later on they paid dearly. The two Tus had now developed into tyrants pure and simple. The missionaries have recorded it in their Journal but as if it did not concern them. The first Pomare was a thorough savage throughout, though at heart a coward, but he was gentle when compared with his son who was both heartless and cruel.

In 1797 — to revert — even with his son and Temarii against him he had been far from idle. Paramountcy his life long aim still chiding him, he made one more effort to secure it. His gods were evidently against him but Oro, god of war, might be propitiated if he did Oro special honour. He would fain have with him the image of the god which had been stolen from Paré and was under the special care of the marae Taputapuata at Punaauia — also named Atehuru, a District now under his control. So first for the idol.

He went seemingly on his way to Tautira where his brother was still Regent for his younger son. Going by water with his warriors he took the Atehuruans in charge by surprise, seized and carried off the idol, a mere elongated piece of wood wrapped in a tapa cloth and adorned with feathers, housing it in his great double-canoe and headed for Lesser Tahiti, halting however at Papara where he had some family property in the home of his enemy in order to offer a human sacrifice to please his god, the victim one of his own servants as he could lay hands on no other.

But Punaauia was at once on the war path with Rua as their Chief and "The War of Oro" was on. It was savage and ruthless while it lasted. Rua laid waste all the east coast of the peninsula, totally defeated Pomare's forces and recovered the idol. Pomare escaped by water to Matavai.

Awhile later he again swept down on the Atehuruans, taking them again unawares and alone, for the strong forces of Lesser Tahiti's west coast, who had come to their aid, had by then returned to their homes. By massacre and laying waste he sought to terrorize that people into submission. He left the district bathed in the blood of old men, women and children. Its warriors escaped to the mountains ready to fight again when on an equal footing and the idol was still in their keeping.

Now once again he went — early in that year of 1798 so full of incident — this time re-enforced by 3 and 20 white men, the Captain and crew of the Nautilus soon to bear off the fear stricken ones of the mission band, these well armed, with a cannon to boot. Victory was his at his 3<sup>rd</sup> attempt, Rua falling in the fight and Oro at last in Pomare's hands : but he recognized that it was but an empty

victory, his enemies far from mastered and his position as uncertain as ever, with Papara heading the resisters.

That idol found a safer resting place for the future on Moorea. "The War of Oro" was over but paramountcy still beyond the idol's present owner. Death settled the matter for him in 1803 as in his canoe he was being paddled to the brig Dart lying in Matavai Bay.

Tu the Younger was then about 23 years of age and as he grew in years he developed a character such as the natives could not recognize as theirs but put down to his savage Tuamotu ancestors. (For his portrait see the *Pomare Family of the Past* in the Appendix.) For 5 years he ran riot until the crash came, as we shall see later. The second Pomare fled like his father before him, but to Moorea, his first wife's home. The missionaries abandoned the field in despair, most of them fleeing to Huahine in the Leeward Group by the brig Perseverance, while Nott, Hayward, Scott and Wilson sheltered with Pomare.

Awhile later those on Huahine sailed for Botany Bay as had those of 1798, recognizing as their penmen show their utter failure. They had backed up tyrants from the start. Of the 4 left with Pomare, Scott and Wilson left for Huahine in April 1809 and Hayward followed them in July. All on Huahine except Hayward, who determined not entirely to forsake his duty, sailed from thence on the brig Hibernia. Nott therefore stood alone at Pomare's side.

Here it would seem best for the clearer grasp of the reader to give a short summary of the last years of this Period of Violence, the details to follow.

In 1812 Pomare II declared himself a Christian and returned to Tahiti unmolested by his old enemies but scheming as ever for a return to power and the attainment of supremacy. In 1814 he went again to Moorea and the next year returned thoroughly prepared to fight it out. War ensued and Pomare won. In 1815 till his death in 1821 he was the undisputed "Paramount Chief" or (in English parlance) "King" on and of Tahiti. His father was the First Pomare but he, Pomare II, was the First King.

He left 2 children by his second marriage, the eldest a girl of 7 years — Aimata — born on February 3, 1813 : and a boy, an infant in arms — Teriitaria : the other child, a boy named Teina, born on Tetiaroa November 21, 1817, dying on March 20, 1818 at Afareaitu (Moorea) and buried there. The girl was never a favorite with her father who named the infant boy born on June 25, 1820 as his successor.

This Pomare III died January 8, 1827. Aimata succeeded him as Pomare IV and was Queen of Tahiti for 50 years, 1827–1877. She died September 17 of the latter year. Her eldest son dying during his lifetime unmarried, her second son followed as Pomare V till 1880 when he handed his kingdom over to France. This of the Pomares.

Of the people as the century opened as poor a record must be made. They had been more than decimated not by these wars alone, which had been carried from time immemorial, but by sickness and diseases hitherto unknown. Tahiti did not alone suffer. What happened there, happened throughout the entire South Sea. For untold generations these people had been isolated in the Pacific Ocean as though they were in a sanatorium, protected from all European ailments, living mainly on fish, fruit and root crops. Now fever entered of slight or of severe kind, and comparatively harmless epidemics, like measles, became frightfully fatal when the natives, to allay the fever, plunged into cold waters. Ordinary colds and dysentery took the aspect of plagues.

Ships, even men-of-war with doctor on board, were not beds of health nor were missionaries exempt from the ordinary sickness of white men. These ailments and the still more deadly ones (venereal) found rich field for their germs in the South Sea. Just as such pests as the Lantana and Guava, brought in by white folk, have overrun the islands where the field was wide open to them, so did disease spread through the Tahitian people. Whilst one cannot hold foreigners wholly responsible for what was inevitable, seeing that nations were expanding each their territories for bigger room and trade, yet for much of the political misery on Tahiti at this time they were the cause. They insisted upon backing up an ambitious Chief. All previous local wars were caused by ambition and all had ended in restoring the balance. Tahiti had punished Purea and others before her and the First Pomare would have been put in his place if Englishmen had not steadily supported him, given him guns, fought for him and renewed his strength when he was practically overthrown. Tahitians would never have anything to do with Tyranny, their tribal system was their answer to it. The Pomares, father and son, knew that their only chance lay in destroying that system and their quickest way was by wholesale destruction. For that end they had to win outsiders to their aid. They were successful only by that means. The old century had closed in fears, in blood and tears.

In 1798 father and son had combined to set out to do or die. Their course lay through means fair or foul, no matter which. Never in the memory of the islanders had there been so great a number of human sacrifices as the Pomares took upon themselves to offer to their gods previous to some planned attack on their fellows. Such victims were no longer only of the criminal class. The common people were panic stricken. The Old time courtesies between Chiefs were thrown aside and the Pomares terrified those of lower rank than themselves even as they did the lower grades. There was but one District which defied them resolutely, the indomitable Papara.

The "Journal" of the missionaries bears full witness to all this but their only comment is "*Our peaceful situation in the midst of them is truly marvellous in our eyes.*" Their disillusionment was to come. The Pomares dared even to threaten death to the Chieftainess of Papeari, Head of Island Society for the marae "O'Tahiti" still held amid all the chaos that superiority which nothing could lessen. This threat was a climax, it was in Tahitian eyes to be guilty of the supreme offence, beyond it Tahitian thought could not travel, but even that seems to have made or left no impress on these blind Englishmen.

Some excerpts from their letters and daily Journal in addition to those already given may be of interest :

February 4, 1799. In a letter to the Captain of a Spanish brig : "*The King is desirous to have a musquet from the ship through our hands. We find it necessary for us, in order to preserve peace, to solicit you to grant us a musquet... any return in our power to make we will gladly give.*"

October 16, 1799. "*Heard that 5 human sacrifices have, within a few days, been brought over from Eimeo to this island; also that many of the inhabitants of Opare have fled to the mountains to avoid being seized for human sacrifice... Pomare is labouring to bribe his idol god to be propitious to him.*"

January 1, 1800. "*At one in the afternoon Otoo, Pomare and Edea assembled before Brother Eyre's apartment and the Brethren presented unto each a musquet and one four pound cartridge.*"

January 14, 1800. "*From the Eliza has been landed on Pomare's account, without any interference of ours, one 18 pound carronade, 2 swivels, several musquets and a great deal of ammunition.*"

January 31, 1801. *“It is surprising what havock disease has made since we have been on the island. Matavai is almost depopulated in comparison to what it once was according to the accounts given by the natives, and not only this District but the whole island.”*

February 2, 1801. *“Brothers Eyre and Henry bring a melancholy report : the country very scantily peopled, the low lands over run with long grass, and the under woods which form swamps stop the circulation of air and tend much to the unhealthiness of the people.”*

March 6, 1801. *“This day 4 years we arrived at Otaheite... at present we see no good arising from our residence.”*

They appear to have been ever praying for Peace and at the same time helping to make War. But their hands were largely forced.

**Moorean native homes**

## NOTES

- (1) Moorea — “Eimeo” to the earlier white men — is a mountainous island, over 36 miles round its coastline, lying across a 10 miles Strait from Tahiti. It forms with the latter together with Mehetia, a single volcanic cone, and Tetiaroa, an Atoll, the Windward Islands of French Oceania.

“Moo-rea” = “Off-shoot” from the larger island Tahiti. “Ai-meho” = “Food in retreat”, the former Refuge island for fugitives from Tahiti.

Moorea becoming sacred as a word in the Long Ago had to be dropped (see Pii) : but when Christianity triumphed the natives restored it as the name of their home.<sup>54</sup>

- (2) The immediate cause of the first flight of the missionaries was owing to an attack on some of them as follows.

Twelve months from the day they had first landed, the brig Nautilus arrived. Some Sandwich islanders were aboard and 5 of these absconded. The ship left without them, 3 Tahitians taking their place, but had to put back owing to bad weather and 2 seamen likewise now left the vessel. Shorthanded, the Captain appealed to the missionaries who agreed to use their influence to enduce the Pomares to secure and return the men. Four of them walked to Arué, where Tu the Younger was in residence. Receiving but surly looks and no assistance they proceeded along the trail to where his father was dwelling at the time, some 30 natives accompanying them. When about to wade across a mountain stream which crossed their path, they were seized, stripped, dragged through the rushing water and threatened with death, some of their rough handlers exclaiming that as they had been treated so would those be in their home at Matavai. But others had compassion and rescuing them led them before Pomare I who promptly returned with them to his son expressing indignation at their treatment. The deserting seamen were cavalierly present and despite their determination not to be handed over to their Captain voluntarily went aboard the next day, but returned ashore after being assured of prosecution on arrival at Botany Bay. This rough experience thoroughly frightened the more timid of the mission band and despite the pleading of Pomare I they sailed away on the Nautilus on March 30, 1798. The four thus roughly handled were Jefferson, Broomhall, Main and W. Puckey and the last 2 decided to quit Tahiti. Two of the ringleaders in the assault were slain by Pomare's order.

The arrival in the following August of the Cornwall and the Sally caused consternation ashore : *"On seeing the vessels all the local Chiefs and people fled to the mountains, fearing they were to be punished for the outrage committed on the brethren."* The remaining missionaries followed them *"but much persuasion was required to induce them to return."* Once however returned, they supplied the vessels with far more provisions than were needed or could conveniently be stored but the natives would not desist.

- (3) In Rua's last fight, the native warriors had retired to a natural fortress in the adjoining hills some distance from the shore. Arrived at the foot of this rocky barrier the white men volley-fired which scared but did no harm. The day wore on and towards evening, failed in their aim, the assailants retired, followed by the loudly taunting enemy and a close up fight took place on the shore of the lagoon. The white men's weapons at short range took heavy toll, over 60 of the warriors lay dead, the rest retired to their fortress but they had lost the idol. The white men thinking they had taught the Atehurians a lesson counted upon capitulation on the morrow but Pomare knew better. There was none.
- (4) The attitude of his brethren to Lewis in casting him out of their midst, owing to his taking to wife a native woman to whom they refused the religious ceremony as *"contrary to Holy Scripture"*, would certainly not have been countenanced by the man who practically brought about the Society which sent them out and was one of the leading Directors at Home.

---

<sup>54</sup> See the reference to the law of Pii in Note #2 to Chapter VII.

D<sup>r</sup> Haweis <sup>55</sup> in his Instructions to Captain W<sup>m</sup> Wilson of the Royal Admiral wrote as follows in March 1800 : “*I am apprehensive that it is very probable that some of our brethren may have thought it absolutely necessary to have taken wives from among the natives, and should that be the case it would be no doubt one further tie of Union and probably facilitate our civilization off those with whom they are so nearly connected. In the circumstances in which they are placed I confess I could not regret such a step, supposing they cleaved only to one woman and that she could be brought under any sense of obligation to her husband as to be for him alone... Should the experiment have been tried and in any measure have proved desirable, nothing would have a more effectual tendency to carry on and accomplish our designs. The Chiefs with whom we might be thus related would bear our name and they would become our close friends.*”

When D<sup>r</sup> Haweis penned the above broadminded words “the experiment” had been tried and the unfortunate Lewis — the victim seemingly of a jealous and disappointed lover — was dead. Today he and his chief denouncer, his fellow minister Jefferson, lie side by side at Matavai. (See *The Graves at Matavai* in the Appendix.)

- (5) The end of the idol of Oro was ignominious. Bicknell writing from Moorea April 12, 1816 to Hassall in Sydney, N.S.W., says that Pomare II “*fired musquet balls through Oro the principal god and burned a great part of it.*” Elsewhere it is related that for some time it was used as an upright for Pomare’s outside kitchen and when shot to death as above was cut up for firewood. It is described as “*A straight log of hard casuarina wood, 6 feet in length, uncarved but decorated with feathers, being wrapped around with sennit or coconut fibre.*”
- (6) “The Great House” called “Nanu” is “The Long House” of the maps of Cook and Wilson. This name “Nanu” was given generally to the waterfront and site where Papeete now stands, “The Great House” its distinguishing feature. Therein on ceremonial occasions a vast concourse could assemble. “Nanu” appears at times recorded as Nannoo and Nawnoo.
- (7) Pomare II writes to the Brethren on Moorea : “*Matavae. February 17. 1813... I have a daughter born February 3. I did not know of her birth being at Heteaa. By the time we came here she was born.*” He asks for “*sugar, 2 small cups and also 2 small spoons to feed her with.*” Aimata was therefore within one month of her 14<sup>th</sup> year when she became Queen of Tahiti.

See Appendix for “*Character of Pomare I*”.

---

<sup>55</sup> [Thomas Haweis \(1734–1820\)](#). Haweis rhymes with *Pause*.

## CHAPTER VII

So passed the opening years of the new century till Pomare II stood alone, and in 1808 the crash came which obliterated his ambition for a time. In June of that year he committed an act which made the whole Tahitian people and particularly the Teva Clan deadly enemies not only to Pomare but to the missionaries and to Christianity. That act was a massacre. One more clash of arms has also to be related, a straight fight this, and the story is told so far as this Pomare is concerned. With 1815 the Period of Violence upon Tahiti passed. Pomare III was but an interlude between the 2 Periods, a child of tender years who quickly passed from the scene. The succeeding Pomares belong to another Period — the French.

It seemed that the people of Punaauia, the Atehuruans, had taken some of the bones of the Chief Mataha, who was killed in a war of the long past on Lesser Tahiti, and had made fish hooks of them, a common practice, but in this case Pomare declared that it was to show their contempt for him who was related to the dead Chief's descendants. Pomare cleaned his musquets, gathered his forces and swept down from Arue through Faa to Punaauia taking that District completely by surprise, for hearing of his anger they had hastened to send him the customary Peace offering — a bunch of red feathers and a sucking pig — in the hope of pacifying him. He handed them to his stepmother Itia, himself turning the offering down.

Slaying right and left, he burned the dwellings, destroyed the plantations and seized all portable property. The missionaries report : *"Cloth and other things were sent up today in great quantities to Oparee and Matavai."* Again, *"The Atehuruans are entirely subdued and destroyed. Pomare requests us to send him some paper to make cartridges and 2 bottles of rum. A little of the former was sent him but the latter was denied."* Some of the band proceeded to Pomare's camp. *"He was standing by the dead bodies on the seaside, giving orders to the people... the district presents a horrid scene."* A few escaped, fleeing to the mountains at the back.

But Pomare was not yet satisfied. He pushed on to Papara where the peaceloving Tati was Chief. A man who had escaped the carnage had hurried down the trail through Paea to give warning. Those who could, fled; the rest, old men, women and children were slain. Tati had escaped across the mountains to find refuge far from the scene. The brother of Tati — by name Opuhara, a warrior of the first rank — had no force ready to meet the sudden attack and also escaped out of Pomare's reach. Two of their sisters perished, and near the isthmus past Papeari the widow and children of Temarii, who had been his adopted father and friend, were pitilessly slain with all their attendants. Pomare returned to Arue gluttoned with blood and loot.

But now the whole island rose, including his 2 chief ministers Tooti and Tamihuteia, determined to make an end of him. They needed a Leader and called upon Opuhara who, gathering a force from all quarters, advanced by way of the east coast to Papenoo. The avengers were now within striking distance.

At this crisis the majority of the missionaries fled in a brig which opportunely called during November (1808). The next month Pomare attacked and was totally defeated. Without waiting for another effort, he, his household and the 4 remaining missionaries fled from Matavai to Moorea. Point Venus was completely wrecked, the Mission buildings burned, the gardens destroyed, the cattle seized and all the property and stores left behind in the hurried flight of the white men was carried off by the wreckers.

Till 1815 Opuhara was the greatest personage on Tahiti. He was a thorough pagan and had been always opposed to the missionaries but they always spoke well of him and were convinced that he meant them no harm. Papara, feeling that Tati was too complacent for his office, now gave it to the younger and the stronger one. Papara was on top at last, seemingly triumphant.

Except for another effort on Tahiti made by him in October 1809 which again ended in defeat, Pomare lay low on Moorea till July 1812 when he suddenly announced to those of the Mission band who had returned to their duty — his faithful friend Nott being unfortunately absent, having sailed to Sydney for his marriage — that he would be a Christian and had done with idols and with war. His conversion was a masterpiece of strategy.

His old District of Paré-Arué took him at his word and invited him to return. He went, his perfidious friends Tooti and Tamihuteia had died, and for 2 years dwelt on and off in his own home alone, an avowed Christian, unmolested by his former enemies. No missionary returned.

Tati now reappears. He had escaped from the island and gone to Pora Pora where he had married. At the second marriage of Pomare which took place on Moorea in 1812 with a daughter of one of the Opoa Chiefs on Raiatea Tati returned along with her. Even in this second marriage Pomare could not act straight. He had promised to marry the eldest daughter Teriitaria. Her younger sister Terito, ambitious for position, managed to reach Moorea first and was installed as consort. The breaking of faith was however so flagrant that Pomare gave to the elder sister the same position, under the title of “Pomare Vahine” and 2 consorts ruled his now Christian household.

Tati returned to Papara, Pomare and his wives to Arué. The missionaries now crossed and recrossed the Strait and conversions became very numerous on Tahiti. Moorea declared for Christianity. Pomare was working hard to form a Christian party with which he would proclaim a war against Paganism. The more converts, the more on his side.

In 1814 he again crossed to Moorea accompanied by a large body of adherents, all Christians and having been trained to arms. A similar large body joined him there from the Leeward islands where the majority had given up the Old time gods. Those Christians left behind in Paré-Arué banded themselves together and all saw a fresh clash coming.

Pomare felt it wisest to leave it to his wives. If they succeeded all would be well, if they failed he would have to act for himself. The 2 women crossed over to Arué in May 1815 with a strong force well prepared for the overthrow of the Pagans on Tahiti. These had no choice but to accept the challenge. Opuhara led the Pagans, he marched as far northward as Paré sending notice ahead to Arué to the 2 women there, thus giving them time to escape if so they desired. He declared that he was no woman fighter. The women’s courage failed them and they fled back to Moorea, their main force with them. Opuhara however sacked Arué and was again master of the island.

Tati saw the inevitableness of Christianity gaining the mastery. If at that price war could be prevented he was in favour of it though it meant the supremacy of Pomare who however could possibly be held within bounds by diplomacy, by his new Creed and with the help of the missionaries. Opuhara, with the usual Tahitian readiness to forget a quarrel, yielded to his brother’s ideas so far as to allow not only the Christians of Arue to return from Moorea if so they wished but Pomare himself. Tati would keep him within bounds. There he greatly erred.

Pomare upon his return did not take long to act for himself. On November 12, 1815 with both land and sea forces he suddenly took up a position at Narii near the village of Punaauia. Here had been the massacre of 1808. This time he was in a far stronger position with all the Christian forces of Tahiti

and other islands at his back. He wanted a fight this time, a fight to the finish not first for his new Creed, which ever sat lightly upon him, but first for himself. It came.

Opuhara, fearing another massacre, rushed from Papara with but half his forces. On the trail he met Tati coming from Pomare's camp, sent by him to secure the submission of the Pagans without a fight as Tati had pleaded for with the Christians' leader. "*Peace I seek with you my brother,*" said Tati : Opuhara turned on Him. "*Go! traitor! Shame on you! You whom I knew as my brother I know no more, and this day I call my spear Ourihere (Brotherless). Beware of it, for if you meet it hereafter it meets you as a foe. I bow to no other gods but those of my fathers : these I shall stand by to the end : never will I bow to Pomare or the God of the white faced man.*"

The fight known as the Fei-pe — from the "ripe plantains" (wild bananas) where the forces met — followed close upon this meeting. It was indeed a real fight till Opuhara, breaking through the front ranks of the Christians made for the beach where the leading warriors were grouped. Beyond them, in a double-canoe, stood Pomare his foe. An outsider, a Christian native not of Tahiti, raised his musket from the platform, fired, his aim true, and Opuhara fell to rise no more. With his death, his men broke and retired unpursued. The fight was over, their Leader gone.

By the death of this one man Pomare had gained his aim. There was now no longer any choice on Tahiti between Leaders, he stood alone, paramount, supreme. With Opuhara, Papara at long last, as well as all other opposition, fell for good. Pomare was not only the chief of Chiefs but in European parlance Royal, the King of Tahiti in very truth. What his father long had sought but failed to win, he his son attained.

"The Brotherless," Opuhara's spear, is said to be in the Museum of the Louvre today. Even on those days there were among all his warriors but two who could wield it. Among the Tevas even to this day he is still regarded as their greatest hero for they are clannish still though nominally but part of the native population and as Ariitaimai, one of them, records as she recounts the Past, if the missionaries have sometimes doubted whether among the Tevan Districts the blessings of their Creed have been rightly appreciated, one reason may well be that Tevans cannot forget how the missionary converts fought for Pomare and slew their hero Opuhara.

Tati was now restored to his post as Ariirahi and during the next 40 years till his death when 84 years of age in 1854 his influence was the strongest of all men on the island. He had seen Cook when a child, had lived through all these troublous years and saw another Era open in his island's history bringing its own special troubles. His great aim was to further Peace and despite his great influence his hands were ever full. Between the Pomares, the now lesser Chiefs, the missionaries and the French, he was seldom without anxieties and cares.

Diplomatically he began by binding Pomare to him by the strongest possible tie. A marriage was arranged which meant much for security. Marama, Head Chief of Moorea, who was the descendant of Auri, the brother of the redoubtable Pureau, had only one heir, a daughter, to bear his name and inherit his extensive possessions. This great heiress was given, with Pomare's consent, in marriage to Tati's son. Pomare possessed no son of an age to win so great a prize. To secure himself however against any risk that this powerful combination of Papara and Moorea might later turn against him, Pomare claimed as his own the first child that Marama's daughter might bear and contracted — though in vain — that all children of this marriage should marry Pomares if such there were. Tati's plan thus worked out well, both sides being satisfied.

How the Marama family came to hold so high a position on Moorea and by this marriage bound Moorea up with the Pomares who already had both lesser right and property there will be read of in the following chapter.

## NOTES

### (1) Tati and Royalty

Tati I — Taura atuaipatea — born 1770, married Tehea of Pora Pora. Tapua ta'aroa, his son, married Marama. Tapua's eldest child, Ariioehau (Ariitaimai), repudiating the contract, married Alexander Salmon, an Englishman, and had 8 children, of whom the eldest, Titaua Salmon, married a Scotsman, John Brander, whilst the sixth, Joanna Marauta'aroa Salmon, married Pomare V and had no "recognized" issue. Their brother, Tati II, also had 8 children of whom one son — Opuhara — married as had his Aunt Marau into the Royal Family, his wife being Teriina vahoroa, one of the daughters of Tamatoa, a son of Queen Pomare IV. The contract with Pomare was thus very limited in its fulfilment.

In these Periods there was a recognised Table of Affinity or prohibitive degrees as to matrimony but Chiefs and Chieftainesses were not always deferent to such rules in eugenics. Such unions however shocked Society and the people in general. These rules were broken upon Opuhara's death, he leaving 2 children : his brother Mote becoming the widow's second husband and thus also managing to link himself with Royalty. He left one son. The rest of the numerous Salmons of today are of course commoners.

### (2) Ariitaimai

At her birth in 1822 she was named (in English) "Chieftainess of Peace" but assumed the name by which she is universally known on her marriage in 1840. This name was the native one given to Salmon by Queen Pomare on his first arrival on Tahiti — Arii = Chief : tai = sea : mai = from = The Arii who came from over the sea. In accordance with Tahitian custom at the marriage feast of him and Ariioehau, his name was formally announced as the name of both of them with the addition in speaking of them, of Tane (man) or Vahine (woman) to distinguish one from the other.

Marama, also mentioned above, was the ancient Tahitian name for the Moon but becoming sacred according to the law of Pii, another name was given to that Orb which is in general use today.

### (3) Heraldry and Tahiti's Princes and Princesses

By perusal of the Pomare Family tree (see *The Pomare Family* in the Appendix) there will be seen all who rank as "Members" of the Royal Family of Tahiti. The "Titles" of that Family are a wholly different matter. These Titles were borrowed from England and became Tahitian. They are not affected by any change in sovereignty any more than are other Tahitian customs.

With the borrowed Titles came Regulations governing them as to who are entitled to them and who are not. These Regulations are very definite in different Continental Europe and also widely different.

Dealing alone with English Heraldry — now also Tahitian — there are the following definite Regulations.

1. They can only descend through a sovereign King : not a Queen unless she is a sovereign reigning in her own Right (as was Queen Pomare). The Consort of a King cannot transmit them.
2. They are limited to the 2<sup>nd</sup> generation from the sovereign (the son and the grandson) : then they cease.
3. If the 1<sup>st</sup> generation from the sovereign is a woman they cease with her, since a woman cannot transmit them. There is no 2<sup>nd</sup> generation.

With these Regulations it will be seen as to Tahiti

- (A) That all the children of Queen Pomare were Princes — one a Princess.
- (B) That only 2 of them left surviving issue.
- (C) Tamatoa's many daughters were Princesses (the 2<sup>nd</sup> generation) and the end would have been reached : but owing to the fact that he was a sovereign (King of Raiatea) his issue would have had 2 generations of the Titles from him (not his mother) but all being women, again they ceased.
- (D) Teriitua left a son — Hinoi. He was the 2<sup>nd</sup> generation from his sovereign Grandmother. With him the Title also ceased.

The only way to revive these Titles is a Sovereign's (The Fount of Honour) action. There is no sovereign today on Tahiti.<sup>56</sup>

- (4) In 1806, before the flight of one and all with Pomare II in 1808 and before the latter had declared himself a Christian, but after the flight of those in 1798, the whaler Alexander arrived at Matavai on board of which was a Dane named Jorgensen who some 3 years later was to become temporarily famous as the man who seized power in Iceland and proclaimed himself its King.<sup>57</sup>

The stay of the vessel was for a couple of months as the captain collected provisions, pork in special. Jorgensen kept his eyes open and a book by him appeared in London in 1811 dealing with "*The State of Christianity on Tahiti.*"<sup>58</sup> He is very hard on the missionaries, their evident lack of education galled him, they seemed a timid lot alike with natives and strangers. He marks out Jefferson as different from the rest by reason of his education and his determined solitude, save of necessity not mingling with the rest. He was never seen to smile, looked like a ghost, his skin a deadly hue. Jefferson died shortly after (1807) presumably of jaundice.

He deals heavily with Pomare II, exceptionally tall, giving his height as 6 feet 4 inches, and exceedingly intemperate, cursing the God of the Christians and lauding his idols. He kept around him 200 warriors ready for emergencies.

---

<sup>56</sup> See also WWB's article, *Pomares of Tahiti and Heraldic Law*, in the 15 December 1938 edition of the Pacific Islands Monthly, pages 38–39, in Part VII.

<sup>57</sup> [Jørgen Jørgensen \(1780–1841\)](#)

<sup>58</sup> [State of Christianity in the Island of Otaheite](#): and a defence of the pure precepts of the gospel against modern antichrists : with reasons for the ill success which attends Christian missionaries in their attempts to convert the heathens (Snare and Man, 1811).

Jorgensen took 2 Tahitians of Chiefly rank away with him but within a year they died in London despite every care and kindness.

See the Appendix for “*November 12, 1815, When Pomare Won Kingship*”

## CHAPTER VIII

On Moorea today the outstanding villages are, on the north Faatoai <sup>59</sup> at the head of Papetoai Bay, Maharepa near the head of Pao Pao Bay — Cook's so-called Bay — the two largest bays on the island : Haapiti on the western side and Afareaitu on the eastern. In earlier days adjoining Haapiti there was Nuurua whose Chief when the story opens was Punua. The Chief of Haapiti was Marama.

A small subdistrict of Punaauia on Tahiti was occupied by the Atiroo whose leading men were relatives of both these Moorean Chiefs. The Atiroos therefore had the right of hospitality being extended to them at any time, and many crossed over to Nuurua and were kindly received.

A visit of this sort was always a serious matter, for such guests might choose to remain permanently and Tahitian custom then required that land should be given to dwell on. These Atiroo did remain but Punua of Nuurua gave them no land. It was from Marama of Haapiti that they received it.

As Marama's guests they settled down and in course of time spread also to Nuurua. Then their Chief thought himself strong enough to declare his entire independence of his relatives and set up a marae of his own instead of having a seat in Marama's at Haapiti. This was not only a great insult but practically a declaration of war. Marama at that time was a woman and she had no wish to take up the quarrel but their next insult created a bloodfeud and forced her hand.

Kite flying as we have seen was a favorite pastime both for men and boys. The Atiroo were to hold a great Feast with flying of Kites. In a spirit of mischief 4 boys of Marama's people, the sons of one mother, planned to take part in the kite racing though uninvited.

When the Feast day arrived, the Atiroos flew their kites and whilst eagerly watching to see which flew best under the strong Trade Wind, 4 kites started up from a neighbouring hill more powerful, more beautiful and faster. These soon caught up with the Atiroos' kites and quickly passed them.

The elders present were furious and gave orders to their young men to follow these outsiders' kites till they fell, there to lie in wait for their owners who would surely reclaim them and slay the daring ones. The kites flew far, the young men had to cross from their own District into that of Nuurua before those stranger kites fell close to Punua's marae. The Atiroos were first on the ground and when the 4 boys appeared not only slew them but savagely mutilated their bodies.

Their mother, anxious over their prolonged absence, scented trouble and followed. When finally she came across the bodies, she bathed her face and her breasts in their blood and swore revenge. But she was no Chieftainess and could do nothing unless some Chief took up her quarrel. The nearest was Nuurua's. He refused. She then made her way of Faatoai's and was again refused. Then past her own home, where but a woman ruled, she made for Afareaitu. Here yet another refusal. None dared seemingly to take up her cause.

She now returned to her home where her husband, hearing her tale of war, and of refusal, told her to appeal to her own Chieftainess, a woman like herself. Though she affirmed it was a man's job she went nor was her appeal in vain.

Marama ordered the mother to be taken to her own sacred pool, there her boys' blood to be washed away. The drums were beaten for a General Assembly and Marama took her seat at her stone within

---

<sup>59</sup> Also known as Papetoai.

Haapiti's marae. Her address was short : "The time has come long waited for. Today has come one of our own people asking for revenge for the slaughter of her boys. I have taken up her quarrel. I call upon you to avenge their deaths and this insult to my marae." It was effective. En masse her men responded, "Your will shall be done. Death to the Atiroos wherever they may be found."

Marama's leading warriors were twins. They pulled down their home, showing thus that they gave themselves to the cause nor thought of return till it was accomplished however long, shaped its 2 main props into spears and calling the men of Haapiti together came the very next morning as day broke upon those Atiroo nighest who, warned on what was coming, were massing on the sea shore. Not an Atiroo escaped, men, women and children were massacred. From there the avengers swept clear round Moorea, killing every outlying Atiroo they met upon the way save a few who had made their escape to the hills. Those guests of Old time were made an end of at last : but Haapiti had not yet finished with the Clan.

Collecting their war canoes those avengers now crossed to Tahiti, attacked the Atiroo's headquarters at Punaauia, wiped them out, then pushed on to Lesser Tahiti where still other of the Clan abode, and made such slaughter that that same District has been known since that far off day as Teahupoo, "A pile of skulls."

As there was, as has been seen, a Helen of Troy in Tahitian history, so was there a Delilah. The handfull of Atiroos still left, unable to master the revengeful leader-twins, sent a woman to do the job. They fell to her beauty and her seeming readiness to help them against her own people. She spread a feast before them and poured out kava till they were drunk with it and slumbered. Then, when she should have given the signal to the hidden force close by, she hesitated. Her heart refused the deed, those twins were her ideal of perfect manhood. She kept her oath to her people but with the same spear which slew them she slew herself.

Marama's power grew steadily after this crisis till it extended over all Moorea save Nuurua and Afareaitu.

Marama was now a man and to him despite himself these 2 were added, he thus becoming paramount on the island. Three lesser Chiefs of Afareaitu built a marae for themselves. They desired to give it Toue and to that end must secure an Ariirahi to perform the ceremony of Dedication which of necessity would entail an acknowledgement of overlordship. As Nuurua's Chief appeared to them to be the least aggressive of the then Moorean leaders they made appeal to him. He showed indifference but would consider the matter. From him they went to Marama, more powerful but very popular with all. Finding him however strongly under the influence of kava they were so determined in their quest that they bore him off bodily despite his protests. Arousing later to his full senses he declared himself as not averse but would have preferred to have come amongst them with more seemly ceremony.

When the drums were beaten and Marama took his seat with the sacred enclosure, Nuurua's Chief appeared to do as asked. Too late. Afareaitu was in Marama's hands, not his, for the day. "Marama is worthy" was the general acclaim, and the late comer joined therein, adding his own willingness to look to him for the future as Chief of Chiefs, nor did Afareaitu's Head Chief refuse to join him and the rest.

Little wonder therefore that Marama of Pomare's day was a great heiress and a prize and that he thought to consolidate his own power and that of his dynasty by intermarriage of his own family with hers. His successor seemed then to be a woman, his daughter of 7 years, but a son was born to him on June 25, 1820 and to him went the position.

Affairs political were moving smoothly at last. The final action of this Ruler was the drawing up of a Code of Laws in 1819 – with the assistance of the missionaries — which was promulgated at the opening of the Royal Mission Chapel in Papaoa (Arué). For the times and considering the people it was a good beginning. It would have been better but for the refusal of Pomare to limit his personal authority which he had so hardly won.

The Royal Mission Chapel was an astonishing structure 712 feet long and 54 feet wide : 36 pillars of the breadfruit tree supported the roof down the centre, whilst 280 smaller pillars of the same wood supported the wall-plate along the sides and the circular ends. The walls were planks of the same tree. The windows numbered 133 <sup>60</sup> and all were furnished with shutters. There were 29 doors. The roof was of plaited pandanus leaves, whilst the floor was of broken coral upon which stood benches. There were 2 pulpits, 200 feet apart and there was room for 2,000 hearers — so recorded by those who saw it — in front of them. At the opening 7,000 gathered around and within. Crossing the floor obliquely was a water-course, at the dry season 5 feet wide, its sides walled with coral and its bottom paved.

The building did not last long, as the constant necessary repairs cost too much. It had been erected against the wishes of the missionaries who considered it a waste of materials and money. But Pomare insisted that “a House for Jehovah” should be erected far larger and superior to any that had ever been raised to the worship of their former heathen gods. The actual site remains a problem difficult to solve today, the water-course having been diverted by the French.

The end of this troublous period <sup>61</sup> came in December 1821 at Faava. Pomare on his deathbed wished Tati of Papara to take over the Government for his babe. The missionaries and the other leading Chiefs preferred however to take charge of the boy and the Kingdom and Tati was relieved at escaping the responsibility : he had borne enough. Hitoti became Regent, succeeded in 1825 by the Pomare Vahiné Teritaria, the infant’s Aunt. <sup>62</sup>

---

<sup>60</sup> WWB overwrote the middle digit, making number difficult to determine; however, several references online refer to 133 windows. The source appears to be the [report](#) of the Windward Division of the Tahitian Mission, May 18, 1819.

<sup>61</sup> WWB is missing *period*.

<sup>62</sup> The end of WWB’s account of the Period of Violence is perhaps the appropriate place to quote the memo regarding the Tevas written by James Lyle Young, one of the founders of the Polynesian Society in Wellington in 1893, to an unknown author, dated 30 June 1921, which was published in [Robert Langdon, A View on Ari'i Taimai's Memoirs, The Journal of Pacific History, Vol. 4, \(1969\), pp. 162-165:](#)

*Re Tevas*

*Memo:*

For your information and *not for publication* I may say that it is not historically correct that the people of the Teva districts on the southern part of Tahiti held a predominance at the time of the arrival of the Whites. There can be no doubt that Tu Pomare was the Lord Paramount of Tahiti when Wallis arrived in 1767.

The fiction of the predominance of the Tevas and of the descent of the Salmon family from a chief of the first rank was invented by Marau, the divorced wife of the last King Pomare, who is a half-caste Jewess and the sister of the late Tati Salmon. This woman wished to exalt the Papara people and her mother’s family at the expense of the Pomare family, partly from spite against the latter and partly to assist in the claims of the Salmon family to lands in the Papara district.

It was she also who compiled the so-called *Memoirs of Ariitaimai*, her mother, for the purpose of establishing the descent of her said mother from a chief of high rank. This claim has always been denied and ridiculed by many natives and is at this moment being disputed in the courts here by descendants of the old chief Tati of Papara in connection with land titles, it being held by the latter that Ariitaimai was not of chief blood, but the daughter of one of old Tati’s wives — the original Tati, the late Tati’s reputed grandfather — by a man of low birth.

It is also not correct that Tu Pomare was of low descent. He came from a family of high rank, originally of the Paumotu (now called Tuamotu) Islands to the east of Tahiti.

With Pomare II, who was the last to hold the highest post therein, came the decline and passing of the Arioi Society, a widely spread company of Strolling Players who had caused no end of horror, anxiety and trouble to the missionaries. They had played no small part in the life of Tahiti and neighbouring islands. Its members were chosen from all ranks of society and their influence and power were very great. Containing both sexes it was a reckless and licentious organization. Offspring of the lower ranks within it, and all base born infants of the higher ranks, were killed at birth. If any such parents spared their babe they were dismissed forthwith. They travelled from place to place in flotillas of canoes as grand as those of Ariirahis, and were joyously received into Reception Homes of immense size, specially erected for them on all islands.

There were 8 Orders in the Society, distinguished by tattooing and either dress of a burlesque character for those in the higher ranks or with girdles or wrappers for the lower. Their heads were encircled with garlands. As they rose in rank the tattooing increased, till those who passed through all promotions had but little of the body unmarked. Novices were called Flappers and the novitiate lasted 2 to 3 years till they were accomplished dancers, actors, reciters and musicians. Their Plays usually took place at night beneath the flare of flambeaux, and lasted many days, their stay impoverishing the district. The members were safe in times of war and at death were buried with much ceremony. They brought brightness wherever they went, but when Christianity triumphed their lack of morals proved their undoing.

Whilst with Pomare II there came an end to the Period of Violence, the child Pomare III may be dealt with here. His story is soon told. A babe in arms he was not yet 4 years old when the missionaries went through the formal and hitherto the unknown ceremony of Crowning the child, which took place in an open space nigh the Royal Mission Chapel. He was robed in the home of a missionary, missionaries with the Hivas (Judges) walked at the head of the procession, a Chief leading them with a Bible in his hands. The Anointing was performed by the missionary Henry, the Crowning by Nott, he handing the child that Code of Laws lately adopted, explaining to one and all "*the importance and advantage of being governed by just laws.*" The missionaries shortly afterwards bore him off to their school "The South Sea Academy" recently opened by them on Moorea where he was to be educated. He thus acquired English in addition to his native tongue, but he was not quite 7 years of age when he fell ill and being carried over to his mother at Papeete (in Paré) died on January 8, 1827.

---

Therefore it is best not to refer to the predominance of the Tevas, nor the lower origin of Tu Pomare, nor the chiefly descent of the Salmon family, *for these are all debatable points*. From the Diary of Maximo Rodriguez, the young Spaniard who lived in Tahiti in 1772, 1774, and 1775, which is contained in the third volume of *The Quest and Occupation of Tahiti* translated by Dr B. G. Corney and published by the Hakluyt Society in 1919, it is quite clear that Tu Pomare was in 1772 the acknowledged supreme chief of all Tahiti. It is true that Dr Corney asserts the importance of the Papara chiefs but it must not be forgotten that he obtained *all* his information on that subject from Tati and Marau, and was thus misled.

If you have not yet perused *The Quest and Occupation of Tahiti* you should do so — it is a monument of careful analysis, and painstaking work, and earnest desire for accuracy, and a most valuable contribution. Papara was really one of Tu Pomare's districts. Amo, the complaisant husband of Purea, was a henchman and messenger of Pomare and in effect his representative at Papara — not at all an independent chief. Evidently Maximo did not consider Papara or its chiefs of much importance. (See page 173, Vol. 3, *The Quest and Occupation of Tahiti*)...

In a footnote to the text referred to by Young in [The Quest and Occupation of Tahiti, Vol. 3, page 173](#), Corney writes: "*Máximo describes Papara very inadequately. He appears to have arrived on this night [14 July 1775] at Terehe, and to have been made welcome by the Chief Tevahitua-i-Patea, better known to Captain Cook and Sir Joseph Banks as "Amo," the husband of "Oberea" (Purea), Wallis' "queen." That our diarist did not record full details of his two nights' sojourn under the Chief's hospitable roof is disappointing — and surprising, considering the prominent position Amo and Purea had occupied in bygone years, when their son Teri'i Rere was as yet unborn.*"

A miniature,<sup>63</sup> from an etching, of this young King will be seen in *The Pomare Family of the Past* in the Appendix.

Now all eyes turned to a Queen of 13 years old, officially called Pomare IV but Aimata (Devourer of Eyes) by the natives. She was already “married” to Tapoa<sup>64</sup> the paramount Chief though but also in his ’teens of Pora Pora and Tahaa. The seeming incongruity of her name both for her sex and her high post is to be explained by the Old time custom of presenting the Ariirahi at human sacrifices with an eye of the victim offered to the gods. The head was considered as the sacred portion of the human body and the eyes as its most precious possession. The proffered eye was formally accepted and a pretense was made to consume it.

## NOTES

- (1) The sites of the South Sea Academy were as follows:
  - (a) Afareaitu in March 1824 — Orsmond Headmaster<sup>65</sup>
  - (b) Opunohu in August 1831 — Simpson Headmaster
- (2) The Code of Laws promulgated on Tahiti in 1819 was promulgated on Raiatea in 1820 and on Huahine in 1822. These laws covered a wide circle, from murder to dogs. Women were given protection in many ways : tattooing was a crime as was also Sabbath breaking and drunkenness : whilst pigs and breadfruit trees had each their special section among the 25 enactments which were revised, amended and added to for Tahiti both in 1824 and 1826 : Raiatea and Huahine following suite as time went on.
- (3) There was no Crowning of Aimata as with her infant brother. She was running wild at the time of her Accession and the missionaries who would of necessity have had to have the matter in their hands were scandalized at her conduct. They hoped for better things in time, but the years slipped by and the chance was lost.
- (4) Tapoa the destined Consort of Aimata received from Pomare II the surname “Pomare” as a mark of special favour. In 1822 Aimata was 8, Tapoa was 16. The ceremony unifying them was a Public Betrothment, the custom with those of tender years, but in this instance recognized as a formal “marriage”.
- (5) The Family of Queen Pomare IV.

Aimata and Tapoa though not separated till 1834 had no issue, Tapoa residing mostly in Pora Pora and seemingly wholly indifferent in the matter.

---

<sup>63</sup> WWB has *minature*.

<sup>64</sup> See *Tapoa II* under « Souverains de Bora Bora et dépendance (1821–1895) » [here](#).

<sup>65</sup> WWB has *Orsmund* here and elsewhere. Both *Orsmund* and *Orsmond* are common in the literature. According to the account of his ordination as *Missionary to the Heathen* in King Street Chapel, Portsea, England, on December 22, 1815, which can be found in [Evangelical Magazine and Missionary Chronicle, Volume 24, p. 117](#), the correct spelling is *Orsmond*. See the footnote to WWB’s article, *The Pomares of Tahiti*, in the 22 April 1938 edition of the *Pacific Islands Monthly*, pages 17 and 19, in Part VII.

She then married her cousin Tenania of Raiatea — generally known as Ariifaaite.<sup>66</sup> He died in 1873 aged 53. They had 9 children but the first 3 died in infancy. There were then born 5 sons and one daughter.

1. Ariiaue (son) born on Motu-uta in Papeete's lagoon in 1836 who died of profligacy and consumption when 18 on May 13, 1855.
2. Teratane (son) born on Moorea November 3, 1839 who assumed his brother's name upon his death and became Pomare V.
3. Teriimaevavua (daughter) born on Raiatea May 23, 1841. She was adopted by Tapoa and became Queen of Pora Pora.
4. Tamatoa (son) born on Moorea September 23, 1842 who became the King of Raiatea but was deposed by the natives.
5. Teriitapunui (son) born on Raiatea March 30, 1846, known also as Tirae and Punuarii. Died as Chief of Moorea in 1888.
6. Teriitua Joinville (son) born at Papaoa December 17, 1847 whose son was known as Prince Hinoi. Died April 10, 1875.

Aimata by formal adoption added to the above a granddaughter *Terii nui ounu ma'ona* whom she named as her successor in place of her own children.

(See The Accession of Pomare V and the Succession in the Appendix.)

---

<sup>66</sup> WWB has *Ariifaaite* here, but not elsewhere.

A group portrait of Queen Pomare's family. <sup>67</sup>

Queen Pomare :

Ariifaaite :

and 2 of their 5 sons

Teratane :

Teriitapunui.

---

<sup>67</sup> The actual photo, which should be opposite page 123 in Volume 17 of the Bolton Papers, *Old Time Tahiti*, in the Mitchell Library, is missing. The [photo shown above](#), taken in about 1864, may be the same, except sources [here](#) and [here](#) identify one of the sons as Tamatoa, rather than Teriitapunui. The photo of Teriitapunui (Punuarui) that can be found [here](#) suggests that the young man of the left in the photo above is indeed Teriitapunui and not Tamatoa.

THE PERIOD OF THE FRENCH <sup>68</sup>

## CHAPTER IX

The Quotations are mostly from the “Command Papers”.

Vessels of various kinds and nations were now steadily calling. During the Regency for the minor King, the French corvette La Coquille appeared, the Russian frigate the Cruiser, Kotzebue <sup>69</sup> visited Tahiti, de Thierry <sup>70</sup> the French adventurer called in on his way to attempt a coup in New Zealand : and a Treaty with the U.S.A. had been secretly drawn up and signed on board the U.S.S. Peacock — Commander Jones <sup>71</sup> — by 4 of the Chiefs, on Moorea, with the use of the Boy King’s name in the month of September 1826, the Regent Strenuously objecting. The Council naturally became uneasy, and doubtless the missionaries whose close preserve was Tahiti.

A Petition from the Council was sent to England in 1825 which the missionary Henry Nott, home on leave, personally handed to the Foreign Office. They wrote : *“We wish you to be our friend and for you to protect us. Let not our land be molested by British subjects now or at any other time; and should we be invaded by any others do you then befriend us. Should it be agreeable to you to grant this petition, we then wish to have for use the British Flag. If we hoist the British Flag we are in fear, and if we hoist our own Flag we are also in fear lest we should be invaded from some other country. Another petition also is that you will never abandon us but regard us with kindness for ever.”*

Here was England’s opportunity, not to possess but to protect. It was turned down. Canning <sup>72</sup> replied that *“While the King feels every disposition to comply with your wish as far as he can do with propriety, he regrets that consistently with the usages established among the nations of Europe, it would be improper to grant the permission you solicit to use the British Flag.”* His Majesty would however be glad *“to extend all such protection as His Majesty can grant to a friendly Power at so remote a distance from his own Kingdom.”*

Save for some grave matters — a wild religious movement, the personal conduct of the Queen, and the plundering of vessels in the waters adjoining Tahiti, as also much litigation and hot dispute over land claims provoked by a law of 1825 intended to protect the humble natives from the unjust ravages of the Chiefs — Queen Pomare IV had reigned more or less peaceably for 9 years when in November 1836 the schooner Eliza, Captain William Hamilton, arrived at Tahiti from the Gambier Islands (Mangareva) lying 900 miles to the south-east, with 2 Roman Catholic priests aboard, fathers Laval and Caret. These men had been landed on Lesser Tahiti and walked from thence to Tahiti : Vincent, a carpenter and of the same Faith, who hoped to find work at his trade on the island, going on by the vessel to the port of Entry.

<sup>68</sup> Much of this section has been borrowed from [G. H. Scholefield, \*The Pacific: Its Past and Future\* \(J. Murray, 1919\).](#)

<sup>72</sup> [George Canning \(1770–1827\)](#)

The Association of Picpus,<sup>73</sup> a missionary organization, had been founded in Paris in 1814 with the benediction of the Pope, for the spread of the Faith in heathen lands : and in 1833 one of its priests was appointed Vicar Apostolic of Eastern Oceania. That same year this Bishop — Rouchouze<sup>74</sup> — and 5 priests together with Lay Brothers left for Valparaiso, hopeful to forestall the Protestants in any of the islands and also “*that all whom heresy had led astray and brought under its iron yoke, may be freely brought under the mild and gentle yoke of the Catholic doctrine.*”

These 5 started with the Gambier Islands which had been discovered by the Duff with what lamentable results can be seen today, the saddest Group in the Pacific. In 1830, 5000 souls, in 1930, 5 hundred and one.<sup>75</sup> “The mild and gentle yoke” was Tyranny which had to be suppressed by the French Government (see Note #2 to Chapter V). Here they would master the language as the first step towards the spiritual conquest of the Eastern Pacific whether others had been already at work or not.

According to Port Regulation, aimed at “undesirables”, passengers could not be landed without permission from the Queen’s headquarters. In this case permission was not applied for, save by the carpenter, but a few days later the priests waited upon the Queen and tendered the amount of the fine incurred, the carpenter proffering his licence fee. The monies were refused and all were told that they could not remain on the island.

They were determined however to remain, and the priests secured a haven in a house which belonged to the American Consul — Moerenhout<sup>76</sup> — but as there were signs of serious trouble arising, they were laid hands on and forcibly carried aboard the Eliza — which was under another captain found willing to return the vessel to the Gambiers which Hamilton apparently was unwilling to do — and compelled to depart. The carpenter was allowed to remain.

Foreseeing trouble, the British Consul — Pritchard<sup>77</sup> — wrote at once to Lord Palmerston,<sup>78</sup> and with his letter went one from the Queen. The Consul wrote : “*Her Majesty is anxious to know whether the British or any other Government can compel Her Majesty to receive any body of foreigners that may be disposed to settle in her dominions. Tahiti is acknowledged by the British Government as an independent nation, hence she hoists her own Flag. If she be considered as an independent nation has she any power to enact laws for her own government so long as those do not interfere with nor are contrary to the laws of Nations?... At present there are several Frenchmen who are determined to land and reside on this island as Roman Catholic missionaries.*”

These priests had made claim to have the sanction of the British Government for entering Tahiti (Command Papers pp. 53, 54, 57).

The Queen was very emphatic. Referring to their claim, she wrote : “*Is it suitable that they should come here and disturb the peace of my government? It is by no means agreeable to us to receive these Roman Catholic missionaries. We have a sufficient quantity of teachers in our land : we agree well with them : they do not trouble us. We conceive these Roman Catholic missionaries have nothing to do with our island and hence we are determined not to receive them.*”

<sup>77</sup> [George Pritchard \(1796–1883\)](#)

<sup>78</sup> [Henry John Temple, 3rd Viscount Palmerston \(1784–1865\)](#)

H.M.S. Actaeon — Captain Lord Edward Russell <sup>79</sup> — arrived opportunely and approved the Queen's action. Shortly after he had left, Father Caret and a new companion — Father Maigret <sup>80</sup> — made a fresh attempt to land — January 1837 — this time applying in the regular manner. Permission was refused though they affirmed they were only on their way to Valparaiso, their vessel an American one, the Columbus under Captain Williams.

Lord Palmerston's reply was not very helpful. So far from having sanctioned the coming of the priests, the British Government had no knowledge of them whatsoever. *"Neither would the government of this country have any right to give or to withhold their sanction to the residence of the subjects of any other nation in territories which do not appertain to Great Britain. Of course every government has a right to refuse any foreigners permission to reside within its dominions, if the presence of such foreigners is considered hurtful to the State : but if no such reason exists for requiring foreigners to depart, it is contrary to the usual rules of international hospitality to force them to leave a country in which they may wish to take up their abode provided they do not infringe the laws of the land."* There things rested.

In September of the same year — 1837 — the Vicar Apostolic, this time, of Western Oceania, Bishop Pompallier <sup>81</sup> appeared and, granted landing, waited upon the Queen : and *"all the Royal Family except the Queen herself came onboard to visit me."* This cordiality was probably grounded upon learning the policy of this Bishop which was not to settle missionaries on islands where Protestants were already established, this grounded on the obvious advantage these Protestants had in knowing the language and the customs of the islanders. But his policy did not last. It was over ruled by the Powers at Home, not at first from a religious point of view but from a purely political. Chartering the Raiatea he sailed from Botany Bay. The opposition shown to Roman Catholics in more than one Group in the South Sea had come to the notice of the Royal Government, and King Louis Philippe <sup>82</sup> saw in it an excellent means of gaining popularity with the religious section of his people. Apart from this, France had recovered from the blow of Waterloo <sup>83</sup> and was again a vigorous rival to England for World power. Under Orders, the French naval Commanders in the Pacific were to show an aggressive zeal in defense of the Catholic missions. This they did in high handed fashion, first for France and as a secondary object for religion. Hawaii's story shows their zeal, the Loyalty Islands also : Tahiti was to know it very soon.

On August 29, 1838 Commodore Du Petit Thouars <sup>84</sup> in the French naval frigate Venus dropped anchor at Papeete, and the day after his arrival an Ultimatum was sent to the Queen, the frigate at the same time preparing for hostilities. The Queen answered begging for time to comply with the demands of the Commodore and to make an explanation. To Pritchard, however, who acted as Intermediary, *"the only alternative to devastation and death was to comply with the demands"* at once.

These demands on behalf of the French King were :

1. An apology in French and Tahitian within 24 hours.

---

<sup>79</sup> [Edward Russell \(1805–1887\)](#)

<sup>80</sup> [Louis Désiré Maigret \(1804–1882\)](#)

<sup>81</sup> [Jean Baptiste François Pompallier \(1802–1871\)](#)

<sup>82</sup> [Louis Philippe I \(1773–1850\)](#)

<sup>83</sup> The [Battle of Waterloo](#) was fought on Sunday, 18 June 1815.

<sup>84</sup> [Abel Aubert Du Petit Thouars \(1793–1864\)](#)

2. An Indemnity of 2000 Spanish dollars for “*the bad and cruel treatment which some of the priests had suffered who had come to Otaheite*”.
3. A Salute of 21 guns to the French Flag from Motu-uta (the islet in Papeete’s lagoon).

It was clear that Du Petit Thouars intended to carry out his threat. The demands were met. The Treasury not being in affluence, Pritchard and Bicknell (a sugar planter)<sup>85</sup> with Vaughan (a resident surgeon) found the money : and the difficulty of the Salute was surmounted by the use of some old and odd cannon lying on the islet, the Commodore supplying the powder and the natives very timidly setting the blasts off.

His supports, the corvettes Astrolabe and Zelee now arrived and the Heroine was on its way. With this great show of force the Commodore next demanded a “Treaty of Friendship and reciprocal Freedom of nationals” with France. The Queen offered the objection that as all Tahitians were Protestant she did not desire the Roman catholic doctrines to be taught at all. To this he replied that “*as Frenchmen*” all priests must receive full protection under the Tahitian Government, but at the same time “*it was competent to Her Majesty to enact a law forbidding the teaching of the doctrines of the Roman Catholic church in her dominions*”.

We shall see however that this very thing being done, the French demanded its repeal at the cannon’s mouth.

Relying on this important point and under the threat of the small armada, a formal Treaty was drawn up and signed.

*“There shall be peace perpetual between the French and the inhabitants of Otaheite : they shall be received and protected as the most favoured strangers : the French whatever their profession can come and go freely, establish themselves and trade in all the islands which compose the Government of Otaheite. The subjects of the Queen of Otaheite can equally move in France, they shall be received and protected as the most favoured strangers.*

*“Made and signed at the Palace of the Queen in Papeete, the 4<sup>th</sup> of September 1838.”*

On the 5<sup>th</sup> a Consul for France was appointed, the Belgian Moerenhout who had been the American Consul but who was on the point of being dismissed by Washington, at the request of the Queen and her Council for openly defying the local laws as to liquors. He was named by the Commodore for the post who refused to listen to objections. His appointment had to be accepted, S. R. Blackler<sup>86</sup> replacing him as Consul for the U.S.A.

Du Petit Thouars had lost no time, all was over in under a week, and now proffering sundry courtesies he sailed : he had taught Tahitians the Might of France.

Commodore Wilkes<sup>87</sup> of the U.S. Exploring Expedition, who came upon the scene, expressed himself strongly in his Report home as to this action of the French Commodore.

*“It was high handed and hardly admits of justification. The French Commander in thus bullying a defenceless people into payment of an exorbitant indemnity and into a relinquishment of the right of*

---

<sup>85</sup> Bicknell, the planter, was the nephew of L.M.S. missionary Bicknell, who arrived on the Duff.

<sup>86</sup> Samuel R. Blackler (died 1844); WWB has *S. N. Blackler*.

<sup>87</sup> [Charles Wilkes \(1798–1877\)](#)

*admitting or excluding foreigners or strange religious Creeds by municipal regulation, appears in a light far from advantageous.”* As he looked at the cause of offense, the French had no excuse for intruding upon a missionary ground already occupied, whilst the Tahitians were precipitate and rough.

This, however, was only the beginning of things.

## NOTES

- (1) The following interesting letter from the Boy King was addressed to Elley, the British Vice Consul who along with others was greatly disturbed lest the Treaty mentioned in the Text, arranged without their knowledge and consent, might offend Great Britain. The Peacock had sailed away a month before. (See *U.S. Sloop of War Peacock* in the Appendix.)

*Griffin Town. Afareaitu.  
Moorea. October 13. 1826.*

*E hoa ino e*

*Aore au i faarue Arii George IIII. E hio â vau iana, E faaroo â vautina, o oia tau haapu raa. E peu râ na tau Metua e e ite maitai atu te taata afoa i papai, ae au tana parau râ ia Cap<sup>n</sup> Jones.*

*Pomare III*

Translation

*Dear Sir*

*I have not abandoned King George IV. I still look to him, I still regard what he says, he is still my refuge. But it was a custom of my father to be kind to all men, therefore I wrote that paper for Captain Jones.*

Less than 3 months later, the Boy King died.

- (2) In 1828 a sect named Mamaiâ was formed in Tahiti, its object being to abolish the new laws promulgated by Pomare II, under the guidance of the missionaries and the various customs introduced by the latter. This sect sought to revive the old time savage practices under a cloak of religion, part Christian, part heathen. They were given to much prayer to the Unseen, the while being grossly immoral. The young Queen came under their influence for awhile, and only after strenuous and drastic efforts of the steadier Chiefs and the L.M.S. leaders was the movement finally suppressed.
- (3) That the Queen and the resident missionaries were not unaware of the possible arrival of Roman Catholic missionaries from the Gambiers is clear from their knowledge of their work in that Group then current in Papeete, gained by the coming of one of the band — the Irish Catechist Columba Murphy,<sup>88</sup> who landed on Tahiti on his way to missionary labour in the Hawaiian Islands, May 21, 1835, over a year before the arrival of Laval and Caret. Brother Murphy had

---

<sup>88</sup> [Columba Murphy](#) is mentioned in Chapter XXXVII, *The French Priests Pay Their Respects*, in [Omoo](#), by Herman Melville.

an interview with the Queen after he had been told by Pritchard and others that he could not land. Her statement to her passing visitor, waiting for his boat to proceed was “*If you wish to land, it is necessary to secure the authorization of the Chiefs and missionaries. If they consent I have no objection to make.*” The Chiefs consenting, the missionaries did not force the issue. He remained 2 months. From Papeete he wrote to his Bishop in Valparaiso telling of all that had passed, and followed it by another letter, this from Hawaii, assuring him that many of the Tahitian Chiefs would welcome his arrival, but the consent of the Queen and the leading Chiefs was necessary — he ignores the missionaries — and suggests that a good way to secure a permanent base would be to get some Chief to donate land to him on which to build a home. The Bishop did not come but sent the 2 priests instead. By this time the missionaries were clearly determined not to be ignored, with what results to themselves the sequel unfolds. (See also *Untempered Zeal* in the Appendix.)

- (4) The following is a copy made by Pritchard of Du Petit Thouars’ letter to Queen Pomare. It is his translation, now in the possession of the Mitchell Library, Sydney, N.S.W.

*Aboard the French frigate Venus  
Papeete the 30<sup>th</sup> of August 1838 at  
10 o’clock in the morning.*

*To The Queen of Otaheite*

*Madame*

*The King of the French and his Government justly irritated for the outrages offered by the natives’ bad and cruel treatment which some of His members who had come to Otaheite have suffered, and especially Messrs Laval and Caret, Apostolic missionaries who called at this island in 1836, has sent me to reclaim and enforce if necessary, immediate reparation due to a Great Power and a valiant Nation who have been gravely insulted and without provocation.*

*The King and His Government demand : 1<sup>st</sup> That the Queen of Otaheite write to the King of the French to excuse for the violence and other insults offered to Frenchmen whose honourable conduct did not deserve such a treatment. The letter of the Queen will be written in Tahitian and in the French language and both will be signed by the Queen. The said letter of reparation will be sent officially to the Commander of the frigate Venus within 24 hours after the present notification. 2<sup>nd</sup> A sum of 2,000 Spanish dollars will be paid, within the 24 hours of the present notification, to the cashier of the frigate Venus as an indemnification to Messrs Laval and Caret for the loss occasioned to them by the bad treatment they received at Otaheite. 3<sup>rd</sup> After having complied with these two first obligations the French Colours will be hoisted the 1<sup>st</sup> day of September on the island Motu-uta to be saluted by the Tahitian Government with 21 guns.*

*I declare to Your Majesty that if you do not subscribe to give the reparation asked for, I will see myself in the obligation to declare war, and to commence hostilities immediately against all the places of Your Majesty’s dominions, and which will be continued by all the French vessels of war which will successively call here, and will last to the time when the French will have obtained satisfaction.*

*(Signed) A. Du Petit Thouars.*

- (5) H.M.S. frigate Imogene arrived from Hawaii in November 1838 and shortly afterwards H.M.S. Conway dropped anchor at Papeete. From the London Times of February 26, 1938 the following excerpt is taken from the Imogene's Captain — Henry Bruce <sup>89</sup> — in his correspondence with his brother-in-law Sir Thomas Trowbridge, a Lord of the Admiralty.

The political troubles of the island do not appear to have concerned him deeply, but his fellow countrymen on Tahiti called for notice in the main condemnatory as will be seen.

*The Conway brought presents for Queen Pomare from our Government, so that while I was lecturing Her Majesty and Her Authorities for breaking into the houses of British subjects and otherwise ill-treating them — and vice versa — the Conway was presenting her with 2 soiled gowns, a handsome pink bonnet, an ugly soiled cap and some ribbands cut into 5 fathom lengths. Pomare is an interesting woman, she is a decided Christian and very well conducted : is married and has had 3 children who all died young : she is warmly attached to the English who I am sorry to say behave very ill and give her the greatest trouble in her own country. Ships ought to be sent more frequently to protect her from British insult as well as to look after British interests : she dined on board with me and wrote me a letter, besides giving me one in charge for our King.*

(For further Gifts see Note #4 to Chapter X and *The War of Independence* in the Appendix.)

- (6) During the decades of the 20s and 30s of the 19<sup>th</sup> century, Papeete was also known to British folk locally and abroad as “Wilks’ Harbour”. This title arose from the custom of the earlier missionaries to give the names of their Leaders at home to their “stations” both on Tahiti and Moorea. Matthew Wilks <sup>90</sup> of the Moorfields Tabernacle, London was one of the originators of the London Missionary Society and among its first Directors.

Thus Crook <sup>91</sup> in October 1822 writes to Hassall in Sydney from “*Mount Hope, Wilks’ Harbour, Tahiti*”. His station from 1818–1823 was Papeete : whilst Blossom writing to Hassall in May 1825 speaks of “*Papeete or Wilks’ Harbour*”. <sup>92</sup>

## CHAPTER X

A second Petition went forward without delay. On November 8, 1838 the Queen and her leading Chiefs wrote direct to King William though Queen Victoria was then upon the throne.

*Accustomed from childhood to cherish the English name we are following the impulse of our hearts. Since the first Englishmen neared our shores in one of your vessels we have praised you as the only nation which showed us a Christian heart... Take us under your protection. Let your Flag cover us and your Lion defend us. Determine the form through which we could shelter ourselves lawfully under your wings. Cause our children to bless you and to cherish your Christian feeling as we do.*

On the same day the Tahitian Council with the Queen presiding passed a Law on the line suggested by Du Petit Thouars declaring Protestantism the only lawful religion, and any person coming to Tahiti with the purpose “*of disturbing the Gospel*” or to teach any other form of religion was to be deported. It reached out also to include any native Tahitian guilty of like act. Tahiti was well within its rights in passing such a law but it was certainly unwise under the circumstances. It looked too clearly to be the work of the Protestant missionaries to keep their preserve intact and a challenge by them to France.

No sooner was it law then Cap<sup>t</sup> La Place<sup>93</sup> who had visited Tahiti in 1831 put into Papeete not in La Favorite but with L’Artémise<sup>94</sup> in distress. As he was refitting he observed the course of affairs and as soon as his vessel was ready for sea again he demanded, under threats, the repeal of that law. Tahiti pleaded that it was passed at the suggestion of the Commodore. La Place would accept no excuse : repeal or suffer. It was repealed. He then demanded a portion of land in Papeete as a site for a Roman Catholic church. It was given. Then followed a demand that in every village where there was then a Protestant church, there should be built a Catholic one by the natives. This also was promised. Finally La Place presented a document which the Queen, under threats, was forced to sign promising that no Frenchman should be molested in his religious duties, and that the free exercise of the Roman Catholic religion should be permitted throughout Tahiti. He then sailed. He had gone many steps further than the Commodore and flung the challenge of the missionaries in their face.

There was just one hope : that England might step in. Queen Victoria’s reply was eagerly awaited. It was again from Palmerston and directed to the British Consul Pritchard. England turned Tahiti down a second time. It was full of deep concern over the troubles that had arisen, but none could fail to see that England was a broken reed to lean upon.

*Considering the great extent of the present Dominions of the British Crown in the Southern Ocean and the difficulty of adequately providing for the defence of the persons living in allegiance to Her Majesty in a quarter of the Globe so distant from Great Britain, Her Majesty feels that it would be impossible for Her to fulfil, with proper punctuality, obligations which Her Majesty might contract towards the Government of Tahiti. And therefore, however strong the interest may be which Her Majesty takes in the prosperity of the Society Islands and in the happiness and welfare of Queen Pomare, Her Majesty is bound in good faith to decline to enter into a specific engagement of the kind which has been suggested. But you will assure Queen Pomare that Her Majesty will at all times be ready to attend to any representations that Queen*

<sup>93</sup> [Cyrille Pierre Théodore Laplace \(1793–1875\)](#)

<sup>94</sup> WWB has *L’Artimise*.

*Pomare may wish to make and will always be glad to give the protection of Her good offices in any differences which may arise between Queen Pomare and any other Power.*

One thing was now clear : that when this decision of Great Britain became known, Du Petit Thouars' and La Place's demands not only must stand but Tahiti must prepare for more.

For some 4 years things political were quiet but religious far from so upon the island. Roman Catholics, both priests and lay, were very active but steadily and jealously resisted and feeling grew so strong that something ere long was bound to happen.

It came with the reappearance, in September 1842, of Du Petit Thouars in the La Reine Blanche of 50 guns. The British Consul Pritchard was at Home on leave and the Queen in the islands. The bullying went on and Tahiti was defenseless. Much happened within 10 days.

After consultation with Moerenhout, the bitter enemy of the Queen and the missionaries, Du Petit Thouars, now in rank an Admiral, complained to the regent — Paraita — that the French Flag had been insulted, and that there was not one Frenchman on the island who had not some complaint to make of the iniquities and overbearing conduct of the Government : *“Ill advised, submitting to all things fatal to her true interests, the Queen will learn a second time that the faith and loyalty of a Power such as France is not with immunity to be trifled with.”*

He refused to have anything to do with the Protestant missionaries either as intermediaries or interpreters and there was a long conference on board the frigate with the Regent and 3 of the leading Chiefs — Tati, Utomi and Hitoti. It was extended well into the night, being transferred ashore to Moerenhout's residence, and when day dawned it was announced that a Document had been signed, asking the King of France for a Protectorate.

The Admiral now demanded a still larger Indemnity than before, Ten Thousand Spanish dollars, not however for individuals affronted but as a security for good behaviour, and threatened that if not received he would occupy the forts round Papeete.

It appears that the Queen was by this time in Moorea, near her confinement, and in dire fear was compelled by the 4 Chiefs to add her signature (Command Papers pp. 130, 131, 173).

The Petition requested the Admiral to solicit from his Government French Protection on the following terms : <sup>95</sup>

1. The Sovereignty of the Queen and the Authority of the Queen and High Chiefs over the people to be guaranteed.
2. All Laws and Regulations to be issued in the Queen's name and signed by her.
3. The possession of lands belonging to the Queen and to the people to be secured to them : and all disputes as to ownership of land or property to be decided by the tribunals of the country.
4. Everyone to be free in the exercise of his form of worship or religion.

---

<sup>95</sup> For the exact text, see the addendum, *Tahitian Chiefs and Treaty Making*.

5. The Churches already established to continue to exist and the English missionaries to continue their labours without molestation. The same to apply to every other form of religion and none to be molested therein.
6. All Foreign policy to be in the hands of the French King.

Du Petit Thouars accepted the terms on the 9<sup>th</sup> of the month (September 1842) subject to his King's approval. He seemed thoroughly satisfied and wrote to the Signers "*a decision so honourable removed every symptom of dissatisfaction*".

He at once set up a Provincial Government, to regulate the affairs of foreigners, consisting of 3 members, a Commissioner Royale, Moerenhout; a Military Governor, years later properly altered to "Commandant", by name Reine, succeeded shortly afterwards by Mallet; and a Captain of the Port named De Carpegna, alike succeeded by D'Aubigny, the last 2 his own Lieutenants.<sup>96</sup> It was practically a Protectorate before his action had been confirmed by his own Government. The Tahitian Flag was changed to bear the French colours in addition in the upper part next to the staff and prior to the departure of the Admiral was saluted by his frigate.

It was a full year before he returned with the announcement that Louis Philippe had accepted the proffered Protectorate and bringing with him as "Governor" the naval Captain Bruat,<sup>97</sup> named by the King for the post. There had been much searching of heart for both in Paris and London before the decision was come to, but England could not go back on the signatures though word had reached its Government of the 4 Signers regretting their action (Command Papers N° 130). And things meanwhile had been happening at Papeete.

In January 1843 when H.M.S. Talbot — Captain Sir T. Thompson<sup>98</sup> — arrived, the customary Royal courtesies were observed, the Captain pending Instructions from his Admiral being unable to recognize this new provisional regime. The Queen was rowed out to the vessel in the state barge flying the old Tahitian Flag, the Talbot hoisting the same and firing a Royal Salute. The Provisional Government of 3 was furious. Thompson having looked into matters remained in a watching attitude till he was relieved by the Vindictive in February, which stayed in the harbour for six months. This sloop of war brought gifts from one Queen to another, from the young Victoria to Aimate, now 31.

Commander Nicolas<sup>99</sup> at first took the same position Thompson had, and under his inspiration the Old time glories of Tahiti flourished once more. The Tahitian Flag once again flew over the Royal residence with a Crown in its white stripe — this on the direct suggestion of the Commander. A demand was made by the Provisional Government for its prompt removal as an insult to France but the demand was denied. Though a French frigate had put in appearance, the Vindictive held the situation. The Tahitian Legislative Assembly met, the Tahitian Code was put again into force and all things moved on the old lines. Against the detested 3 French officials a native rising simmered, but the Vindictive stood for fair play all round. Nicolas later changed his attitude. At first he was under the impression that the Queen had merely lent her name to the request for the Protectorate. He learned however that she had signed a formal document. She must keep to her word. But despite this their friendship stood fast (see their letters in *Extracts from Some "Human" Documents* in the Appendix). With the Vindictive's departure and the Dublin's arrival, Du Petit Thouars also came upon the scene

<sup>96</sup> Dominique-Edouard Reine (1809–1847); Stanislas Louis Mallet (1796–?); Edouard Jules Gabrielli de Carpegna (1816–1883); J.M. D'Aubigny.

<sup>97</sup> [Armand Joseph Bruat \(1796–1855\)](#)

<sup>99</sup> [John Toup Nicolas \(1788–1851\)](#); WWB has *Nicholas* here and elsewhere.

in the Uranie of 60 guns. The news he brought completely changed the situation and he was not the man to let the late happenings pass without reprisal. Pritchard had returned on the Vindictive and had written Home in such terms as to cause grave anxiety in London. Both in June and July he was urged by Lord Aberdeen “*to adapt your conduct and language with the tenour and spirit of the policy of the Instructions*” sent to the British naval Captains in the Pacific. Again in September a definite setback to his belief that England would step in was sent him but before it reached him he had impatiently delivered himself into the hands of his bitter opponents. He had been warned by Nicolas that his attitude was untenable and in measure had agreed but the Queen was inflexible in her hostility to the Protectorate and the Vindictive gone, Pritchard’s sympathy with the unhappy woman had its influence upon him to his own undoing.

Du Petit Thouars after announcing the acceptance of the Protectorate demanded an audience with the Queen. On being granted he complained of the use of a Crown in her flag and demanded that she abandon the practice. On her refusal he shot his final bolt. He wrote her and also informed Pritchard officially that “*in consequence of actions alike hostile and offensive to the dignity of the King of France*” he found himself “*under the necessity no longer to recognize Queen Pomare as the Sovereign of the lands and people of the Society Islands*” and that on the morrow “*in the name of the King and of France*” he would “*take possession of the islands*”. This was the penalty for the last six months’ joy.

On the 9<sup>th</sup> of November 1843 a strong force was landed from the frigate, a square was formed about the Queen’s flagstaff, her Flag was lowered, and Du Petit Thouars took possession of Tahiti. The keys of the Queen’s native built “palace” were demanded and delivered up. The Queen had already taken shelter in the British Consulate, from thence shortly afterwards repairing on board H.M.S. Basilisk, a ketch attendant on the Dublin, on which she remained for 5 months, from thence transferring to the Cormorant during its short stay in port, returning to the ketch till the arrival of the Carysfort — Captain Lord Edward Paulet <sup>100</sup> — on which she was taken to her mother’s home on Raiatea in July 1844.

Meanwhile Captain Bruat had taken up his Quarters in the “Palace” as Governor of Tahiti with D’Aubigny as his Assistant. The Dublin’s Commander, Captain Tucker, formally entered a protest against these proceedings, and Pritchard impatiently wrote that same day to inform Du Petit Thouars that his post as Consul must now cease. He held his appointment to a Protectorate only : “*I have accordingly struck my Flag, not having been accredited to a French Colony.*”

The French Admiral then sailed.

## NOTES

- (1) The British Consulate in Papeete was built on land given by Queen Pomare to the British Government as British soil, as already she had given land for a similar purpose to the United States Government on its present site, both sites portions of her Family properties. It was given during the Consulate of Pritchard and not to him personally as he later on mistakenly claimed when on leaving Tahiti for Samoa he sought to hand it over to the London Missionary Society. Such claim failed.

The site was a portion of the large site on which the native Church stood which had been given many years before — 1817 or 1818 — to the native public of Papeete and which ran along the

---

<sup>100</sup> [George Paulet \(1803–1879\)](#)

waterfront up to a fence marking off the Pastor's residence standing on a further portion of the land given to the L.M.S.

A portion of the Church's site became by the Queen's orders the Consulate and today a road further divides the Church from both Consulate and the Pastor's residence. Next to the latter stood another house of the L.M.S. in its own ground, next to which stood the Printing Office of the L.M.S. also in its own ground, and next to the Office the native cemetery of the L.M.S. for their converts, not the general public : the last 3 being private property today. The donor of this valuable waterfront property whether Chief Paofai or King Pomare II is not yet definitely known. It stands in Paofai, one of the sections which today compose Papeete.

**The British Consulate office**

- (2) The arrival in 1829 of H.M.S. Satellite, bringing the information that the request to use the British Flag could not be acceded to, a Tahitian flag of 3 horizontal bars — Red — White — Red — was resolve upon in March of that year for "The Georgian Islands," as Tahiti and its adjacent islands were then named. A crown was not then a part of its design. The original Tahitian Flag from the days of Pomare II was wholly of Red Fustian, with a 5 pointed star in white on the top side near staff and cord.

- (3) The British Consuls at Tahiti since 1825 were as follows : the list supplied in 1938 by the Foreign Office.<sup>101</sup>

Name	Date of Appointment	Vice or Acting Consul
1. Charlton, R.	September 23, 1824	Thomas Elley
2. Pritchard, G.	February 14, 1837	C.B. Wilson <sup>102</sup>
3. Miller, W.	August 16, 1843	G.C. Miller
4. Miller, G.C.	April 9, 1856	A. Gibson John Brander G. Miller J <sup>r</sup>
5. Talbot, C.A.P.	November 24, 1885	
6. Hawes, A.G.S.	October 1, 1889	Arthur Brander
7. Simons, R.T.	September 27, 1894	John Hart J.A. Phillips A.J. Du Temple
8. Rowley, A.L.S.	December 11, 1908	
9. Richards, H.A.	January 8, 1912	W.J. Williams
10. Fisher, G.A.	February 18, 1920	W.J. Williams
11. Williams, W.J.	May 11, 1921	I.E. Walker S. Russell
12. Gorton, F.G.	March 2, 1936	D. O'Brien
13. Edmonds, E.	October 1, 1938	
14. Cameron, D.	December 7, 1941	

- (4) The Gifts brought by the Vindictive are thus named in a letter to the Queen from Governor Gipps dated from

*Government House. Sydney. 20<sup>th</sup> January 1843*

*To Her Majesty Queen Pomare, Tahiti.*

*... I request the gracious acceptance by Queen Pomare of an engraving of Her Majesty Queen Victoria and some articles of furniture forwarded on board the Vindictive, together with a dress which I desire to offer to Queen Pomare's Royal Consort and a few small presents*

<sup>101</sup> The list does not include Busvargus Toup Nicolas (1819–1859), who was British consul for Tahiti in 1849, perhaps because he was at Raiatea; see Part XI, *Roaming the Pacific Waters, The Island Of Despair (III) : The Coming Of The Pitcairners, Norfolk a Possible Site*.

<sup>102</sup> Wilson is the protagonist in Chapter XXI, *Proceedings of the Consul*, in [Omoo](#), by Herman Melville.

*intended for the Royal princes and princesses... M<sup>r</sup> Pritchard will have the honour of delivering them to Your Majesty.*

These were probably more useful and acceptable than previous gifts, as in a former letter to the Queen dated September 22, 1838 the Governor appends a note to the draft copy for his Secretary General requesting therein “*her gracious acceptance of the accompanying presents*” informing him “*that a bonnet has usually been sent or some other articles of dress. Let this be obtained*”.

- (5) The Pape (water) at the back of the Pomare Family property in present day Papeete had around and about its spring abundant rushes from which the Ete (baskets to hold the gourd calabashes) was made. Hence from unknown times came the name of that portion of the waterfront of the lagoon into which the stream empties.

The Queen’s “Palace” of the 1840<sup>s</sup> was to one side of that stream. Her father had raised that native “home” which correctly became a “Palace” in 1815 when at last he won kingship. His daughter had renovated it in 1838. A lofty and commodious wooden building was designed and begun in the 60<sup>s</sup> hard by, at an estimated figure of Francs 100,000, but financial difficulties greatly retarded the work and it was not fully completed till June 1883, nor was it ever furnished for Pomare V who lived and died in the old Palace. That new erection as it stands today is the Government Treasury Building dating from August 1901. A vacant space between it and the Governor’s Office is where the Old time building stood.

**Site of the original Palace 1815—1880**

**Vacant centre.**

## CHAPTER XI

January 1844 opened with H.M.S. Dublin again in port with Instructions from the Admiral of the Pacific Station to its Captain — Tucker <sup>103</sup> — to acknowledge the Protectorate alone. Bruat acknowledged the propriety of the reservation of being thus unable to salute the French Flag, but countered by refusing to accept Tucker's proposal for the temporary reappointment of Pritchard as Consul.

There was trouble on the island. Chiefs and natives had risen in revolt and had gathered in force on the eastern coast. There was fighting at Hitiaa and Arue with loss of life on both sides. The Protestant missionaries wanted to avoid bloodshed and approached Bruat on behalf of those whom he had outlawed. He was willing, but insisted that the first step towards pardon must be a full and frank submission of the missionaries themselves (Command Papers N° 199 H.).

But the “rebels” who termed themselves “Patriots” were not at all disposed to submit, and the French had further fighting on their hands both at Faaa and Taravao. Men on both sides were killed or wounded. For this continuance Bruat held the missionaries — and Pritchard especially — responsible. The continual coming and going of British warships in Tahitian waters was also held by him to encourage the natives' resistance.

The Dublin had gone but the Basilisk remained and later the Cormorant arrived.

To its Captain — Gordon <sup>104</sup> — Queen Pomare wrote:

*On board H.M.S. 's ship Basilisk*

*February 20. 1844*

*... Health to you. I feel great joy at your coming. My heart feels delight while I think of my friend Queen Victoria. She has sent you O! Captain to see me in my troubles. My lands have all been confiscated, my government and my sovereign power have been taken from me, my Flag has been hauled down. The French Governor had determined to put me and those attached to me in irons. I have escaped by taking refuge on board this little vessel. If this little vessel had not been here you would have found me in irons, transported to some other land. Remain near me. Do not leave me. Watch over me.*

*Pomare*

The French corvette the Meurthe lay in the harbour and the Governor was absent from Papeete with his troops at Taravao when more trouble arose. As Pritchard was about to leave the shore to go on board the Cormorant, the Captain of the Port — D'Aubigny — ordered the arrest of the former Consul. He was thrown “into the unfloored dungeon of a Block house”. Captain Gordon demanded his immediate release but this was not complied with till Bruat returned 6 days later. He ordered Pritchard to be taken on board the Meurthe and held there.

Bruat acknowledged later that though he considered Pritchard a menace and his arrest a necessity he could not approve the manner in which he had been handled. He did not hesitate however to deport

---

<sup>103</sup> Jervis Tucker

<sup>104</sup> C.T. Gordon

him by means of a request to Captain Gordon that he also would take his departure and give Pritchard a passage. The requests were acceded to in March 1844 and Pritchard transferred from the Meurthe and joining the Cormorant, transferred again to the Vindictive at Valparaiso and sailed for England.

That May, the last of the Pioneer missionaries — Nott — died at Arue, a saddened man.

Pritchard's story, on arriving Home, which he at once proclaimed far and wide, threw England into a ferment, and relations with France immediately became strained. The matter was carried into Parliament. The missionary element were, besides, furious at the overthrowing of Protestantism in a field so long peculiarly their own. A serious rupture was averted only by mutual goodwill and common sense of Peel <sup>105</sup> for England and Guizot <sup>106</sup> for France. No insult had been offered to a British Consul as had been claimed, Pritchard had voluntarily resigned. He was but a foreign resident. The Protectorate had power to deport obnoxious persons : but his imprisonment was illegal and his treatment greatly deserving of blame. Such was the French view. An Apology was due and compensation. These made, the matter was closed. Pritchard was moved to Samoa as Consul at Apia : G. C. Miller being appointed as Acting Consul in his place : but along with the Apology went the welcome and important announcement that France had refused approval of Du Petit Thouars' high handed act of Annexation. He had carried out his Country's policy too fast. It took nigh 40 years more and a new Pomare to see the matter through.

England had to be considered. When the French Government learned of their Admiral's action — he then a Commodore — as to a Tahitian Protectorate a few years previously, it realized as Guizot wrote "*that some difficulties might result from the proceeding in regard to our relations with England*". These difficulties were surmounted but "the Pritchard affair" had roused too high a feeling to confirm a far more serious thing. Bruat was therefore informed in 1844 that he was not a "Governor" of a French Colony but "Commandant" of a Protectorate.

This however was very far from satisfying Queen Pomare and all attempts on Bruat's part at coming to an understanding were met with prompt refusal. A full year after he had received his orders from France the deadlock was still on, as can be seen from the following letter to him from the Queen, then on Raiatea :

*(Excerpt) I have been informed that the King of the French and his wise counsellors have disapproved of the proceedings of Admiral Du Petit Thouars in seizing my Government, my home and my lands because my personal flag did not please him. The great King of the French and his wise counsellors have also said that Admiral Du Petit Thouars acted without being commanded and with injustice and without wisdom and that they have commanded you to restore my Government and my lands. I thought, and wise men also thought, that you would regard the commands of your Master the King and restore quickly to me my Flag, my house<sup>107</sup> and my lands. But you have not done so, you are still obstinate in building barracks and erecting forts upon my land and upon my people's land and you interfere with my people in appointing Judges and other officers which you have no right to do. I write this word to you that you may know that I throw all the evils of these things upon you, and to make known to you that until you restore to me my Flag, my lands and my property and rehoist the proper Flag agreeably to the command of your King I can place no confidence in what you say or even listen to you.*

<sup>107</sup> WWB has *hous*.

*And now may you be kept and saved by the true God.*

*Pomare.*

“The War of Independence” was now going strong. Throughout 1845 Bruat had had his hands full. The year 1846 saw specially stubborn fighting on both coasts, Papenoo on the east coast and Papeete itself on the north.

And as if there was not already enough cause for dissension, a Proclamation was issued in November 1846 announcing a change in the Sabbath day. From 1797 the day had been as it was miscalculated by the pioneer missionaries on their arrival who had gained and not lost a day on their long journey by coming from the East via the Cape of Good Hope. As the many French now on Tahiti and Moorea were observing a different Day of Rest from the native population, confusion followed and Bruat had won over the Regent and many of the Chiefs to a change. The missionaries saw the point, but with many of the natives there was great unwillingness “*some having conscientious grounds whilst others were too superstitious to think of a change being made*”. Threats of being confined in irons did not help matters, but the Will of those in command prevailed and Tahitians henceforth knew a new Seventh Day.

Then what men could not accomplish a woman did (Command Papers Part III pp 190, 191). She interposed to bring about peace, the submission of Tahitians to French rule under the Protectorate and the return to Tahiti of their Queen who had steadfastly refused to return till both her Sovereignty was restored and the Protectorate annulled. It was a difficult business.

She was Ariitaimai, the granddaughter of Tati, the first born of Tapua and Marama and — as has been noted had been “adopted” before her birth under the marriage contract with Pomare II. She was the most intimate friend and companion of her foster sister the troubled Queen — nine years her senior — and was looked upon throughout Tahiti as a high and great personage. (See Note #2 to Chapter VII.)

The Queen was still with her mother’s people on Raiatea and the Commandant was preparing to attack in force the patriot Chiefs and their followers who had gathered at Papenoo and so to finish the “rebellion” for good. Moved to action by the appeal of an old woman friend, after the report of a futile visit to the “rebels” assembled there in October (1846) by a Papeete merchant — E. Lucett <sup>108</sup> with his half caste wife as interpreter — Ariitaimai called upon Bruat and requested that she be allowed to pass through the lines beyond Point Venus to appeal personally to the “insurgents” to submit. She had learned that both the Uranie and the Phaeton were about to be sent round the coast from Papeete transporting troops for the attack and others were about to take the road thereto. Her request was readily granted, she herself setting a time limit.

Accompanied by only one relative, Ariipaea by name who had gone over to the French and was therefore looked upon as a traitor, but who was safe under Ariitaimai’s protection, she set out on her mission, Bruat lending her his own horses for transport. Passing through the French outposts she reached those of the natives, and soon saw many hastening into the bush, together with their goods and chattels, thinking they foresaw an attack.

Reaching the village she got the Chiefs together in the Church. Here were gathered practically all the “insurgent” leaders. There was prolonged discussion but she won her way. They would submit but not without their Queen at her home again, she had first to be back in her little capital.

---

<sup>108</sup> Possibly of the British firm, Collie and Lucett.

Early the next morning the Peacemaker set out on her return and before the expiration of her time limit reported to the Commandant. He thanked her and urged her to sail for Raiatea, bring back with her the Queen and so finish the trouble. She assayed so to do.

The Phaeton was ordered to convey her, Ariipaea and her husband Alexander Salmon. Arriving they were at first refused a landing by those surrounding the Queen but the following day the order was relaxed and the women met.

Said the delegation, "*Return and all will be forgotten.*" But Pomare was obdurate. She still clung to Great Britain. "*I will not be under the French.*" They returned without the Queen.

A few days later the Commandant requested her to make another attempt, this time via local schooner not a French man-of-war. She found the Queen alone, who said that for the sake of peace for her country and people she would put herself under the obnoxious French but that Ariitaimai should not be in so great a hurry as to bear her back forthwith. For full 2 months the foster-sister kept close to her side and unfortunately the "rebels", their Queen having not returned, broke out afresh. There was a clash of arms at Punaauia and no clear mastery by the French (see *The War of Independence, May 1846*, in the Appendix). The news reached the Queen and fancying that her people might yet master the foreigners she changed her mind. Ariitaimai for a second time had to return without the Queen.

Bruat was now weary of the whole matter of this obdurate Queen. He "proclaimed" — as Life Regent — Paraita and a while later pressed the Peacemaker herself to consent to be proclaimed Queen under the Protectorate. This she refused. Weeks passed, then a letter from Pomare reached her, stating her regret at not following the conseil of her lifelong companion. It was clear that at long last she had realized that England and England's Queen were once again weak reeds to lean upon.

Once again Ariitaimai saw the Commandant whom she found preparing a Proclamation absolutely repudiating Pomare as having anything further to do with Tahiti : and her Chiefs as "rebels" to be crushed for good. With reluctance he consented to one last effort : "*Bring her to Moorea and let me know.*"

The Phaeton again bore Ariitaimai and Salmon (later to become for awhile Secretary of State) to Raiatea, and this time brought Pomare back "*her long captivity and lack of any assistance*" leaving her no alternative. The sloop of war left her on Moorea, proceeding to Papeete for Bruat.

The following day February 6, 1847 he reached Moorea and on the 9<sup>th</sup> took the Queen aboard the war sloop, flying the Protectorate flag. On reaching Papeete that afternoon the Forts around broke out into a Royal Salute, soldiers onshore lined up, the Queen was conducted first to the Commandant's residence — which had been brought out, ready made, from France in 1844 — thence to her own home and Palace : her submission a thing at last accomplished, the long drawn out "rebellion" broken, and most properly Ariitaimai publicly thanked by Bruat for her invaluable services.

Things now being settled, Bruat was as a Rear Admiral retired from his post in May 1847 and Captain Lavand arriving from France took the post of Commandant : Pritchard had gone, Moerenhout also : those banished by Bruat to the Austral Isles to the south were brought home : and Quiet rested on Tahiti after a Ten Years' struggle.

But the Queen, still only in her 30<sup>s</sup> never wholly recovered from the shock and the treatment received. She bowed to the inevitable, but for her the Joy of Life was gone. She died September 17, 1877 a Queen for 50 years.

**As Papeete appeared to Lieutenant Conway Shipley in 1848.**  
**In the distance is the island of Moorea. In the immediate foreground, within the fortification, is Queen Pomare's palace. The French Governor's house (with the veranda) is immediately behind it.**

The scattered happenings of any interest to the reader during the Queen's return and death and her son's short rule are more fittingly dealt with in the Appendices. The French naturally dominated the scene, the purely Old time Tahiti was slowly passing.

It was in 1880 that the son of this Queen so stoutly anti French handed over his Sovereign rights to that Power. He had passed all his life among the French, was easy going, a free and a fast liver, nor cared at all for the affairs of State, and gave away complacently his birthright and his people.

Hard by "The King's House", once the Pomare's residence in Arue 5 kilometres from Papeete, there is Ahu-Toru, not the aforementioned Marae in Chapter II but a low walled enclosure some 30 yards by 20. Usually, as in 1928, through the natives' fear of disturbing the "spirits" it, like other graveyards, is overgrown with rankest vegetation and difficult to move about it. There was till 1934, since when the spot is carefully tended, a fair sized bushy tree nigh the centre and thereabouts lie all but one of Tahitian Royalty with neither monument nor headstone. Hinoi (II), since dead and lying there, a giant of a man in height and of huge proportions pointed out to the writer in 1928 where each lay, the Savage with the Christian. By the Tahitians they seem to be forgotten. They were never loved. The men, the woman, the child King lie as undistinguished beneath the sod as the humblest of their people in forest, cave or vale.

**The Pomare graveyard**

**The Entrance.**

**Within**

The exception is the last of them, Pomare V, who not far off lies alone in a foursquare Mausoleum of coral tapering upwards with an overhanging roof. Above the doorway a shield is embedded bearing on its face but one letter, “P”, and above it yet other, a Crown. He died a Frenchman as he himself affirms (see his Proclamation of 1880) and this his lasting reward.

**The tomb of Pomare V.**

**Erected (and body transferred) 1892.**

**There will be seen on its summit not a cross but at his own special order a huge earthenware replica of a Benedictine bottle, a liquor of which he was inordinately fond.**

The following appeared in Papeete on July 2, 1880.

*Proclamation de Pomare V aux Tahitiens*

*Tahitiens :*

*Je vous fais savoir que, de concert avec M. le Commandant Commissionnaire de la République et les Chefs des districts, je viens de déclarer Tahiti et ses dépendances réunis à la France. C'est un témoignage de reconnaissance et de confiance que j'ai voulu donner à la nation que depuis près de quarante années nous couvre de sa protection. Désormais notre archipel et ses dépendances ne formeront plus avec la France qu'un seul et même pays.*

*J'ai transféré mes droits à la France, j'ai réservé les vôtres c'est à dire toutes les garanties de propriété et de liberté dont vous avez joui sous le gouvernement du Protectorat. J'ai même demandé de nouvelles garanties qui augmenteront votre bonheur et votre prospérité.*

*Notre résolution, j'en suis certain, sera accueillie avec joie par tous ceux qui aiment Tahiti et qui veulent sincèrement le progrès.*

*Nous étions déjà tous Français de coeur, nous le sommes aujourd'hui en fait.*

*Vive la France.*

*Vive Tahiti.*

#### Translation

*Tahitians :*

*I would have you know that in agreement with Monsieur the Commandant Commissioner of the Republic and the Chiefs of the Districts, I have declared Tahiti and its dependencies united to France. It is a testimony to the recognition and confidence which I desire to give to the Nation who since nigh 40 years has covered us with its protection. Henceforth our archipelago and its dependencies form with France but one and the same Country.*

*I have transferred my Rights to France : I have reserved yours, that is to say all the guarantees of ownership and liberty which you have enjoyed under the Government of the Protectorate. I have even required new guarantees which increase your happiness and prosperity.*

*Our resolve, I am sure, will be received with joy by all those who love Tahiti and sincerely desire its progress.*

*We were all already Frenchmen at heart, today we are that in fact.*

So was the curtain rung down for good upon Old time Tahiti. A new Era began. <sup>109</sup>

#### NOTES

- (1) The Struggle's End. Armed resistance came to an end with the capture of the Fautaua fort. Despite the very fair success of the "insurgents" at Punaauia which buoyed up the hopes of the Queen in distant Raiatea, Bruat next led an attack in person on the forces gathered at Papenoo which had promised Ariitaimai to give up the struggle if the Queen returned. She was of two

---

<sup>109</sup> The photographs below of the Pomare Cemetery and the tomb of Pomare V in Arué were taken in November 2014.

minds as the record shows, and the Commandant grew tired of waiting. He attacked and drove his opponents up the valleys nearby to make another stand in what seemed an absolutely inaccessible spot.

To take the fort which the natives had carefully erected — and the remains of which are to be seen today — it was practically impossible to make a frontal attack, as a sheer precipice prevented, down which the Fautaua rivulet falls. A goat track along one mountain side and a sharp turn on the edge of the precipice made every man who should attempt it — and it must needs be in single file — an easy mark for musket, spear or stone. At their back the “insurgents” had the rocky mass known as the Diadème from its rugged summit’s appearance. They felt secure.

X

**Fautaua Fall.**

**The Diadème in the background :**

**The Fort site on the left – marked X.**

But Bruat gained over to his service a native of Rapa island named Mairoto who for years had hunted round the base of the Diadème for a bird's special feathers whose habitat was that wild district. He had his secret ways of approach and consented to act the traitor to his kinsmen. He led a strong force through dense undergrowth and rocky fastnesses, necessitating rope work and ladders in places, whilst a feint was made in front of the fort to hold the attention of the enemy in that direction. The plan was entirely successful : the date December 17, 1846.

Those holding the fort, in number nigh a thousand, were suddenly rushed from behind. They made no futile resistance. There and then came an end of all opposition.

A general amnesty was now proclaimed, muskets were handed over, and the Chiefs one and all tendered their adherence to the Protectorate. There remained then but the return of the Queen which took place as already described and peace came at last to a distracted land.

- (2) The Terms offered by Bruat on behalf of the French Government for the Queen's acquiescence in and submission to the Protectorate were as follows :

(a) A lump sum of 25,000 francs as compensation for the loss of her Harbour dues — her personal perquisite — during her 2½ years flight from Papeete. Bruat on November 9, 1843 had declared it a Free Port.

(b) An annuity of 25,000 francs for life.

(c) A residence to be erected for her in Papeete or elsewhere at her choice, once Quiet had settled on the island.

- (3) By a census taken shortly after these events, the Returns made — dated March 21, 1848 — were as follows :

Tahiti : Natives 8082 : Strangers 475 : Total 8557

Moorea : Natives 1372 : Strangers 40 : Total 1412

Grand total : 9969

In this connection and recalling the estimate of the Duff's Captain in 1800 of 16,000, a note in Crook's Journal may be noted.

Writing in 1826 he says "*The missionaries families are increasing fast 101 in number, the numbers of natives decrease as fast. There is not one third of the inhabitants on Tairapu (Lesser Tahiti) that there was in the year 1802 when Brother Nott made a preaching tour.*" In 24 years two thirds of one portion of Tahiti had been eliminated, it was altogether likely to be the same elsewhere, hence only 8082 left on the island 22 years later still.

This decimation of a native race from 1767, Wallis' day, when both he and Cook calculated the number to run into the hundred thousands may well be compared as a possibility with what happened in Haiti under the Spaniards. The number of natives there in 1492 was reckoned to be 100,000. In 1514 — 22 years later — the reckoning was down to 30,000. On Tahiti the heaviest mortality seemingly took place in the first 33 years contact with the white race (1767–1800).

Compare also the Australs. In 1829 over 5,000 : in 1859 down to 1700 : Raivavae from 3000 to 800 and Rapa from 2000 to 500.

- (4) That those arriving on the Duff were long ignorant of their error in the calendar is shown by the entry in their Journal made upon the arrival of the Betsy in 1799 : “*Sunday December 22. By the ship’s reckoning tomorrow is the Sabbath.*” The arrival of the Royal Admiral in 1801 under Captain William Wilson must have confirmed the Betsy’s statement as to their error, but evidently no attention was paid. Having committed the error they stuck to it stolidly for 50 years, evidently the natives the cause, they dared not change the holy day they had so impressed upon their converts.
- (5) “The Royal Georgian Order of Polynesia” (Command papers N° 142)

Just prior to the second visit — in November 1834 — of Du Petit Thouars whilst the Sovereignty was undisturbed, though the Protectorate held sway, Queen Pomare wrote as follows to Rear Admiral Thomas, Commander-in-Chief of the Pacific Station <sup>110</sup> — the date June 15, 1834.

*Wishing to testify to you, O Admiral, my great satisfaction for all the good services that you have rendered to me in my distress, I send to you by the first opportunity, the highest proof that I can give to you of my gratitude and pleasure. This to make known to you that I have conferred upon you the first and highest honour of Tahiti, and which I had determined upon establishing and did establish so as to reward my kind friends of Britain who had come to my help in this time of my trouble, as well as to reward my High Chiefs who had been faithful to their Queen.*

*The Emblem of this Order of Merit shall be sent to you very soon, as I have sent to Britain for them. According then to the Rules in your and in other lands, I hereby nominate you a Knight Grand Cross of the Royal Georgian Order of Polynesia as a perpetual testimony of my great satisfaction, and I shall write to my sister Queen, the great Victoria, to grant to you permission to wear this token of my gratitude for the services you have done for me and my dominions.*

*Pomare. Queen of Tahiti.*

There is no record known as to whether Rear Admiral Thomas became a K.G.C.

## APPENDIX

## List of the Pioneer Missionaries

who landed on Tahiti from the Duff March 7, 1797

	Aged
1. Jefferson, The Rev. J. Died 1807. Buried at Matavai.	37
2. Lewis, The Rev. T. Murdered 1799. Buried at Matavai.	31
3. Cover, The Rev. J. F. Fled to Botany Bay with wife and boy : returned to England.	34
4. Eyre, The Rev. J. Fled to Botany Bay with wife : buried at Parramatta, N.S.W.	28
5. Bicknell, H. (later the Rev.) A wheelwright : fled to Botany Bay : in 1810 returned : died at Papara 1820 : buried on Moorea.	29
6. Broomhall, B. A harness maker : lapsed : left for Botany Bay in 1801 : in Calcutta in 1811 : said to have been lost at sea with his ship.	20
7. Cook, J. A carpenter : fled to Botany Bay and resigned.	23
8. Clode, S. A gardener : fled to Botany Bay : murdered by a soldier : buried at Port Jackson 1799.	35
9. Gillham, Doctor J. A. Also a surgeon : returned to England on the <u>Duff</u> .	28

10.	Henry, W. (later the Rev.)	23
	A carpenter : fled to Botany Bay with wife : in 1800 returned : retired in old age : buried at Ryde, N.S.W. 1859	
11.	Hodges, P.	29
	A brazier : fled to Botany Bay with wife and resigned.	
12.	Hassal, R. (later the Rev.)	27
	A weaver : fled to Botany Bay with wife and 2 boys : a Pastor thereby : buried at Parramatta 1820.	
13.	Main, E.	24
	An army tailor : fled to Botany Bay and resigned.	
14.	Nott, H. E. (later the Rev.)	22
	A bricklayer : held fast : buried at Arue 1844.	
15.	Oakes, F.	25
	A shoemaker : fled to Botany Bay and resigned.	
16.	Puckey, J.	25
	A carpenter : fled to Botany Bay and resigned.	
17.	Puckey, W.	20
	A carpenter : fled to Botany Bay and resigned.	
18.	Smith, W.	30
	A linen draper : fled to Botany Bay and resigned.	

Crook and Harris aboard the Duff were not Tahitian “Originals” though Harris rejoined his brethren on Tahiti shortly afterwards in lieu of the Marquesas : and Crook did the same in 1816.

	Harris, J.	40
	Subsequently returned to England.	
	Crook, W. P. (later the Rev.)	22
	Buried at Melbourne 1846.	

## **The Missionary Henry Nott**

From the “Register” of the London Missionary Society.

*Number 23. Nott Henry. Born 1774. Appointed to the South Seas. Single. Sailed August 10, 1796. Arrived at Tahiti March 6, 1797. Removed to Moorea December 22, 1808. In 1812 he visited Port Jackson where in July he married Miss A. Turner and returned to Moorea October 5, 1812. Removed to Huahine July 1818 and to Matavai Tahiti June 1819. Left for England March 4, 1825 and arrived in London July 7, 1826. Returned to Tahiti arriving August 24, 1827. Having on December 18, 1835 after 20 years labour completed the Tahitian version of the Scriptures, and being in ill health, he left Tahiti February 20, 1836 and returned with M<sup>rs</sup> Nott to England arriving June 19, 1836. He there revised the MS of the Tahitian version of the entire Bible and carried it through the Press at the expense of the Bible Society. Taking the Bible with him, he with M<sup>rs</sup> Nott returned to Tahiti. Sailing August 18, 1838 he arrived at Tahiti on September 12, 1840 and soon after retired from active service. Died at Tahiti May 2, 1844.*

**Henry Nott**

## NOTES

- (1) He suffered greatly from elephantiasis.
- (2) He was the first to master the language. On August 10, 1801 Jefferson writes Home, "*We have the satisfaction of informing the Missionary Society that by the Grace of God we hope for the first time to address the natives on the next Lord's Day. Brother Nott will be the speaker.*"
- (3) The Tahitian Bible was begun by Nott in 1813 and occupied him, assisted by others both white folk and natives, during an actual period of 22 years. Writing Home he announced the goal achieved. "*That work I am happy to inform you was finished on Friday December 18, 1835 at half past one o'clock.*" Before returning from Home with the issue printed, he was granted an audience with Queen Victoria to whom he presented a copy.
- (4) From the "Sydney Gazette" July 18, 1812.

*Marriage. By Special Licence on Thursday last by the Rev<sup>d</sup> M<sup>r</sup> Marsden at the Church of S<sup>t</sup> John, Parramatta, M<sup>r</sup> Henry Nott, missionary from Otaheite to Miss Ann Charlotte Turner from the London Missionary Society.*

From the L.M.S. Records :

*Miss Turner whom he married was one of the 4 sent out by the Society at a venture, to provide helpmates for the young missionaries.*

They made the selection in order of their arrival on the scene, and Nott being the last to arrive at Port Jackson secured the last one left : an unfortunate partner as it turned out to be. In a letter to Marsden then in Sydney, dated from Moorea February 18, 1813 Nott commented thus :

*I hope he (Brother Henry whose first wife had died) may find some person in the Colony that will make him a sensible wife in some respects, but for him to obtain one in every, or even in the most material things suitable, seems to me to be impossible.*

Nott had not been a 12 month married.

The other 3 women respectively married Davies and Scott at Port Jackson and Hayward on Moorea. Both M<sup>rs</sup> Davies and M<sup>rs</sup> Hayward died on Moorea in 1812. Their graves are at Papetoai.

- (5) The full Inscription on Nott's grave is as follows :

*Sacred to the memory of  
Rev. Henry Nott  
Missionary,*

*who departed from this life of sin and sorrow and entered into his rest on the 2nd day of May 1844 after having endured a great fight of afflictions. He had been for 48 years the faithful servant of the London Missionary Society, having been sent out by them to this island in the ship Duff commanded by Captain James Wilson in the year 1796. He was translator of the Sacred Scriptures into the Tahitian language.*

*I have fought a good fight. I have finished my course. I have kept the faith. Henceforth there is laid up for me a crown of righteousness which the Lord, the righteous Judge, shall give me at that Day : and not to me only but unto all them also that love His appearing.*

*And God shall wipe away all tears from their eyes : and there shall be no more Death.*

It is to be noted to his lasting honour that when all others fled, he — alone of the Originals — stood fast.

- (6) Nott and McKean lie side by side at Arue but the site may well have been lost. Prince Hinoi, grandson of Queen Pomare, determined on his sole initiative to remove these bodies and the grave stones to another site, the Point on which the Mausoleum of Pomare V rises — his Uncle and his “Father” by adoption. He moved the grave stones but died before the task was finished. That was in 1916. Those grave stones were found, by an American resident, in 1918 lying loosely about, and awhile later were seen to have been used as an adornment to an ancient native grave nearby. The American, together with a fellow countryman and an English resident got busy and — lest another such happening should occur — cemented the grave stones to a low wall which they built around the graves. Alongside Nott, but outside the wall, lies Nott’s devoted native servant.

**Graves of McKean and Nott**

## Locating the Graves of the Pioneer Missionaries at Matavai and Papara

### The Graves at Matavai.

Lewis buried 1799 : Jefferson buried 1807.

Grave stones suitably inscribed placed thereon December 30, 1936.

Matavai is a fairly long and broad neck of land, flat and running north towards the sea from Haapape village, ending in Point Venus. Matavai Bay lies on its western side. The Records of the L.M.S. show that the graves were “*near their Dwelling*” and that their first church — or Chapel — stood “*near the grave of M<sup>r</sup> Lewis*”. The Quest therefore resolved itself into where was the Dwelling and where the Church?

The first Dwelling of the missionaries was the building raised by the first Pomare for Bligh’s expected return. It stood on the west side of Matavai; not of the Bay but of the neck of land so called even to this day. That was in 1797 and here men thought to have found the answers and let the graves themselves go at that.

But in 1798 they had removed to another location on Matavai, on its northern end but its east side. Here they raised their new Dwelling, apportioned off with Apartments for bedrooms, living room and study : and “near” thereto they raised in 1800 the first Christian Church — or Chapel in their view — on the island and indeed in the whole South Sea, which however they had to pull down in 1802 in self defence fearing an attack by the Atehurians : a 2<sup>nd</sup> being raised in 1803 on the same site, and a 3<sup>rd</sup> being raised in 1822, not on the same site, yet but a short distance off.

The first site has always been known to the natives of the neighbourhood and moreover has been marked from the first by a stone used as a stepping stone to the Entrance — the Chapel being raised somewhat above the ground in case of flood — and which they state was taken from a neighbouring marae, an unlikely thing since not till 1815 had Pomare II ordered all maraes in the District as elsewhere to be destroyed. In 1800 to have removed it would have been sacrilege and death. But that fairly upright stone proved useful in locating the graves. The sites of both Dwelling and Church being thus definitely assured, the 2 graves were therefore “near”, a term which allows to itself all reasonable latitude as to distance.

The records speak of a stone marking the head of the Jefferson grave but no mention is made of one at the head of the Lewis grave which was the one first dug, the work of Brothers Nott and Bicknell “*with the assistance of 2 or 3 natives*”. It must however be recalled that Lewis died an “Outcast” from his brethren and as they would have expressed it “in sin”. They were in duty bound to inter the body reverently but there matters would end, his remembrance by the natives had best die out. So was it with Ellis who “*stood by the grave of Jefferson*” in 1821 and commented thereon, but quietly ignores the grave close by.

It becoming known that an age-ing native of Haapape knew of the Jefferson grave, he was approached and leading to the spot pointed out the headstone where he said that “a Duffie missionarie” lay. The name he did not know nor had the memory of the “Outcast” been handed down the years. He marked the site and the boulder at its head — far sunk and without his aid impossible to have been discerned — by their distance from a tamarind tree said to have been planted by Cook, the stump of which he had seen as a youth and its site still marked by a large depression. The grave lay in a direct line and

a short distance from the stone of the Chapel's site. Of the Dwelling neither memory nor vestige remains.

**Stepping Stone to the first Christian Church in Polynesia : Matavai. Tahiti.**

**Stone marking the site of the first Christian Church on Tahiti**

**A.D. 1800.**

**And also the first House of God throughout Polynesia, Melanesia and Micronesia. The first Church in Australia was raised at Parramatta near Sydney by Marsden in 1803, a temporary structure “*of posts, wattle and plaster*” was raised in Sydney in 1793 and was burned by an incendiary convict in 1798.**

In confirmation of this native's knowledge of the site he made the following statement. In his boyhood a foreign Training ship — the name he had forgotten this long while — arrived at Papeete, and from it 2 young officers — evidently Ensigns were meant — appeared at Matavai. He understood from them that “a Duffie missionarie” had either married into their family or had some other special connection with them and that they had come to Matavai to report to their home of his grave. They had a chart with them of the ground and surveying instruments. They knew of Cook's tamarind tree and used it as their base. Their measurements brought them to 2 stones, a pure black boulder and a reddish black. They had found their quest even as the lad beside them had always known it. They marked the black.

Ellis' (whose early training was that of a gardener) “*rustic hillock*” where lay the grave would seem to be a poetic licence he took in 1829 when he wrote of his missionary roamings of 1821. Matavai is a dead flat with sluggish streams intersecting it, along with swamps. It has a very slight rise from the sea.

**Graves of Lewis and Jefferson at Matavai.**

**Lewis 1799**

**Jefferson 1807**

**1936.**

As noted, both graves were dug “near” the Chapel : where Jefferson was laid, Lewis had been laid. There are stones and stones : those used for grave stones, headstones — for stones at the foot are not

even today the custom — are of a special kind, familiar today to the natives for that purpose and are either pure or reddish black.

Those 2 boulders close together mark 2 graves, and knowing one there can be no doubt whose is the other. They were 2 of the Pioneer band, separated in life but in death no longer divided, and today alike full worthy of remembrance.

### **The Graves at Papara.**

Here lie 2 of the second contingent of 9 who arrived on Tahiti by the Royal Admiral

July 10, 1801.

Tessier buried 1820 : Davies buried 1855.

Two full length grave stones, suitably inscribed, were placed thereon May 29, 1936.

Through Uramoae, who for over 30 years had resided in Papara as schoolmaster, it was learned that in his first years he had known a native woman close to or over a century old who not only often talked to him of a “Duffie missionarie” who had resided in her parents’ home — which renovated she still occupied — and whom she had waited upon as his little serving maid, but of how he had died in their home. The name she gave him began with a “P” with of course a vowel ending, the rest a mere jumble of letters which he could not decipher. She was recalling Bicknell : there is no pure “B” in Tahitian.

So far her memory had not failed her but she confused his burial “opposite” her home with that of another missionary — Tessier — who had died but a fortnight before. He was the Assistant of Bicknell, his home a short distance away. The body of Bicknell was carried over to Moorea to lie beside the grave of one of his children. Tessier’s body was buried by Bicknell across the way from the latter’s residence, the grave pointed out to Uramoae by the aged woman, and easily recognized under his direction when good fortune brought him and searchers together. This for Tessier.

#### **Of Davies**

Natives now met the investigators and pointed out not only the site of the first Chapel, of which the coconut plantation of today was the burial ground, but a second grave near to Tessier’s covered with large square slabs of coral. They had the first letter of the name as “T” there being no “D” in Tahitian save in their Holy Writ, the rest a jumble as was with Tessier’s name. But though he was of the Long Ago he was not “a Duffie missionarie”, of that they were quite certain. And they were right. Davies took Bicknell’s post in 1820 and held it till 1855. He died in August of that year and was buried hard by his House of God but a few yards from his fellow voyager on the Royal Admiral, 35 years the gap between their deaths.

These 2 graves lie about half a kilometre past the village on the way to Atimaono, on the sea side of the Island Highway which encircles Tahiti.

**Grave of Davies at Papara.**

**Davies 1855**

**1936**

## NOTES

- (1) Ellis has confused his readers by recording only by inference the removal of the first contingent to a new site in 1798, and giving as a lead to the Jefferson grave “*near their dwelling on the north side of Matavai Bay*”. The north side is the Ocean. The dwelling was on the north end but east side. His date for the first Chapel must be a slip of the pen. He gives it as on the “*5<sup>th</sup> of March 1797*” which was the day on which the Duff arrived in the Bay, the landing taking place on the 7<sup>th</sup>.
- (2) The site of the Matavai graves and the Stone was in 1934 owned by Monsieur Villierme, a French resident in Papeete. The name of the agèd native who from childhood knew the sites sought for, was Outuaata. The once missionary property is today known as Tetiarahi.
- (3) As to the Church stone. Coral slabs were mostly used in the construction of maraes but also extra large boulders which were to be found, and still are to be found in the many streams of Tahiti, these roughly shaped to suit. This would have caused neither difficulty nor danger to the Brethren once they had “*fixed on the spot for the intended place of worship*” as Jefferson notes down in the Journal as being decided upon on February 6, 1800.
- (4) The site of the Papara graves was in 1934 owned by the native Tetu Ourima, the descendant of the “adopted” son of the centenarian whose Family owned the property and donated it for the purposes of their new found Faith.
- (5) Jefferson reported Home as follows of the work done in 1798: “*Our time has been much employed in various duties, some have been occupied in constructing our habitations.*” This plural form is confusing as against the constant use of the word “dwelling”. That raised in 1798 was a Community House such as they had converted the “Bligh House” into. We read of Itia going to “*Brother Eyre’s apartment*”. They herded together for greater security. An earlier entry in the Journal is “*January 23. 1798. A meeting was held to discuss the inconvenience of our present habitation (“the Bligh House”). It was unanimously agreed : That a house should be erected 2 stories high, 132 feet long, 18 feet broad, each room to be 10 feet long and 18 feet wide : in the middle a public dining room, 20 feet long by 18 feet, upon the lower floor, and over that a preaching and schoolroom of the same dimensions : That 5 lower and 5 upper rooms be for the married brethren at one end, and 6 lower and 6 upper be for the single brethren at the other : That a balcony about 4 feet wide surround the building upon the upper flat. As much time had been spent before in examining the district for the most convenient place to build, the spot now determined upon is on the other side of the river, about 80 yards from our present habitation.*”

Unanimity however was not quite complete. We read later “*The principal of the brethren engaged in flooring our apartments. Brother Main with some natives erecting his house.*” And on November 20, “*Brother Main’s house finished and occupied by him.*”

- (6) The upper story proved useful. In 1802 we read “*The Mission house (British House) was converted into a garrison : 4 brass cannon were fixed in 2 of the upper rooms*” : and Pomare II writing to them on March 11, 1806 says “*Friends! Give me the room above... let the room above be for me.*”

The end of that dwelling or habitation came in that disastrous year 1808. When the mission returned to Tahiti in 1818 they went back across the river to “*the west side of Matavai*”, raising a fresh dwelling near the Bligh House site. Ellis gives a picture of this new home. Tessier and

Wilson were there, and Nott took up his residence there for awhile, close to where he first set foot on Tahiti. Later he removed to Papaoa (Arue) to be nearer his young charge — the boy King.

The east side of Matavai was deserted and no stones marked where once their Dwelling stood but happily one where their first Chapel rose. If not a dwelling for themselves, another House of God should rise and by 1822 so it was : “*some 200 yards from the original*” as they reported Home. Yet “near” were the graves well known to them but long forgotten. Today they are marked so that none who would can fail to see them.

The 3<sup>rd</sup> Church was a plaster building 98 feet by 42 feet, “*well floored and seated and has a neat plain pulpit made by M<sup>r</sup> Blossom*”. It was opened for use in October 1822. Till that time 2 temporary meeting houses were built “*one at each end of Matavai, having bamboo walls and thatched with palm leaves, furnished with benches made of breadfruit planks. One raised on the beach near the new residence used only as a school and for weekly prayer meetings, the Sabbath services being held in the larger of the two near Haapape.*”

## November 12, 1815, When Pomare II Won Kingship

Having given the “pagan” account of events leading up to the final fight and the fight itself, it is but just to record the account as given by the Puré-Atua (“Praying People”) or Christians, together with that sent Home by the missionaries who were not present at either time but heard of these from their Christian native friends. All accounts are naturally prejudiced and we of today must judge between the record given by the Vanquished and the Victors as to the actual truth.

After the flight of the 2 Queens back to Moorea and the sacking of Matavai by Opuhara, a determined effort by the Pagans to annihilate the Puré-Atua on the northern end of Tahiti was only avoided by the news leaking out and the intended victims escaping to Moorea. The disappointed Pagans fell out among themselves and set to work plundering and killing one another. Some of them, disgusted at the chaos, crossed over to Moorea and joined the Praying People, thus strengthening that Party. The events following hard upon these are told in a letter dated August 13, 1816, nine months later and before the missionaries yet ventured to re-establish themselves on Tahiti.

*“The people at Tahiti who had embraced Christianity having providentially made their escape and joined us at Eimeo, their enemies as we mentioned before, quarreled among themselves. The Atehuru (western coast) party having fought with and vanquished the Porionuu (the north and eastern coasts); Teharoa etc. (the southern coast and Lesser Tahiti) who had assisted them quarrel’d also amongst themselves and fought, when Tairapuans (Lesser Tahiti) were conquered and driven to the mountains. After this there was a prospect of peace being established; and the people, who on account of their religion had fled to Eimeo to save their lives, were invited to return and take re-possession of their respective lands. This made it necessary for the King and his people and most of those about us to go over to Tahiti, in company with different parties of refugees, and according to an ancient custom of the country to re-instate them in a formal manner in their old possessions.*

*“On the arrival of the King and those who followed him at Tahiti (Papaoa in Arué), the idolatrous party appeared on the beach in a hostile manner, seemed determined to oppose the King’s landing and soon fired on his party, but by the King’s strict orders the fire was not returned but a message of peace sent to them which was productive of the exchange of several messages and at last apparently issued in peace and reconciliation.*

*“In consequence of this, several of the people returned peaceably to their different lands, but still fears and jealousies existed on both sides. This state of things continued till Sabbath Day November 12. 1815 when the heathen party taking advantage of the day and of the time when the King and all the people were assembled for worship (nigh Punaauia), made a furious, sudden and unexpected assault thinking they would at such a time easily throw the whole into confusion. They approached with confidence, their prophet having assured them of an easy victory. In this however they were mistaken. It happened that we had warned our people before they went to Tahiti of the probability of such a stratagem being practised should a war take place, in consequence of which they attended worship under arms; and though at first they were thrown into some confusion, they soon formed for repelling the assailants, the engagement became warm and furious and several fell on both sides. In the King’s party there were many of the refugees from several parties who had not yet embraced Christianity, but our people not depending upon them took the lead in facing the enemy; and as they were not all engaged at once, being among bushes and trees those who had a few minutes of respite fell on their knees crying to Jehovah for mercy and protection and that He would be pleased to support His Cause against the idolatry of the heathen. Soon after the commencement of the engagement Upufara, the Chief of Papara, the principal man on the side of the idolators, was killed : this when known threw the whole of his party into confusion and Pomare’s party quickly gained a*

*complete victory. The vanquished however were treated with great lenity and moderation and Pomare gave strict orders that they should not be pursued and that the women and children should be well treated. This was complied with, not a woman or child was hurt nor was the property of the vanquished plundered. The bodies also of those who fell in the engagement, contrary to the former barbarous custom, were decently buried, and the body of the Chief of Papara was taken in a respectful manner to his own land to be buried there.”*

## Pomare II's Correspondence

His first recorded letter is dated December 9, 1804 and was written to Governor King at Sydney N.S.W. requesting firearms.

*“(Extract) From the friendship you showed the late King my father, and the expense the English have been at in sending missionaries into the parts for the impriving of myself and ignorant people I’m sure it will give you pleasure it has not been thrown away as it has enabled me to address myself to you by letter what I should have been incapabell of, but for these gentlemen.”*

His letters show no timidity as to requests as has been seen in his request for the “room above” at Matavai in 1806. A letter of his written to the Directors of the L.M.S. in London from “*Matavae Otaheite January 1. 1807*” shows no abatement and must certainly have surprised them.

*“(Extract) Friends, I hope you also will consent to my request which is this : I wish you to send a great number of men, women and children here. Friends, send also plenty of musquets and powder for wars are frequent in our country. This also I wish, that you would send me all the curious things you have in England. Also send me everything necessary for writing, Paper, Ink and Pens in abundance, let no writing utensil be wanting. Friends, I have dome and have nothing at all more to ask you for.”*<sup>111</sup>

He was fond of the pen and a very neat writer for he not only assisted Henry Nott in his translating but copied out the entire “Gospel of S<sup>t</sup> John” for the Press. This MS is to be seen in the archives of the Bible Society at Home. He also wrote out the Code of Laws promulgated by him and handed his copy to the missionaries’ Press.

The same day as his letter to the Directors, he wrote the following to Hassall at Sydney N.S.W. from

*“Matavae Otaheite January 1. 1807.*

*“Sir, I shall esteem it a favour if you can procure me a Still, in return for which, if hogs will be acceptable please to write to me that I may know how many. I am Sir Yours etc. Pomare.”*<sup>112</sup>

He was inordinately fond of the flowing bowl. Hassall replied diplomatically that the laws of the country prohibited under heavy penalty any person from making a still, but if at some future time circumstances permitted he would forward one.

On February 17, 1813 writing from Matavai to his friends at Ueva on Moorea he defies the Old time gods, granting permission to cut down both Tamanu and Amae trees for boats.

*“(Extract) Cut them down, without regarding consequences, for the keels of our vessels. What will be the consequences? Shall we be destroyed by the Evil Spirits? We cannot be destroyed by them. We have a great Saviour, Jesus Christ. Where you lead, regardless of consequences, I this evil man will follow.”*

The work went forward, none afraid.

<sup>111</sup> This extract also appears in WWB’s article in the 16 April 1940 edition of the Pacific Islands Monthly, pages 34–36, *Pot-pourri of Tahitian History*, in Part VII.

<sup>112</sup> This letter also appears in WWB’s article in the May 1942 edition of the Pacific Islands Monthly, pages 32–33, *Some Old-Time Tahitian Customs*, in Part VII.

On February 19, 1816 he next contemns his Old time gods. He writes to the missionaries at Ueva, handing over to them the special idols of his Family. He was in his summerhouse Motu uta, the little islet in the Papeete lagoon, lying opposite the strip of Family property “Papeete” on the waterfront.

“(Extract) *I wish you to send these idols to Britain for the Missionary Society, that they may know the likeness of the gods that Tahiti worshipped. These were my own idols belonging to our Family from of old, and when my father died he left them to me. That principal god that had the red feathers of the Otuu is Temeharo that is his name, that was my father’s own god. If you think proper you may burn them all in the fire or, if you like, send them to your Country for the people of Europe to see them and know Tahiti’s foolish gods.*”<sup>113</sup>

**Idols worshipped by the inhabitants of the South Sea Islands.**<sup>114</sup>

<sup>113</sup> For an account of the Pomare’s rejection of the idols, see [Tyerman and Bennet \(1841\), pages 23–25](#).

<sup>114</sup> The idols in this plate are not Pomare’s. An illustration of the idols given by Pomare to the London Missionary Society on 19 February 1816 can be seen in the plate on page 24 of Tyerman and Bennet (1841), which is reproduced below; alternative spellings of the names of the idols, based on *Extracts from the Quarterly Chronicle, Volume I*, in *Pioneer Missionaries of Tahiti*, are given in parentheses. This illustration was originally published on the title page of [Missionary Sketches No. III \(August 1820\)](#), which also contains the complete letter of 19 February 1816 written by Pomare to the missionaries at Ueva. See also [S. Kooijman, 1964, Ancient Tahitian God-Figures, The Journal of the Polynesian Society 73\(2\): 110–125](#). The idols were subsequently sold to the British Museum in 1911; information is available on the British Museum’s website for [Idol #3 \(objectId=489220, Museum number Oc1981.Q.1552\)](#), [Idol #7 \(objectId=502698, Museum number Oc.LMS.102\)](#), [Idol #8 \(objectId=502702, Museum number Oc.LMS.98\)](#) and [Idol #9 \(objectId=502744, Museum number Oc.LMS.57\)](#). The location of the other six idols is currently unknown; however, they may have been obtained by private collectors prior to the sale of parts of the LMS collection to the British Museum. See ‘*Scarcely more than a Christian trophy case?*’ *The global collections of the London Missionary Society museum (1814–1910)*, by Chris Wingfield, in *Journal of the History of Collections*, Volume 29, Issue 1, 1 March 2017, pages 109–128. Pomare's Idols

- No. 1.    **Termapotuura [Teriitapotuura], said to be the son of the great god, Oro.**
- No. 2.    **Name not known.**
- No. 3.    **Temehare [Temehara], the principal god of Pomare's family.**
- Nos. 4, 5 and 6. **Called Oromatuas.**
- No. 7.    **Tüpa [Tiipa], a god of Otaheite.**
- No. 8.    **A family Tü [Tii].**
- No. 9.    **Tahivi Anunaehau, the handle of the sacred fan with which the priest drove off the flies, while about his prayers and sacrifices.**
- No. 10.   **An ugly wooden image called a Tü [Tii].**

## The Tomb of Pomare II at Papaoa

In the Pomare graveyard lie all the Pomares and their close kindred save Pomare V. Within that walled space there are numerous fair sized black boulders, the usual sign of an Old time grave but here they are placed not only at the head but also at the foot. Beyond these there is no aid to recognize of whose grave they tell.

But some confusion is caused by Ellis' allusion to the elaborate tomb of Pomare II of which not only a sketch exists made by Captain R. Elliott, R.N., in 1822 appearing in Ellis' "Polynesian Researches" but also the following detailed description by 2 eye witnesses, Mss<sup>rs</sup> Tyerman and Bennet sent out as a Deputation from the L.M.S. in London to inspect and report upon every Missionary and Station under its control the world over. These men were on Tahiti in 1823 and describe the Tomb as follows:

*"The tomb consists of a stone building 10 feet long by 8 feet broad and raised above the ground about 4 feet : over this is raised a roof of wood which rests on the walls of the Tomb on the 2 sides. In one of the gable ends, which are filled up with boards, is a door through which the coffin has been introduced and which now stands within covered with black cloth and supported by a scaffold. This Tomb is enclosed in a wooden built and plastered house, the door of which is carefully nailed up. There is a small window."*

They made no mention of the surrounding fence which the sketch shows, an oversight probably.

It must be recalled that the First Pomare died suddenly in a canoe on Matavai Bay and was buried in 1803 at one of his several residences in "Opore". He had one residence at Papaoa facing the lagoon where he met his death. It seems altogether likely that his grave was dug there, and possibly then — though the custom was against it — and when his son died the intention was to bury him nigh where his father lay. That was in 1821, but not for the present was it the purpose to commit the body to the ground.

We read of the elaborate erections made for previous Great Chiefs such as Vehiatua at Tautira, and a Tomb as described above was raised for Pomare II. It would not last long, it was not expected to as with others like it. We see by the constant rebuilding of the various Chapels how the weather and the poor materials played havoc with buildings in those days. The time came when that tomb was falling to pieces. Something as usual had to be done. The coffin therefore was interred in the ground beneath it — no year as yet come across when this was done. Nearby was his father's grave, still more probably having gone through the same process. The son's tomb was the last of its kind to be raised on Tahiti.

Shortly after his own death, his son the Boy King was interred close by, then came in due course the interment of the wives of Pomare II : his kin would claim the right, as we white residents have seen it today, and privilege : the Pomare Burial Ground became a recognized fact. To safe guard these graves from roaming animals, especially the uprooting pig, a wall was necessary and stands today encircling the various graves as a whole, not scattered more or less amid the underbrush.

The Tomb as reported by the Deputation was raised "within 2 or 3 yards" of the dwelling shown in the sketch to the left side which Pomare Vahine and her baby nephew — now a King — made their home. No Papeete for her. She, not her sister, was both Mother and virtual Queen. The pleasures of life appealed too strongly to Terito.

“The Queen’s House” was also reported by the Deputation as “*very near*” the 200 yards long Royal Mission Chapel so all 3 were close together. Vain search had long been made for any evidence of the actual site of that weird building. The Pomare Burial Ground today settles its position : first the graveyard nigh the seashore, next the Queen’s House close thereto, next the Chapel “*very near*”, all 3 in line along the shore of the lagoon.

The last named stood on property then known and still known as Outuaiai which extends to the Point on which the marae Ahutoru once stood where now is a native Church and the Mausoleum of Pomare V.

“The Queen’s House” was in course of time falling to pieces and not renovated. In place of it the building on the opposite side of the Tomb, once the home of both the first and the second Pomare, was repaired for use. It is still known to all as “The King’s House”. Here Prince Hinoi died in 1916.

**Tomb of Pomare, at Papaoa**

## The Coronation of Pomare III

April 21, 1824.

From a contemporary native witness :

*There were two classes of people in that ceremony, some were ungodly and others were godly.*

1. *Those who carried the Tiari and the Oroa (flowers) were Mauihiuiti Vahine, Teraimano Vahine, Tuehau Vahine (women), and Tehapai. They threw the flowers along the road.*
2. *Next were the children of the missionaries and their wives.*
3. *Next was Mahine. His office was to carry the Word of God. Mess<sup>rs</sup> Tyerman and Nott were on his right; Mess<sup>rs</sup> Bennet and Henry on his left : they assisted Mahine.*
4. *Next were the missionaries.*
5. *Next to them was Utomi. He carried the Laws : he was assisted by Paofai on his right and by Paraita on his left.*
6. *Next was Tati who carried the Crown <sup>115</sup> : Hapoto on his right, Onee on his left.*
7. *Next to them was Pomare and the people who carried him, namely Taitu mataata, Heivae, Uoho and Laaviri on his right, Teupoopaari, Piriui, Roura and Tehope on his left. Aita Vahine, Maihara Vahine, Tenania Vahine (women) were also on his left : and Ta'aroa Vahine (mother), Aimata (sister) and Teratane (aunt) on his right.*
8. *Next was Pomare's hunoa (the betrothed of his sister), Tamatoa on his right hand and Tahitoe on his left.*
9. *Next was Fenuapeho. He carried the table to place the Crown upon : Pahititia carried the oil (coconut) for anointing the King : all the Governors and District Judges assisted them.*
10. *We went inland by way of Taipu : it was there where Pomare III was crowned.*
11. *Then all the Royal party, the Governors, the missionaries, all the Judges and the society were assembled together.*

---

<sup>115</sup> Tyerman and Bennet (1841) note that “The crown was somewhat in the form of the English royal crown, very neatly made of purple velvet; the fillet and wings covered with broad gold lace enriched with some very fine pearls and valuable stones.” This description differs somewhat from the crown in the *Musée de Tahiti et des îles*, shown below, which has been attributed to Pomare III. WWB states below that “The Museum exhibits are those of Pomare V.”

12. *After M<sup>r</sup> Crook, the priest, finished prayer, M<sup>r</sup> Henry anointed the King and placed the Crown upon his head.*

13. *M<sup>r</sup> Nott read the Laws and pardoned all the guilty. M<sup>r</sup> Wilson exhorted the King. M<sup>r</sup> Davies prayed and M<sup>r</sup> Jones read a hymn. M<sup>r</sup> Wilson prayed. When finished we returned to Outuaiai. There M<sup>r</sup> Henry prayed. These were the Words of God, "Exalt the King and fear God." There it finished.*

116

Ellis however states that it was Nott who placed the Crown on the child's head. Henry moreover states, writing from Moorea on October 15, 1845 (21 years later), "*King Pomare III that young Prince whom I anointed on the occasion and on whose head my late reverend Brother Nott placed the Crown.*"

From a very full and detailed description which appeared in the "Sydney Gazette" of February 17, 1825 and which was taken from the publication "Missionary Report" of 1824 the following excerpts are taken :

*This was an event which excited great interest among the people of Tahiti, Eimeo and the Leeward islands, it being the first Coronation that has taken place since they embraced Christianity and should consequently be a precedent for time to come.*

*All the Kings and Chiefs of the 5 Leeward islands with their attendants were present.*

*The entire number of the natives was computed at 8,000. Brother Darling was the Master of Ceremonies having been appointed to take the direction of the whole matter.*

(He appears to have been highly efficient.)

*In a field about half a mile distant from Brother Nott's house were 2 stone platforms, one raised higher than the other, which had been erected for the convenience of performing the ceremony. The upper platform was occupied by the little King (3 years and 10 months old) seated on his chair in the middle with the Canopy over his head, the table placed before him upon which the Crown was placed in the centre, the Bible on its right side, the Laws on its left, with a small vial <sup>117</sup> containing the anointing Oil.*

*The Queen (mother), and her daughter (Aimata) as also their Aunt (Pomare Vahine) were seated close at his hand. The missionaries and the Supreme Judges were seated on either side of him. Brother Davies who was appointed to act as Speaker for the infant sat close by him. The white women and their children were seated at each end of this platform.*

*On the lower platform sat the Governors, the District Judges and the magistrates with their wives. Singers were placed on either side of both platforms. The people stood around.*

*The King was conveyed to the scene seated on his chair which was carried by 4 stout boys, sons of Chiefs, 4 others supporting the Canopy over his head.*

<sup>116</sup> The translation is also found in WWB's article, *The Boy King of Tahiti and His Crowning*, in the 23 June 1937 edition of the Pacific Islands Monthly, pages 45-46, in Part VII.

<sup>117</sup> WWB has *viol*.

*The Crown and all the King's dress was made by M<sup>rs</sup> Nott and does her great credit, especially when it is considered the difficulty she had in collecting the materials.*

*Brother Nott now took the Crown from the table and put it on the King's head saying "Pomare! I crown thee King of Tahiti." Here the people gave 3 shouts, saying "Long live the King."*

There is a naive

*N.B. The king looked exceedingly well in his robe and Crown : but it was with difficulty that he was kept still.*

In the Papeete Museum there is preserved a Crown of gold-washed metal, as also a Sceptre and a Sword of State. These clearly have no connection with the infant, for, as we see, M<sup>rs</sup> Nott made the Crown, most likely of whale-bone and flowers. The Museum exhibits are those of Pomare V.

"The field" is still known as Taipu, close adjoining Outuaiai whither the King and the crowd went after the Crowning for the inevitable Sermon of which the Text is given.

## The Boy King's Treaty

In the "Australian" for March 10, 1827 there appeared a long letter dated from the island of Huahine January 16, 1827. It was sent forward by the ship Rolla. The name of the writer is not appended. The visit of Captain Jones in the Peacock is referred to in the following excerpt :

*That Uncle Jonathan has an idea that these islands with their matchless harbours and abundance would be a very fine thing for his ships to run into in case of war, he has accordingly tried a piece of cunning with the Tahitian chiefs to get them to place America on the same footing with the most favoured nations and to pledge themselves to protect these ships in case of being followed by an enemy into these ports, on failure of which he would then turn round and say you have promised so and so, you have failed to perform, and now as you cannot afford us protection we must take possession of your lands, build batteries and of course colonize the islands.*

*The sloop of war the Peacock came to Tahiti with this object, whose Commander, Captain Jones, a very quiet kind of a man, first anchored here, then there, till he met with a missionary whom he could mould and handle to his purpose, not divulging his project to the rest. Such a man he found whose vanity was greater than his judgement and prudence, and who imposed upon by sophisticated constructions of what he knew nothing about and had no business with, induced 2 chiefs and the young King to sign the instrument which will probably breed a serious difference between England and America. At Raiatea he was decisively repulsed through the manly and enlightened conduct of the Reverend Williams.*

It was undoubtedly Orsmond who was the missionary referred to, as he alone of the Band dabbled in politics, and had charge of the Boy King at his school at Afareaitu on Moorea.

In Crook's Journal, under date of August 30, 1826 we read, "*I proceeded by boat to Wilks' Harbour. Brother Orsmond had just arrived on board the Peacock with the young King, and a number of cannon were fired on the occasion.*"

The Boy King evidently paid a Courtesy Visit soon after, and the following is taken from the Farewell letter to him from Captain Jones :

*U.S. Sloop of war Peacock*

*Papeete. September 1<sup>st</sup> 1826*

*"... I congratulate myself of having the first ship of war belonging to the United States of North America which has ever visited the Kingdom of Tahiti, and return you my sincere thanks for the honour you have conferred upon me by your visit to the Peacock this day.*

*"At your tender age you cannot justly appreciate the inestimable blessing which the propagation of the Gospel has poured upon your people, but it will be a proud theme of future contemplation to know that your late illustrious and lamented father was an able instrument in the hands of his Maker to bring about this great work of the Lord.*

*"King Pomare, it is with the deepest interest I contemplate your high calling. Never forget that kings were made for and by the people and the people for kings.*

*“The time is now approaching when I must bid adieu to you and your people most probably for ever. Be assured that the very kind attention I have received from the people of Tahiti will never be effaced from my recollection.”*

He asks the young King to use his influence in favour of

*“those faithful missionaries of the Cross to which you owe everything : above all the kind friend, who has adopted you as one of his own family, is entitled to your boundless and unceasing gratitude.”*

He forwards

*“a likeness of the great Father of my Country the illustrious Washington, a man whose character you would do well to study and whose virtues the most favoured may be proud to imitate.”*

The paper used by the Captain was evidently supplied to him by his missionary friend. It bears the British Crown on its watermark.

Nott had the supervision of this child at Papaoa (Arué) till he became a schoolboy. It was Orsmond who was his Teacher : it was Orsmond who carried the dying boy from his home at Papeete and it was in Orsmond's arms that the Boy King died.

## The Beginnings of Papeete

### Maps.

Captain Cook’s — The Duff’s — Boenechea’s.

Research in the above answers the following Questions :

1. Was “Papeete” the original name of the general site where the present Town stands?

It was not. The general site was known colloquially as Nanu. The town is a growth from a straggling collection of native homes on various Family properties. It was to that straggling assemblage, with the Nanu — the “Long House” of the maps — its predominant feature that the name Nanu applied. It dropped out of use as a town developed.

2. How then did the name Papeete come about?

Alike from past Records and present day usage it is clear that stretching round the shore line of Nanu — from the present day ship yards to the Colonial Prison — were strips of Family property running back from the waterfront to a line which may be roughly outlined as the Rue des Remparts, thence to the Barracks and so to the Prison. These Family strips of property were as follows : 1. Fare-ute. 2. Vai nini ore. 3. Arupa. 4. Toruparé. 5. Pape-ete also known as Vai-ete. 6. Paofai. 7. Tipaerui.

Number 5 was wholly the Family property of the Pomares and roughly extended from the Diadème Hotel of today to the Hospital in its width and from the waterfront to the Barracks in depth. The Pomares had proprietary rights in some of the others. Number 2 was “Swampland” and was reclaimed for a habitable site by the “Embankment” later made under the French to divert the streams from the hills at the immediate back of the town into one channel and so to the sea.

The “Orovini” of today, lying at the back of N° 4 did not reach the waterfront whilst the present day “Umupua” at the back of N° 6 is clearly from its meaning “Lime Kiln” a much later addition.

---

<sup>118</sup> WWB has *Bailey* here and elsewhere.

These 7 Family properties were distinct parcels of land and are still used colloquially by natives and many white folk to indicate where they reside in the present town, whilst Fare-ute, Paofai and of course Papeete are in constant use. When a town began to develop, business alone required one name, not seven, and the property of the now Royal Family naturally took precedence. Nanu was lost by the frequent use of the seven and the seven were absorbed into one — Papeete.<sup>119</sup>

3. Who brought about the change of centre from Arue?

It was gradual. Begun by Pomare II and hastened during the Regency for the Boy King, Pomare III, whose mother and the Regent Hitoti were living on the Pape-ete property of the Family in a house raised there by Pomare II.

4. When was Papeete finally established as the Capital?

It came when the “Parliament” in 1827 was held there in place of Arue’s Royal Mission Chapel as heretofore.

Making research by dates for proof of the above, we find — As to Nanu —

1. 1797. Maps. Captain Wilson of the Duff reporting his voyage with the missionaries entitles his map “*according to the survey taken by Captain Cook in 1769 and corrected by his later observations. The names of the places near the sea by W. Wilson*” who was on board and the Captain’s nephew. Cook’s earlier maps show “*Mattavai Bay*” also “*Papaouah*” and where Papeete now stands is marked “*Nawnoo*”. Wilson lets these stand.
2. The missionaries report a party of refugees from Eimeo (Moorea) having taken refuge “*on the small island that stands in Nannoo Bay*” — Motu-uta which maps write Motootoo.
3. The Spaniard Boenechea’s<sup>120</sup> map of 1772 is an entire blank as to both harbour and Papeete though he sent his armed launch under the command of Lieutenant Gayangos<sup>121</sup> on a complete circuit of Tahiti, starting from Tautira. The trip took from the 5<sup>th</sup> to the 10<sup>th</sup> of December. Gayangos touched at Matavai, then he “*brought up in a bay having 14 fathoms and fine black sand*”, Arue today, thence “*proceeded to coast along inside the reef until we saw an opening*”, the Taunua Pass today, and “*thence kept to the open sea*” missing the adjoining harbour — Papeete’s of today<sup>122</sup> — altogether.

As to the waterfront properties.

1. 1775. The Diary kept by Maximo Rodriguez, the young and enterprising Spaniard left by Boenechea with the priests. He made a complete tour of Tahiti starting from Tautira and reports that on July 5 he reached Matavai, on July 6 he reached “*Oparre*”, on July 7 and 8 he stayed with Tu — the first Pomare. On July 9 he writes “*I started off by land. I saw the whole of Oparre. We arrived about midday at the place they call E-fare-ura. I had to stay the night there (Fare-ute) owing to rain coming on.*” On July 10 he reached Faaa. He must needs have passed through present day Papeete but makes no mention of its existence.

<sup>119</sup> See also *The Story of Papeete’s Name* in Part XIV, *Tahitian Vignettes*.

<sup>120</sup> [Domingo de Bonechea Andonaegui \(1713–1775\)](#)

<sup>121</sup> Tomás Gayangos

<sup>122</sup> WWB has *the Papeete’s of today*.

As to E fare ura, the E is a prefix, a Tahitian custom, the name itself following. Ura and Ute with the accent on the U alike mean Flame, Fire, Red : Ute with the accent on the E means Song, Fare means house. The Nanu — The Long House — was there, either stained red with the juices of the mati and the tou plants or once burned down. The use of Ura prohibits the interpretation of Ute as the house of Song nor is it so pronounced today.

2. 1838. Until the French Protectorate “Ordnance maps” were unknown to Papeete. When the French commenced to lay out the town, “Papeete” had for many years absorbed the other 6 names. Other portions added to the original ones, though correct at the time of their drafting and no “proof” of what was long years before.
3. 1844. The British Consulate stood in Paofai where it stands today. Queen Pomare wrote an Appeal to her people from there, dated January 10 heading it “Paofai” though she lived in “Papeete”. This custom continues to the present day, the waterfront properties retain their individuality though they have long passed from the possession of the original Family owners.

As to the town’s gradual development.

- 1797–1803. Years of the first Pomare. Throughout these years as recorded by the missionaries, Nanu was the name by which alone Papeete was known to all. Jefferson on a tour of Pare — having left Arue accompanied by a native guide on the 4<sup>th</sup> of October 1798 — records no “Papeete” but gives a fresh name to the Bay. His guide called it “*Tow-po*” and at Fare ute pointed out a house on the Point as belonging to Pomare, evidence of those proprietary rights in other strips than that of his own special strip which in years to come was to give its name to the whole.
- 1803–1821. Years of the second Pomare. Up to this period Nanu was a closed harbour, and the first vessel to make the then dangerous Pass through the Barrier reef is so far a matter of conjecture. Neither Wallis nor Cook nor Bligh nor Vancouver make any mention of that harbour. The most likely ones to dare the narrow passage were whalers whose Captains dared anything, and these were — around 1810–1820 — beginning to frequent these waters regularly, using Huahine as their headquarters which lay on the whalers’ track to and from the Antarctic. With whalers there followed of necessity Traders and a Settlement which gradually evolved itself into a town.
1812. So far as at Present known, the first mention of “Papeete” as against “Nanu” is from the pen of Pomare II who on “*Friday September 25. 1812*” wrote to his missionary friends on Moorea from “*Papeite, Taheite*”. It was in July of the same year that Pomare having declared for Christianity — which was true — and that he had done with war — which was untrue — was allowed by his enemies who had driven him off Tahiti in 1808 to return to his Chieftainship in Paré-Arué. No missionary returned with him, none settled on Tahiti till 1817, after he had attained to Kingship. He was alone and corresponded with those on Moorea as well as with those at Botany Bay, some of whom were returning to assist Nott, the one “Original” who had stood fast by Pomare’s side. By the above mentioned letter written with his own hand, having learned to write from the year 1803 and attaining great efficiency during his exile — 1808 to 1812 — it is evident that he was favouring his property in Nanu as against his old time residence at Arué.
1815. With Pomare II’s now settled position as Paramount Chief — or King — and war over at last, he made steady use of Motu-uta as a retreat during his last years and had raised a residence for himself on his Family property Pape-ete. The small islet was part of that property. Now a resident, his property became the main property along the waterfront, the rest “secondary” and

Papeete now became an established and recognized name for the whole as correspondence shows.

1816. Davies after a 15 years residence, on making a tour of the whole island afoot writes in his Journal : “*November 27. Left Papaoa — Arué — early in the morning and came to Pape-ete or Nanu.*”
1818. Ellis coming to Tahiti from Huahine in April writes : “*I directed their attention to the mountains in the vicinity of Matavai and Papeete.*” He reports a missionary being stationed at Papeete and that a Chapel had been built. He tells of “*500 present at a service*” and that “*on the brow of a hill*” — where today is the Semaphore and the Mission School for Teachers or natives in training for pastorships — Crook had built his residence “*inconvenient on account of its distance from the Settlement*”. He shows further that ships were by then using the harbour, for writing of the arrival of the Tuscan from England he mentions its first anchorage at the old spot Matavai “*but the next morning proceeded to Papeete*”.

1822–1827. Years of the Regency.

1824. Ariitaimai in her “Memoirs” speaking of her mother, Marama of Moorea, but a resident, since her marriage, of Papara, notes her reluctance to have anything at all to do with Papeete. No native tradition or dignity was associated with it and it grew in importance solely on account of its harbour.
1825. Captain Bayly anchored his vessel at Papeete opposite the native Chapel. He anchored the Saint Patrick at the usual spot Matavai but moved to Papeete where already there were 2 American ships and a whaler.
1826. Captain Beechey writes that the Queen Regent — Teriitaria — lived at Papeete. She had had to take the position Hitoti had held and was thus forced to leave her house in Arue. The British Consul, other Europeans and some of the missionaries lived at Taunoa — Gayangos’ Pass lies opposite thereto. It was Thomas Elley the Vice Consul <sup>123</sup> who was the resident.

Captain Charlton of the schooner Active was the first British Consul but was a resident of Hawaii. In 1825 he had been appointed to both the Hawaiian and the “Georgian” islands and sailed between the two groups.

Beechey further says that the best port is neither Matavai nor Papeete but “Papawa anchorage” — in Arué. It was at that anchorage that Bligh after leaving Matavai anchored the Bounty, there to load the breadfruit saplings he had come for. Here be it noted, Teuira Henry in “Ancient Tahiti” is in error or there is a miss print as to Bligh’s moving from Matavai to “Papeete”. At Bligh’s date, 1789, there was no Papeete.

1827 onward. Years of Queen Pomare.

In the home of Papeete the young Queen had passed most of her life with her mother and here she remained throughout. Arue to her was only a country change though business would often follow her there as happened with her first interview with fathers Laval and Caret.

---

<sup>123</sup> Captain Thomas Augustine Elley served as British vice-consul in Tahiti in 1826–1827.

She set her stamp upon Papeete from the very first as (1) the permanent Royal residence and (2) her Seat of Power. The one step left to create it her capital followed.

Arue, a countryside village, was left for good as the Seat of "Parliament" where the laws of the island were made, the essential foundation of a Capital. Papeete was no longer a village, it had developed into a town. An engraving of Papeete made in 1828 shows over one dozen storehouses scattered along the waterfront : and another of 1829 shows a Public Hall, a Mission House, the native Chapel and Schoolhouse, with 3 British whalers and H.M.S. Satellite in port. It was in that year that Moerenhout landed as he says "*at the port of Papeete*".

There is no need to proceed further down the years as Papeete's leading position on Tahiti was assured.

As to the first Parliament.

In 1824 during the Regency for Pomare III, the Code of Laws drawn up under Pomare II in 1819 and confirmed by a "General Assembly" of Chiefs and the public at Papaoa were revised and enlarged at a similar gathering at Papaoa on the 23<sup>rd</sup> of February. At this "General Assembly" 2 of the most important changes were :

1. The Monarchy to be a Limited not an Absolute one.
2. A Parliament, not a General Assembly, to meet yearly.

This Parliament not to be attended by all the Chiefs and the general public but (a) by all the Chiefs and (b) by 2 Representatives elected by each of the Districts : these to hold office for 3 years.

This first Tahitian Parliament met in 1826 as usual in Papaoa and was then transferred under the title of "Legislative Assembly" to the new Sovereign Queen Pomare's Seat of Power, Papeete. It has been the Capital therefore since 1827.

#### NOTE.

Further references to "Nanu" in the daily Journal of the missionaries are as follows:

*"October 19. 1804. The great idol Oro is brought back from Eimeo and landed on the islet in Nannoo Bay.*

*"January 20. 1806. Nine of the brethren went down to Nanu to meet the King.*

*"May 25. 1807. A canoe with a human sacrifice arrived at Matavai from Nanu."*

## The Consul Pritchard

George Pritchard <sup>124</sup> arrived at Papeete as a missionary in 1824. He was married and his children were numerous as the years passed on. After 13 years service, complaints against the Consul Charlton as to his frequent long absences and his trading in “*spirituous liquors*” — against the local laws — were so pronounced that the British Government decided on a change. Thomas Elley, the Vice Consul, was anxious to withdraw.

In February 1837 Pritchard received the appointment. He was strongly supported by the prominent white residents as well as by the Queen and leading Chiefs but he was required by the L.M.S. to resign as a missionary and as one of the local Staff; the latter he did but the former not at once.

As to his removal from his post as Consul, his strenuous actions at Papeete were throughout not condemned at Home, “*far from wishing to express any disapprobation of your conduct*” the British Government considered “*that it would be more conducive, as well to your own comforts as to the good understanding between Great Britain and France*” that he should be replaced “*by some person who had been in no way connected with the transactions which have taken place within the last two years.*” (From the Foreign Office Records, April 10, 1844.)

No request at any time was made by the French Government for his removal. (Command Papers N° 173.)

The above official letter was posted after it was known at Home that he had struck his Flag on November 7, 1843 — a very serious action unless fully justified — but before his arrest by the French on March 3, 1844 was known in England, an action which roused its ire and sympathy very strongly.

After leaving Papeete he acted for some years as Consul at Apia — Samoa — from which post he retired to the south of England where he died on May 6, 1883, aged 86.

His Indemnity long “held fire”. There was intense opposition to it in the Chamber of Deputies at Versailles. The Earl of Aberdeen allowed him to draw Two Thousand Pounds on the British Treasury in advance of the French payment; and nothing further officially being on record it is surmized that the French Government paid the sum agreed upon between the 2 countries under subterfuge so as to prevent its formal appearance in their Budget and any further bitter feeling in the 2 Parliaments. But his own son writing in 1866 denies it. One of his sons — W. T. <sup>125</sup> — followed in his father’s footsteps, becoming British Consul at Fiji and became as much “a thorn in the flesh” to his own Government as his father had been to the French. His appointment was cancelled. His troubles however came from an exactly opposite cause from his father’s : the latter was too narrow, the former too liberal in his attitude towards religious bodies : narrow minds combined against him and the Foreign Office of his day would fain be rid of a troublesome matter, though it was he who brought about the cession of Fiji to the Mother Country.

Pritchard’s reluctance to retire wholly from missionary work was, as given out by him, due to the fact that his Consular duties occupied only a few hours a week. It led to much internal trouble in the mission and had no small influence on the troubles which befell Tahiti as a whole. The brethren took great exception, whilst one of them wrote Home — December 4, 1837 — “*The Chiefs and the Churches seem to detest the idea of a missionary becoming a Consul*”, the spiritual according to both

---

<sup>124</sup> [George Pritchard \(1796–1883\)](#)

<sup>125</sup> [William Thomas Pritchard \(1829–1907\)](#)

the Brethren and the natives should be kept clearly distinct from the material. Opposition went so far that when he stepped outside Papeete to hold a Service, the Chapel emptied at his appearance. He refused however to retire from his attitude as a voluntary agent and found sufficient backing in 1840 in his home town to be elected as sole pastor of the native Church in Papeete, his congregation paying his salary. But that same year saw the end of his dual duties. He went to England at its close, not to return till 1843 when Consular work demanded his whole time till his retirement.

**M<sup>r</sup> George Pritchard**

He was the leader in the opposition to what was held to be French aggression, but he had antagonized many who should have stood firmly by his side. There were therefore divided counsels and confusion where unity was essential. His brethren — with the exception of Orsmond — rallied to his aid but he had lost the full grip which the pioneers of his Calling had held heretofore upon the natives. His hands were further weakened by the steady growth in feeling against the Brethren in general for engaging in trade and barter.

Christians all by now, as the natives were, they drew a line not realizing the cause. The meagre salaries received from Home were utterly insufficient to support wives and children. They were forced to engage in trade or go without essentials such as clothing, medicines and imported supplies.

The erratic Orsmond put it bluntly up to the Directors at Home. "*December 25. 1837. We are a set of trading priests, our closets are neglected and our cloth disgraced.*" The fault lay in London but the local men got the contumely and the blame. Money — once of no account on the island — had become a necessity for living; the Brethren were thus forced into commercial pursuits to secure it and so lost caste.

Upon Pritchard's appointment there was a change made as to Consular jurisdiction. The Hawaiian Islands were dropped and the Friendly Islands — the Cook Group <sup>126</sup> — took their place. This is to be read of in a letter from him to the then Governor of New South Wales, Sir Richard Bourke, <sup>127</sup> dated "*Tahiti November 25. 1837. I have the honour to inform Your Excellency by the earliest opportunity, that as His Britannic Majesty has been graciously pleased to appoint me as Consul for these and the Friendly Islands, I shall at all times be happy to receive from Your Excellency any suggestions relative to my official duties.*"

---

<sup>126</sup> "Friendly Islands" refers to Tonga, so named by Cook in 1773.

<sup>127</sup> [Richard Bourke \(1777–1855\)](#)

## The Consul Moerenhout

Jacques Antoine Moerenhout,<sup>128</sup> who unfortunately played so sinister a part in this French Period, was by birth a Belgian. He arrived on Tahiti in 1829, a roamer, then supercargo of a trading schooner and settled down as a merchant. A man of good education “*of engaging manners and highly intelligent*” he combined literary ability with his business interests, writing first at Papeete his “*Voyage aux Îles du Grand Océan*”<sup>129</sup> containing much of the then known history as well as the customs, the religions and the governments of Polynesia.

His conduct, however, quickly brought him into conflict with the Authorities, the Queen, the Chiefs in control under her and of course the missionaries. Securing a long lease on property of the Arupa Family on the waterfront, he raised home and storehouse and took as his mistress the wife of a native of that Family who bore him a son to bear and retain his name.

He was a determined purveyor of “spirituous liquors” to the natives in open defiance of the law later passed — March 1834 — and “*consorted with the ungodly and depraved*”.

Travelling oft between Tahiti and the Americas he brought home an American wife.<sup>130</sup> In 1832 he left for France, taking his MS with him where in Paris he saw it through the Press. He returned to Papeete by way of the United States, securing on his way home — through influence unknown — the post of the first American Consul for Tahiti. He reached his post January 1834.

When in November 1836 trouble first arose with France over the arrival of the priests Laval and Caret he was, as ever, “at outs” with all in authority especially the religious leaders, Pritchard, his chief enemy, the great friend and counsellor of the Queen and soon to become the British Consul. When the 2 priests were ordered aboard, Moerenhout in open defiance “*provided them with shelter in a small cottage of his*” some 200 yards from Consulate soil and openly threatened retaliation upon their being forced to leave. He saw the matter through with entire success.

His conduct in general was so flagrant that appeal was made to Washington in December 1836 for his dismissal since he was a law unto himself. When Du Petit Thouars first appeared upon the scene — 1838 — the request having been granted, his formal dismissal was on the way, Blackler<sup>131</sup> being appointed in his place. He forestalled the indignity through the Commodore’s action in appointing him as the first French Consul, but he would pay Tahiti back.

His bitterness was increased by a wanton attack made on him by a couple of ruffians, beachcombers, a negro and a white man at his home in the early hours of June 10, 1838 just prior<sup>132</sup> to Thouars’ arrival. Papeete was infested with Tutaeauri as the Tahitians called them, lawless vagabonds, escaped convicts, deserters from ships, men living by violence and the oppression of the lower class of natives.

---

<sup>128</sup> [Jacques Antoine Moerenhout](#) was born January 17, 1796 in Echren, Antwerp, Belgium, and died July 13, 1879 in Los Angeles, California. See also Eric Ramsden’s article, *M. Moerenhout*, in the 25 June 1935 edition of the Pacific Islands Monthly, pages 37–38, in Part VII.

<sup>129</sup> WWB has *Voyage aux Iles du Grand Océan*.

<sup>130</sup> Moerenhout married [Petronilla Garcia De La Huerta](#) in 1833 in Valparaiso, Chile; she was born 1818 in Valparaiso and died 1838 in Papeete. He subsequently married [Rooino Tehoro](#) in 1840; she was born 1824 on Tahiti and died in 1871.

<sup>131</sup> Samuel R. Blackler (died 1844)

<sup>132</sup> WWB has *priore*.

These ruffians attacked him with axe and knife marking him for life, and in the struggle turned on his wife who died of her wounds a few days later. The negro was hanged for the murder. He was not out for revenge on all these grounds and the Commodore became unwittingly his instrument. The various British Commanders whilst insisting on fair play all round were unanimous as to Moerenhout. They reported Home “*a clever rogue*”, “*a man occupied in intrigue and villainy*”, “*vengeful*”, “*making dupes of his friends whether native or white*”, “*the main cause of all the trouble*”, “*ceaseless in provoking animosity all round*”.

His immediate triumph was his appointment as French Consul — 1838 — and with that in his hands he worked ceaselessly to undermine the authority of the Queen. He went to great lengths, for when on Thouars’ second visit — 1842 — a Treaty as to a French Protectorate was demanded and the Regent Paraita — the Queen being absent on Moorea — with 3 other Chiefs of the Queen’s Council hesitated to sign it aboard the French man-of-war, Moerenhout — as they later on witnessed in writing — took them ashore to his home and when they still hesitated offered them a bribe of a thousand Spanish dollars each for their signature. They signed. Later they protested their action but in vain. Too late. He won. France had gained control despite the missionaries.

At the reiterated request of the British Government for his removal “*as an evil influence*” and “*an impediment to peace*” he was dropped as French Consul in 1843 : but was retained at Bruat’s side as “*Director of Native Police*”. This not satisfying the British Government much he was given the post of French Consul at Monterey — California — and left Tahiti for good in June 1846, taking with him his young daughter<sup>133</sup> by his murdered wife who lived, married and died in that State.

His halfcaste son lived out the lease which then lapsed back to the sole living representative of the Arupa Family — Turia — who after losing the greater portion of her considerable and valuable inheritance through careless handling and the chicanery of others, parted with the remnant for an Annuity. She was the daughter of Moerenhout’s discarded mistress, her father a negro. Born in 1866, she became a notorious “*woman of the town*” proud and overbearing. She died in 1937.

An outsider’s opinion of Moerenhout appeared in the “*Southern Cross*” newspaper published at Auckland N.Z. dated April 13, 1844. “(Excerpt) *Statement by Captain Daldy*<sup>134</sup> *of the schooner Shamrock dated at sea March 22. 1844. The principal agent of the French in all these matters is M. Moerenhout whose character is given in the “Dublin Magazine” very correctly*<sup>135</sup> *as “The Belgian grogseller”, then American Consul who broke his trust and was dismissed, then French spy and Consul, now man of all work such as bribing Chiefs, giving them uniforms, and they can always get grog at his home prohibited by law and his title is Director of Police. There is a law that no one shall sell or use spirits. The French if friends of M. Moerenhout do it openly and no notice is taken, but should an Englishman do it his house is closed for 8 days for the first offence and for the second he is expelled from the island. There is a law against Drunkenness : plenty of French to be seen drunk on the beach but no notice is taken. There is a law against bathing in public, yet at noonday you may see the crew of the Governor’s own barge bathing within 10 yards of the most public thoroughfare. The fact is a Frenchman, if not an enemy of M. Moerenhout, may break the laws with impunity but woe to any other European. I do not state this from mere hearsay : I have both seen and felt the partiality which the laws — if any exist — are administered.”*

## The Missionary Orsmond

One missionary, as a disturbing influence on Tahiti during these troublous years, calls for special notice. J. M. Orsmond <sup>137</sup> took a decided stand, so much so that he was struck off the L.M.S. local staff.

He was undoubtedly of an eccentric character and unbalanced mind (Command Papers N° 255) but his work in research — “Ancient Tahiti” — was both exhaustive, able and brilliant whilst his entry into politics was both impolitic and unwise.

An extraordinary letter of his to Lord Aberdeen, a mixture of history and hearsay, “*to cast a ray of light upon the great Tahiti Question*” must have caused his Lordship some anxiety as to the mental condition of the writer.

And Queen Pomare writes on August 30, 1844 from Raiatea to her loyal friends on Tahiti, “*I am greatly perplexed by M<sup>r</sup> Orsmond. He is entreating me to become French.*” He had written to her “*Give your entire confidence to their proposals, the French shall be your refuge, your arm and your cannon.*”

Consul-General Miller had had to write sternly to him “*for assurance by you that you will for the future observe the strictest neutrality.*” He seems to have been drawn to the interests of the French owing to Moerenhout’s American wife <sup>138</sup> having lived under his roof during her husband’s absence in Paris in 1832, a close intimacy being thus established between the two men, one simple minded, the other an intriguer. He became intimate also with Bruat and unfortunately betrayed to him a private communication made by Lord Aberdeen — through Pritchard the Consul — to the mission band and to them only, which Bruat published in a Proclamation as the settled policy of the British Government as to the Protectorate. For this betrayal of trust in chief, he was retired from the Staff on Tahiti, his bias also making it impossible to work in harmony with the rest.

He remained on, supported by those natives who had been won over to the French side and 1851 became Pastor of the native Church at Papeete, the L.M.S. having by then withdrawn most of their staff. (See *The Protestant Viewpoint of Tahiti’s Troubles* under the heading *From previous and later Reports of the L.M.S. Directors.*) He died April 23, 1856 on his way to Sydney, N.S.W. for the benefit of his health and was buried at sea.

There is however another view of his disturbing influence, namely that of the man himself which is very fully, very plainly even if erratically stated. It is to be found in a letter of his — dated 1849 — of great length written to members of “King Street Chapel” in Portsea, Hampshire, England whence he offered his services to the L.M.S. in 1816, <sup>139</sup> recounting what he had seen and suffered since his landing on Moorea — 1817. <sup>140</sup>

---

<sup>137</sup> WWB has *J. H. Orsmund*.

<sup>138</sup> Moerenhout’s wife was from Valparaiso, Chile.

<sup>139</sup> A reference to Orsmond’s ordination as *Missionary to the Heathen* in King Street Chapel on December 22, 1815, can be found in [Evangelical Magazine and Missionary Chronicle, Volume 24, p. 117](#), Oxford University, 1816.

<sup>140</sup> This letter is widely referenced, particularly in regard to Pomare II having been reduced to an alcoholic by the missionaries, but the text was not found online.

Bengt Daniellson, in *Love In the South Seas* (1956, page 58), may be quoting from a copy of the letter that was found in the Papeete Museum, Tahiti: *Another missionary declares that ‘for deception, lasciviousness, fawning eulogy, shameless familiarity with men, and artful concealment of adulterers, I suppose no country can surpass Tahiti. She is the filthy*

He does not mince matters and the letter is very far from pleasant reading as to morals all round. There was a very seamy side to the earlier bands of missionaries, suppressed then and best ignored today, and the grossness of the natives despite their nominal adherence to Christianity from the King down, cannot in its definiteness be quoted here.

Pomare II is fully exposed as a vainglorious and tyrannical sot and Queen Pomare is spared nothing in his handling of Her Majesty. His efforts to mend and uplift things were from the very first rebuffed by the rest of the Band, whilst the grubby life they led, their constant quarrels and bickerings, their obsequiousness both to His and Her Majesties as well as their literary ignorance appalled him.

He felt and knew that the supporters of the mission at Home were being grossly deceived yet his hands were tied. His letters to the Directors were not acceptable. The curt and evasive reply was sent that his letters were expensive items — paid at their end — but that they hoped to hear from him through their magazine.

He refutes the charge that he betrayed his brethren. He states that Bruat had a newspaper copy of the supposed private letter. It is evident that he suffered for what he felt was right. The French provided him with a stipend, till then he was forced to sell all he had that was saleable, salt pork and breadfruit for him and his their daily fare, shoes were a luxury, clothing called loudly for repair, some black cloth his “Sabbath Best” was a thoughtful and generous gift from the French when badly needed. Whatever may be said of him, for or against, we of today through his remarkable research work in “Ancient Tahiti” are deeply in his debt.

There came into the writer’s possession the rough copy of another letter of Orsmond’s — incomplete — written during the struggle between the Patriots and the French, sent to a D<sup>r</sup> Raffles at Home. It is unsigned of course but unmistakably his and has a righteous place in this Sketch of his day. It reads :

*Taiarabu 11 September 1845.*

*“Be still and know that I am God.”*

*The Protectorate and the Ministry.*

*The Protectorate.*

---

*Sodom of the South Seas. On her shores chastity, and virtue, find no place. The predominant theme of conversation from youth to old age is the filthy coition of the sexes. From the King and Queen to the lowest grade, all are alike guilty, and if secrecy can be obtained, a very small reward will seduce any female. Often among deacons and generally in all classes it is found that persons go from the bed of adultery to the Lord’s table and from thence to the same bed. In the shaking of hands, in presenting one thing to another, especially by the eyes, and toes, are signs ceaselessly given of a desire for copulation. It is the expected reward of almost every little act of kindness, while a nod of the head, or a little conversation, is enough to bring on the really innocent.*

Elsewhere, Orsmond, as quoted in [Edmond \(1997\), p. 121](#), states: “Tahiti is a vortex of iniquity, the Sodom of the Pacific and gazing stock to the world, a thorn in the eyes of the just. All contradiction, licentiousness and obsequiousness. Even now we dare not suffer our children to assemble with the native tribes. Virtue is not in Tahiti; chastity is unknown save in the presence of some only of the Missionaries.”

Orsmond also sent a 94-page report entitled *Look again, or a few observations on the affairs of Tahiti from 1845 to 1849 by an eye-witness* to the President of France; the report is available in the [Collection on French Polynesia, 1768-1882](#) at the Mitchell Library and at the Pacific Manuscripts Bureau (Microfilm PMB 73).

1. *The present day is a Day in which Divine Providence is cast into the shade, while Selfwill and National animosity riot on the elevated platform in Exeter Hall.*
2. *For the aborigenes of Tahiti, for merchants and Residents, the Protectorate is the very best thing that was ever established on her shores, and long may she prosper and be a blessing.*
3. *The Queen's ancestors were never so rich, powerful, independent, happy and respected as she now is and will be under the Protectorate of France.*
4. *In Moorea the Rev. A. Simpson saw it to be of so much importance that his advice perfectly swayed the Queen and she signed the Treaty for the Protectorate at his command.*
5. *The Queen never had power to enforce her own laws, much less had she skill to make them, but in every case on the arrival of a British ship-of-war from the coast or elsewhere, there were cases which she could not herself settle to be submitted to the Captain, by M<sup>r</sup> Pritchard's authority, for decision. He was Power and he was Law before which all trembled.*
6. *National animosity on the one hand and love of immense gain on the other have induced gentlemen and merchants to advise the people and the Queen never to come under the Protectorate of France or all would have been perfectly well from the very first day of Bruat's arrival.*
7. *In former days the merchants governed the island and the Queen. They sold whole cargoes and brought others but never paid a shilling for Licence, for Customs or Taxes. They were rich, the Queen miserably poor.*
8. *Now under the Protectorate, ships go and come as usual, whale ships in a state of mutiny are set to rights. Personal and relative rights are secured for the peaceful resident. The natives are not ordered to be Papists but are urged to attend to their own religion with assurances that no priests come to molest them.*
9. *To the concealment of Lord Aberdeen's letter and the underhand machinations of foreigners may be attributed the loss of all the blood on Tahiti.*
10. *Nothing but the best of feelings induced Louis Philippe of France to establish the Protectorate, but how has it and all who have befriended it been scorned at by those of other countries dwelling on Tahiti's shores.*

#### *The Ministry*

1. *The Ministry on Tahiti would rather see her inhabitants in intestine commotion for 2 years together than exhort them to sit down quietly and wait for the decision of France and England in the case.*
2. *The Ministry of England has not exerted half as much energy for the conversion of the dark corners of the Earth as they have done in opposing the Protectorate of France on Tahiti of which it seems to have such indistinct views.*
3. *Had the Ministry prayed more in the closet and spouted less in public assemblies to the annoyance of the Rulers of the Earth they would not only have maintained sweetness of temper but they would have become "terrible as an army with banners" and under their united prayers Victoria would have trembled as one of old did under the prayers of John Knox.*

4. *The strife about the Protectorate of Tahiti has effected no revival in religion : in all the ranting meetings no soul has been converted, yet how much time, strength and money have been wasted, while in many places the Ministry is loudly blamed.*
5. *The Ministry has not, by associated prayer with their flocks, become peacemakers but by irritability that wars against the soul they have sown the seeds of discord, blown the coals of strife and evidently lost sight of Divine Providence, if they have not even been fighting against God.*
6. *Bing was sacrificed to appease the fury of a mad populace, Luther was immolated to please the Devil's enemies, and you see D<sup>r</sup> Raffles I am sacrificed on the alter of Protectorate strife by the Christian ministry for receiving hospitalities of which all my brethren are equally guilty.*

## French Residents in 1842

Du Petit Thouars' complaint in 1842 that there was not a Frenchman on the island who had not some complaint to make, wherein Consul Moerenhout's hand is clearly to be seen, reads strangely as there were<sup>141</sup> but Nine upon Tahiti and the following their record : (Command Papers N° 270)

1. Lefèvre. "Tattooed Joe". He arrived in 1831 from the Marquesas. He was a great boaster and of a bad temper, forever quarrelling but never punished.
2. Nicholas. He came in 1839. He sold spirits and kept a Bad house. He was fined for breaking the law of the land.
3. Victor. He came in 1840. A cook on a ship. Of bad character, his behaviour similar to Nicholas, and also fined for breaking the law of the land.
4. Bremond. He came in 1834. A carpenter. Not so bad a character as the last 2 named but of similar behaviour and also fined.
5. Louis. He came in 1830. An upright man and never complained of.
6. Lucas. He came in 1838. Of good character and never complained of.
7. French William. He came in 1838. Beloved of all. He never complained.
8. Bernard. Resided here for the year 1841. Arrested for striking a constable in performance of his duty. At the American Consul's request he was set free. A respectable man, glad to get so easily out of his difficulty.
9. Maurac. He came here in 1828. In a dog fight a constable pushed him aside and Maurac knocked him down. Moerenhout demanded that the constable should be banished. It was felt that so great a punishment did not fit so trivial a crime.

Justice was not administered haphazardly but, under the guidance of the missionaries, had been instituted in regular and legal form. There was a Court with right of Appeal to a Supreme Court of Seven Judges of whom at that time the Chief Justice was Paofai. The Queen had the Sovereign's right of Pardon. With such poor material Du Petit Thouars, backed by the revengeful Moerenhout, claimed redress "*for the overbearing conduct of the Government*".

---

<sup>141</sup> WWB is missing the word *were*.

## Divided Counsels

Though Queen Pomare and the body of missionaries as also numerous Chiefs were stoutly opposed to the demands of Du Petit Thouars in 1842 it must be placed alike on record that not all the British residents were on the Queen's side. Whether they were in Moerenhout's wild set it is impossible to say. Their subjoined letter to the Commadore was naturally in French, hence a translation is given. They seem to have omitted the day of the month but it followed after the Queen's letter of the 9<sup>th</sup> instant.

*Tahiti the     of September 1842*

*Sir,*

*We, the undersigned British residents of Tahiti desire to thank you for having accepted provisionally the request by which Queen Pomare has solicited the protection of His Majesty the King of the French in all which touches Her exterior relations with Foreign Powers; and we are happy to see an end put to the disorders and abuses which have reigned hitherto in the port. We felicitate ourselves that you have, pro tempore, as you announce by your Proclamation, stated such laws and regulations and given such sufficient guarantees as assure the protection of property and the administration of Justice.*

The letter was signed by R. Harton and 29 other signatures followed. And this division of opinion was not confined to white folk. Though those High Chiefs of the Queen's inner Council — Tati, Utomi and Hitoti — who had signed along with the Queen for the Protectorate repudiated their signatures at a later date, the following letter from another of them — absent at the time — speaks otherwise. A translation follows :

*Tahiti the 19<sup>th</sup> of September 1842*

*Monsieur the Admiral*

*I salute and congratulate you upon your arrival at Tahiti. This is what I wish to say to you. I greatly approve that the French King takes Tahiti under His protection. I am satisfied at this request having been made. I desire that you will consider as if I had signed my name below that request. If you do not agree to that I shall be grieved.*

*Signed Paofai, Chief Justice*

This same High Chief appears to have been consistent for upon the first arrival of the Catholic priests he along with Hitoti had refused to agree with the rest as to their expulsion at a Council meeting held on November 27, 1836.

As to the white folk in general there had long been very bitter feeling caused by the passing of certain laws :

- (1) prohibiting marriage between white men and Tahitian women;
- (2) prohibiting the importation of and the use of spirituous liquors by one and all.
